pass through any ordinary farm-gate. All the materials are of the cheapest and most common character consistent with strength, and the apparatus can be readily made in any wagon-shop for a moderate sum of money.

The apparatus for blowing dry powders over cotton-plants consists of a horizontal triangle of wood, mounted on three wheels and intended to be drawn by one horse. Over the forward wheel is a hopper for holding the dry powder, and closed by a tight-fitting cover. Under the hopper is a small fan-blower, that may be connected by a crossed belt with the axle of the leading wheel. At the top of this blower is an opening into the hopper, with a second opening on the opposite side, so that the blast of the blower enters the hopper at the bottom on one side and passes out at the other. The motion of the machine over the ground drives the blower, and the blast of air it sends through the hopper takes up a portion of the powder and carries it to the discharge-pipes at the rear of the machine. These pipes are of sheet-iron, and hang down between the rows of plants, so that three pipes cover six rows of plants. When the machine is driven over the field, the pipes discharge clouds of the dry powder that completely cover every plant in reach. In a strong wind, when the machine is moved side to the wind, the number of rows covered may be much larger, as the wind blows the powder over the plants for some distance. Another and cheaper form of the same machine, and designed to discharge only one jet of powder, employs a common hand-bellows attached to the hopper. In this case, the machine is fastened to the handle of a plow or cultivator, and the bellows is operated by the foot of the plowman as he walks behind. These two machines—the automatic sprinkler and the rotary dust-blower—are the largest and most complete tools of their class yet brought out. They are admirably designed and, at the same time, cheap and easily managed—rather unusual merits in large agricultural implements.

Gins and Seed-Cotton Cleaners.

MANY attempts have been made to construct a machine that would pick the cotton from the plants in the field. As far as can be learned, none of these experiments have been successful upon a commercial scale. The entire crop must be gathered by hand, and thus the supply of labor at the harvest limits the size of the crop. The picking is performed in haste, and the crop is always liable to injury by storms, contact with dust and dirt, and general ill-usage from the field to the gin-house. The first mechanical step beyond the field is, therefore, to clean the seed-cotton. Several machines for this purpose are already in the market. A comparatively new machine, inspected while in operation, seemed to do its work thoroughly and quickly. It consists of a suction-fan, a "whipper-wheel," or light paddle, for stirring up the cotton while exposed to the blast of air set up by the fan, and a suitable feed-box or hopper. The seed-cotton is placed in the hopper at the side of the circular chamber containing the whipper-wheel, and enters this chamber through an opening at the side near the bottom of the hopper. At the top of the chamber is an opening covered with wire netting, and through which the fan draws its blast. There is also an opening below, where

the cleaned cotton is thrown out. The fan and the whipper-wheel turn at a high speed upon the same shaft, and the action of the machine is to create a powerful blast of air through the chamber into the fan. The cotton is drawn in by the air-current or is fed to the machine by its own weight, and on entering the chamber, is driven and dashed around the chamber by the whipper-wheel in a direction opposite to the blast. All the dust and "trash" is shaken out and swept away by the blast, but the tufts of cotton carrying the seeds cannot pass the netting, and fall out below after one or more revolutions around the chamber. The blast carrying the dust and small leaves passes through the fan, and is thrown outside through a pipe leading out-of-doors. The apparatus is self-contained, and is designed to clean from ten to twenty-five bales of seed-cotton in ten hours, according to the size of the machine.

The display of gins was very large, but, with one exception, there was apparently no radical improvements over the many excellent tools of this class already in use. There were, however, several minor modifications of the saw-gin which seem to have merits. In one gin a new style of saw was exhibited. It consists of a sectional saw divided into small segments intended to be locked into the rim of the saw, each segment containing about eighteen needle-pointed and curved teeth. These sections of teeth can be easily removed for repairs or sharpening, and save the time and trouble of removing the whole saw when only a few teeth are injured. The device is simple and convenient.

Another new appliance consists of a series of wooden friction-rollers placed around the brush that feeds the cotton to the saws. The object sought is to preserve the cotton from injury by friction against the sides of the gin. It appeared to work to advantage.

The seeds of the long staple cotton may be taken out of the cotton by the roller-gin. Here the smooth seeds are pressed out as the cotton meets the leather-covered rollers. The short staple cotton, which forms the larger part of the entire crop, has seeds that retain a part of the lint, and they must be violently torn away by the sharp teeth of the saws. This injures the cotton to a greater or less degree, and it would seem that, if the roller-gin could be adapted to the short staple cotton, there would be a great gain in the quality of the finished lint. One new gin was shown in operation that appeared to do this work effectually and at a very fair speed. The gin consists of two rollers covered with rough leather, and a novel attachment for holding the seeds against the rollers while the lint is pulled off. Between the pair of rollers is a set of steel combs, designed to move one within the other at each revolution of the rollers. The seeds are caught and held by the teeth of these combs during a part or the whole of one revolution of the rollers, when they open and allow the seed to fall between the rolls. This intermittent action is controlled by suitable mechanism, and requires no attention from the operator. Tufts of cotton only partly cleaned cannot fall between the combs, and the slight nap that clings to the seed does not prevent its escape when the lint is removed. This gin is regarded by those competent to form an opinion as the most valuable machine of its class yet introduced. Its future success must, how-

ever, depend on the speed at which it will do the work. It certainly delivers the cotton in a better condition than the saw-gins, the staple being longer and less torn and shredded. It does not throw the lint out in a loose and feathery cloud that must be caught in a close and dusty "lint-room," but lets it fall in small, coherent masses, that are evidently in a good shape for spinning. On the other hand, the amount of cotton cleaned in a given time appeared to be less than with the saws. The preparation of cotton for market is almost universally too rough and hasty for the best results. The better the quality the higher the price, and the matter turns upon the question whether the improved quality of the lint delivered by this machine may not more than compensate for the loss of time.

Gin-saw Sharpener.

A SMALL self-feeding gin-saw sharpener, intended to be held in one hand, was examined, that seemed to have the merit of cheapness and simplicity. It is held on the edge of the gin-saw by the left hand, and in this position a small steel disk-shaped file cuts the front edge of one tooth, while two long, triangular-shaped files cut the sides of a tooth in the rear. The machine is operated by turning a handle, and at each revolution of the circular file a dent in the file catches in the next saw-tooth and moves the machine forward. The machine thus feeds itself to the work, and the operator has only to hold it upright and turn the crank. The two files at the rear have an alternating up and down motion, and finish off the points of the saw-teeth. The tool appeared to be compact and convenient, and to work fairly well.

New Cotton-baling Press.

IF there is any one point at which every one who has to do with cotton, from planter to mill-owner, is losing money, it is at the cotton-press. The manner in which this light and delicate material is prepared and sent to market is something that should be entirely reformed. Here is a material depending wholly for its commercial value upon its purity, cleanliness, and quality, that is thrown, like so much straw, into a press and squeezed into a heavy and unwieldy mass, half-clothed with a cheap and worthless fabric, and called a cotton bale. The loss by exposure to the weather, rough usage in transportation, frequent and wholly unnecessary samplings and resamplings, by theft, and the cost of handling so bulky a package,—all these losses fall on the planter, and amount annually to an enormous sum of money. There appears to be no uniform standard of weight, size, or shape of bale, and any process or machine that makes it possible to deliver this great crop in a safer and better package must be regarded as a very valuable invention.

The machine is a self-packing press, that works continuously, the cotton being fed at the top from a hopper, and shot out below in the form of a small, neat package, safely inclosed in a strong canvas bag. The press exhibited was arranged horizontally, the hopper being placed on top, and the pressure being applied to the mass of cotton in the machine by means of a follower moving horizontally; but this arrangement can be easily reversed, so that the press may stand upright

and occupy two floors of a gin-house. The underlying idea of this press is to pack the cotton in a compact package by placing a small portion of the bundle, say one-sixteenth, in the press, and submitting it to the whole power of the machine. Then another portion is added and pressed. More and more is added and pressed, till the right quantity is obtained for a convenient package, when a wooden shield is put in the press to separate this bale from the next. The bale is then bound with wires (not bands), and slips out of the press a small bundle, with square, sharp edges, and of a size convenient for handling. As it slides out, under the pressure of the bale that follows, it slips into a canvas bag ready to receive it. The machinery by which this is accomplished is well designed and efficient, and the power needed to operate it is moderate. The pressure is obtained by simple gearing, arranged to give a heavy horizontal thrust and a quick and light return. The pressure is made effective by placing the plunger that presses the cotton in a square tube, having a taper toward the open end. To measure off the small portions pressed at one time is a second plunger, working in a perpendicular well over the main chamber where the bale is formed. This plunger moves first, thrusting a portion of the cotton down into the press and then moving upward out of the way, while the lower horizontal plunger drives the mass along the chamber toward the narrower end. This plunger retreats and the other sends down another lot, and this in turn is pressed up against the first. When enough has been pressed to make a bale, the wooden guard is dropped into the well from the hopper and is pressed against the end of the bale. The next stroke delivers the first portion of the following bale, and this, as it is built up, drives the other forward and out of the press. Iron fingers are arranged around the discharging end, and over these is spread the bag intended to hold the bale. It will be seen the process is continuous. Two bales are always in the machine, one being formed and pressed, the other being wired and thrust into the bag. The press requires two men to operate it—one to feed the cotton to the hopper and another to wire the bales and prepare the bags. Other help will also be required, to attend to the engine and to remove the bales as they are thrown out of the press. This press must be regarded as the most promising machine connected with the preparation of cotton shown at Atlanta. It will be observed that the bale is wired inside the bag, and not outside, as in the present wasteful and almost ruinous system of packing cotton. The bag is laced up at the top and may be easily opened for examination, and at the same time it keeps the cotton safe from moisture, dirt, and theft. The bales have square corners and ends, and pack snugly in boat or car. The bags are strong and durable, and may be returned and used over again many times, at a great saving over the present system, for the cost of returning the bags would be no more than the cost of sending the bagging, which is now used once only, to the planter. The wire would also cost less than the bands and buckles used in the present system. This press is more expensive, and requires more skill to handle it than the presses now used on cotton plantations, but its advantages over these presses are so obvious that it appears to be only a question of time when the entire crop will be sent to market packed in small, square-cornered, and

easily handled packages, prepared by this press or some other operating upon the same plan. It can be safely recommended to the planter and shipper, as it saves all the loss by exposure and theft to which the bales now used are subject, and all the expense of handling an unwieldy and heavy package, and the cost and injury to the lint that springs from its rough usage in the compresses at the shipping ports. It will also benefit the mill-owner, by delivering the lint in a light, clean, and healthy condition.

Direct Process for Yarns.

THE tendency of manufactures is always toward directness and simplicity. In tracing cotton from the field to the mill where it is spun into yarns for the loom, there is a long series of operations, all of them injurious to the cotton and many of them wholly unnecessary. The seed-cotton is ginned, pressed, baled, compressed, and delivered at the mill. Here it must be opened and prepared for the cards by the use of complicated machinery. It is now proposed to place the gin on the card machinery, and to feed seed-cotton directly to the card through the gin, and to do away with the baling (except in a modified form), the compress, and all the machinery needed to restore the cotton from its tangled condition in the compressed bale, and make it fit for the card. This is the sum and substance of an invention that has attracted a great deal of attention throughout the entire South. The idea must be regarded

as only second to the invention of the gin. There is in reality no new machinery, for it is only the placing of a common saw-gin on the frame of a carding machine in the place of the usual feeding apparatus. Then, in place of feeding the lint from the bale to the card, the seed-cotton is fed to the gin, and the lint passes instantly to the card. The lint is used in its best and most natural condition, directly from the seed. There is no lint-room, no baling, no compress, no transportation in a tight package, no loss from drying after the lint is separated from its seed, and no loss and injury by the machinery that must be used to repair the injury caused by the compress. This union of the gin and the card has been tried, with both failure and success. The failure, it must be observed, appears to be the result of a misunderstanding of the idea. The union of the gin and card should be in a mill and not on the plantation. The mill may be in the same town, but it cannot be expected that the planter should set up a yarn-mill, and make it a financial success. The yarn-mill must be a separate concern, owned by the planters perhaps, and certainly in their neighborhood. The planter can hardly expect to be spinner and planter too. This does not in any way lower the value of this idea. The gin and the card may be united, and in their union must flow to both the North and South substantial benefits to the mill and farm. The machine examined was not in operation, but from an inspection of its parts, all that has been claimed for this device seemed to be just and correct.

BRIC-À-BRAC.

Was it Chance?

WAS it chance that we should meet?
Was it chance that I should find
All you did so perfect, Sweet?
Is chance so very kind?

Was it chance that we should meet?
Ah! wanton fate, too weak to bind!
Yet still the coming years are sweet
For such a chance behind.

The Midnight Chime.

(MERMAID TAVERN, 15—.)

WHEN soberhead is in his cowl,
And watchmen first begin to snore,
And o'er the moonlight flits the owl,
And star-winds blow beneath the door;
And fairies 'gin their nightly dance
That moves till morning's prime
Beneath the broad moon's countenance,—
You hear the midnight chime.

To duller ears, upon the hearth,
Rings nothing but the cricket's song;
But ears anointed hear the mirth
Of fairy throats the whole night long.
A toast once more!—We'll never hail
As fellows meaner fowl;—
There's music in the nightingale
And wisdom in the owl.

Politeness.

AT first they played Bizet's "Toreador,"
While I at my high window blandly smiled,
Then they ground "William Tell" for an encore,
And with some strains from "Faust" an hour
beguiled.

All these were followed by some gems of Strauss,
While I stood listening to each charming air,
Then came a German ballad, "Nix Kommt 'raus,"
And still I lingered nonchalantly there.

I had not one red cent upon me then
Wherewith to revel in the flowing cup,
But they knew not this odious fact, poor men,
And so they sent their starving monkey up.

His frame was clad in robes of deepest red,
A great blue bang was tied upon his tail,
Plumes, once light yellow, dangled on his head,
And his lean legs were sheathed in rusty mail.

He climbed with startling ease the granite stoop
(Ah! such, indeed, is the great power of will!)
And, with a grunt, like some one low with croup,
He doffed his feathery hat upon the sill.

He grinned and pirouetted in the sun;
Of many courteous bows there was no lack,
While I, in pure politeness ne'er outdone,
With a sweet smile, like Talleyrand, bowed back!

A Twilight Pastoral.

KATIE takes the milking-pail,
And to the meadow trips along;
The sunbeams slant along the vale,
And sweetly rings her milking-song:
"Heigho! heigho!
A milking I go.
Come, Spot, and come, Bonnie,
Come, Brindle, come, Brownie;
The sun fast is sinking,
The bright stars are blinking;
Come to me, my darlings,
'Tis Katie who calls."
The meadows in the gold rain glisten,
The cricket stops his chirp to listen.
As o'er the grass the sweet voice rings,
Lo! high upon the topmost spray,
A robin gayly sings.

Colin hears the sweet voice call,
And sees the kine go lowing to her;
No call for him, and yet he goes,
Ah! twilight is the time to woo her:
"Heigho! heigho!
A milking I go.
Come, Spot, and come, Bonnie,
Come, Brindle, come, Brownie;
The sun fast is sinking,
The bright stars are blinking;
Come to me, my darlings,
'Tis Katie who calls."
So Colin leans upon the bars,
And woeth Katie, till the stars
Shine through the haze the twilight brings,
And still, upon the topmost spray,
The robin gayly sings.

The years they roll, the summers go,
The grass springs green, the waters flow,
And Katie gray, with Colin sitting,
He with his pipe, she with her knitting,
As twilight shadows trooping throng,
Hears another Katie's song:

"Heigho! Heigho!
A milking I go.
Come, Spot, and come, Bonnie,
Come, Brindle, come, Brownie;
The sun fast is sinking,
The bright stars are blinking;
Come to me, my darlings,
'Tis Katie who calls."
And sees, within the meadow fair,
Another Colin wooing there;
While from the vale the sweet voice rings,
Lo! high upon the topmost spray,
A robin gayly sings.

Quel Dommage?

It was just Cousin Jack, and so—what was the harm?

We sat on the steps, for the evening was warm;
We spoke very softly, and—as to his arm,
It was just Cousin Jack, and so—what was the harm?

The scent of the hay-fields crept up from the farm,
We were quite in the dark, save the fire-flies' swarm

(It was just Cousin Jack, and so—what was the harm?)
A bird, from the hedge whirring up, broke the charm;

He bent, as I started in foolish alarm,
And—'twas just Cousin Jack, and so—what was the harm?

Theology in the Quarters.

Now, I's got a notion in my head dat when you come
to die,
An' stan' de 'zamination in de Cote-house in de sky,
You'll be 'stonished at de questions dat de angel's
gwine to ax
When he gits you on de witness-stan' an' pin you to
de fac's;
'Cause he'll ax you mighty closely 'bout your doin's
in de night,
An' de water-milion question's gwine to bodder you a
sight!
Den your eyes'll open wider dan dey ebber done
befo',
When he chats you 'bout a chicken-scape dat hap-
pened long ago!
De angels on de picket-line erlong de Milky Way
Keeps a-watchin' what you're dribin' at, an' hearin'
what you say;
No matter what you want to do, no matter whar you's
gwine,
Dey's mighty ap' to find it out an' pass it 'long de
line;
An' of'en at de meetin', when you make a fuss an'
laugh,
Why, dey send de news a-kitin' by de golden tele-
graph;
Den, de angel in de orfis, what's a-settin' by de gate,
Jes' reads de message wid a look an' claps it on de
slate!

Den you better do your juty well an' keep your con-
science clear,
An' keep a-lookin' straight ahead an' watchin' whar
you steer;
'Cause arter while de time'll come to journey fum de
lan',
An' dey'll take you way up in de a'r an' put you on de
stan';
Den you'll hab to listen to de clerk an' answer mighty
straight,
Ef you ebber 'spec' to trabble froo de alaplaster gate!

A Study from Nature.

THE robin plucks the berry red,
And tastes its spicy flavor;
The dainty bee, the floweret wooses,
And sips its honied favor.

'Tis Nature's universal law
Her sweets should not be wasted.
If fruit and flower a lover find,
Should ripe lips pout untasted?

"Behind Her Fan."

BEHIND, her fan of downy fluff,
Sewed on soft saffron satin stuff,
With peacock feathers, purple-eyed,
Caught daintily on either side,
The gay coquette displays a puff.

Two blue eyes peep above the buff:
Two pinky pouting lips, . . . enough!
That cough means surely come and hide
Behind her fan.

The barque of Hope is trim and tough,
So out I venture on the rough,
Uncertain sea of girlish pride.
A breeze! I tack against the tide,—
Capture a kiss and catch a cuff,—
Behind her fan.

Yours truly
J. H. Cable

No. 4.

THE TILE CLUB ASHORE.

A SUBTLE DEVICE.

SINCE last these pages chronicled the small beer of the guileless Tilers, two years have gone. If in that interval nothing has been heard of the Tile Club, it is because the unostentatious practices and modest habits of that worthy body have led it to avoid the public gaze and to prefer the seclusive charm to be found within itself alone.

It is a little older than it was; it has undergone some slight changes; but in character and in spirit it remains the same. In its devotion to art unswerving, elevated, if not inspired, in its faithful pursuit of the Beautiful and the Good, it maintains the agreeable and inexpensive tenor of its way, proceeding by slow but certain footsteps to that eminence in the not too remote future, which true virtue, wholesome assiduity, and a liberal publisher shall inevitably confer. Secure in this happy conceit, and

mindful of its obligations to many indulgent readers, the Tile Club renews its respectful salutations.

Sirius will be missed. That amiable artist, whose moments of dyspepsia enlivened the critical atmosphere about him, has gone where all good artists go—when they can. He is even now closeted with the old masters in a Flemish cathedral or some modern Dutch gallery, exposing his sensitized nature to their beauties and their erudition, and absorbing everything about him. Otherwise, the Club is itself, reënforced and vigorous. In the place of Sirius it has taken the Burr, the worthy associate of its English representative, the Puritan, who is familiar to all peoples by his charming pictures of American colonial life. The Burr is not beautiful to look upon, but there is a great deal more in him than at first

sight one would naturally suppose there was. The other accession is the Bulgarian, a gentleman strangely and mysteriously gifted, and who, by assiduous study and remote travel, has in great part overcome his Boston origin.

The sessions of the Club that have taken place since it was last heard of by the readers of this periodical have not differed materially from those that have been described. It began by painting tiles for mantel-pieces

he pleased, or, in compliance with the wishes of the host, adapted his sketch or drawing to some special purpose. The results were not always equal. Sometimes it would fall to the lot of a Tiler to have an evening when there were distinguished guests, not members of the Club, but invited for the occasion; and it generally happened that the distinguished guests were pressed into service and made to requite the host with a tile, or a plaque, or a charcoal, or a sketch in oils. In this way things of real value often accrued, and the happy Tiler became possessed of an enduring and agreeable memento of his own hospitality and assurance. It not infrequently occurred, however, that when he came to sum up the evening's product, he found some valuable materials permanently disabled, and probably a portrait or two of himself, treated with disagreeable freedom.

No matter what the art product of those evenings was, there remains the unquestionable fact that they were occasions of social attraction to be highly prized. They were always animated by a most agreeable spirit, their atmosphere was unconventional and free, and those who participated were concerned with matters somewhat removed from the commonplace of life, and of a special and unique interest. The diversions of the Tile Club have always leaned in the direction of the intellectual. Much as the writer deplores the use of tobacco, particularly his own that he has paid for, it must be admitted that no hurtful consequences have been apparent from the corn-cob pipes of the Club. They are used to produce an artistic atmosphere, and it will be conceded by all who have any experience in the premises that they have that effect. Adhering strictly to cheese, crackers, and "ink," and keeping rigidly in the line of its original frugality, the foundations of the Club have not been sapped by luxury.

For all this, there has been from time to time a certain ambition in the breasts of some of the members that was not without its danger. It had its origin in the voyage in the canal-boat, and it took the form of an insatiable greed for navigation. When it came to a discussion of what sort of journey the Club should next undertake, after its memorable trip in the *John C. Earle*, one-half of the members would be satisfied with nothing short of an ocean voyage. In fact, it was only so slight a thing as the expense of it that kept them from chartering a Cunarder. It was difficult, all through that winter, to get the Club to consider any less ambitious plan of summer work, but as spring advanced, a more rational feeling succeeded.

One evening the O'Donoghue, while en-

TWO FLEETING IMPRESSIONS.

and other and more obscure decorative purposes; and it will be recalled that, every member being the embarrassed owner of several mantel-pieces and stacks of tiles, the Club took to decorating plaques. Naturally, the result was a surplus of plaques, and in the year 1881, when a vast store-house in the heart of the city, freighted with the choicest art-treasures of the country, burned down, and the public and the press deplored for weeks the irreparable loss of so priceless an accumulation of objects of art, it might have been noticed that the event was contemplated with an unnatural resignation by the members of the Tile Club.

"It was a dispensation of Providence!" sighed the Owl, as he thoughtfully folded up the check that the insurance company had sent him.

From plaques, the Club proceeded to matters more promiscuous. Its Wednesday night table would be covered with drawing-boards, blocks of water-color paper, small canvases, charcoal and pencil paper, tiles and plaques; and brushes, paints, "turps," and materials of all kinds. Each guest of the evening did what

COMING ASHORE.

gaged in making a conventionalized worm in blue and red on a plaque, with his fingers, passed the remark that he knew a wreck upon a sandy shore, and that it promised to afford him all the navigation he should require that year, and that therein he would, for the ensuing season, take up his abode.

"You fellows," he said, "can go to Europe if you want to; as for myself, the public taste in respect of sculpture is, at present, in such a condition that a sacrifice is demanded, and I propose to retire to a wind-swept beach, a remote and solitary retreat untenanted of man, and there by methods of my own propitiate the gods."

"Yes," said the Terrapin, "but what will you eat?"

"Eat!" said the O'Donoghue, with a withering and superior smile. "Eat? It is given to me to dispense when I please with the grosser functions of my personal economy. When I am concerned with my art, sir, I do not eat!"

This statement, coming from a gentleman whose appetite was possibly the most trustworthy and perennial upon record, was not received with respect, but he was eagerly questioned about his wreck.

With much picturesque detail, he described a large schooner which a winter storm had cast high upon a desolate beach.

"Boys," said the Bone, when the description was ended, "if even so much of that stuff were true as that there should really be somewhere upon such a shore such a wreck, and she tenable after our fashion, what a

jolly proceeding it would be to go thither this summer, and live in her for a week or two!"

Restraining himself by a powerful effort of his will, the O'Donoghue offered to produce the particular wreck in question, and exhibit it to any committee appointed to accompany him. His proposition was accepted on the spot.

The report of the committee was enthusiastic. The *Two Sisters* was high and dry upon a broad beach bordered by thick wood and undergrowth. For miles, there was no dwelling-place of any description, and there was a spring of fresh water within a hundred yards. She afforded a sufficient shelter in case of rain; she was accessible by a fifty-mile journey in a tug-boat, and she contained all the conditions essential to personal comfort and the special purposes of an artistic sojourn. These and other matters the committee set forth fully, and their plan was adopted by acclamation.

The scheme reached maturity at the close of June. At the foot of West Tenth street, near to the spot from which the venerated canal-boat *John C. Earle* had sailed away so auspiciously, there lay the tug-boat *P. B. Casket*, the property of T. J. Coffin, Esq., of Jersey City. The sun was overhead, and it was so hot that the steam that issued from the *Casket's* boiler might have been generated by it. It was a fearful day anywhere, but here on the dusty dock, with piles of merchandise baking in the noonday tide of heat, no movement of the listless air, and all about the interminable bustle, noise, and turmoil of the city's front, it seemed as though one could

hardly breathe. Small citizens between the docks, and in the shade beneath them, disported gayly in the dirty water. Polyphemus was the first to arrive. He trickled visibly at every pore. "Our civilization," he sighed, "has its drawbacks." He bestowed his burdens in the cabin and sat down on the roof to wait. Presently there appeared the ancient Daniel, the patron of "Deuteronomy" and the discoverer of "Priam"; Daniel, with-

kitchen stove, pots, kettles, pans, broilers, some stove-pipe, the decorated awning of the canal-boat, five or six tons of ice, sacks of sawdust and coal, packages of meats, two coops of chickens, and boxes of groceries without number. These, with great labor and pains, were bestowed as best they might be all over the *Casket*, and possibly never before did tug-boat appear as strangely and completely freighted as she. The Tilers arrived one by one, some with wagons bearing their baggage, but for the most part in light marching order. The *Casket*, like all craft of her calling, was not built with direct reference to either freight or passengers. Employed for the uses of both, she became embarrassing. The Tilers, some of them silent, some painfully the reverse, were about as comfortable as if they were holding on to the platform of an overcrowded street-car. The feeling was ominous.

"Give me the tow-path!" said the Scratch, seated on the top of the stove.

"And a mule," said Cadmium, from the door of the engine-room. It was evident that the tide of preference set strongly toward the canal.

"We are all here," said the Owl, as he mounted the companion way and counted. "All aboard, Captain," he roared through the fizzing steam to the pilot-house; "go ahead with your old sarcophagus!"

The broiled citizens on the dock cheered with a dry and crackly cheer and waved their hats, and the boys in the water played about the bow like the fry of mermaids. Out into the stream went the *P. B. Casket*, and down the Bay she laid her course, the O'Donoghue in the post of honor in the pilot-house, to show the captain where to go.

Matters mended. The speed of the boat caused the equivalent of a breeze. The smells, the dust, and the noises disappeared as if by magic. Discomfort after discomfort followed them,

and was forgotten, and presently the Club was in its usual spirits, and equal to any demands that might be made upon its ardor. Then sped by a panorama which is familiar to all who go down to the Bay in ships, but which, except for the Marine, had little interest. That industrious artist sat cross-legged on the roof of the cabin, sketch-book in hand, and made endless notes of boats and rigging, of the set of sails and the proportion of spars, and of the lines of boats, loaded or unloaded.

"There is always something new to be

THE CAPTAIN.

out whom the canal voyage would have been an episode of famine; Daniel, under whose sable integument were the aspirations, the invention, the ambition and the genius of a natural cook, the *cordon noir* of the Club. A broad ripple of amiability occupied the considerable area of Daniel's countenance, and his obeisance was as profound and dignified as ever. He was followed by a dray, loaded with the various property of his important office. There was a refrigerator nearly as big as a parlor in a French flat, a capacious

UNDER THE AWNING.

learned in ships," he said. "The more one studies the mysteries of their cordage, the style of their masts, the cut and setting of their sails; the matters that go to produce the effects of buoyancy and stability; the countless details that make up the sum of their picturesqueness, the more one becomes willing to confess to how small his knowledge of them really is. Those great steamers are valuable as masses only. There is little of pictorial grace to be found in them. Those excursion boats? Well, they are abominations upon the fair face of the waters. The great art of painting ships lies in acquiring skill in the subordination and repression of their details. A ship painted into a marine study with every rope in its place would be as valuable as a picture of a field with precisely the right number of blades of grass in it. In both subjects the aim and the art are identical, only the result is more obvious in the painting of a ship. The illusion of the eye is the main purpose. Give it but a helping hand, and it will see for itself in a glance more of detail and more of diversity and beauty of form than the art of all the painters that live could accomplish in years."

"Talks nicely, doesn't he?" said Polyphemus, looking over his shoulder. "Sounds like an Academy notice in a daily paper—so diffusive, yet so logical, so sententious, and so sweetly didactic."

"Nonsense!" said the Griffin, to whom the Marine was reeling off his wisdom. "The Marine is right in every word he says, and I know it; but I don't find it written for me. You are so densely ignorant on these subjects, Polyphemus, that you are just the sort of man to want to write about them. In fact, I never look at your ears that I don't suspect that you are an art-critic in disguise. And of all

the obnoxious objects on the face of the earth——"

But he got no farther. The unworthy suspicion was too much for the honest Polyphemus, and he executed a wild war-dance on the prostrate Griffin's form, until that rash Tiler said that he took it all back, and Polyphemus was a true artist, and consequently, no critic.

Certain eminences that are well set down in the geography of New York Bay disappeared and low-lying sandy shores sprang up on either side, with buildings great and small all distorted in the refractory atmosphere. But the *P. B. Casket* held on her seaward course, and the afternoon was far advanced when wild, demoniac yells from the pilot-house admonished the Tilers that the Hibernian Palinurus had sighted the *Two Sisters*, of Bath, Maine. The captain bore down on a sandy strip of coast, a beach backed by low woods and thickets, and beyond the green hills rising abruptly in the distance. On the beach, close to the water's edge, could be seen a dismantled vessel, with three masts standing, and as the *Casket* drew closer to the shore, it became apparent that a very respectable surf was running. The captain of the *P. B. Casket* was a reserved, severe navigator. He did not say much, but as he slowed up, two hundred yards away from the shore, his countenance shone with an agreeable expectancy.

The Bone came up through a hole in the *P. B. Casket*, looked at the situation, and promptly expressed the general feeling. He was indignant.

"Where's your wharf?" he cried. "How the mischief are we going to get ashore?"

"Why, easy enough," said the O'Donoghue, "we will go ashore in the small boat." On top of the cabin of the tug was a small

THE BOW OF THE "TWO SISTERS."

boat which could contain with difficulty a mass-meeting of four ordinary-sized souls. The *P. B. Casket* was in smooth water. That is, smooth in the sense of not being rough on the surface, but it consisted of well-marked undulations, and when the boat's broadside was turned parallel with the line of these swells, she rolled like a thing possessed. Each swell, after passing a little distance toward the shore, suddenly seemed to mount and move faster, until it toppled gracefully over and chased its predecessor up the shore in confusion. This pretty sight can be studied at sea-side resorts at regular rates. The Tilers contemplated it, and looked at the small boat. Then they looked at one another, and then at the pilot-house. The captain's head was hurriedly drawn in. There was a dangerous look in the Owl's eye. Putting his hand, with an ominous gesture, on his hip-pocket, where he kept his new patent atomizer, he turned to the O'Donoghue and nodded with a nod of deadly significance. But the reckless sculptor winked his eye with a careless wink, and asked who was going ashore with him. The engineer and the man engaged as crew got the small boat overboard. The Crew took off his boots, his stockings, and other matters, until he had reduced himself to two garments, of which there was reasonable suspicion that they had once been red flannel. He took the oars and seated himself in the cockle-shell which tossed wildly alongside. The O'Donoghue jumped in and the Terrapin followed him.

"Is it safe, Captain?" asked the Horsehair.

"Safe enough," replied the captain, "but it's moist."

The Horsehair stowed himself into the little angle of the bow and the bold Crew pulled off with a broad smile on his countenance. Everybody got up on the roof to witness the catastrophe. But fortune favors the brave. When they had reached the point where the rollers ran highest, the little boat rose on top of one of the biggest, and in another instant was landed high and dry on the beach. The wave carried her in bodily, and the performance looked both agreeable and exciting. The captain withdrew within his cabin with a shade of disappointment in his mien, but the Tilers were re-assured, and concluded that it was not near so bad as it looked. The three passengers were presently waving their hats and shouting in great glee upon the deck of the *Two Sisters*, while the Crew launched his boat by pushing her before him through the breakers and jumping in when he had passed them. She was half-full of water when he got back, but he bailed her out and went safely ashore with a load of light merchandise. Then there set forth with him the Bone, Briareus, and Polyphemus. The last-named recollects how the boat mounted on a rushing wave, and how he sat on the bow as it projected in the air a foot or two in advance of the crest of water, and looked down at the depth below him. Onward it sped, and it seemed as if it were the regular thing for the waves to land boats that way; he waved his hat and emitted a whoop of excitement, and then * * *! No one knew exactly how it happened;

CLAMMING.

from the masthead to the keel the Tilers took possession.

When the refrigerator had been slung on deck, the ice and the coal hoisted, the stove adjusted and its pipe run up the foremast, the cots, bedding, provisions, and the

whether the boat went a little faster than the wave and dropped in front of it, or whether the wave suddenly stopped and let the boat go on. The Bone swore that it was the ungainly bulk of Polyphemus on the bow that tipped her over, but at any rate three objects, battered, punched, buffeted, and banged to pieces; breathless, dizzy, drenched, and full of salt water, crawled out of the surf and lay down on the sand, while the captain of the *P. B. Casket* gave way to his feelings and tumbled all over the pilot-house. What remained of the rigging of the *Two Sisters* was speedily decorated with flags of distress of various shapes hung out to dry, and the Bone and Polyphemus, disembarassed of their attire, swam out to the tug and came ashore on the refrigerator.

The sun went down and the moon came up before everything was got ashore, and it was dark by the time that Daniel had fitted up his kitchen in the bow of the *Two Sisters*. The *P. B. Casket* had steamed away, a fresh breeze had sprung up from the south-east, and on board the *Two Sisters* there was more of a wreck, and confusion worse confounded, than on the night when that unhappy ship had come ashore. She had driven well up on the beach, and the sand had piled up about her so that even at high tide the waves scarcely reached her side. She lay there firmly imbedded, canted a little toward the sea, but looking as if she had settled down permanently. Her hatches were open, her hold was clean and well-lighted, she was stripped of everything movable, and wind, and rain, and sea had swept and garnished every hole and corner. The deck was a picturesque tangle of broken machinery, spars, pumps, and the apparatus of the Coast Wrecking Company, but

countless "traps" of each Tiler had been put aboard and stowed away, a labor of no small consequence had been performed. Most of the Tilers had been in the water assisting in the debarkation, and were wet through, and all had performed more labor in half a dozen hours than in the preceding half a dozen months, and yet no one complained of being tired. The evening was beautiful, a refreshing and delicious breeze came from the sea; and it was only when absolute darkness put an end to their work that a sudden and overwhelming conviction took possession of each and every man of them. The novelty and delight of the occasion, the enthusiasm that made such deep preoccupation, had combined

A SKIPPER.

to defeat Nature for the time being, but it was now her turn.

"At nine o'clock this morning," said Cadmium, out of the blackness of the hold, "I had a cup of coffee, two eggs, and a piece of toast. Since that frugal meal I have had nothing but two gallons of salt water, and that I felt I had no right to retain, as it did not belong to me."

"Let us go and see Daniel," said the Grifin, adding, in the hollow and pleading voice

"I have a thousand-dollar appetite and thirst on me this minute," said the O'Donoghue, and he threw a belaying pin at Polyphemus, whom he detected in the exercise of the cook's prerogative of tasting one of the dishes to see if it was all right.

It was nine o'clock when the soup came on the table. Daniel, wise in his experience, had brought a five-gallon demijohn of stock from the city, and the result was that there was a splendid *croûte au pôt* all ready without delay,

THE SEA-SERPENT, AS SEEN BY "BRIAREUS."

of the professional mendicant: "I haven't had a bit to eat for three days, and I have a wife and six small children, the oldest of them two months old, starving to death in Baxter street for the want of a morsel of bread. For the love of heaven do something for me or I'll die, so I will!"

When they got to the kitchen, they found the O'Donoghue begging Daniel for some food, "if it was only a cowl'd potato an' a dhrop of wather." The Catgut and the Owl had been stealing pickles and crackers, but the rest of the Tilers were perched on the bulwarks and hanging on the shrouds, watching every motion of the worthy Daniel, and stimulating him to speed. Polyphemus and the Horsehair were helping; the stove was red-hot, things were steaming and smoking, and there sailed up into the evening air such a fragrance and savor as are known only to those that are righteously and properly hungry.

in spite of the disadvantages of the new kitchen and the confusion. It was a very simple meal, but a generous one. There was the soup; there were four porter-house steaks, family size, some excellent new potatoes and stewed onions, and a capital salad of lettuce, and a cold pie from the hand of the eminent John Sutherland himself. On the bulwark there reposed a keg from which there protruded a wooden faucet. On top of the keg was a cake of ice, and the contents of the keg were cold and refreshing. Above all swung a lamp, suspended from the rigging and illuminating the table, and about all, there played that pleasant breeze, alluded to before as coming from the sea.

Every Tiler was hungry. His need surpassed mere appetite; it was downright hunger. A touching silence fell upon the table with the soup, and was maintained to the end, broken only by occasional ejaculations of

THE SEA-SERPENT, AS SEEN BY THE "MARINE."

gratification and approval, not wholly unlike the manifestations of many humbler animals under like conditions. It was an occasion of complete unreserve.

There were some subtle things that were known to an alchemy that is dead and gone long years since—properties that, when taken into the body, played strange pranks with the mind, and caused it to leave its customary and normal channel and wander in strange paths. Perish the thought, here, that any reflection is implied upon Daniel's supper! But it begat a strange and common disturbance in the Tilers who consumed it. Heavy eyelids came with the first pipe that was smoked on the poop-deck, the fatigues of the day asserted themselves, and the responsibilities of digestion outweighed all frivolous inclinations to social intercourse. One by one they sought their improvised beds, and presently the hold was filled with a gentle volume of familiar discord. Polyphemus alone remained above, stretched in a sheltered hammock, his brain secreting an easy and agreeable flow of thought, and his general condition approaching that passive and reposeful sense of content that precedes entire oblivion. He indulged the gentle intellectual exercise of distinguishing the inarticulate utterance of the several individual voices composing the concert below. He recognized the intermittent honk of the Owl, the bourdon bass of the Griffin, the touch of the brogue in the O'Donoghue, the stalwart snort of the Terrapin, and the mighty ophicleidean roll of the able organ of the Bone. "And yet," he thought, "if one were

to wake one of them up and say to him that he was snoring, he would not believe a word of it! He would be indignant!"

How long he dozed and snored himself, Polyphemus does not know, but he awoke with a sudden and apprehensive start. Something had struck him with a certain degree of force on the nose. He caught a glimpse of it. It was a human foot, and it seemed to disappear up the mast, which was close to his head. For the moment, he was thunder-struck and speechless. Then he was inclined to give the alarm, but, on an instant's reflection, he refrained, and slipped from his hammock to the deck, whence he could see the mast above the awning cover. To his mingled amazement and consternation, he beheld the Griffin climbing the mast with the most extraordinary energy and apparent haste,

THE (SKELETON OF THE) SEA-SERPENT, AS SEEN BY THE "GRIFFIN."

THE CLAM-BAKE.

greatly impeded by his nocturnal garment, which embarrassed his movements, and all the while looking down as if pursued by some enemy. He was on the point of shouting to him to know what on earth had possessed him, when the Owl, clad in white linen that reached to his heels, stalked noiselessly past him and scampered with marvelous agility up the starboard rigging, and sitting on the only two ratlines there were left on the shrouds, began making an imaginary charcoal sketch at lightning speed with imaginary materials. The sight was appalling; the least movement, the slightest loss of balance or hold, and either of them might be precipitated to the deck. The situation was frightful. Polyphemus took one silent step toward the ladder to awaken some one to come to his counsel and assistance, when he was almost paralyzed at seeing three white figures rapidly ascending it, not more than a rung or two apart. Up came the Pie, the Scratch, and the Terrapin. With excitement in every feature, they sprang to the bulwarks, climbed upon them, and stood there gazing with straining eyeballs out to sea. Hardly a minute had passed when Cadmium was half-way up the mainmast, and three or four others had taken various positions in the scant rigging, all presenting the most extraordinary, incomprehensible, and alarming spectacle. The O'Donoghue was the last to come on deck, which he effected by way of the pipe of the wrecking pump as far as the hatchway combing, over which he

swung himself with the quickness of a monkey. He gave one glance over the bulwarks out to sea and then turned like a frightened deer, cleared the main hatch at a bound, went over the ship's side like a flash, shot across the beach, and melted into the gloom of the shore. What concerned them all, what frightful hallucination possessed them, Polyphemus could not divine. He only knew that all sense of their danger, all painful and realizing apprehension of some shocking accident, was centered and concentrated in himself. He stood there helpless, looking in agonized suspense from one to another of his friends, in the deepest, most distressed perplexity and anguish of expectation. Presently, the Owl shot down the shrouds like a falling star, approached the poop, went through the movement of placing a drawing erect in front of him by leaning it against the chicken-coop, pulled out an imaginary atomizer and blew a spray of fixative through its tube, gazed with fastidious criticism at the imaginary sketch, held it up, looked out to sea, added a touch here and there of invisible charcoal or white chalk, blew some more fixative on it, and then perused its every line with rapt absorption. There was a "swish" on the smooth, weather-beaten mizzen-mast, and the Griffin landed safely on deck and walked up beside the Owl. He glanced a moment at the Owl's imaginary sketch, shook his head indifferently, shrugged his shoulders, turned away, and went down the ladder. The Owl, holding his

sketch at arm's length, and looking at it with great apparent satisfaction, followed him slowly. One by one the mysterious watchers of the night abandoned their posts, gave over their weird, mysterious gymnastics, and retired to bed. The O'Donoghue came last. He peered cautiously over the bulwarks, stepped stealthily on the deck, crept across to the opposite side, looked fixedly a moment out to sea, and then, with a gesture and a sigh of intense relief, went down the ladder to his couch. Polyphemus, scarcely daring to credit the evidences of his senses or believe himself awake, followed, and tossed restlessly awhile, and toward morning fell into a heavy sleep.

It was eight o'clock, and the sun was streaming into the hold and illuminating every part of it. The O'Donoghue sat up in his cot, and every one was awakened when he yelled: "I'd like to know who the second-hand chromo-maker is that put this sand in my bed! It may seem funny to fill a fellow's bed like that, but I don't see it!"

No one confessed to any knowledge on the subject, but as it was apparent, when he went on soliloquizing about sand, that there was to be no more sleeping, there was a general stir, and the Tilers turned out.

As they undressed for a morning swim, the Owl complained of rheumatism, and was heard to remark to himself:

"I wonder how the dickens I got my night-shirt all over tar like that!"

"Unloading those things yesterday," said the Griffin, "has made me as sore and as stiff as a poker, but where and how I came to get my knees full of slivers is what beats me completely!"

There is no man so wise as he that tells only that which he knows will be believed, and by such discretion of his speech preserves his reputation for veracity. Polyphemus heard all these things, and much more, but he kept his own counsel.

The matutinal swim did a great deal of good, but it must be confessed, while these confidences are disclosed, that the Club was out of tune at breakfast. It mended a little afterward, but went off to work in various directions with a certain air of not agreeable preoccupation. Polyphemus was troubled, but he spoke not; and the wind blew from the sea a gentle summer gale, cool and refreshing.

Early in the afternoon, Briareus came in, tired and thirsty.

"What did you get?" asked Polyphemus.

"Nothing," he answered. "I could find nothing. I didn't feel in the mood for it."

The others all came in shortly after, and every one reported failure. They could find nothing, couldn't seem to see anything in anything, and, for some reason or other, didn't feel like doing anything, anyhow.

No wonder they could find nothing! Every canvas brought in had a sketch on it of a seaserpent! Every sketch-book held from one to a dozen designs of gigantic snakes, lashing

A ROAD-SIDE VIEW.

TOO WET OUTSIDE.

the ocean with interminable coils, wrapping ships in their folds, and threatening the firmament with their towering crests. The Griffin, who was more chipper than any one else, brought in a sketch of the skeleton of a seaserpent—a ghastly relic of horrible dimensions covering the beach with its gigantic bones.

Each kept his own counsel, and Polyphemus held his peace; and if the reader is worthy of the confidence herein reposed in him, he will draw his own inferences and likewise hold his peace.

A breeze, to which, already, more or less reference has been made, still blew softly from the sea. Beneath the awning, on which the shadows from Weaver's Basin with its over-arching willows were perpetuated, it was pleasant enough, but out in the sunlight itself, it was intolerably hot. It was an afternoon conducive to indolence, and such opportunity as it presented in that direction the Club embraced. Pipes were lighted and hammocks swung in the gentle air; chairs were let back to the remotest angle, and a member who always paints things that have a strong literary motive or narrative interest, crossed his legs tailor-wise on the top of the capstan and produced a volume fresh from a London publisher.

He read aloud and the Club was interested. The volume contained poems, and they were not such as grosser poets make. To listen to them, to grasp fully their substance, to apprehend their inspiration, their motive, and their end, involved an almost inappreciable effort of the intellect. The Club was equal to it, and smoked passively as it took them in.

"Boys, let's go in swimming!" exclaimed the Bone.

The air was sultry and dead; the sea shimmered like a mirror of blue, the surf rolled in, in long and inviting lines, and the sun sank in the west into hot mists of orange and yellow. The Tilers swam on the placid waters beyond the bar, or tumbled in the white waves within it, until the twilight deepened, when they all came on deck to dress, cool and refreshed, and with dawning thoughts of coffee and something crisp for supper.

A gentle breeze had sprung up, but, unlike the breezes that had gone before, it blew not from the sea.

Presently, in the busy group beneath the awning, there was a sound as of a fish dropped on a marble slab. Yielding to a sudden and uncontrollable impulse, a Tiler had smitten himself.

"That was a mosquito," he explained.

"I should say so!" said another, with a wild flourish of his towel, and almost immediately every one seemed alive to the need of urgent haste in resuming his garments.

As they dressed, more mosquitoes arrived. On that gentle but malefic breeze they sailed in clouds from the thickets and the swamps of the inner shore. The deeper the darkness grew, the thicker they came, and a more high-minded, self-sacrificing, and assiduous community of insects never brought itself to the attention of humanity. The Tilers had met mosquitoes before, and were prepared to undergo, as every one is, their regular proportion of mosquito in acquiring their sum of human

THE HOUSE OF THE RECKLESS LANDLORD.

experience; but in this case it looked as if they were expected to take it all at once. It was a dispensation like one of the plagues of Egypt. They bit at every available point. They betrayed no sense of fear, but went right to work without regard to the consequences. As fast as a whisk of a towel or a slap of a handkerchief killed or swept them off, others promptly took their places. They climbed inside the legs of trowsers; they invaded the sleeves of coats; they got into beards, ears, eyes, and noses, and the torture they inflicted was really painful in the last degree.

Handkerchiefs were put around necks, trowsers-legs were tied at the ankles with strings, or thrust into boots, and hands kept far down in pockets, clouds of smoke were blown in exasperating futility, and every device and exertion resorted to to mitigate the infliction. Nothing availed against them, and

supper was eaten with a running accompaniment of gymnastics. The Bone and the Owl went down on the beach and built a huge fire of wreckage, which sent up a prodigious smoke and myriads of sparks that looked like fiery mosquitoes waiting for midnight. They sat down in the lee of the blazing pile, and smoked themselves, so that when they returned to the ship they exhaled an aroma like that of Westphalia hams. It was an evening of complete misery.

A veil should be drawn over the night that ensued. Some there were that slept and let the mosquitoes take their fill, but the majority could not rest, and stalked about like restless spooks, covering themselves with sheets, and dozing fitfully, only to wake up and resume the unequal combat. It will not do to speak of what was undergone; much less repeat what was said about it. The mosquito, how-

AN OLD SALT.

ever, is a guilty thing, for whose greatest excesses the cover of the night is needed, and so when daylight came it brought a partial relief.

Somewhat restored by the morning swim, they ate their breakfast with a resentful air.

"I can fight mosquitoes all day," said the Scratch, "but I want my regular sleep. If we can't get some nets by night I am going home."

The Barytone was expected to arrive in the evening, so the Owl, as the best pedestrian, was dispatched to the nearest civilized point, with instructions to telegraph him to bring an invoice of mosquito-nets with him; which that brave and faithful Tiler, no whit dismayed by the message, accordingly did.

That afternoon, the wind went about and blew a brave summer gale; the enemy was dispersed, and the Tilers wandered for miles about, happy and industrious. The Barytone was met far away by a delegation who bore the nets to the *Two Sisters*, and Daniel, rising to the occasion, prepared a supper of great merit. The evening was perfect, and the nightmare memory of the night that had gone

before made it seem more perfect still. It was a very contented group that sat late upon the poop. The waves plashed with a low and murmurous melody upon the shifting sands, the firmament was jeweled with bright, unclouded worlds. The lights of ships far out at sea shone like wandering rubies and emeralds, and the Barytone sang with a voice for which not all the space about appeared too vast. It was a delightful and a compensating event.

The next day, the ingenious Briareus might have been seen sketching beneath a mosquito-net that he had erected on the beach. There were insects enough to justify the expedient. Numbers of sketches were brought in, in the evening, many interesting in respect of their subjects, but all fragmentary and incomplete. The nets were put up in the hold, and every one at dark sought their protecting folds. The air was again filled with torment. No lamps were lighted, but in each of the ghostly canopies that filled the hold there was the fitful glow of an incandescent pipe. The protection afforded was fairly effective, but the situation was discouraging.

A CORNER BY THE HARBOR.

In the middle of the hold, where a broad square of moonlight was projected from the hatch above, like a statue of Buddha, his head bent in the apparent contemplation of his own person, the Owl sat up on his cot and filled his seclusion with a dense cube of illuminated smoke.

"Boys!" he said, solemnly. "This wont do. We must get out of here!"

Not a word of comment was heard, but the silence that prevailed was eloquent of assent. The square of moonlight moved away from the canopy of the Owl, who no longer plied his meditative pipe, and secure within their defenses, the Tilers abandoned themselves to such dreams as unimpaired digestions and good consciences held in store for them. There ensued no day of respite. The

sun beat mercilessly upon the yellow sand, the landscape quivered in the tide of heat, the sea betrayed no movement, and the listless air turned to purple haze.

"Nature," said Polyphemus, "is opposed to this business."

"Yes," said the Marine, "let us go! I know a 'tiley' town by the sea, not far away—a place of peace and cheapness."

"All right!" said the Club.

"Follow me!" said the Marine.

And in an hour the sable Daniel stood alone on the bow of the *Two Sisters*, while afar on the shore he watched the receding figures of the Tilers.

There is a very old town, a sea-port, a place where generation after generation has built all manner of stout wooden ships, a town

A SEA-SIDE HOMESTEAD.

surrounded by high hills and owning a deep, land-locked harbor. It is not over fifty miles from New York, and it is accessible by a railroad which runs to the top of a hill a mile distant and stops there, as if unwilling to enter into competition with the steep road that completes the rest of the journey. It is a conservative, steady-going, sensible settlement, full of statistics and physical geography, and rich in historical interest, as well as everything else which goes to make an old town tedious. In its exterior aspect it is a delightful place, and its people are as simple, as unconventional, and as sincere as if it had never known a summer boarder, and New York were a thousand miles away. Thither the Tilers had fled. Down the hill-side they

marched, in the shade of the trees and the cool by-paths. At the bottom were gray shingles and brick chimneys, and all along the edge of the deep blue basin there were ships in the various stages of construction and others in the various stages of decay. There was an inn, capacious enough to contain all the Tilers, and the landlord of it received them in a kindly, unenthusiastic fashion, assigned them to neat and comfortable bedrooms, and named a price so astonishingly low as to create a feeling of uneasiness as to what he intended giving them to eat. But when he told them to make themselves at home, and that he thought it was time that there was a little noise about the place, anyhow, and that they would oblige him person-

THE JOVIAL SEA-DOG.

ally-by-making as much of it as they wanted to, he won their confidence completely. They never fully understood him, however: he was so different from all other inn-keepers they had known. He never seemed quite comfortable in his mind unless they ate more than was good for them at every meal, and in the quantity and quality of what he set before them he was evidently courting an early bankruptcy. He was a most meritorious man, and Briareus portrayed him with a soft black lead-pencil on a large sheet of rough paper, and the Owl obstructed the entire traffic of the street by sitting down in the middle of it and doing his house in water-color.

The Tilers invaded the town in every part, unearthing a bewildering wealth of material. Half of the houses were on the most intimate terms with the water. The tides rose and fell in and about them, boats were fastened at the doors, and everywhere there was a wreck of matter and an aspect of unlimited flotsam and jetsam that was of the deepest interest. In the ship-yards were the chips of a century, and on every hand the débris of vessels long gone to their rest. On the hills

and slopes and in the valleys about, were the cottages of this community of shipwrights, each embowered in an endless tangle of apple-trees and vines and revealing itself by a bright bit of paint, or a red chimney pushed up through the foliage. The fences were of wreckage or ship-joinery; if there was a touch of decoration here and there, it partook of the character of that on a ship's cabin, and in the matter of color they conformed strictly to the unwritten rules that prescribe how a vessel shall be painted. Besides the ship-building, there were the repairing yards, with dismantled hulks gathered about them, an interminable confusion of things, smoke ascending and the air laden with picturesque smells and the clatter of calkers' tools. Everything had to do with the making of ships, and there was hardly a child in the place that was not a born expert in all that pertained to the business. The houses were full of models and odd pictures of ships in carved wood, gayly painted as they sailed on the brightest of deep green seas. There were more ambitious pictures, too; portraits made in foreign parts, many thousand miles away, of ships that had been built in the yard.

The sturdy carpenters took a great interest in the Tilers and their work. One who, at his dinner-hour, found the Burr under his apple-trees at work, was delighted, and insisted that he should "put the old woman in," and wherever there was a Tiler found at work, a crowd surrounded him and ventured the freest, openest, and most unsophisticated of criticism. There were no closed doors to them, and when one day it rained, a master-builder gave them his sail-loft, commanding the whole harbor, to sketch in. Another gave them boats to work in, and a great jovial sea-dog with a skin of leather, a foggy voice, and a big heart, hoisted sail and went off to sea with the Marine, and brought him home in great spirits in the midst of a gale of wind and a storm of rain.

At the inn there were a piano and an organ, and as the Club's musical representation was of the strongest, these two instruments came into active employment. The Husk was present with his nimble fingers, the Catgut had his cherished Guarnerius, and the Horsehair had brought his trusted 'cello. Added to these, there was the noble Barytone, and it is not to be wondered at that there was more music in the town than ever before in its history. When it was confined to the artists mentioned, it was, no doubt, excellent; but the subject of the choruses, and the rendering of pieces that were supposed to call for the entire vocal strength of the Club, must be approached with diffidence. However, local criticism was

not severe, and popular interest, in what could be heard through the open windows, was overwhelming.

In the homely and quiet atmosphere of this peaceful country-side, so reserved, so shy, and so simple in its unspoiled beauty, William S. Mount spent his life. He was one of the first of distinctively American artists, a most faithful and conscientious worker, a man of honorable attainments and admirable qualities, and thoroughly esteemed by all who knew him. At sunset one evening, the Club visited his home, a charming old Long Island household, a place rich in tender memories, and hallowed by endearing associations. They were received with graceful hospitality by the ladies of an essentially artistic household, which is filled with objects of art, including many examples of the work of the deceased artist. It was an agreeable and interesting episode, and the members felt it to be in some sort a respectful observance to a justly revered memory.

They were happy days, those days about the ship-yards, the old houses, and the orchards; days of extemporized clam-bakes on the pebbly beach, of long swims in the clear blue waters of the harbor, of excursions through the hills and the valleys by the Sound, of sketch-books filled to overflowing,—days that the weather could not spoil, and that shall not be forgotten. They ended all too soon, and with their ending the Tile Club takes its leave.

HOME OF THE ARTIST, W. S. MOUNT.

BROTHER STOLZ'S BEAT.

It is one hundred and thirty-eight years since the Moravian Bishop Nitschman, with his missionaries, and his handsome niece Anna, and Count Zinzendorf, kept their first Christmas in Pennsylvania, in a stable in a forest, which they had named Bethlehem; and it is eighty years since Brother Stolz walked for the last time his watchman's beat in the Bethlehem paths, and called aloud at six in the morning, "*Der Glock hat sechs schlag*"—that is, "*Die Glocke hat sechs geschlagen*."

If he were to walk there now, he would be as unhappy as the white-haired Rip Van Winkle in the village of Falling Waters, and doubtless would lose his way at every turn; but to the stranger of to-day, visiting Bethlehem for the first time, it would seem nothing strange to meet him halting before some one of the quaint old stone houses, and saluting newcomers in the name of the Lord. In fact, it seems strange not to meet him, or "Brother Rose," who succeeded him, the records say, in

RELICS OF THE CROWN INN.

1801; what could be more natural, in streets where all lights are put out at ten o'clock every night, than to meet a holy watchman carrying a spear, and singing sacred hymns softly to himself?

Instead of this, however, it is a modern policeman you meet, with all the modern appliances for first deafening people and then knocking them down; but the policeman looks out of place and superfluous, and as often as he crosses your path seems a reminder of the old past by the very emphasis with which he marks the new present.

The North Pennsylvania Railroad has done its best to obliterate every trace of the Bethlehem which Zinzendorf knew; it has cut down the forests, planted forges, and furnaces, and rolling-mills, and warehouses, clattering and black and unsightly, crowding up and

down the Monocacy Creek, shriveling its willows and polluting its waters, till the stream has come to have the resigned and dejected look that always settles on the face of a free brook after it finds itself hopelessly hemmed in by a town.

This same North Pennsylvania Railroad will carry passengers now from Philadelphia to Bethlehem in two hours, and comfortably; but that seems a small atonement for the audacity of having pulled down the old Crown Inn to make room for their fine union depot. This old inn was the first which the Moravians built. It was separated by the Lehigh River from their settlement—it being their invariable custom to build inns at a distance from their towns, “to keep their people free from contact with the world, and to avoid as much as possible the prying curiosity of travelers.” On a panel of its double-door was painted the crown of one of those good friends of America, the royal English Georges, and in the bar-room hung the inn’s license, granted in 1746—“in the thirty-third year of the reign of the sovereign Lord George the Second, by the grace of God, King of Great Britain, France, Ireland,” etc. Living was cheap at the inn: “Breakfast with tea or coffee, 4 pence; dinner, 6 pence, and with a pint of beer, 8 pence; supper, 4 pence, or if hot, 6 pence; lodging, 2 pence; a night’s hay and oats, 12 pence.”

With food and lodging to be had at such prices as these, there could be no doubt that it must have been genuine religion and not economy which made the Moravians of that day carry all their food with them on long journeys, and eschew public inns. The wonder is that they ever took journeys at all, since the rules of the society forbade their leaving home, even for one day, without their clergyman’s permission; and when a man was bold enough to desire to go so far as New York or Philadelphia, it became a still more serious matter, for the question of his going or not

THE FIRST HOUSE IN BETHLEHEM.

going had to be decided by the Overseers' College assembled in conference with the clergy. It was customary, also, for journeys of such dangerous length to be made in a private stage owned and run by a member of the society; and as it was manifestly impossible for him to run his stage all the way to New York and back for the sake of transporting the body and protecting the soul of a solitary passenger, it was the habit of these patient people to wait, sometimes for weeks, till seven or eight persons could be found all carnally bent on the same journey. Then the stage of one Adam Luckenbach

This grave-yard is the pleasantest spot in all Bethlehem. It lies in the very heart of the town, shaded by great trees, and looking toward the sunset as a grave-yard should. It is simply a field of solid green turf, with wide, well-kept walks, and rows of green mounds, close together, and all of the same size. Here, without distinction or separation, except of sex, the dead Moravians lie, in the order of their dying. A man might happen, thus, to lie at last by the side of his worst enemy—if such a thing could be as enmity under the banner of the "*Unitas Fratrum*," and, doubtless, they did have their quarrels and dislikes,

IN THE GRAVE-YARD.

was hired for the trip, and the good Moravian wives were thrown into a bustle of preparation. Pies and cakes, and meats and bread, and coffee—all the food that could possibly be required for the journey—were cooked and stowed in baskets. Not once would this stage-load of embodied consciences stop at an inn of the world's people. Adam carried the feed for his horses, and a bucket to water them with; at noon the travelers kept a holy picnic by the road-side, and at night they asked for shelter at farm-houses, warmed up their tea and coffee by the kitchen fire, and ate the food from their baskets. It is a picture of incredible simplicity, and is not without a certain fine pathos, also, of reproach to our present methods.

It is only a few years—not a hundred—since these good men did this thing. They were the grandparents of the men who are making and selling iron, building and running railroads, buying merchandise, and bartering land in Bethlehem to-day, and who can go and come at their pleasure from wicked city to wicked city all over the world. Is it absolutely certain that the grandchildren have the best of it? Walking at sunset in the old Moravian grave-yard, one thinks it over, and doubts.

like the rest of us. One would think, however, that the every-day seeing of this common and undivided final dormitory must have been a great check upon neighborhood squabbles—sometimes, also, a pang to weak human hearts that would like so much better to be buried close to their own beloved, than by the side of people for whom in life they had cared but little. On every one of the old mounds lies a small marble slab, bearing either a number or an inscription of a name, dates of birth and of death—nothing more; the harsh word "died" is never seen; always the kinder and truer word "departed," for which there is the authority of the Apostle Paul, as well as of all poets.

It is an unconscious tribute to the beauty of the old Moravian faith, and the inalienable truth of their view of death, that the townspeople of Bethlehem find this grave-yard pleasant to sit in; women bring their sewing, children their toys, and spend whole afternoons there in the summer; and lively social chat goes on with a sort of home-like freedom, which would seem impossible in any public park, but seems inexplicably natural in this sunny old grave-yard. Part of this strange atmosphere of good cheer may be owing to

THE EASTER PROCESSION ENTERING THE GRAVE-YARD.

the effect of the joyous ceremonies which are held in this grave-yard at sunrise on every Easter morning. It would seem in no wise unlikely that their deep-seated gladness should outlast a short twelve months' time, and linger from Easter round to Easter again and again, in a sacred bond of worship and triumphant contentment.

If the influence of the North Pennsylvania and the Lehigh Valley railroads, and the institutions and occupations kindred and incidental to them, should ever crowd out or degrade these beautiful Easter ceremonies, the loss to the Bethlehem people would be greater than they perhaps dream. But up to this time, the ceremonies have suffered no change. Long before daylight, on Easter morning, men playing trombones go through the town. They play a sweet and solemn tune, to which are set the words :

"Christ is risen from the dead,
Thou shalt rise, too, saith my Saviour—
Of what should I be afraid?
I with him shall live forever;
Can the dead forsake his limb,
And not draw me unto him?"

Waked by this music, the Moravians gather in their church, where a part of the Easter Litany is said. At the passage, "Glory be to him who is the resurrection and the life," the congregation rises and moves in proces-

sion to the grave-yard. The little children go first; then the singers and the trombone-players; then the clergymen; then the women; lastly the men. Slowly singing hymns, they walk through the streets, and enter the grave-yard with a burst of music; at the instant of sunrise, swiftly and quietly taking their appointed places on the different paths, the women still separated from the men, they sing and chant the remainder of the Litany. Sometimes, there are present at this service more than two thousand persons.

Another sunrise service, not ecclesiastical and not amenable to the Overseers' College, has much to do with the cheer of the old grave-yard. It is a summer service, held daily for many weeks, beginning in June. No trombones are heard, only voices—the voices of orioles, cedar-birds, thrushes, flickers, black-birds, and robins. They live in the trees, knowing they are safe; they gather and brood and multiply and return, as much at home as in a forest. The place is full of them; and some are so tame that they come down and hop about with the children, in the afternoon.

Song, and sunshine, and shade against heat; flowers and green turf, and a beautiful outlook to far-off wooded hills,—all Nature joins hand in hand here with the Moravians in their loving wisdom about death. From first to last they accept it, and recognize its triumph of deliverance. They hold it a sin to wear black for the dead; their funeral services and hymns are full of joy, and not sorrow—of hope, and not desolation; each death in the congregation is announced to the town by a burst of melody from the trombones in the church-belfry, and bells are rung, and not tolled, as a summons for the burial services. After all, it is not so strange that the old

THE MORAVIAN CHURCH.

grave-yard has such a home-like air, and that the women and children of Bethlehem like to spend their summer afternoons in it. The slabs on

gachcook" of Cooper's Leatherstocking stories. Tschoop was a Mohican, and held so high a place in the Moravian esteem that they departed from their usual custom of reticence on tombstones, and wrote in marble of him that he was "one of the first fruits of the mission at Shekomo, and a remarkable instance of the power of divine grace,"

the more modern graves are larger, and betray a tendency to the modern vice of wordy inscriptions. If this should increase, the spell of the charm of the old grave-yard would be broken.

Fifty-eight of the Indian converts to the Moravian Church are buried here. Their quaint names seem still quainter carved on marble. One of these is "Tschoop," said to be the father of Uncas, who was the "Chin-

EASTER MORNING SERVICE.

which might not be so unqualified praise as it looks at first sight. Another Indian grave of interest is that of "Brother Michael," who, before the Moravians took him in hand, was one of the fiercest warriors of the Munsey tribe. After he became a Christian, he was so good

taken; upon his left cheek two lances, crossing each other, appeared; and upon the lower jaw was delineated the head of a wild boar."

Brother Michael was baptized in 1742, and died in 1758. Sixteen years' test of a man's conversion ought to be held a fairly good one.

VIEW IN BETHLEHEM.

and pious that he was known as "the crown of the Indian Mission." An old record of his burial says:

"The serenity of his countenance, when laid in his coffin, formed a singular contrast to the warlike characters scarified and tattooed upon his face when he was a noted Indian brave. On his right cheek and temple was the representation of a rattlesnake; from the under lip a pole was drawn, passing over the nose and up between the eyes to the top of his forehead, ornamented at every quarter of an inch with round marks, intended to represent the number of scalps he had

Governments which can discover to-day no way of dealing with Indians except to kill them, might find profitable matter for reflection in the early records of the Moravian churches. In an old memorandum of the statistics of a "certain religious society in Bethlehem" is the following clause: "There are eighty-two Indians, besides those young Indian women who live with our young women, and besides the savages who are going and coming and staying longer or shorter

A FAMILY TRIO.

with us." And in the early winter of 1756, Bishop Spangenberg wrote to the Governor of Pennsylvania:

"We are at a loss how to act with those Indians that come out of the woods, and want to stay at Bethlehem. They are very troublesome guests and we should be glad to have your Honor's Orders about them. Our Houses are full already, and we must be at the Expences of building Winter-Houses for them if more should come; which very likely will be the case according to the account we have from them who are come. And then another difficulty arises, viz. we hear that some of our neighbors are very uneasy at our receiving such murdering Indians; for so they stile them. We, therefore, I fear, shall be obliged to set watches to keep of such of the neighbors who might begin quarrels with or attempt to hurt any of them."

It is on record, also, that the hostile Indians in Pennsylvania found the Moravian towns great hinderances to their warfare, "because they could not prevail on the friendly Indians to destroy the missionary establishments, nor prevent them from informing the Brethren whenever any attempt was to be made on the settlements." And in the record of a petition which the Moravians made, in 1757, for a "Relaxation of Taxes," we find stated as one reason of their especial impoverishment at that time "the extraordinary expense the Brethren are and must still be at, in maintaining the Indians who fled to them from Gnaden Hutten (now wholly thrown upon their hands and left unprovided for by

the Government), for whose subsistence alone this year they have been obliged to let them have upwards of fifty acres of their best land (cleared and fenced for them at the Brethren's own expence), to plant their Indian corn," etc.

The first building in which the Moravians worshiped in Bethlehem is now called the "old chapel." It was a house built of hewn logs, two stories high, with a steep roof, in which there were two stories, again, of garrets. It was the second house they built, and was intended as a house for ministers and their families, as well as for a place of worship. It was called the Gemein House, and a large room on the second floor, where the congregation assembled, was called "Der Saal." The ceiling of this room was supported by four wooden pillars, which can still be seen in the walls of the four rooms into which it has been partitioned.

Ten years later, "the town having a population of two hundred souls," it became necessary to have a larger place of meeting; and a stone addition to the Gemein House was put up, and dedicated on the 10th of July, 1751, by Bishop Nitschman, the father of the famous Anna Nitschman, Count Zinzendorf's second wife, about whom it is impossible not to speculate curiously when one puts "two and two together," as he prowls about among the old

THE OLD CHAPEL.

archives in Bethlehem, and looks up at the handsome face of Anna's old portrait.

The present church is comparatively modern, having been built in 1806; but even this has in its turn been modernized, and is now in its interior not unlike the majority of plain meeting-houses of the Congregational sects. There are still living many graduates of the "Boarding-school for Females"—as the Moravians called their young ladies' school—who recollect vividly the bare floors, the white-curtained windows, the hard pine benches, and the round tub of a pulpit, high up in the air, with a canopy above it—in place of which now are bright red carpets, cushioned pews, and a low reading-desk; all changes for the better, so far as physical comfort goes, but changes which mean a loss of sentiment—a loss so subtle that it cannot be stated, but so positive that nothing can compensate the soul which knows what it is, and the places whence something has fled. In those old times the men sat by themselves on one side, the women on the other; and though this fashion of separation of the sexes has become obsolete, there are some old Moravian women in Bethlehem to-day who cannot yet bring themselves to sit by the side of their husbands in church on Sunday.

Much more interesting than this modernized room for worship is a room in the second story where are kept the old records of the society, and its library, numbering about two thousand volumes, all relating to the past or present of the "Unitas Fratrum." Here are treasures indeed. A rare set of old Bibles, in many tongues; records of the early history of Pennsylvania, and the treaties with the Indians; the diaries of the church, kept from 1742 to the present day, and recording with great minuteness not only church affairs, but the affairs of the town; quaint old narratives of the journeys of some of the early travelers in America, and closets full of original letters and documents written in the last century, bearing invaluable autographs.

Among these treasures is Benigna de Watteville's old hymn-book—a thick, clumsy little volume, bound in fine scarlet leather, with more gilding than one would suppose Benigna would have thought it right to possess, she being Count Zinzendorf's daughter and the wife of a bishop of the church. Six years before her marriage to Baron de Watteville, she traveled in America with her father, and was present with him at that memorable Christmas celebration in the stable, in the year 1741, by reason of which the name of

Bethlehem was given to the town, which had before been called "Bethlehem," or "The House on the Lecha." It must have tried Benigna's eyes if she sang hymns from this hymn-book on that Christmas night in the dimly lighted stable, for the print is fine and none of the best.

Another still more interesting hymn-book is one that belonged to an old Moravian, Paul Muenster by name, and was held by him so dear that, when he fled from Moravia to Herrnhut, in 1729, he carried the volume strapped on his back, as his greatest earthly treasure. It was printed in 1606, "By the Elders and servants of the Churches of the Bretheren in Bohemia, Moravia, and Poland." At Herrnhut, Muenster gave the book to Anna Nitschman, and she in turn gave it to another Anna, well known in Moravian history—Anna Johanna Seidel, a clergyman's wife. A rare token of friendship for Mistress Seidel it was in Deaconess, Anna to give away this old quarto, even then one hundred and twenty-three years old. Ultimately, Paul Muenster removed from Herrnhut to Bethlehem; there he found and reclaimed the old hymn-book, and kept it until the 4th day of October, 1792, when he bequeathed it to the library of the church, and himself "entered into the joy of the Lord."

High up on the walls of this room of the archives hangs a row of queer, stiff old portraits of the Moravian men and women who

were famous in the early days of the church. The women all wear the severe and unbecoming white caps of the order—a cap fitting as close as possible to the head, covering all the hair, and held down flat on the forehead by a tight band passing around the head. At twelve years of age all the Moravian girls had to put on these caps: dark red strings were worn at first; pink after the age and dignity of "single sisters" had been attained; blue after marriage, and white by widows. One is led to wonder if the precise date was fixed, by the Overseers' College, at which the red strings marking the period of "great girl"-hood were to be replaced by the paler pink of the "single sisters," or whether it was left to the humility and discretion of the individual to make the change at the suitable time. The name of this cap was "Schnepfen Haube"—from the resemblance of its shape to that of a snipe's bill. No wonder that there is said to have been great rejoicing among the married women and sisters when this hideous and unbecoming head-gear was abolished from the American congregations, in the year 1818. How ludicrous must have been the discussions among the fathers when this momentous change was under consideration; and how easy to fancy what a tremendous home pressure must have been brought to bear on all of them to induce them to vote in the right way. No doubt, if one could get at the Moravian family statistics of that time, all the young

THE FIRST MORAVIAN SEMINARY AT BETHLEHEM.

BISHOP SPANGENBERG.

and handsome wives and daughters would be found on the side of "no caps": only a very bold man could have had courage to vote that the caps should stay on.

No face in all the long rows of portraits in this room compares in interest with that of Anna Nitschman, Count Zinzendorf's second wife. Handsome, determined, it compels one's instant attention, and awakes a strong curiosity to know the details of her life. Underlying all the spiritual devotion, holy self-denials, and enthusiastic proselyting of the lives of those early Moravians, there were doubtless strong currents of human

emotion, warfares with the flesh, and storms of passion; and looking from the face of Anna Nitschman to that of Count Zinzendorf on the opposite wall, one cannot forbear wondering what the count thought of Anna that Christmas night in the stable, and whether she and his daughter Benigna "looked over" together in the fine scarlet-and-gilt hymn-book. Anna was a person of mark, having been appointed "eldress" at Herrnhut when she was only fifteen years old. She came to America with her father, in 1740, and it appears from the records that she accompanied Zinzendorf and his daughter in their travels in

PART OF THE SISTERS' HOUSE.

America. At this time Zinzendorf's first wife, Dorothea, the Countess Erdmuth, was at home, on the estate of Berthelsdorf, and consoled herself during her husband's absence by devoting all her energies to "the counsel and assistance" of the Moravians at Herrnhut. It was in the year 1741 that the count traveled in America with Benigna and Anna, and it was not until 1756 that the good Countess Dorothea died—fifteen years; but Anna had waited, and the count had remembered; and in 1757 they were married, Zinzendorf being then fifty-seven years old, and Anna most certainly no longer young. They lived together only three short years, "died within twelve days of each other, in 1760, and were buried side by side in the cemetery at Hutberg."

In the same year in which this significant marriage took place, there was a rare great marrying in Bethlehem—a most curious incident in the history of the congregation. Owing to the strict separation of the sexes, the "single sisters" not being permitted to pass the "Bretheren's Home," nor the "single brethren" the "Sisters' Home"—the sisters being forbidden to mention the name of one of the brethren or to look toward them if they accidentally met,—owing to these restrictions, and to the absurd practice of selecting wives

for men and husbands for women by lot, and assigning them to each other by the authority of the elders' conference, marriages were growing fewer and fewer in Bethlehem. This fact being reported to the authorities at Herrnhut caused much uneasiness there, and the Rev. Bishop John, Baron de Watteville (husband of the Benigna who had the handsome scarlet hymn-book), was sent from Germany to America to see what could be done about it. The result of his visit must have given great satisfaction all round, for it brought about that on one day, the 20th of April, 1757, no less than fourteen couples were married out of hand, "in the face of the whole congregation, in the old place of worship, 'Der Kleine Saal.'" This ceremony was called "The Great Wedding Act," and was put on record, with the names of the couples married and the ministers who performed the ceremony. Twelve ministers there were, two of them bishops. Each bishop married two couples; the other ministers, one apiece. As the fourteen couples, accompanied by the twelve ministers, entered the hall, the trumpets and trombones were played, and the sight must have been indeed what the old record calls it—"a very respectable prospect," and "a triumph for the young people of both sexes." After the ceremony, Bishop Spangen-

ANNA NITSCHMAN. (FROM A PHOTOGRAPH BY H. B. EGGERT, BETHLEHEM, OF THE OLD PAINTING.)

singing songs, either for his daily crossing or for the hours of storm, as Father Petrus did, and Massy Warner, also, who was the regular ferryman, but happened to be away on the day when "Doctor Huebner's grandfather" arrived. Indeed, the old Moravians sang songs on every occasion; all their work was set to music. Bishop Spangenberg, writing in 1746 about the "bretheren and sisters of Nazareth," says: "Never since the creation of the world were there made and sung such lovely and holy shepherds', plowing, reapers', thrashing, spinners', knitters', sewers', washers', and other laboring hymns, as by these people." He does not add, "ferryman's," but we, thinking of the old ferry, add it at once, and imagine Father Petrus pacing slowly to and fro on the boat, leaning against the straining rope, as if to set his weight athwart the current, and chanting such words as these—might they not have been?—

Downward current, I shall stem thee;
In Jehovah's name restrain thee;
Rushing water, seek the sea!
Yonder green shore lureth me.
Banks of Canaan, Jesus' land,
Where the singing angels stand,
Downward current, vain to draw me,
In Jehovah's name I stay me;
Rushing water, seek the sea!
Yonder green shore lureth me.

Downward current, like my sinning;
Out of thee I win my winning;
Sinners seek the burning sea;
Heaven's green shore lureth me;

berg delivered a sermon, several of the other ministers read addresses, and "Brother Petrus Boehler sang an original ode." Brother Petrus Boehler evidently was not above turning his hand to anything, for it was he of whom an old traveler recorded that "when the grandfather of Doctor Huebner came to Bethlehem he had to cross the Lehigh River, and he hailed a person on the other side who was watering linen on the bleach [then linen was worn altogether]. The person came and took him across. It proved to be the noted Brother Petrus Boehler who tended the bleach. All were required to be busy; and he, as the minister of the congregation, set a good example to the others."

The boat in which Brother Petrus carried the stranger across the river was a flat-boat, large enough to carry six horses. It was run on a strong rope stretched across the river, and made fast on each bank. By the mere force of the current of the river, the boat was pulled across. This was the only way of crossing the Lehigh until the year 1792, when the Lehigh Bridge Company built a bridge, and did away with the ferry. Since then, what with spring freshets and the breaking of huge dams put up by canal companies, bridges have had a hard time of it on the Lehigh, and have gone down stream, sometimes, much faster than the old ferry-boat ever did in the roughest of weather. And nobody thinks of

COUNT ZINZENDORF.

Banks of Canaan, Jesus' land,
Where the singing angels stand,
Downward current, vain to draw me,
In Jehovah's name I stay me,
From the sinner's burning sea
Christ the Saviour saveth me!

The "Sisters' Home" is still devoted to the same purpose for which the thoughtful Moravians built it in 1742, *i. e.*, the shelter of lonely single women, who have not money enough to make for themselves homes. It is a quaint low building of stone, with heavy buttresses, and a high, steep roof, in which are tiers of dormer-windows. It walls in three sides of a green court-yard in front, and has at its rear another green inclosure, where each sister may have, if she likes, a tiny flower-garden of her own. The halls are low, narrow, and cross and intersect each other by arched ways; their floors are of square red tiles such as were baked in Bethlehem a hundred years ago; the stairs, balustrades, and all wood-work are of old oak, shining brown, and worn to a surface like satin; such smooth spotlessness, such record of a century of cleanly fashions, was never seen in wood before. The walls are of white plaster seemingly as durable as the oak—not a break, not a crack, in it. The mechanics of to-day in Bethlehem wonder when they pull down an old house to find plaster as firm as timbers; but the explanation is simple: "The Moravians prepared their plaster in the fall of the year in a pit in the ground, where it remained all winter, covered only by a few boards to keep out the dirt, so that all the lime became thoroughly slacked by exposure to the winter, and, when used, became as soon as it was dry a cement as hard almost as stone."

The floors are sunken in places almost into hollows, yet not a sill has a chipped edge or corner, and the fine old dull red color is as handsome in its way as anything in Pompeii. The walls of these passage-ways are lined with cupboards, wardrobes, narrow tables, hanging-shelves, boxes—all the little devices and accommodations of a snug spinster housekeeping. Each sister has right to all the space along that part of the passage-way wall which bounds her own rooms, and the story which the passage-ways tell is the whole story of the plan of the sisters' living. It is, after all, only an apartment-house on a humble and economical scale. But the scale which would, anywhere else in the world, seem so narrow and uncomfortable that it would surely sink into untidiness and squalor, is here lifted, by simple cleanliness, with its allied "godliness," into a dignity that is more elegant than mere splendor could ever be. One cupboard which I remember was swung

BLAST-FURNACES ON THE LEHIGH.

on the wall, and had sides of open wire. With touching unconsciousness of neighbors' prying eyes, some sister had set away here, in plain sight, among her little stores, a tiny strip of cheese,—certainly not more than two mouthfuls,—one tumbler with perhaps three mouthfuls of currant-jelly in it, and another with a table-spoonful of cranberry. The exquisite neatness of the place took away from this little hoard every suggestion of the sordid, and merely gave one a thrill of tender sympathy at the thought of the lonely noon or night meal at which these tidy bits of savings would be set forth. Here and there, in corners, or at the turning of a passage-way, stands an old-fashioned high clock; some of them silent, as better befits the place—heirlooms, no doubt, belonging to sisters who cannot spare space for them in their little parlors and bedrooms, but who like to see them standing outside, like faithful sentries over the past. It is a token of the inalienable dignity of the lives lived in this place that one sees here, without any thought of offense or sense of the ludicrous, an old broom and dust-pan, or even a well-worn pail and scrubbing-brush, hanging on the wall by the side of a clock of fine old mahogany, inlaid with yellow satin-wood.

The rooms in this house are not bestowed as charities, although none but Moravian women may occupy them. They are rented at low prices, and the rent-money goes to the church. Some of the sisters who have sufficient means occupy apartments containing

HALL-WAY IN THE SISTERS' HOME.

several rooms, and furnish them comfortably. Others live in a single room in the roof, but, up to the very ridge-pole, extend the same exquisite cleanliness, order, and sense of protection.

It is the one spot left in Bethlehem, besides the grave-yard, where the old Moravian atmosphere still lingers—the one place where, if Brother Stolz were to return for an evening ramble over his old “beat,” he would find himself at home. One can easily fancy him pausing any night in the shadows of the old stone buttresses, and, resting on his spear, looking up at the dark and soundless chambers, singing a watchman’s hymn :

“Lie still in the darkness,
Sleep safe in the night.
The Lord is a Watchman,

The Lamb is a Light.
Jehovah, He holdeth
The sea, and the land,
The earth, in the hollow
Of His mighty hand.
All’s well! in the darkness,
All’s well! in the night.
The Lord is a Watchman,
The Lamb is a Light.

“Awake! Day is dawning!
The Lamb is the Light.
The Lord has a vineyard,
His harvests are white.
Jehovah, He holdeth,
By sea and by land,
His saints in the hollow
Of His mighty hand.
Awake! It is morning.
The Lamb is the Light.
The Lord has a vineyard,
His harvest is white.”

TO A DEAD WOMAN.

NOT a kiss in life; but one kiss, at life’s end,
I have set on the face of Death in trust for thee.
Through long years keep it fresh on thy lips, O friend!
At the gate of Silence give it back to me.

ESMERALDA.*

A PLAY IN FOUR ACTS.

CHARACTERS :

"OLD MAN" ROGERS . . . A North Carolina Farmer.
 LYDIA ANN ROGERS His Wife.
 ESMERALDA His Daughter.
 DAVE HARDY A Young North Carolinian.
 ESTABROOK A Man of Leisure.

JACK DESMOND An American Artist in Paris.
 NORA DESMOND } His Sisters.
 KATE DESMOND }
 "MARQUIS" DE MONTESSIN . . . A French Adventurer.
 GEORGE DREW An American Speculator.

ACT I.

Room in Rogers's house, North Carolina. Rough log interior. Window and door in background.

Drew appears at door—looks in a little, and knocks.

DREW. There doesn't seem to be any one about. (*Steps in and looks around.*) From the general aspect of things, I should say it wouldn't be difficult to make a bargain with them—and a good one. They are generally pretty innocent. Now if Estabrook will keep quiet! (*Looking around, goes to door.*) Estabrook! Esta—oh, he's making a sketch of some confounded thing or other. Estabrook!

ESTABROOK. (*Enters, with sketch-book.*) With all respect for your energy of character, I must confess that it jars on the pastoral nature of the scene. What's the difficulty? Business again, I suppose. Oh! this is the house where the owner of the unlimited vein of iron ore—

DREW. (*Puts hand over Estabrook's mouth.*) For heaven's sake, keep still.

ESTABROOK. My dear fellow, there's a vigor about you that might be toned down—to advantage.

DREW. Look here! I must make a bargain with these people. It's a matter of thousands of dollars.

ESTABROOK. And this is the house—the little house they live in—and there's a simplicity about it —

DREW. Never mind the simplicity about it. I want to find the people. (*Knocks on door.*)

DREW. There's some one, at last. (*Hurries to door.*) Hallo! Hallo, you, I say! (*To Estabrook.*) He's chopping wood. Hallo!!

OLD MAN. (*Outside.*) Mother, whar air ye? Some un's a-hollerin' at the door. Lyddy Ann!

DREW. No, it's you I want. Can't you come here for a few moments?

OLD MAN. (*Appearing at door.*) She aint yere.

DREW. Who isn't here?

OLD MAN. She aint—Lyddy Ann—mother, ye know.

DREW. Do you mean your wife?

OLD MAN. Y-yes. Thet's her.

DREW. I don't want your wife.

OLD MAN. Who d'ye want then? Esmeraldy?

DREW. No, I want the man who owns this farm around here. It's rather a barren place, but I thought —

OLD MAN. Waal, mother—she's out some-whares.

DREW. Look here. Is this farm hers or yours?

OLD MAN. Waal, I reckon I paid fer it—sorter—but mother, she—she kinder runs it—an' I don't 'low to enterfere much. Thet's the way it is. But wont ye set down?

DREW. Thanks.

OLD MAN. (*Glances toward Estabrook.*) Aint he 'long with ye?

DREW. Yes—oh, yes. Estabrook—this is the gentleman I was looking for.

OLD MAN. Howdy! howdy! I'm glad ter be made acquainted. Rogers is my name. Set down. Mother, she'll be pow'rful glad ter see ye—pow'rful. Whar air ye from?

ESTABROOK. New York—as much as anywhere.

OLD MAN. Lor', how tickled mother wud be ter see ye. She haint never been ter New York, but 'Liz'bethville—whar she was raised—it kinder made her feel like she knew suthin of how New York was. Thar's three churches to 'Liz'bethville, an' four stores, an' a post-office. She's high-sperred, mother is.

DREW. And you say she takes charge of your farm for you?

* The drama of "Esmeralda" is founded upon a short story of the same name by Mrs. F. H. Burnett, which appeared in this magazine for May, 1877. It is here printed through the courtesy of the Madison Square Theater, where it was produced October 30, 1881, and is still being played. In abridging the play to meet the requirements of the magazine, passages have been necessarily omitted which are striking features of the stage representation. Copyright, 1881, by Frances Hodgson Burnett and W. H. Gillette. All rights reserved.

OLD MAN. Waal, yes—she kinder runs things. She's a pow'rful manager, mother is—an' she's high-sperreted, an' it's—waal—it's kinder easier ter let her. An' her bein' raised in 'Liz'bethville makes her more businessliker then me an' Esmeralda.

ESTABROOK. And who is Esmeralda?

OLD MAN. She's my little gal—'tleast she aint so little now. She's eighteen years old an' a-goin' ter be married—Lor', just ter think of her a-goin' ter be married!

DREW. I suppose the land round here isn't good for much. Now yours, for instance. What is your wife's opinion of it?

OLD MAN. Waal, I dunno so much about thet.

DREW. Hasn't she ever given you her opinion of it?

OLD MAN. Wa-al—no—not eggzackly. She's kinder confined herself more to givin' me her opinion o' me fer buyin' it.

DREW. Um! What does she say?

OLD MAN. Waal—she sez a heap—now an' ag'in—when she gits started on thet, we kinder change the subjick.

DREW. (*Gets up and walks to and fro.*) Well, I suppose she'll be here before long, wont she? You see, I have a little idea—that is, it occurred to me that possibly—

OLD MAN. Say! Was ye thinkin' o' stayin' 'round yere till she comes?

DREW. Yes.

OLD MAN. An' talkin' to her about the land?

DREW. Yes, I wanted to have a little talk with both of you.

OLD MAN. Oh, ye wont need me—when ye git her started ye wont need me. I reckon I'll hev to go an' git a load o' wood about—about ten miles from yere. I 'low I'd better start now. (*Gets up hastily.*) Ye wont need me, when ye git her started about the land.

DREW. (*Catching Old Man's arm.*) Look here, you mustn't go. (*Gently pushes him back into seat.*)

OLD MAN. (*Nervously.*) Thet thar wood—we can't do without it.

ESTABROOK. (*Aside.*) Oh, this is a shame—to get the poor old chap's land like this—it's a rascally shame, by Jove!

MRS. ROGERS. (*Outside.*) Esmeralda, where's your father?

OLD MAN. (*Starting.*) Thar—thar she is—an' thet thar wood!

DREW. Look here. The best thing for you to do is to take us over the farm. Suppose we go before she comes.

OLD MAN. I think we'd just as well.

MRS. ROGERS. (*Outside.*) Esmeralda! Esmeralda!

OLD MAN. (*Going quickly toward door, stopping.*) Le's go! Le's go! She haint feel-

in' her best—I kin tell. (*Beckons Drew vigorously. Exit.*)

ESTABROOK. Drew, it's a shame—it's a confounded shame. (*Going.*) And such an innocent old fellow, too. (*Exit with Drew.*)

Enter Mrs. Rogers from door Left. She looks about.

MRS. ROGERS. There was some one here—I heard him talking. (*Looking out of window.*) There they go! What did he take them away for without letting me see them! Always drudge—drudge—drudge—nothing else—and no chance of anything else. I ought to be used to it by this time. But I suppose I never shall be. It comes over me morning, noon, night. And there's no escape. I was a fool. There wasn't a man in 'Lizabethville or 'round I mightn't have had when I was teaching school there—and some have done well since then—done well—and moved off to big cities. And for a mere fancy—a whim—I came to this—to drudge my life out on a rocky farm—and never see a soul from month's end to month's end. And I was a handsome girl, too—and always had it in me to long for what was going on outside. What fools girls are!

Esmeralda enters door with a pail.

ESMERALDA. (*Timidly.*) Mother!

MRS. ROGERS. Oh, you're there, are you? What makes you slink about that way, as if you were scared? That's one of your father's ways. Where have you been?

ESMERALDA. (*Nervously.*) I've—been pulling the corn for supper—and here it is, mother.

MRS. ROGERS. Here it is! Where? It isn't in the pail.

ESMERALDA. (*Looks in pail.*) Oh—I—I—must have left it there. We were talking—and—and he laid it down by me on the grass—and—I think I forgot it. I'll go and get it.

MRS. ROGERS. Stop! Who was with you?

ESMERALDA. Dave, mother—

MRS. ROGERS. Don't hang your head down as if you had no spirit in you. That's another of your father's ways. You two are so alike you drive me wild. What was it you were talking about?

ESMERALDA. We were talking—he was saying—he—was saying—

MRS. ROGERS. Did it take him a week to say it? Well, go on!

ESMERALDA. If—if you don't mind—I'll call him, mother, and—he'll tell you himself. He's down by the bars. He wanted to come in with me—but—

MRS. ROGERS. But what? You were afraid to let him, I suppose. As if I didn't know what he wanted.

ESMERALDA. (*Timidly draws near Mrs. Rogers and lays a hand on her arm.*) Don't be angry, mother—please don't. It's all my fault. Don't let what I do make you blame Dave or—or father.

MRS. ROGERS. It's not so much your fault as your father's. You get it all from him. You'd be well enough if you had some spirit, and set more value on yourself.

ESMERALDA. (*At door.*) Mother, he's coming.

MRS. ROGERS. Well, you might have done better. (*Aside.*) If there was any sort of a chance for her around here, I'd never listen to it for a moment. If we'd lived in 'Lizabethville!

ESMERALDA. Here he is, mother.

Dave enters. He goes at once to Esmeralda and takes her hand.

DAVE. Well, Mrs. Rogers, may be you know how it is with us.

MRS. ROGERS. (*Rather sullenly.*) Oh, yes, I know—I'd have been blind not to have seen it.

DAVE. And—I—hope you've nothing particular against it.

MRS. ROGERS. Nothing particular—no more than I've nothing particular for it.

DAVE. I know I aint good enough for her, but—

MRS. ROGERS. Well, she might have done better.

DAVE. She might have found a richer fellow—and a smarter fellow, but she couldn't have found one anywhere who'd think more of her.

ESMERALDA. I shouldn't care for money, mother—I shouldn't know what to do with it; but when I go away from father—dear, gentle father—I couldn't bear to go to anyone who was different, and Dave—I—I've known Dave so long. Tell her about the little house, Dave.

DAVE. (*Laughs.*) I've been building a house for my wife. I drove the last nail yesterday, and it's standing there under the chestnut trees.

ESMERALDA. And he never told me a word of it till to-day—and it's so far off the road that no one has seen it—and father knew it all the time, but he never said a word.

MRS. ROGERS. Oh, you've built a house. Well, that shows you've got something in you. What kind of a house is it?

DAVE. Frame, and pretty enough, too. Oh, yes, it's pretty—'taint built for me, you know—a rough chap like me could get along with any place. "Taint for you," says I,

"but for a little creature with soft ways—and she's got to be kept in mind. Make your stairs easy," I says, "for she's going up 'em every day—Heaven bless her! Fix the shelves the right height, and drive your nails so a person can reach 'em that aint six feet in her stockings." I drove in one nail last night for a sun-bonnet to be slung up on—a little white sun-bonnet, and I stood and looked at it in the twilight until I swear I could see that little bonnet hang there. It was the last thing I did to the house. And there it stands waiting. And if anything should happen to part us—though, thank God, nothing could—it would stand there waiting until it fell away board from board, and there wasn't anything left of it.

Enter Old Man from door in background, followed by Drew and Estabrook.

OLD MAN. Oh, she's yere—an'—an' so's Esmeraldy, an' Dave.

DREW. (*To Mrs. Rogers.*) Madam, allow me to explain.

MRS. ROGERS. Oh, you can't tell me anything. It's the land, or the taxes for the land.

DREW. I don't wonder at it. Would you sell it cheap?

MRS. ROGERS. Cheap? I'd sell it for almost nothing.

DREW. What would you say to five hundred dollars?

MRS. ROGERS. Will you give that?

DREW. I will, if you'll settle the matter right up now, as I'm in something of a hurry. If you agree, I'll pay you the money down; if you say no, that ends it.

MRS. ROGERS. I'll do it.

Old Man and Esmeralda, who have watched the whole affair with breathless interest, are much grieved. Old Man covers his face with his hands and bows his head.

OLD MAN. Mother, ye aint really—goin' ter sell the old place?

MRS. ROGERS. Of course I am, and glad of the chance. Come! (*All except Dave follow her into room Left.*)

Dave stands motionless. After a moment he moves a little uneasily, goes and looks after them; comes down Center.

DAVE. There's something wrong. He didn't look like a man that would cheat, but you can't tell. I've seen those men before—yes, I saw 'em on the hill—and—one of 'em was picking up stones and hammering pieces off the—e— There's ore on this farm! Am I too late? (*Runs to door.*) Yes. (*Staggers back.*) They have signed! (*An idea occurs to him. Opens door and speaks.*) Would you come here a moment? (*Nodding.*) You, sir!

Yes. Could you come out here? I want to see you. (*Drew appears at the door.*)

DREW. Did you want to see me, my friend?

DAVE. Yes, if you'll please come here. It's very important, sir.

Drew hesitates a moment, looks back, apparently satisfied, comes quickly out toward Dave. Dave moves up a little, and without apparent effort comes around between Drew and the door.

DREW. What do you mean?

DAVE. I don't mean anything but this: There's ore on this place!

Drew makes a quick motion toward door. Dave stands before him. They regard each other.

DAVE. (*Quietly.*) I thought so.

DREW. Young man, you are too late; the farm is sold. He has signed a bond for a deed.

DAVE. Well, I reckon you haven't got it yet.

DREW. That may be, but I will have it in a moment.

DAVE. I don't think so.

DREW. Don't you? Oh, well, we're all apt to be wrong once in a while. (*To Estabrook, who appears at door.*) E-Estabrook, just get that contract for me.

ESTABROOK. My dear fellow, I wouldn't touch it with a ten-foot pole.

DREW. (*Aside.*) Confound it! (*To Dave.*) Come, now. You're a man of sense. This is simply a matter of business with me. The farm may be worth a little something, but not so very much. Now I'm willing to do the fair thing. What'll you take to keep it dark?

DAVE. How? How do you mean?

DREW. (*Aside.*) They're coming. (*To Dave.*) See here! I'll give you a thousand dollars if you wont say a word.

DAVE. What!

DREW. Here, I'll—I'll make it five—five thousand—just to keep quiet half a minute.

DAVE. Five thousand! (*Derisively.*) Why, I wouldn't wrong that old man for a million!

Enter Mrs. Rogers with bond in her hand, followed by Old Man and Esmeralda.

DREW. (*Desperately.*) Ten thousand.

DAVE. No, sir!

DREW. (*Making toward Mrs. Rogers.*) Then I warn you not to interfere. (*Dave seizes Drew. A short struggle.*) Let me pass, young man.

MRS. ROGERS, ESMERALDA, OLD MAN. Dave! Dave! What does all this mean?

Dave throws off Drew, and seizes bond out of Mrs. Rogers's hand.

DAVE. Nothing, only the land you were going to sell this man is worth a fortune.

MRS. ROGERS. (*To Drew, almost fiercely.*) Is this true?

DREW. (*Crossing to Mrs. Rogers.*) Madam, it is a fact that there is an iron drift on your farm.

MRS. ROGERS. And you've been trying to get it from me for nothing!

DREW. I always buy as cheap as I can. Since our former bargain is off, I will make you as good an offer as any one.

MRS. ROGERS. What is your offer?

OLD MAN. (*Going to Mrs. Rogers.*) Mother, seems like if we could jest save out the old house, it 'ud be a heap o' comfort.

MRS. ROGERS. Save it! I've done with it and everything that's gone along with it. I've done with it. Step this way, sir. (*Drew and Mrs. Rogers move toward door.*) I'd as soon sell to you as any one, but this time I'll see that you don't get the best of me. I'll sell you only a part of it, and you may work it on shares. Dave! I wish to speak with you.

Dave leaves Estabrook and follows Mrs. Rogers and Drew. Estabrook goes toward door in background. Old Man goes and takes hold of Estabrook's sleeve.

OLD MAN. Mother, ye know—(*Motions toward door.*)

ESTABROOK. Yes, I know.

OLD MAN. She—she's pow'rful high-sperreted, an' ye know how high-sperreted people is. Ef—ef ye could do anything about gettin' him ter leave the house standin', not ter pull it down, it 'ud be a heap o' comfort to us, me an' Esmeraldy—a heap o' comfort. Ef ye'd jest let it stand awhile, mebbe—mebbe I could kinder save up myself—by littles—ter pay ye fer it. Lor'! ye don't know what a comfort it'd be to know it was a-standin' yere. Seems ter me like it's been yere so long that the mountains 'ud kinder miss it.

ESTABROOK. (*Takes Old Man's hand.*) Mr. Rogers, it shall stand here if I have to buy it out myself—I will buy it out myself—I'd rather buy it out myself.

OLD MAN. Will ye? Lor'! Will ye? Esmeralda, he's a-goin' ter keep it fer us. Come yere.

ESMERALDA. You—are very kind to us.

ESTABROOK. (*Taking Esmeralda's hand.*) Don't thank me. It's nothing. (*Takes Old Man's hand. Goes to door. Pauses and passes hand over eyes.*) The atmosphere here is getting misty! (*Exit.*)

OLD MAN. (*To Esmeralda.*) Don't cry, honey. Come here.

ESMERALDA. (*Trying to brush away tears.*) Oh, forgive me, father. She—she'll take me away from him—and—the little house will stand empty. I shall never see it.

OLD MAN. (*Softly caressing her.*) Thar,

thar, honey, don't ye believe it. She caynt be hard enough fer thet.

ESMERALDA. Did she ever spare me? Did she ever spare you? Hasn't she been against him always? It's all over, father—it's—all—over.

MRS. ROGERS. (*Outside.*) I shall go to 'Lizabethville to-morrow, an' then I can let you know. Dave will show you the road. Good-night.

DREW. (*Outside.*) Good-night.

OLD MAN. She's coming.

Esmeralda rises and goes to the spinning-wheel. Mrs. Rogers enters from door in background. She stops and looks at Esmeralda.

MRS. ROGERS. What are you there for? There's no need of your touching that again.

OLD MAN. 'Twont hurt, mother—an' it kinder ockypies her thoughts.

MRS. ROGERS. She's got plenty to occupy her thoughts. Here she is going to be a lady—with all the world before her. I shouldn't have slept a wink for happiness if such luck had come to me.

OLD MAN. But, mother, we aint all on us alike, and Esmeraldy she aint alike.

MRS. ROGERS. She's got to give up all that nonsense about Dave Hardy.

OLD MAN. Now, mother—

MRS. ROGERS. He's done something for us about selling the land, and I'll see that he's paid; but I should be a fool to let him spoil everything right at the start.

OLD MAN. It'll go kinder hard with him, mother. You know thet.

MRS. ROGERS. It will at first, but he'll soon get over it.

OLD MAN. But Dave—mebbe he aint alike, nuther.

Enter Dave, by door in background.

DAVE. Why, old man! Esmeraldy!

MRS. ROGERS. Stop where you are.

DAVE. What has happened here?

MRS. ROGERS. You may as well have it now as later. You heard what I said about the life we've lived?

DAVE. You said you'd done with it.

MRS. ROGERS. So we have—and with everything that belonged to it.

DAVE. And I belonged to it!

MRS. ROGERS. And we've done with you!

DAVE. (*After pause.*) Esmeralda—you aint nothing to do with this?

ESMERALDA. There's no need to ask it, Dave.

DAVE. Very well then. (*Goes quickly to her.*)

MRS. ROGERS. What do you mean?

DAVE. Do I look like a fellow that means

nothing—like a chap that means to give up what's been trusted to him, or like a man that'll stand by what he loves and lives for?

OLD MAN. He's a-standin' up ag'in' mother!

MRS. ROGERS. You mean what you say. So do I. She aint but eighteen—what has she seen of the world and other men? And are you so foolish as to think that if she'd seen other men, handsomer, and better educated, and richer, that she'd have chosen you?

ESMERALDA. Dave, don't listen to her.

MRS. ROGERS. Are you the man to stand in her way—to rob her of what she might have?

DAVE. Rob her! You don't mean that!

MRS. ROGERS. If you keep her from what she might have, don't you rob her? If you compel her to stay here when she might see the world and live in gay places, don't you rob her? She can be a lady. What would you do with a lady in the little house you've built?

DAVE. What shall I do?

MRS. ROGERS. Leave her, unless you're the man to ruin her life for her as mine's been ruined for me.

DAVE. Oh, this is hard—hard!

OLD MAN. (*Aside in despair.*) I knowed it—I knowed he couldn't stand up ag'in' mother.

MRS. ROGERS. If you act like a man now, she'll always remember it of you. If you stand in her way—look that the time doesn't come when she'll remember that.

DAVE. Old man, is she right?

MRS. ROGERS. He knows I'm right! If you love her, go, Dave Hardy—don't stay here and torture her!

DAVE. Yes—I'll go! But I can wait, and so will she. And—if the end's what it might be—I shall know I've done her no wrong—and acted a man's part. Esmeralda! It's not the end. I don't believe it. True hearts can't be parted by things like this—but for a little while. Good-bye! Good-bye! (*Exit.*)

OLD MAN. (*With sudden impulse, starting toward door.*) Mother, let me call him back.

ESMERALDA. (*Runs toward door, calling.*) Dave! Dave!

Stops before Mrs. Rogers, and turns in despair to her father.

OLD MAN. (*Holding out his arms.*) Esmeraldy, come yere!

ACT II.

A studio in Paris. Nora and Kate discovered in quaint costumes. Kate decorating large punch-bowl. Nora painting panel.

NORA. And when I called, Mrs. Rogers

showed me a new photograph of Esmeralda. Just think of it. Another.

KATE. And I suppose in another dress—that is eighteen times since we've known her, and we've known her only two months.

NORA. Poor Esmeralda! Well, I must say if all mothers are like Mrs. Rogers I am not so awfully sorry we are orphans, and Jack had to bring us up among the paint-brushes in his studio. At all events, we are not obliged to have our photographs taken every twenty-four hours, and we're not dragged around after marquises.

KATE. Marquises, indeed! Nora, if ever there was a reptile —

NORA. Yes, if ever there was a reptile, it is that man.

KATE. And to think of that sweet, innocent little Esmeralda being made miserable by him.

NORA. (*Indignantly.*) And to think of that utterly stupid Mrs. Rogers being deceived by a title which doesn't even mean that he is respectable.

KATE. Gracious, Nora! Somebody's coming up, and here we are covered with paint.

NORA. Never mind; we can be busy and keep our backs to him.

MAID. (*Entering.*) Monsieur will be in presently. Will you be seated?

Enter Estabrook. Sees Nora, who keeps her back toward him and pretends to be occupied.

ESTABROOK. (*Aside.*) Æsthetic female artist with rather satisfactory back. Wonder if face is as satisfactory. (*Sits; picks up book. Nora looks furtively, but only sees his back. He moves, and she turns quickly. He looks at her again.*) Rather tantalizing, upon the whole. I wonder if the pursuit of art necessitates such extreme devotion to one's subject.

Turns and looks at punch-bowl. While he does so, Nora looks again and seems struck by some new thought; makes a half-step.

ESTABROOK. (*Aside.*) What delightfully diabolical decorations! I wonder if she did them. I'll look again and see if it's possible.

Looks again. Nora is looking, too, and starts forward with exclamation.

NORA. Mr. Estabrook!

KATE. (*From back of stage.*) What!

NORA. Only imagine it being you!

ESTABROOK. I can't. If a man is going to imagine a thing, he had better begin with something less complicated.

KATE. It is.

NORA. Of course it is.

ESTABROOK. I will not deny it, though I

feel it to be greatly against me. (*Aside.*) The front view is entirely satisfactory. (*Aloud.*) It was very charming in you to recognize me. I was rather afraid you had forgotten.

NORA. Of course not, though it is ten years since we saw you.

ESTABROOK. It seems much longer—to me.

NORA. Then it is entirely unnecessary for me to mention that I am Nora Desmond.

ESTABROOK. What! Nora! Jack's sister! Little Nora!

NORA. Oh, it takes the form of a sudden revelation, does it? Then you did not know me.

ESTABROOK. Really—oh, of course I knew you, but (*looks at her again*) don't impose on a too confiding nature. It is impossible. Excuse me. You must be mistaken. Little Nora!

NORA. Excuse me. I have grown since then. I have had time in ten years, and I have given a good deal of attention to it.

ESTABROOK. But it's out of the question. I used to kiss little Nora—I distinctly remember it.

KATE. Perhaps you remember —

ESTABROOK. (*Takes Kate's hand.*) And this?

KATE. Guess.

ESTABROOK. Is Kate.

KATE. I won't insist on it. You know I was always more accommodating than Nora.

ESTABROOK. And this is Nora. Allow me to congratulate you—you must find it extremely satisfactory?

KATE. She does, extremely.

ESTABROOK. The last time I saw you, you were little girls, wore long hair and short dresses, and paint on your aprons.

NORA. We wear paint on them now. *Regardez!*

KATE. But it is because she is a daughter of toil, and paints little panels very badly and sells them very well to unsuspecting people.

ESTABROOK. (*To Kate.*) And you?

KATE. I decorate tea-cups and punch-bowls, as *par exemple*.

ESTABROOK. And Jack?

NORA. He paints just as well, and wears his coat just as shabby as ever. He is painting just now a portrait of an American girl, a Miss Rogers.

ESTABROOK. Miss Rogers, an American—not—not from North Carolina?

NORA AND KATE. Yes!

ESTABROOK. And her name is —

NORA AND KATE. Esmeralda.

ESTABROOK. Then I have actually found them!

NORA. Were you looking for them?

ESTABROOK. Looking for them? I never was so given over, body and soul, to the pursuit of people in my life. I wouldn't miss being on the ground with Mrs. Rogers for the next few months for a —

NORA. You might say ducal coronet.

ESTABROOK. I will! Ducal coronet does seem to meet the exigencies of the situation.

NORA. And it is Mrs. Rogers you want to see?

KATE. She's worth seeing.

ESTABROOK. It is all of them, but Mrs. Rogers beyond all else on earth. I have a letter in my pocket which — But tell me what they are doing.

NORA. Doing? If you mean Mrs. Rogers, she is making a vicious old spectacle of herself; but if you mean poor Esmeralda and her father, they are breaking their hearts. They are dragged out, night after night, to parties where they know nobody —

KATE. Oh, if you could only once see Mr. Rogers at a party, sitting against a wall, wondering at his gloves. He can't speak a word of French.

NORA. He can't even speak English, dear, gentle old man; and people laugh and stare at him, but he dares not go home until Mrs. Rogers gives him permission.

ESTABROOK. And the poor girl?

NORA. That is the worst of all. Her mother has set her mind upon marrying Esmeralda to a certain marquis, and makes her life a torture to her. Ah! I wish I could change places with her for an hour—just one hour.

ESTABROOK. I don't think it would take an hour.

KATE. Here's Jack.

DESMOND. (*Entering.*) I say.

ESTABROOK. So do I.

DESMOND. Look here. How are you? Is it you, old fellow?

ESTABROOK. Certainly not.

DESMOND. Well, how are you, and that sort of thing? You're the very man I was thinking of a moment ago.

ESTABROOK. Delighted to hear it, but why?

DESMOND. Because I've run across something new in simplicity and situation—and material.

ESTABROOK. Where?

DESMOND. I'll tell you—you'd like it, old fellow. There's an atmosphere about it and all that sort of thing. It's our guileless countryman. I've seen him again.

KATE. Oh, where? What was he doing?

DESMOND. Well, I saw him on the Champs Élysées again, and I went and sat by him, and suddenly—guess what happened?

NORA AND KATE. What?

DESMOND. The Rogerses passed with the Marquis in their carriage, and —

ESTABROOK. And he turned and asked you something about them?

DESMOND. (*Amazed.*) Yes. How did you know?

ESTABROOK. I knew it. Thank you. Now I've found him.

NORA, KATE, AND DESMOND. You've found him?

ESTABROOK. Yes. I've a letter in my pocket which —

NORA AND KATE. Oh, yes! The letter which — Oh! do tell us.

ESTABROOK. I will, but (*to Jack*) tell me what he said, and what you found out.

DESMOND. He said, "Sir, those people—do you know anything of them?" I answered, "Yes, I do." "And the gentleman with them," he continued, "is he—is he—going to marry the—young lady?" And I answered —

NORA. No! no! no! Didn't you say No! Jack, didn't you?

DESMOND. No—I—I said I'd heard he was.

NORA. Oh, you stupid! Why didn't you say wasn't?

KATE. And shouldn't.

NORA. And you'd kill him before he should.

ESTABROOK. Miss Desmond, Miss Kate, my climax has arrived. I have a letter in my pocket which will floor this marquis so completely that he will forget where his marquise is, and wonder why he was born. (*Takes out letter.*)

NORA. Mr. Estabrook, if you don't read it —

ESTABROOK. (*Reads.*)

"MY DEAR ESTABROOK:

"You remember the Rogers's farm, on which I thought I had made such a find when you were with me. It turns out to be a dead failure. The vein of ore has given out, the people are penniless, and I am defrauded. You remember the lover the old woman treated so badly—she took her daughter away from him without giving him even a chance to say good-bye; and it is on this lover's farm the ore appears now in apparently limitless quantities; and not only on his farm, but on one adjoining, which has just been left him by a relative. The man will be a millionaire."

NORA. And this poor fellow of mine is the lover. I know it—I know it!

ESTABROOK. Miss Desmond, control your emotions. (*Reads.*) "Naturally the next move is to see the man, and the man is not to be

found. The story goes that he scraped together every cent he could and followed the girl to Paris, and is probably starving there in a garret. There is no time to be lost. If you can find him and cable to me, you will do me a tremendous service. Find him for her sake, for his sake, and for the sake of that demoniac old spit-fire who is paid in her own coin." (*Folds letter.*) The rest is only business. "George Drew."

NORA. Let me go and find him this minute.

KATE. This instant, Nora. Put on your bonnet.

ESTABROOK. Do you know where he is?

DESMOND. Yes. Hurrah! I hadn't finished my story. He is coming here, and may be in at any moment.

NORA AND KATE. Why?

DESMOND. Because it struck me he was hungry, and I thought a good way of giving him money would be to pretend I wanted him for a model, and then ask him to dinner when he came.

NORA. (*Kissing him.*) Jack, I love you!

KATE. Suppose he should come when the Rogerses are here. You know Esmeralda is coming for her sitting.

ESTABROOK. If they come before he does, I swear you to secrecy. Let him be the one to tell them what has happened.

NORA. Certainly—and some one is coming now.

SERVANT. Monsieur Rogare.

Enter Old Man meekly—Nora runs to meet him.

NORA. Mr. Rogers, I'm so glad to see you.

OLD MAN. Thank ye, honey—thank ye—bong—bong—What is it I have to say, Miss Nory?

NORA. *Bon jour.*

OLD MAN. That's it. Bong jore—I'm a-tryin' to git it, but it goes sorter hard with me. Bong jore. I come to tell yez Esmeraldy can't come because she's a-gone out with the Markis and I haven't got a minit to stay.

Turns to speak to Desmond and sees Estabrook.

OLD MAN. Lor'! Lor'! I seed ye last in North Ca'lliny—I seed ye last in North Ca'lliny.

ESTABROOK. So you did, Mr. Rogers, so you did, and I left them all well there. Sit down and let me tell you all about it. (*Leads him to seat.*)

OLD MAN. I haven't got hardly a minit to stay. Mother, she'd just rear if I didn't take her to the Boys.

ESTABROOK. The Boys?

OLD MAN. The Boys de Bolony. (*Breaks*

off nervously.) Lor'! Lor'! how glad I am to see ye. (*To the rest.*) Ye mustn't mind if I kinder tell everything else go fur a moment to talk to him.

KATE AND NORA. No, no. Go on.

OLD MAN. Seems like it was old times and all this yere trouble—(*Checks himself.*) Ahem! I rekin ye've heerd how we've been enj'yin' ourselves.

ESTABROOK. I've heard something of it. What have you been doing principally?

OLD MAN. Lor'! Ah! we've been doin' a sight. Lor'! we've been gay (*groans*)—we've been gay.

ESTABROOK. In what way, for instance?

OLD MAN. We've been a-goin' 'round to dress-makers—an' dry goods stores, an' tradin' kinder wild, an' a-goin' to ball-dances, an' theaters, and operays, an' gallerys full o' ile-paintin's, an' a-goin' to 'em day and night. Lor'! how gay we've been! (*Wipes forehead and groans.*) I guess I'd better go. Mother, she'd just rear—ef I didn't take her to the Boys.

ESTABROOK. Oh, you mustn't go yet—just tell me. I'm afraid you haven't really liked all this.

OLD MAN. I'd orter, I reckon. Mother, she's enjoyed it enough to go 'round the family. Her a-bein' born in 'Liz'bethville is what gives her a advantage over me and Esmeraldy. Ye haint seen Esmeraldy yet?

ESTABROOK. No.

OLD MAN. Ye'd sca'cely know her. She's got so much style to her dressin'. There's a heap o' style to it, an' style is what folks wants, I reckon, but seems like it don't egg-sackly reach the spot allers.

ESTABROOK. You mean she doesn't enjoy it?

OLD MAN. Lor'! no! Though I'd orter be a-goin'—mother, she'll just rear ef I don't take her to the Boys; but Esmeraldy, she's kinder in my mind—an' she aint a-thinkin' of style—she (*in a burst of confidence*)—she's a-thinkin' o' suthin' else—she's a-thinkin' o' the little house standin' empty, an' Dave, a-waitin' and wearin' himself out.

ESTABROOK. Poor little girl! Poor little girl!

OLD MAN. Yes—yes—them's young folk's ways—an' I haint got nothin' ag'in' 'em—an' seems like sometimes Esmeraldy couldn't hold out no longer. Ef it could be fixed now so as things'd be easier for her, mother might take it out of me an' welcome.

NORA. Kate, I'm convinced that I shall tell him.

KATE. I wish you would.

OLD MAN. I haint got a single minit to stay. But just tell me, is the old

house a-standin' yet, or did they tear it down?

ESTABROOK. It's there yet. I got my friend to leave it.

OLD MAN. Lor' bless you! (*Grasping his hand.*) I kinder felt it weren't gone.

ESTABROOK. (*Shaking his hand affectionately.*) Thank you—thank you. But look here. As to Mrs. Rogers and your daughter, can't something be done? Couldn't you make a stand? If a man was going to make a stand, I should think this was as good a time as any. Make a stand!

OLD MAN. (*Amazed.*) Eh! What! Ag'in' mother?

ESTABROOK. Oh, yes! With the highest deference for her—confound her! Tell her to go to—the Catacombs. What right has she to be making everybody miserable?

OLD MAN. Lor'! you don't know nothin'—ye're young an' onexperienced.

NORA. If I don't put my hands over my ears, I must tell him. (*Puts hands over her ears.*)

KATE. Nothing else will save me. (*Does the same.*)

OLD MAN. But I'll see ye ag'in—I've got to go—I've jest got to. Ef I don't take her to the Boys—mother, she'll jest let down on me—I can't stay a minit.

ESTABROOK. Oh, mother be roasted—not to put a too fine point on it. Don't go yet.

OLD MAN. (*Picking up his hat and shaking hands as he walks to the door.*) I must—I've got to—you don't know what it is to be kinder married—to folks as is high-sperreted. Come an' see us—it's Kattery vank dux Boolyvard Horseman. Good-bye all. Lor'! I wish I hed longer to stay.

ESTABROOK. Good-bye.

OLD MAN. (*Gets outside door, steps back wistfully.*) Ef it warn't fer mother—but I've got to go. (*Exit.*)

NORA. If he had staid another minute, I should have told him.

KATE. If you hadn't I should.

DESMOND. I don't mind saying that I came rather near it myself.

ESTABROOK. And how about Dave?

DESMOND. He will certainly come soon.

KATE. I'll stand at the window and watch for him.

NORA. How shall you tell him, Mr. Estabrook?

ESTABROOK. How? By Jove! I hadn't reflected. I might break it to him gently by saying, Look here, you've come into no end of money and luck.

NORA. (*Indignantly.*) The moment he comes in, of course! That would be breaking it to him gently. You ought to prepare his

mind. It isn't money he wants—it's Esmeralda, don't you know.

ESTABROOK. (*Reflectively.*) Is Esmeralda at all like you?

NORA. Why?

ESTABROOK. Ah! you said he wanted Esmeralda—and the idea struck me as entirely plausible.

NORA. It is Esmeralda he wants. What does he care for money? If he thinks she doesn't love him, and you tell him he is rich, money will only make it worse.

ESTABROOK. (*Regarding her with reflective admiration.*) Of course—money is mere dross.

NORA. You must let him know—in one word that she loves him with all her heart and soul and life—and detests the Marquis, and loathes him, and abhors him, and wouldn't marry him for fifty million worlds, and no one could make her, and her mother is a wretched fiend—and ———

ESTABROOK. (*Retreating.*) All that in one word?

NORA. Yes, and you must tell him ———

KATE. He's coming—he's coming. He's crossing the street.

DESMOND. He is! Look here; let's give him a glass of wine first.

NORA. Oh, I'll attend to that. Mind, we're just taking some ourselves. (*Goes to little cupboard and gets wine and cake, which she sets on table, while Estabrook looks amazed.*)

Mr. Estabrook and Jack, sit down this minute and begin to eat as if you were hungry. (*Pushes them into chairs, talking all the time.*) It will make him feel easier. Mr. Estabrook, take a cake. (*Forces one into his hand. He begins to eat.*)

SERVANT. (*Announces.*) Mr. Hardy.

Enter Dave.

NORA. Jack, here is Mr. Hardy, and he has caught us at our lunch, but I daresay he'll excuse us.

DAVE. Yes, miss, certainly.

DESMOND. So glad you've come. I was afraid I was going to lose my sitting. If you haven't lunched, wont you sit down in a kind of a happy-go-lucky with us?

NORA. Please do, Mr. Hardy; we've been out and you haven't an idea how hungry we are, and what awful appetites we have. Mr. Estabrook's is terrible.

DAVE. Thank you. Did—did you say—Estabrook?

NORA. Yes.

Nora leads Dave to table. Dave stops and looks at Estabrook, who rises and extends his hand.

ESTABROOK. Yes, we've met before—in North Carolina.

DAVE. Ye-s—it was there. If you don't mind—I'll sit down. I aint as strong as I was—and it's kind o' startled me. (*Drops into chair and leans head on hand a moment.*)

NORA. You want a glass of wine, Mr. Hardy. (*Pours out glass and gives it to him.*) Drink that, and we'll have some lunch, and you can tell us about North Carolina, and we'll tell you about your friends.

DAVE. About my friends?

NORA. Yes, as Jack said we would. We know them very well. Kate and I are great friends of Esmeralda's. Drink your wine, and we'll tell you all about her.

DAVE. All about her—about Esmeralda? Perhaps I'll need the wine before I hear it. (*Drinks.*) Now tell me. Is she well? Has her money made her happy? Has it made her forget—her home and those that loved her?

NORA. Was she that kind of girl when you loved her in North Carolina?

DAVE. No! God bless her—no.

NORA. And she isn't now. Women don't change so soon as that—women like her.

KATE. She's the dearest, sweetest, and most loving little thing that ever lived—and if it wasn't for Mrs. Rogers—

ESTABROOK. Never mind Mrs. Rogers. If I'm not mistaken, I have a letter in my pocket which—

NORA. (*Casting a glance of indignation at Estabrook, and speaking hurriedly.*) Take another cake. Yes, of course, but that is only business. Mr. Hardy wants to know, first of all, about Esmeralda.

DAVE. Yes, I don't care about the rest of it. I want to hear about Esmeralda. She's mine and I'm hers just as much as if we were man and wife. My God, man—I—I love her!

NORA. And she loves you.

DAVE. And yet they tell me she's going to marry another man, and last night, when I went and stood outside the house, there was light and music, and she came to the window with him, and he took some flowers out of her hand and—and kissed them—and me outside there in the dark and cold! It seemed—somehow it seemed as if I hardly knew her, and the woman I loved was nowhere in the wide world.

ESTABROOK. Oh, look here—I can't stand this while I've a letter in my pocket. (*Hands letter to Nora.*) Miss Desmond, if you will be so kind as to take in hand this letter, which—

NORA. Which contains good news.

ESTABROOK. Exactly! That's it. And, in one word, you must prepare yourself for it, and all that sort of thing—and of course it's not half so much consequence as—Miss

Rogers—and—and in one word—money is dross—and nobody cares for it, and all that; but it's useful when—when your mother-in-law makes a point of it—and —

NORA. Oh, let me tell him. See, I'll tell it like a story. Once upon a time there was a girl who was gentle, timid, and loving —

DAVE. Esmeralda!

NORA. And there was a brave, kind heart that had always been true to her, and it was her comfort and her refuge —

DAVE. She—she—used to say so.

NORA. And there was a wicked old mother and some land that seemed to turn out valuable—but through that wicked woman and the land, the sweet little loving soul was torn away from all she loved, and taken to a foreign country and surrounded by luxury and wealth and flattery she didn't care for; she only wanted the brave, kind heart she used to nestle against.

DAVE. My little girl! my little girl!

NORA. And the wicked old woman grew wickeder every day, and tried to make her marry a man she hated, and who only wanted her money.

DAVE. The bitter villain!

NORA. (*Rising and approaching him.*) And it was as if there was a fate in it. It turned out that the money he wanted was not there—she had none.

DAVE. She had none?

NORA. No—nothing—nothing; but the love she had to give and the love that was given to her! The letter tells it all, and Mr. Estabrook can explain it. I don't know anything about ore, and I don't care; but the land that was of value was the lover's land and the wealth was his—and you're a rich man—and Esmeralda loves you—you're worth thousands and thousands and thousands—perhaps millions—and Esmeralda loves you!

DAVE. I—I'm a rich man?

ESTABROOK. (*Coming forward.*) In one word, the letter will tell you—you are a rich man indeed.

NORA. And Esmeralda loves you.

DAVE. That's true—true!

NORA. Yes!

DAVE. Then (*as Estabrook hands him letter*) let the letter go. I am indeed a rich man if—if—Esmeralda loves me.

ACT III.

A room in Rogers's house in Paris during a ball. Kate and Desmond discovered.

DESMOND. Well, I must say, I shall be rather glad when it's all over. A fellow

don't seem to get so much good out of his friends and relations when there's a mystery on hand. Now there are Estabrook and Nora —

KATE. You don't mean to say you have any intention to make about Mr. Estabrook and Nora?

DESMOND. Oh, no complaint. Only this affair of the Rogerses gives them so much to talk about you never seem to be able to lay your hand on them. They've got into a way of rambling off together —

KATE. Yes, I've observed it.

DESMOND. And getting absorbed in conversation and all that. It's natural, of course, as they are the prime movers in the affair, but it interferes with general sociability. Besides, I'm fond of Estabrook. He's the kind of fellow it's natural to be fond of. And he seems to get along specially well with Nora. Here, I say, what are you laughing at? Something wrong with my neck-tie? Got a daub of paint on my nose? (*Looks in glass.*)

KATE. Do go on talking about Nora and Mr. Estabrook. It's so observing in you to have noticed them so, and the interest they take in the Rogerses.

DESMOND. (*Whistles.*) The dickens! You don't mean to tell me!

KATE. Certainly not. I shouldn't think of such a thing. I am giving all my attention to decorating that punch-bowl for Mrs. Craig, and I neither see nor hear anything. When Mr. Estabrook is talking to Nora about Mr. Rogers, and Nora is talking to Mr. Estabrook about Mrs. Rogers, I turn my back and paint the punch-bowl.

DESMOND. Well, I must say, I didn't think it of Estabrook.

KATE. And I must say, I wouldn't have believed it of Nora.

DESMOND. And you really think —

KATE. No, I don't. I think nothing—except that I hope the punch-bowl will be as satisfactory to Mrs. Craig as it is to Nora and Mr. Estabrook. Think! Do you suppose I am no better sister than that? Nora hasn't quite made up her mind what she thinks yet, and if I thought before she did, she'd be ready to—to bite me.

DESMOND. Well, I suppose it's natural; but Nora—oh, confound it! after a fellow's bringing her up by hand, as it were, and filling her stocking at Christmas, and being a parent to her,—it's rather tough to discover that she's beginning to take an interest —

KATE. In Mr. and Mrs. Rogers? So it is. (*Looks through open door.*) There, they are coming! I'm going. (*Exit.*)

DESMOND. Who? Mr. and Mrs. Rogers? No; it's Nora and Estabrook. What did she

shoot off in that way for? A fellow never seems to know what girls are up to—even after he has brought up two of them by hand.

Enter Estabrook and Nora, expecting to find room empty.

DESMOND. Come in to have a rest, have you? Same myself. It's cool here.

NORA. (*Buttoning her gloves rather abstractedly.*) Ye-es, so it is.

ESTABROOK. Cooler than I expected to find it. All by yourself?

DESMOND. Yes; Kate's just left me. Good chance for us to have a chat. (*Seats himself on the sofa.*) It's better fun than dancing like mad in there.

NORA. Certainly it is for a while. It wouldn't be a bad idea to have some ices. Suppose you go and get some, Jack?

DESMOND. Send Estabrook. He knows all about supper-room struggles. He's sophisticated. I'm not. I couldn't find the way.

ESTABROOK. I'll go. He would be stopped by female brigadiers, who would take them from him on his way back. (*Exit.*)

NORA. Been having a pleasant evening, Jack?

DESMOND. Yes, all right.

NORA. Have you been dancing much?

DESMOND. No; haven't danced much.

NORA. Then, why don't you go and dance? It's lovely. The music is perfect. You—you don't know what you are missing. I never had such delightful dances in my life. You ought to go and dance, Jack. You'd enjoy it.

DESMOND. I will—later on.

NORA. But the waltz they are playing now is enchanting, and that pretty Miss Berris you are so fond of was not dancing when we left.

DESMOND. Miss Berris! Who's Miss Berris? I'm not fond of Miss Berris.

NORA. Why, you are, Jack—you know you are fond of her. You said last winter you never enjoyed waltzing with any one so much in your life.

DESMOND. I say! I wish you'd tell me—do you want me to go?

NORA. Want you to go! Of course not! Gracious, no! I should think not! Why should I want you to go? What perfect nonsense!

DESMOND. It's pretty certain you want me to do something, and if you want to have a chance at Estabrook alone, and all that sort of thing —

NORA. Jack, what do you mean? I'll never forgive you!

DESMOND. Nora, I haven't an objection on earth. He's a splendid fellow, and it's all

right; and after I've settled down to giving up my share of you, nothing would please me better.

NORA. (*Retreating in wildest confusion.*) Jack, if you say another word, I shall detest you, and I shall detest him. I shall detest everybody.

DESMOND. Oh, come now! That's just like a girl. I tell you, I'm not going to stand in the way. I'm going to ask Miss Berris

NORA. Stay where you are this instant! I wouldn't let you go now for—for millions! Want to be left alone with—with a person! Nothing would induce me to be left alone with him! (*Backs up against mantel and stands there.*) Jack, I—I—wonder how you can be so—so fiendish.

DESMOND. Nora, do you mean to say —

NORA. No, I don't. Nobody said anything—nobody thinks of saying anything—as if people couldn't be—be friends without saying things. We are interested —

DESMOND. In the Rogerses?

NORA. Yes, sir, in the Rogerses. We—we sympathize with them, and it brings us together, and—and—and we talk—and things — Oh, do go away this instant! He's coming.

DESMOND. I thought you didn't want me to go?

NORA. I don't. Stay where you are. No—go! I don't know what I want you to do.

DESMOND. Well, I do—and I'm going to do it. (*Goes toward door.*)

NORA. At any rate, it is not because I want to be alone.

DESMOND. By no means. It's because you don't want to be alone. (*Runs against Estabrook at door.*)

ESTABROOK. Where are you going, my friend?

DESMOND. I'm going to dance with Miss Berris. (*Exit.*)

ESTABROOK. (*To Nora.*) Rather sudden, isn't it?

NORA. Rather, but that's just like Jack—and he's tremendously partial to Miss Berris.

ESTABROOK. You look cool. Have an ice? I mean, you don't look cool, and you're a trifle out of breath. Are you tired?

NORA. Tired? Of dancing? I should think not—only one does reach a point sometimes when one likes to lean against something. But go on. You were saying in the ball-room —

ESTABROOK. Only that a mysterious change is taking place in my character.

NORA. How so? When did you first begin to notice it?

ESTABROOK. The day I met you at the studio. Curious, isn't it?

NORA. Is it a very interesting change?

ESTABROOK. Oh, very, I assure you. I am watching its development with a great deal of pleasure.

NORA. How absorbing! What form does it seem to take, for instance?

ESTABROOK. Several. In the first place, the form of an increased affection for—Jack. I was always fond of Jack, but I had no idea my affection was so deep—and violent.

NORA. Really, I must tell him.

ESTABROOK. Do. He'll be gratified.

NORA. Wouldn't you like to go and talk to Jack now? He's in the ball-room, you know.

ESTABROOK. Thanks! That's quite a happy thought, isn't it?

NORA. It struck me in that way. (*Pause.*) Well, why don't you go?

ESTABROOK. (*Serenely.*) Oh, I wasn't thinking of going.

NORA. Suppose you tell me about old Mr. Rogers. What is it he is going to do?

ESTABROOK. He is going to appeal to the Marquis.

NORA. You mean, to ask him to give up Esmeralda?

ESTABROOK. Yes.

NORA. The dear old fellow! Being a sordid creature, I've always liked him since he bought that panel from me. (*Points to panel on wall.*)

ESTABROOK. Oh, it's an amazing panel—perfectly amazing. The humming-bird flying in such a spirited manner at the flamingo is vigor itself.

NORA. It isn't a humming-bird, and it isn't a flamingo. It's a grasshopper gazing at a conventionalized Colorado beetle.

ESTABROOK. Miss Desmond, you are endeavoring to deceive me. It is a butterfly and a stork, and this is the butterfly and this is the stork. Look me in the eye and deny it if you can.

NORA. I am not going to deny it.

ESTABROOK. Then would you have any objection to looking me in the eye without denying it?

NORA. (*Nonchalantly.*) Not the least. (*Turns face over shoulder and looks at him.*)

Old Man enters. Catches sight of them, and stops.

OLD MAN. Them's young folk's ways, an', Lor', I aint nothin' ag'in' 'em. Don't let me disturb ye. (*Nora and Estabrook start.*)

NORA. Oh, you don't disturb us. We—we're very glad to see you for a moment. Dear Mr. Rogers, you look so tired. Sit down for a second.

OLD MAN. Honey, I—I caynt—I am tired—I'm all worn out. I caynt stand it no longer. I'm a-goin' to see the Markis and tell him how it is.

ESTABROOK. You're going to make an appeal to him?

OLD MAN. I'm going to tell him just how it is. Lor', he must hev feelings somewhars—he's bound to hev 'em. Folks is better than ye give 'em credit for bein' in general.

NORA. Have you asked him to come in here?

OLD MAN. Yes, I thought he'd hev been here by this. I'll go back and look for him. (*Starts to go.*)

NORA. But don't you want to stay with us until he comes; then we'll leave you together.

OLD MAN. No, honey—no. I'm old folks, an' you're young folks, an' young folks—it's kinder more feeliner to leave 'em alone—now an' ag'in. Young folks' ways—Lor'! I haint nothin' ag'in' 'em. They're nateral an' they're right. I'm a-goin' to leave you together. (*Exit.*)

NORA. It's a shame! Oh, how I wish that old woman was in Africa!

ESTABROOK. She will be in a much warmer place when Hardy returns, and she learns the truth.

NORA. But when will he return?

ESTABROOK. As soon as his business in North Carolina is settled. No doubt he's on his way over now.

NORA. And then—oh, there is one thing I do wish.

ESTABROOK. What is it?

NORA. That Esmeralda would gather up courage before he comes, and fly at Mrs. Rogers and the Marquis and defy them both. I should delight in doing it.

ESTABROOK. I haven't a doubt of it.

NORA. Well, I hope you haven't. If I loved a person —

ESTABROOK. If you loved a person —

NORA. Oh, well, I don't love a person.

ESTABROOK. Of course not; but if you loved a person —

NORA. Oh, I—I don't think I should like it at all.

ESTABROOK. (*Taking Nora's hand.*) But do you know, it strikes me that the person might like it?

Enter Marquis and Mr. Rogers. Estabrook turns and sees them.

ESTABROOK. Confound the Marquis! (*To Nora.*) Miss Desmond, I'm afraid we shall have to return to the ball-room.

NORA. Yes. I'm sure we ought to—and they are beginning to play a lovely waltz—

and, don't you know, you can see Jack. Mr. Rogers, as you wont dance with me, I am obliged to dance with somebody else.

OLD MAN. I wish I could dance with ye, honey. I'd like to, mightily.

Nora and Estabrook go.

OLD MAN. They're having a pow'rful good time, they air—an' I don't blame 'em, either. Them's young folks' ways. (*Takes Marquis by lapel and pushes him toward chair.*) Sit down, Markis—sit down, and let's be sosh-er-ble. Seems like we haint been sosh-er-ble together fer a right smart spell.

MARQUIS. Monsieur has something to say to me, perhaps.

OLD MAN. (*Sits down.*) Thet's so—thet's so. I've a heap to say to ye—an' Lor'! let's be sosh-er-ble.

MARQUIS. It is possible that monsieur wishes to speak to me of mademoiselle.

OLD MAN. (*Starts eagerly.*) Thet's it. Lor'! how quick ye've hit it! Esmeraldy (*Draws chair near and seizes lapel of his coat*)—it's about Esmeraldy—Esmeraldy—she—she's a little down-spereted—an' so am I. (*Lets lapel go and leans back to look at him.*)

MARQUIS. I regret to hear this, monsieur. Permit me to offer you the assurance of my profoundest sympathy.

OLD MAN. (*Regarding him doubtfully.*) Y-yes; I thort ye would—I kinder felt sure ye would. I—I thort ye was thet way.

MARQUIS. It is to be *triste*—this low-spereted—unhappy, is it not? Mademoiselle Rogare is unhappy—melancholy?

OLD MAN. Yes, thet's so—thet's so. How quick ye've hit it again! Onhappy! Thet's it—she's onhappy.

MARQUIS. That is a great misfortune.

Old Man regards him uneasily a moment, and takes out handkerchief and wipes his forehead.

OLD MAN. (*Aside.*) Seems sorter es ef he is—an' sorter es ef he aint. He—he haint got North Ca'lliny ways. (*Suddenly draws chair closer and seizes lapel of Marquis's coat in outburst of confidence.*) Yes—Lor'! let's be sosh-er-ble. Ye see, it's this way. We're home folks—me an' Esmeraldy—home folks. We caynt get used to city ways, an' we're allers a-thinkin' o' North Ca'lliny. Mother, she was raised in 'Liz'bethville.

MARQUIS. And this 'Liz'bethville?

OLD MAN. Thar—thar was a court-house thar—an' a jail, an' mother kinder hed the advantage of 'em; but me an' Esmeraldy, we don't seem to git no userd to things than we was at the fust. Dressin', it aint no comfort to us—Lor', no! Esmeraldy now—only yisterday she was all dressed out,

an' she bust right out a-cryin', an' fell into my arms, an' sez she—she ses, "They wouldn't know me in North Ca'lliny, father—they wouldn't none of 'em know me—Dave, he wouldn't know me." (*Voice breaks. Wipes eyes with handkerchief.*)

MARQUIS. And this Monsieur Dave?

OLD MAN. (*Laying hand on Marquis's knee confidingly.*) Markis, it's him es she's breakin' her heart fer.

MARQUIS. *Ma foi!* but this is pleasant news to hear of one's betrothed.

OLD MAN. I knowed ye'd feel that way—I knowed ye would. An' it aint nothin' but nateral. Ye don't want to marry a woman with no heart to give ye. Ye wouldn't be a man ef ye did. Lor'! I've said it a thousand times—folks hes feelin's ef ye git at 'em, an' ye'd orter trust 'em an' believe in 'em. And yere's Esmeraldy breakin' her heart for Dave, an' Dave a-breakin' his'n for her, an' the sea between 'em, an' mother sot on her a-marryin' you. An', sez I to myself, I'll speak to him an' trust to his feelin's, and ask him to make a stand.

MARQUIS. You would ask me to make a stand?

OLD MAN. Yes. Sez I, I'll ask him to give her up, an' that'll settle mother's mind when nothin' else would.

MARQUIS. (*Rising from seat and pacing floor.*) Ah, I think I comprehend. I am to decline the hand of mademoiselle—I myself—and upon what grounds?

OLD MAN. (*Rising also.*) I've been a-thinkin' o' that too. 'Twont do to say it's Esmeraldy; it'd kinder make it harder fer her. Don't ye say it's Esmeraldy as ye're objectin' to—say it's me. Me! I aint nothin', ye know—Lor', no! I'm old folks, and mother, she kin take it out o' me an' welcome. Tell her I aint showy enough—tell her I haint no manners—tell her ye couldn't stand me in the family—Lor'! tell her anything. It don't matter fer me. What I'm a-thinkin' on is Dave an' Esmeraldy, that's young, an' loves each other, an' hes life afore 'em.

MARQUIS. And we must consider Monsieur Dave and Mademoiselle Esmeralda, it is true.

OLD MAN. Yes, we must consider 'em—an' stand by 'em, fer they haint got no one else.

MARQUIS. (*Takes two or three steps across room and returns.*) And you desire my reply to this proposition?

OLD MAN. Yes, Markis, an' I aint afeared to hear it.

MARQUIS. (*Approaching him.*) It is this, then—this, monsieur. Mademoiselle, your daughter, is young and not too strong of the

will. Madame Rogare is the stronger of the two. With the assistance of Madame Rogare, I shall make mademoiselle my wife—and after that let her lovers look to themselves.

OLD MAN. Markis!

MARQUIS. I do not give way readily, monsieur, when I have a thing at stake.

OLD MAN. An'—an' ye wont give her up?

MARQUIS. No, monsieur; not yet.

OLD MAN. I—I caynt believe it. (*Marquis shrugs shoulders in reply.*) Markis, look yere. Aint ye givin' up nothin' yerself ef ye take her? Ye're a man—an' what ye want's a home an' a wife—a young creeter that comes ter ye willin' an' gentle, an' thinks thar aint nothin' in the whole world like ye. What a man wants is a woman's heart—ef ye haint got it, what d'ye want o' her? Ye can call her by yer name an' keep her about yer; but ye haint got her. Lor', no! she aint thar—she aint nowhars nigh.

MARQUIS. She will be near enough, monsieur.

OLD MAN. And ye're willin' ter give up all the rest on it.

MARQUIS. All, monsieur.

OLD MAN. Then ye're willin' ter give up more then I 'lowed a man would.

MARQUIS. If our interview is at an end, monsieur, I will retire.

OLD MAN. I haint got nothin' more to say. (*Marquis bows and goes, Old Man sinks into chair and covers face with hands.*) 'Twarnt no use—no use. These aint North Ca'lliny ways.

Enter Mrs. Rogers, excited.

MRS. ROGERS. What are you doing here? Who went out just now?

OLD MAN. The Markis. He went out.

MRS. ROGERS. Why did he go? What have you been saying to him?

OLD MAN. I've been sayin' a sight o' things; but it warn't no good—it warn't no good.

MRS. ROGERS. (*Sinks into chair.*) If ever there was a woman who was badgered and run to death, and paid for all she's done with ingratitude from a couple of fools, I'm that woman.

OLD MAN. Who's the fools, mother?

MRS. ROGERS. Who? You're one of them, and Esmeralda's the other. Here I have placed every luxury around you, and every advantage, and you go moping about, and Esmeralda wears herself out and gets thin and pale, and the Marquis at his wit's end to please her—and on the top of that comes a new piece of news.

OLD MAN. News! From North Ca'lliny, mother?

MRS. ROGERS. Yes, from North Ca'lliny. What do I find out! That sentimental idiot followed us before we'd been here six months, and has been hanging around and watching Esmeralda, and living on a crust in a garret.

OLD MAN. Mother! Not Dave! Lor', no—not Dave! Dave—he's in North Ca'lliny.

MRS. ROGERS. Not Dave? Yes, Dave! Who else would be big enough simpleton but Dave? And he's been about the house night after night, and Esmeralda has heard of it, and if I can keep her quiet until the party's over, it's all I can do.

OLD MAN. (*Looking at door.*) Mother, she's coming now, an' if I ever knowed what her pretty face meant, ye've kept her quiet fer the last time.

Enter Esmeralda. The Marquis follows her, talking and holding bouquet.

MARQUIS. I am most unfortunate that my poor flowers do not please mademoiselle.

ESMERALDA. No, they do not please me. Nor do you. Take them and go, and leave me alone! (*Turns on him fiercely.*) I hate them because you have held them in your hand; that would be reason enough for my hating anything. And you know it, and have known it all the time. Only you were not man enough to spare me. And I was too great a coward to dare to speak. But you have gone too far. It has all gone too far.

MRS. ROGERS. (*Seizing her.*) What are you saying? Are you mad?

ESMERALDA. (*Freeds herself.*) Don't touch me! I'm not afraid of you now—nor of him. Let him see to it that he doesn't come near me again. I've found out what has made me what I ought to have been long ago—a woman—a woman worthy a good man's love; and I'm not afraid of anything. I've found out who has followed me over thousands of miles of dreary land and sea, and who has watched me in the cold and dark of the night outside when I was there in the brightness and warmth. If he forgives me for it, do you think I shall ever forgive myself—do you think I shall ever forgive you?

OLD MAN. (*Comes up behind her and touches her tremblingly.*) Esmeraldy, honey, I—don't hardly know ye.

ESMERALDA. (*Embraces him.*) Father—father—you'll stand by me. I hardly know myself—I feel so fierce, and bitter, and strong. It's all true. He has been in Paris—cold, and tired, and hungry, while we were rich and warm. Dave—Dave we loved

—Dave, who loved us and was true to us even when we seemed false.

OLD MAN. (*Wiping his eyes.*) He—he was always that away, Dave was. Thar never couldn't hev been nothin' truer than his true heart.

MRS. ROGERS. Oh, you soft fools! (*Going to Marquis.*) And haven't you a word to say for yourself? Do something to stop this.

MARQUIS. (*Bowing sardonically.*) Madame, it occurs to me that in a scene so truly domestic I am in the way and should retire.

MRS. ROGERS. No, you shall not. Do you think I'm going to have my plans overturned this way? (*To Esmeralda.*) You say he saw you through the windows. Then he saw you with the Marquis. How are you going to make him believe that you weren't with him of your own free will?

ESMERALDA. Make him believe! I'm going to tell him. He'll know it's true because he'll see it in my face. I'm going to follow him until I find him. I'm going to follow him if it's on foot and I go a thousand miles—you can't hold me back now. I'm your own daughter for the first time in my life, and I'm no more to be stopped than you are. Stop me if you can!

MARQUIS. (*Regards her with some admiration.*) Mademoiselle becomes more interesting. My regret at parting with her will be greater than I thought.

OLD MAN. Esmeraldy, honey, ye almost skeer me—ye're sorter like yer mother. I hope it wont last.

MRS. ROGERS. (*To Esmeralda.*) I'll stop you—if I have to do it by force.

ESMERALDA. I tell you the time for that is past. I'm not afraid any longer—I'm only ashamed that I've been a coward so long. Look here! (*Tears off necklace and bracelets.*) There are the things you made me wear and he saw me in when he stood outside in the bitter cold. (*Throws them to the floor with fierce gesture.*) Pick them up if you think they're worth it. As long as I live I'll never wear them again.

MRS. ROGERS. Oh, you'll come out of this—you'll come out of this! You'll be meek enough to-morrow and frightened enough—you're as pale as death now with fright.

OLD MAN. So she is—so ye air, honey—ye look faint. Kinder try to stand up ag'in' it.

He draws her to sofa. As he reaches it she falls upon her knees before him.

ESMERALDA. Yes, I'm faint and tired; but we'll find Dave, wont we, father? and go back to the mountains and the blue sky—and no one will be cruel to us any more—

and I'll kneel down before Dave and tell him that I was true and loved him—and the little house—wont be empty—any more. (*Sinks upon the floor at his feet.*)

Mrs. Rogers and the Marquis spring forward.

MRS. ROGERS. What ails her? She looks like death.

OLD MAN. (*Waves her off with solemn dignity.*) Stand back, Lyddy Ann. 'Taint fer you to tech her. Seems like she's gone back to North Ca'lliny in spite of ye.

ACT IV.

Studio. Desmond, Kate, Nora, Dave discovered. Nora dashing off note at table.

NORA. There, I've finished it. (*Reads.*) "DEAR MR. ROGERS: Mr. Hardy is here, and I think it would be better if you brought Esmeralda at once. Make some excuse to leave her in the carriage below until you have seen him first, then you can bring her up and we will break the news to her gently. With much love to you both, NORA DESMOND."

DESMOND. You haven't given him a hint about the money.

NORA. The money isn't of the slightest consequence. It doesn't matter to him whether Mr. Hardy is rich or poor—and as for Esmeralda she would rather have him poor. Who cares about money?

DAVE. He doesn't, nor she either.

KATE. Of course not. Give me the note, Nora. I will send it while you talk to Mr. Hardy.

Nora gives note to Kate, who goes out.

NORA. Now, Mr. Hardy, I shall send you into the next room to lunch and rest a little, because you are tired, and if you look ill you will frighten Esmeralda.

DAVE. Tell me first about Esmeralda.

NORA. Well, she has been ill; but not very ill, though it seemed so at first. She was only ill because she wanted you.

DAVE. What did they do to her? What had he to do with it—that Marquis fellow?

NORA. Oh, not very much, really—and he has never been near her since, which has made Mrs. Rogers awfully angry with Esmeralda; but you mustn't think of that—you must think that she will be with you in a short time, and that you can care for her yourself. You will spend your honeymoon in your little house—only you two together—together. Isn't that a nice word—together?

DAVE. It means—a great deal—to me.

DESMOND. I say, Nora, that's all very well, you know, but I don't believe Hardy has

lived on anything but Miss Rogers for the last fortnight, and I'm going to take him off into the next room and make him eat something.

DAVE. (*Going with Desmond into inner room.*) You'll call me the minute they come?

NORA. Yes.

Nora, left to herself, goes to the mantle and looks at the clock.

NORA. Nearly three. What nonsense! The idea of my noticing when he comes and when he goes. If it was Jack, now, there would be some reason in it, but to be noticing the incomings and outgoings of a man who isn't the least relation to you is—well, it's a thing you're not going to stand. (*Professes to paint furiously. Drops brush, picks it up.*) He was evidently going to tell me something; I wonder what it will be? Perhaps he's going to leave Paris. Well, if he is—Jack will miss him—very much. I shall be rather sorry—for Jack. (*Bell rings.*)

Estabrook enters. She does not turn.

ESTABROOK. Good afternoon. Ah, another panel, Miss Desmond.

NORA. Yes, another; and you mustn't disturb me, because I've just reached a critical point.

ESTABROOK. (*Aside.*) So have I. (*Aloud.*) Oh no, I won't disturb you. Tortures shouldn't compel me. May I sit down?

NORA. Certainly. Jack will be in directly—after he has taken care of Mr. Hardy.

ESTABROOK. Will he? Then on second thought I won't sit down. I'll take a look at the panel. (*Goes to her.*) That is going to be a great deal worse than the other, isn't it?

NORA. Do you know, no one in the world says such disrespectful things to me as you do? And besides, you are disturbing me.

ESTABROOK. That relieves me.

NORA. Relieves you?

ESTABROOK. Yes. I thought I couldn't disturb you, and I wanted to—I rather came to try. You've disturbed me a good deal lately, and I wanted to balance the thing a little.

NORA. You came to try to disturb me? I thought you came to see Jack. Oh, there—there's Jack talking to Mr. Hardy. Don't you want to see him?

ESTABROOK. No, I don't; and if he presents himself I shall warn him by all the sacred ties of friendship not to cross the threshold.

NORA. But—but what—what nonsense!

ESTABROOK. No, it isn't. I mean to say what I came to say in spite of Jack.

NORA. But you are disturbing me, and I haven't done anything for days and days.

ESTABROOK. (*Taking her brush.*) Suppose you leave the panel for a short time.

Leads her to a chair. Stands behind her, and looking down, puts a pair of gloves into her hands.

ESTABROOK. I'm very much interested in these just now.

NORA. My lost gloves! Where did you find them?

ESTABROOK. In my vest-pocket—by a curious coincidence. I have a fancy for seeing you put one on—the left one, for instance.

NORA. (*Beginning to put it on.*) I have no objection—I've had them on before. (*Pauses.*) There's something in the fourth finger. It's a ring.

ESTABROOK. (*Taking glove again.*) So it is.

NORA. I can't put on a glove with a ring in it. (*Ring drops out.*)

ESTABROOK. Perhaps you can put on a ring without a glove on it. Suppose you try.

NORA. Oh—no.

ESTABROOK. (*Taking her hand and ring.*) Suppose you let me try—Nora.

NORA. But—there's no reason why I should.

ESTABROOK. There's the best reason. The affection I felt for Jack seems to have transferred itself to you, Nora. We won't jest any longer. I came here to-day to say I love you. I don't find the words difficult to say. They are very simple words. I wish you could say them to me as easily.

NORA. I cannot say them as easily. Suppose—I was—to think them.

ESTABROOK. Then I should put on the ring. (*Slips it on, bends and kisses her.*)

Enter Old Man. Sees what is going on.

OLD MAN. They're all right, Lor' bless 'em! Nothin' caynt hurt them. They're fixed now. Don't ye mind me, chil'n. 'Taint nothin' ter be ashamed on. It's somethin' ter be proud on. (*Goes to Nora, who has risen, and gives her to Estabrook. To Nora.*) Thar, he'll take care o' ye, honey. (*To Estabrook.*) If she had a father, I reckon he'd say what I do. Stand by her.

ESTABROOK. I think you may trust me.

OLD MAN. Lor', yes; you're the right kind. Lor' now 'bout Dave and Esmeraldy. Esmeraldy, she's down-stairs.

NORA. And Dave is in there.

OLD MAN. He is? Lor', how glad I'll be ter see him! Thar aint but one thing to be done. I'm agwine to stand out fer seein' things set right. It's a kinder narvous thing to do, but I'm gwine to do it.

Enter Mrs. Rogers, trembling with rage.

*VOL. XXIII.—43.

MRS. ROGERS. I'm just in time, am I, and not a minute too soon! I've heard the whole story and I'll put a stop to this.

OLD MAN. Mother, kinder quieten down.

MRS. ROGERS. A nice time to quiet down! It's the old story. Setting my child against me and upholding her, while I'm trying to do the best I can to make a lady of her.

NORA. Mrs. Rogers, let me say a few words to you.

MRS. ROGERS. The quieter you keep the better. You've always stood by her in your still, impudent way. You're sharp enough to know it's a good thing to be friends with a rich girl. You ought to be on the good side of her mother.

ESTABROOK. If a—you are going in for remarks of that kind—suppose—a—you generalize—it would be better.

MRS. ROGERS. (*To Estabrook.*) I've nothing to do with you or her either. I've come here to tend to my own business. (*To Old Man.*) You thought I wouldn't find you out, did you? He hasn't gone back to North Carolina, has he? And you've picked him up out of the gutter and made up your mind to stand up against me. Where is he?

OLD MAN. In there! (*Points to inner room.*)

MRS. ROGERS. In there? And Esmeralda down-stairs waiting to be brought up, and you—you—you! Let me see him—that's all I want.

Mrs. Rogers goes toward door. Old Man gets there before her, and waves her back.

OLD MAN. Mother, kinder quieten down.

MRS. ROGERS. Wh—what do you mean? What's taken you? How dare you stand there and brave it out?

OLD MAN. Mother—seems like we've hed enough. Seems like we've got to a place whar things hed to sorter be settled down—an' it's me as hes got ter do it.

MRS. ROGERS. You—you're a fool! You always was a fool.

OLD MAN. Mebbe I was. Mebbe we might both hev been wiser.

MRS. ROGERS. Let me get into that room.

OLD MAN. No; we've tried it your way awhile. We've hed money, and foren languidges—an' ile paintin's—an'an' markisses—we've tried a elevatin' ourselves to a higher spear—an' what's come of it?

MRS. ROGERS. Plenty's come of it, if you had the sense to see it. You've seen the world, and you've traveled.

OLD MAN. Yes, we've seed the world. We've been gay, and we've left home behind, an' neighbors an' friends we growed up with

—an' Esmeraldy's heart nigh broke—an' Dave is brought to death's door—an' the little house they was to have lived in an' loved each other in is a standin' empty in North Ca'lliny.

MRS. ROGERS. You'll bring them together and send them back! You mean that you'll defy me out an' out?

OLD MAN. I aint a-defyin' ye, mother. That aint my kind. But I'll bring them two young hearts together, an' let 'em beat side by side.

MRS. ROGERS. You're all in the plot—I always knew you were—he'd never have had the strength to stand out alone—you're all backing him. (*To Nora.*) I always saw it in you, you sly minx! Esmeralda was always harder to manage after she'd been with you.

NORA. I've no doubt of it—and I hope she was. And let me tell you if I had been Esmeralda, I should like to have seen you take me away from—any one I loved.

ESTABROOK. So should I.

MRS. ROGERS. Oh, you're all in it—and you (*turning fiercely to Old Man*)—you think you can hold out?

OLD MAN. I mean to try, mother. I've hed—a kinder delercacy about sayin' anything about the money sorter belongin' ter me; but it does—in a way—sorter. An' I've been to a lawyer, an' I'm goin' ter hev papers drawn up as'll provide for 'em; an' when we're gone thar's no one but them to hev what's left—an' they kin live whar they like, an' how.

MRS. ROGERS. And you'll give up all I've done, and all I've worked for—what's to make up to the girl for it—what's she going back to, anyhow? Answer me that.

OLD MAN. Mebbe it aint much, mother—and mebbe it's a good deal. She's a-goin' back to home an' love.

MRS. ROGERS. Then I tell you she sha'n't. Do you think I'll give up that easy?

Enter Esmeralda, alarmed. Goes to her father.

ESMERALDA. Father—mother—what is it? Tell me. Oh, how angry you look! I knew something had gone wrong and I couldn't keep away.

OLD MAN. Don't tremble so, honey. 'Taint nothin' gone wrong—it's suthin' thet's a-goin' right.

MRS. ROGERS. You knew well enough, I reckon, with your tricks and plots, deceiving your own mother. You knew he was here, and the only wonder is you weren't up before.

ESMERALDA. I knew he was here? I knew who was here? Father—Nora—who is here?

NORA. No one you need be afraid to see, Esmeralda.

OLD MAN. Don't ye tremble so, honey—nor get so pale. It's only some one ye thought was fur away.

ESMERALDA. No, no, it isn't true. Don't tell me so and break my heart. There's half the world between us.

OLD MAN. Thar aint nothin' between ye, honey—nary thing.

Dave appears in the door. Esmeralda utters a cry and starts toward him. Mrs. Rogers catches her arm.

ESMERALDA. Let me go! I'm not afraid now. Not all the world should keep me from him!

Esmeralda rushes into Dave's arms.

DAVE. I thought you'd gone back on me, Esmeraldy, but you was true—you was true.

OLD MAN. (*Goes to Mrs. Rogers and lays his hand on her shoulder pleadingly.*) Mother, don't grudge it to 'em—don't ye—don't ye.

MRS. ROGERS. Me grudge it to them? No, I wont. Let them have what they've got, and welcome. He came over here to marry a rich girl, did he—and he's got her—thanks to you—with all she's worth. You—you are going to set them up for life and give them all they want. Do it if you can—that's all I've got to say.

OLD MAN. Mother, what d'ye mean?

MRS. ROGERS. What do I mean? (*Triumphantly.*) Just this—I've got a letter—

NORA. In my pocket, which—

MRS. ROGERS. What do you know about it? What does that piece of impudence mean?

NORA. I heard of a letter like it once before.

MRS. ROGERS. You did?

ESTABROOK. Yes, and it was from North Carolina—name of man who wrote it, George Drew.

NORA. And it was about some land that didn't turn out so well as was expected. Is yours anything like it?

MRS. ROGERS. You—you've known it all along.

DAVE. Mrs. Rogers, I've known it myself, and if you'll let me speak—

MRS. ROGERS. Oh, of course you knew you were going to marry a beggar instead of an heiress! You have traveled half the world over for pure love, haven't you—

OLD MAN. Mother! Mother!

MRS. ROGERS. You're—you're to blame for it all. But for you I'd have sold the place out and out—but for you that girl would have been married to a marquis by this, and settled for life—but for you we shouldn't have been disgraced, and mocked, and laughed at.

ESTABROOK. And but for him, of course, the vein of ore would have been carefully

arranged by Nature to meet all demands, and wouldn't have worked out and infamously turned up in another man's farm, and made a millionaire of him.

MRS. ROGERS. Another man's farm? Who's the man? Who is he?

DAVE. Mrs. Rogers, I'm the man.

MRS. ROGERS. You! you! you!

DAVE. Yes, and what's mine is Esmeralda's and her father's and her mother's; and so you see the thing stands just about where it did—an' you're no poorer than before—only that Esmeralda belongs to me.

MRS. ROGERS. Is this true? Is it—is it?

ESTABROOK. Yes, madam. He (*indicating Dave*) has a letter in his pocket which —

NORA. And but for Mr. Hardy you would have known it two months ago. He sent you money when you had spent your own—and he would have sent it until the end of time and said nothing, only that he wanted Esmeralda and found out that she wanted him. Everybody isn't selfish and cruel. There are such things as love and truth, and they are worth all the money the world could hold. There! (*Goes to Estabrook.*)

ESTABROOK. Are there? How do you know?

NORA. I found it out, and so has Esmeralda.

MRS. ROGERS. (*Sinks into chair. To Dave.*) Don't speak to me. You've won and I've lost. Leave me alone awhile. Go and tell him.

She points to Old Man, who has sat down and is mopping his forehead in a wild, bewildered way.

DAVE. Old Man, don't you understand?

OLD MAN. Seems like things was kinder mixed—and mother, she wasn't a-gettin' the best of it.

DAVE. It's easy enough told. You stood by me when you thought I was a poor man and you a rich one.

OLD MAN. An' now —

DAVE. What's mine is yours, and we'll stand by each other.

OLD MAN. (*Seizing his hand.*) Ye don't mean ter tell me we aint rich folks no more?

DAVE. The money has changed hands; that's all, old man.

OLD MAN. And the hands it's in now is the right ones. Mebbe now it's over, mother'll kinder be easy on us.

Goes to Mrs. Rogers. Dave and Esmeralda follow.

OLD MAN. Mother!

ESMERALDA. Mother!

DAVE. Mrs. Rogers!

MRS. ROGERS. (*Turns sharply.*) I don't see what you've got to say to me!

OLD MAN. We thought mebbe you'd got something to say to us, mother. Seems like Dave now—ye might want ter say a word or so to Dave—an' he's ready ter hear it.

MRS. ROGERS. (*Savagely.*) Does he want me to say I forgive him?

OLD MAN. No, mother. It don't seem like thar war eny needcessity on that. He aint done nothin' but act like a man, an' a brave an' honest one as was too much a man to bear a grudge ag'in' them that's injured him.

MRS. ROGERS. Does he want me to ask him to forgive me?

DAVE. No, I don't, Mrs. Rogers. I only want you to shake hands, and let's begin again in a fair and square way. You shall have your rights, and the old man shall have his—and I'll see that Esmeralda has hers.

OLD MAN. And we shall be apt to come out more kinder evenner.

Enter Kate and Desmond, Kate with letter.

KATE. Here's a lovely piece of news.

NORA. What is it?

KATE. I've just found this letter in my room. It is from Mrs. Delaplayne.

NORA. And what in the world is in it that you bring it here?

KATE. The Marquis is in it. Listen. (*Reads.*) "You know that man who was reported to be about to marry Miss Rogers, the Marquis de Montessin; he has just eloped with that awfully stupid Miss Meadows, whose father struck oil a few years ago. They say he heard that Miss Rogers was not as rich as he had imagined, and so he took the other, with much discretion."

MRS. ROGERS. I knew something was wrong when he gave up his claims so suddenly.

ESMERALDA. Oh, he is gone, and I shall never see him again. (*Clasps Dave's arm.*) Oh, Dave, it frightens me to think of him!

DAVE. There is no need of that, honey. The sun shines again as it used in the old days. It shines upon the little house, and the door waiting to be opened. And we are together.

[CURTAIN.]

HERMES TRISMEGISTUS.

As Seleucus narrates, Hermes described the principles that rank as wholes in two myriads of books; or, as we are informed by Manetho, he perfectly unfolded these principles in three myriads six thousand five hundred and twenty-five volumes. * * * Our ancestors dedicated the inventions of their wisdom to this deity, inscribing all their own writings with the name of Hermes.—IAMBLICUS.

STILL through Egypt's desert places
Flows the lordly Nile,
From its banks the great stone faces
Gaze with patient smile;
Still the pyramids imperious
Pierce the cloudless skies,
And the Sphinx stares with mysterious,
Solemn, stony eyes.

But where are the old Egyptian
Demi-gods and kings?
Nothing left but an inscription
Graven on stones and rings.
Where are Helius and Hephœstus,
Gods of eldest eld?
Where is Hermes Trismegistus,
Who their secrets held?

Where are now the many hundred
Thousand books he wrote?
By the Thaumaturgists plundered,
Lost in lands remote;
In oblivion sunk forever,
As when o'er the land,
Blows a storm-wind, in the river
Sinks the scattered sand.

Something unsubstantial, ghostly,
Seems this Theurgist,
In deep meditation mostly
Wrapped, as in a mist.
Vague, phantasmal and unreal,
To our thought he seems,
Walking in a world ideal,
In a land of dreams.

Was he one, or many, merging
Name and fame in one,
Like a stream, to which, converging
Many streamlets run?
Till, with gathered power proceeding,
Ampler sweep it takes,
Downward the sweet waters leading
From unnumbered lakes.

By the Nile I see him wandering,
Pausing now and then,
On the mystic union pondering
Between gods and men ;
Half-believing, wholly feeling,
With supreme delight,
How the gods, themselves concealing,
Lift men to their height.

Or in Thebes, the hundred-gated,
In the thoroughfare
Breathing, as if consecrated,
A diviner air ;
And amid discordant noises,
In the jostling throng,
Hearing far, celestial voices
Of Olympian song.

Who shall call his dreams fallacious ?
Who has searched or sought
All the unexplored and spacious
Universe of thought ?
Who, in his own skill confiding,
Shall with rule and line
Mark the border-land dividing
Human and divine ?

Trismegistus! three times greatest!
How thy name sublime
Has descended to this latest
Progeny of time!
Happy they whose written pages
Perish with their lives,
If amid the crumbling ages
Still their name survives!

Thine, O priest of Egypt, lately
Found I in the vast,
Weed-encumbered, sombre, stately
Grave-yard of the Past ;
And a presence moved before me
On that gloomy shore,
As a waft of wind, that o'er me
Breathed, and was no more.

THE SUPERLATIVE.

THE doctrine of temperance is one of many degrees. It is usually taught on a low platform, but one of great necessity—that of meats and drinks, and its importance cannot be denied and hardly exaggerated. But it is a long way from the Maine Law to the heights of absolute self-command which respect the conservatism of the entire energies of the body, the mind, and the soul. I wish to point at some of its higher functions as it enters into mind and character.

There is a superlative temperament which has no medium range, but swiftly oscillates from the freezing to the boiling point, and which affects the manners of those who share it with a certain desperation. Their aspect is grimace. They go tearing, convulsed through life—wailing, praying, exclaiming, swearing. We talk, sometimes, with people whose conversation would lead you to suppose that they had lived in a museum, where all the objects were monsters and extremes. Their good people are phoenixes; their naughty are like the prophet's figs. They use the superlative of grammar: "most perfect," "most exquisite," "most horrible." Like the French, they are enchanted, they are desolate, because you have got or have not got a shoe-string or a wafer you happen to want—not perceiving that superlatives are diminutives, and weaken; that the positive is the sinew of speech, the superlative the fat. If the talker lose a tooth, he thinks the universal thaw and dissolution of things has come. Controvert his opinion and he cries "Persecution!" and reckons himself with Saint Barnabas, who was sawn in two.

Especially we note this tendency to extremes in the pleasant excitement of horror-mongers. Is there something so delicious in disasters and pain? Bad news is always exaggerated, and we may challenge Providence to send a fact so tragical that we cannot contrive to make it a little worse in our gossip.

All this comes of poverty. We are unskillful definers. From want of skill to convey quality we hope to move admiration by quantity. Language should aim to describe the fact. It is not enough to suggest it and magnify it. Sharper sight would indicate the true line. 'Tis very wearisome, this straining talk, these experiences, all exquisite, intense, and tremendous—"The best I ever saw"; "I never in my life!" One wishes these terms gazetted and forbidden. Every favorite is not a cherub, nor every cat a griffin; nor each unpleasing

person a dark, diabolical intriguer; nor agonies, excruciations, nor ecstasies our daily bread.

Horace Walpole relates that in the expectation, current in London a century ago, of a great earthquake, some people provided themselves with dresses for the occasion. But one would not wear earthquake dresses or resurrection robes for a working jacket, nor make a codicil to his will whenever he goes out to ride; and the secrets of death, judgment, and eternity are tedious when recurring as minute-guns. Thousands of people live and die who were never, on a single occasion, hungry or thirsty, or furious or terrified. The books say "It made my hair stand on end!" Who, in our municipal life, ever had such an experience? Indeed, I believe that much of the rhetoric of terror—"It froze my blood," "It made my knees knock," etc.—most men have realized only in dreams and nightmares.

Then there is an inverted superlative, or superlative contrary, which shivers, like Demophoon, in the sun: wants fan and parasol on the cold Friday; is tired by sleep; feeds on drugs and poisons; finds the rainbow a discoloration; hates birds and flowers.

The exaggeration of which I complain makes plain fact the more welcome and refreshing. It is curious that a face magnified in a concave mirror loses its expression. All this overstatement is needless. A little fact is worth a whole limbo of dreams, and I can well spare the exaggerations which appear to me screens to conceal ignorance. Among these glorifiers, the coldest stickler for names and dates and measures cannot lament his criticism and coldness of fancy. Think how much pains astronomers and opticians have taken to procure an achromatic lens. Discovery in the heavens has waited for it; discovery on the face of the earth not less. I hear without sympathy the complaint of young and ardent persons that they find life no region of romance, with no enchanter, no giant, no fairies, nor even muses. I am very much indebted to my eyes, and am content that they should see the real world, always geometrically finished without blur or halo. The more I am engaged with it the more it suffices.

How impatient we are, in these northern latitudes, of looseness and intemperance in speech! Our measure of success is the moderation and low level of an individual's judg-

ment. Doctor Channing's piety and wisdom had such weight that, in Boston, the popular idea of religion was whatever this eminent divine held. But I remember that his best friend, a man of guarded lips, speaking of him in a circle of his admirers, said: "I have known him long, I have studied his character, and I believe him capable of virtue." An eminent French journalist paid a high compliment to the Duke of Wellington, when his documents were published: "Here are twelve volumes of military dispatches, and the word *glory* is not found in them."

The English mind is arithmetical, values exactness, likes literal statement; stigmatizes any heat or hyperbole as Irish, French, Italian, and infers weakness and inconsequence of character in speakers who use it. It does not love the superlative but the positive degree. Our customary and mechanical existence is not favorable to flights; long nights and frost hold us pretty fast to realities. The people of English stock, in all countries, are a solid people, wearing good hats and shoes, and owners of land whose title-deeds are properly recorded. Their houses are of wood, and brick, and stone, not designed to reel in earthquakes, nor blow about through the air much in hurricanes, nor to be lost under sand-drifts, nor to be made bonfires of by whimsical viziers; but to stand as commodious, rentable tenements for a century or two. All our manner of life is on a secure and moderate pattern, such as can last. Violence and extravagance are, once for all, distasteful; competence, quiet, comfort, are the agreed welfare.

Ever a low style is best. "I judge by every man's truth of his degree of understanding," said Chesterfield. And I do not know any advantage more conspicuous which a man owes to his experience in markets and the Exchange, or politics, than the caution and accuracy he acquires in his report of facts. "Uncle Joel's news is always true," said a person to me, with obvious satisfaction, and said it justly; for the old head, after deceiving and being deceived many times, thinks, "What's the use of having to unsay to-day what I said yesterday? I will not be responsible; I will not add an epithet. I will be as moderate as the fact, and will use the same expression, without color, which I received; and rather repeat it several times, word for word, than vary it ever so little."

The first valuable power in a reasonable mind, one would say, was the power of plain statement, or the power to receive things as they befall, and to transfer the picture of them to another mind unaltered. 'Tis a good rule of rhetoric which Schlegel gives—

"In good prose, every word is underscored"; which, I suppose, means never italicize.

Spartans, stoics, heroes, saints, and gods use a short and positive speech. They are never off their centers. As soon as they swell and paint and find truth not enough for them, softening of the brain has already begun.

It seems as if inflation were a disease incident to too much use of words, and the remedy lay in recourse to things. I am daily struck with the forcible understatement of people who have no literary habit. The low expression is strong and agreeable. The citizen dwells in delusions. His dress and draperies, house and stables, occupy him. The poor countryman, having no circumstance of carpets, coaches, dinners, wine, and dancing in his head to confuse him, is able to look straight at you, without refraction or prismatic glories, and he sees whether you see straight also, or whether your head is added by this mixture of wines.

The common people diminish: "a cold snap"; "it rains easy"; "good haying weather." When a farmer means to tell you that he is doing well with his farm, he says, "I don't work as hard as I did, and I don't mean to." When he wishes to condemn any treatment of soils or of stock, he says, "It wont do any good." Under the Catskill Mountains the boy in the steam-boat said, "Come up here, Tony; it looks pretty out-of-doors."

The farmers in the region do not call particular summits, as Killington, Camel's Hump, Saddleback, etc., mountains, but only "them 'ere rises," and reserve the word mountains for the range.

I once attended a dinner given to a great state functionary by functionaries,—men of law, state, and trade. The guest was a great man in his own country and an honored diplomatist in this. His health was drunk with some acknowledgment of his distinguished services to both countries, and followed by nine cold hurrahs. There was the vicious superlative. Then the great official spoke and beat his breast, and declared that he should remember this honor to the latest moment of his existence. He was answered again by officials. Pity, thought I, they should lie so about their keen sensibility to the nine cold hurrahs and to the commonplace compliment of a dinner. Men of the world value truth, in proportion to their ability, not by its sacredness, but for its convenience. Of such, especially of diplomatists, one has a right to expect wit and ingenuity to avoid the lie, if they must comply with the form. Now, I had been present, a little before, in the country at a cattle-show dinner, which followed an agricultural discourse delivered by a farmer; the

discourse, to say the truth, was bad; and one of our village fathers gave at the dinner this toast: "The orator of the day: his subject deserves the attention of every farmer." The caution of the toast did honor to our village father. I wish great lords and diplomatists had as much respect for truth.

But whilst thus everything recommends simplicity and temperance of action, the utmost directness, the positive degree, we mean thereby that "rightly to be great is not to stir without great argument." Whenever the true objects of action appear, they are to be heartily sought. Enthusiasm is the height of man; it is the passing from the human to the divine.

The superlative is as good as the positive, if it be alive. If man loves the conditioned, man also loves the unconditioned. We don't wish to sin on the other side, and to be purists, nor to check the invention of wit or the sally of humor. 'Tis very different, this weak and wearisome lie, from the stimulus to the fancy which is given by a romancing talker who does not mean to be exactly taken,—like the gallant skipper who complained to his owners that he had pumped the Atlantic Ocean three times through his ship on the passage, and 'twas common to strike seals and porpoises in the hold. Or what was similarly asserted of the late Lord Jeffrey, at the Scottish bar,—an attentive auditor declaring, on one occasion, after an argument of three hours, that he had spoken the whole English language three times over in his speech.

The objection to unmeasured speech is its lie. All men like an impressive fact. The astronomer shows you in his telescope the nebula of Orion, that you may look on that which is esteemed the farthest-off land in visible nature. At the Bank of England they put a scrap of paper that is worth a million pounds sterling into the hands of the visitor to touch. Our traveling is a sort of search for the superlatives or summits of art,—much more the real wonders of power in the human form. The arithmetic of Newton, the memory of Magliabecchi or Mirandola, the versatility of Julius Cæsar, the concentration of Buonaparte, the inspiration of Shakspeare, are sure of commanding interest and awe in every company of men.

The superlative is the excess of expression. We are a garrulous, demonstrative kind of creatures, and cannot live without much outlet for all our sense and nonsense. And fit expression is so rare that mankind have a superstitious value for it, and it would seem the whole human race agree to value a man precisely in proportion to his power of expression; and to the most expressive man that

has existed, namely, Shakspeare, they have awarded the highest place.

The expressors are the gods of the world, but the men whom these expressors revere are the solid, balanced, undemonstrative citizens who make the reserved guard, the central sense, of the world. For the luminous object wastes itself by its shining—is luminous because it is burning up; and if the powers are disposed for display, there is all the less left for use and creation. The talent sucks the substance of the man. Superlatives must be bought by too many positives. Gardens of roses must be stripped to make a few drops of otto. And these raptures of fire and frost, which indeed cleanse pedantry out of conversation and make the speech salt and biting, would cost me the days of well-being which are now so cheap to me, yet so valued. I like no deep stakes. I am a coward at gambling. I will bask in the common sun awhile longer.

Children and thoughtless people like exaggerated event and activity; like to run to a house on fire, to a fight, to an execution; like to talk of a marriage, of a bankruptcy, of a debt, of a crime. The wise man shuns all this. I knew a grave man who, being urged to go to a church where a clergyman was newly ordained, said "he liked him very well, but he would go when the interesting Sundays were over."

All rests at last on the simplicity of nature, or real being. Nothing is for the most part less esteemed. We are fond of dress, of ornament, of accomplishments, of talents, but distrustful of health, of soundness, of pure innocence. Yet nature measures her greatness by what she can spare—by what remains when all superfluity and accessories are shorn off.

Nor is there in nature itself any swell, any brag, any strain, or shock, but a firm common sense through all her elephants and lions, through all her ducks and geese—a true proportion between her means and her performance. *Semper sibi similis*. You shall not catch her in any anomalies, nor swaggering into any monsters. In all the years that I have sat in town and forest, I never saw a winged dragon, a flying man, or a talking fish, but ever the strictest regard to rule, and an absence of all surprises. No; nature encourages no looseness, pardons no errors; freezes punctually at 32°, boils punctually at 212°; crystallizes in water at one invariable angle, in diamond at one, in granite at one; and if you omit the smallest condition the experiment will not succeed. Her communication obeys the gospel rule, yea or nay. She never expatiates, never goes into the reasons. Plant beech-mast and it comes up, or it does

not come up. Sow grain, and it does not come up; put lime into the soil and try again, and this time she says yea. To every question an abstemious but absolute reply. The like staidness is in her dealings with us. Nature is always serious—does not jest with us. Where we have begun in folly, we are brought quickly to plain dealing. Life could not be carried on except by fidelity and good earnest; and she brings the most heartless trifter to determined purpose presently. The men whom she admits to her confidence, the simple and great characters, are uniformly marked by absence of pretension and by understatement. The old and the modern sages of clearest insight are plain men, who have held themselves hard to the poverty of nature.

The firmest and noblest ground on which people can live is truth; the real with the real; a ground on which nothing is assumed, but where they speak and think and do what they must, because they are so and not otherwise.

But whilst the basis of character must be simplicity, the expression of character, it must be remembered, is, in great degree, a matter of climate. In the temperate climates there is a temperate speech, in torrid climates an ardent one. Whilst in Western nations the superlative in conversation is tedious and weak, and in character is a capital defect, nature delights in showing us that in the East it is animated, it is pertinent, pleasing, poetic. Whilst she appoints us to keep within the sharp boundaries of form as the condition of our strength, she creates in the East the uncontrollable yearning to escape from limitation into the vast and boundless; to use a freedom of fancy which plays with all the works of nature, great or minute, galaxy or grain of dust, as toys and words of the mind; inculcates the tenet of a beatitude to be found in escape from all organization and all personality, and makes ecstasy an institution.

Religion and poetry are all the civilization of the Arab. "The ground of Paradise," said Mohammed, "is extensive, and the plants of it are hallelujahs." Religion and poetry: the religion teaches an inexorable destiny; it distinguishes only two days in each man's history—the day of his lot, and the day of judgment. The religion runs into asceticism and fate. The costume, the articles in which wealth is displayed, are in the same extremes. Thus the diamond and the pearl, which are only accidental and secondary in their use

and value to us, are proper to the oriental world. The diver dives a beggar and rises with the price of a kingdom in his hand. A bag of sequins, a jewel, a balsam, a single horse, constitute an estate in countries where insecure institutions make every one desirous of concealable and convertible property. Shall I say, further, that the orientals excel in costly arts, in the cutting of precious stones, in working in gold, in weaving on hand-loom costly stuffs from silk and wool, in spices, in dyes and drugs, henna, otto, and camphor, and in the training of slaves, elephants, and camels—things which are the poetry and superlative of commerce.

On the other hand,—and it is a good illustration of the difference of genius,—the European nations, and, in general, all nations in proportion to their civilization, understand the manufacture of iron. One of the meters of the height to which any civility rose is the skill in the fabric of iron. Universally, the better gold, the worse man. The political economist defies us to show any gold-mine country that is traversed by good roads; or a shore where pearls are found on which good schools are erected. The European civility, or that of the positive degree, is established by coal-mines, by ventilation, by irrigation, and every skill—in having water cheap and pure, by iron, by agriculture for bread-stuffs, and manufacture of coarse and family cloths. Our modern improvements have been in the invention of friction matches; of India-rubber shoes; of the famous two parallel bars of iron; then of the air-chamber of Watt, and of the judicious tubing of the engine, by Stephenson, in order to the construction of locomotives.

Meantime, nature, who loves crosses and mixtures, makes these two tendencies necessary each to the other, and delights to reënfice each peculiarity by imparting the other. The Northern genius finds itself singularly refreshed and stimulated by the breadth and luxuriance of Eastern imagery and modes of thinking, which go to check the pedantry of our inventions and the excess of our detail. There is no writing which has more electric power to unbind and animate the torpid intellect than the bold Eastern muse.

If it come back, however, to the question of final superiority, it is too plain that there is no question that the star of empire rolls West: that the warm sons of the South-east have bent the neck under the yoke of the cold temperament and the exact understanding of the North-western races.

DANIEL WEBSTER.

THE hundredth anniversary of Daniel Webster's birth starts a train of mingled reflections. A fortune of singular infelicity has befallen this great statesman's fame. During the period that has intervened since his death in 1852, now almost three full decades of years, his memory has suffered under a most extraordinary fatality of pertinacious public misunderstanding of his position, and consequent blind detraction from his merit. There has been, too, a certain element of undeniable nobleness in the indignant reprobation, as it were vicariously, and, therefore, unjustly, visited upon his name, that all the time went far to clothe it in the general esteem with the attributes of a divine judicial sentence severely accordant with desert. The voice of the people was the voice of God, until at length the accepted and unchallenged voice of God bade fair to become, in turn, the final and irreversible voice of the people. And thus it happens that the one selected man who, by eminence among all our lately finished hundred years of wise Americans, did most by his living labors to postpone the crisis that so nearly cost us our national life, who then, by his transmitted influence, did most to carry us safely through that crisis when it could no longer be postponed, who even yet, by his unexhausted, although unrecognized and unacknowledged, exertion of power from his grave, is destined in the future to do most toward making us really and vitally whole again (for such, we may at length fairly trust, is indeed to be the happy issue), after the dangerous and doubtful period of political experiment that necessarily supervened—that man, a true human saviour to this American nation, as much, at least, as any one man is rightly to be named for such a saviour, Daniel Webster, is now either not known, except by tradition, or else so falsely known that he might almost prefer not to be known at all to the vast majority of the great new nation which he so largely contributed to save. This is a doubly injurious injustice; injurious, first, to the disparaged name, but injurious not less to those to whom the name is thus disparaged.

Perhaps no man ever lived that, quite apart from any adventitious circumstances affecting him, such as accident of birth, or dignity of station, apart indeed from actual achievement of his own, by mere and pure force of inherent character and personality, so impressed the generation to which he belonged as did Daniel Webster. There was something almost

supernatural about it. The adjectives by which he was customarily characterized, in the common and instinctive speech of the people, attributed a kind of divinity to the man. He was the "godlike Daniel" to his countrymen in general, who thus called him by a phrase which, with a certain semi-conscious humor in it racy of the national character, redeemed its own excess of veneration by a corrective dash of associated familiarity. But no less the educated men among his fellows were accustomed to employ in their own more scholarly way a similar language. To them, he was "Jove," a "descended god," a "demi-god," "the Olympian." If he went abroad, some Englishman said he "looked like a cathedral," or Sydney Smith, with irreverent homage to his Titan might, said he "was a steam-engine in breeches."

This imposing effect of Webster's personal presence was partly due to the remarkable physical mold in which he was cast. He was not gigantic in proportions, was not even greatly above the medium height; but somehow the beholder took from him an instantaneous and overwhelming impression of immense mass, weight, momentum,—in one word, of power. He was always one of the sights of Boston, where his presence in the streets made the neighboring buildings look smaller. Men from the country, that did not know who it was, would stand to gaze at him. Of course, as soon as you were aware that a physical frame so magnificent was the abode of a moral and intellectual nature not unfit to inhabit it, the pleasurable inspiration of wonder and awe that you felt in beholding was more than doubled. But when, in addition, you could further assure yourself that this man was the great lawyer, the great statesman, the great orator, of his country and time, why, naturally, the enthusiasm of admiration and delight of which you were conscious in his presence became something extraordinary.

A gentleman whose name, if it were proper to mention it, would be widely recognized as that of an author of rare merit, has told the present writer that in the time of his own early manhood he used to go, when in Washington, to the Senate Chamber and sit by the hour for no other purpose than to look at Daniel Webster. That this instance of generous young devotion at the shrine of manly genius and of personal power nobly incarnated was by no means exceptional, is amply shown in the very remarkable terms of the encomiums which with one con-

sent were passed upon him by the periodical press, the rostrum, the pulpit, and the bar of the whole country, at his death. Obituary newspaper-writing is quite apt, of course, to be extravagant, and funeral eloquence is not to be taken as sober history. This must be remembered; but it still remains true that, in these various tributes to the memory of Daniel Webster, a certain sentiment of homage and ascription was present that almost literally deified the man whom it exalted. The idolatry was not an idolatry of mere affection. It was much rather an idolatry of reverence and awe. The dead divinity seemed in some cases even to be hated and feared, while he was worshiped; for a strange discord of execration in certain quarters, as if from some unfriendly demoniacal spirit unawares in possession, mingled at the obsequies with the high pæans that chanted his praises.

This strain of posthumous eulogy, it is just to say, was but a return, on the part of the public, for a single remorseful and expiatory moment, to that becoming temper of appreciation toward Daniel Webster which not quite two years before, at a memorable crisis, it abruptly and passionately lost. Daniel Webster died in October, 1852, in the seventy-first year of his age. It was in March of the second year preceding that the first murmur arose of a popular reprisal upon his fame, which refused to be altogether silent at the great man's funeral, and which, in a muffled under-tone of disparagement by neglect, could be detected amid the multitudinous chorus of rejoicing lately heard over our hundred years of prosperous national history, retrieved from irreparable disaster and loss so largely through his own labors and sacrifices. An act of just though tardy expiation toward the memory of Daniel Webster would have constituted one of the most befitting rites that we could have performed to signalize the observance of our national centennial year.

On the 7th of March, 1850, Webster delivered in the Senate of the United States a speech (on the relations of slavery to the Union) the effect of which upon his own chances of fame has been, up to the present moment, in the highest degree unfavorable. That speech turned against the orator nearly the whole force of the particular literary mode then rapidly gaining the ascendant in this country. The time since then has been an era of sentimentalism in literature, as it has been an era of sentimentalism in politics and in religion. Webster has been judged according to the fashion of such an era. There will succeed a different era, having different canons of judgment, and Webster will be judged differently. The pendulum al-

ready commences its return toward the opposite extreme of oscillation. This, however, is anticipation, and we now deal with retrospect. The tide of political opinion, held for a time from ebbing by the almost sole contrary attraction of Webster's own example and influence while he yet lived, receded with precipitate rapidity after his death, and left the great bulk of his name, it well might seem, a wreck forever on the strand. The reaction against Webster in popular regard resulting from this celebrated speech found powerful and beautiful expression in one of Mr. Whittier's finest poems, a piece significantly entitled "Ichabod!" Since then, in a published poem on Webster, Mr. Whittier has evinced some disposition to unwrite his earlier branding lyric of dispraise.

What, now, was there in Webster's 7th of March speech that properly inspired a lyric dirge like "Ichabod"? How did Webster obliterate then, at a stroke, the glorious record of his past public life? These are questions rather for a volume in answer (and the volume should be a narrative, not an argument), than for an article like this. But the case is remarkable, and what it is may at least be indicated here. Thirty years before his speech of the 7th of March, Webster had stood on Plymouth Rock and pronounced an oration which may not untruthfully be said to have founded a new order of eloquence peculiar to this country,—the eloquence of patriotism,—so completely equaling then, if he did not even surpass, the great occasion with his utterance, that immediately, and permanently thenceforth, the occasion was conspicuous by the speech, rather than the speech conspicuous by the occasion. A few years later he had stood on Bunker Hill, and, in one great act of oratory, at the same time created the granite monument which was yet to spring from the historic sod under his feet, and made that future monument at once commanding and superfluous by an associated production of genius destined to be more enduring than itself. Again, in commemoration of the illustrious occasion when, by a most impressive coincidence, John Adams and Thomas Jefferson, twin founders of the republic, added to the auspices of their country's natal day by concurrent sudden deaths, at a ripe old age, on the Fourth of July, 1826, the semi-centennial anniversary of the Declaration of Independence, he had delivered yet another of those unequalled occasional addresses which from his lips wrought so powerfully on the intellect, the heart, and the conscience of the nation. Once again, and perhaps chief of all, in the Senate of the United States, in 1830 (just twenty years before those fatal nones of March, 1850), he had

spoken for the Union and the Constitution in reply to the graceful, spirited, and seductive sophistries of Hayne, and had won the name of expounder of the Constitution and defender of the Union. During the two decades of years that intervened, he had taught the people only the noblest and purest lessons of grave political and social wisdom, always preferring in his inculcation the true before the agreeable, in accordance with his famous favorite motto, *vera pro gratis*. Such had been the tenor of a public career that during the space of one whole generation had commanded equally the veneration and the grati-

tude of his countrymen to a degree probably never exceeded in the history of the human race, when suddenly, by a single day's deed, with its sequel of consistent conduct, he, as so many will have it, branded "Ichabod" (the glory has departed) in an ineffaceable legend over the entire surface of his life.

This is the case, and the case, I say, is remarkable. The problem it suggests is one to be solved only in a dispassionate judicial study of Webster's life. That study remains to be written. This centennial year for Webster's memory would be a fit occasion for the appearance of the needed volume. Who will write it?

LOVERS IN THE TROPICS.

WEST-INDIAN IDYL.

PHILIP.

Love, the winds long to lure you to their home,
To tempt you on beneath the northern arch!
There, in the swift, bright summer, you and I
May loiter where the elms' deep shadows lie;
There, by our household fire, bid Yule-tide come,
And winter's cold, and every gust of March.

CLEMENTINE.

Stay, O stay with me here, and chasten
Your heart still longing to wander more!
Ever the restless winds are winging,
But the white-plumed egrets, skyward-springing,
Over our blue sea hover, and hasten
To light anew on their own dear shore.

PHILIP.

The lips grow tired of honey, the cloyed ear
Of music, and of light the eyelids tire.
I weary of the sky's eternal balm,
The ceaseless droop and rustle of the palm;
Only your whisper, love, constrains me here
From that brave clime I would you might desire.

CLEMENTINE.

Cold, ah! cold is the sky, and leaden,
There where earth rounds off to the pole!
Still by kisses the moments number,—
Here are sweetness, and rest, and slumber,
All to lighten and naught to deaden
The heart's low murmur, the captured soul.

PHILIP.

Dear, I would have you yearn, amid these sweets,
For the clear breeze that blows from waters gray,—
For some fresh, northern hill-top, overgrown
With bush and bloom and brake to you unknown;
There, while the hidden thrush his song repeats,
The rose shall tinge your cheek the livelong day.

CLEMENTINE.

Stay in the clime where living is loving
 And the lips make music unaware;
 Where copeses thrill with the wood-doves' cooing,
 And astral moths on the flight are wooing;
 While the colibris, that poise unmoving,
 Like winged Loves, mate in the trembling air.

PHILIP.

Nay, love itself will languish in the days
 When Summer never doffs his burning helm.
 No lasting links to bind the soul are wrought
 Where passion takes no deeper cast from thought;
 Ah! lend your ear a moment to the lays
 Our poets sing you of a trustier realm!

CLEMENTINE.

Under the cocoa-fronds that flutter,
 Here, where the lush white trumpet-flower
 And the curled lianas roof us over,
 So that no evil thing discover
 The sighs we mingle, the words we utter,—
 Here, oh here, let us make our bower!

PHILIP.

Love is not perfect, sweet, that like a dream
 Flows on without a forecast or a pain;
 Some burden must betide to make it strong,
 Some toil, to make its briefest bliss seem long,—
 Ay, longer than the crossing of a stream
 Mist-haunted; lit by moons that surely wane.

CLEMENTINE.

Here, for a round of moons unbroken,
 A spell that binds shall your loss requite;
 The fleet, sweet moments shall pass unreckoned
 And all to our constant love be second,
 And the fragrant lily shall be our token,
 That folds itself on the waves at night.

PHILIP.

Yonder, or here, and whether summer's star
 Burn overhead, or rains of autumn fall!

CLEMENTINE.

Or snows of winter in the frozen North?

PHILIP.

Love, never doubt it!

CLEMENTINE.

Take me with you forth!
 And oh, forget not in that land afar,
 I am your summer,—you, my life, my all!

THE PHIDIAN AGE OF SCULPTURE.

IN the fifth century before the Christian era, there lived in Greece two sculptors, who were pupils of the same master and were destined to exercise great influence on the art of their land. These were Phidias and Polycletus—the former claiming Athens as his birthplace, and the latter the neighboring Argos.

Among the hills of Epidaurus, across the bay from Athens, was a far-famed health resort where Æsculapius was worshiped, and where his priests directed medical treatment. For the crowds of invalids gathered there, theaters and houses of worship were in demand, as at watering-places of to-day. Of these buildings, the *tholus* and the theater owe their existence to Polycletus. Although Pausanias grows enthusiastic over the latter building, the fame of its builder was due more to his sculptures than to his architectural achievements. Ancient writers were lavish in praise of his statues, sometimes placing them even above those of Phidias. The money value of his handiwork may serve to indicate how highly it was prized, one of his statues bringing a hundred talents (\$117,750)—an immense sum for a single figure, either in ancient or modern times. But quiet Argos, where his lot was cast, was less rich in opportunities for the artist than progressive and ambitious Athens. Since Argos failed to take part with her sister cities against the Persian invader, she had no share in the glorious victories and in that awakening of public spirit and vigorous life which thrilled through Attica after those great national triumphs. Matters went on quietly as before in Argos, the ancient seat of bronze working. It is not strange, then, that we find the activity of Polycletus moving in a narrower sphere than that opened up by Athens to her sons. Such, however, was the excellence of his athletes that the ancients could not extol them enough; but for the most part they are described in obscure terms, which render it well-nigh impossible to determine the art-character of their creator. Two of his bronze figures were most famous. One represented a youthful athlete in the act of binding a fillet about his head, hence called the *Diadumenus*; the other, who bore a spear, received the corresponding name of the *Doryphorus*. One of these may have been the celebrated "canon" or model

which was studied by artists, and about which volumes of theory have been written, even in modern times. These works have perished, and only feeble echoes of them remain in existing marbles and bronzes. Two of these remote repetitions of the *Diadumenus*, one from France and one from Italy, are in the British Museum. Those of the *Doryphorus* have found their way to the collections of Naples, Rome, and Berlin, and are all traceable to Italy. A tombstone relief, recently discovered in Argos, confirms ancient descriptions of the *Doryphorus*. In the replicas of this statue, the figures in the round want the spear, but in this tombstone relief the spear is seen. In this humble monument some ancient workman in Argos, the very home of the great master, seems then to have copied the celebrated bronze, adapting it to his monumental purpose by adding a horse. This animal is strikingly inferior to the youth, who retains some of the force of the original. A statue of the goddess Hera, by Polycletus, enjoyed a fame scarcely second to that of the Olympic Zeus of Phidias. Pausanias, in traveling through Argolis seventeen centuries ago, saw this costly image in gold, ivory, and wood in its temple on the slopes of Mount Eubœa. To-day, the traveler may search among the uncovered foundations of this temple, but he will find no trace of its sacred image. Nevertheless, here, where the genius of this great master once presided, excavations in 1854 were rewarded by a rich discovery of fragments from colossal and life-size figures, besides bits of relief evincing a rare degree of perfection, and mostly in Parian marble. Among these were seven heads, twenty fragments of bodies, forty-two of arms and hands, one hundred and fourteen of thighs and feet, and one hundred and sixty of drapery, all of which were stored in a shed at Argos. Dust and spiders immediately plotted a second oblivion for these precious marbles, and many fragments, it is said, have been purloined by tourists, leaving irreparable gaps. Of only two or three fragments have casts been taken, one of which wins admiration at once, so rich are its lines. These marbles are, then, a stock in reserve, from the study of which we may hope to learn something definite of the art of a master whose

praises were so loud that they have not yet died away, but which, in the opinion of the great German archæologist, Conze, give Polycletus a position with reference to Phidias like that of Dürer to Raphael.

From Argolis, then, let us turn to Attica, across the blue Saronic gulf. The master who meets us there is Phidias, son of Charmides, as he inscribed himself. Numerous and able were his pupils and rivals, and yet it is around his sublime genius that the memories of the golden age of Attic art cluster. Of his life little is known; calculating from contemporary events, his birth may be placed at about 490 B. C., making him a few years younger than the poet Sophocles. When the word Marathon was sounding from the lips of every exulting Athenian, he was a mere lad. When he was approaching manhood, the vengeance of the Persians broke out afresh upon his native land, and the immense army of Xerxes crossed the Hellespont and approached on the north, while Persian galleys swarmed in Greek waters. Anguish and distress accompanied their course. Athens became a waste, the Athenians were fugitives on the neighboring shores, their homes and sacred places a prey to the flames. The Persians again were driven back, but they carried off many art-treasures sacred to the Athenians. Such memories could not have failed to leave their impression on the young Phidias. His pulse must have quickened with feverish anxiety when the news came that Greek soldiers had defended to the death the pass of Thermopylæ, and his soul must have glowed with patriotic fervor as the shouts of victory rang through the streets after the battles of Platæa, Salamis, and Mycæ.

Old Athens had been destroyed, but, fired with new life, it was to be made glorious and powerful for the future. Under Themistocles her walls steadily rose, in the midst of obstacles as great as those met by Nehemiah and Ezra in a similar work. Her port, the Piræus, was laid out as became the center of a great naval power, and although her private houses were hastily thrown together for the returning fugitives, her public buildings were begun in a truly monumental spirit. With the wisdom of a far-seeing statesman, Themistocles gave all strangers at work on Athenian buildings immunity from taxation, and artists of all kinds from different parts of Greece flocked to her opened gates. Such, then, were the favorable circumstances under which Phidias came to manhood. Moreover, he belonged to an artistic family. Though his father, Charmides, seems to have been an artist, the youth was put under the tutelage of Hegias. The works of this sculptor are reported to have been

stiff; we are not, then, surprised to learn that the fame of a greater man, Ageladas of Argos, early attracted Phidias, as it had done Myron and Polycletus, and from this Argive master we may believe that the young Attic sculptor learned those principles of proportion and correctness characteristic of Peloponnesian art, and which, grafted on his native Attic genius, were to produce works of rare richness and perfection.

In the beginning of his career, Phidias seems to have enjoyed the patronage of Cimon, Miltiades's great son, as appears from the subject of his first work. This was an extensive bronze group for Delphi, commemorative of the battle of Marathon, and representing Miltiades, its victor, among gods and mythic heroes. It was doubtless, also, while Cimon ruled, that Phidias executed two other thank-offerings for victory, statues of the goddess Athene—one, an acrolith for Platæa, the decisive battle-field of the Persian war, and the other the familiar bronze colossus called Athene Promachos, or Champion, whose gleaming helmet and spear shone far over the waters, even to Cape Sunium.

His prime, however, was to be spent in the friendship and service of one greater than Cimon, and that was Pericles. The old temples and many sacred semblances had perished in the fires of the Persian invasion. Twenty years had elapsed, and though Themistocles and Cimon had commenced the work of restoration, many temples lay still in ruins, and many vows remained unfulfilled. It was to rebuild and repeople these temples that the powers of Phidias were now called into play. But for their full exercise was needed the patronage of a Pericles, guiding the helm of state. As the Greeks had united against the barbarians, so Pericles believed that they should unitedly celebrate their triumph, and he sent, therefore, ambassadors, veterans from the Persian war, to invite delegates to Athens for the purpose of deliberating upon the restoration of the national sanctuaries. Jealousy of Athens causing the failure of this great plan, Attica concentrated her energies upon rebuilding her own capital and wasted temples, and although a few of the other states were aroused to activity, they fell far short of their sister commonwealth. In Attica the wealth of citizens was not to be devoted to private luxury, but to the public weal and the honoring of the gods. To the same objects was extensively applied the Persian booty—a treasure so great that the frugal Greeks marveled how the oriental monarch could have desired their barren, rugged land. The silver mines of Laurium, and especially the annual tribute from a thousand Greek towns and cities, paid into the national treasury at Athens as a return for her protection,

constituted still other sources of revenue. Prosperous and wealthy, Athens now, more than ever, must have been the center of attraction to artists, for whose works abundant materials were collected. Costly woods and ivories were brought from the far East. The imported Parian marble used by earlier sculptors was now supplanted by a golden-toned but cheaper sort from the neighboring Pentelicus. In the short space of twenty years there arose temples, theaters, and other buildings, with richly sculptured decorations, sheltering statues of sacred import and new beauty. Immense treasure was spent upon these works; the golden drapery of one statue alone weighed forty-four talents (about fifty-three thousand dollars). Only a few decades later the Propylæa of the Acropolis cost the art-loving Athenians two thousand and twelve talents, which was twice the yearly income of all Attica. Even if the marvels of architecture and sculpture studding Attic soil had perished, these sums alone would bear witness to the munificent spirit in art matters of the Athenian state, in this the time of her glory. The brilliant reigns of Leo X. and Julius II., when Raphael and Michael Angelo adorned Rome, and artists flocked to the Eternal City, pale before these magnificent yet fleeting years in the history of Athens.

This stupendous artistic activity was guided, we are told, by Phidias, to whose ruling mind men of celebrity, architects, sculptors, and painters, gladly yielded. But the impulse which the intellectual and æsthetic spirit of the nation had received made it impossible servilely to replace the ancient forms. Although, indeed, the sacred wooden idol of Athene, a time-honored relic, could not be touched, other statues might be produced which, by nobler forms, should attune the souls of men to truer devotion.

To Phidias was intrusted the highest mission which Attica could offer. This was to erect a statue of the virgin goddess of Athens, Athene Parthenos, to be set up in her new and glorious shrine, the Parthenon, erected on the wasted site of an older temple. For this, costly materials were placed at his disposal,—gold, ivory, silver, gems, and choice woods,—making its execution most complicated. A genius for grand composition was required for conceiving the whole, an architect's skill in building up the colossal wooden frame-work, the carver's subtle fancy and fingers to give form to the delicate ivory, and a metal-worker's knowledge in dealing with the broad masses or elaborate finish of the gold work. The wooden frame-work was supported by inserted iron stays, and without was incrustated with thin sheets of ivory, made pliable by fire

and then modeled and fitted together with consummate skill, its creamy color and texture well representing the natural skin. Appurtenances of drapery, weapons, and hair were of massive gold, or of silver gilded, and the eyes of lambent gems, all these materials making up the fabric of the chryselephantine colossi of the gods which were the master-pieces of the Phidian age, but were seldom executed in the following century.

The statue of Athene by Phidias was six times the height of a man (over thirty-eight feet), and must have filled the beholder with an overpowering sense of its presence as it stood in the holy place (*cella*), which was less than sixty-five feet high and but little over one hundred feet long. The air of the Acropolis being dry, water was applied to the statue to prevent shrinkage in the wooden frame-work and consequent displacement of the ivory incrustations. In 437 B. C., this golden colossus stood complete in its sanctuary, but, notwithstanding the precautions taken, as early as 397 B. C. it needed to be repaired. Several centuries later, Pausanias saw it still clothed in gold. It was seen in Athens in 375 A. D., and is reported—with little probability, however—to have been in Constantinople as late as the sixteenth century A. D. Whatever its fate may have been, with its disappearance a priceless treasure of art was lost, and we regretfully ask, is there nothing which can bring before us the form in which Phidias represented the great goddess of his people? With regret comes the answer, there is nothing aside from a few feeble copies, which we recognize because they tally with the descriptions of Pausanias, Pliny, and others. Of these copies, thirteen are scattered through the museums of Athens, Rome, Turin, and Madrid. One was recently discovered at Pergamos, another is in the Louvre. By far the most complete copy of the Athene of Phidias was brought to light during the reparation of a street in Athens. This marble statuette, found in what was probably the chapel (*sacrarium*) of a private dwelling, may have been an object of worship to some pious Athenian, who thus procured for his devotions a semblance of the goddess of gold and ivory, which, according to a recently discovered dedicatory inscription, was regarded as holy. This little figure, executed with that punctilious finish characterizing statues of Roman times, is scarcely three feet high, yet gives, nevertheless, the impression of great size, its proportions, as may be seen from points on the back, being mechanically reduced from those of the colossus, as given by Pausanias.

According to that ancient author and this statuette, Phidias represented the goddess as

STATUETTE OF ATHENE PARTHENOS, ATHENS.

standing quietly erect, and wearing garments simple in form and made of gold. A long, flowing robe, the *chiton*, drops to the feet, and when open on the right side is graceful in detail, though recalling the regular zig-zag folds of earlier art. The length of the *chiton* is broken by a shorter garment, the *diploidion* falling over it and girt at the waist. But these perpendicular folds, regular hollows, sharply bent and undercut edges, as well as loosely hanging bobs, are so harsh that doubts may arise as to their beauty even in the drapery of the Phidian original. It should be remembered, however, that that was not in marble

but in metal, and that the malleable properties of gold would lend themselves gracefully to a treatment which would be thoroughly harsh and unpleasant when applied to unbending, ponderous stone. The effects of gold, bent at will into broad or into small folds, and of ivory, laid over wood, shaped easily by the turner's wheel, must have been altogether unlike those to which marble consents. Hence, doubtless, the misleading and disappointing impression given by many copies of ancient statues. Besides, what might be elaborate in these brilliant materials would offend in dull marble. The mere money value and sheen of gold suffices to satisfy a lower taste; but let its dazzling lights be toned down, and its rich color be made to reflect beautiful form, then, whether in the tiny jewel or chryselephantine colossus, it will meet the highest demands. It was, doubtless, to break these disturbing lights that the finish of a chryselephantine statue was so elaborate, the drapery enameled, necklace, earrings, and bracelets added, and all accessories, as helmet, scepter, or shield, covered with marks of the goldsmith's skill. Could we then imagine the folds of this marble statuette as of gold, their surfaces broken by smaller ones, neutralizing the disturbing reflexes of the shiny metal, and then translate it all into colossal forms, to be viewed not in the blaze of the sun, but in the mellowed temple light, we should realize that the grandeur of the drapery was worthy of the dignity of the goddess. This little statuette reminds us, also, that the colossal Athene wore the *ægis*, her ancient defense with its circling border of serpents; but it is no longer the enveloping armor of the warrior goddess of old, storming to battle, as she is seen on black-figured vases and in archaic statuettes. Reduced in size, it is made a broad but graceful collar, falling over the bosom and shoulders, and more becoming to the peace-bestowing character which Phidias seems to have divined in his Attic deity.

The Gorgon head in the center of the *ægis* has likewise felt the master's touch, giving it a place midway between the repulsive creations of earlier times, as seen in the metopes of Selinunt, and the beautiful death-stricken face of later ages, such as the Ladovisi Medusa. Although the grinning jaws of the older Medusa are here closed, and the disgusting tongue drawn in, yet the lips are still thick, and the nose broad and flat. That terror which the earlier artist sought to inspire by exaggeration amounting to caricature, is here expressed by the furrowed forehead, knitted eyebrows, and a homely, materialistic face, utterly void of the ideal conception given it in later times.

Resting on the maiden locks appears the close-fitting Attic helmet-hat, with laps raised and a crest so high as to seem top-heavy and even awkward. Here, too, we must not forget the peculiar material composing the colossus, and also the position the helmet occupied, raised high above the eye of the beholder. A sphinx crouches on its summit, a standard for its feathery crest and having a sacred meaning, as Pausanias tells us. In the sides of the helmet hover winged Pegasi, emblematical, perhaps, of the wild power in nature tamed by Athene. Bracelets, which pleasantly enlivened the creamy surface of the arm, clasped the wrist in graceful coils. Earrings and necklace doubtless added their finish to the golden colossus, for they may be seen in copies on gems and coins, although wisely omitted in most of the marble copies. Upon Athene's outstretched hand a small figure, the winged goddess Niké, or Victory, appears, and her preservation in the statuette shows us the great thoughts which Phidias expressed while holding to traditional forms in some respect, as seen in the column supporting this figure. As this Victory of gold was six feet high and weighed more than four hundred pounds, we can easily understand, with Doctor Lange, how difficult it would have been for the extended arm of the colossus to hold such a weight without a substantial support, like the column of the statuette. Early coins, moreover, show that such columns were common under the extended arms of very ancient idols. In these earlier works, the column or support gives the impression of an arbitrary addition, while in later art it is intimately associated with the figure, so as to seem an integral part of the composition. Here, also, Phidias takes a place midway between the old and new. Although retaining the traditional pillar as such, he has so worked it into the composition that without it the effect would be one-sided, an unpleasant vacant space being filled by it on Athene's right hand. How Victory with her golden wreath alighted on Athene's hand in the statue of Phidias has been much discussed, but this statuette solves the problem. Niké, the victory-bearer, could not bring triumph to the goddess in whom dwells the fullness of victory, nor yet does she turn her back on the deity, but flies obliquely toward the devout worshiper, whom in imagination we see at her feet, awaiting his crown. Niké, thus bringing the reward, forms a beautiful link between the great goddess looking off into infinity, all-sufficient in herself, and the dependent suppliant mortal at her feet. Athene's lance, which does not appear in the marble statuette, as well as her massive shield, was lowered—the latter,

COPY OF SHIELD OF ATHENE PARTHENOS, WITH PORTRAITS OF PHIDIAS AND PERICLES. BRITISH MUSEUM.

according to recently discovered inscriptions, being of silver, gilded. Under it coiled the sacred Erichthonius serpent, symbolical of the earth-born people of Athens finding protection at the feet of their goddess. Scenes representing combats of mythic Greek heroes with turbulent Amazons, those enemies of law and order, decorated the outer surface of the shield. Among these Phidias, as Plutarch tells us, represented himself as a bald-headed old man, with arms raised to hurl a stone, and Pericles, in full armor, swinging a spear so as to conceal the middle of his face. The shield of Phidias was repeatedly copied in antiquity, the best-preserved imitation being a marble relief in the Elgin room. On its rudely executed surface we can make out the portraits of Phidias and Pericles, corresponding to this description. Besides the decorations on the obverse of the shield and her high sandals, the creation of Pandora, the "Eve" of the Greeks, in the presence of twenty gods, was represented on the low pedestal. Of these figures only the rudest possible trace remains in a tiny marble copy of the Parthenos at Athens, of which casts may be seen in London and Boston. The impression which we receive concerning this statue is that it combined richness of significant

detail with a grand simplicity bordering on severity. The massive breadth of the shoulders, the length of the torso, and the narrowness of the hips are in strong contrast with the lithe and swelling curves of later times. Further, the great size of the statue, its complicated mechanism, as well as its religious character, doubtless limited the expression of movement, which, as seen from the statuette, was confined within an oblong frame, as it were, made by pillar and shield. The architectural surroundings of the great colossus may also have had a share in this limitation, the pillar-like drapery having been made apparently to harmonize with their columnar lines. The goddess does not, as in older figures, stand firmly on both feet, for the left leg is bent. Unlike the statues of Polycletus, and many of a later time, the unfreighted leg is not drawn easily backward, but simply to the side, assuming a pose difficult to maintain, as experiment will prove. Moreover, the poise of the trunk is not made to harmonize with this concentration of weight on one leg—the shoulders being on one level instead of naturally following the bend of the knee. Severity also appears in the pose of the head, which, although not painfully erect as in older works, does not bend as in

COIN OF ELIS. ZEUS ENTHRONED.

later ones. In these archaic traits of his temple statue, Phidias seems to have been influenced still by tradition. So great is their contrast to the dramatic, tempestuous compositions of the Parthenon pediments, that we are tempted to believe that the study for the Athene Parthenos was made at an earlier period—perhaps when the building of its temple was begun, about 450 B. C. The sculptural decorations for the architecture, on the other hand, would naturally be undertaken later, as the building advanced, and when the master had grown into that marvelous freedom evident in every line of the Parthenon groups. The conception of the goddess was, however, worthy of the sublime age of Phidias. Athene is no longer the fierce warrior of older times, brandishing her lance or raising her shield, as on archaic vases and reliefs, but she blesses her people in peace. The barbarian being now vanquished, her implements of war are lowered. Victory flies from her hand, freighted with good things, and the serpent, symbolical of her people, finds shelter at her feet. The whole statue, even to the minutest detail, seems to sound a hymn of praise to the Athenian deity for the triumph of right over wrong. From this time on, we find that Phidias's supremely humane conception of his goddess supplanted the older, more revengeful one; later Attic reliefs similarly represent the goddess in an attitude of peace.

When this statue stood resplendent in its completed temple, even her jealous sister states were forced to acknowledge the primacy of Athens in art. Athenian masters were called in different directions to execute great works for sacred places. The highest honor was, however, awarded to Phidias himself, who was invited to Elis to erect for the temple at Olympia, the religious center of Greece, a statue of the supreme god of Heliās. To this quiet vale the master now repaired, accompanied by his kinsman, the painter Panænus, and some of his scholars. Near the holy grove a workshop was built for his use,—an altar to all the gods standing in its center, when seen by Pausanias. Its foundations, long buried beneath the ruins of a Byzantine church,

are at last made visible by modern excavations. The master had expressed the ideal of the goddess of Attica, but the task now required was much greater. The god to be represented was not the ruler of a single state, but of all Greece, the Olympian Zeus, "whose power," as Homer says, "surpasses all the power of gods and men."

Phidias constructed this statue of the same costly materials as those used in his Parthenos, and represented the god as seated on an imposing throne, which rested on a low pedestal. The *altis* (grove) being damp, oil was used to prevent the decay of the wooden frame-work, but even with this precaution and the care with which the descendants of Phidias watched over the statue, about sixty years after its completion cracks appeared in the ivory, rendering repairs necessary. Still later, two of its ponderous golden locks were

COIN OF ELIS. HEAD OF ZEUS.

stolen. In Cæsar's time, the statue was struck by lightning. Caligula, seized with a desire to remove it to Rome and to supplant the head by a portrait of himself, was prevented from carrying out his impious designs, as was popularly believed, by miracles. The workmen put hands to the statue to remove it. But, according to Suetonius, a tremendous peal of scornful laughter burst from its otherwise silent lips, and put them to flight, fearful and trembling before the anger of the god, who, hurling a thunder-bolt at the same time, consumed the ship which was waiting to receive the sacred form. The statue occupied its temple until the time of Theodosius II., about 408 A. D., in whose reign the celebration of the Olympic games ceased and the temple fell a prey to the flames. The statue doubtless perished either in that fire or in the devastations of the Goths, who shortly after swept over the Peloponnesus. The most faithful representation of it is to be found only on a small coin of Hadrian's time. This colossus, though seated, towered to the height of forty-two feet, the sublime head almost touching the temple-ceiling, and, according to the ancients, awakening the feeling that for such a god no temple made by

man could suffice. Peacefully enthroned, the god held in one hand the scepter, crowned with his eagle and glittering with precious metal. On the other hand, which rested on the arm of his seat, Niké appeared, bearing a fillet, and doubtless, as in the statue of Athene, flying toward the worshiper. The nude parts of the great Zeus were of fine ivory; a golden mantle fell over the left shoulder and arm, and lay in folds over the legs. It was studded with lilies and small figures in enamel. Sandals, likewise of gold, shod the feet; an olive wreath, symbolical, perhaps, of the Olympic prize, rested on the golden locks, as if to suggest the thought "with thee, our god, is the fullness of victory." The scepter was not menacingly raised, but held so as least to obstruct the view of the benignant head.

Not alone was the statue sublime in form and thought: seat, footstool, and pedestal were a world of art in themselves, and replete with sacred import to the Greeks. The throne was massive in its build, as suited the immovable seat of the great god. Sculpture beautified it with significant forms and rich color, and painting added its charms. Here were mythic combats of Greeks and Amazons, represented in a composition of twenty-nine statues, besides goddesses of victory, which appear repeatedly, as if they would pass the hymn of praise around the seat of the mighty one, corresponding perhaps to the angel choirs about God the Father in Christian art. There were, also, reliefs representing Niobe's family—symbols, doubtless, of the punishment which follows pride. Sphinxes supported the arms of the throne, each holding a youth in her relentless grasp. Besides these sculptures calculated to inspire fear, there were others indicating the benignity of the god. His "welcome daughters," the "Three Hours," who, in Homeric words, "bring to mortals the day of reward," as well as the three joyous Graces, crowned the back of his throne. The footstool supporting the feet rested on lions, and was enriched with representations of the combat between Theseus and the Amazons. The whole rested on a low pedestal, much of which has recently been discovered, showing it to have been of stone, incrustated with metal plates. On these doubtless appeared the seventeen figures seen by Pausanias, representing the birth of Aphrodite, the goddess of love, as she arose from the sea and was welcomed by the gods of Olympus. The chariot of Helios, the god of the sun, at one end of the composition is seen emerging from the ocean, while Selene's car of the night is descending into the deep at the opposite end. These are noteworthy since the same ideas are repeated in the representation by Phidias of Athene's birth in the

sunrise pediment of the Parthenon. How sublime this conception of the supreme deity of Greece seems when compared with the older ideal of the god! Judging from archaic sculptures and rare paintings, the character of Zeus had been expressed by putting in his hands the winged lightning which should strike terror into the hearts of offenders. But Phidias seems to have caught a diviner spirit in his sacred poet Homer, for when asked what pattern he intended to follow, he quoted that passage in which the mighty one, complying with the pleading of a mother for her son, is said to have given

"The nod with his dark brows;
The ambrosial curls upon the sovereign one's immortal head
Were shaken, and with them the mighty Mount Olympus trembled."

Thus Phidias's conception of his god united that mildness which listens to a mother's prayer with the power which makes the mighty dwelling of the immortals quake. It is related that Phidias, upon the completion of the statue, humbly prayed the unseen Zeus to grant some sign of favorable recognition, when suddenly a thunderbolt flashed from the high heaven through the open roof, and struck the temple floor. Antiquity marked the spot by an urn placed in the pavement, and a curious rent still exists to recall the memorable story.

Gladly would we search the galleries of existing sculptures, or ponder over coins, to find a clearer reflex of this great Zeus. One beautiful Elis coin from Hadrian's time is thought to give the most faithful hint of the benignant head. Here the hair rolls gently up from the forehead, and falls in easy, quiet masses under a wreath. In the broad, serene brow, strong eyebrows, firm but gentle mouth, power seems coupled with unspeakable mildness. The sculptures, however, that suggest the Zeus of Phidias are marked by an elaborate exaggeration altogether unlike the simple truthfulness of the Parthenon sculptures, those authentic works of the Phidian school. In the latter the outlines are quiet, and the passages between the muscles gentle, and there is nothing extreme in their treatment. The famous Roman Otricoli head, long considered the best copy of Phidias's Zeus, is painfully unquiet in detail, especially about the forehead and eyebrows, where excessive elevations and furrows altogether destroy the grand and simple effect of the life-like masses of the Parthenon marbles.

In the British Museum there is, however, another colossal marble head, which clearly approaches nearer to the master's great creation. Though it cannot be an exact copy, being

more elaborate in style than the sculptures of the Phidian age, we may, doubtless, recognize in it the work of a gifted Greek master distantly echoing the original of Phidias. It was discovered in 1828 in an ancient shrine, a grotto on the island of Melos. (See page 552.) Inscriptions showing that this place was sacred to Æsculapius, god of healing, led to the belief that this was the head of that god, but Professor Overbeck has shown that it differs radically from all known heads of Æsculapius, and represents the supreme Hellenic deity. Its discovery in the shrine of Æsculapius may be due to some Roman, who brought it from elsewhere to be worshiped with the deity to whom he had consecrated the shrine—a custom not uncommon in antiquity. The generous forms of this head, covered with lightly curling locks and once crowned with a wreath of metal, are strongly contrasted with the stunted skulls of most Roman Jupiters, and are possessed of an infinite beauty, though the force of many of the shadows is lost in the present false mounting, making the head look upward in an attitude of devotion unsuitable to him who was the hearer, and not the offerer, of prayer. Mark the forehead, significant of wisdom and power. In its center is an elevation from which the curling locks grow gently upward; below, its lines blend in exquisite harmony with those of the nose and eyebrows; at the sides, they pass gently into the prominent temples, there being here only a slight depression—a feature which contrasts most favorably with the exaggerated Otricoli forehead. The subtle, elastic lines of the eyebrows, without any indication of hairs, sweep off on either side at a graceful angle to the nose, and, disappearing in the temples, seem capable at any moment of contracting, and casting over the eyes a look of lowering anger. There is no narrow and abrupt break at the bridge of the nose, as in faces of a baser cast, nor are the muscles directly over the eyebrows, like small hills, indicative of brute force, as in the face of Hercules and in those of simply physically powerful men. The features express spiritual power combined with the highest self-control. The eyes, on which color is still evident, have a mild expression, and lie, unlike those of the Parthenon heads, deeply imbedded beneath the brow—a peculiarity appearing in Attic sculpture in the century following Phidias. The nose, which, by rare good fortune, is perfectly preserved, is of great beauty and strength, being of equal width from forehead to tip, where the finely shaped nostrils seem capable of instantaneous dilation. Around the full lips clusters the manly, curling beard, giving force to the lower part of the face. Benignity is one of the chief char-

acteristics of this face, but the serene forehead and placid eyes are combined with such powerful brows, nose, and mouth that, were these brows contracted in anger, these nostrils distended and these lips moved by passion, we feel that the serenity would be transformed into the dire wrath of the mighty Zeus. If such is the sublimity of one of the later echoes of the Zeus of Phidias, in the unbounded praise of which ancient writers agree, what must have been the impression left by the original? More beautifully than all others did Dion Chrysostomus express the devotion it awakened, saying, "Were any one so heavily burdened with cares and afflicted with sorrows that even sweet sleep would not refresh him, standing before thy statue he would, I firmly believe, forget all that was crushing and fearful in life, so wondrously hast thou, O Phidias, conceived and completed thy work, such heavenly light and grace is in thy art." Thus Phidias placed in the temples of the Greeks, not images of minor deities, but of the sublimest ideals of their religion, interpreting their supreme gods in forms of higher meaning than had ever before met the gaze of the devout.

But let us, with Pausanias, close the rich curtain of Assyrian weaving and Phœnician purple before the Zeus of Phidias, and stepping outside the temple, contemplate the sculptures decorating its pediments or beautifying the holy grove. The temple at Olympia was built by a native architect about the middle of the fifth century before the Christian era, but, according to Pausanias, the pedimental sculptures were by masters from abroad, one of whom, Alcamenes, he tells us, took a place second only to Phidias. The composition of Alcamenes in the western pediment, we further learn, represented the battle of the Lapithæ with Centaurs at the wedding of Pirithoüs, who had bidden these guests to celebrate his nuptials with the beautiful Hippodamia. But these semi-brutes, yielding to passion, laid violent hands upon bride, maidens, and youths, and attempted to carry them off. A fearful struggle ensued on the spot—the heroes, Theseus and Cæneus, aiding the injured bridegroom against his lawless guests. The group by Alcamenes, representing such stirring scenes, has remained for centuries unknown. Earthquakes precipitated the pediments and their supporting columns to the ground, there to be gradually covered by deposits from the overflowing river and rudely disturbed by plundering barbarians. Fragments of the twenty-one statues which formed this group of Alcamenes have, however, been discovered, and are now among the treasures at Olympia, while casts of them are to be

seen in the museums of Berlin, Cambridge (England), and Boston. Among these rescued marbles are six brutal Centaurs carrying off women and boys, heroes fighting, aged women fallen on the ground, nymphs lying unconcerned in the corners, and one erect colossal figure, the insulted bridegroom himself, or perhaps a god. Minor groups of two or three figures each go to make up the composition, which in true Greek style is symmetrical, each group being balanced by a corresponding one on the opposite side of the pediment; but within this symmetry the details are bold and varied. Examining one of these fiercely contending groups, we find a Centaur has seized a struggling woman by the waist and one leg, as if to toss her upon his back, but a hero kneeling in the way catches him by the hair and stabs him in the broad chest; the brute now falling must, we are sure, soon loosen his hold upon his victim, and, succumbing to the pain, suffer full vengeance. How intricate this grouping! the actors seem fairly interlocked; there are, however, few lines of beauty in it. The Centaur's back describes an unnatural and ugly hollow, and the pose of the warrior is constrained. Although the slope of the pediment required the fall of these figures, we cannot but contrast their awkward, unwilling surrender to the architecture, with that supreme grace in yielding, perceivable in each group of the Parthenon pediments. Continuing the contrast, we find that the nude lacks that vigor seen in the Athenian forms, which, to use Professor Brunn's simile, seem to have been nourished on beef while these have been fed on veal. There is, moreover, in this group a strange inequality. The left hand of the Centaur clutching his victim's leg is a masterpiece of sculptural art, and still in no group does insufficient regard for the form beneath the garments appear more strikingly than in this. Although we know that the maiden must have sunk on one knee, while the other leg is held by the well-formed hand, still we are utterly unable to trace her form beneath the folds. The drapery is, in all the statues, more completely disappointing than the nude. While in the Parthenon marbles we find large, graceful masses, so light in their fall and subtle in their lines that we almost forget that they are marble, here we meet nothing but coarse, leathern-like rolls. So cumbrous are these lines that the beholder cannot conceive how so much that was barbarous could have been allowed, in an age when a Phidias lived, in the brow of the great temple which sheltered his masterpiece. Nor is he less astonished at the lack of finish in those parts not directly exposed, there being here a slovenly way of working which contrasts most unfavorably

with the exquisite finish of the Parthenon sculptures. This may, no doubt, in part be explained by the fact that many details were completed with color, one piece of drapery having been discovered still brilliant with deep red, and color being visible on beards and hair which are merely outlined in the marble. But how to explain satisfactorily so much that is fierce and intricate in the composition, such flashes of superior skill in the execution of some parts combined with so much that is inferior in the pediment of Alcamenes, is a problem as yet unanswered.

Similar defects, but more glaring, will appear in the sculptures of the opposite pediments, attributed by Pausanias to Pæonius of Mende. Some think that, when the Peloponnesian war broke out and Elis turned against Attica, the skilled Athenians and other sculptors there employed were obliged to flee, and the local sculptors were thus left to complete the designs. While from these groups we thus gain only glimpses of curious phases in the sculptures of the Phidian age, and little direct knowledge of the masters themselves, excavation has given us a beautiful witness to the skill and boldness of the chisel of Pæonius. Pausanias tersely mentions a goddess of victory which he saw in the sacred grove—a votive offering made by Pæonius for the people of Messina in commemoration of successful warfare. Great were the surprise and joy of the excavators at Olympia as one day, early in their first campaign, they came upon a marble base bearing the inscription quoted by Pausanias, while below it in smaller letters was to be read, "Pæonius of Mende executed the work." The next morning there came to light, close by, a more than life-size figure in Pentelic marble, now in Olympia, and later the remainder of its lofty triangular pedestal. Casts of it have rapidly multiplied, and are to be seen in Berlin, London, and Boston. The intent of this beautiful statue is unmistakable; it is Niké, the winged bearer of victory, shooting through the ether. Shoulder and bosom are bared by the unclaspings of the *chiton*, the left arm is raised, and carried doubtless some emblem significant of victory, perhaps a wreath. One leg, from which the flowing drapery has blown backward in her flight, forms a beautiful contrast to the lines around it. We almost hear the rush of her drapery and the whizzing of her wings as she approaches. How bold the subject for marble, which, disregarding all physical laws, seems to float before us! The ankles only touch the clouds beneath, and the inclination of the whole statue is so far forward that we almost fear the mass will topple over. But what we

HEAD OF ZEUS FROM MELOS. BRITISH MUSEUM.

look at is at the best fragmentary. Could we see the outspread wings and the swelling drapery at the back in their places again, the sense of equilibrium would, doubtless, be restored to the eye. Could we, then, imagine the statue complete and standing out in front of the great temple on its lofty pedestal, towering up in the green of the sacred grove, we should better be able to judge of Pæonius's skill in giving wings to marble. A casual glance will possibly perceive in that figure a resemblance to the Parthenon marbles, but careful comparison will show marked differences. Those matchless sculptures seem to

throb with an inner life which we miss in this Niké. They, moreover, are thoroughly sculptural, while, without detracting from the merit of Pæonius in compelling marble to do so gracefully his bidding, this statue is more pictorial than suits the ponderous material. The Parthenon marbles are, moreover, finished with exquisite care throughout. Those parts of the Niké which are not directly visible are, on the contrary, neglected, notwithstanding the fact that the statue was to be seen from all sides on its lofty isolated pedestal. Under the raised arm the folds are confused, and difficult to trace to their origin. The protrud-

ing abdomen below the tightly drawn girdle unpleasantly suggests the defects of a living model, which are not toned down, but imitated with a lack of that nobler taste evident in the Parthenon figures. But in criticising thus severely this statue, it is done only on comparison with some of the highest achievements of Greek art. We may fondly believe that Pæonius, when engaged in Olympia, knew the great master Phidias.

But, in spite of his fame, Phidias had much to suffer. Scandalous reports were spread about his private life; he was charged with having appropriated to his own use some of the gold intrusted to him for the drapery of the Athene Parthenos. Fortunately, in compliance with the advice of Pericles, this had been so constructed that it could be removed and weighed, which being done the gold was found intact, and the sculptor's innocence proved. But it had been discovered that, on the goddess's golden shield, Phidias had represented himself and Pericles as warring with mythic heroes. Even the influence of his powerful friend Pericles could not save him from charges of blasphemy. The people demanded his arrest, and Phidias, who had immeasurably increased the glory of Athens, was led to prison, while his lying accuser Menon received favor and distinction. It is said that before the completion of the trial, perhaps about 421 B. C., Phidias breathed his last within his dungeon, a victim of grief, or age, or poison. Another account is that similar charges were brought against the master in Olympia. But this seems hardly probable, since his workshop there was regarded with devotion, and his descendants in charge of the Olympic Zeus were especially honored. It is more than probable that in that unhappy time, toward the close of the century, when party strife and bitter contention filled Athens and disastrous civil wars tore the land, Phidias fell before the political enemies of his great patron Pericles. But, in spite of his country's ingratitude, later ages have done him the honor which is his due, holding that had Greece produced but one great man, and that one Phidias, her mission would have been fulfilled. Happily, we are not left without witnesses of his genius. The marbles which adorned the temple of Athene Parthenos reveal to us the glories of Phidian art. They are widely scattered: a few cling still to the ruined walls of the ancient structure, others are sheltered within the British Museum and the Louvre, or are admired in precious fragments in Denmark and Carlsruhe.

Could we have visited Athens when the Parthenon was being built, we should have seen the people thronging the artists' work-

shops and the site of the building, and, if we may believe ancient story, even the beasts of burden took an interest in the raising of the sacred structure. Such scenes are described eloquently by Michaelis in his great work, "Der Parthenon." We should have seen blocks of Pentelic marble passing up the steep sides of the Acropolis, drawn on carts or carried on the backs of mules. We are told that an octogenarian mule, dismissed from service on account of age, still joined the procession of carts, plodding energetically by the side of his younger comrades, and that, as a reward for his faithfulness, he received a life-long pension from the state. The history of the Parthenon, and the recital of the storms it has braved, might fill a volume of breathless interest. Fortunately, before 1687, when the demons of war were let loose and powder shattered those time-honored walls, a French artist, Carrey, had made sketches of these sculptures, of the greatest importance in studying their composition and bringing home to us our great loss. After the Venetian victory of 1687, a fatal passion seized commander, soldier, and traveler to carry off what they could, and much was destroyed by the Athenians themselves. Thus, in Carrey's time, the west pediment group stood well-nigh perfect; its gaping spaces and shapeless fragments, however, now bear witness to ruthless destruction. Happily, to rescue what little remained, Lord Elgin appeared, and in time, after long delays and partial shipwreck, the marbles found their way to the British Museum. In studying these sculptures, we find that as dramatic compositions they occupy the pediments; as detached groups they give force to the met-

CORNER OF THE PARTHENON.

GROUP OF GODS FROM THE EAST FRIEZE OF THE PARTHENON.

opes of a ponderous entablature supported by columns; as a graceful band or frieze they enrich the top of the sacred place, or *cella*. This frieze, raised forty feet above the eye and visible to those walking under the colonnades, alone had a length of five hundred and twenty feet. How impossible a task it would have been for one man in a few short years to produce the several thousand square feet of relief, well-nigh fifty colossal marble statues, besides several colossi of gold and ivory, is apparent; and while the conception of the whole and doubtless designs for some of the details emanated from Phidias, the execution must have been by other hands, Phidias reserving for himself the finishing strokes on some of the statues, which are powerful and delicate in their character. The researches of our countryman, Dr. Waldstein, promise to throw light on these matters, and we wait impatiently for the result.

Of the ninety-two metopes in very high relief, representing combats of gods and heroes with Centaurs and other powers of evil, many are preserved. With all their vigor, these sculptures have not that exquisite beauty marking the frieze to which we now turn, and most of which is in the British Museum. Here a procession passes before our eyes, such as frequently wound through the streets of Athens in great religious festivals, when all Attica and Athens took part. Colonies then sent ambassadors to the mother city

with spotless cows and sheep for sacrifice, and even the freed slaves were allowed to share in the rejoicings and to decorate the marketplace with oak-leaves. On this festival, which was held as the anniversary of the birth of the goddess Athene, she was presented with a saffron or violet hued veil (*peplos*), embroidered by Athenian women and carried in procession to her temple, probably there to be placed upon her ancient idol. Gymnastic, equestrian, and musical contests, the Pyrrhic dance and solemn sacrifice, made more complete the sacred ceremonial. Noble maidens, we are told, walked in the procession, carrying costly vessels, or the holy baskets in which were borne to the altar sashes to wreath the victim, the knife to slay it, and corn to strew upon the sacrifice. Envoys in charge of these victims were also then to be seen, as well as gray-haired sires, chosen for their beauty, and bearing branches of the olive sacred to Athene. We are told that youths on horseback or in chariots joined in the stately array. There were also marshals who kept order in the throng. All this mortal beauty has been made immortal for us by the sculptor. In the ideal splendor of his art we seem to forget the ephemeral nature of life; we see devotion glowing still in these Athenian maidens, youths, and sires as we gaze upon their single figures in the frieze, and the study of its composition only increases our wonder.

In that part which was over the door of the

temple, on the east or front side, there reigns a composure befitting the entrance to the dwelling of the gods. They themselves are there enthroned as honored guests, conceived as unseen by the multitude. In their very center takes place a scene, unnoticed by them but intimately connected with the procession beyond. Here a stately woman, doubtless a priestess, receives two chairs from maidens approaching, while by her side a bearded man, perhaps a priest, takes a folded robe from a graceful boy or gives it to him. This robe was long supposed to be Athene's celebrated birthday *peplos*, above mentioned. But a newer and more inviting interpretation of the whole scene is that it concerns the sacrifice of the victims seen approaching on either hand. The priest, it is thought, here lays off his cumbersome outer mantle, preparatory to slaying the cow, and hands it to his attendant. Thus, by acts insignificant in themselves, the sculptor suggests the solemn scene when the priestess, having offered prayer, the priest shall slay the victim and lay its flesh upon the altar to be burned—a sweet-smelling and acceptable offering before the gods.

The matchless forms and grouping of the gods themselves it were vain to attempt to describe. Only he who is so favored as to stand long before the marbles will catch in the composition infinite modulations of rhythm which, like gentle diminuendos, alternate with powerful crescendos, and reveal a subtle grace transfiguring but not supplanting symmetry. Perhaps no figures are better calculated to reveal the grandeur and sublime simplicity of this detail than the group which still adorns the ruins of the Parthenon. Here we see, to the left, Poseidon, the ruler of the seas, his head bound about with a sacred fillet and his locks falling as though wet, and clinging to his neck. The strongly developed forehead, the arched upper lid, almost touching the eyebrow, as well as the widely opened lower one, give the god an air of self-sufficiency; but his attitude is not that of easy repose; leaning forward, as well becomes the stormy sea-god, he seems to force himself to reserve and quiet. In the raised hand, as indicated by holes in the marble, he once held some symbol, doubtless a trident of bronze, it being evident that the whole frieze was finished with adjuncts of metal. Grouped with Poseidon is a god whose type and graceful laxity of pose has won for him, from some, the name of Dionysus, while by others he is called Apollo. On his drapery we see that fluted edge, like the finished-off end of woven stuffs, which is a striking characteristic of the sculptures of the Phidian school, but which disap-

pears in those of the next century, in which an exact and well-laid seam takes its place. Note the similarity and yet great diversity in these two seated figures. In one the arm is raised, with drapery falling gracefully over it. The legs are quietly crossed and the face turned, affording a front view of its beardless features. In the other a strict profile is observed. The sandaled feet are uneasily in motion, and the left arm is dropped, revealing a marvelous play of skin, veins, and muscles. Heightening by contrast the beauty of these two manly forms, there follow two female figures, attended by the winged Eros. Only a part of one of these appears in the engraving, but so noble and ravishing is its beauty that in its contemplation we would hush the murmur of conjecture as to whom it represents. Let us but note the grandeur of the form, the broad shoulders and strong build, not entirely hidden by the rich drapery. How exquisite the contrast between the fine clinging folds of the *chiton*, unbuttoned and slipping from the left shoulder, and the sweep of the heavier mantle across the lap. Around the head is bound a kerchief, concealing a part of the hair. This appears from vases to have been the house-cap of Greek women, and if we consider this the goddess Demeter, we may here mark her motherly and home character. Female servants also often wear it. And if this goddess represents Pitho, Aphrodite's attendant, as some would have us think, it would perhaps indicate her subjection to that greater goddess. However that may be, this exquisite but impersonal face is one of the most precious witnesses to that ideal treatment so pronounced in the Phidian school, which seems to have seized the general features of beauty and avoided portraiture or fleeting emotion.

Perhaps nothing will better bring out this reserve than comparison with reliefs from the well-known balustrade of the Niké Apteros temple at Athens, on which goddesses of victory, repeated again and again as on the throne of Zeus, and engaged in raising trophies, or preparing for sacrifice, show far more transparent drapery, luxurious forms, and life-like lines than the Parthenon frieze. Thus, that beautiful Niké who stands with wings extended and both arms raised,—once, no doubt, as on the coins of Seleukos, placing a wreath or helmet on a trophy,—as well as other fragments, reveal a delicate elaboration and delicious abandon which seem to be leading away from the divine strength and abstraction of the Parthenon marbles to the ravishing individual grace and passion of the following century.

But returning to the Parthenon frieze, let us watch the procession on the north and south

CAVALRY FROM THE NORTH FRIEZE OF THE PARTHENON.

sides of the temple, where, although the subject represented is the same, we shall find an infinite variety of delicate changes. Here, as was doubtless the case in life, the action is far more intense than in the front: the animals for sacrifice grow unruly, chariots dash forward, and horses prance eagerly on, lifting their riders frequently quite off the solid earth. Looking past the musicians, vase-bearers, chariots, and others, we see the cavalry approaching, and so enticing is its composition that the eye, catching its motion, runs eagerly from figure to figure. On the south side it presses more uniformly forward, becoming quiet as it approaches the chariots. In none does the action become more intense than in the glorious riders, sometimes three and sometimes seven deep, of the north side, a fragment of which is given above. We seem to hear spirited stamping, snorting, and neighing from these ranks, which are, however, all under control. And all this life, grace, and subtle detail is given in relief much less than four inches in depth—so low that we constantly ask ourselves how this multitude of figures, this intricate tracery of veins and gently flowing skin, could have been expressed within such narrow limits, and still be as clear as limpid water and as truthful as nature.

Passing from the frieze, we note the statues

which adorned the temple fronts. Pausanias saw these sculptures raised high up in the two pediments, but only tells us that those over the entrance related to the birth of Athene, and the others to her successful combat with Poseidon for the possession of Attica. Accordingly, here were represented two great articles of faith in the Attic religion—the birth of their goddess, and her taking the land under her patronage.

In these pediments, each of which affords the sculptor a triangular space nearly one hundred feet long, about ten feet high at its central and loftiest point, and about three feet deep, these great ideas were represented by no less than forty-four colossal statues in Pentelic marble. Of these only fifteen large fragments are preserved, thirteen of them being in the British Museum, two still in the pediment at Athens, and many smaller ones in London and Athens.

In the eastern pediment Pausanias saw represented the birth of Athene, but, alas! a yawning gap, many feet long, now occupies all its center, and conjecture is unable to charm back the creation of Phidias, or even tell us whether Zeus here awaited the issuing of his daughter Athene from his head, or whether she had already appeared "golden," "all radiant in warlike armor dressed, the

EAST PEDIMENT OF THE PARTHENON, REDUCED FROM CARREY'S DRAWING, PARIS.

wonder of the assembled gods," as she is described in Homeric song. Conjecture has also been busy as to the names of the few remaining fragments from the extremities of the pediment. Twenty-one different theories exist about them, and twenty-six about the groups of the western pediment, but still we must consider the question unsettled. One point is certain, that as in the Olympic Zeus of Phidias the rising Helios and sinking Selene bounded the scenes of Aphrodite's birth, so here, on one side, the fiery steeds of Helios plunge snorting out of the water, and on the other, those of Selene, watchful and vigilant, descend into the deep. As the chariot of Helios emerges from the waves, his rays are first cast on a powerful youthful form, reclining on a rocky eminence over which is thrown a skin. This figure, of heroic build, has been called in turn Theseus, Hercules, and Dionysus. But its vigorous type and semi-active attitude seem most appropriate to the personification of a mountain,

thought by Professor Brunn to be sacred Olympus, the local seat of the gods, and scene of Athene's birth, illumined by the first rays of the rising sun. The head still rests upon the powerful shoulders, showing that manly beauty belonging to Attic art in the time of Phidias. The skull has those strong, square proportions peculiar to intellectually superior races, and the face, with its fullness about the chin and cheeks, is a round oval and not the pointed one of the Æginetan heads. The forehead is enlivened by a gentle projection of the frontal bone above the nose, but which is not, as in later heads, extended toward the temples. There is no luxurious sweep of the lower jaw as in the Apollo Belvedere, but it is more nearly upright and chaste in its outlines. The neck is strong and columnar, and quite suited to bear such a head. Contrast these massive shoulders, this broad chest, with the liquid form of the well-known river god of the west pediment, and the tre-

OLYMPUS, FROM THE EAST PEDIMENT OF THE PARTHENON. BRITISH MUSEUM.

TRIAD FROM THE EAST PEDIMENT OF THE PARTHENON. BRITISH MUSEUM.

mendous power of this rocky character will appear. The harmony of its proportions is so subtle and overpowering that, though one collar-bone is shorter than the other, our admiration is thereby only increased for the genius which has given the spirit, without being bound to the letter. One knee projected ten inches beyond the cornice, "thus breaking the architectural lines, which might have seemed too rigidly to confine the composition," while its other lines, as would appear were the feet still attached, quietly fell in with those of the pediment toward its declining angle. This form of such ideal beauty and strength has inspired many modern sculptors, among whom none has better expressed its sublimity than the great Dannecker, who wrote concerning it: "This statue is so true to nature, that one is tempted to say the master must have formed his model directly on the limbs and body of some beautiful youth; and yet," he adds, "no such heroic youth ever meets us, or ever could have walked the earth."

But the group of all groups occupies the opposite end of the pediment. These figures, like the Olympus, have received many different names. The Fates, the daughters of Cecrops, Hestia, Pitho, and Aphrodite, are some of them. But, again, Professor Brunn offers so poetic an interpretation that we are tempted to receive it, especially as it harmonizes with the character of the statues and the place they occupy next to Selene, the goddess of night. He considers them personifications of the graceful, fleeting clouds gathering about the setting sun. By a recent correction in the placing of

the reclining figure in conformity with its original position in the pediment, lines of unexpected beauty in the composition of Phidias have been revealed to us. These appear in the bended form and deeper shadows of the central figure, as contrasted with the erect and lighter ones of the first, and the long, flowing form of the third. This will be seen in the illustration, taken from the group in its new position. The figure nearest the center of the pediment and looking toward the scene of Athene's birth, seems to catch life from what there takes place and is about to rise from the rocky seat. She wears a fine, soft undergarment (*chiton*), which is rendered, even in its larger oblique folds between the breasts, with masterly simplicity and grace. Her heavier mantle, thrown around the form and across the lap, seems ready to be lifted by the first gust, so easy is its fall. Each broad fold can be traced to its faint beginning, and each deep shadow is as exquisitely rendered as though done with a painter's subtle power. The glorious form of womanhood in its perfect maturity is not lost in this drapery, but rather enhanced in beauty by it. The grandeur of the shoulders, neck, and bended form, the natural curve and ease of the remaining toe of the sandaled but shattered foot, reveal how great is our loss in the lack of head and arms. The feeling of the living, throbbing form under the drapery, as well as the harmonious contrast between the large folds of the mantle and the finer tissues of the *chiton*, are to be obtained even from the back of the statue—a view which could not

have been enjoyed when it was raised high up in its place in the pediment.

What inexpressible beauty marks the remaining figures of the triad! Here seems held up to view the intimacy of the gods. One, reclining, rests on the bosom of a sister goddess, who, bending forward, draws in her feet to make more easy the repose of her charge, besides encircling her with one arm. How rich in this statue is the plastic truth in each detail, and how loving the finish in the deep recess about the feet,—although almost lost to view, even now, when the statues stand nearly on a level with the eye, and entirely beyond inspection when elevated in the pediment. But if these sister statues are so ravishing in beauty, what shall be said of the reclining figure? When Carrey saw the group, this goddess gazed off toward Selene's steeds, her very thought and attitude in harmony with the quiet of coming evening, and gently suiting the slope of the pediment. Majesty of form is here combined with ethereal grace, reëchoed interminably in the countless quietly fluttering folds of the drapery, while there exist the most subtle tenderness and exquisite harmony between the form and the folds through which the marble glows with life. Seen in a fresh cast, with its unsullied light and shadow deepening around the waist and limbs, and growing broader and more quiet in the drapery thrown over the rock, this group seems not material, but a dream of beauty and queenly majesty which must vanish from sight. Viewed from whatever point, unlike most

groups of sculpture, new and equally charming lines reveal themselves.

These statues of the Parthenon are, as Mr. Newton eloquently writes, "the result of a generalization so profound that, in contemplating them, we almost forget that they are the product of human thought and executed by human hands. They seem to reveal to us the very archetypes of form, such as we might conceive to dwell in the mind of a divine creator." But while the forms rouse such enthusiasm, the thoughts of the Parthenon marbles expressed in treble structure, as in the tragedy of *Æschylus*, are no less sublime when regarded as a whole. Like great harmonies blending in some vast symphony, appear in the pediments the relation of the goddess to her land, in the metopes her battle for law and order, and in the frieze the honors offered by her grateful people. Could we imagine these matchless forms in their Attic home, shaded by the marble roof of the Parthenon, or looking down from among its faultless pillars; could we charm before us violet-hued *Hymettus* and the depths of the overarching azure; could we feel the gentle breezes from the blue sea, and behold the Greek sun bathing all with golden light,—then should we realize what met the eye of the Athenian of old and inspired his thoughts as he devotedly ascended his sacred mountain—then should we feel in our own souls what transcendent ideals were charmed into adequate and splendid material forms by the Phidian age.

FREDERICK W. ROBERTSON.

THE name of Frederick Robertson is on many accounts remarkable. There is probably no one of our time whose writings have had such an extended influence after his death, and who yet was during his life-time so little known except to the immediate circle to whom he ministered. His extraordinary merits as a preacher were acknowledged in that limited range, but beyond this, although from time to time his fame reached the outer world, yet his manner, his voice, his appearance, were entirely unknown. One single sermon, that on the death of Queen Adelaide, was all that he published whilst actually living. He was a contemporary of mine at Oxford. I may no doubt have met him in the rooms of casual friends; but I have not the slightest recollection of ever having heard his name at that time. He was also curate of St. Ebbs in Oxford during some part of

my stay there; but neither did I then become acquainted with him, nor, in fact, ever hear that such a person existed. In later years I now and then heard of his fame at Brighton; but I never was there on a Sunday, and therefore my early ignorance of him was never compensated by any knowledge in later times. How remarkable is the contrast of this obscurity with his wide-spread popularity in after years! It is not too much to say that he has become, beyond question, the greatest preacher of the nineteenth century, the most widely admired, and with the most powerful reasons for this wide-spread judgment.

Let us look at the diffusion of his sermons. They are the only sermons that have been published in Tauchnitz's edition, side by side with the novels of Dickens or the essays of Macaulay; they have been the model on

*Sincerely & gratefully yours,
Frederick W. Robertson*

which the sermons of the French Colani have evidently been formed; and I may be allowed to mention two instances of the way in which I became acquainted with this general appreciation. Once, in traveling from the south of France to Paris, we entered the railway, at Macon, and found coiled up on the opposite seat of the railway carriage a rough, shaggy, way-worn traveler, fast asleep. He was, with us, the only occupant of the carriage. After a time he lifted up his head and began to speak to us. He was a wild, revolutionary, unbe-

lieving surgeon who had been attached to a regiment in Algeria, and was then on his way to the army in Mexico. We entered into conversation, which lasted through the livelong day till we reached Paris. In the course of this conversation he asked—not knowing that I was a clergyman—whether I had ever known or read the sermons of Frederick Robertson; he had himself fallen in with a copy and been struck with them; and he was eager to know anything that I could tell him about them. We parted at Paris; he went to

Mexico, and I have since lost all trace of him. This was one end of the scale.

On the next day, in Paris, I went as usual to see a man who in his best days I greatly respected and loved, Augustin Cochin, who afterward became prefect of Versailles in the troubles which succeeded the Franco-German war, and who died of the fatigues which in that war had fallen to his lot. He was a devout Catholic, liberal, indeed, and open to all kinds of questionings about England and Protestantism; of the school of Montalembert and Father Gratry. He, on the occasion to which I refer, asked if I could tell him anything about an extraordinary preacher whose name was Frederick Robertson. Thus, in the course of forty-eight hours, I had evidence of the effect produced on the two extremes of French society, and that by an English preacher.

I do not doubt that there are English sermons and religious publications very widely known in foreign parts; Mr. Spurgeon's tracts and sermons, for example; possibly also those of Bishop Ryle; but these have never penetrated into the high intellectual circles which, after all, must be considered the permanent test of celebrity, literary or otherwise.

What is there, we may ask, which justifies this unique fame? There are two sets of sermons with which it may be useful to compare Frederick Robertson's. They are the most nearly approaching, we will not say in celebrity, but in point of literary excellence, to his volumes. One example is to be found in the six volumes of Cardinal Newman's sermons. No doubt, many Englishmen would say that these sermons are far superior to those of Robertson, at once in their excellence and their authority. The singular grace with which sacred subjects are handled in Doctor Newman's is beyond all praise. There are hardly any passages in English literature which have exceeded in beauty the description of music, in his University sermons; of the parting of friends, in his Parish sermons; the description of the sorrows of human life in his sermon on the pool of Bethesda; the description of Elijah on Mount Horeb; or, again, in the discourses addressed to mixed congregations: "The arrival of St. Peter as a Missionary in

Rome"; the description of Dives as the example of a self-indulgent voluptuary; the account of the Agony in the Garden of Gethsemane, and of the growth of the belief in the Assumption of the Virgin Mary. We also acknowledge to the fullest extent the insight into many phases of human character and the subtle analysis of human thought. But what is the truth concerning God or man which these sermons can in any degree be said to have illustrated, except indirectly, and by force of that marvelous grasp of the English language which their author possessed? What are the principles respecting the interpretation of the Scriptures or the causes of history which have received any permanent light from these exquisite productions? Where is the insight which has penetrated into any of the deeper questions which agitate the minds of men, and which bring into one focus the doubts or the certainties of modern times?

Let us turn to Arnold's sermons. They certainly do not possess the grace or the charm which belong to the elaborate compositions of the Cardinal. They bear the traces of the headlong haste with which they were composed, the ink on the page hardly dry before he entered the pulpit. They are short to a degree which baffles the attempt to create out of any of them a finished work of art; but in spite of this there is a grasp of the subject on which he treats; there is a knowledge shown of the criticism of modern times; there is a hold never lost of the moral and spiritual side of the Christian religion; there is a constant endeavor to distinguish between the spirit and the letter; there is a manly, wholesome, vigorous atmosphere pervading the discourses which invites, instead of repelling, the most masculine mind; there is that keen sympathy with the moral progress of individuals and of races which his son Matthew has so well described in his touching poem on Rugby Chapel.

We have brought together these two series of sermons in order to indicate wherein we think that Robertson was, as a preacher, superior to both.* There is in the first place a completeness in the manner in which he treats the subject of his discourse that is on the one hand unlike to the abrupt and

* There are two sets of sermons which ought not to be forgotten in this comparison. One is the volume by Principal Caird. It is perhaps equal in excellence, but not in celebrity. The Scottish atmosphere clings to it, and has prevented it from ever receiving more than a provincial greatness. It is as great in its combination of philosophic thought with religious force. It is not, perhaps, as great in the literary and, so to speak, ecclesiastical completeness with which its subjects are rounded off. There is, however, one sermon of Principal Caird's which, being completely in the spirit of Robertson's sermons, is yet, we think, superior to any. It is the greatest sermon of this century. The religion of human life grapples with the most serious of all questions, with a depth of illustration and with a thoroughness of application which are more than equal to Robertson's finest efforts. And this sermon has had a wide-spread Continental reputation equal to its extraordinary merit. The other sermons are those of Professor Mozley. Penetrating as they are, and larger in their scope than Doctor Newman's, yet they also have only an English—almost only an academical—fame, and they cannot, except in a few instances, compete with them in fullness or in strength.

rapid discourses of Arnold, and on the other to the one-sided and partial representations of Cardinal Newman. He, as it were, goes all round the subject in hand, and leaves the reader with the impression that, if he has not entirely mastered the whole of it, yet he has endeavored to do so with open eyes and listening ears. He rises entirely above that party spirit which to a great degree affected the discourses of both the great men whom we have named. How entirely he is able to enter into the detestation of the calumnious representations which drove the Oxford school from the Church of England! How nobly does he describe in burning words the mischief of such double-edged arguments; and yet, on the other hand, how thoroughly he sympathizes with the free and manly spirit which animated the inquirers and the scholars of another phase! While throwing aside the conventionalities which hedge in and cloak up the sacred topics of which he is preaching, he yet never loses the dignity and the simplicity of a preacher, or the generous and vigorous tone of a man of letters. In the sermon, for example, on Jacob's wrestling, he acknowledges, as it were, at a glance, that the story may be a myth or a legend; and yet draws out of it truths so powerful and so penetrating that we find ourselves diverted from what we have lost at the gain of what we have found in the relation. On the subject of the sacrifice of Christ he lays down principles so wide in their interpretation that they will stand the fire of all the scathing criticisms of later times. In the representation of the divine life of Jesus Christ, how much there is which is applicable to every phase of thought which can be formed concerning it! How vainly should we look in the discourses of Cardinal Newman, or of any of his followers, for such a direct, outspoken declaration of Christian thought as in the ser-

mon on the Sabbath, or Salvation out of the Visible Church. How striking is that passage from the one sermon which, as we have said, he published himself, on the Christian Spirit before the Christian Times: "Christ was in Joseph's heart, though not definitely in Joseph's creed. The Eternal Word whispered in the souls of men before it spoke articulately aloud in the Incarnation. It was the divine thought before it became the divine expression, Λόγος ἐνδιάθετος—προφορικός. It was the Light that lighteth every man that cometh into the world, before it blazed into the day-spring from on high which visited us. The mind of Christ, the spirit of the years yet future, blended itself with life before He came; for his words were the eternal verities of our humanity. In all ages love is the truth of life."

I remember to have heard on one occasion from the old Dissenter, Crabbe Robinson, who entertained an admiration for him as keen as if he had been one of his own communion, that Frederick Robertson, expressing his belief upon some disputed point, said: "There is no orthodox statement of doctrine, however true in itself, which does not contain in its outer form a detestable falsehood." To which the old Dissenter added, no doubt with Robertson's entire assent, "And there is no orthodox statement of doctrine, however false, which does not contain in its kernel a precious truth."

Such an appreciation of the different sides of truth is the secret of the excellence of Robertson as a preacher,—this appreciation sanctified and purified by the truthful and the sacred atmosphere with which he surrounded both them and himself. Other preachers, other teachers, have arisen since, but there is no one who so filled the place allotted to him as Frederick Robertson did at the time, and there is no one who so holds that place now that he has departed from us.

THE NIGHT-WIND.

ONCE, when the night-wind clapped its wings,
And shook the window-bars and roof,
I heard the souls of battle-kings
Drive by in clashing proof!

Sometimes, a runic strife it kept,
Of winter nights, in sleeted trees;
Or underneath the eaves it crept—
A swarm of murmuring bees.

Or, now, wild huntsmen of the air
In hollow chase their bugles blew,
While swift o'er wood and hill-top bare
The shrill-voiced quarry flew.

Sometimes I heard of lovers flown,
Safe, under ward of storm and night,
To where, in sylvan lodge, there shone
A taper kind and bright.

These things the night-wind used to tell,
And still would tell, if I might hear;
But sorrow sleeps too sound and well
To lend a dreamful ear.

SIGNIFICANT ASPECTS OF THE ATLANTA COTTON EXPOSITION.

WHEN the record of the "International Cotton Exposition" at Atlanta, Georgia, is made up, it will be marked as singular in many ways. Under the able control of Mr. H. I. Kimball, the Director-General, well sustained by the Executive Committee and by the citizens of Atlanta, it has developed into something vastly greater, better, and of more far-reaching influence than could have been contemplated at its inception; yet it is not, in many respects, what it was intended or what it purports to be.

In the first place, it is not "international." With the exception of one English roller gin, an excellent example contributed by Messrs. Platt Brothers & Co., of Oldham, the writer is unaware of there being any foreign exhibit of machinery included within its limits. There is, however, some foreign combing machinery, forming a part of the collective exhibit of the Willimantic Thread Company. This lack is much to be regretted, as English machinery has been adapted to many purposes with which we are not yet familiar, especially to ginning and preparing cotton. It would have been a matter of great interest to planters and farmers to see more of the work of the English roller gins; but as our own mechanics have now taken up this subject, it may not matter much that the English machines are wanting. The other foreign contributions consist of a valuable exhibit of foreign cotton fibers, in the bale, collected by the Treasurer, Mr. S. M. Inman, to whose firm, wise, and quiet discretion the Exposition owes much; and a quite complete collection of Chinese and Japanese hand-made native fabrics. The Chinese hand-made fabrics and garments contributed by Messrs. Russell & Co., of Shanghai, are of the greatest interest, as they represent the common wear of the immense population of China, of whom not over ten per cent. have yet been supplied with the machine-made goods of Europe or the United States. With these few exceptions, everything in the several buildings is national.

Nor is it primarily an exposition of cotton. The collection of tools and implements for the cultivation of cotton, of machinery and apparatus for preparing, baling, spinning, and weaving, and for the treatment of cotton-seed, has never been equaled in any other exhibition yet held, and cannot be excelled elsewhere at the present time, yet cotton itself is only a small element in the case.

While this is neither an international nor a cotton exposition, in the ordinary sense of the term, neither is it in a general way like other exhibitions. At other times and in other places, vast collections of finished products have been exposed to view, principally for the purpose of advertising their existence. There are very few examples of this class of exhibits at Atlanta. It might, rather than anything else, be called an exhibition of the beginnings of new processes and for the correction of errors in old methods; coupled with examples of a great variety of materials of which the world has as yet had little knowledge. Might we not call it an exhibition of the potentialities of the future? Within the limits of this article, it will be impossible to do more than to name a portion of the contents of the buildings.

The vast collection of minerals, timber, and products of agriculture surprises even the managers of the railroads by whom they have been hastily gathered. Silk from worms fed upon the leaf of the Osage orange finds its place alongside the wild silk of North China, made by worms which feed upon oak leaves of the same variety that grows upon the mountains of Virginia. The Japanese persimmon gives promise of a new and valuable fruit. The ramie fiber is shown in a way that looks as if the secret of its treatment had been discovered. The small, cheap mills for hulling rough rice, of which there are two examples, give promise of profit in the growth of upland rice, which crop may be indefinitely extended if these machines shall adequately serve their purpose. The fine examples of the hair of the Angora goat make it apparent that we may add that, also, to our list of fibers; the cultivation of the olive has begun, and the samples of many kinds of wine give evidence that Italian and Swiss immigrants may have plenty of opportunity to apply their skill to growing grapes and improving the methods of making the wine. Leather is sent from Chattanooga, tanned in what is already the largest single tannery in the country,—a tannery worked wholly by colored laborers. Many machines for utilizing cotton-seed, which the inventors had almost despaired of being able to introduce before, are now being ordered faster than their works can supply them. Trash-cleaners, for saving the waste or total loss of storm-beaten cotton, or cotton which has been blown to the ground, which

were hardly known last year, when the reasons for this exhibition were first submitted, cannot now be made fast enough to supply the demand.

The writer does not feel competent to describe the collection of minerals. Of iron and coal the evidence of unequalled abundance is conclusive. In respect to other minerals, the words of Colonel Killibrew, who is in charge of this department, may be quoted: "Within a radius of one hundred and fifty miles from Mount Mitchell, the highest mountain east of the Rocky Mountains, may be found every mineral that contributes to the arts, and every variety of timber which grows between the St. Lawrence and the Gulf of Mexico. But," said Colonel Killibrew, "tell your people that there are two classes of persons who will not be tolerated here." "Who are they?" asked the writer. "Mormons and Secessionists," was the prompt reply.

This exhibition may also be regarded as an instrumentality for the correction of errors of opinion on the part of citizens of the two sections of this country in regard to each other, in respect to their relative conditions and opportunities, and also in regard to the past history of their respective sections. It may be well to consider the social and political changes which have occurred, without which this exhibition could not have been held, before we treat the industrial changes which are in part a consequence and in part a cause of them.

It surely marks an important era in the history of this country, that even the abolitionists of old time can here meet ex-Confederate officers of high rank, and while conversing, without any sense of animosity, about the events and ideas which controlled the ante-war period, can also take counsel together as to the common interests and common needs of the future,—almost as if slavery and war had never been. It may not be a new conviction to many persons that there were men of great mental capacity in the South, fifty years since, who absolutely feared liberty; who absolutely believed that emancipation would lead to anarchy; and who were positively convinced that if freedom were given to the slave in any way whatever, the existence of the two races in the same place or State would become impossible; yet such is the conception which one cannot fail to receive from the intimate relations into which men of the two sections are brought by such an undertaking as this one is.

That such were the convictions of many persons of little prominence, may have been well understood throughout the long period

of controversy which preceded the civil war; but that such should have been the want of faith on the part of leading Southern men, who, it may be assumed, knew something of history and of politics, is certainly a new conception to many, if not to all, of those who were engaged upon the other side of the question. It is therefore well worth while for men who have passed middle age and who were active throughout the conflict regarding the status of Kansas; who helped fit out John Brown for the beginning of that fight (even though they might have condemned the Virginia raid had they known about it), to review some of the proceedings of that time; and it may also be well even for those who came much later into the ranks of the Republican party, after the Free Soil party had completed its work, to reconsider these questions; better yet would it be for "stalwarts," so called, or the Bourbons of the North, to visit this exhibition, if there were any hope that they could extend their mental vision.

Objection is sometimes made to any reference to these incidents of the past, and it is often assumed that good feeling may be more promoted by silence regarding slavery; but it will soon become apparent to any one visiting the South who attempts to solve the questions of the present, that reference to the past must be made, in order to comprehend or explain the curious anomalies which one meets to-day on every side. Next, one will find that even if he himself carefully refrain from any reference to the war or to the conditions which preceded it, when conversing with Southern friends, they themselves will constantly refer to both; and finally it may also become apparent that they feel more respect and confidence in a man who makes no attempt to conceal his own past ideas and acts than they do for one who tries to excuse or palliate the acts of the past on either side. The sensitive nerve of the citizen of the New South is less quickly touched by any reference to the past than by the expression of doubt as to the immediate capacity of the Southern people to do any kind of work in the manufacturing or mechanic arts.

It is a singular fact that several of the Northern subscribers to the capital of the Atlanta Exposition could not have visited that city without danger to their lives, had they been known, between the years 1855 and 1860 inclusive, because they were either members of the Boston Vigilance Committee for rescuing fugitive slaves, or of the Philadelphia branch of the "Underground Railroad," or active promoters and members of the New England Emigrant Aid Company, by which John Brown was fitted out for Kansas. It

is only necessary to consider the light in which such men were of necessity viewed by the sincere supporters of slavery to perceive that the latter had no choice in the matter, but were compelled, as years went by, to make it more and more unsafe to oppose slavery, even to the extent of outlawing and lynching any man who dared differ in opinion or action: the more sincere they were the more necessary their appeal to force, either with or without law.

The volume of speeches and letters of the late Governor and Senator James H. Hammond, of South Carolina, gives a good example of the convictions of the sincere slaveholder, who really believed that American slavery was warranted by the Christian religion and could be fully sustained by arguments drawn from the Bible, and must be defended at any cost. As one looks over this volume in the light of the present time, it has a strange sound to read such paragraphs as the following, and to perceive that they represented very profound and sincere convictions:

"It is impossible, therefore, to suppose that slavery is contrary to the will of God. It is equally absurd to say that American slavery differs in form or principle from that of the chosen people. *We accept the Bible terms as the definition of our slavery, and its precepts as the guide of our conduct.*" We desire nothing more. Even the right to 'buffet,' which is esteemed so shocking, finds its express license in the Gospel (I. Peter 2: 20). Nay, what is more, God directs the Hebrews to 'bore holes in the ears of their brothers' to mark them, when under certain circumstances they become perpetual slaves.

"I think, then, I may safely conclude, and I firmly believe, that American slavery is not only not a sin, but especially commanded by God through Moses, and approved by Christ through his Apostles."

In another place, he says:

"Hence, slavery is truly the corner-stone and foundation of every well-designed and durable Republican edifice."

This man was no hypocrite; he was honest and true according to his light. Probably no expression uttered by a slaveholder ever created more resentment in the North than the one used by Senator Hammond during the Kansas debates, when he referred to the slaves of the South and the mechanics and laborers of the North as the "mud-sills" of society; yet it was a perfectly natural expression for one to use who had no faith in, and could hardly conceive of, a government uncontrolled by an aristocracy, and who regarded permanent class-distinctions as necessary in their very nature. The simple sincerity with which the Senator quotes the Old Testament as final authority becomes curiously

interesting, now that the awful retribution has cured the error which he sustained, yet it is perfectly evident that he would have been very much shocked had any one defended polygamy upon the authority of the Old Testament.

It was this narrowing of the mind, this intense provincialism, which made slavery so dangerous to those who sustained it; they became incapable of sound judgment, and therefore could not help misleading the States which they governed, even without knowing what they did.

The fear of the negro crops out throughout Governor Hammond's letters and speeches. It is curious to read his words in the light of the present time. He says:

"The negro loves change, novelty, and sensual excitements of all kinds, *when awake*. Reason and order, of which Mr. Wilberforce said 'liberty was the child,' do not characterize him. Released from his present obligations, his first impulse would be to go somewhere; and here no natural boundaries would restrain him. At first they would all seek the towns, and rapidly accumulate in squalid groups upon their outskirts. Driven thence by the armed police which would immediately spring into existence, they would scatter in all directions. Very few of them could be prevailed on to do a stroke of work, none to labor continuously while a head of cattle, sheep, or swine could be found in our ranges, or an ear of corn noddled in our abandoned fields. These being exhausted, our folds and poultry yards, barns and store-houses, would become their prey.

"Finally, our scattered dwellings would be plundered, perhaps fired, and the inmates murdered. How long do you suppose that we could bear these things? How long would it be before we should sleep with rifles at our bedside, and never move without one in our hands?

"No preparation can avoid these dangers, and gradual emancipation is impossible. Every scheme founded upon the idea that the two races can remain together on the same soil, beyond the briefest period, in any other relation than precisely that which now subsists between them, is not only preposterous, but fraught with deepest danger."

If these were the convictions of honest and otherwise able leaders, what must have been the prejudices of men of less education and intelligence? If we then recall the fact that these dreaded negroes were not only suddenly enfranchised, but that the greater part of the white citizens of the Southern States were, at the same time, disfranchised, while we may not palliate or excuse the period of fraud and violence which followed, we may yet wonder that nothing worse has happened, and that order and safety for white and black alike are now well assured throughout the South, unless it be in some of the most remote districts, not yet penetrated by the railroad.

No wonder that those who have inherited these convictions from their own immediate ancestors find it hard to believe that the suburbs of the cities in which the negroes

have actually gathered in large numbers, are not all as "squalid" as the suburbs of many other cities which are almost wholly occupied by whites. Most of those who stay in these suburbs remain for the same reasons that keep white men in similar places—because work is more certain and the pay is better. The curious inconsistency in the testimony of the white regarding the negro cannot last much longer in the face of the facts disclosed in places where the latter has had a fair opportunity for work. The ample suburbs of Lynchburg and other places where the manufacture of tobacco is carried on,—an industry which is exclusively in the hands of colored people,—and also of Charleston, Savannah, Norfolk, and many other cities, mark the capacity of the negro to establish himself in comfort wherever the conditions are propitious for saving a portion of his wages, or the means of investment are fairly open to him. Washington itself offers probably more numerous examples of fairly prosperous colored men than any other place.

That there are also many who only work spasmodically cannot be denied, but the reason is not far to seek. Not yet educated to new wants, a little labor suffices to meet their needs, and, until savings-banks are established, the quicker they spend their earnings the safer for them. The true capacity of the negro, and of the poor white of the South as well, cannot be determined until some means of saving small sums with safety shall be provided; when that time comes the South will learn the one lesson now needed more than any other—the difference between a cent and a nickel (five-cent coin)—a difference now measured in Massachusetts by two hundred and twenty-five million dollars in our savings-banks.

Another controlling conviction of the late Senator Hammond constitutes one of the lingering errors which are being refuted at Atlanta. The idea still pervades and misleads the South that the world could not get on without American cotton, and that all the great financial interests would be reduced to chaos if the cotton crop of the South were cut off. Senator Hammond said:

"I do not undervalue the importance of other articles of commerce, but no calamity could befall the world at all comparable to the sudden loss of two millions of bales of cotton annually. The factories of Europe would fall with a concussion that would shake down castles, palaces, and even thrones; while the purse-proud, elbowing insolence of our Northern monopolist would disappear forever under the smooth speech of the peddler scouring our frontiers for a livelihood, or the bluff vulgarity of the South Sea whaler, following the harpoon amid storms and shoals. Doubtless, the Abolitionists think we could grow

cotton without slaves, or that at worst the reduction of the crop would be moderate and temporary.

"Such gross delusions show how profoundly ignorant they are of our condition here."

In his speech upon the admission of Kansas, he added:

"You dare not make war on cotton. No power on earth dares to make war upon it. Cotton is King."

Speaking to the North, he said:

"One hundred and fifty million dollars of our money passes annually through your hands. Much of it sticks: all of it assists to keep your machinery together and in motion. Suppose we were to discharge you; suppose we were to take our business out of your hands;—we should consign you to anarchy and poverty."

All these are the sincere views of a man of profound convictions, whose last words expressed as his last wish, the desire that if the Southern States did not succeed in their effort to secede, a plow should be run over his grave in order that its place might be forgotten. It is a pity he could not have lived to know that the sixteen crops of cotton made by free labor since the war exceed the last sixteen crops of slavery by fourteen million bales.

When it is remembered that the Southern States were actually governed by such leaders in former days, in a way of which we have little conception in the North; that books and papers were few, and that all political instruction was given by speeches, the pernicious influence of such sincere but utterly false convictions may now be comprehended, and with such comprehension may come a removal of the bitter feelings which were engendered by the war. Such men were the mere creatures of circumstance, who could no more avoid the logic of their convictions than the men of the North could avoid resisting them. Of the baser sort, who knew the malignant effect of slavery, but yet sustained it, nothing more need be said either here or hereafter; even if still in life they are now dead and gone.

In general, it may be said that the New South is surely surmounting the intense and dogmatic provincialism of the Old, and is rapidly coming into line with the more progressive States. The most conclusive proof of the change may be found in the instructive book entitled "Our Brother in Black," by President Haygood, of Emory College, Oxford, Georgia.

If, then, Southern men, suffering even under the sting of defeat, are, whether wittingly or not, surrendering errors which have come to them from remote generations, and are now only sensitive when the least doubt is thrown upon their immediate ability to take any

part in any manufacturing, mechanical, or other kind of work,—if they are now in as dead earnest to take up every branch of profitable work as they formerly were averse to sharing certain kinds of manual labor at all,—may it not be well for Northern men to see if they also have not been controlled by some errors in regard to the past history and condition of the South?

In the course of a conversation upon the events preceding the war, with two grandsons of John C. Calhoun, the writer was somewhat startled by a remark substantially to this effect:

"If my grandfather and his associates had known as much about the negro as I know, and could have had the same faith in his capacity for progress which I have attained from my own experience, there would have been neither slavery nor war."

"Do you mean to tell me," I asked, "that your grandfather feared liberty for the black, however compassed?"

"Of course I mean that," said he. "What other justification could there have been? He and his associates believed that the two races could not exist together upon the same soil except in the relation of masters and slaves."

One of these gentlemen moved from South Carolina to the bottom-lands of the Mississippi, with a large number of the negroes formerly the slaves of his family. He has succeeded in assuring not only his own prosperity, but their welfare also, and he bears conclusive testimony to the ability of the colored laborers to sustain themselves in comfort. I am permitted to use the following notes of my conversation with this gentleman and his brother, which, at my request, one of them reduced to writing, and which will fully indicate the difficulties under which Southern planters and farmers have been placed. After demonstrating the enormous productive power and present low valuation of the bottom-lands of the Mississippi valley, these gentlemen make the following statement:

"These lands rent for eight or ten dollars an acre, but why should lands that produce so much, and rent for so much, sell at such low prices? It is not because there is any danger of losing the rents from the inability of the tenants to pay. The landlord's lien is a first lien upon the crop, and these lands never fail to produce very much more than the rental. The true explanation will be found in the condition of the country. Here we must go back a little into the past.

"Prior to the war, as is well known, these plantations were cultivated by slave-labor. In nearly every instance, the planter's wealth

consisted of his slaves, his plantations, and the personal property required to run them. In the vast majority of cases, he was heavily in debt, either for the purchase of his land, or his slaves, or from his extravagant mode of life. When the war closed, he found his slaves freed, his personal property lost, stolen, or destroyed, and only his land, which had greatly depreciated in value, left to pay his debts. As a rule, his liabilities exceeded his assets. But the price of cotton was very high, and he found persons willing, at a high rate of interest, to carry his indebtedness and to advance the sum necessary to carry on his business. This was the more easily accomplished, as the commission merchant was the principal creditor. In addition to his already existing debt, the planter had to borrow the money with which to buy such personal property, mules, wagons, etc., as he was compelled to have to run his plantations. The slave emerged from slavery without a dollar, and at first the planter had to borrow the money to supply him with the necessities of life. At the high prices of provisions, this was no small item. In spite, however, of all obstacles, the planter found no difficulty in obtaining advances at high rates of interest, and with the high price of cotton and an average season, he was able to make a large sum of money. The result was, that he continued to spend and to borrow, and that 1874 found him poorer than 1865. If the merchants had demanded payment for their claims, it is safe to assert that nearly the entire planting interest would have been found bankrupt, and that the majority of the property would have passed into the hands of the creditors. But it was not the interest of the merchant to foreclose. He could not personally attend to the growing of cotton, and it was better for him to carry the planter at high rates and secure the control of his cotton. If, in order to protect himself, he was forced to foreclose, he willingly sold again on credit. Thus, the planter became, in all but the name, the manager of the merchant. His debts, as a rule, were only carried from year to year. What was left after paying the merchant back the special advance for the year, with the interest, went to the interest on the old debt, and the remainder, after defraying the expenses of the planter's family, which seemed to have a wonderful way of adapting themselves to the largest crops, went to the principal of the old debt. Thus it happens that every year the planter has had to borrow to run his places. It would be safe to assert that even now, after several years of closer economy than the planter ever before practiced, and after reducing the balance against him, it would be cheaper for him to let his land go to pay his

debts, and borrow money at a legitimate interest with which to buy and run it. The interest he now pays for yearly advances alone, not counting the interest on older debts, would more than pay the interest at six per centum on the present value of his plantations and the money it would take to run them.

"But I do not wish to be understood as condemning the merchants. But for them the planter could not have planted at all, and they have probably been as liberal as any capitalists who had the borrower completely at their mercy. From nowhere else could the planter borrow. Again, the capital of the merchant was, and is, limited. By advancing upon cotton and sugar, and receiving and selling the articles advanced upon during the same month, for a large part of the year, he is able to make five per cent. commissions in one month, besides interest.

"The secret is, that the merchant is not simply a money-lender. Money is to him the lever with which to obtain commissions. No wonder, then, that the commission merchant should be willing only to advance money to the planter at such high rates, or should be willing to sell places which have fallen into his hands, and which rent for eighteen and twenty per cent. on their present value. These latter it necessarily takes some attention to manage, and lying, as they do, hundreds of miles from him, are the source of annoyance.

"Another of the great evils of this system is, that the planter cannot protect his laborers from the extortions of the store-keepers who supply them, or, if he provides for them himself, he, from force of circumstances, becomes an extortioner himself. Borrowing money at a high and ruinous rate, he takes the risk of loaning to the laborer. Many of these are responsible; many are not. The practice is to make the hard-working, the industrious, the frugal, pay for the deficits of the idle. The result of the whole is, to speak in the language of one of the most intelligent merchants of America, to make paupers of the planters and tramps of the negroes.

"Add to this vicious system of business the disturbed state of that section incident to the total overthrow of the former social status, and you have a complete picture of the obstacles under which the planter has labored.

"But the clouds in the sky are beginning to clear away. The country is taking on settled habits; the planter has become more industrious and economical; the negro who, as we said before, emerged from slavery without a dollar, and we here add, with no experience of providing for himself, has, by industry, in many instances been able to buy mules, wagons, farming implements, cattle, etc., and

to surround himself with the comforts of a home. Many others have enough, at least, to support themselves for one year. In spite of everything, many have prospered. The fertility of the soil and their own industry have been in their favor. And here permit me to digress far enough to say that I believe if our ancestors could have foreseen the present condition of the negro, there would have been no war. They did not sufficiently estimate the development which attrition with civilization for several generations had produced upon the savage. But this is too large a subject for this letter. At some other time I hope to give you sound reasons for my opinions.

"But to resume: Why, you will naturally ask, if the condition of the country is so improving, should the planter be willing to sell his lands at the prices I have named?

"Let one example answer this question. There is a plantation that was purchased by a bank, and resold since the war for \$120,000. The purchasers have so managed to reduce their indebtedness as now to owe only \$62,500. To it is attached a landing that is now rented to perfectly solvent and responsible persons for \$3,000 per annum. The rental of the planters this year is 375 bales of cotton. They will sell the whole place, landing included, for \$90,000, and agree to take the plantation for five years at a rental of \$10,000 per annum, because they say it would be cheaper for them to do this than to pay their present interest. Nor can we estimate the demoralizing effect upon a people of borrowing, borrowing, year after year.

"There is another subject to which I would call your attention in this connection, except that your greater familiarity with it forbids. And that is, the immense increase the planter could add to the value of his crop by introducing better machinery, and paying more attention to saving it; and the immense expense he could save by dealing directly with the manufacturers.

"But, I fear, I have already trespassed too far upon your time and patience. In conclusion, permit me to say, that the indications seem to point to a day not far distant when the introduction of Northern capital will give to these lands a value more nearly proportioned to their productiveness, and when their only standards of value will cease to be the necessities of the seller and the offers of the purchaser.

"The abolitionist and the former secessionist can well unite in the prayer for the speedy coming of the day when the planter and manufacturer will be brought into the closest relations."

I give this statement of the Messrs. Calhoun

thus fully because it may go far to explain the reasons why the only exodus of negroes of any moment was from these very same rich bottom-lands of the Mississippi Valley. It is impossible to doubt that with relief from the financial burdens indicated by this letter, better conditions of life for black and white will ensue, and may it not be held that such vast industrial changes must ultimately control the political status of this great valley?

The managers of some of the large companies which have loaned money on the security of Western farms, greatly to the benefit of themselves and of the farmers as well, are now turning their attention to these rich lands of the Mississippi Valley, and of the South-west. No greater benefit could happen than will come from this movement: the citizens of such States as have not yet re-established their State credit will be obliged to give attention to the matter at once, lest their own personal interests, which are inseparable from the credit of their State, should be imperiled; on the other hand, whenever full confidence in Southern credits can be restored and mortgages on Southern land are safe, the plethora of capital in the East will be relieved. The work now being done upon Southern railroads is but the beginning, and the managers of these roads have done wisely in giving such ample material evidence of the capacity of the country through which they pass, in their contributions to the Atlanta Exposition.

It is by such intercourse as this, with the Messrs. Calhoun and others, and by the better understanding of industrial conditions which comes from it, that the Atlanta Cotton Exposition may be most useful in removing false impressions on both sides.

It is somewhat difficult for men who have been bred in utter abhorrence of slavery to make the mental concession which is necessary when they become convinced that the iniquity of slavery was not apparent to Southern men of large mental capacity, or, if apparent, was met by graver danger in its removal. Sad must have been the lives of many men under such conditions. It is difficult to conceive that they may have dreaded liberty more than they feared the consequences of slavery; yet as one reviews the heated contentions of the ante-war period, and converses with men who were ruined by the loss of slave property, but who would now resist the re-establishment of slavery more urgently than they ever sustained it, it becomes impossible not to yield to the impression that these men lived according to their light, and that whatever may have been the baneful effects of the system, they themselves were dominated by it,

and could not resist the necessity of their own conditions. The writer well remembers a conversation with Theodore Parker, which he related to some of these Southern gentlemen, and to which they fully assented. He said: "Slavery is a condition of passive war; it can only end in active war, by which it will be destroyed." The first shot fired upon Fort Sumter in 1861, which gave liberty to the slaves, proved how true was the insight of Mr. Parker.

The writer has been held to have spoken harshly and unjustly of the South, both in the address in which the Atlanta Exposition was first proposed and since that time, yet he has found that the intolerance of free thought and expression which was the absolute necessity of slavery, has almost wholly ceased to govern the thought or action of the men of the New South; naught has been set down to him in malice, and no sign of animosity, of any moment, has been witnessed; a few childish examples of jealousy and intolerance on the part of some of the smaller newspapers only bringing the general emancipation of thought into more prominent view. He may therefore the more freely admit that the more he has come into close relations with his Southern friends the more he has had reason to perceive that the sad events of recent history had been the necessary evolution of the past; and that all animosity ought now to cease with the hearty effort of both sections to adopt a policy of "vigorous prosecution of peace."

The errors on the part of the children of Southern slave-holders, which are being removed by contact with Northern men at the Exposition, may be of somewhat the same nature as our own. They had inherited the bitter animosity which their grandfathers entertained against the antislavery men of the North, and it certainly marks a great change in the condition of opinion when an able ex-Confederate general cordially expressed to the writer his gratification at the success of the Exposition and the opportunity which it gave him to make the acquaintance of those who had formerly been his most bitter opponents. Over our lunch we compared notes regarding the past, and discussed in what manner coöperation could be had in the future;—he admitting that the opportunity which had come with liberty had greatly surprised him, and had given him more confidence in the stability of this country than he had ever known before; while also admitting that under the logic of events, had he lived in Massachusetts and inherited the confidence in liberty by which the abolitionists were moved, he himself would have been a bitter abolitionist.

It is necessary to study these changes for oneself in order to appreciate the social and industrial revolution which has occurred since the end of the war. It would be well if a capable observer could spend a few months in each year, for a few years, in studying the phases of this change. Not only would his work cover the effect of the change from slavery to freedom, but the industrial history of two centuries can be observed within the limits of a two days' journey from the center of the mountain section, where the spinning-wheel and the hand-loom are still in use, to the great works of the middle and eastern States. In three short vacation trips which the writer has been able to make in the South during the last few years, it has seemed to him that one of the most remarkable chapters in social and industrial history was passing almost unobserved and unrecorded; that underneath the political froth, which may constitute the only record which will be written, great forces have been working upon which a true observer could base his assurance of future welfare springing up under the peaceful order of liberty, with the same certainty that led Theodore Parker to predict the war by which slavery would destroy itself. No such change can ever occur again, because the conditions can never be repeated, but in view of the impending struggle in Europe by which the system of standing armies is to be destroyed, and "government of the people, by the people, for the people" is to be substituted, it might well repay the ablest student or legislator to study the way in which society has become re-organized in the New South under the working of democratic institutions.

A material error regarding the relative conditions of North and South, of which Governor Hammond's statements of the supposed power of King Cotton constituted so marked an example, is also being removed. The idea still controls very many otherwise intelligent persons in the South, that a very large share of the prosperity of the Northern States rests upon the manufacture of cotton. They express the greatest surprise when informed that this branch of industry constitutes only a small fraction of the work even of Massachusetts, where the largest number of spindles are to be found; and many very intelligent persons yet hold to the idea that it is so profitable as to make it possible to work the mills, even though the rivers freeze up in the winter. It is not an uncommon notion among many persons in the South, that all work in the cotton-mills in New England ceases during a portion of the winter, because the rivers are frozen and the wheels cannot be turned.

This error in regard to the climate and condition of the North finds a correlative in the idea which many Northern people have had regarding the climate and condition of the South. The aspect of the Piedmont district, of the mountain sections and broad plateaus of the central part of the South, from which sections most of the minerals, timber, and products of agriculture on exhibition have been drawn, is evidently a great surprise to many of the Northern visitors, and the variety of products which can be shown from a single small farm, excites the astonishment, not only of Northern visitors, but of most of the Southern planters as well.

No more pernicious error ever obtained, throughout a great section, than what is called the "all-cotton" method of farming; and it was interesting to observe that some of the visitors from the Mississippi Valley, where the plantation system, as has been stated, still continues to exist in greater measure than elsewhere, took especial note of the very low cost of the cotton exhibited by the small farmers of Georgia as their surplus crop. They could hardly imagine that a Georgia farmer could raise wheat, oats, corn, cow-pease, sorghum, potatoes, upland rice; make pickles, sirup, preserves, and bacon, and yet have twenty or thirty bales of cotton, equal to the best of their bottom-land staple, as his surplus or money crop; yet there is ample evidence of these facts in the Exposition.

As this is one of the most significant points brought out at the Exposition, the following statement, made by Mr. James F. Jones, of Hogansville, Troup County, Georgia, may well be made a part of this review. It will be observed that the subsistence of the family and the money value of the boys' labor are charged against the crop, but Mr. Jones makes no charge for his own work.

"CROP OF 1880.

"Based on	21	acres in	cotton,
"	12	"	corn,
"	10	"	wheat,
"	14	"	oats,
"	1	"	sweet-potatoes,
"	$\frac{1}{4}$	"	rice,—

besides water-melons, chufa and ground pea patches, garden vegetables, such as cabbage, tomatoes, Irish potatoes, turnips, beans, pease, and all other garden products usually grown in this section. In January and February, during such weather and at such times as plowing could not be done free from freezing or wet, we cut and put in forty (40) cords of wood. Our compost heap was prepared also in such times and during rainy weather, as it was all under shelter. Our wheat being sowed, our first work on the farm was to sow oats. We had been three (3) days seeding wheat, and now required about the same time to put in our oats. Our cotton land, in connection with four (4) acres of corn land, also such other preparation

as was necessary for garden—sweet-potato patch, etc.—was all finished up in good time, the four (4) acres of corn being planted last of March and cotton last of April, our manures all having been applied with a distributor, and a planter used in planting seeds. The remaining corn was planted in June, after oats from same land had been harvested. (Corn all on bottom or branch land.)

"By the time our small grain was ready for the scythe, our four (4) acres in corn had been plowed twice and hoed out, our cotton plowed twice and hoed out nicely and clear of weeds. In accomplishing this, I used the seventeen dollars of extra labor, so as to be ready for my wheat and oats crop when it was ready to harvest.

"Now, in order to get through with harvesting in time to get back to my corn and cotton before it would suffer for work, I employed extra labor. Three (3) cradlers and three (3) binders finished the wheat and oats in a little less than two and one-half ($2\frac{1}{2}$) days, at one

dollar and a half a cradle, they furnishing their own binders. The wheat cost one-tenth ($\frac{1}{10}$) and oats one-twelfth ($\frac{1}{12}$) for threshing. (I own an interest in a field thresher and did not pay toll.) For this work, I had three extra hands at seventy-five cents per day, and in one day threshed out and housed all my grain and penned the straw. Then up to saving my fodder and picking cotton, no extra labor was used. After finishing up the crop, I set about repairing about my premises, such as renovating gates, moving rock for fencing purposes, cleaning ditches, etc., which time lasted about one month, from the 15th of July to 15th of August; in the meantime finishing up the cultivation of our late corn, planted after oats.

"We commenced to pick cotton last of August, and in order to gather it and our fodder, cow-pease, etc., as it ripened, employed extra labor to pick half the cotton—fourteen bales at seven dollars per bale. At the conclusion of our year's labor, the results were as follows:

RECEIPTS.

28 bales cotton, average weight 518 lbs. at 10c.....	\$1448.00
300 bushels corn, at \$1.00 per bushel.....	300.00
190 " wheat, at \$1.25.....	237.50
500 " oats, at \$1.00.....	500.00
80 " sweet-potatoes.....	25.00
16 " rough rice, at \$2.00.....	32.00
3500 lbs. fodder at \$1.00 per hundred.....	35.00
3000 lbs. swamp hay ".....	30.00
12 bushels cow-pease, at \$1.50.....	18.00
Wheat and oat straw and shucks, worth.....	50.00
40 cords wood at \$1.50 per cord.....	60.00
850 bushels cotton-seed, and from their extra quality, I sold 200 bushels for.....	600.00
The remaining 650 bushels I used as manure and to plant, 20c. per bushel.....	130.00
We fattened and sold five (5) beeves of our own raising, 1 and 2 years old, for.....	40.00
We raised, fattened, and killed nine (9) hogs, at 7c. per pound.....	125.00
	<u>\$3630.50</u>

"N. B.—Ground pease, chufas, turnips, Irish potatoes, and garden vegetables not being marketable here at a fair valuation, no value can be estimated correctly. We also raised one fine colt that year."

The high price at which Mr. Jones credits corn, oats, and hay gives an indication of the disadvantage under which his neighbors work, who pursue the all-cotton method still, and who buy Western corn and Northern hay. It will be observed that the crop of cotton is very nearly 700 pounds lint per acre: that if the cotton is charged with its proportion of the expense of the farm, according to its ratio of value to the rest of the crop, 14,500 pounds cost \$410.90, or less than three cents per pound.

A discrepancy will be noticed between the price at which cotton-seed is credited in the crop and charged in the cost. This arises from the fact that Major Jones cultivates an extra quality of great prospective value, of which he sells the seed, buying common seed for manure.

In the two statements of the Messrs

EXPENSES.

Willie Jones, 16 years old.....	\$75.00
Hugh Jones, 12 ".....	40.00
Gordon Jones, 9 ".....	40.00
Of extra labor cultivating.....	17.00
Seed wheat, 10 bushels, worth.....	12.00
Harvesting wheat, oats, and threshing, extra labor.....	13.50
Seed oats, 30 bushels.....	30.00
Rails made and put up, 2000 at 50c. per hundred.....	10.00
300 feet lumber used on farm.....	3.00
Nails, 25 lbs.....	.75
Blacksmithing, iron, etc.....	15.00
Picking cotton with extra labor.....	98.00
One and a half ($1\frac{1}{2}$) tons guano.....	90.00
Cotton-seed used as manure.....	63.00
250 bushels corn was consumed.....	250.00
1000 lbs. fodder.....	10.00
70 bushels oats.....	70.00
60 " wheat, as bread.....	75.00
1200 lbs. pork.....	84.00
Garden vegetables, etc., not estimated.....	
	<u>\$996.25</u>
Bagging and ties for cotton.....	33.60
	<u>\$1029.85</u>

Calhoun and of Mr. Jones are embodied examples of two different methods of work, and of conditions varying greatly from each other; yet both so far removed from the conditions of the ante-war period that it is almost impossible to convey in words even a faint idea of what has been called the industrial reconstruction of these States. It should be added that for several years Major Jones tried the "all-cotton" plantation system, and only gave it up when he had incurred a debt of more than seven thousand dollars; he then went to work with the aid of his boys, and may now, having paid his debts, rightly enjoy the name he has given to his place, that of "Farm Independence." Samples of all his crops are to be found in the Exposition, together with the honey saved and the pickles and preserves made by his daughters.

We may now consider some more technical points. The Exposition has dispelled an error held by Major Jones, and by many others;—namely, that he could properly prepare his cotton upon a saw gin. It will be observed that he values his crop at ten cents per pound, but the variety of cotton which he grows is of extra staple, and he was much astonished when he brought a portion of his crop of 1881 to the roller gin of the Willimantic Thread Company, and was informed that when prepared upon that machine it was worth sixteen cents a pound, at which price he has since sold several bales to the manager of that company.

If English readers still have any fear that "Cheap Cotton by Free Labor" may not be supplied in any needed quantity, it may interest them to know that the State of Georgia alone contains fifty-eight thousand square miles, of which, if every acre were cultivated as intelligently and as productively as the little cotton-patch of Major Jones, less than seven thousand would be needed to produce the present entire cotton crop of the United States, or over six million bales; also that the average summer heat of Troup County, which is in part about seventeen hundred feet above the level of the sea, is less than that of some parts of Philadelphia, and that land in Troup County equal to Major Jones's can be purchased at ten dollars per acre, while unimproved but equally good land at a greater distance from a railroad is worth only three to five dollars.

In view of this testimony of Major Jones and many others, I may be permitted to make the following extracts from my first writing upon cotton, a pamphlet published in 1861, the first year of the civil war, entitled "Cheap Cotton by Free Labor." In this I said:

"The object of the present pamphlet is to prove that labor upon cotton culture may be performed by whites, with perfect ease and safety—that it will yield a larger return to the small cultivator than almost any other agricultural product of the country, and that free labor upon cotton is an absolute necessity to enable this country to maintain its hold upon the cotton markets of Europe.

"What intelligent farmer will deny his ability, with one able-bodied assistant, to cultivate forty acres of light sandy loam in corn and wheat * * * then let him suppose himself upon Texas cotton-lands, the best in the world, producing five hundred pounds clean cotton to the acre. He will put twenty acres in cotton, and if he is blessed with a reasonable family of children he will require very little assistance to pick it. He will pick ten thousand pounds of cotton, and will, for some years to come, be certain of receiving at least ten cents a pound for it, after paying all expenses of sale—one thousand dollars income from one-half his land. Any one who doubts that his other twenty acres will yield wheat, corn, and other products sufficient for the food of his family, may have his doubts removed by reading Olmsted's 'Texas Journey.' Let it be borne distinctly in mind that at ten

cents a pound, or even higher, this country can hold almost a monopoly of the cotton markets of the world."

It may be added that at the time it was published, so little were the facts about cotton then understood, this pamphlet excited considerable derision even in the North. It was at this time that the writer also submitted the proof that if cotton were a northern plant producing seed alone and no lint, it would constitute one of our most valuable crops in the production of oil and oil-cake.

It is a curious fact that while cotton has affected modern history most profoundly, and is a prime factor in all finance, yet the grower and the spinner have been cut off from each other almost as if they lived on two sides of an impassable sea, neither knowing the requirements of the other. Men who have spent their lives in spinning visit Atlanta in order to see cotton in the field for the first time, and to witness its preparation. Men who have grown cotton all their lives go there to see a spindle operated by power, to learn what a machine-card is, and to be taught how to form a true judgment of the quality of their own staple.

It is by consultation with Major Jones and his associates that another error, which has been widely held in the North, is also being dispelled, to wit: that the intelligence and mental activity of the Southern planter and farmer are to be measured by the barbarous manner in which cotton is picked, ginned, baled, and pressed. Such an inference is entirely unwarranted; the whole treatment of the cotton fiber was the logical necessity of slavery—the planter was controlled by his own conditions, but yet it took a great deal of mental capacity and power of organization to operate a large plantation with ignorant slaves, incapable of using good tools or machinery without abusing them. On the other hand, how could the white cotton-farmer, working his small bit of cotton land in a sparsely settled community, be expected to master in one or two decades the true methods acquired of necessity by Northern farmers during a century of close attention to small savings? It is a great error to assume that there is not as much mental capacity applied to the working of land in the South as there is in the North or West, if not more, and if this is not yet fully apparent in the results, ought not some of the reasons to be considered?

The rapid extension of the railway system, the establishment of schools, and the opening of direct communication between the two departments of the cotton manufacture, cannot fail to produce most beneficial results. The want of direct communication has had a most pernicious effect on both sides.

Very many planters and farmers have heretofore assumed that it was better not to attempt to remove dust, sand, and trash from their cotton-bales, and that they could get more money for the trash than they could for well-handled staple. There may have been sound reasons for this conclusion before the last cotton year, ending September, 1880; but the large quantity of very low grade cotton which formed a part of that crop, and which brought a very low price, taught the necessary lesson. The new spirit which controls the New South has led to the investigation of this and other questions. When the planters began to weigh clean and dirty bales in order to compare them, many of them discovered that for each quarter-cent's worth of dirt left in the bale, they lost a cent in the grade of the cotton. Greater discrimination is now being used in the sorting of the cotton from the very beginning; and the pernicious habit of merging all kinds of staple together is passing by. It is true that this important change is just beginning, and that much time will of necessity elapse before new methods will be perfected. How much farther this reform may be carried can be inferred from an incident which happened at the Exposition. A preliminary trial of the various kinds of cotton-gins had been arranged, and the persons in charge of the supply of seed-cotton had been requested to bring in a load of seed-cotton from one field, of uniform quality: this they did, so far as they knew, and sold it all at three and one-half cents a pound in the seed; but when a portion of the cotton had passed through two of the gins, and a third was being tried, the staple came from the gin worth, in the judgment of the experts who were watching the proceedings, at least two and one-half to three cents a pound more than the cotton already ginned. At first the improvement was attributed to the merit of the gin; but it presently appeared that an entirely different variety of cotton was being worked. Yet those who had provided the cotton were not aware of the difference in value; and had they been carrying their load to a neighboring gin, it would all have been merged together and sold at the same price; the good cotton even injuring rather than improving the poor staple by the irregularity in length of the staple which would have ensued.

Another error may perhaps be corrected. The superiority of the cotton prepared upon a roller gin has long been admitted with regard to the long staple or black-seed cotton of the Sea Island variety; but it has not been supposed that any roller gin existed which could be applied to the green-seed or common cotton of commerce in an economic way. It has

always been assumed that no roller gin could approach the saw gin in quantity, and therefore it has been inferred that the roller gin could not be generally used. Many farmers and planters are attending the Exposition from the interior, where the Sea Island variety is not grown, who had never even seen a roller gin. They find several kinds in the Exposition which are expected to yield not only the better quality resulting from their use, but also as large a quantity in proportion to the capital invested in machines, and in ratio to the power and labor applied, as can be obtained from any saw gin in existence. If such shall prove to be the fact, a great step will be made in enabling this country to undertake branches of fine spinning, such as are now conducted in Europe mainly by the use of Egyptian cotton, worked upon combing-machines. We have had a full supply of Sea Island cotton for the very finest work; we have also had a full supply of green-seed cotton for common and medium work. But we have lacked the middle class, like the Egyptian, for spinning yarn suitable for fine hosiery, fine lawns, and other classes of goods for which the Sea Island cotton is too expensive. A large number of varieties of extra staple cotton can be found in the Exposition which will serve even better than Egyptian or South American for all these purposes, provided they are prepared upon a roller gin, and are not torn in pieces and virtually destroyed, as they are by the work of the saw gin. Many growers informed the writer that they had been unable to carry out plans for the improvement of their crop, because they could not prepare the cotton properly upon the saw gin, and did not know that there was any other machine which could be used with economy.

Another error which has greatly retarded the progress of the South may be corrected by the Exposition. It seems to have been assumed by the managers of Southern railways that very high rates of charge were most expedient. Hence traveling in that section has been more expensive than in any other part of the country. But the low excursion rates established upon all the lines which center in Atlanta have set great crowds in motion, and if a permanent change of policy should follow, the people and the railroads will be equally benefited. This matter is the more important in view of the consolidation and extension of the Southern railway service now in progress. A thorough analysis of the railway service of the United States will reveal the fact that the great consolidated lines which have been most profitable to their owners are also the lines which have performed the largest public service at

the lowest rates of charge. In the sixteen years which have elapsed since the end of the civil war, sixty-six thousand of our present total of one hundred thousand miles of railway have been constructed, or about four thousand miles a year; but, in this extension, the Southern States have had the least proportionate share. With our increasing population and traffic, it is not too much to assume that we shall construct about six thousand miles a year, or a little more, for the next sixteen years, by which we shall double our present mileage. This work will call for the continuous service of three hundred and fifty thousand men, as executive officers and engineers, as workers in mines, iron-works, rolling-mills, and machine-shops, and as car-builders, track-layers, and laborers. This small army, engaged in works that make for peace and plenty, is just one-half the standing army which we should need if we should maintain a force under arms in camp and barracks equal to the present standing armies in active service in France and Germany, in proportion to our population as our population will be for the period named. With the other half of our industrial army employed especially upon the development of the resources just now brought to light at Atlanta, we may bring the commerce of the world to our feet. A nation endowed like our own with the most abundant elements of wealth—applying even moderate skill and industry to their development,—which is free from the blood-tax of a standing army, and which pays high wages because the opportunities for labor are many—can enjoy the greatest abundance of the products of the field, the mine, and the factory, at the lowest cost, and pay for its exchanges with other nations by the sale of what it does not need and could not itself consume.

On the other hand, our abundant supply of the products of the field, the mine, and the forest is rendering the burden of rent, of tithes, and of standing armies intolerable to the people of other countries, and when our commerce is even in part made free from the obstruction of our navigation laws, and our excessive war tariff, our competition in supplying the world with manufactured goods will be felt in equal measure.

Several other errors exist, but on which side the error lies cannot yet be determined. It is alleged by many that although Northern men and Northern capital are now welcome in the South, and each one is free to work in his own way, yet families are not received with the same welcome,—that women

and children are isolated, and that offensive distinctions are made, not only in regard to persons of Northern birth, but even in respect to those of Southern birth who do not belong to the dominant political party. Should this be true, it will prove to be a great error in judgment, if Southern men expect to secure the use of capital or to promote emigration in any but the most scanty measure. The writer himself believes that the error in this case lies upon both sides; that in the larger portion constituting the progressive parts of the South, all such prejudices have been abated, but that they still exist in some remote or insignificant places in sufficient measure to justify the allegation. That such silly prejudices can resist the effect of the closer relations brought about by this exposition is not to be believed.

I can close this article in no better manner than by quoting the words of one of the most intelligent Georgia farmers, who summed up the case in this way: "Massachusetts has heretofore sold us her shoddy and has bought of us our trash; this exposition has given us the first chance we have ever had to meet each other and to begin anew under better methods of trade."

It will be apparent to the reader of this article that any attempt to analyze the true meaning of the Atlanta Cotton Exposition must lead the observer into deeper questions than those of mere purchase and sale, and may make his treatment of it very discursive. This exhibition deals apparently with mere material interests and business questions, but its social and political influence will profoundly affect the future history of this nation. The exhibition of minerals and timber contributed by only a portion of the Southern railroads cannot fail to give increased confidence in the future value of the railways themselves; the intercourse between the planters of the Mississippi Valley and men controlling capital from the Northern States may soon lead to the extension of the system of lending capital through the mortgage-security companies, which has worked so successfully in the West; the small farmers of other Southern States may learn a useful lesson from the progressive men of Georgia, whose crops give such assurance of their intelligence and activity. All these forces work together toward peace, order, industry, and mutual confidence; they will compel those who are called political leaders to obey their behest, and will render futile all attempts to maintain party divisions upon the dead issues of the past.

IN EXILE.

I.

THE singing streams and deep, dark wood
Beloved of old by Robin Hood,

Lift me a voice, kiss me a hand,
To call me from this younger land.

What time, by dull Floridian lakes,
What time, by rivers fringed with brakes,

I blow the reed and draw the bow,
And see my arrows hurtling go

Well-sent to deer or wary hare,
Or wild-fowl whistling down the air;—

What time I lie in shady spots
On beds of wild forget-me-nots,

That fringe the fen-lands insincere
And boggy marges of the mere,

Whereon I see the heron stand,
Knee-deep in sable slush of sand,—

I think how sweet if friends should come
And tell me England calls me home.

II.

I keep good heart and bide my time
And blow the bubbles of my rhyme;

I wait and watch, for soon I know
In Sherwood merry horns shall blow,

And blow and blow, and folk shall come
To tell me England calls me home.

Mother of archers, then I go
Wind-blown to you with bended bow,

To stand close up by you, and ask
That it be my appointed task

To sing in leal and loyal lays
Your matchless archers' meed of praise,

And that unchallenged I may go
Through your green woods with bended bow—

Your woods where bowered and hidden stood
Of old the home of Robin Hood.

Ah, this were sweet, and it will come
When merry England calls me home!

III.

Perchance, long hence, it may befall,
Or soon, mayhap, or not at all,

That all my songs nowhither sent,
And all my shafts at random spent,

Will find their way to those who love
The simple truth and force thereof,

Wherefore my name shall then be rung
Across the land from tongue to tongue,

Till some who hear shall haste to come
With news that England calls me home.

IV.

I walk where spiced winds raff the blades
Of sedge-grass on the summer glades;

Through purfléd braids that fringe the mere,
I watch the timid tawny deer

Set its quick feet and quake and spring,
As if it heard some deadly thing,

When but a brown snipe flutters by
With rustling wing and piping cry;

I stand in some dim place at dawn,
And see across a forest lawn

The tall wild turkeys swiftly pass,
Light-footed, through the dewy grass.

I shout and wind my horn, and go
The whole morn through with bended bow,

Then on my rest I feel at noon
Sown pulvil of the blooms of June;

I live and keep no count of time,
I blow the bubbles of my rhyme;

These are my joys till friends shall come
And tell me England calls me home.

v.

The self-yew bow was England's boast;
She leaned upon her archer host,—

It was her very life-support
At Crécy and at Agincourt,

At Flodden and at Halidon Hill,
And fields of glory redder still!

O bows that rang at Neville's Cross!
O yeomanry of Solway Moss!

These were your victories, for by you
Breast-plate and shield were cloven through,

And mailed knights, at every joint
Sore wounded by an arrow-point,

Drew rein, turned pale, reeled in the sell,
And, bristled with arrows, gasped and fell!

O barbèd points that scratched the name
Of England on the walls of fame!

O music of the ringing cords
Set to grand songs of deeds, not words!

O yeomen! for your memory's sake
These bubbles of my rhyme I make;

Not rhymes of conquest, stern and sad,
Or hoarse-voiced, like the Iliad,

But soft and dreamful as the sigh
Of this sweet wind that washes by

The while I wait for friends to come
And tell me England calls me home.

vi.

I wait and wait; it would be sweet
To feel the sea beneath my feet,

And hear the breeze sing in the shrouds
Betwixt me and the white-winged clouds,

To feel and know my heart would soon
Have its desire, its one sweet boon,

To look out on the foam-sprent waste
Through which my vessel's keel would haste,

Till on the far horizon dim
A low white line would shine and swim!

O God, the very thought is bliss!
The burden of my life it is,

Till over sea song-blown shall come
The news that England calls me home!

vii.

Ah, call me, England, some sweet day
When these brown locks are silver gray,

And these brown arms are shrunken small,
Unfit for deeds of strength at all;

When the swift deer shall pass me by
Whilst all unstrung my bow shall lie,

And birds shall taunt me with the time
I wasted blowing foolish rhyme,

And wasted dreaming foolish dreams
Of English woods and English streams,

Of grassy glade and queachy fen
Beloved of old by archer-men,

And of the friends who would not come
To tell me England called me home.

viii.

Such words are sad—blow them away
And lose them in the leaves of May,

O wind! and leave them there to rot
Like random arrows lost when shot;

And here, these better thoughts, take these
And blow them far across the seas,

To that old land and that old wood
Which hold the dust of Robin Hood!

Say this, low-speaking in my place:
"The last of all the archer-race

Sends this, his sheaf of rhymes, to those
Whose fathers bent the self-yew bows,

And made the cloth-yard arrow ring
For merry England and her king,

Wherever Lion Richard set
His fortune's stormy banneret!"

Say this, and then, oh haste to come
And tell me England calls me home!

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

VIII.

THE more Bartley dwelt upon his hard case, during the week that followed, the more it appeared to him that he was punished out of all proportion to his offense. He was in no mood to consider such mercies as that he had been spared from seriously hurting Bird; and that Squire Gaylord and Doctor Wills had united with Henry's mother in saving him from open disgrace. The physician, indeed, had perhaps indulged a professional passion for hushing the matter up, rather than any pity for Bartley. He probably had the scientific way of looking at such questions; and saw much physical cause for moral effects. He refrained, with the physician's reticence, from inquiring into the affair; but he would not have thought Bartley without excuse under the circumstances. In regard to the relative culpability in matters of the kind, his knowledge of women enabled him to take much the view of the woman's share that other women take.

But Bartley was ignorant of the doctor's leniency, and associated him with Squire Gaylord in the feeling that made his last week in Equity a period of social outlawry. There were moments in which he could not himself escape the same point of view. He could rebel against the severity of the condemnation he had fallen under in the eyes of Marcia and her father; he could, in the light of example and usage, laugh at the notion of harm in his behavior to Sally Morrison; yet he found himself looking at it as a treachery to her. Certainly, she had no right to question his conduct before his engagement. Yet, if he knew that Marcia loved him, and was waiting with life-and-death anxiety for some word of love from him, it was cruelly false to play with another at the passion which was such a tragedy to her. This was the point that, put aside however often, still presented itself, and its recurrence, if he could have known it, was mercy and reprieve from the only source out of which these could come.

Sally Morrison did not return to the printing-office, and Bird was still sick, though it was now only a question of time when he

should be out again. Bartley visited him some hours every day, and sat and suffered under the quiet condemnation of his mother's eyes. She had kept Bartley's secret with the same hardness with which she had refused him her forgiveness, and the village had settled down into an ostensible acceptance of the theory of a faint as the beginning of Bird's sickness, with such other conjectures as the doctor freely permitted each to form. In the evasions he was obliged to make, Bartley found his chief consolation in the work which saved him from question. He worked far into the night, as he must, to make up for the force that was withdrawn from the office. At the same time he wrote more than ever in the paper, and he discovered in himself that dual life of which every one who sins or sorrows is sooner or later aware: that strange separation of the intellectual activity from the suffering of the soul, by which the mind toils on in a sort of ironical indifference to the pangs that wring the heart; the assurance that, in some ways, his brain can get on perfectly well without his conscience.

There was a great deal of sympathy felt for Bartley at this time, and his popularity in Equity was never greater than now when his life there was drawing to a close. The spectacle of his diligence was so impressive that when, on the following Sunday, the young minister who had succeeded to the pulpit of the orthodox church preached a sermon on the beauty of industry from the text "Consider the Lilies," there were many who said that they thought of Bartley the whole while, and one—a lady—asked Mr. Savin if he did not have Mr. Hubbard in mind in the picture he drew of the Heroic Worker. They wished that Bartley could have heard that sermon.

Marcia had gone away early in the week to visit in the town where she used to go to school, and Bartley took her going away as a sign that she wished to put herself wholly beyond his reach, or any danger of relenting at sight of him. He talked with no one about her; and going and coming irregularly to his meals, and keeping himself shut up in his room when he was not at work, he left people

very little chance to talk with him. But they conjectured that he and Marcia had an understanding; and some of the ladies used such scant opportunity as he gave them to make sly allusions to her absence and his desolate condition. They were confirmed in their surmise by the fact known from actual observation, that Bartley had not spoken a word to any other young lady since Marcia went away.

"Look here, my friend," said the philosopher from the logging-camp, when he came in for his paper on the Tuesday afternoon following, "seems to me from what I hear tell around here, you're tryin' to kill yourself on this newspaper. Now, it wont do; I tell you it wont do."

Bartley was addressing for the mail the papers which one of the girls was folding.

"What are you going to do about it?" he demanded of his sympathizer with whimsical sullenness, not troubling himself to look up at him.

"Well, I haint exactly settled yet," replied the philosopher, who was of a tall, lank figure, and of a mighty, brown beard. "But I've been around pretty much everywhere, and I find that about the poorest use you can put a man to is to kill him."

"It depends a good deal on the man," said Bartley. "But that's stale, Kinney. It's the old formula of the anti-capital-punishment fellows. Try something else. They're not talking of hanging me yet." He kept on writing, and the philosopher stood over him with a humorous twinkle of enjoyment at Bartley's readiness.

"Well, I'll allow it's old," he admitted. "So's Homer."

"Yes; but you don't pretend that you wrote Homer."

Kinney laughed mightily; then he leaned forward, and slapped Bartley on the shoulder with his newspaper.

"Look here!" he exclaimed, "I *like* you!"

"Oh, try some other tack! Lots of fellows like me," Bartley kept on writing. "I gave you your paper, didn't I, Kinney?"

"You mean that you want me to get out?" was the response.

"Far be it from me to say so."

This delighted Kinney as much as the last refinement of hospitality would have pleased another man.

"Look here!" he said, "I want you should come out and see our camp. I can't fool away any more time on you here; but I want you should come out and see us. Give you something to write about. Hey?"

"The invitation comes at a time when circumstances over which I have no control

oblige me to decline it. I admire your prudence, Kinney."

"No, honest Injian, now," protested Kinney. "Take a day off, and fill up with dead advertisements. That's the way they used to do out in Alkali City when they got short of help on the 'Eagle,' and we liked it just as well."

"Now you are talking sense," said Bartley, looking up at him. "How far is it to your settlement?"

"Two miles, if you're goin'; three and a half, if you aint."

"When are you coming in again?"

"I'm in, now."

"I can't go with you to-day."

"Well, how'll to-morrow morning suit?"

"To-morrow morning will suit," said Bartley.

"All right. If anybody comes to see the editor to-morrow morning, Marilla," said Kinney to the girl, "you tell 'em he's sick, and gone a-loggin', and wont be back till Saturday. Say," he added, laying his hand on Bartley's shoulder, "you aint foolin'?"

"If I am," replied Bartley, "just mention it."

"Good!" said Kinney. "To-morrow it is, then."

Bartley finished addressing the newspapers, and then he put them up in wrappers and packages for the mail.

"You can go, now, Marilla," he said to the girl. "I'll have some copy for you and Kitty; you'll find it on my table in the morning."

"All right," answered the girl.

Bartley went to his supper, which he ate with more relish than he had felt for his meals since his troubles began, and he took part in the supper-table talk with something of his old audacity. The change interested the lady-boarders and they agreed that he must have had a letter. He returned to his office, and worked till nine o'clock, writing and selecting matter out of his exchanges. He spent most of the time in preparing the funny column, which was a favorite feature in the "Free Press." Then he put the copy where the girls would find it in the morning, and leaving the door unlocked, took his way up the street toward Squire Gaylord's.

He knew that he should find the lawyer in his office, and he opened the office-door without knocking, and went in. He had not met Squire Gaylord since the morning of his dismissal, and the old man had left him for the past eight days without any sign as to what he expected of Bartley, or of what he intended to do in his affair.

They looked at each other, but exchanged no sort of greeting, as Bartley, unbidden,

took a chair on the opposite side of the stove; the Squire did not put down the book he had been reading.

"I've come to see what you're going to do about the 'Free Press,'" said Bartley.

The old man rubbed his bristling jaw, that seemed even lankier than when Bartley saw it last. He waited almost a minute before he said:

"I don't know as I've got any call to tell you."

"Then I'll tell you what *I'm* going to do about it," retorted Bartley. "I'm going to leave it. I've done my last day's work on that paper. Do you think," he cried, angrily, "that I'm going to keep on in the dark, and let you consult your pleasure as to my future? No, sir! You don't know your man quite, Mr. Gaylord!"

"You've got over your scare," said the lawyer.

"I've got over my scare," Bartley retorted.

"And you think, because you're not afraid any longer, that you're out of danger. I know my man as well as you do, I guess."

"If you think I care for the danger, I don't. You may do what you please. Whatever you do, I shall know it isn't out of kindness for me. I didn't believe from the first that the law could touch me, and I wasn't uneasy on that account. But I didn't want to involve myself in a public scandal, for Miss Gaylord's sake. Miss Gaylord has released me from any obligations to her; and now you may go ahead and do what you like." Each of the men knew how much truth there was in this; but for the moment, in his anger, Bartley believed himself sincere, and there is no question but his defiance was so. Squire Gaylord made him no answer, and after a minute of expectation Bartley added, "At any rate, I've done with the 'Free Press.' I advise you to stop the paper, and hand the office over to Henry Bird, when he gets about. I'm going out to Willett's logging-camp to-morrow, and I'm coming back to Equity on Saturday. You'll know where to find me till then, and after that you may look me up if you want me."

He rose to go, but stopped with his hand on the door-knob, at a sound, preliminary to speaking, which the old man made in his throat. Bartley stopped, hoping for a further pretext of quarrel, but the lawyer merely asked,

"Where's the key?"

"It's in the office-door."

The old man now looked at him as if he no longer saw him, and Bartley went out, balked of his purpose in part, and in that degree so much the more embittered.

Squire Gaylord remained an hour longer; then he blew out his lamp, and left the little

office for the night. A light was burning in the kitchen, and he made his way round to the back door of the house, and let himself in. His wife was there, sitting before the stove, in those last delicious moments before going to bed, when all the house is mellowed to such a warmth that it seems hard to leave it to the cold and dark. In this poor lady, who had so long denied herself spiritual comfort, there was a certain obscure luxury: she liked little dainties of the table; she liked soft warmth, an easy cushion. It was doubtless in the disintegration of the finer qualities of her nature, that as they grew older together, she threw more and more the burden of acute feeling upon her husband, to whose doctrine of life she had submitted, but had never been reconciled. Marriage is, with all its disparities, a much more equal thing than appears, and the meek little wife, who has all the advantage of public sympathy, knows her power over her oppressor, and at some tender spot in his affections or his nerves can inflict an anguish that will avenge her for years of coarser aggression. Thrown in upon herself in so vital a matter as her religion, Mrs. Gaylord had involuntarily come to live largely for herself, though her talk was always of husband. She gave up for him, as she believed, her soul's salvation, but she held him to account for the uttermost farthing of the price. She padded herself round at every point where she could have suffered through her sensibilities, and lived soft and snug in the shelter of his iron will and indomitable courage. It was not apathy that she showed when their children died one after another, but an obscure and formless exultation that Mr. Gaylord would suffer enough for both.

Marcia was the youngest, and her mother left her training almost wholly to her father; she sometimes said that she never supposed the child would live. She did not actually urge this in excuse, but she had the appearance of doing so; and she held aloof from them both in their mutual relations, with mildly critical reserves. They spoiled each other, as father and daughter are apt to do when left to themselves. What was good in the child certainly received no harm from his indulgence; and what was naughty was after all not so very naughty. She was passionate, but she was generous; and if she showed a jealous temperament that must hereafter make her unhappy, for the time being it charmed and flattered her father to have her so fond of him that she could not endure any rivalry in his affection.

Her education proceeded fitfully. He would not let her be forced to household tasks that she disliked; and as a little girl she

went to school chiefly because she liked to go, and not because she would have been obliged to if she had not chosen. When she grew older, she wished to go away to school, and her father allowed her; he had no great respect for boarding-schools, but if Marcia wanted to try it, he was willing to humor the joke.

What resulted was a great proficiency in the things that pleased her, and ignorance of the other things. Her father bought her a piano, on which she did not play much, and he bought her whatever dresses she fancied. He never came home from a journey without bringing her something; and he liked to take her with him when he went away to other places. She had been several times at Portland, and once at Montreal; he was very proud of her; he could not see that any one was better-looking, or dressed any better than his girl.

He came into the kitchen, and sat down with his hat on, and taking his chin between his hands, moved uneasily about on his chair.

"What's brought you in so early?" asked his wife.

"Well, I got through," he briefly explained. After a while he said, "Bartley Hubbard's been out there."

"You don't mean 't he knew she ——"

"No, he didn't know anything about that. He came to tell me he was going away."

"Well, I don't know what you're going to do, Mr. Gaylord," said his wife, shifting the responsibility wholly upon him. "D' he seem to want to make it up?"

"M-no!" said the Squire, "he was on his high horse. He knows he aint in any danger now."

"Aint you afraid she'll carry on dreadfully when she finds out 't he's gone for good?" asked Mrs. Gaylord, with a sort of implied satisfaction that the carrying on was not to affect her.

"M-yes," said the Squire, "I suppose she'll carry on. But I don't know what to do about it. Sometimes I almost wish I'd tried to make it up between 'em that day; but I thought she'd better see, once for all, what sort of man she was going in for, if she married him. It's too late, now, to do anything. The fellow came in to-night for a quarrel, and nothing else; I could see that; and I didn't give him any chance."

"You feel sure," asked Mrs. Gaylord, impartially, "that Marcia wa'n't too particular?"

"No, Miranda, I don't feel sure of anything, except that it's past your bed-time. You better go. I'll sit up awhile yet. I came in because I couldn't settle my mind to anything out there."

He took off his hat in token of his intending to spend the rest of the evening at home, and put it on the table at his elbow.

His wife sewed at the mending in her lap, without offering to act upon his suggestion.

"It's plain to be seen that she can't get along without him."

"She'll have to, now," replied the Squire.

"I'm afraid," said Mrs. Gaylord, softly, "that she'll be down sick. She don't look as if she'd slept any great deal since she's been gone. I d' know as I like very much to see her looking the way she does. I guess you've got to take her off somewheres."

"Why, she's just been off, and couldn't stay!"

"That's because she thought he was here, yet. But if he's gone, it won't be the same thing."

"Well, we've got to fight it out, some way," said the Squire. "It wouldn't do to give in to it, now. It always *was* too much of a one-sided thing, at the best; and if we tried now to mend it up, it would be ridiculous. I don't believe he would come back at all, now, and if he did, he wouldn't come back on any equal terms. He'd want to have everything his own way. M-no!" said the Squire, as if confirming himself in a conclusion often reached already in his own mind, "I saw by the way he began to-night that there wasn't anything to be done with him. It was fight from the word go."

"Well," said Mrs. Gaylord, with gentle, skeptical interest in the outcome, "if you've made up your mind to that, I hope you'll be able to carry it through."

"That's what I've made up my mind to," said her husband.

Mrs. Gaylord rolled up the sewing in her work-basket, and packed it away against the side, bracing it with several pairs of newly darned socks and stockings neatly folded one into the other. She took her time for this, and when she rose at last to go out, with her basket in her hand, the door opened in her face, and Marcia entered. Mrs. Gaylord shrank back, and then slipped round behind her daughter and vanished. The girl took no notice of her mother, but went and sat down on her father's knee, throwing her arms round his neck, and dropping her haggard face on his shoulder. She had arrived at home a few hours earlier, having driven over from a station ten miles distant, on a road that did not pass near Equity. After giving as much of a shock to her mother's mild nature as it was capable of receiving by her unexpected return, she had gone to her own room, and remained ever since without seeing her father. He put up his thin old hand and passed it

over her hair, but it was long before either of them spoke.

At last Marcia lifted her head, and looked her father in the face with a smile so pitiful that he could not bear to meet it.

"Well, father?" she said.

"Well, Marsh," he answered huskily.

"What do you think of me now?"

"I'm glad to have you back again," he replied.

"You know why I came?"

"Yes, I guess I know."

She put down her head again, and moaned and cried, "Father! Father!" with dry sobs. When she looked up, confronting him with her tearless eyes, she demanded desolately:

"What shall I do? What shall I do?"

He tried to clear his throat to speak, but it required more than one effort to bring the words.

"I guess you better go along with me up to Boston. I'm going up the first of the week."

"No," she said quietly.

"The change would do you good. It's a long while since you've been away from home," her father urged.

She looked at him in sad reproach of his uncandor.

"You know there's nothing the matter with me, father. You know what the trouble is."

He was silent. He could not face the trouble.

"I've heard people talk of a heart-ache," she went on. "I never believed there was really such a thing. But I know there is, now. There's a pain here." She pressed her hand against her breast. "It's sore with aching. What shall I do? I shall have to live through it somehow."

"If you don't feel exactly well," said her father, "I guess you better see the doctor."

"What shall I tell him is the matter with me? That I want Bartley Hubbard?" He winced at the words, but she did not. "He knows that already. Everybody in town does. It's never been any secret. I couldn't hide it, from the first day I saw him. I'd just as lief as not they should say I was dying for him. I shall not care what they say when I'm dead."

"You'd oughtn't—you'd oughtn't to talk that way, Marcia," said her father gently.

"What difference?" she demanded, scornfully.

There was truly no difference, so far as concerned any creed of his, and he was too honest to make further pretense.

"What shall I do?" she went on again. "I've thought of praying; but what would be the use?"

"I've never denied that there was a God, Marcia," said her father.

"Oh, I know. *That* kind of God! Well, well! I know that I talk like a crazy person! Do you suppose it was providential, my being with you in the office that morning when Bartley came in?"

"No," said her father, "I don't. I think it was an accident."

"Mother said it was providential, my finding him out before it was too late."

"I think it was a good thing. The fellow has the making of a first-class scoundrel in him."

"Do you think he's a scoundrel now?" she asked quietly.

"He hasn't had any great opportunity yet," said the old man, conscientiously sparing him.

"Well, then, I'm sorry I found him out. Yes! If I hadn't, I might have married him, and perhaps if I had died soon I might never have found him out. He could have been good to me a year or two, and then, if I died, I should have been safe. Yes, I wish he could have deceived me till after we were married. Then I *couldn't* have borne to give him up, may be."

"You *would* have given him up, even then. And that's the only thing that reconciles me to it now. I'm sorry for you, my girl; but you'd have made me sorrier then. Sooner or later he'd have broken your heart."

"He's broken it now," said the girl calmly.

"Oh, no, he hasn't," replied her father with a false cheerfulness that did not deceive her. "You're young, and you'll get over it. I mean to take you away from here, for a while. I mean to take you up to Boston, and on to New York. I shouldn't care if we went as far as Washington. I guess when you've seen a little more of the world, you won't think Bartley Hubbard's the only one in it."

She looked at him so intently that he thought she must be pleased at his proposal.

"Do you think I could get him back?" she asked.

Her father lost his patience; it was a relief to be angry.

"No, I don't think it. I know you couldn't. And you ought to be ashamed of mentioning such a thing!"

"Oh, ashamed! No, I've got past that. I have no shame any more where he's concerned. Oh, I'd give the world if I could call him back—if I could only undo what I did! I was wild; I wasn't reasonable; I wouldn't listen to him. I drove him away without giving him a chance to say a word! Of course, he must hate me now. What makes you think he wouldn't come back?"

"I know he wouldn't," answered her father, with a sort of groan. "He's going to leave Equity for one thing, and ——"

"Going to leave Equity?" she repeated, absently. Then he felt her tremble. "How do you know he's going?" She turned upon her father, and fixed him sternly with her eyes.

"Do you suppose he would stay after what's happened, any longer than he could help?"

"How do you know he's going?" she repeated.

"He told me."

She stood up.

"He told you? When?"

"To-night."

"Why, where—where did you see him?" she whispered.

"In the office."

"Since—since—I came? Bartley been here! And you didn't tell me—you didn't let me know?"

They looked at each other in silence.

"When is he going?" she asked, at last.

"To-morrow morning."

She sat down in the chair which her mother had left, and clutched the back of another, on which her fingers opened and closed convulsively, while she caught her breath in irregular gasps. She broke into a low moaning, at last, the expression of abject defeat in the struggle she had waged with herself. Her father watched her with dumb compassion. "Better go to bed, Marcia," he said, with the same dry calm as if he had been sending her away after some pleasant evening which she had suffered to run too far into the night.

"Don't you think—don't you think—he'll have to see you again before he goes?" she made out to ask.

"No; he's finished up with me," said the old man.

"Well, then," she cried, desperately, "you'll have to go to him, father, and get him to come! I can't help it! I can't give him up! You've got to go to him, now, father—yes, yes, you have! You've got to go and tell him. Go and get him to come, for *mercy's* sake! Tell him that I'm sorry—that I beg his pardon—that I didn't think—I didn't understand—that I knew he didn't do anything wrong"—

She rose, and placing her hand on her father's shoulder, accented each entreaty with a little push.

He looked up into her face with a haggard smile of sympathy.

"You're crazy, Marcia," he said, gently.

"Don't laugh!" she cried. "I'm not crazy now. But I was, then—yes, stark, staring crazy. Look here, father! I want to tell you—I want to explain to you!" She dropped upon his knee again, and tremblingly

passed her arm round his neck. "You see, I had just told him the day before that I shouldn't care for anything that happened before we were engaged, and then at the very first thing I went and threw him off! And I had no right to do it. He knows that, and that's what makes him so hard towards me. But if you go and tell him that I see now I was all wrong, and that I beg his pardon, and then ask him to give me *one* more trial, just one *more*—you can do as much as that for me, can't you?"

"Oh, you poor, crazy girl!" groaned her father. "Don't you see that the trouble is in what the fellow *is*, and not in any particular thing that he's done? He's a scamp, through and through; and he's all the more a scamp when he doesn't know it. He hasn't got the first idea of anything but selfishness."

"No, no! Now, I'll tell you—now, I'll prove it to you. That very Sunday when we were out riding together; and we met her and her mother, and their sleigh upset, and he had to lift her back; and it made me wild to see him, and I wouldn't hardly touch him or speak to him afterwards, he didn't say one angry word to me. He just pulled me up to him, and wouldn't let me be mad; and he said that night he didn't mind it a bit because it showed how much I liked him. Now, doesn't that prove he's good—a good deal better than I am, and that he'll forgive me, if you'll go and ask him? I know he isn't in bed yet; he always sits up late—he told me so; and you'll find him there in his room. Go straight to his room, father; don't let anybody see you down in the office; I couldn't bear it; and slip out with him as quietly as you can. But, oh, do hurry now! Don't lose another minute!"

The wild joy sprang into her face, as her father rose; a joy that it was terrible to him to see die out of it as he spoke:

"I tell you it's no use, Marcia! He wouldn't come if I went to him!"

"Oh, yes—yes, he would! I know he would! If!"

"He wouldn't! You're mistaken! I should have to get down in the dust for nothing. He's a bad fellow, I tell you; and you've got to give him up."

"You hate me!" cried the girl. The old man walked to and fro, clutching his hands. Their lives had always been in such intimate sympathy, his life had so long had her happiness for its sole pleasure, that the pang in her heart racked his with as sharp an agony. "Well, I shall die; and then I hope you will be satisfied."

"Marcia, Marcia!" pleaded her father. "You don't know what you're saying."

"You're letting him go away from me—you're letting me lose him—you're killing me!"

"He wouldn't come, my girl. It would be perfectly useless to go to him. You *must*—you *must* try to control yourself, Marcia. There's no other way—there's no other hope. You're disgraceful. You ought to be ashamed. You ought to have some pride about you. I don't know what's come over you since you've been with that fellow. You seem to be out of your senses. But try—try, my girl, to get over it. If you'll fight it, you'll conquer yet. You've got a spirit for anything. And I'll help you, Marcia. I'll take you anywhere. I'll do anything for you!"

"You wouldn't go to him, and ask him to come here, if it would save his life!"

"No," said the old man, with a desperate quiet, "I wouldn't."

She stood looking at him, and then she sank suddenly, and straight down, as if she were sinking through the floor. When he lifted her, he saw that she was in a dead faint, and while the swoon lasted would be out of her misery. The sight of this had wrung him so that he had a kind of relief in looking at her lifeless face; and he was slow in laying her down again, like one that fears to wake a sleeping child. Then he went to the foot of the stairs, and softly called to his wife: "Miranda! Miranda!"

IX.

KINNEY came into town the next morning bright and early, as he phrased it; but he did not stop at the hotel for Bartley till nine o'clock. "Thought I'd give you time for breakfast," he exclaimed, "and so I didn't hurry up any about gettin' in my supplies."

It was a beautiful morning, so blindingly sunny, that Bartley winked as they drove up through the glistening street, and was glad to dip into the gloom of the first woods; it was not cold; the snow felt the warmth, and packed moistly under their runners. The air was perfectly still; at a distance on the mountain-sides it sparkled as if full of diamond-dust. Far overhead some crows called.

"The sun's getting high," said Bartley, with the light sigh of one to whom the thought of spring brings no hope.

"Well, I shouldn't begin to plow for corn just yet," replied Kinney. "It's curious," he went on, "to see how anxious we are to have a thing over, it don't much matter what it is, whether it's summer or winter. I suppose we'd feel different if we wa'n't sure there was going to be another of 'em. I guess that's one reason why the Lord concluded

not to keep us clearly posted on the question of another life. If it wa'n't for the uncertainty of the thing, there are a lot of fellows like you that wouldn't stand it here a minute. Why, if we had a dead sure thing of over-the-river—good climate, plenty to eat and wear, and not much to do—I don't believe any of us would keep Darling Minnie waiting, well, a *great* while. But you see, the thing's all on paper, and that makes us cautious, and willing to hang on here awhile longer. Looks splendid on the map: streets regularly laid out; public squares; band-stands; churches; solid blocks of houses, with all the modern improvements; but you can't tell whether there's any town there till you're on the ground; and then, if you don't like it, there's no way of gettin' back to the States."

He turned round upon Bartley and opened his mouth wide, to imply that this was pleasant.

"Do you throw your philosophy in, all under the same price, Kinney?" asked the young fellow.

"Well, yes; I never charge anything over," said Kinney. "You see, I have a good deal of time to think when I'm around by myself all day, and the philosophy don't cost me anything, and the fellows like it. Roughing it the way they do, they can stand 'most anything. Hey?" He now not only opened his mouth upon Bartley, but thrust him in the side with his elbow, and then laughed noisily.

Kinney was the cook. He had been over pretty nearly the whole uninhabitable globe, starting as a gaunt and awkward boy from the Maine woods, and keeping until he came back to them in late middle-life the same gross and ridiculous optimism. He had been at sea, and had been shipwrecked on several islands in the Pacific; he had passed a rainy season at Panama, and a yellow-fever season at Vera Cruz, and had been carried far into the interior of Peru by a tidal-wave during an earthquake season; he was in the Border Ruffian War of Kansas, and he clung to California till prosperity deserted her after the completion of the Pacific road. Wherever he went he carried or found adversity; but with a heart fed on the metaphysics of Horace Greeley, and buoyed up by a few wildly interpreted maxims of Emerson, he had always believed in other men, and their fitness for the terrestrial millennium which was never more than ten days or ten miles off. It is not necessary to say that he had continued as poor as he began, and that he was never able to contribute to those railroads, mills, elevators, towns, and cities which were sure to be built, sir, sure to be built, wherever he went. When he came home at last to the woods, some hundreds of miles

north of Equity, he found that some one had realized his early dream of a summer hotel on the shore of the beautiful lake there; and he unenviously settled down to admire the landlord's thrift, and to act as guide and cook for parties of young ladies and gentlemen who started from the hotel to camp in the woods. This brought him into the society of cultivated people, for which he had a real passion. He had always had a few thoughts rattling round in his skull, and he liked to make sure of them in talk with those who had enjoyed greater advantages than himself. He never begrudged them their luck; he simply and sweetly admired them; he made studies of their several characters, and was never tired of analyzing them to their advantage to the next summer's parties. Late in the fall, he went in, as it is called, with a camp of loggers, among whom he rarely failed to find some remarkable men. But he confessed that he did not enjoy the steady three or four months in the winter-woods with no coming out at all till spring; and he had been glad of this chance in a logging-camp near Equity, in which he had been offered the cook's place by the owner, who had tested his fare in the northern woods the summer before. Its proximity to the village allowed him to loaf in open civilization at least once a week, and he spent the greater part of his time at the "Free Press" office on publication-day. He had always sought the society of newspaper men, and wherever he could, he had given them his. He was not long in discovering that Bartley was smart as a steel-trap; and by an early and natural transition from calling the young lady compositors by their pet names, and patting them on their shoulders, he had arrived at a like affectionate intimacy with Bartley.

As they worked deep into the woods on their way to the camp, the road dwindled to a well-worn track between the stumps and bushes. The ground was rough, and they constantly plunged down the slopes of little hills, and climbed the sides of little valleys, and from time to time they had to turn out for teams drawing logs to the mills in Equity, each with its equipage of four or five wild young fellows, who saluted Kinney with an ironical cheer or jovial taunt in passing.

"They're all just so," he explained, with pride, when the last party had passed. "They're gentlemen, every one of 'em—perfect gentlemen."

They came at last to a wider clearing than any they had yet passed through, and here on a level of the hill-side stretched the camp, a long, low structure of logs, with the roof

broken at one point by a stove-pipe, and the walls irregularly pierced by small windows; around it crouched and burrowed in the drift the sheds that served as stables and store-houses.

The sun shone, and shone with dazzling brightness, upon the opening; the sound of distant shouts and the rhythmical stroke of axes came to it out of the forest; but the camp was deserted, and in the stillness Kinney's voice seemed strange and alien.

"Walk in, walk in!" he said, hospitably. "I've got to look after my horse."

But Bartley remained at the door, blinking in the sunshine, and harking to the near silence that sang in his ears. A curious feeling possessed him; sickness of himself as of some one else; a longing, consciously helpless, to be something different; a sense of captivity to habits and thoughts and hopes that centered in himself, and served him alone.

"Terribly peaceful around here," said Kinney, coming back to him, and joining him in a survey of the landscape, with his hands on his hips, and a stem of timothy projecting from his lips.

"Yes, terribly," assented Bartley.

"But it *aint* a bad way for a man to live, as long as he's young; or haint got anybody that wants his company more than his room.—Be the place for you."

"On which ground?" Bartley asked, dryly, without taking his eyes from a distant peak that showed through the notch in the forest.

Kinney laughed in as unselfish enjoyment as if he had made the turn himself.

"Well, that *aint* exactly what I meant to say; what I meant was that any man engaged in intellectual pursuits wants to come out and commune with nature, every little while."

"You call the Equity 'Free Press' intellectual pursuits?" demanded Bartley, with scorn. "I suppose it is," he added. "Well, here I am—right on the commune. But nature's such a big thing, I think it takes two to commune with her."

"Well, a girl's a help," assented Kinney.

"I wasn't thinking of a girl, exactly," said Bartley, with a little sadness. "I mean that if you're not in first-rate spiritual condition, you're apt to get floored, if you undertake to commune with nature."

"I guess that's about so. If a man's got anything on his mind, a big railroad depot's the place for *him*. But you're run down. You ought to come out here, and take a hand, and be a man amongst men." Kinney talked partly for quantity, and partly for pure, indefinite good feeling.

Bartley turned toward the door. "What have you got inside, here?"

Kinney flung the door open, and followed his guest within. The first two-thirds of the cabin was used as a dormitory, and the sides were furnished with rough bunks, from the ground to the roof. The round, unhewn logs showed their form everywhere; the crevices were calked with moss; and the walls were warm and tight. It was dark between the bunks, but beyond it was lighter, and Bartley could see at the farther end a vast cooking-stove, and three long tables with benches at their sides. A huge coffee-pot stood on the top of the stove, and various pots and kettles surrounded it.

"Come into the dining-room and sit down in the parlor," said Kinney, drawing off his coat as he walked forward. "Take the sofa," he added, indicating a movable bench. He hung his coat on a peg and rolled up his shirt-sleeves, and began to whistle cheerily, like a man who enjoys his work, as he threw open the stove-door and poked in some sticks of fuel. A brooding warmth filled the place, and the wood made a pleasant crackling as it took fire.

"Here's my desk," said Kinney, pointing to a barrel that supported a broad smooth board-top. "This is where I compose my favorite works." He turned round, and cut out of a mighty mass of dough in a tin trough a portion which he threw down on his table, and attacked with a rolling-pin. "That means pie, Mr. Hubbard," he explained, "and pie means meat-pie—or squash-pie, at a pinch. To-day's pie-baking day. But you needn't be troubled on that account. So's to-morrow and so was yesterday. Pie twenty-one times a week is the word, and don't you forget it. They say old Agassiz," Kinney went on, in that easy familiar fondness with which our people like to speak of greatness that impresses their imagination, "they say old Agassiz recommended fish as the best food for the brain. Well, I don't suppose but what it is. But I don't know but what pie is more stimulating to the fancy. I *never* saw anything like meat-pie to make ye dream."

"Yes," said Bartley, nodding gloomily, "I've tried it."

Kinney laughed.

"Well, I guess folks of sedentary pursuits, like you and me, don't need it; but these fellows that stamp round in the snow all day, they want something to keep their imagination goin'. And I guess pie does it. Anyway, they can't seem to get enough of it. Ever try apples when you was at work? They say old Greeley kep' his desk full of 'em; kep' munchin' away all the while when he was writin' his editorials. And one of them German poets—I don't know

but what it was old Gatty himself—kept *rotten* ones in *his* drawer; liked the smell of 'em. Well, there's a good deal of apple in meat-pie. May be it's the apple that does it. I don't know. But I guess if your pursuits are sedentary, you better take the apple separate."

Bartley did not say anything; but he kept a lazily interested eye on Kinney as he rolled out his pie-crust, fitted it into his tins, filled these from a jar of mince-meat, covered them with a sheet of dough pierced in herring-bone pattern, and marshaled them at one side ready for the oven.

"If fish *is* any better for the brain," Kinney proceeded, "they can't complain of any want of it, at least in the salted form. They get fish-balls three times a week for breakfast, as reg'lar as Sunday, Tuesday, and Thursday comes round. And Fridays I make up a sort of chowder for the Kanucks; they're Catholics, you know, and I don't believe in interferin' with *any* man's religion, it don't matter what it is."

"You ought to be a deacon in the First Church at Equity," said Bartley.

"Is that so? Why?" asked Kinney.

"Oh, they don't believe in interfering with any man's religion, either."

"Well," said Kinney, thoughtfully, pausing with the rolling-pin in his hand, "there's such a thing as being *too* liberal, I suppose."

"The world's tried the other thing a good while," said Bartley, with cynical amusement.

It seemed to chill the flow of the good fellow's optimism, so that he assented with but lukewarm satisfaction.

"Well, that's so, too," and he made up the rest of his pie in silence.

"Well," he exclaimed, at last, as if shaking himself out of an unpleasant reverie, "I guess we shall get along, somehow. Do you like pork and beans?"

"Yes, I do," said Bartley.

"We're goin' to have 'em for dinner. You can hit beans any meal you drop in on us; beans twenty-one times a week, just like pie. Set 'em in to warm," he said, taking up a capacious earthen pot, near the stove, and putting it into the oven. "I been pretty much everywhere, and I don't know as I found anything for a stand-by that come up to beans. I'm goin' to give 'em potatoes and cabbage to-day—kind of a boiled-dinner day—but you'll see there aint one in ten'll touch 'em to what there will these old residents. Potatoes and cabbage'll do for a kind of a delicacy—sort of a side-dish—on-*tree*, you know; but give 'em beans for a steady diet. Why, off there in Chili, even, the people regularly live on beans—not exactly like ours—broad and

flat—but they're beans. Wa'n't there some those ancients—old Horace, or Virgil, may be—rung in something about beans in some their poems?"

"I don't remember anything of the kind," said Bartley, languidly.

"Well, I don't know as *I* can. I just have a dim recollection of language thrown out at the object—as old Matthew Arnold says. But it might have been something in Emerson."

Bartley laughed.

"I didn't suppose you were such a reader, Kinney."

"Oh, I nibble round wherever I can get a chance. Mostly in the newspapers, you know. I don't get any time for books, as a general rule. But there's pretty much everything in the papers. I should call beans a brain-food."

"I guess you call anything a brain-food that you happen to like, don't you, Kinney?"

"No, sir," said Kinney, soberly; "but I like to see the philosophy of a thing when I get a chance. Now, there's tea, for example," he said, pointing to the great tin pot on the stove.

"Coffee, you mean," said Bartley.

"No, sir, I mean tea. That's tea; and I give it to 'em three times a day, good and strong—molasses in it, and no milk. That's a brain-food, if ever there was one. Sets 'em up, right on end, every time. Clears their heads and keeps the cold out."

"I should think you were running a seminary for young ladies, instead of a logging-camp," said Bartley.

"No, but look at it: I'm in earnest about tea. You look at the tea-drinkers and the coffee-drinkers all the world over! Look at 'em in our own country! All the Northern people and all the go-ahead people drink tea. The Pennsylvanians and the Southerners drink coffee. Why, our New England folks don't even know how to *make* coffee so it's fit to drink! And it's just so all over Europe. The Russians drink tea, and they'd e't up those coffee-drinkin' Turks long ago, if the tea-drinkin' English hadn't kept 'em from it. Go anywheres you like in the North and you find 'em drinkin' tea. The Swedes and Norwegians in Aroostook County drink it; and they drink it at home."

"Well, what do you think of the French and Germans? They drink coffee, and they're pretty smart, active people, too."

"French and Germans drink coffee?"

"Yes."

Kinney stopped short in his heated career of generalization, and scratched his shaggy head.

"Well," he said, finally, "I guess they're a kind of a missing link, as old Darwin says." He joined Bartley in his laugh cordially, and

looked up at the round clock nailed to a log. "It's about time I set my tables, anyway. Well," he asked, apparently to keep the conversation from flagging, while he went about this work, "how is the good old 'Free Press' getting along?"

"It's going to get along without me from this out," said Bartley. "This is my last week in Equity."

"No!" retorted Kinney, in tremendous astonishment.

"Yes: I'm off at the end of the week. Squire Gaylord takes the paper back for the committee, and I suppose Henry Bird will run it for a while; or perhaps they'll stop it altogether. It's been a losing business for the committee."

"Why, I thought you'd bought it of 'em."

"Well, that's what I expected to do; but the office hasn't made any money. All that I've saved is in my colt and cutter."

"That sorrel?"

Bartley nodded.

"I'm going away about as poor as I came. I couldn't go much poorer."

"Well!" said Kinney, in the exhaustion of adequate language. He went on laying the plates and knives and forks in silence. These were of undisguised steel; the dishes and the drinking-mugs were of that dense and heavy make which the keepers of cheap restaurants use to protect themselves against breakage, and which their servants chip to the quick at every edge. Kinney laid bread and crackers by each plate, and on each he placed a vast slab of cold corned beef. Then he lifted the lid of the pot in which the cabbage and potatoes were boiling together, and pricked them with a fork. He dished up the beans in a succession of deep tins, and set them at intervals along the tables, and began to talk again.

"Well, now, I'm sorry. I'd just begun to feel real well acquainted with you. Tell you the truth, I didn't take much of a fancy to you, first off."

"Is that so?" asked Bartley, not much disturbed by the confession.

"Yes, sir. Well, come to boil it down," said Kinney, with the frankness of the analytical mind that disdains to spare itself in the pursuit of truth, "I didn't like your good clothes. I don't suppose I ever had a suit of clothes to fit me. Feel kind of ashamed, you know, when I go into the store, and take the first thing the Jew wants to put off on to me. Now, I suppose you go to Macullar and Parker's in Boston, and you get what *you* want."

"No; I have my measure at a tailor's," said Bartley, with ill-concealed pride in the fact.

"You don't say so!" exclaimed Kinney.

"Well!" he said, as if he might as well swallow this pill, too, while he was about it. "Well, what's the use? I never was the figure for clothes, anyway. Long, gangling boy to start with, and a lean, stoop-shouldered man. I found out some time ago that a fellow wa'n't necessarily a bad fellow because he had money; or a good fellow because he hadn't. But I hadn't quite got over hating a man because he had style. Well, I suppose it was a kind of a *survival*, as old Tylor calls it. But I tell you, I sniffed round you a good while before I made up my mind to swallow you. And that turn-out of yours, it kind of staggered me, after I got over the clothes. Why, it wa'n't so much the colt—any man likes to ride after a sorrel colt; and it wa'n't so much the cutter: it was the red linin' with pinked edges that you had to your robe; and it was the red ribbon that you had tied round the waist of your whip. When I see that ribbon on that whip, damn you, I wanted to kill you." Bartley broke out into a laugh, but Kinney went on soberly. "But, thinks I to myself: 'Here! Now you stop right here! You wait! You give the fellow a chance for his life. Let him have a chance to show whether that whip-ribbon goes all through him, first. If it does, kill him cheerfully; but give him a chance, *first*.' Well, sir, I gave you the chance, and you showed that you deserved it. I guess you taught me a lesson. When I see you at work, pegging away hard at something or other, every time I went into your office, up and coming with everybody, and just as ready to pass the time of day with me as the biggest bug in town, thinks I: 'You'd have made a great mistake to kill that fellow, Kinney!' And I just made up my mind to like you."

"Thanks," said Bartley, with ironical gratitude.

Kinney did not speak at once. He whistled thoughtfully through his teeth, and said:

"I'll tell you what: If you're going away *very* poor, I know a wealthy chap you can raise a loan out of."

Bartley thought seriously for a moment.

"If your friend offers me twenty dollars, I'm not too well dressed to take it."

"All right," said Kinney. He now dished up the cabbage and potatoes, and throwing a fresh handful of tea into the pot, and filling it up with water, he took down a tin horn, with which he went to the door and sounded a long, stertorous note.

X.

"GUESS it was the clothes again," said Kinney, as he began to wash his tins and

dishes after the dinner was over, and the men had gone back to their work. "I could see 'em eyin' you over when they first came in, and I could see that they didn't exactly like the looks of 'em. It would wear off in time, but it *takes* time for it to wear off; and it had to go pretty rusty for a start-off. Well, I don't know as it makes much difference to you, does it?"

"Oh, I thought we got along very well," said Bartley, with a careless yawn. "There wasn't much chance to get acquainted." Some of the loggers were as handsome and well-made as he, and were of as good origin and traditions, though he had some advantages of training. But his two-button cutaway, his well-fitting trowsers, his scarf with a pin in it, had been too much for these young fellows in their long stoga boots and flannel shirts. They looked at him askance, and dispatched their meal with more than their wonted swiftness, and were off again into the woods without any demonstrations of satisfaction in Bartley's presence.

He had perceived their grudge, for he had felt it in his time. But it did not displease him; he had none of the pain with which Kinney, who had so long bragged of him to the loggers, saw that his guest was a failure.

"I guess they'll come out all right in the end," he said. In this warm atmosphere, after the gross and heavy dinner he had eaten, he yawned again and again. He folded his overcoat into a pillow for his bench and lay down, and lazily watched Kinney about his work. Presently he saw Kinney seated on a block of wood beside the stove, with his elbow propped in one hand, and holding a magazine, out of which he was reading; he wore spectacles, which gave him a fresh and interesting touch of grotesqueness. Bartley found that an empty barrel had been placed on each side of him, evidently to keep him from rolling off his bench.

"Hello!" he said. "Much obliged to you, Kinney. I haven't been taken such good care of since I can remember. Been asleep, haven't I?"

"About an hour," said Kinney, with a glance at the clock, and inquiring his agency in Bartley's comfort.

"Food for the brain!" said Bartley, sitting up. "I should think so. I've dreamt a perfect New American Cyclopaedia, and a pronouncing gazetteer thrown in."

"Is that so?" said Kinney, as if pleased with the suggestive character of his cookery, now established by eminent experiment.

Bartley yawned a yawn of satisfied sleepiness, and rubbed his hand over his face.

"I suppose," he said, "if I'm going to

write anything about Camp Kinney, I had better see all there is to see."

"Well, yes, I presume you had," said Kinney. "We'll go over to where they're cuttin', pretty soon, and you can see all there is in an hour. But I presume you'll want to see it so as to ring in some description, hey? Well, that's all right. But what you going to do with it, when you've done it, now you're out of the 'Free Press'?"

"Oh, I shouldn't have printed it in the 'Free Press,' anyway. Coals to Newcastle, you know. I'll tell you what I think I'll do, Kinney: I'll get my outlines, and then you post me with a lot of facts—queer characters, accidents, romantic incidents, snowings-up, threatened starvation, adventures with wild animals—and I can make something worth while; get out two or three columns, so they can print it in their Sunday edition. And then I'll take it up to Boston with me, and seek my fortune with it."

"Well, sir, I'll do it," said Kinney, fired with the poetry of the idea. "I'll post you! Dumn 'f I don't wish I could write! Well, I *did* use to scribble once for an agricultural paper; but I don't call that writin'. I've set down, well, I guess as much as sixty times, to try to write out what I know about loggin'!"

"Hold on!" cried Bartley, whipping out his note-book. "That's first-rate. That'll do for the first line in the head: *What I Know About Logging*: large caps. Well!"

Kinney shut his magazine, and took his knee between his hands, screwing his eyes almost shut to sharpen his recollection. He poured forth a stream of reminiscence, mingled observation, and personal experience. Bartley followed him with his pencil, jotting down points, striking in sub-head lines, and now and then interrupting him with cries of "Good!" "Capital!" "It's a perfect mine—it's a mint! By Jove!" he exclaimed, "I'll make *six* columns of this! I'll offer it to one of the magazines, and it'll come out illustrated! Go on, Kinney."

"Hark!" said Kinney, craning his neck forward to listen. "I thought I heard sleigh-bells. But I guess it wa'n't. Well, sir, as I was sayin', they fetched that fellow into camp with both feet frozen to the knees—dumn 'f it *wa'n't* bells!"

He unlimbered himself, and hurried to the door at the other end of the cabin, which he opened, letting in a clear block of the afternoon sunshine, and a gush of sleigh-bell music, shot with men's voices, and the cries and laughter of women.

"Well, sir," said Kinney, coming back and making haste to roll down his sleeves and put on his coat. "*Here's* a nuisance! A whole

party of folks—two sleigh-loads—right *on* us. I don't know who they *be*, or where they're from. But I know where I wish they *was*. Well, of course, it's natural they should want to see a loggin'-camp," added Kinney, taking himself to task for his inhospitable mind, "and there aint any harm in it. But I wish they'd give a fellow a *little* notice!"

The voices and bells drew nearer, but Kinney seemed resolved to observe the decorum of not going to the door till some one knocked.

"Kinney! Kinney! Hello, Kinney!" shouted a man's voice, as the bells hushed before the door, and broke into a musical clash when one of the horses tossed his head.

"Well, sir," said Kinney, rising, "I guess it's old Willett himself. He's the owner; lives up to Portland, and been threatening to come down here all winter, with a party of friends. You just stay still," he added; and he paid himself the deference which every true American owes himself in his dealings with his employer: he went to the door very deliberately, and made no haste on account of the repeated cries of "Kinney! Kinney!" in which others of the party outside now joined.

When he opened the door again, the first voice saluted him with a roar of laughter.

"Why, Kinney, I began to think you were dead!"

"No, sir," Bartley heard Kinney reply, "it takes more to kill me than you suppose." But now he stepped outside, and the talk became unintelligible.

Finally Bartley heard what was imaginably Mr. Willett's voice saying, "Well, let's go in and have a look at it now;" and with much outcry and laughter the ladies were invisibly helped to dismount, and presently the whole party came stamping and rustling in.

Bartley's blood tingled. He liked this, and he stood quite self-possessed, with his thumbs in his waistcoat pockets and his elbows dropped, while Mr. Willett advanced in a friendly way.

"Ah, Mr. Hubbard! Kinney told us you were in here, and asked me to introduce myself while he looked after the horses. My name's Willett. These are my daughters; this is Mrs. Macallister, of Montreal; Mrs. Witherby, of Boston; Miss Witherby, and Mr. Witherby. *You* ought to know each other; Mr. Hubbard is the editor of the Equity 'Free Press'; Mr. Witherby of the 'Boston Events,' Mr. Hubbard. Oh, and *Mr. Macallister*."

Bartley bowed to the Willett and Witherby ladies, and shook hands with Mr. Witherby, a large, solemn man, with a purse-mouth and tight rings of white hair, who treated him with the pomp inevitable to the owner of a city newspaper in meeting a country editor.

At the mention of his name, Mr. Macallister, a slight little straight man, in a long ulster and a seal-skin cap, tiddled farcically forward on his toes, and giving Bartley his hand, said, "Ah, haow d'e-do, *haow* d'e-do!"

Mrs. Macallister fixed upon him the eye of the flirt who knows her man. She was of the dark-eyed English type; her eyes were very large and full, and her smooth black hair was drawn flatly backward, and fastened in a knot just under her dashing fur cap. She wore a fur sack, and she was equipped against the cold as exquisitely as her Southern sisters defend themselves from the summer. Bits of warm color, in ribbon and scarf, flashed out here and there; when she flung open her sack, she showed herself much more lavishly buttoned and bugled and bangled than the Americans. She sat down on the movable bench which Bartley had vacated, and crossed her feet, very small and saucy, even in their arctics, on a stick of fire-wood, and cast up her neat profile, and rapidly made eyes at every part of the interior. "Why, it's delicious, you know. I never saw anything so comfortable. I want to spend the rest of me life here, you know." She spoke very far down in her throat, and with a rising inflection in each sentence. "I'm going to have a quarrel with you, Mr. Willett, for not telling me what a delightful surprise you had for us here. Oh, but I'd no idea of it, assure you!"

"Well, I'm glad you like it, Mrs. Macallister," said Mr. Willett, with the clumsiness of American middle-age when summoned to say something gallant. "If I'd told you what a surprise I had for you, it wouldn't have been one."

"Oh, it's no good your trying to get out of it *that* way," retorted the beauty. "There he comes now! I'm really in love with him, you know," she said, as Kinney opened the door and came hulking forward.

Nobody said anything at once, but Bartley laughed finally and ventured,

"Well, I'll propose for you to Kinney."

"Oh, I dare say!" cried the beauty, with a lively effort of wit. "Mr. Kinney, I have fallen in love with your camp, d'ye know?" she added, as Kinney drew near, "and I'm beggin' Mr. Willett to let me come and live here among you."

"Well, ma'am," said Kinney, a little abashed at this proposition, "you couldn't do a better thing for your health, I *guess*."

The proprietor of the "Boston Events" turned about, and began to look over the arrangements of the interior; the other ladies went with him, conversing in low tones. "These must be the places where the men sleep," they said, gazing at the bunks.

"We must get Kinney to explain things to us," said Mr. Willett a little restlessly.

Mrs. Macallister jumped briskly to her feet.

"Oh, yes, do, Mr. Willett, make him explain everything! I've been tryin' to coax it out of him, but he's *such* a tease!"

Kinney looked very sheepish in this character, and Mrs. Macallister hooked Bartley to her side for the tour of the interior. "I can't let you away from me, Mr. Hubbard; your friend's so satirical, I'm afraid of him. Only fancy, Mr. Willett! He's been talkin' to *me* about brain-foods! I know he's makin' fun of me; and it isn't kind, is it, Mr. Hubbard?"

She did not give the least notice to the things that the others looked at, or to Kinney's modest lecture upon the manners and customs of the loggers. She kept a little apart with Bartley, and plied him with bravadoes, with pouts, with little cries of suspense. In the midst of this he heard Mr. Willett saying, "You ought to get some one to come and write about this for your paper, Witherby." But Mrs. Macallister was also saying something, with a significant turn of her floating eyes, and the thing that concerned Bartley, if he were to make his way among the newspapers in Boston, slipped from his grasp like the idea which we try to seize in a dream. She made sure of him for the drive to the place which they visited to see the men felling the trees, by inviting him to a seat at her side in the sleigh; this crowded the others, but she insisted and they all gave way, as people must to the caprices of a pretty woman. Her coquetties united British willfulness to American nonchalance, and seemed to have been graduated to the appreciation of garrison and St. Lawrence River steam-boat and watering-place society. The Willett ladies had already found it necessary to explain to the Witherby ladies that they had met her the summer before at the sea-side, and that she had stopped at Portland on her way to England; they did not know her very well, but some friends of theirs did; and their father had asked her to come with them to the camp. They added that the Canadian ladies seemed to expect the gentlemen to be a great deal more attentive than ours were. They had known as little what to do with Mr. Macallister's small-talk and compliments as his wife's audacities, but they did not view Bartley's responsiveness with pleasure. If Mrs. Macallister's arts were not subtle, as Bartley even in the intoxication of her preference could not keep from seeing, still, in his mood, it was consoling to be singled out by her: it meant that even in a logging-camp he was recognizable by any person of fashion as a good-looking, well-dressed man of the world. It embittered him

the more against Marcla, while, in some sort, it vindicated him to himself.

The early winter sunset was beginning to tinge the snow with crimson, when the party started back to camp, where Kinney was to give them supper; he had it greatly on his conscience that they should have a good time, and he promoted it as far as hot mince-pie and newly fried doughnuts would go. He also opened a few canned goods, as he called some very exclusive sardines and peaches, and he made an entirely fresh pot of tea, and a pan of soda-biscuit. Mrs. Macallister made remarks across her plate which were for Bartley alone; and Kinney, who was seriously waiting upon his guests, refused to respond to Bartley's joking reference to himself of some questions and comments of hers.

After supper, when the loggers had withdrawn to the other end of the long hut, she called out to Kinney,

"Oh, *do* tell them to smoke: we shall not mind it at all, I assure you. Can't some of them do something? Sing or dance?"

Kinney unbent a little at this.

"There's a first-class clog-dancer among them; but he's a little stuck-up, and I don't know as you could get him to dance," he said in a low tone.

"What a bloated aristocrat!" cried the lady. "Then the only thing is for us to dance first. Can they play?"

"One of 'em can whistle like a bird—he can whistle like a whole band," answered Kinney, warming. "And of course the Kanucks can fiddle."

"And what are Kanucks? Is *that* what you call us Canadians?"

"Well, ma'am, it aint quite the thing to do," said Kinney, penitently.

"It isn't at *all* the thing to do! Which are the Kanucks?"

She rose, and went forward with Kinney, in her spoiled way, and addressed a swarthy, gleaming-eyed young logger in French. He answered with a smile that showed all his white teeth, and turned to one of his comrades; then the two rose, and got violins out of the bunks, and came forward. Others of their race joined them, but the Yankees hung gloomily back; they clearly did not like these liberties, this patronage.

"I shall have your clog-dancer on his feet yet, Mr. Kinney," said Mrs. Macallister, as she came back to her place.

The Canadians began to play and sing those gay, gay airs of old France which they have kept unsaddened through all the dark events that have changed the popular mood of the mother-country; they have matched words to them in celebration of their life on

the great rivers and in the vast forests of the North, and in these blithe barcaroles and hunting-songs breathes the joyous spirit of a France that knows neither doubt nor care; France untouched by Revolution or Napoleonic wars; some of the airs still keep the very words that came over seas with them two hundred years ago. The transition to the dance was quick and inevitable; a dozen slim young fellows were gliding about behind the players, pounding the hard earthen floor, and singing in time.

"Oh, come, come!" cried the beauty, rising and stamping impatiently with her little foot, "suppose we dance, too?"

She pulled Bartley forward by the hand; her husband followed with the tallest Miss Willett; two of the Canadians, at the instance of Mrs. Macallister, came forward and politely asked the honor of the other young ladies' hands in the dance; their temper was infectious, and the cotillion was in full life before their parents had time to wonder at their consent. Mrs. Macallister could sing some of the Canadian songs; her voice, clear and fresh, rang through those of the men, while in at the window, thrown open for air, came the wild cries of the forest: the wail of a catamount, and the solemn hooting of a distant owl.

"Isn't it jolly good fun?" she demanded, when the figure was finished; and now Kinney went up to the first-class clog-dancer, and prevailed with him to show his skill. He seemed to consent on condition that the whistler should furnish the music; he came forward with a bashful hauteur, bridling stiffly like a girl, and struck into the laborious and monotonous jig which is, perhaps, our national dance. He was exquisitely shaped, and as he danced, he suppld more and more, while the whistler warbled a wilder and swifter strain, and kept time with his hands. There was something that stirred the blood in the fury of the strain and dance. When it was done, Mrs. Macallister caught off her cap and ran round among the spectators to make them pay; she excused no one, and she gave the money to Kinney, telling him to get his loggers something to keep the cold out.

"I should say whisky, if I were in the Canadian bush," she suggested.

"Well, *I* guess we sha'n't say anything stronger than lawger in *this* camp," said Kinney.

"Yes, lager for loggers—that's right," she returned, promptly punning upon Kinney's accent. "I know Mr. Hubbard is dying to do something. Do something, Mr. Hubbard!" Bartley looked up in surprise at this interpretation of his tacit wish to distinguish himself

before her. "Come, sing us some of your student songs."

Bartley's vanity had confided the fact of his college training to her, and he was really thinking just then that he would like to give them a serio-comic song, for which he had been famous with his class. He borrowed the violin of a Kanuck, and, sitting down, strummed upon it banjo-wise. The song was one of those which is partly spoken and acted; he really did it very well; but the Willett and Witherby ladies did not seem to understand it quite; and the gentlemen looked as if they thought this very undignified business for an educated American.

Mrs. Macallister feigned a yawn, and put up her hand to hide it. "*Oh*, what a stupid song!" she said. She sprang to her feet, and began to put on her wraps. The others were glad of this signal to go, and followed her ex-

ample. "Good-bye!" she cried, giving her hand to Kinney. "*I don't think your ideas are ridiculous. I think there's no end of good sense in them, I assure you. I hope you won't leave off that regard for the brain in your cooking. Good-bye!*" She waved her hand to the Americans, and then to the Kanucks, as she passed out between their respectfully parted ranks. "*Adieu, messieurs!*" She merely nodded to Bartley; the others parted from him coldly, as he fancied, and it seemed to him that he had been made responsible for that woman's coquetries, when he was conscious, all the time, of having forborne even to meet them half-way. But this was not so much to his credit as he imagined. The flirt can only practice her audacities safely by grace of those upon whom she uses them, and if men really met them half-way there could be no such thing as flirting.

(To be continued.)

INVOCATION.

(FROM THE GAELIC.)

COME, come, come, my love, come and hurry, and come, my dear;
 You'll find me ever loving true, or lying on my bier:
 For love of you has burned me through—has ope'd a gap for Death, I fear;
 O come, come, come, my love, before his hand is here.

Though angels' swords should bar your way, turn you not back, but persevere;
 Though heaven should send down fiery hail, rain lightnings, do not fear;
 Let your small, exquisite, white feet fly over cliffs and mountains sheer,
 Bridge rivers, scatter armed foes, shine on the hill-tops near.

Like citizens to greet their queen, then shall my hopes, desires, troop out,
 Eager to meet you on your way and compass you about—
 To speed, to urge, to lift you on, 'mid storms of joy and floods of tears,
 To the poor town, the battered wall, delivered by your spears.

The javelin-scourges of your eye, the lightnings from your glorious face,
 Shall drive away death's armies gray in ruin and disgrace.
 Lift me you shall, and succor me; my ancient courage you shall rouse,
 Till like a giant I shall stand, with thunder on my brows.

Then, hand in hand, we'll laugh at Death, his brainless skull, his nerveless arm;
 How can he wreak our overthrow, or plot, or do us harm?
 For what so weak a thing as Death when you are near, when you are near?
 Oh, come, come, come, my love, before his hand is here!

THE PROPOSED NATIONAL LIBRARY BUILDING.

If it be true, as Carlyle has written, that "the true university of these days is a collection of books," all men should rejoice in the growth of libraries open to all the people. Such an educator is the Government Library at Washington. Known as the Library of Congress since its foundation in 1800, this collection was called, in Mr. Jefferson's catalogue of the books which formed the nucleus of the new library, after the British had burned the old one with the Capitol in 1814, "The Library of the United States." It is in fact, though not in name, the library of the United States, because (1) it is the property of the nation; (2) it is the only repository of copyright publications in the United States; (3) it is maintained and recruited by the public treasury; (4) it is open to all the people, without formality or introduction.

Having risen from the ashes of two conflagrations, the last of which, in 1851, spared only twenty thousand volumes, the Government Library has grown with rapid strides, until it counts, in 1881, upward of four hundred thousand volumes, besides one hundred and fifty thousand pamphlets, and several hundred thousand copyright publications, other than books. In the history of this progress, which has raised the collection in thirty years from twenty thousand books to four hundred thousand, the marked sources of increase have been fourfold:—first, a liberal appropriation by Congress, in 1852, of eighty-five thousand dollars in one sum for the purchase of books to repair losses by fire; second, the acquisition of the Smithsonian Scientific Library in 1866, with all its annual accessions since; third, the purchase of the Force Historical Library in 1867; and fourth, the enactment of the copyright law in 1870, making this library the national record office for copyrights, and the depository of all publications to which exclusive right of multiplying copies is secured.

The law of growth of this already large collection, aside from the very modest appropriations for purchase (varying from five thousand dollars to fifteen thousand dollars per annum, for the last thirty years), is such as to give emphasis to the fact that it requires most ample provision of space for its orderly arrangement and preservation. This library not only presents itself as the great conservatory of American letters, but there is added,

by careful and steady annual purchase, a selection of the best literature of other lands and languages. It is, besides, the assiduous gatherer of books, periodicals, documents, and maps relating to America. Its collection of newspaper files extends to over seven thousand volumes, embracing the "London Gazette" from 1665 to 1881; the "Times" from 1796 to date; the German "Allgemeine Zeitung," complete, from the close of the last century; full sets of the "Moniteur Universel" and of the "Journal des Débats," from their origin in 1789; the "New York Evening Post" from the first issue in 1801; with complete sets of every important English or American review or magazine, and an extensive collection of periodicals, scientific, literary, etc., of other countries. This library is also, and should continue to be, the zealous collector and preserver of the documents of foreign governments, of which it already has an invaluable collection from every government of Europe, as well as from British America, Mexico, and the South American and Central American republics. Its assemblage of the transactions of the learned societies of the world, acquired through the exchanges of the Smithsonian Institution, is very large and is constantly increasing. Add to this its function as the copyright bureau of the United States, and the recipient and preserver of the vast number of publications other than books which teem from the press,—including periodicals, musical compositions, maps, charts, engravings, photographs, drawings, and other works of graphic art, many of which require more room for storage than books,—and it will be seen that the continued accommodation of so vast a collection within the walls of the Capitol is impossible.

The suggestion has been made, and has been received with favor by some writers for the press, that the provisions of the copyright law must accumulate in the library a disproportionate amount of rubbish, and that this accumulation is foreign to the proper aims and uses of a national library, which should gather books alone, and should limit its contents to a careful selection of the best literature. This view of the matter overlooks the fact that, in every nation, the guarantee of exclusive rights in literary, musical, or artistic property is, and ought to be, coupled with the receipt and preservation of examples of the

publications so protected. The idea that our national library would be improved by a bonfire, or by the distribution through the country of its accumulated copyright stores, is as reasonable as would be a proposition to despoil the Patent Office, for the sake of room, of the models of inventors deposited to secure and identify their claims; and to scatter them over the country to enlighten benighted regions with illustrations of the progress of American invention. Congress has received every copyright publication as a trust in behalf of the whole people. It is bound by the terms of its own legislation, as well as by due regard for public enlightenment and national honor, to provide for the due care, arrangement, cataloguing, and preservation of all the objects received. Having no right to alienate them, it is bound to provide, in the national archives, space adequate, no matter to what extent, for their custody and preservation. The interest and value of a visit to Washington would be enhanced to multitudes by the exhibition of such a gallery of the graphic arts, and of charts and maps, as could be formed from the heaped piles which only eleven years of the silent and inexpensive operation of the copyright law have accumulated. Those who sneer at the "trash" to be found in the literary, or scientific, or musical, or artistic product of the American mind, should consider that an office of national copyright is no place for a censorship. These collections are not for one generation alone, but they are the invaluable historical memorials which future generations are to receive as the authentic and complete, not the select and partial, representation of the age in which we live.

In the great American library of the future, posterity will expect to find every book which the country has produced. The only way in which this just expectation can be fulfilled is by the steady conservation at the national capital, in a library supported by the whole people, of the entire product of the press, so far as it is protected by copyright. Recent amendments of the copyright law have considerably restricted the field of publications which are lawful subjects of copyright, throwing out labels and designs intended for any article of manufacture, as belonging to the Patent Office. This wise limitation of copyright to literature, musical productions, and the fine arts renders it easier so to administer the law that everything can be preserved. Grant that the National Library will thus become, to a certain extent, a conservatory of the fine arts: this is one of the very objects to be desired. Every great library should have its departments, in which not

only its books, periodicals, pamphlets, and manuscripts should be coördinated and classified, but also its maps, its charts, its musical compositions, its engravings, its autographs, etc. The priceless collections of old engravings and of modern art in the "Bibliothèque Nationale" at Paris, and in the British Museum Library at London, draw hosts of artists and amateurs to profit by their free exhibition.

It has now been several years since the necessity of building accommodations for these great collections has been forced upon the attention of Congress. Controversies and debates as to the necessity or expediency of leaving the Capitol, of adding to that symmetrical pile an appendage large enough to contain the library of the future, or of a proper site for a separate building, have consumed the time of successive Congresses, committees, and commissions. The net result of the protracted debate as to the best thing to do is that nothing has been done. But the great Library has not stood still, although Congress has. Four hundred thousand volumes are crowded and piled into a space not adequate to the orderly arrangement of three hundred thousand. The surplus, after the expedients were exhausted of double rows upon the shelves, temporary cases for storage, and colonization in such dark and distant lower rooms of the Capitol as could be procured, are piled in heaps upon the floors, until books wanted can be produced only through the long experience of custodians who know where they are. Heaps of valuable maps and engravings, duly stamped and numbered, are piled away where they must be completely buried from view. Newspapers and periodicals, in default of room wherein to file them for current reference, are stored in alphabetical order in daily growing piles, awaiting the epoch of binding. But it is not alone the books and other publications which suffer the inconveniences of this overcrowded library. There is not in all its halls a solitary space where a member of Congress can spend a quiet hour in writing or reading. The readers are huddled together in narrow quarters, pursuing their investigations amid discomforts and deprivations as to room and quiet which are enough to appall any but the strongest heads. The multifarious business of the copyright department, with its immense mail openings, has to be transacted in the midst of the readers, and almost under the feet of the sight-seeing public who throng the library and the Capitol.

As the matured opinion of the last Congressional commission on accommodations for the library, aided by three architectural experts, it was reported to Congress, in January,

1881, that a separate building was an immediate necessity. The report says:

"No government library known to the committee except our own is now located in the same building devoted to legislative purposes. It has been found indispensable in each European capital to have separate library edifices for the great collections of books gathered at the public cost and through the operations of the copy-tax. Yet in none of these cases is the library charged, as in the United States, with the custody and keeping of all copyright records of the nation. The buildings belonging to the British Museum Library cover eight acres of ground, and it is expected that the collections of art and antiquities there gathered will ultimately have to remove to a separate building to give space to the growing encroachments of the books. The national library of France covers nearly four acres. The present Capitol covers only three and a half acres, and no additions to it of sufficient magnitude to provide for library growth could be made without greatly marring the beauty and effect of that classic edifice.

"On grounds of public economy, also, a separate edifice is demanded for the Library. The estimates of the architects of the Capitol, Messrs. Walter and Clark, for an extension of the eastern center of the Capitol three hundred and fifty feet, place the cost of such an extension at \$4,500,000, while the estimates for a separate building vary from \$1,500,000 to \$4,000,000, according to the magnitude of the edifice and the style of architecture employed. The reason of this difference is found in the fact that any Capitol extension must be carried out in the same costly style of architecture, as to marble columns and capitals, as the existing wings, while no such expensive condition applies to an independent building erected elsewhere. Besides this, it is demonstrated, by the measurements of the architects and the reports of the librarian, that even this large addition to the Capitol would be completely filled with books in about forty years. It would then be necessary at last to erect a separate building, thus burdening the tax-payers with the cost of two library constructions instead of one."

At the same session of Congress, the Senate passed a bill appropriating \$1,500,000 for the erection of a library building on grounds to be purchased adjoining the park fronting the Capitol on the east, the building to be constructed in accordance with a

plan approved by the commission, and under the supervision of the Secretary of the Interior, the architect of the Capitol, and the Librarian of Congress. The fact that this measure passed the Senate by the heavy majority of thirty-eight to eighteen (the minority favoring a different site or enlargement of the Capitol) shows the strong conviction of that body as to the necessity of a building not only adequate to the emergency, but amply sufficient to provide against its recurrence. Any extension of the Capitol, of sufficient size to contain the library, was felt to be not only an architectural mistake and incongruity, but a temporary make-shift entailing costlier constructions in the future. The bill, however, failed to pass the House of Representatives—not because there was not a heavy majority in its favor, but because, under the despotism of the rules, the House could not get at the bill to consider it during the closing hours of the short session. It will be one of the first matters of public importance to enlist the attention of Congress at this winter's session. It is in all respects an opportune moment for making a worthy and permanent provision to serve as the great repository of a nation's literature and art. The surplus revenue, larger than it has been for years, has enabled us to pay off the national debt so fast as almost to take away the breath of the financial world. It is not to be doubted that the people will sanction any wise expenditure needful to afford an ample fire-proof and permanent home for the treasures gathered under the immediate custody of its representatives. Let us hope that no dissension over mere styles of architecture or collateral issues of any kind will longer postpone the work of laying the foundations at Washington of a library worthy of the American people.

REGRET.

THERE is so little that a man can do,
 Howe'er he quit him, work he well or ill,—
 There is so little, ere Death's hand shall still
 The fitful stir of life in me and you,
 That I, who know the one-half journey through
 And thirst to drink from the Lethean rill,
 Half question if I have desire or will
 These fruitless labors longer to pursue.
 But yet I mind me when one spoken word
 Had lightened this long sadness of my day.
 The moment passed; the gates of heaven were stirred,
 And shut. Then fled reluctant Hope away,
 And Love, whose glory ne'er about me streams—
 Save in the restless memory of my dreams.

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER IX.

DURING the next few weeks, Bertha did not appear as well as usual. The change Tredennis had seen in her became more marked. She lost color and roundness, and now and then was forced to show signs of fatigue which were not habitual with her. She made no alteration in her mode of life, however. When Tredennis called in the evening, the parlor was always full, and she was always vivaciously occupied with her guests. Chief among her attractions was counted her pet pretense of being interested in politics. It was not a very serious pretense, but being managed deftly and with a sense of its dramatic value, animated many an hour which might otherwise have been dull, in view of the social material which occasionally fell into her hands.

"What should I do," Tredennis heard her say once, "if I knew nothing of politics? There are times when they are my only salvation. What should I have done last night with the new member from Arkansas if I had not remembered that he was interested in the passage of the Currency Bill? He is an excellent, solid, sensible creature; we are frivolous, aimless, beings compared with him. It is such men as he who do everything worth doing and being done; but he is purely a politician, and he has spent his life in a small provincial town, where he has been a most important person, and he cares as much for the doings of society and discussions of new novels and pictures as I do for the linseed-oil market—if there is a linseed-oil market. When I began to ask him modest questions about his bill, his face brightened at once, and he became a self-respecting and well-informed person—at ease with himself and with me, and quite forgot his coat and his large boots, which had been slowly and painfully dawning upon him a few moments before when he contrasted them with Mr. Arbuthnot's silk attire. My very mistakes were a pleasure to him, as they gave him an opportunity to say several things very well worth remembering. He could not have told whether I was well or ill dressed, but he detected my flimsiness

in argument in a moment and gave me more information in half an hour than you scoffers could have given me in a week, and"—with much modesty of demeanor—"he mentioned to Senator Vaughan, in the course of the evening, that I was a most intelligent woman."

Arbuthnot and Richard burst into the laughter which was always her applause upon such occasions.

"You!" commented Arbuthnot. "You are Herodias's daughter, dancing for the head of John the Baptist. You are always dancing in a quiet and effective way for somebody's head. Whose would you like next? How does mine strike you?"

"Thank you," said Bertha. "Would you really give it to me if I danced for you in my ablest manner, and how do you think it would look on a charger?"

There was more than one hard-worked politician who, after a day of exciting debate or wearisome battling with windmills, found relief and entertainment in the pretty parlors. Some of those who came had known Bertha in her girlhood and were friends of her father, and with these it was the fashion to encourage her to political argument, and affect the deepest confidence in her statements, with a view to drawing forth all her resources. These resources were varied and numerous, and marked by a charming feminine daring and superiority to ordinary logic which were the delights of the senatorial mind.

"Why should I endeavor to convince you by being logical?" she said. "You have logic—at least we hope so—all day, and sometimes all night, in the Senate and the House, and even then you are not convinced of things. It is not logic which governs you, but a majority. And that is what one should aspire to, after all—not to be in the right, but to be in the majority. And I am sure one's arguments are much more untrammelled and brilliant for being illogical. And if I convince you without logic, I win a victory worth having. It is like the triumph of an ugly woman who is called a beauty. If I am pretty and you say so, it is simply as if you said 'white is white, blackness is dark'; but if I am not pretty, and am ingenious enough to persuade

you that I am—there is a triumph to be proud of!”

It was nonsense, but it was often sparkling nonsense, whose very lightness was its charm, and the rooms were rarely ever so gay and full of laughter as when there was among the guests a sprinkling of men no longer young, who had come there to forget that they were jaded, or secretly anxious, or bitterly disappointed.

“It pleases me to dance before some of them,” Bertha said to Arbuthnot. “I like to think I make them forget things for a little while. If I can do nothing greater and wiser, let me employ my one small accomplishment to the best advantage, and do my harmless best to be both graceful and agile. No one can persuade me that it can be a pleasant thing to engage in a hand-to-hand conflict from three to eight months in the year, and to sit day after day placidly endeavoring to confront men who differ with you on every point, and who count the fact among their virtues, and glory in it, and watch you and listen to you, with the single object of seizing an opportunity to prove in public that you are an imbecile or a falsifier, or a happy combination of both. When I reflect upon my own feelings,” she added, with delightful *naïveté*, “when people are stupid and ill-mannered enough to differ with me, I am filled with the deepest sympathy for the entire political body. There is nothing so perfectly exasperating as to know people are differing with you, and I know there is nothing so wearing to the mind.”

An exciting debate in the Senate was occupying public attention at this time, and to her other duties and entertainments she added that of following it in its course. She spent an hour or so at the Capitol every day, read the newspapers, and collected evidence and information with an unflagging industry which would have been worthy of admiration if it had been inspired by any serious intention. But she made no pretense of seriousness of intention. She returned home from such visits with derisive little arguments jotted down in her note-book and little sketches of senatorial profile adorning its pages, and entertained a select audience with them in the evening—an audience which not infrequently included the political dignitaries themselves. Her manner would have been a mystery to Tredennis if he had not remembered the professor's words of warning, and even with their memory in his mind, he was often at a loss. There was a restless eagerness to be amused in all she did, and he felt that, after all, she was privately less successful in her efforts than she seemed. He was, at least, relieved to find that he had but little

to do in the rôle assigned him. When Arbuthnot appeared again, he had entirely recovered his equilibrium, and was unemotional, self-possessed, occasionally flippant, plainly cherishing, at no time, any intention of regarding himself seriously. He did not sing his “Serenade” again, and, when he sang at all, committed himself to no out-reaching warmth of feeling. He rarely spoke to Bertha alone, and the old tendency to airy derision of each other's weaknesses re-asserted itself. Only once Tredennis heard him address her with any degree of seriousness, and this was in reference to her visits to the Senate. There had been an all-night session, and it had been her whim to take part in it to the extent of sitting up until after midnight, and she had returned home more tired than she was willing to confess. Arbuthnot—who, with Richard, Tredennis, and a newspaper friend had been her companions in the dissipation—remonstrated with her after the little supper they had on their arrival at the house.

Bertha had left the table and was half reclining against a pile of cushions on the sofa, and Arbuthnot followed her, and spoke in a somewhat lowered voice.

“You are making a mistake in doing such things,” he said. “Why will you keep it up? It's all nonsense. You don't care for it really. It is only one of your caprices. You have not a particle of serious interest in it.”

“I have as much serious interest in it as I have in anything else,” she answered. “More, indeed. Do you suppose I was not interested when Senator Ayres got up to-night to be immeasurably superior by the hour? It elevated my mental plane, and gave me food for reflection. It filled me with a burning desire to be immeasurably superior, too. Is he always immeasurably superior? Could he keep it up, do you suppose, in the bosom of his family—when he is putting salt on his eggs at breakfast, for instance, and thinks no one is looking? When he tries on a new hat, does he do it with a lofty air of scorn, and does he fall asleep and have the nightmare with coldly contemptuous condescension? I don't mind mentioning to you that it is one of my favorite moods to be immeasurably superior. It is such a good way when you cannot get what you want; it disposes of your antagonists so simply and makes you feel so deserving; but I never could keep it up—but that may be owing to weakness of character, and the fact that I am only an unworthy imitator and lack the vigor to convince myself of my own genuineness. Oh! I assure you, I was very much interested, indeed.”

“Well,” said Arbuthnot, “I might have expected you would say something of this kind.

It is your little way of evading matters. You have a knack at it."

Bertha looked down at the footstool on which her small shoe rested, and then up at him with a quiet face.

"Yes, it is my little way," she answered. "I suppose I might count it among my few small accomplishments. But don't you think it is as good a way as any—particularly if it is the only way you have?"

"It is as good a way as any," replied Arbuthnot, with the calmness of a sensible person addressing an attractive but obstinate child. "But you know it will not prevent my saying again what I said at first. You are very foolish to tire yourself out for nothing, and you will regret it when it is too late."

"Yes," answered Bertha, "if I regret it I shall naturally regret it when it is too late. Did you ever hear of any one's regretting a thing too early, or just in time? That is what regret means—that one is too late."

Arbuthnot sat down near her.

"If you want to talk in that style," he remarked, in the most impartial manner, "I am entirely in the mood to listen, now I have expressed my opinion. It isn't worth much as *my* opinion, but it is worth something as the truth, and I am not afraid you will forget it, but, in the meantime, until Mrs. Dacre is in the mood to be escorted home, you can ponder to my lower nature by showing me the sketches you made of Senator Ayres and the Speaker, and the gentleman from Iowa who was afraid to fall asleep."

The next morning, calling with a newspaper she had wanted, Tredennis, being handed into the room in which Bertha usually spent her mornings at home, found her lying upon a sofa, and as she did not hear him enter, he had the opportunity to stand for a few seconds and look at her.

While he did so she opened her eyes languidly and saw him, and the thought which held his mind for the moment sprang to his lips and uttered itself.

"I do not think you know," he said, "how pale you are."

"I do not want to know," she answered, with a rather tired little smile, "if it is unbecoming, and I am sure it is. But I will ask you to excuse my getting up."

He entirely passed over the first part of her reply, as she had noticed he had a habit of passing in silence many of her speeches, though she had not been able to decide why he did so.

"You said," he went on, "that when the season was over you intended to rest. Have you been doing it lately?"

"Yes," she answered, with entirely unem-

barrassed readiness. "I have been very quiet indeed."

At this he was silent for a moment again, and during the pause she lay and looked at him with an expression of curious interest—trying to make up her mind whether he did not reply because he felt himself not sufficiently ready of speech to meet her upon her own ground, or whether his silence was a negative sign of disapprobation.

"I am never tired when anything is going on," she said, at last.

"That is the worst of it," he replied.

"Oh, no—the best of it," she said, and then she looked away from him across the room, and added, in a tone altogether different, "One does not want too much time on one's hands."

Once or twice before he had seen this slight, unconscious change fall upon her, and without comprehending had been sharply moved by it, but she always recovered herself quickly, and she did so now.

"I tried it once," she said, "and it did not agree with me, and since then I have occupied myself. As Richard says, 'one must have an object,' and mine is to occupy myself."

"You accomplish your end, at least," he remarked.

"Yes," she answered. "I congratulate myself upon that. Upon the whole, I do not know any one who is more fortunate than I am. No other life would suit me half so well as the one I lead. I am fond of gayety and change and freedom, and I have all three. Richard is amiable, the children are like him, and there is nothing to interfere with my having my own way, and amusing myself as I please. I should be thoroughly unhappy if I could not have my own way; to have it invariably is one of my laudable ambitions, and as I always get it, you see I have reason for being charmed with my lot."

"You are very fortunate," he said.

"I am more than fortunate," she answered. Then she broke into a little laugh. "It is rather odd," she said, "that just before you came in, I was lying thinking of the time you were in Washington before, and there came back to me something I said to you the night you gave me the heliotrope."

"Was it," said Tredennis, "what you said to me about being happy?"

"What!" she said. "You remember it? I scarcely thought that you would remember it."

"Yes," said Tredennis, "I remember it."

"I could not bear the thought of not being happy," she went on. "It had never occurred to me that such a thing was a pos-

sibility until you said something which suggested it to me. I recollect how it startled me. It was such a new idea."

She stopped, and lay for a moment silent.

"And this morning?" suggested Tredennis.

"This morning," she answered, rather slowly, though smiling as she spoke, "this morning, as I said, I decided that I had been very fortunate."

"Then," he said, "you *have* been happy."

"If I had not been," she answered, "it would have been very curious. I have never been interfered with in the least."

"That is happiness indeed," said Tredennis.

Just now he was reflecting upon the fact that all their conversations took the same turn and ended in the same way. It mattered little how they began; in all cases she showed the same aptitude for making her subject an entirely inconsequent source of amusement. Experience was teaching him that he need expect nothing else. And even as he was thinking this, he heard her laugh faintly again.

"Shall I tell you what I see in your face," she said—"what I see oftener than anything else?"

"I should be glad to know," he replied.

"I see that you are thinking that I am very much changed, and that it is not for the better."

He paused a moment before he answered her, and when he did so he spoke with his eyes fixed on the floor, and slowly:

"You are not the Bertha I used to know," he said. "But that I should have allowed myself to expect it shows simply that I am a dull, unprogressive fellow."

"It shows that you are very amiable and sanguine," she said. "I should have been even more fortunate than it has been my fate to be if I had not changed in ten years. Think of the good fortune of having stood still so long—of having grown no older, no wiser. No," in a lower voice, "I am not the Bertha you used to know."

But the next instant, almost as soon as she had uttered the words, she lifted her eyes with the daring little smile in them.

"But I am very well preserved," she said. "I am really very well preserved. I am scarcely wrinkled at all, and I manage to conceal the ravages of time. And, considering my years, I am quite active. I danced every dance at the Ashworth's ball, with the kindly assistance of Mr. Arbuthnot and his friends. There were *débutantes* in the room who did not dance half as often. The young are not what they were in my generation—though probably the expiring energies of advanced age are flaming in the socket and ——"

She stopped suddenly, letting her hands drop at her sides. "No," she said again, "I—I am not the Bertha you used to know—and this morning I am—tired enough to be obliged to admit it."

Tredennis took a quick step toward her; the hot blood showed itself under his dark skin. What he had repressed in the last months got the better of him so far that he had no time to reflect that his stern, almost denunciatory, air could scarcely be ranked among ordinary conventionalities, and that an ordinarily conventional expression of interest might have been more reasonably expected from him than a display of emotion, denunciatory or otherwise.

"Can you expect anything else?" he said. "Is your life a natural one? Is it a natural and healthy thing that every hour of it should contain its own excitement, and that you should not know what simple, normal rest means? Who could be blind to the change which has taken place in you during the last few weeks? Last night you were so tired and unstrung that your hand trembled when you lifted your glass to your lips. Arbuthnot told you then it was a mistake—I tell you now that it is worse—it is madness and crime."

He had not thought of what effect he would produce—his words were his indignant masculine protest against her pallor and weakness, and the pain he had borne in silence for so long. It seemed, however, that he had startled her singularly. She rose from her reclining posture slowly and sat upright—and her hands trembled more than they had done the night before.

"Why," she faltered, "why are you so angry?"

"That," he returned bitterly, "means that I have no right to be angry, of course! Well, I am willing to admit it—I have no right. I am taking a liberty. I don't even suggest that you are making a mistake—as Mr. Arbuthnot did; I am rough with you, and say something worse."

"Yes," she admitted, "you are very rough with me." And she sat a few moments, looking down at the floor, her little hands trembling on her lap. But presently she moved again. She pushed one of the cushions up in the sofa-arm and laid her cheek against it, with a half-sigh of weariness relieved and a half-smile.

"Go on!" she said. "After all—since I have reflected—I think I don't dislike it. New things always please me—for a little while—and this is new. No one ever spoke to me so before. I wonder whether it was because I did not really deserve it or because people were afraid?"

Tredennis stopped in the walk he had begun and wheeled sharply about, fronting her with his disproportionately stern gaze.

"Do you want to know why I do it?" he demanded. "I think—since I have reflected—that it is for the sake of—of the other Bertha."

There was a slight pause.

"Of the other Bertha," she said after it, in a low, unsteady tone. "Of the Bertha who thought it an impossibility that she should be anything but happy."

He had not been prepared for her replies before, but he was startled by what she did now. She left her seat with a sudden, almost impassioned, action; the cushion fell upon the floor. She put her hand upon the mantel, as if to support herself.

"Why did you say that?" she exclaimed. "I do not like it! I do not like to be reminded that it is so long since—since I was worth liking. I suppose that is what it means. Why should you seem to accuse me when you say you speak for the sake of the other Bertha? Am I so bad? You have lived a quiet life because you liked it best—I did not chance to like it best, and so I have been gay. I go out a great deal and am fond of the world, but do I neglect my children and treat my husband badly? Richard is very happy, and Jack and Janey and Meg enjoy themselves and are very fond of me. If I was careless of them, and ill-tempered to Richard, and made my home unhappy, you might accuse me. It is the most mysterious thing to me, but I always feel as if I was defending myself against you, even when you only look at me and do not speak at all. It—it is a curious position! I do not understand it, and I do not like it!"

Her sudden change of mood was a revelation to Tredennis. He began to realize what he had dimly felt from the first—that her mental attitude toward him was one of half-conscious defiance of his very thought of her. He had not known why he had felt at times that his mere presence prompted her to present her worldly, mocking little philosophies in their most incontrovertible and daring form—and that it was her whim to make the worst of herself and her theories for his benefit. He accused himself angrily in secret of overestimating his importance in her eyes, and had reiterated impatiently that there was no reason why she should be at all specially aware of his existence when he was near her, and it had been one of his grievances against himself that, in spite of this, every time they met he had felt the same thing, and had resented and been puzzled by it.

But he had never before seen her look as

she looked now. One of his private sources of wonder had been the perfect self-control which restrained her from exhibiting anything approaching a shadow of real feeling upon any subject. He had seen her under circumstances which would have betrayed nine women out of ten into some slight display of irritation, and she had always maintained the airy serenity of demeanor which deprived all persons and incidents of any weight whatever when they assumed the form of obstacles, and her practicable little smile and calm impartiality of manner had never failed her. He had heard her confess that it was her chief weakness to pride herself upon her quietadroitness in avoiding all things unpleasant or emotional, and upon her faithfulness to her resolve not to permit herself to be disturbed.

"I have seen people who enjoyed their emotions," she had said, "but I never enjoyed mine, even when I was very young. I definitely disliked them. I am too self-conscious to give myself up to them simply. If I had one, I should think about it and analyze it and its effects upon me. I should be saying all the time, 'Now I am hot—now I am cold'; and when it was over I should be tired, not only of the feeling itself, but of taking my own temperature."

And now she stood before him for the instant a new creature—weaker and stronger than he had dreamed it possible she could be—her eyes bright with some strange feeling, a spot of color burning on each pale cheek. He was so bewildered and impressed that he was slow to speak, and, when he began, felt himself at so severe a disadvantage that his consciousness of it gave his voice a rigid sound.

"I do not think," he began, "that I know what to say——"

Bertha stopped him.

"There is no need that you should say anything," she interrupted. "You cannot say anything which will disapprove of me more than your expression does. And it is not you who should defend yourself, but I. But you were always severe. I remember I felt that when I was only a child, and knew that you saw all that was frivolous in me. I was frivolous then as I am now. I suppose I have a light nature—but I do not like to be reminded of it. After all, no one is harmed but myself, and it would be charity in you to let me go my flippant way and not despise me too much."

"Bertha," he answered, "it is not for me to say that I do not despise you."

He stood with his arms folded and looked down at her steadily. It was very easy for her to place him at a disadvantage. He knew

nothing of feminine ways and means, and his very masculine strength and largeness were against him. If she gave him a wound he could not strike back or would not—and in her last speech she had given him more wounds than one, and they were rankling in his great breast fiercely. And yet despite this it was not she who came off entirely victor. After meeting his gaze with undeniable steadiness for a few seconds, she turned away.

"I told you," she remarked, with a persistence which was its own betrayer, "that—it was not necessary for you to say anything." The next moment an impatient laugh broke from her. She held up her unsteady hand that he might see it.

"Look!" she said. "Why should I quarrel with you when you are right, after all? It is certainly time that I should rest when I am so absurdly unstrung as this. And my very mood itself is a proof that something should be done with me. For a minute or so I have actually been out of temper—or something humiliatingly like it. And I pride myself upon my temper, you know, and upon the fact that I never lose it—or have not any to lose. I must be worn out when a few perfectly truthful speeches will make me bad-tempered. Not that I object to it on moral grounds, but it wounds my vanity to lose control of myself. And now I have reached my vanity I am quite safe. I will leave for Fortress Monroe to-morrow."

"It would be better if you went to a quieter place," he said.

"Thank you," she answered. "I think it will be quiet enough—if I take the children and avoid the ball-room, and am very decorous."

There seemed but little more for him to say. She changed the subject by taking from the table the paper he had brought her, and beginning to discuss its contents.

"Richard asked me to read the editorial and the letter from the Washington correspondent," she said. "He is more interested in the matter than I ever knew him to be in anything of the kind before. He is actually making it one of his objects, and flatters me by wanting to know my opinions and wishing me to share his enthusiasm." She sat down to the table, with the paper open before her and her hands lying clasped upon it.

"Have you read it?" she asked. "Is it very clever? Can I understand it? Richard is so amiably sure I can."

"It is well done," replied Tredennis, "and you will certainly understand it."

"I am glad of that," she said, and sat still a moment, with eyes lowered. Then she spoke, rather suddenly. "Richard is very

good to me," she said. "I ought to be very grateful to him. It is just like him to feel that what I think of such things is worth hearing. That is his affectionate, generous way. Of what value could my shallow little fancies be?—and yet I think he really believes they should carry weight. It is the most delightful flattery in the world."

"It is your good fortune," said Tredennis, "to be able to say things well and with effect."

"What!" she said, with a half-smile, "are you going to flatter me, too?"

"No," he answered, grimly, "I am not going to flatter you."

"You would find it a very good way," she answered. "We should get along much better, I assure you. Perhaps that is really what I have been resenting so long—that you show no facility for making amiable speeches."

"I am afraid my facility lies in the opposite direction," he returned.

"I have recovered my equilibrium sufficiently not to admit that," she said.

When he went away, as he did shortly after, she followed him to the door of the room.

"Was I very bad-tempered?" she said, softly. "If I was, suppose you forgive me before you go away—for the sake of the other Bertha."

He took the hand she offered him, and looked down at it as it lay upon his big brown palm. It was feverish and still a little unsteady, though her manner was calm enough.

"There is nothing to forgive," he answered. "If there was—this Bertha—" He checked himself, and ended abruptly. "I don't share your gift," he said. "I said my say as bluntly and offensively as possible, I suppose, and you had a right to be angry. It was all the worse done because I was in earnest."

"So was I—for a moment," she said; "that was the trouble."

And that was the end of it, though even when he dropped her hand and turned away, he was aware of her slender figure standing in the door-way, and of a faint, inexplicable shadow in the eyes that followed him.

He went back to his quarters bitterly out of humor with himself.

"A nice fellow I am to talk to women!" he said. "I have not lived the life to fit me for it. Military command makes a man authoritative. What right had I to seem to assume control over her? She's not used to that kind of thing, even from those who might be supposed to have the right to do it. Some one ought to have the right—though that

has gone out of fashion, too, I suppose." Something like a groan burst from him as he laid his forehead upon his hands, resting his elbows on the table before him. "If a man loved her well enough," he said, "he might do it and never hurt her; but if she loved him, perhaps there would be no need of it."

He had passed through many such brief spasms of resentful misery of late, and he was beginning to acknowledge to himself that each one was stronger than the last. He had contended his ground with steady persistence and with stubborn condemnation of his own weakness, but he had lost it, inch by inch, until there were times when he felt his foothold more insecure than he could have believed possible a year ago.

"Why should I think of myself as a man who has lost something?" he was wont to say to himself, bitterly and impatiently. "I had won nothing, and might never have won it. I had what would have been opportunity enough for a quicker temperament. It is nothing but sentiment."

And, even as he said it, there would come back to him some tone of Bertha's voice, some pretty natural turn of her head or figure as she sat or stood in the parlor with her small court around her, and, slight as the memory might be, the sudden leap of his pulses had more power than his argument.

It was these trifles and their habit of haunting him which were harder to combat than all the rest. His life had been so little affected by femininity that hers had a peculiarly persistent influence upon him. He noted in her things he might have seen in scores of other women, but half-fancied belonged specially to herself. The sweep and fall of her dress, the perfume she used, the soft ruffles of lace she was given to wearing—each of her little whims of adornment had its distinct effect, and seemed, in some mysterious way, to have been made her own, and to be shared with no other being. Other women wore flowers; but what flowers had ever haunted him as he had been haunted by the knot of heliotrope and violets he had seen her tuck carelessly into the belt of her dress one day? He had remembered them with a start again and again, and each time they had bloomed and breathed their soft scent afresh.

"It is all sentiment," he persisted. "There would be nothing new in it to—that fellow Arbuthnot, for instance: but it is new to me, and I can't get rid of it, somehow."

He had heard in his past stories of men who cherished as treasures for a life-time a ribbon or a flower, and had passed them by

in undisturbed composure as incidents belonging only to the realms of wild romance; but he had never in the course of his existence felt anything so keen as the inconsequent thrill which was the result of his drawing suddenly from his pocket one night, on his return to his quarters after a romp with the children, a small, soft, long-wristed glove which it had been Master Jack's pleasure to hide there.

He had carried it sternly back the next morning and returned it to Bertha, but the act cost him an effort; it had been like a living presence in his room the night before, and he had slept less well because of it.

He had used his very susceptibility to these influences as an argument against his feeling.

"There is nothing substantial in it," he had said,—“nothing but what a man should find it easy to live down. It is the folly of a boy, intoxicated by the color of a girl's cheek and the curl of her hair. An old fellow, who any day may find a sprinkling of gray in his scalp-lock, should know better than to ponder over a pretty gown and—a bunch of flowers; and yet how one remembers them!”

And to-day it was the little things, as usual, almost as much as the great ones. The memory of the small, bright room, with its air of belonging to Bertha, and being furnished by Bertha, and strewn with appendages of Bertha; the slight figure, in its white morning dress, lying upon the sofa or standing between the folding-doors; the soft, full knot of her hair as he saw it when she turned her head proudly away from him—what trifles they were! And yet if the room had been another, and the pretty dress not white, and the soft hair coiled differently, everything might have had another effect, and he might have been in another mood—or so he fancied.

But he gave himself little leisure for the indulgence of his fancies, and he made his usual effort to crush them down and undervalue them. His groan was followed by a bitter laugh.

"It is the old story," he said. "I please myself by fancying that what would please me would make her happier. Arbuthnot would know better. Control would not suit her—even the gentlest. She has had her own way too long. She is a small, slight creature, but it has been her lot to rule all her life, in a small, slight creature's way. It is the natural sentimentality of an obstinate, big-boned fellow to fancy she would thrive under it. She would know better herself. She would laugh the thought to scorn, and be wise in doing it."

GEORGE W. CABLE.

THE charge that we have no characteristic American literature has hardly been a just one, both because there always has been much that was characteristic in our best writings, and because our writers, with a few notable exceptions, have necessarily been, first of all, English—in language, in tradition, and in habit of thought—and, as writers, American only because of certain accidental surroundings. These surroundings themselves, in spite of an American origin and character, were still marked with a strong English quality. "America," as we know it at the North and East, is mainly a newer England, where the social and mental qualities of the older have been modified and adapted to new conditions without losing their original impulse and stamp.

Far away in the South-west, born of purely French enterprise, strongly modified by Spanish association and control, heated with the glow of a subtropical sky, lulled and intoxicated with the delusive curse of slavery, secluded behind the defenses of restricted speech which slavery built for itself everywhere, and allied to the American family of States by ties which long failed to touch its real heart, there has grown up at our side a community in which English influence has found no place, and which has hitherto been subjected to only a distant and purely external study. A keen and sympathetic eye has studied it at last, and the wealth of its material is being laid before us, warm with the touch of the Southern sun, and throbbing with a life that is new to our colder zone. If we had had no characteristic literature before, we surely have one now; and if it were ever safe to predict permanent favor for a writer, we should claim it for the author who has so allied himself to all the varied humanity he has depicted that his name must live as long as interest in the picturesque and plaintive creole survives.

Were we to ask the source of such skill and success, it would be an easy begging of the question to say that Mr. Cable is a genius, and that genius is its own creator. A somewhat intimate study of the man himself, and of the methods of his work as well as its results, shows that while he unquestionably is a genius, his genius has been trained to walk in a very strait path, and to submit to very rigid discipline. The God-given quality is there, and its mettle and freak and force are always felt, yet we feel almost equally the wholesome subjection in which

it is held. It is like a weanling race-horse trained to serious work and made to lead a useful life,—the native spirit and vim always evident, but always controlled by wisely accepted restraints. Given the divine spark, without which no friction can produce light, we find the remaining factors of Mr. Cable's success in his surroundings and necessities, and in the spirit in which he has met them. Not a little of his peculiar quality, and very much of his peculiar development, may be traced to the Puritan element in his composition—a Puritanism inherited, cultivated, and stalwart, but a Puritanism mellowed by the sunny sky under which he has grown, humanized by the open and cordial habit of Southern life, and made wise and forbearing and discreet—almost made not to be Puritanism at all—by an all-embracing and ever-vigilant sense of humor, which is as quick to check his own act as to catch his neighbor's lapse; a sense of humor which ripples at every shoaling of the serious stream of his life and work.

Resolute, earnest, laborious to the last degree, and so trained to toil that no detail of research or execution deters him; with a mind schooled to the minuter systems of the counting-room; with an ear ever alert for characteristic expression or dialect; with a quick eye for shades of manner, and with an unflinching memory for what he sees and hears, he has passed his life among the people of New Orleans, gleaning, as he went his busy way, for the sheaves he now presents us. While thus equipped for his calling, he evidently recognizes his own limitations, and works well within his powers. He has made a special study of the creole population in and about his native city, and of the conditions under which that city has grown,—finding in its later colonial and earlier territorial life his most congenial field of work—a field he has made so much his own that another writer poaching upon it would probably be warned off by the public as an imitator.

Personally, Mr. Cable is a small, slight, fragile-looking man, thirty-seven years old. He is erect, bright and frank, with a strong head, and a refined, gentle face. His hair and beard are dark, and his large hazel eyes are expressive,—happily more often of merriment than of sadness, though they are capable of becoming sad eyes, too.

A young author should be accorded the privilege of having his more intimate biog-

raphy withheld until his career is finished, but it can be no unwelcome invasion of Mr. Cable's privacy to say that he is happily married, that he has four charming little girls, and that he lives in a high-porched, broad-verandahed house, somewhat after the manner of the Grandissimes' mansions we know so well, and situated far up in the "Garden District" of New Orleans.

What is of more legitimate interest to the public, and more important as a study of character, is the combination of inheritances and of circumstances which have helped to make him what he is. He is descended on the father's side from a colonial Virginia family, and on the mother's from the old New England stock. The two branches came together in Indiana, where his father and mother were married in 1834, and whence they moved to New Orleans after the financial crisis of 1837. In New Orleans, Mr. Cable prospered in commercial pursuits until some time after the birth of the subject of this sketch. In 1859, after a second disastrous failure, the father died, leaving the family so reduced in their circumstances that young Cable was obliged to leave school at the age of fourteen to aid in their support. From this time until 1863 he was usually employed as a clerk. Although then in his nineteenth year, he was such a tiny and youthful-looking lad that his sisters, when sent beyond the lines for refusing to take the oath of allegiance, had no difficulty in obtaining permission to take their "little brother" with them. Once within the Confederacy, the valiant youth soon volunteered, and was mustered into Colonel Wilburn's Fourth Mississippi Cavalry, of General Wirt Adams's brigade. The experiences of the field and the rude life of the camp produced a marked change in the hitherto gay disposition of the young recruit. He is described as having been a good soldier, scrupulously observant of discipline, always at his post, and always courageous and daring. During days of inactivity, he employed his leisure hours in making a critical study of the Bible, in working out problems in the higher branches of mathematics, and in keeping up his knowledge of Latin grammar. In one of his engagements he received a serious wound in the left arm-pit, making a narrow escape with his life.

At the end of the war, like most of his comrades, he returned penniless to New Orleans, a city then overflowing with young men, clamorous for employment. He began his career as errand-boy in a mercantile house. Subsequently, for a time, he found employment at Kosciusko, Mississippi. Returning to New Orleans several months later, he took up the study of civil engineering, and joined a State

surveying expedition for the reëstablishment of the lines and levels of levees along the banks of the Atchafalaya River. The most important outcome of this enterprise, so far as Mr. Cable was concerned, was a very serious attack of malarial fever, from which he did not fully recover for two years. During his convalescence, he became an enthusiastic student of natural history, and laid the foundation for those close descriptions of bayou and prairie and swamp life, and still-life, which are such a marked feature of his writings.

Mr. Cable's first attempt at literary work was in the capacity of a contributor, over the signature of "Drop-Shot," to a special column of the New Orleans "*Picayune*," devoted to critical and humorous papers, with an occasional poem. These contributions, which at first appeared but once a week, became, later on, a daily feature of the paper, and Mr. Cable was regularly attached to its editorial staff. In this field he developed originality, and vigor and delicacy of expression. His newspaper career was, however, destined to be brief. In accepting the position, he had stipulated that he should not be called upon to write theatrical notices, as attendance at places of dramatic entertainment involved a moral question which he had not investigated, and which was condemned by the stricter rules of the Presbyterian church, of which he was and is an active member. On an urgent occasion, it was considered necessary to instruct him to take charge of the theatrical column of the paper. This he positively refused to do, and, as soon as his services could be spared, he was informed that they were no longer required.

Soon after this, he accepted the position of accountant and corresponding clerk of the firm of William C. Black & Co., cotton factors, a successful and conservative house, which he continued to serve for several years, and of which he became the trusted representative. He retained this position until the sudden death of the head of the firm, in 1879. In addition to his office duties, he acted as secretary to Mr. Black in various offices of trust, especially in the treasurership of the New Orleans Cotton Exchange, and as secretary of its finance committee.

The success achieved by the sketches which first appeared in this magazine, and which are now collected in "*Old Creole Days*," made Mr. Cable decide to depend thenceforth mainly on his pen for his future career. Thus far, literature had been to him only a stolen industry. The earlier sketches, and much of "*The Grandissimes*," were written as with the left hand, while the right was busy with the invoices and the correspond-

ence of the cotton firm. In the odd moments of his busy life he jotted down, on odd scraps of paper, the conceits that grew out of his passing intercourse with creole men of business of all grades, and with the stray bits of creole life with which he was thrown in contact. With a good gift for language, and a very rare one for dialect, he has made a systematic study of creole French, of which he may be regarded as the first thorough exponent. He has been no less successful in acquiring the patois of the New Orleans negro, and the music of the curious old slave-songs. In singing these, as in rendering the speech of the creole and the negro, he evinces a talent which is at somewhat strange variance with his former prejudice against the dramatic art.

His work in this direction, as in others, has been carried on with a direct purpose, and with a success which is now yielding him good fruit. He is, and he will, probably, remain, the first authority in all matters, light or grave, relating to the people and the history of Louisiana. He would be a bold man and a resolute one who, with Cable's precedence assured, would now attempt that mastery of a slightly known dialect, without which no true portrayal of the character of this people could be possible. Probably, also, the true spirit of the creole could never be gained by one not born among them, and whose life had not been passed in close observation of their characteristics. His work has by no means been confined to speech and personal traits. It has penetrated every remote corner of the whole history of the colony, and he has gained a hard-earned familiarity with his subject, such as few writers ever consider it worth their while to achieve. For more than a year past he has devoted himself almost exclusively to the preparation of a history of New Orleans, which is now being published by the Census Office in connection with the social statistics of that city, and, except so far as relates to the mere enumeration, he has collated the statistical information himself. He might well rest his reputation for thorough and judicious historical and descriptive work on this production alone. He has gathered also the material for a census report on that curious and romantic people of the Têche and Attakapas country, who, exiled from Acadia, found a home only in far Louisiana, where, as 'Cadjians, they still retain their original peculiarities. Charmed as he is with the brilliant color and picturesque effects that this study has developed, there is ground for the hope that a novel which he is to write before long may be laid in the land of Evangeline.

Mr. Cable has said, in "The Grandissimes," "a creole never forgives a public mention,"

and his work has hitherto been received by the race it has delineated in no such cordial spirit as has marked its welcome elsewhere. Much resentment has been expressed; the correctness of the portrayal has been denied, and the suspicion was aroused that a strange and unkind critic had been making free with the sacred traditions of a proud and over-sensitive people. Happily this condition is now changing, and the creoles themselves are beginning to recognize the kindly and appreciative spirit which has actuated all his dealings with them. Indeed, the better men among them, who at first resented "The Grandissimes" as an intrusion and an impertinence, realizing, at last, that it was written by a native of New Orleans and by an ex-Confederate soldier, have been penetrated by its true meaning, have seen that it was written in a spirit of reform rather than of criticism, and have expressed their hopeful satisfaction that it was written.

As was natural in the case of one exploring such an unfamiliar field, Mr. Cable has been charged by more than one of his critics with inaccuracy and exaggeration. His methods of work and his methods of thought, if not indeed his inherent character, are a perfect answer to this charge. He has carried into his study the habits and processes of the counting-room, making sure that his day-book and cash-book are quite correct before they are posted into his literary ledger, which is a complete index to his material. He works slowly and carefully, with his authorities at his elbow; mastering the details of every subject and making himself familiar with all its bearings before accepting it for his work. Nor does he stop here. Any one who has seen the earlier drafts of his writing must recognize, in his frequent erasures and interlineations, not only a search for the best methods of expression, but a desire for exact statement.

Mr. Cable's reading has been thorough rather than general. For a long time he cherished scruples against novel-reading, but this prejudice is now laid, his convictions having been completely changed by reading George MacDonald's "Annals of a Quiet Neighborhood." He is still innocent of the modern French novel. Victor Hugo, Thackeray, Tourguéneff, and Hawthorne he holds in the highest estimation. He is fond of music, and has a more than ordinary knowledge of it, and is especially given to working out the score of the songs of his favorite birds, having succeeded, after many efforts, in recording the roulade of an oriole that sings in his orange-tree.

His frank and manly treatment of the peculiar social problems of his native city has not failed to arouse a certain feeling of

antagonism. This, however, is yielding to a recognition of the real drift of his purpose. Although a Southerner, bred to the prejudices of his community, and although he has rarely been subjected to other influences, he has been able, by the sheer force of his own genius, to lift himself above his immediate surroundings and to view them with the eye of a man of the world. A friend has written of him: "What he hopes to accomplish is the amelioration of the colored race in every possible way. To this end, he would incite them to greater ambition, extend to them, through the State, every educational advantage, afford them opportunities for a fuller religious instruction, give them a more exalted idea of the sanctity of the marriage relation, and so widen their sphere of action that they may become useful, intelligent, and contented members of the community." He has shown, as in "Madame Delphine," a special tenderness for the quadroons and octo-rooms, who have hardly a place in the social economy. The careful reader of his works, looking beyond their humor and their dramatic and pathetic elements, must recognize a deep-lying purpose, not only to elevate these lower orders of the community, but even more to humanize and civilize the dominant race which has suffered so deeply from its false relation to its dependents.

It is not possible, in a brief sketch like this, to give an adequate idea of the force and delicacy of Mr. Cable's writing; of his close study of creole character, of his appreciation, remarkable in a Southerner, of the underlying principles involved in the question of slavery, or of his great cleverness in handling the creole dialect. Indeed, the difficulty with which any rendering of this dialect is caught by those not familiar with French, or rather with Louisiana French, is the only serious limitation to the general popularity of his work. His rendering of creole English is perfect, and once its key is found, it becomes entirely familiar.

In his census history of New Orleans, he says of the creoles:

"Their more pronounced faults were generally those moral provincialisms which travelers recount with undue impatience; they are said to have been coarse, wasteful, vain, and they were also deficient in energy and application, and without well-directed ambition; unskillful in handicraft, doubtless entirely through negligence, and totally wanting in that community feeling which begets the study of reciprocal rights and obligations * * *. Hence, they were fonder of pleasant fictions regarding the salubrity, beauty, and advantages of their town, than of measures to justify their assumptions. Easily inflamed, they were as easily discouraged, thrown into confusion, and subdued, and they expended the best of their energies in trivial pleasures, especially the masque and

the dance; yet they were kind parents, affectionate wives, tractable children, and enthusiastic patriots."

Nothing that he has written is more characteristic than these two bits from "The Grandissimes":

"Where is the gold that came into your purse? All gone?"

"For rice and potatoes," said Aurore, and for the first time she uttered a genuine laugh, under that condition of mind which Latins usually substitute for fortitude.

* * * * *

"And one after another, under the mild coolness of Honoré's amiable disregard, their indignation trickled back from steam to water, and they went on drawing their stipends."—

Following is his explanation of the character of the *calas* vender:

"As for us, our feelings, our sentiments, affections, etc., are fine, keen, and delicate; and many what we call refined. Why? Because we get them as we get our old swords and gems and laces—from our grandsires, mothers, and all. Refined they are—after centuries of refining. But the feelings handed down to Clemence had come through ages of African savagery; through fires that do not refine, but that blunt and blast and blacken and char; starvation, gluttony, drunkenness, thirst, drowning, nakedness, dirt, fetishism, debauchery, slaughter, pestilence, and the rest—she was their heiress; they left her the cinders of human feelings. She remembered her mother. They had been separated in her childhood, in Virginia, when it was a province. She remembered with pride the price her mother had brought at auction, and remarked, as an additional interesting item, that she had never seen or heard of her since. She had had children of assorted colors—had one with her now, the black boy that brought the basil to Joseph; the others were here and there, some in the Grandissime households or field-gangs, some elsewhere within occasional sight, some dead, some not accounted for. Husbands—like the Samaritan woman's. We know she was a constant singer and laughter."

The following relates to the sad and silent "f. m. c." ("free man of color"):

"And the other, with that grave and gentle economy of words which made his speech so unique, recounted what we amplify."

This bit grows out of Mr. Raoul Innerarity's curiosity as to how much Doctor Keene thought he had got for his picture of "Louisiana 'Rif-fusing to h-anter' the Union":

"Well, how much?"

"Two 'ondred fifty." He laid himself out at length, his elbow on the deck, his head in his hand. "I believe I'm sorry I sole 'er."

"I don't wonder. How's Honoré? Tell me what has happened. Remember, I've been away five months."

"No; I am verrie glad dat I sole 'er. What? Ha! I should think so! If it have not had been fo' dat, I would not be married to-day. You think I would get married on dat sa'rie w'at Proffis-or Frowenfel' was payin' me? Twenty-five dolla' de mont'? Docta Keene, no gen'leman h-ought to git married if 'e 'ave not anny'ow fifty dolla' de mont'! If I wasn' a h-artiz I wouldn' git married, I gie you my word."

EUPHEMIA AMONG THE PELICANS.

THE sun shone warm and soft, as it shines in winter time in the hemi-tropics. The wind blew strong, as it blows whenever and wherever it listeth. Seven pelicans labored slowly through the air. A flock of ducks rose from the surface of the river. A school of mullet, disturbed by a shark, or some other unscrupulous pursuer, sprang suddenly out of the water just before us, and fell into it again like the splashing of a sudden shower.

I lay upon the roof of the cabin of a little yacht. Euphemia stood below, her feet upon the mess-chest, and her elbows resting on the edge of the cabin roof. A sudden squall would have unshipped her; still, if one would be happy there are risks that must be assumed. At the open entrance of the cabin, busily writing on a hanging-shelf that served as a table, sat a Paying Teller. On the high box which during most of the day covered our stove was a little lady, writing in a note-book. On the forward deck, at the foot of the mast, sat a young man in a state of placidness. His feet stuck out on the bowsprit, while his mildly contemplative eyes went out unto the roundabout. At the tiller stood our guide and boatman, his somber eye steady on the south-by-east. Around the horizon of his countenance there spread a dark and six-days' beard, like a slowly rising thunder-cloud; ever and anon there was a gleam of white teeth, like a bright break in the sky, but it meant nothing. During all our trip, the sun never shone in that face. It never stormed, but it was always cloudy. But he was the best boatman on those waters, and when he stood at the helm we knew we sailed secure. We wanted a man familiar with storms and squalls, and if this familiarity had developed into facial sympathy, it mattered not. We could attend to our own sunshine. At his feet sat humbly his boy of twelve, whom we called "the crew." He was making fancy knots in a bit of rope. This and the occupation of growing up were the only labors in which he willingly engaged.

Euphemia and I had left Rudder Grange, to spend a month or two in Florida, and we were now on a little sloop-yacht on the bright waters of the Indian River. It must not be supposed that, because we had a Paying Teller with us, we had set up a floating bank. With this Paying Teller, from a distant State, we had made acquaintance on our first entrance into Florida. He was traveling in

what Euphemia called "a group," which consisted of his wife,—the little lady with the note-book,—the contemplative young man on the forward deck, and himself.

This Paying Teller had worked so hard and so rapidly at his business for several years, and had paid out so much of his health and strength, that it was necessary for him to receive large deposits of these essentials before he could go to work again. But the peculiar habits of his profession never left him. He was continually paying out something. If you presented a conversational check to him in the way of a remark, he would, figuratively speaking, immediately jump to his little window and proceed to cash it, sometimes astonishing you by the amount of small change he would spread out before you.

When he heard of our intention to cruise on Indian River he wished to join his "group" to our party, and as he was a good fellow we were glad to have him do so. His wife had been, or was still, a school-teacher. Her bright and cheerful face glistened with information.

The contemplative young man was a distant connection of the Teller, and his first name being Quincy, was commonly called Quee. If he had wanted to know any of the many things the little teacher wished to tell he would have been a happy youth; but his contemplation seldom crystalized into a knowledge of what he did want to know.

"And how can I," she once said to Euphemia and myself, "be expected ever to offer him any light when he can never bring himself to actually roll up a question?"

This was said while I was rolling a cigarette.

The "group" was greatly given to writing in journals, and making estimates. Euphemia and I did little of this, as it was our holiday, but it was often pleasant to see the work going on. The business in which the Paying Teller was now engaged was the writing of his journal, and his wife held a pencil in her kidded fingers and a little blank-book on her knees.

This was our first day upon the river.

"Where are we?" asked Euphemia. "I know we are on the Indian River, but where is the Indian River?"

"It is here," I said.

"But where is here?" reiterated Euphemia.

"There are only three places in the world," said the teacher, looking up from her book,

—“here, there, and we don't know where. Every spot on earth is in one or the other of those three places.”

“As far as I am concerned,” said Euphemia, “the Indian River is in the last place.”

“Then we must hasten to take it out,” said the teacher, and she dived into the cabin, soon re-appearing with a folding map of Florida. “Here,” she said, “do you see this wide river running along part of the Atlantic coast of the State, and extending down as far as Jupiter Inlet? That is Indian River, and we are on it. Its chief characteristics are that it is not a river, but an arm of the sea, and that it is full of fish.”

“It seems to me to be so full,” said I, “that there is not room for them all—that is, if we are to judge by the way the mullet jump out.”

“I think,” said the teacher, making a spot with her pencil on the map, “that just now we are about here.”

“It is the first time,” said Euphemia, “that I ever looked upon an unknown region on the map, and felt I was there.”

Our plans for travel and living were very simple. We had provided ourselves on starting with provisions for several weeks, and while on the river we cooked and ate on board our little vessel. When we reached Jupiter Inlet we intended to go into camp. Every night we anchored near the shore. Euphemia and I occupied the cabin of the boat; a tent was pitched on shore for the Teller and his wife; and there was another tent for the captain and his boy, and this was shared by the contemplative young man.

Our second night on the river was tinged with incident. We had come to anchor near a small settlement, and our craft had been moored to a rude wharf. About the middle of the night a wind-storm arose, and Euphemia and I were awakened by the bumping of the boat against the wharf-posts. Through the open end of the cabin I could see that the night was very dark, and I began to consider the question whether or not it would be necessary for me to get up, much preferring, however, that the wind should go down. Before I had made up my mind we heard a step on the cabin above us, and then a quick and hurried tramping. I put my head out of the little window by me, and cried:

“Who's there?”

The voice of the boatman replied out of the darkness:

“She'll bump herself to pieces against this pier! I'm going to tow you out into the stream!” And so he cast us loose, and getting into the little boat which was fastened to our stern, and always followed us as a colt

its mother, he towed us far out into the stream. There he anchored us, and rowed away. The bumps now ceased, but the wind still blew violently, the waves ran high, and the yacht continually wobbled up and down, tugging and jerking at her anchor. Neither of us was frightened, but we could not sleep.

“I know nothing can happen,” said Euphemia, “for he would not have left us here if everything had not been all right, but one might as well try to sleep in a corn-popper as in this bed.”

After a while the violent motion ceased, and there was nothing but a gentle surging up and down.

“I am so glad the wind has lulled,” said Euphemia, from the other side of the center-board partition which partially divided the cabin.

Although I could still hear the wind blowing strongly outside, I too was glad that its force had diminished so far that we felt no more the violent jerking that had disturbed us, and I soon fell asleep.

In the morning, when I awoke, I saw that the sun was shining brightly, and that a large sea-grape bush was hanging over our stern. I sprang out of bed, and found that we had run, stern foremost, upon a sandy beach. About forty feet away, upon the shore, stood two 'possums, gazing with white, triangular faces upon our stranded craft. Except these, and some ducks swimming near us, with seven pelicans flying along on the other side of the river, there was no sign of life within the range of my sight. I was not long in understanding the situation. It had not been the lulling of the storm, but the parting of our cable which had caused the uneasy jerking of our little yacht to cease. We had been blown I knew not how far down the river, for the storm had come from the north, and had stranded I knew not where. Taking out my pocket-compass I found that we were on the eastern shore of the river, and that the wind had changed completely, and was now blowing, not very strong, from the south-east. I made up my mind what must be done. We were probably far from the settlement and the rest of the party, and we must go back. The wind was in our favor, and I knew I could sail the boat. I had never sailed a boat in my life, and was only too glad to have the chance, untrammelled by any interference.

I awoke Euphemia and told her what had happened. The two 'possums stood upon the shore, and listened to our conversation. Euphemia was much impressed by the whole affair, and for a time said nothing.

“We must sail her back, I suppose,” she remarked at length, “but do you know how to start her?”

"The hardest thing to do is to get her off the beach," I answered, "but I think I can do that."

I rolled up my trowsers, and with bare feet jumped out upon the sand. The two 'possums retired a little, but still watched my proceedings. After a great deal of pushing and twisting and lifting, I got the yacht afloat, and then went on board to set the sail. After much pulling and tugging, and making myself very warm, I hoisted the main-sail. I did not trouble myself about the jib, one sail being enough for me to begin with. As the wind was blowing in the direction in which we wished to go, I let the sail out until it stood nearly at right angles with the vessel, and was delighted to see that we immediately began to move through the water. I took the tiller, and steered gradually toward the middle of the river. The wind blew steadily and the yacht moved bravely on. I was as proud as a man drawn by a conquered lion, and as happy as one who did not know that conquered lions may turn and rend. Sometimes the vessel rolled so much that the end of the boom skimmed the surface of the water, and sometimes the sail gave a little jerk and flap, but I saw no necessity for changing our course, and kept our bow pointed steadily up the river. I was delighted that the direction of the wind enabled me to sail with what might be called a horizontal deck. Of course, as the boatman afterward informed me, this was the most dangerous way I could steer, for if the sail should suddenly "jibe" there would be no knowing what would happen. Euphemia sat near me, perfectly placid and cheerful, and her absolute trust in me gave me renewed confidence and pleasure. "There is one great comfort," she remarked, as she sat gazing into the water,—"if anything should happen to the boat we can get out and walk."

There was force in this remark, for the Indian River in some of its widest parts is very shallow, and we could now plainly see the bottom, a few feet below us.

"Is that the reason you have seemed so trustful and content?" I asked.

"That is the reason," said Euphemia.

On we went and on, the yacht seeming sometimes a little restive and impatient, and sometimes rolling more than I could see any necessity for, but still it proceeded. Euphemia sat in the shadow of the cabin, serene and thoughtful, and I, holding the tiller steadily amidship, leaned back and gazed up into the clear blue sky.

In the midst of my gazing there came a shock that knocked the tiller out of my hand. Euphemia sprang to her feet and screamed; there were screams and shouts on the other

side of the sail, which seemed to be wrapping itself about some object I could not see. In an instant another mast beside our own appeared above the main-sail, and then a man with a red face jumped on the forward deck. With a quick, determined air, and without saying a word, or seeming to care for my permission, he proceeded to lower our sail; then he stepped up on top of the cabin, and looking down at me inquired what in thunder I was trying to do.

I made no answer, but looked steadily before me. Now that the sail was down, I could see what had happened. I had collided with a yacht which we had seen before. It was larger than ours, and contained a grandfather and a grandmother, a father and a mother, several aunts, and a great many children. They had started on the river the same day as ourselves, but did not intend to take so extended a trip as ours was to be. The whole party was now in the greatest confusion. I did not understand what they said, nor did I attend to it. I was endeavoring, for myself, to grasp the situation. Euphemia was calling to me from the cabin, into which she had retreated; the man was still talking to me from the cabin roof, and the people in the other boat were vociferating, and screaming; but I paid no attention to any one until I had satisfied myself that nothing serious had happened. I had not run into them head on, but had come up diagonally, and the side of our bow had struck the side of their stern. The collision, as I afterward learned, had happened in this wise: I had not seen the other boat because, lying back as I had been, the sail concealed her from me, and they had not seen us because their boatman was in the forward part of their cabin, collecting materials for breakfast, and the tiller was left in charge of one of the boys, who, like all the rest of his party who sat outside, had discreetly turned his back to the sun.

The grandfather stood up in the stern. He wore a black silk hat, and carried a heavy grape-vine cane. Unsteadily balancing himself on his legs, and shaking his cane at me, he cried:

"What is the meaning of this, sir? Are you trying to drown a whole family, sir?"

"If he'd run his bowsprit in among you," said the boatman from the cabin roof, "he'd 'a' killed a lot of you before you'd been drowned."

Euphemia screamed to me to come to her; the father was standing on his cabin roof, shouting something to me; the women in the other boat were violently talking among themselves; some of the little children were crying; the girls were hanging to the ladies, and all the boys were clambering on board our boat. It was a time of great excitement,

and something must be instantly said by me. My decision was quick.

"Have you any tea?" I said, addressing the old gentleman.

"Tea!" he roared. "What do you mean by that?"

"We have plenty of coffee on board," I answered, "but some of our party can't drink it. If you have any tea, I should like to borrow some. I can send it to you when we reach a store."

From every person of the other party came, as in a chorus, the one word, "Tea?" And Euphemia put her pale face out of the cabin, and said, in a tone of wondering inquiry, "Tea?"

"Did you bang into us in this way to borrow tea?" roared the old gentleman.

"I did not intend, of course, to strike you so hard," I said, "and I am sorry I did so, but I should like to borrow some tea."

Euphemia whispered to me:

"We have tea."

I looked at her, and she locked her lips.

"Of course we can give you some tea, if you want some," said the red-faced boatman, "but I never heered of a thing like this since I was first born, nor ever shall again, I hope."

"I don't want you to give me any tea," I said. "I shall certainly return it, and a very little will do—just a handful."

The two boats had not drifted apart, for the father, standing on the cabin roof, had held tightly to our rigging, and the boatman, still muttering, went on board his vessel to get the tea. He brought it, wrapped in a piece of a newspaper.

"Here comes your man," he said, pointing to a little boat which was approaching us. "We told him we'd look out for you, but we didn't think you'd come smashing into us like this."

In a few moments our boatman had pulled alongside, his face full of a dark inquiry. He looked at me for authoritative information.

"I came here," I said to him, "after tea."

"Before breakfast, I should say!" cried the old gentleman. And every one of his party burst out laughing.

Much was now said, chiefly by the party of the other part, but our boatman paid little attention to any of it. The boys scrambled on board their own vessel. We pushed apart, hoisted sail, and were soon speeding away.

"Good-bye!" shouted the father, a genial man. "Let us know if you want any more groceries, and we'll send them to you."

For six days from our time of starting we sailed down the Indian River. Sometimes the banks were miles apart, and sometimes they were very near each other; sometimes we

would come upon a solitary house, or little cluster of dwellings; and then there would be many, many miles of wooded shore before another human habitation was to be seen. Inland, to the west, stretched a vast expanse of lonely forest where panthers, bears, and wild-cats prowled. To the east lay a long strip of land, through whose tall palmettos came the roar of the great ocean. The blue sky sparkled over us every day; now and then we met a little solitary craft; countless water-fowl were scattered about on the surface of the stream; a school of mullet was usually jumping into the air; an alligator might sometimes be seen steadily swimming across the river, with only his nose and back exposed; and nearly always, either to the right or to the left, going north or going south, were seven pelicans, slowly flopping through the air.

A portion of the river, far southward, called "The Narrows," presented a very peculiar scene. The banks were scarcely fifty feet apart, and yet there were no banks. The river was shut in to the right by the inland shore, and to the left by a far-reaching island, and yet there was no inland shore, nor any island to the left. On either side were great forests of mangrove trees, standing tiptoe on their myriad down-dropping roots, each root midleg in the water. As far as we could see among the trees, there was no sign of ground of any kind—nothing but a grotesque network of roots, on which the forest stood. In this green-bordered avenue of water, which extended nine or ten miles, the thick foliage shut out the breeze, and our boatman was obliged to go ahead in his dinky, as he called the little boat, and tow us along.

"There are Indians out West," said Euphemia, as she sat gazing into the mangroves, "who live on roots, but I don't believe they could live on these. The papposes would certainly fall through."

At Jupiter Inlet, about a hundred and fifty miles from our point of starting, we went into camp, in which delightful condition we proposed to remain for a week or more. There was no trouble whatever in finding a suitable place for a camp. The spot selected was a point of land swept by cool breezes, with a palmetto forest in the rear of it. On two sides of the point stretched the clear waters of the river, while half a mile to the east was Jupiter Inlet, on each side of which rolled and tumbled the surf of the Atlantic. About a mile away was Jupiter Light-house, the only human habitation within twenty miles. We built a palmetto hut for a kitchen; we set up the tents in a permanent way; we constructed a little pier for the yacht; we built a wash-

stand, a table, and a bench. And then, considering that we had actually gone into camp, we got out our fishing-lines.

Fishing was to be the great work here. Near the Inlet, through which the waters of the ocean poured into and out of our river, on a long, sandy beach, we stood in line, two or three hours every day except Sunday, and fished. Such fishing we had never imagined!—there were so many fishes, and they were so big. The Paying Teller had never fished in his life before he came to Florida. He had tried at St. Augustine, with but little success. "If the sport had been to chuck fish into the river," he had said, "that would be more in my line of business; but getting them out of it did not seem to suit me." But here it was quite a different thing. It was a positive delight to him, he said, to be obliged so often to pay out his line.

One day, when tired of struggling with gamy blue-fish and powerful cavalhos (if that is the way to spell it), I wound up my line, and looked about to see what the others were doing. The Paying Teller stood near, on tiptoe, as usual, with his legs wide apart, his hat thrown back, his eyes flashing over the water, and his right arm stretched far out, ready for a jerk. Quee was farther along the beach. He had just landed a fish, and was standing gazing meditatively upon it as it lay upon the sand. The hook was still in its mouth, and every now and then he would give the line a little pull, as if to see if there really was a connection between it and the fish. Then he would stand a little longer, and meditate a little more, still looking alternately at the line and the fish. Having made up his mind, at last, that the two things must be separated, he kneeled down upon his flopping prize and proceeded meditatively to extract the hook. The teacher was struggling at her line. Hand over hand she pulled it in. As it came nearer and nearer, her fish swam wildly from side to side, making the tightened line fairly hiss as it swept through the water. But still she pulled and pulled, until, red and breathless, she landed her prize upon the sand.

"Hurrah!" shouted the Paying Teller. "That's the biggest blue-fish yet!" But he did not come to take the fish from the hook. He was momentarily expecting a bite.

Euphemia was not to be seen. This did not surprise me, as she frequently gave up fishing long before the others, and went to stroll upon the sea-beach, a few hundred yards away. She was fond of fishing, but it soon tired her. "If you want to know what it is like," she wrote to a friend in the North, "just tie a long string around your boy Charlie, and try to haul him in out of the back yard."

But Euphemia was not upon the sea-beach to-day. I walked a mile or so along the sand, but did not find her. She had gone around the little bluff to our shark-line. This was a long rope, like a clothes-line, with a short chain at the end and a great hook, which was baited with a large piece of fish. It was thrown out every day, the land end tied to a stout stake driven into the sand, and the whole business given into the charge of "the crew," who was to report if a shark should bite. But to-day the crew had wandered away, and Euphemia was managing the line.

"I thought I would try to catch a shark all by myself," she said. "I wonder if there's one on the hook now. Would you mind feeling the line?"

I laughed as I took the rope from her hand.

"If you had a shark on the hook, my dear," said I, "you would have no doubt upon the subject."

"It would be a splendid thing to catch the first one," she said, "and there must be lots of them in here, for we have seen their back fins so often."

I was about to answer this remark when I began to walk out into the water. I did not at the time know exactly why I did this, but it seemed as if some one had taken me by the hand and was leading me into the depths. But the water splashing above my ankles and a scream from Euphemia made me drop the line, which immediately spun out to its full length, making the stake creak and move in the sand.

"Goodness gracious!" cried Euphemia, her face pale as the beach. "Isn't it horrible? We've got one!"

"Horrible!" I cried. "Why, didn't you want to get one?" and seizing the ax, which lay near by, I drove the stake down deep into the sand. "Now it will hold him!" I cried. "He can't pull that out!"

"But how are we to pull him in?" exclaimed Euphemia. "This line is as tight as a guitar-string."

This was true. I took hold of the rope, but could make no impression on it. Suddenly it slackened in my hand.

"Hurrah!" I cried. "We may have him yet! But we must play him."

"Play him!" exclaimed Euphemia. "You can never play a huge creature like that. Let me go and call some of the others to help."

"No, no!" I said. "Perhaps we can do it all by ourselves. Wind the line quickly around the top of the stake as I pull it in."

Euphemia knelt down and rapidly wound several yards of the slack cord around the

stake. In a few moments it tightened again, jerking itself out of my hand.

"There, now!" said Euphemia. "He is off again! You can never haul him in, now."

"Just wait," I said. "When he finds that he cannot break away he rushes toward shore, trying to bite the line above the chain. Then I must haul it in and you must wind it up. If you and I and the shark continue to act in this way, perhaps, after a time, we may get him into shallow water. But don't scream or shout. I don't want the others to know anything about it."

Sure enough, in a minute or two the line slackened again, when it was rapidly drawn in and wound around the stake.

"There he is!" exclaimed Euphemia. "I can see him just under the water, out there."

The dark form of the shark, appearing at first like the shadow of a little cloud, could be seen near the surface, about twenty-five yards away. Then his back fin rose, his tail splashed violently for an instant, and he disappeared. Again the line was loosened, and again the slack was hauled in and wound up. This was repeated, I don't know how many times, when suddenly the shark in his desperation rushed into shallow water and grounded himself. He would have floundered off in a few moments, however, had we not quickly tightened the line. Now we could see him plainly. He was eight or nine feet long and struggled violently, exciting Euphemia so much that it was only by clapping her hand over her mouth that she prevented herself from screaming. I would have pulled the shark farther in shore, but this was impossible, and it was needless to expect him to move himself into shallower water. So, quickly rolling up my trousers, I seized the ax and waded in toward the floundering creature.

"You needn't be afraid to go right up to him," said Euphemia. "So long as he don't turn over on his back he can't bite you."

I had heard this bit of natural history before, but, nevertheless, I went no nearer to the shark than was necessary in order to whack him over the head with the ax. This I did several times, with such effect that he soon became a dead shark.

When I came out triumphant, Euphemia seized me in her arms and kissed me.

"This is perfectly splendid!" she said. "Who can show as big a fish as this one? None of the others can ever crow over you again."

"Until one of them catches a bigger shark," I said.

"Which none of them ever will," said Euphemia, decidedly. "It isn't in them."

The boatman was now seen approaching in his dinky to take the party back to camp,

and the crew, having returned to his duty, was sent off in a state of absolute amazement to tell the others to come and look at our prize. Our achievement certainly created a sensation. Even the boatman could find no words to express his astonishment. He waded in and fastened a rope to the shark's tail, and then we all took hold and hauled the great fish ashore.

"What is the good of it now you have got it?" asked Quee.

"Glory is some good!" exclaimed Euphemia.

"And I'm going to have you a belt made from a strip of its skin," I said.

This seemed to Euphemia a capital idea. She would be delighted to have such a trophy of our deed, and the boatman was set to work to cut a suitable strip from the fish. And this belt, having been properly tanned, lined, and fitted with buckles, is now one of her favorite adornments, and cost, I am bound to add, about three times as much as any handsome leathern belt to be bought in the stores.

Every day the Paying Teller, his wife, and Quee carefully set down in their note-books the weight of fish each individual had caught, with all necessary details and specifications relating thereunto; every day we wandered on the beach, or explored the tropical recesses of the palmetto woods; every evening the boatman rowed over to the light-house to have a bit of gossip, and to take thither the fish we did not need; every day the sun was soft and warm, and the sky was blue; and every morning, going oceanward, and every evening, going landward, seven pelicans flew slowly by our camp.

My greatest desire at this time was to shoot a pelican, to have him properly prepared, and to take him to Rudder Grange, where, suitably set up, with his wings spread out, full seven feet from tip to tip, he would be a grand trophy and reminder of these Indian River days. This was the reason why, nearly every morning and every evening, I took a shot at these seven pelicans. But I never hit one of them. We had only a shot-gun, and the pelicans flew at a precautionary distance; but, being such big birds, they always looked to me much nearer than they were. Euphemia earnestly desired that I should have a pelican, and although she always wished I should hit one of these, she was always glad when I did not.

"Think how mournful it would be," she said, "if they should take their accustomed flights morning and evening with one of their number missing."

"Repeating Wordsworth's verses, I suppose," remarked the little teacher.

I had been disappointed in the number of

pelicans we had seen. I knew that Florida was one of the homes of the pelican, and I had not expected to see these birds merely in small detachments. But our boatman assured me that on our return trip he would give me a chance of seeing and shooting as many pelicans as I could desire. We would touch at Pelican Island, which was inhabited entirely by these birds, and whence the parties of seven were evidently sent out.

One day, the boatman told us that a man at the light-house was an amateur photographer, and that, if we liked, he would come down and take a picture of us in camp. This idea was received with great favor. I have noticed that everybody who goes into camp, or engages in outdoor sports of any kind, likes to be photographed in some phase of his untrammelled life. Thus it is that no living creature prowls more frequently through our woods and wilds than the photographer.

Euphemia had very strong ideas on this subject. "I would associate the photographer," she said, "more closely with our social and domestic being. Instead of going to him to have our heads taken, as if we were a lot of Bluebeard's wives, he should come to us and photograph us in our homes. How many an absent husband would be overjoyed to see his wife sitting at her sewing, with all the familiar objects cluttered about her in the way he knew so well! How many a loved one, far, far from home, would be gratified to receive a picture of the family at supper, where he could recognize even the cracks in the familiar cups and plates! And how charmed an absent wife would be to get a photograph of her husband at work in his office, or, if belonging to a lower class, digging with his spade, or carrying his hod! Such a picture would be infinitely more comforting than his unfamiliar appearance with merely head and shoulders."

This eloquent pleading was scarcely necessary. We all wanted the photographer anyway, and we sent for him. When he came, a great deal of time was taken up in the composition and grouping of the intended picture. We tried to manage matters so that everything would show—the palmetto hut, with as many kitchen utensils as possible disposed near the door, the boat moored by the shore, the tent, the wash-stand, the table, the bench, some choice fish hung up in prominent positions, and, lastly, ourselves, grouped with natural ease. The photographer interfered a good deal with our arrangement of ourselves, as he desired each face should show as plainly as possible, and that no one of us should be more prominent than the others. The consequence of this was that, after many changes,

we gradually became arranged in a straight line. The boatman and his boy were allowed to place themselves as they chose, and they, therefore, took admirable positions on one side.

When the pictures were finished, we looked at them rather blankly. Everything was there, to be sure, but the palmetto hut looked very much like the tree it was under; and only a few of the pots and pans, on which we had relied to give a gypsy or backwoods look to our encampment, peered through the gloom of that corner of the picture; the hull of our yacht was almost entirely out of sight behind the bank on which we stood; the top of the palmetto tree, under which our tents were pitched, had been greatly influenced by the wind at the critical moment, and appeared to be spread along the sky in irregular patches; while, as for ourselves, it was impossible to recognize any one of us. I, by Euphemia's command, had stood up as straight as I could; the Paying Teller, who had a habit of sinking into his sockets, shut himself up as much as possible; while Quee had stood on a little elevation between us. Thus, we all appeared of about the same height, and, indeed, like little triplicates of the same man.

"Our friends can tell which is you," said Euphemia, "by your standing next to me."

But as it was impossible to distinguish Euphemia from the teacher, this method of identification did not appear to me to possess much value.

One figure, however, took admirably. A large fish which hung on a pole was placed so far in the foreground that it looked a little larger than any of us. As the portrait of a big fish, with the camp and figures in the distance, our photograph was a success.

It was a great thing, however, to have pictures of ourselves showing exactly how we looked when in camp, and as soon as we reached a post-office, we mailed copies to our distant friends. If the big fish had had any friends, they would have been, perhaps, the most appropriate individuals to receive the pictures.

A few days after this, we broke up our camp, and started northward. We had all been very happy and contented during our ten days' sojourn in this delightful place; but when at last our departure was determined upon, the Paying Teller became possessed with a wild desire to go, go, go. There was some reason, never explained nor fully expressed, why no day, hour, minute, or second should be lost in speeding to the far Northwest. The boatman, too, impelled by what impulse I know not, seemed equally anxious to get home. As for the Paying Teller's

"group," it always did exactly as he wished. Therefore, although Euphemia and I would have been glad to linger here and there upon our homeward way, we could not gainsay the desire of the majority of the party, and consequently we sailed northward as fast as wind and sometimes oars would take us.

Only one cause for delay seemed tolerable to the Paying Teller. This was to stop at every post-office. We had received but one mail while in camp, which had been brought in a sail-boat from an office twenty miles away. But the Paying Teller had given and written the most intricate and complex directions for the retention or forwarding of his mail to every postmaster in the country we had passed through, and these directions, as we afterward found, had so puzzled and unsettled the minds of these postmasters that for several weeks his letters had been moving like shuttle-cocks up and down the St. John's and Indian rivers—never stopping anywhere, never being delivered, but crossing and recrossing each other as if they were imbued with their owner's desire to go, go, go. Some of the post-offices where we stopped were lonely little buildings with no other habitation near. These we usually found shut up; being opened only on mail-days, and in such cases nothing could be done but to slip a protesting postal into the little slit in the wall apparently intended for letters. Whether these postals were eaten by rats or read by the P. M.'s, we never discovered. Wherever an office was found open, we left behind us an irate postmaster breathing all sorts of contemplated vengeance upon the disturbers of his peace. We heard of letters that had been sent north and sent south, but there never was any at the particular place where we happened to be, and I suppose that the accumulated mail of the Paying Teller may for several years drop gradually upon him through the meshes of the Dead-Letter Office.

There were a great many points of interest which we had passed on our downward trip, the boatman assuring us that, with the wind we had, and which might cease at any moment, the great object was to reach Jupiter as soon as possible, and that we would stop at the interesting places on the way up. But now the wind, according to his reasoning, made it necessary that we should again push forward as fast as we could; and, as I said before, the irresistible attraction of the Northwest so worked upon the Paying Teller that he was willing to pause nowhere, during the day-time, but at a post-office. At one place, however, I was determined to land. This was Pelican Island. The boatman, paying no at-

tention to his promise to stop here and give me an opportunity to shoot one of these birds, declared, when near the place, that it would never do, with such a wind, to drop anchor for a trifle like a pelican. The Paying Teller and Quee also strongly objected to a stop; and, while the teacher had a great desire to investigate the subject of ornithology, especially when exemplified by such a subject as a pelican, she felt herself obliged to be loyal to her "group," and so quietly gave her voice to go on. But I, supported by Euphemia, remained so firm that we anchored a short distance from Pelican Island.

None of the others had any desire to go ashore, and so I, with the gun and Euphemia, took the dinky and rowed to the island. While we were here the others determined to sail to the opposite side of the river to look for a little post-office, the existence of which the boatman had not mentioned until it had been determined to make this stoppage here.

As we approached the island we saw hundreds of pelicans, some flying about, some sitting on trunks and branches of dead trees, and some waddling about on the shore.

"You might as well shoot two of them," said Euphemia, "and then we will select the better to take to Rudder Grange."

The island was very boggy and muddy, and, before I had found a good place to land, and had taken up the gun from the bow of the boat, every pelican in sight took wing and flew away. I stood up and fired both barrels at the retreating flock. They swerved and flew oceanward, but not one of them fell. I helped Euphemia on shore, and then, gun in hand, I made my way as well as I could to the other end of the island. There might be some deaf old fellows left who had not made up their minds to fly. The ground was very muddy, and drift-wood and underbrush obstructed my way. Still, I pressed on, and went nearly half around the island, finding, however, not a single pelican.

Soon I heard Euphemia's voice, calling loud. She seemed to be about the center of the island, and I ran toward her.

"I've got one!" I heard her cry, before I came in sight of her. She was sitting at the root of a crooked, dead tree. In front of her she held, one hand grasping each leg, what seemed to me to be an ungainly and wingless goose. All about her the ground was soft and boggy. Her clothes were muddy, her face was red, and the creature she held was struggling violently.

"What on earth have you got?" I exclaimed, approaching as near as I could, "and how did you get out there?"

"Don't you come any closer!" she cried. "You'll sink up to your waist! I got here by

treading on the little hummocks and holding on to that dead branch; but don't you take hold of it, for you'll break it off, and then I can't get back."

"But what is that thing?" I repeated.

"It's a young pelican," she replied. "I found a lot of nests on the ground over there, and this was in one of them. I chased it all about, until it flopped out here and hid itself on the other side of this tree. Then I came out quietly and caught it. But how am I going to get it to you?"

This seemed, indeed, a problem. Euphemia declared that she needed both hands to work her way back by the means of the long, horizontal limb which had assisted her passage to the place where she sat, and she also needed both hands to hold her prize. It was likewise plain that I could not get to her. Indeed, I could not see how her light steps had taken her over the soft and marshy ground that lay between us. I suggested that she should throw the pelican to me. This she declined to do.

"I could never throw it so far," she said, "and it would surely get away. I don't want to lose this pelican, for I believe it is the last one on the island. If there are other young ones they have scuttled off by this time, and I should dreadfully hate to go back to the yacht without any pelican at all."

"I don't call that much of one," I said.

"It's a real pelican for all that," she replied, "and about as curious a bird as I ever saw. Its wings won't stretch out seven feet, to be sure."

"About seven inches," I suggested.

"But it is a great deal easier to carry a young one like this," she persisted, "and I expect a baby pelican is a much more uncommon sight in the North than a grown one."

"No doubt of it," I said. "We must keep him now you've got him. Can't you kill him?"

"I've no way of killing him," returned Euphemia. "I wonder if you could shoot him if I were to hold him out."

This, with a shot-gun, I positively declined to do. Even if I had had a rifle, I suggested that she might swerve. For a few moments we remained nonplussed. I could not get to Euphemia at all, and she could not get to me unless she released her bird, and this she was determined not to do.

"Euphemia," I said, presently, "the ground seems hard a little way in front of you. If you step over there I will go out on this strip, which seems pretty solid. Then I'll be near enough to you for you to swing the bird to me, and I'll catch hold of him."

Euphemia arose and did as I told her, and

we soon found ourselves about six feet apart. She took the bird by one leg and swung it toward me. With outstretched arm I caught it by the other foot, but as I did so I noticed that Euphemia was growing shorter, and also felt myself sinking in the bog. Instantly I entreated Euphemia to stand perfectly still, for, if we struggled or moved, there was no knowing into what more dreadful depths we might get. Euphemia obeyed me, and stood quite still, but I could feel that she clutched the pelican with desperate vigor.

"How much farther down do you think we shall sink?" she asked, her voice trembling a little.

"Not much farther," I said. "I am sure there is firm ground beneath us, but it will not do to move. If we should fall down we might not be able to get up again."

"How glad I am," she said, "that we are not entirely separated, even if it is only a baby pelican that joins us."

"Indeed I am glad!" I said, giving the warm pressure to the pelican's leg that I would have given to Euphemia's hand, if I could have reached her. Euphemia looked up at me so confidently that I could but believe that in some magnetic way that pressure had been transmitted through the bird.

"Do you think they will come back?" she said, directly.

"Oh, yes," I replied, "there's no manner of doubt of that."

"They'll be dreadfully cross," she said.

"I shouldn't wonder," I replied. "But it makes very little difference to me whether they are or not."

"It ought to make a difference to you," said Euphemia. "They might injure us very much."

"If they tried anything of the kind," I replied, "they'd find it worse for them than for us."

"That is boasting," said Euphemia, a little reproachfully, "and it does not sound like you."

I made no answer to this, and then she asked:

"What do you think they will do when they come?"

"I think they will put a plank out here and pull us out."

Euphemia looked at me an instant, and then her eyes filled with tears.

"Oh, dear!" she exclaimed, "it's dreadful! You know they couldn't do it. Your mind is giving way!"

She sobbed, and I could feel the tremor run through the pelican.

"What do you mean?" I cried, anxiously. "My mind giving way?"

"Yes—yes," she sobbed. "If you were in

your right senses—you'd never think—that pelicans could bring a plank."

I looked at her in astonishment.

"Pelicans!" I exclaimed. "Did you think I meant the pelicans were coming back?"

"Of course," she said. "That's what I was asking you about."

"I wasn't thinking of pelicans at all," I answered. "I was talking of the people in the yacht."

Euphemia looked at me, and then the little pelican between us began to shake violently as we burst out laughing.

"I know people sometimes do lose their minds when they get into great danger," she said, apologetically.

"Hello!" came a voice from the water.

"What are you laughing about?"

"Come and see," I shouted back, "and perhaps you will laugh, too."

The three men came; they had to wade ashore; and when they came they laughed. They brought a plank, and with a good deal of trouble they drew us out, but Euphemia would not let go of her leg of the little pelican until she was sure I had a tight hold of mine.

Day after day we now sailed northward, until we reached the little town at which we had embarked. Here we discarded our blue flannels and three half-grown beards, and slowly made our way through woods and lakes and tortuous streams to the upper waters of the St. John's. In this region the population of the river shores seemed to consist entirely of alligators, in which monsters Euphemia was greatly interested. But she seldom got a near view of one, for the sportsmen on our little steamer blazed away at every alligator as soon as it came into distant sight; and, although the ugly creatures were seldom hit, they made haste to tumble into the water or disappear among the tall reeds. Euphemia was very much annoyed at this.

"I shall never get a good close look at an alligator at all," she said. "I am going to speak to the captain."

The captain, a big, good-natured man, listened to her, and entirely sympathized with her.

"Tom," said he to the pilot, "when you see another big 'gator on shore, don't sing out to nobody, but call me, and slow up."

It was not long before chocolate-colored Tom called to the captain, and rang the bell to lessen speed.

"Gentlemen," said the captain, walking forward to the group of sportsmen, "there's a big 'gator ahead there, but don't none of you fire at him. He's copyrighted."

The men with the guns did not understand him, but none of them fired, and Euphemia and the other ladies soon had the satisfaction of seeing an enormous alligator lying on the bank, within a dozen yards of the boat. The great creature raised its head, and looked at us in apparent amazement at not being shot at. Then, probably considering that we did not know the customs of the river, or were out of ammunition, he slowly slipped away among the reeds with an air as if, like Mr. Turveydrop, he had done his duty in showing himself, and if we did not take advantage of it, it was no affair of his.

"If we only had a fellow like that for a trophy!" ejaculated Euphemia.

"He'd do very well for a trophy," I answered, "but if, in order to get him, I had to hold him by one leg while you held him by another, I would prefer a baby pelican."

Our trip down the St. John's met with no obstacles except those occasioned by the Paying Teller's return tickets. He had provided himself and his group with all sorts of return tickets from the various points he had expected to visit in Florida. These were good only on particular steam-boats, and could be used only to go from one particular point to another. Fortunately he had lost several of them, but there were enough left to give us a good deal of trouble. We did not wish to break up the party, and consequently we embarked and disembarked whenever the Paying Teller's group did so; and thus, in time, we all reached that wide-spread and sandy city which serves for the gate to Florida.

From here, the Paying Teller and his group, with complicated tickets, the determinate scope and purpose of which no one man living could be expected to understand, hurried wildly toward the far North-west; while we, in slower fashion, returned to Rudder Grange.

There, in a place of honor over the dining-room door, stands the baby pelican, its little flippers wide outstretched.

"How often I think," Euphemia sometimes says, "of that moment of peril, when the only actual bond of union between us was that little pelican!"

TOPICS OF THE TIME.

Public Service and Private Business.

PRESIDENT ARTHUR, in his first message to Congress, quotes, with evident appreciation, a passage from the letter in which the late candidate for the vice-presidency accepted his nomination, and in which he said: "It seems to me that the rules which should be applied to the management of the public service may properly conform in the main to those which regulate the conduct of successful private business." We are glad that President Arthur indorses so warmly this sentiment of candidate Arthur. It is an admirable sentiment, and it is admirably expressed. No reform of the civil service is demanded which this proposition does not involve. If President Arthur will throw the whole weight of his administration into the work of making this maxim the rule of the public service, he will revolutionize the methods of appointment and removal, and will make for himself a lasting name.

Nobody will venture to dispute the soundness of the proposition thus laid down by the highest authority. Why should not the public service be managed on the principles which regulate successful private business? These principles are the result of experience; they are calculated to secure, and do secure, honesty and efficiency, vigilance and economy; does not the Government, in the administration of its high trusts and in its vast transactions, need these virtues in its service quite as much as any private business needs them? Who would justify the members of a political administration in adhering to methods of conducting public affairs which, as intelligent business men, they would repudiate as wasteful and ruinous in their own business? President Arthur is right. The public service ought to be managed on business principles. Let us see what this means.

It means, in the first place, that the public service, at least so far as the subordinate places are concerned, ought to be wholly unpartisan. No successful business man asks an applicant for the position of clerk or salesman to which of the political parties he belongs. No business man thinks it important that his clerks should agree with him in their political, or their religious, or their literary opinions. What he wants to know is, whether they are capable of performing the duties of the position for which they apply—whether they are honest, and faithful, and obliging. He will not be guilty of the folly of limiting himself to one-half of the labor-market by an arbitrary and senseless rule which confines his selection of employees to one political party. The men who are responsible for the public service ought to be governed, if President Arthur's maxim is true, by these considerations, and by no others. There are a few important political offices which ought, undoubtedly, to be filled by men who understand, and who will endeavor to carry out, the political policy of the administration. But with the great majority of all the positions in the public service it makes no difference whatever whether the men who hold them are Republicans or Demo-

crats. The Government wants the most capable and trustworthy servants; be they Democrats, or be they Republicans; and it is a distinct repudiation of the plainest business principles when the Government restricts itself, in its search for the best men, to one-half of the population.

Another of these business principles is well formulated by President Arthur. "Original appointments should be based upon ascertained fitness." The principle will be disputed by no intelligent person. The only question is how to apply it. How shall fitness be ascertained? Not one in ten of all the persons appointed to office is personally known to the persons making the appointments. When the Secretary of the Treasury holds in his hand the recommendation of a candidate to a clerkship, signed by various local dignities a thousand miles from Washington, he has not "ascertained" the fitness of the person recommended. Nor is he much more certain after the Congressman from that district has indorsed the application. Doubtless he ought to be, but doubtless he is not. That the person applying is a friend of the Congressman is probable enough; that he is the best man for that place is by no means clear. How shall the fact be ascertained? It is evident that the task of making fit appointments is not an easy one. A business man has only a score or two, or a hundred or two, clerks and salesmen to appoint; in a great department of the Government, especially when the head changes once in four years or oftener, the difficulty is much greater. It is to the solution of this practical difficulty that the civil service reformers have addressed themselves; and they claim to have found out a way in which the fitness of applicants for office can be ascertained with a good degree of accuracy. They say that their method has been tried, and that it works admirably. They point to strong testimonies of its success in documents accompanying President Arthur's message, which he has not overlooked. If it has been ascertained that this method of ascertaining the fitness of candidates for public office is a good method, then the method ought to be adopted. Private business adopts improved methods as soon as their superiority is made manifest. But there need be no disputing about methods. Let President Arthur adhere to his principle, and we are content. "Original appointments should be made upon ascertained fitness." If that rule be thoroughly enforced, the methods are not important.

"The tenure of office should be stable." This is another of the business principles that President Arthur wishes to apply to the public service, and it is the best of them all. "The tenure of office should be stable." How stable? As stable as service would be in any good business house. This is the logic of the President's argument. If the same rules which apply to successful private business are to govern the public service, then capable and experienced officials will not be turned out of office every year nor every four years. What merchant would consent to a regulation by which his clerks and subordinates should be "rotated?"

out of his employ as soon as they had fairly learned their duties, and their places be filled with inexperienced men? What bank would tolerate such an itinerancy in its offices? What private firm would not suffer by the neglect to avail itself of the fruits of experience and training gained by those in its employ? If business principles are applied to the public offices, then the tenure will be during good behavior. President Garfield's scheme of fixing the tenure of all the offices was of doubtful wisdom. Doubtless it would be better to have the terms fixed at four or six years, than to have the offices all emptied and refilled every year or two at the demand of members of Congress; but why should the United States deprive itself of training and experience in its service by any such hard and fast rule?

The constitutional tenure is during good behavior, and the first limitation of the term of some of the offices to four years was in the interest of the spoils system; the intent was to make a sweep of these offices in order to fill them with political workers. It was just here that the public service began to depart from business principles; it is just here that the first step toward reform ought to be taken, by abolishing the fixed term of all the subordinate appointive offices, and by allowing the Government to conform its rules of removal, as well as of appointment, "to such as regulate the conduct of successful private business."

Such is President Arthur's doctrine of the civil service, and it is good doctrine. It is to be hoped that he will live up to it.

The Disappearance of the School-master.

CHARLES LAMB once indited a whimsical "Complaint of the Decay of Beggars in the Metropolis," but it is in no spirit of irony or mere sentiment that we are disposed to regret the vanishing race of school-masters. Nowadays there are teachers of grades—men and women appointed to fetch a pupil through a certain stage of his education, and then pass him along to the driver of the next. But the excess of systemization under which our common schools groan, being burdened, and the high regard paid to the quantitative analysis of learning in examinations, has pretty much done away with the school-master. The individual genius and personal quality of the teacher have been crowded to the wall by the overloaded course of study and the exactitude of system.

One stage of progress is often the most dangerous obstruction to the next. When a country, for example, has won by years of war, or centuries of struggle, a republican or liberal government, the people at once fall to worshipping that which has been acquired. The orator makes his way to the hearts of patriotic listeners by a wreath of eulogies with which to crown the idol of "republican institutions." After awhile, when some one ventures to point out certain defects in these institutions, and certain respects in which other forms of government work more perfectly, the reformer seems to be a croaker, an iconoclast, an irreverent blasphemer of the national gods, a desecrater of the shrine of patriotic egotism.

A sort of apotheosis has taken place in the matter of the American school system. It was, in its inception, so great an advance on the irregular and spasmodic methods which preceded it, that men came to esteem it well-nigh perfect. In its beginnings

there was an enthusiastic advocacy, in its gradual adoption a justifiable exultation. It came to have the sacredness of a holy cause; and popular education, though by no means originally or exclusively American, became a national boast. Did not foreign travelers wonder to see our working-men reading the daily newspaper? There was an aroma of philanthropy and democratic equality about the common school, and it became a favorite theme for holiday eulogy. To find fault with it seems to some people nothing short of attacking the sacred cause of human enlightenment.

Now the great evil of this state of mind is that it fosters abuses. Eternal vigilance is the price of a good many excellent things besides liberty. But the singing of pæans to things in their present state is not conducive to watchfulness. There is nothing in this rather imperfect world that may not be improved, and there is nothing that does not easily slip into abuse through laxity or a mistake of aim. The harm of general laudation is that it covers a multitude of sins which ought to be brought to light. It arrests progress in right directions, and aggravates all tendencies to extremes.

There can be no doubt that our school system in this country has well-nigh lost its flexibility. It is not subject to the guidance of enlightened thought. The primary grades, for example, have received little benefit from the discoveries and devices of Froebel. This may arise partly from the severe spirit in which some of Froebel's most sincere disciples in this country have sought to enforce the mint, anise, and cummin of his system, and partly from the shallow quackery of some mere money-makers, who have advertised modified and Americanized kindergartens, from which all that was substantial or essential in the Froebelian system had been eliminated. But the principles of child-nature are universal, and the great truths announced by Pestalozzi and Froebel have had little really important influence on our system. That, of all things, a little child should be constantly employed and never kept in a state of enforced quiet, is a fundamental principle with all the great masters of education in this century. But our "system" puts fifty or more children, of five or six years of age, under the care of one inexperienced teacher, who is enjoined to "keep them quiet" at all hazards. It is not surprising that President Garfield thought it wonderful that a child's love of education should survive "the outrages of the school-room." The very first step in the American system directly contravenes the strongest law of a child's nature; we make school hateful at the outset by making it a place of enforced inactivity of both mind and body. For a little child who is required to be quiet, cannot study. The long school hours are to him only a sort of imprisonment with enforced silence, from which he gladly escapes at the end of the tedious day. There are ways in which Froebel's more natural system could be applied in a measure, inexpensively, to all our primary schools.

It is the excessive amount of system in our wholesale methods of teaching that prevents the best results in any department. The pressure of quantity does not give the teacher time to mold character. Dr. Arnold himself could not have been Dr. Arnold if he had been required by a board of education to teach the greatest

possible amount of arithmetic and geography within a given time. It is probable that Dr. Arnold would have been considered wanting in the requirements of an American school-teacher of the present day. It is certain he would have found himself hopelessly trammelled, as many an aspiring teacher finds himself trammelled, by the expectations of his employers. The teacher who would fain be less of a machine—who would like to take time to do some thorough training, and to develop the men and women of the future—gets no opportunity. He must bring the largest possible crop of arithmetic and geography at the end of the year; all his better work in building character will count for nothing with the "Board." Then there are hobby-riders, seeking to drive into the already overcrowded course some special study. The arts of design are often useful in a business way, therefore drawing shall be universally exacted of the pupils. Music is charming at home, therefore the vocal teacher must have place. In one considerable city, a wealthy merchant in the Board of Education, who found telegraphy valuable in his own office, has succeeded in putting every boy and girl in the town to clicking telegraph keys.

But, no matter what is put into the course, it is rare that anything is taken out. The school-master finds no place on which to stand. His individuality is utterly repressed. He is a mere cog-wheel in a great machine. He sinks down at last to the level mediocrity which machines always produce; he becomes a hearer of lessons, a marker of registers, a worker for examination week. It is not chiefly his fault that he does not do higher work. There is hardly space for it, and there is no market for it.

We debate about courses of study and modes of procedure in our schools, but the chief thing, after all, is to get a genuine teacher. The master of the famous "Gunnery" school, whose death recently attracted so much attention to his methods, did not teach anything that was not to be found in other schools of the same class. He was not even specially remarkable for his own scholarship, nor for extraordinary attainment in his pupils. But there was in him a manliness which communicated to his scholars something better even than the knowledge they acquired. There is a school district on the edge of the Adirondack wilderness, where the Roman Catholic and Protestant voters have long struggled for control. Sometimes a Catholic teacher would receive the appointment, and, as he would not read the Bible in school, the Protestants would refuse to let their children learn the multiplication table from him. Then the Protestants would put in a teacher. But whichever carried the day, there was much uniformity in the stupidity of the teacher and the inefficiency of the school. It did not occur to any one that the quality of the teacher, as a teacher, was of more importance to the district than the religion to which he might belong in a nominal and hereditary way. But it chanced, in the summer just passed, that the district secured a genuine whole-hearted school-master. He was a Catholic, but Protestants soon forgot it, as he was not a propagandist. The boys and girls, for the first time, were eager for school hours and in love with school days. The district forgot the battle of religions in their feeling that the teacher was giving them something they had never had before.

All the world over, human short-sightedness puts the means for the end. The organization and regular conduct of a school system is of value only as it helps the schools to attain their main end. The minister of public instruction who boasted that he could look at his watch and know just what question was being asked at that moment in every school of a given grade in France, was a good illustration of the system-worshiper. A system of education that defeats its own end by destroying the free and individual action of the teacher is the nightmare of human progress. No doubt, teachers of enthusiastic devotion may do much under existing conditions, but it seems a pity to spend so much time and effort in producing unfavorable conditions.

The Situation in Ireland.

WHY do not things settle down in Ireland? is the question which those naturally ask who have watched the struggle of the last three years, noted the demands of the peasantry, and perceived what a long way the Land Act passed by Mr. Gladstone's government went toward satisfying those demands. Why is the news always of outrage on the one side, arrests on the other? Was the Land Act really an insufficient measure of reform? Or is the land question, after all, not the crucial question in Ireland? Natural as such a question is, it is one which those will hardly ask who understand Irish character, and know how old and deep is the resentment which the bulk of the Irish population feel toward what they still call "the English Government." Of the material grievances Ireland had to complain of, the Protestant establishment and the condition of the tenantry were no doubt the gravest, and the latter far graver than the former. But they were not the only grievances; so that to settle them is not to settle everything.

For many years past there has been in Ireland a party which, whether it called itself Repealer, or National, or Fenian, or Home Rule, has substantially had always the same object—that of shaking off the rule of the Parliament of the United Kingdom and making the island, if possible, absolutely independent; if not, then at least practically so for most purposes. This party has enjoyed the sympathy of the Roman Catholic peasantry, and of a large section of the Roman Catholic middle class, as well as of some few Protestants. But it had from them little more than sympathy. They did not care enough to take up arms or do anything more than vote for Home Rule candidates. Fenianism, though it seems to have made a sort of scare in England, was never really formidable. Perceiving this, Mr. Davitt, who is the ablest man the National party has produced of late years, resolved to rouse the peasantry and win their support by appealing to their material interests. He organized the Land League, and the movement at once acquired an importance it had never had before. There was now something definite to struggle for, something more solid than a green banner and visions of national independence. No equally skillful move had been made since the days of Daniel O'Connell.

Mr. Gladstone's government recognized the change in the situation, and finding that the loyal Protestant population of the north of Ireland supported the demand for a sweeping change in the land laws, they conceded it, and forced the Act of last session through,

many of their own supporters making extremely wry faces over a measure so opposed to ordinary English ideas. They hoped thus to undo the alliance between the tenant farmers and the Nationalists which the Land League had created. They removed the motive, the practical grievance, which that alliance had rested on, and trusted that nationalism would relapse into its previous weakness.

To a great extent they have succeeded. There can be little doubt, in spite of the disturbances cabled from Ireland, that the great mass of the tenant farmers will take advantage of the Act and pay their rents so far as they can. They will recognize, probably they have recognized already, that no further concessions can at present be expected from the British Parliament, so that the wise course is to make the most of the Act. Thus the Land League will lose much of the active support it has had. But there remain, still unappeased, and not likely to be appeased, the Nationalists, many of whom looked on the land agitation as only an engine in the contest for independence. Fearing to lose all of what they had gained, they of course do their best to keep the excitement alive, to deter farmers from applying to the Land Court, to minimize the advantages which that court offers. It is the easier to do this because during the past two years a habit of lawlessness has grown up in which there is something attractive. There is a fascination in the act of conspiracy. It quickens the pulse and begets a sense of power—power all the dearer because it is secret. The Land League courts, and the people who (probably in many cases without the sanction of the Land League courts) carried on the land war by shooting at agents, or maiming cattle, or beating tenants who had paid their rents, cannot be expected to give up their practices at once, especially as the most active men among them are Nationalists, who dread nothing so much as the contentment of Ireland and a good feeling between her and Great Britain, since that would make their cause hopeless.

"But then," some one asks, "why do not those tenant farmers who are going to use the Land Act repudiate the Land League courts and the outrages one reads of?" They have got what they wanted, or nearly all of it; "why do they not show their gratitude by helping to reestablish order?" The truth is, that gratitude counts for little in politics anywhere; and all the less in this particular case because the people think that it was English fear, not English goodwill, that gave them the Land Act. Besides, they have for more than a century been in the habit of regarding the Government (whether Liberal or Tory makes no difference), the law and its ministers, as their natural enemies. They have been carrying on a sort of guerrilla warfare against landlords—that is to say, against the exercise of those full legal rights which the law gave the landlord, but which their sentiment disapproved. An act done in the course of this warfare, even if the law calls it a crime, appeared to them in the light rather of an act of war, a sort of irregular foray on the enemy, than of an offense against the peace and good order of society. Hence, even those who took no active part in what are called agrarian outrages did not exert themselves to check them, would not give evidence, would not as jurymen find a verdict of guilty—not to add, that they would possibly

risk their own lives by doing so. This old habit is not to be got rid of at once, and it makes the great difficulty which those who govern Ireland have to reckon with. It is quite sufficient to account for the continuance of disorders in Ireland now, and it may last for years to come. Nothing seems likely to extinguish it but the growth of a feeling among the people that the law is on their side, and that outrages on individuals are threats to themselves.

If the Land Act succeeds, if rents are reduced, and are paid regularly, and if a large number of farmers become land-owners, the Irish peasant may become, probably will become, as firm a supporter of the rights of property as the French peasant is. All this must take time. Confidence is a plant of slow growth; so too is material prosperity in an old country without remarkable physical resources; and it may be long before either the contentment of the peasants, or a sense of the commercial advantages which English connection gives, or even the bestowal of a better and more popular system of local self-government, allays that desire for national independence which is strong enough to keep the people restless, yet apparently never strong enough (unless when backed by some material interest) to unite them in its cause.

George Eliot and Emerson.

ON the horizon of almost every mind there rise at times the spectral clouds of Doubt and Disbelief. The timid turn away and try to forget, or shiver in uncertain apprehension: the brave man pushes to close grips with the terror, to find if it be fact or phantom, or if perchance it be even a disguised friend.

It is profoundly interesting to study those lives in which the tendency to religious disbelief has been conscientiously accepted and lived out. The result of such observation is not always what we should expect. For instance, there has lately died in England a man who gave up all belief in God and immortality, yet who was, his friends tell us, of pure life and lovable character, and who carried his disbelief with buoyancy of spirit, and every appearance of happiness. On his tomb is the inscription: "I was not, and I was conceived: I lived and did a little work: I am not, and grieve not." We are not told whether this summing up of his story was from Professor Clifford's own hand; but it might well have been, for it expresses his belief and temper.

In the November number of *THE CENTURY*, there was given a personal sketch of George Eliot, which showed the far different effect upon her mind of convictions like Professor Clifford's. Mr. Myers's delicate and sympathetic presentation of her character, from the standpoint of loyal and reverent friendship, confirmed the impression given by her books, that the renunciation of belief in God and immortality wrought in her a profound and abiding sadness. Her unshaken fidelity to duty, amid the shadows that lay upon her spirit and upon the universe, affects us as most heroic and pathetic. The use to which she put that great pain, in drawing from it a finer sympathy and service to the fellow-beings whom she saw as orphans with her in a fatherless universe, is a supreme example of how the bitterest personal experience may be made to bear sweet fruit. But still, to her just and truth-loving mind, the world appeared a sadder place than it was in

the light of the old faith. She did not profess, like Professor Clifford, and like Harriet Martineau, to find no real loss in giving up the hope of a future life, with its disclosure of a light in which earth's miseries and mysteries shall all be reconciled as parts of a supreme good.

This confession, visible between all the lines of her later work, of a great sadness consequent on the loss of a spiritual faith and hope, seems to us to indicate the sanity and truth of her genius and character. Given those premises—no God and no hereafter—and there can rightly be but one conclusion, a profound gloom investing human destiny. Such words as those of Professor Clifford fall on the mind with a sense of bravado and unreality. He may have been happy in the enthusiasm with which he preached his new creed, yet one hardly envies such happiness. It was impossible to a nature with the deeper insight and wider sympathy which belonged to George Eliot. Rightly said Marcus Aurelius: "It is well to die, if there be gods; and it is sad to live, if there be none." It is the latter alternative to which the philosophy based solely on material science compels those who faithfully follow its teaching. "God we have none," then, most surely, "sad is it to live!" How inevitably the two things are bound together was shown by the life of this greatest Englishwoman of our time. For she had the gifts that best might win joy and comfort—fidelity to conscience, domestic happiness, intellectual power, friends, success,—all were hers. Hers was the great endowment of a noble sympathy with mankind, and a keen susceptibility to beauty and grandeur. Yet, led by the philosophy which she accepted and the intellectual associations amid which her life was cast, to disbelieve in God and immortality, she thereupon found the universe a sad place, lightened by courage and mutual tenderness, yet sad to the very heart. Honor to the brave soul that followed so faithfully its thought of truth, and, finding the conclusion bitter, would not call it sweet!

But, looking upon that conclusion, thus fully wrought out, thus shown in vivid reality, the mind draws back with a profound instinct of denial. It says: The world is good, life is good, the inmost meaning of the universe is something blessed and divine. That, we incline to say, is the deepest thing we feel and the surest thing we know. That is the impression which comes home to the healthiest minds. That is the voice which the ineffable beauty of nature speaks to the soul. That is the suggestion of the majestic order in which creation marches. That is the message of the teachers who outrank all the pedants of the schools,—the message of human life at its deepest and highest, of love and labor, of fatherhood and motherhood, of conquered temptation, of aspiration and prayer, of all that brave hearts endure and loving hearts feel. Life is blessed and divine; its very shadows hint at the sun which they obscure, its meaning is better than our best thought, and shall hereafter be disclosed to us. And any intellectual theory which in its outworking destroys this serene confidence impresses us as untrustworthy. No matter how ingenious its arguments: its roots do not strike down to the inmost truth and reality.

In geometry, that science which Plato made the type of our spiritual knowledge,—its truths being most certain, yet wholly independent of sense-evi-

dence,—there is one way of demonstrating some particular truth which is called *reductio ad absurdum*. It consists in assuming that the point in question is not true; in arguing from that basis, and reaching from it as a necessary conclusion some statement so absurd that the mind revolts from it and thereupon discredits the assumption which led to an incredible result. In a like way, a life like George Eliot's may be taken as a sort of *reductio ad absurdum* of the philosophy she accepted. We listen to its clever arguments, we grant them plausible, perhaps we find no flaw. But put them to the working proof. Make them the lens through which a great soul looks at human life, and lo! the whole world is seen wrapped in the lurid hue of a sadness without hope! We reject the lens, we dismiss the philosophy. We trust the great intuitions of humanity, moving on like a majestic river, in which to-day's doubts and denials will hereafter show as a moment's backward eddy.

Mr. Myers quotes from George Eliot this notable utterance:

"I gather a sort of strength from the certainty that there must be limits or negations in my own moral powers and life experience, which may screen from me many possibilities of blessedness for our suffering human nature."

There is more than humility in this. The world is never without its men of spiritual vision,—a kind of insight into reality essentially different from George Eliot's keen analysis of human nature. It is a genius of higher order than hers; it is telescopic, reaching the heavens, where hers was microscopic, revealing the things of earth. Mr. Myers names George Eliot, Carlyle, and Ruskin as three prophets. But we have in Emerson a greater prophet than any of the three; healthy where Carlyle was dyspeptic; serene and all-viewing where Ruskin is partial and passionate; a seer where George Eliot was an analyst. She knew the thought of her day and generation, and was mastered by it: he knows it, and masters it. No one is freer than he from bondage to tradition. No one sees more clearly the meanings of science. He is so free from all false or exaggerated fervors that to many he seems cold. In him the brilliant rays of color—of insight, passion, tenderness, imagination, worship, love—seem to blend in the clear white light of truth. And his sincere message rings always with a jubilant tone of faith, and hope, and joy. In everything he sees divinity,—the token and the very presence of God. For him, life pours from every urn a wine of exquisite joy, which never intoxicates, but yields a celestial vigor. With the heavens opening above and about him, he yet keeps his feet always on the firm ground of familiar fact. His poems are inspirations of serene joy. The present is to him so full that he will scarcely dwell on the future. Yet, in his "Threnody," born of a great sorrow, we have the foretaste, and almost the present sense, of eternity. How nobly, in "Social Aims," he writes of Immortality. He goes deeper than any conviction about man's futurity, to that absolute trust in all-ruling good which is the heart of spiritual faith. "I think all sound minds rest on a certain preliminary conviction, namely, that if it be best that conscious personal life shall continue, it will continue; if not best, then it will not." And from that citadel of the soul, how lofty a glance he throws upon the future:

—"Whatever it be which the great Providence prepares for us, it must be something large and generous, and in the great style of his works. The future must be up to the style of our faculties,—of memory, of hope, of imagination, of reason." This is like what is said in the "Threnody," in a passage whose tenderness matches its moral energy and inspiration:

"—What is excellent
As God lives, is permanent;
Hearts are dust, hearts' loves remain,
Hearts' love will meet thee again.
Revere the Maker; fetch thine eye
Up to his style, and manners of the sky.
Not of adamant and gold
Built he heaven stark and cold;
No, but a nest of bending reeds,
Flowering grass, and scented weeds;

Or like a traveler's fleeing tent,
Or bow above the tempest bent;
Built of tears and sacred flames
And virtue reaching to its aims;
Built of furtherance and pursuing,
Not of spent deeds, but of doing."

Emerson's "Threnody," Tennyson's "In Memoriam,"—these are but new versions of mankind's eternal gospel; from the grave itself is born the great assurance of something above and beyond death. It is through the noblest life here that the life hereafter is revealed. "Not," says Emerson, "by literature or theology, but only by rare integrity, by a man permeated and perfumed with airs of heaven,—with manliest or womanliest enduring love,—can the vision be clear, to a use the most sublime."

COMMUNICATIONS.

The Exhibition of American Wood-Engraving.

TO THE EDITOR OF THE CENTURY :

SIR: The late exhibition of American wood-engraving at the Museum of Fine Arts, Boston (the first of real importance held in this country), was a most interesting one, embracing, as it did, three well-filled rooms, containing specimens of the work of the past and present. Here the public had an opportunity of judging for themselves, by actual comparison, of the merits of different engravers and of different methods. Proofs of all varieties of wood-engraving were shown, from the conventional cutting of the old-fashioned wood-drawing—slick, clean, and pretty—to the wildest and most independent efforts of the "new school" of painters and engravers. Almost every engraver of note had, at least, a few specimens, and a great number of the younger men were well represented. I cannot give a complete review of the exhibition, but will mention some of its most salient features.

One lingered longest and with most pleasure over the collections of T. Cole and W. B. Closson, not only for their own exquisite workmanship, but for the splendid originals which they had so carefully rendered. W. J. Linton's block of "The Raft," after George Harvey, was a masterly treatment of a large subject, and worthy of all praise. His head after Titian seemed to be a new departure for Linton. J. G. Smithwick's "Drumming out a Tory," after Reinhart, calls for special comment for skillful and brilliant handling, and his proof after George H. Boughton's "Autumn" any one might covet. J. P. Davis's "Eager for the Fray," after Shirlaw, is a representative example of his best workmanship. Fred. Juengling's exhibit, arranged in chronological order, was full of interest, beginning, as it did, with a rendering of a conventional wood-drawing for the "Fireside Companion," 1870, and ending with a large block after a painting by R. Swain Gifford, 1880. His best effort was the head of "The Professor," for which he received honorable mention in the *Salon* Exhibition of 1881. French's well-chosen specimens after Abbey, Pyle, and others were delicate and refined. Marsh's "Moths" one can never see too often, but one

missed some of his beautiful proofs after Mrs. Foote, Lathrop, and others. Kruell's collection of masterly portraits was headed by "Dean Stanley"; for his engraving of flesh and use of white line he is unequalled. King's specimens of tint-work after James Beard's drawings showed remarkable skill, especially in the way of mechanical execution. J. H. E. Whitney's wood-cut copies of etchings attracted much attention; the dry point and line effect of his head of "Jo," after Whistler, is one of the most remarkable things ever done on the block. Miss Powell's cut of "At the Piano," after Whistler's painting, was a very successful effort. Thomas Johnson's portrait of the mother of President Garfield showed great strength and directness.

These are only a few of the great number who merit special praise, if space permitted, among whom were Andrew, Miss Barber, Dana, Heinemann, Hellawell, Kingsley, Speer, and many others.

The delicate "Winifred Dysart," by Closson, after George Fuller's painting, and "Autumn Afternoon in the Berkshire Hills," after Thayer, and the "First Communion," after Bastien Lepage, both engraved by Cole, should put an end forever to all controversies as to superiority of old methods over new ones. These proofs show a delicacy and subtlety of expression never before attained in wood-cuts, as well as a quality of line never yet excelled.

After a careful survey of the whole exhibition, one gives a sigh of regret that such excellent engraving has, in so many cases, gone to waste on weakly pretty, and often petty drawings. It would seem, indeed, that reform in the future must come through the artist, rather than the engraver, who now seems able to accomplish any task set before him far better than ever before in the history of the art.

The late exhibit also confirms the opinion already expressed in SCRIBNER, that the American school have won their laurels as that of the best engravers in the world by their subtle and delicate rendering of small and medium-sized blocks. As far as large blocks go, we still have, with rare exceptions, little to show in comparison with the splendid work done by the English and French schools.

A. W. D.

LITERATURE.

"Ralph Waldo Emerson." *

THERE is, perhaps, a certain indelicacy in publishing the biography of an author who is still alive and in condition to speak for himself. But this is forgiven in the present instance, if, as seems probable, Mr. Cooke has the permission of his subject. It is evident, at all events, that he has had access to unpublished addresses, and other manuscript material and information, which implies that he writes as one having authority. The public may be excused, too, for an eagerness to learn all that can honorably be imparted about the career of that reverend and gracious man, in whose distinction his countrymen feel a personal and, as it were, filial pride. America has been fortunate in the character of her best writers. Hawthorne, Longfellow, Lowell, Whittier, Bryant, Holmes, Emerson: what dignified presences these!

Mr. Cooke is far from being an ideal biographer. His book is painstaking and business-like, though deficient in inspiration and insight. He seems to have prepared himself honestly for his task by reading everything that Mr. Emerson has written, and nearly everything that any one has written about him. He gives us copious citations from opinions of others that might easily have been spared. What one man of genius thinks about another is always worth quoting, but what have we to do with the commonplace "opinions" of commonplace minds? Mr. Cooke's attitude is, as he explains, rather that of a disciple than that of a critic; and he modestly obliterates himself in his subject. This may do for a Boswell writing of a Johnson; but when Emerson is in question, whose thought is to be reported, rather than his daily walk and conversation, there is need of a biographer occupying an independent, and even a critical, point of view. When Lowell, *e. g.*, writes of Emerson, it is flint striking on steel, and striking out sparks. And how eagerly we read the few words that Hawthorne has spoken concerning his illustrious neighbor!—Hawthorne, who felt the attraction, but would not be drawn into it, because his shy genius resented the too close approach of any alien mind.

These criticisms apply especially to the earlier and more strictly biographical portion of the work. In the last eight chapters, in which Mr. Cooke expounds Emerson's philosophy, we think that he has made an original and valuable contribution to the literature of his subject. His exposition is not only fuller and plainer than Mr. Frothingham's in his history of Transcendentalism in New England, but seems to us the best that has yet been published. We shall dwell on this point, because we think that in doing this part of his work so thoroughly he has performed no mean service both to Emerson and to the reading public. "If people who write essays about Emerson,"

said a friend to us once, "would only stop saying fine things about him and tell us what he *means*, they might persuade some of us scoffers to read him." Lowell, to be sure, has had his laugh at those who want an edition of Emerson "in words of one syllable for infant minds"; and plain people who were puzzled about the over-soul were told, for their comfort, that the ideas of the reason could not be translated into the language of the understanding. But if Emerson is not his own interpreter, ought any one else to presume to the office? Yes: and for this reason. The mere literary reader finds his page hard, because his point of view is unfamiliar. On the other hand, the reader who has some acquaintance with systematic philosophies, is puzzled where to place him, because, being a poet, he makes no formulated statement of his beliefs, but writes in figures and seems to have no system. His position is almost consciously defined by himself in what he says of Plato: "He has not a system. The dearest defenders and disciples are at fault. He attempted a theory of the universe, and his theory is not complete or self-evident. One man thinks he means this, and another that; he has said one thing in one place and the reverse of it in another." This is precisely the charge that is made against Emerson; that his language is elusive; that he does not agree with himself, but writes from the mood of the moment, etc. Yet, surely, if he has no system, *i. e.*, if it is impossible to classify him exactly as a Kantian or a Berkeleyan or a Platonist, he yet has some synthesis in his ideas; certain ways of conceiving of God, of the human soul, and of the universe of matter, which are constant in his thought. In disentangling these from the mystic and poetic form of expression which he gives them, and in so stating them that the plain people may understand them, Mr. Cooke performs a useful, though perhaps humble, act of mediation, which we are glad to recognize. His book fulfills the purpose for which the preface claims that it was written: to be "an introduction to the study of the writings of Mr. Emerson."

We shall not anticipate the results of Mr. Cooke's study further than to say that he places Emerson in the line of mystics, which includes Plotinus, Eckhart, Boehme, and Schelling. He is not, of course, to be taken as a disciple of any one of these, or as agreeing with any one of them in all particulars. He has an original intuition of spiritual truths: he has *felt* the divine in nature and in the soul, as a poet, not reasoned about it as a dialectician. He is, on the whole, more nearly in agreement with Schelling than with any other modern philosopher. Schelling's latest system is in result mystical, though the arguments by which he supported it have the appearance, at least, of severe logical deduction. His doctrine is esoteric and to be expressed only in figures. He hit upon the famous metaphor of the magnet; mind and nature are the positive and negative ends; the indifference point is

* Ralph Waldo Emerson: His Life, Writings, and Philosophy. By George Willis Cooke. Boston: J. R. Osgood & Co.

Reason, the Absolute, in which nature and mind become one. Only by such an identity yet opposition, by such a polarity, can the Absolute become conscious of itself. It makes of itself as nature an object to itself as mind. "The souls of men are but the innumerable individual eyes with which the infinite world-spirit beholds himself." "Thought is not my thought and Being is not my being. There is no such thing as a reason which we have, but only a Reason which has us. From within or from behind a light shines through us upon things and makes us aware that we are nothing, but the light is all." Such are Schelling's words, and it is needless to quote consenting passages from Emerson. Expressions almost identical will occur to every reader of "Nature" and of "The Over-soul." Schelling, too, was a poet and a man of exalted imagination, whose influence, transmitted to English thought through the channel of Coleridge, could hardly fail of its effect on a mind like Emerson's.

The mooted question whether Emerson is a Theist or a Pantheist has received fresh attention of late through the indiscretions of the Rev. Joseph Cook. On this head it is sufficient to say that if Pantheism means the doctrine that the first principle of things is matter, or force, or anything unconscious and unspiritual, Emerson is most certainly not a Pantheist. His Pantheism extends only to his refusal to separate his idea of God from his manifestation in nature and in the human soul.

Critics sometimes talk as though it were possible to disentangle Emerson's peculiar philosophical views from the body of his writings, leaving the latter to stand upon their own merits as literature merely. This may be the case with "English Traits"—the most popular of his prose books—and with a few of his poems, but it is not true of his works in general. These are but the various presentations of his religious thought. It is not for nothing that Emerson is the descendant of eight generations of ministers. When he left his pulpit he still remained a preacher. The lecture platform became his pulpit, and it is a significant fact that, as his biographer tells us, his published essays have, with unimportant exceptions, been written and delivered first as lectures.

What, then, has been the influence of his philosophical creed upon his literary production? Those who believe that the creed in question is doomed to give way to a more fruitful and progressive philosophy, and one more in accordance with the facts of experience, may regret that Emerson has chosen to nail his flag to the mast of a sinking ship. And those who have no belief on the subject may yet be excused for holding that the most enduring literature is precisely the most *human*, or, in other words, is that which will square best with any philosophy. Systems change, but the great masters of literature are perennially fresh, because human nature changes not. So far as Emerson is an interpreter of permanent elements in human nature, his marvelously fine workmanship is destined to be a joy forever. So far as he is merely the expounder of a system of the universe, we fear that it is fated to decay.

His idealism, for one thing, is repugnant to many readers. The poet dwells in the cheerful world of phenomena. He is most the poet to whom life is most real—who *realizes* most intensely that experience of the soul which we call nature and human life.

Shakspeare does not forget that the world will one day vanish "like the baseless fabric of a vision," and that we ourselves are "such stuff as dreams are made of,"—but this is not his habitual mood.

Again, it is for the poet to distinguish the manifold in unity: for the philosopher to detect the uniform in variety. In Shakspeare and Goethe, how infinite the swarm of persons, the multitude of forms! But with Emerson the type is important, the common element. "Persons are supplementary to the primary teaching of the soul," he says. "How ill agrees the majestic immortality of our religion with the frivolous populations!" And he scorns to examine too microscopically "the universal tablet." "The same—the same! Friend and foe are of one stuff: the plowman, the plow, and the furrow are of one stuff."

"I am the doubter and the doubt,
And I the hymn the Brahmin sings."

The mystical doctrine of identity, moreover, disposes of evil as a negative, as the shadow of good. To doubt the ultimate success of the good is, says Emerson, the only skepticism. The serenity and elevation which are the characteristics of his thought come from the perception that this outward face of things is but a mask, not worthy to dismay the fixed soul. As the idealist declines to cross-question too closely those facts which he regards as merely phenomenal: as he disparages history at a time when the historical method is invading every province of human inquiry with most astonishing effect; so the optimist turns away his eyes from evil, which he considers but a transitory disguise of good, and no part of the order of things. Hawthorne's interest in the problem of sin finds no place in Emerson's philosophy. Passion comes not nigh him. Faust disturbs him into a shudder, and he complains of the disagreeableness of Goethe's conception. Is it the shock of a stronger philosophy than his own? That is a noble and beautiful world into which this high soul leads us. It is a real world—but is it the whole world?

Mulford's "The Republic of God."*

DR. MULFORD'S "Institute of Theology" is a good companion of Robertson Smith's lectures upon the Old Testament. The one proposes a new method of Biblical criticism, and the other a new method of theological discussion. There is reason to fear that Dr. Mulford's book will be less widely read than Professor Smith's; for not only is his subject more abstract, his literary skill is less perfect than that of the Scotch heresiarch. Nevertheless, the treatise of the American will be read and digested by many of the more thoughtful among religious teachers, and will be translated by them, through sermons, and reviews, and newspaper articles, into the common speech of men.

Dr. Mulford's style is individual, but it is often obscure and confusing. Some of his mannerisms are troublesome. The preposition "in" is grievously overworked. There is also, if Dr. Mulford will permit the use of the expression, quite too much of "there is" in this rhetoric. A good share of his sentences

*The Republic of God. An Institute of Theology. By Elisha Mulford, LL. D. Boston: Houghton, Mifflin & Co.

are furnished with this expletory handle, and it is by no means always explicative. These rhetorical blemishes are, however, defects of an excellent quality. They arise from a habit of regarding the interior rather than the formal relations of things, and from a method of presentation in which simple statement is almost wholly substituted for ratiocination. This volume contains but little logic—scarcely a trace of the deductive method is to be found. The book is a bundle of aphorisms; nevertheless, there is a natural order and progress of thought. Dr. Mulford is so careful to avoid logical forms that he often connects with a copulative conjunction sentences which would be more naturally connected with a "since" or a "because." This heroic determination to abstain from the seductive syllogism, and to let his propositions stand and shine with the light that is in them, is a new departure in modern theology, albeit the four Gospels furnish an illustrious precedent.

The titles of the ten chapters of the book are as follows: "The Being of God," "The Personality of God," "The Precedent Relations of Religion and Philosophy to the Revelation of God," "The Revelation of God," "The Revelation of God in the Christ," "The Conviction of the World," "The Revelation of Heaven to the World," "The Justification of the World," "The Redemption of the World," "The Life of the Spirit." At the outset, with these bold affirmations, the writer seizes the stronghold of theism:

"The being of God is the precedent and the postulate of the thought of God. It is the ground in man of his conscious life. From the beginning, and with the growth of the human consciousness, there is the consciousness of the being of God and of a relation to God. Man is conscious of the being of the external world, and lives and acts in this consciousness, and the being of the external world so comes to be apprehended by him. And, further, man is conscious of the being of God, and lives and acts in this consciousness, and the reality of the being of God so comes to him."

The ontological argument, so generally discarded, is rehabilitated by Dr. Mulford, and acquires in his statement a good degree of cogency. The other common arguments are also examined; but the main reliance is placed upon the witness of the consciousness of man to the being of God. "There can be no demonstration," he says, "of the being of God by man; there may be the manifestation of God to man." This is really the key-note of the whole discussion. Much light is thrown upon the theistic arguments, especially in the treatment of the relations of freedom and necessity; but the argument, as a whole, is stated with less clearness than in the masterly work of the late Professor Diman.

After a suggestive chapter in which Christianity is defined to be a revelation and not a religion,—a manifestation of God to man, and not a cultus or a dogma,—the author proceeds to set forth the nature of this revelation: "It is *from* God, but primarily it is *of* God." This revelation is its own witness. It is light.

"It is not of an abstract system, nor of certain propositions which convey abstract truths. It is not the presentation of certain abstract notions about God. It is not the revelation of a scheme of divinity that man is to receive in the place of God. It is the revelation

of God himself; it is the revelation of God himself to man."

The conception of revelation here presented is larger, by several diameters, than the ordinary notion of a few dictated documents. It fills all human experience and pervades all history. The Scriptures are the word of God, but they are not his last word, nor his only word. The Bible is simply "the record of a revelation of God *in man* and to the world." There is an inspiration of men, but not of books.

In the person of Jesus Christ this revelation of God is most perfectly made. "It is in a life that is one with God and one with man." In the Christ was the consciousness of perfect unity with God and of perfect unity with man; therefore in him was the perfect revelation of God. Through this revelation of God in Christ the world is convicted of sin and of righteousness and of judgment. The kingdom of heaven is established on the earth, the world is redeemed, and in the life of the Spirit the divine relations of humanity are realized.

This representation, whose bare outline we have sketched, will undoubtedly be pronounced mystical and unintelligible by the literalists; nevertheless, the truths here quietly stated are likely to lodge in many minds and to prove the germs of a more vital theology. Certainly here is a thinker who has struck out for himself a new path, and who seems to have reached certain points of vision from which the field of Christian thought wears a fresh aspect. It will be necessary for many of those who follow him to pause frequently, that they may get their bearings; but patient reflection upon his deep sayings will be well rewarded.

The teachings of this book will be most sharply challenged at the points where it repudiates the governmental analogies by which the kingdom of God is commonly set forth. Dr. Mulford's statements may sometimes be obscure, but he makes it perfectly clear that he does not hold the traditional theories of atonement and of retribution. Of the former he says that "it is not a compensation to balance injustice that is required, nor an equivalent for sin or for the sequences of sin, but the power to overcome evil and to bring men out of sin." Whether the reader assent or not, he will admit that Dr. Mulford's treatment of eschatological questions is vigorous and eloquent. His doctrine of the resurrection, the judgment, and the punishment of the wicked neglects the costume and paraphernalia of these subjects, in which the thoughts of men are so apt to stick fast, and tries to give us the real spiritual values. Many a master in Israel will not begin to know what he means; yet here his teaching is especially luminous. When, for example, he declares that "the consequence of wickedness is eternal punishment," and then says that there is no such thing as an "irrevocable doom," he will seem to many as one who contradicts himself. But he does not, and it will be well for those who think so if, instead of flouting his doctrine, they endeavor to understand it.

On the last page of his book Dr. Mulford prints the Nicene Creed, without comment. The careful reader knows that the new theology is all contained in the old symbol. The things that are denied in the book, or that are conspicuous by their absence from it, are

things not affirmed by the early church; and not only in his doctrine, but in his method also, Dr. Mulford has more in common with the theologians of the first four centuries than with those in after time whose theories were run in the molds of the Roman jurisprudence.

Campaigns of the Civil War.*

THE military literature of the Civil War (exclusive of official reports) has hitherto consisted of a vast number of regimental histories possessing little or no interest to the general public; of biographies and memoirs, some of which, such as Badeau's *Life of Grant*, Sherman's memoirs, and Johnston's narrative, are of the highest interest and of permanent and enduring value; and of certain special histories, of battles or of armies, of very variable value, of which Swinton's "*Army of the Potomac*" and "*Decisive Battles of the War*" may be taken as a type, and, in spite of their glaring faults, as the best of their class. Only one military history of the whole war has been undertaken, viz., that of the Comte de Paris, four volumes of which appeared in 1874 and 1875, bringing the narrative down to the spring of 1863, and the remaining volumes of which have not yet been published. It may, therefore, be said that there is no complete military history of the war. The publishers of these volumes propose to furnish one by means of a series of small volumes, each treating of a single campaign. The grouping of campaigns, as announced in their advertisement, is excellent, and the authors are all men of established military reputation, with two exceptions, and these are well known in literature, besides having special qualifications for their task.

Four volumes are now before us. The series is very appropriately opened by Mr. John G. Nicolay, in a volume called "*The Outbreak of Rebellion*." His story runs from Governor Gist's circular letter to Southern governors under date of October 5th, 1860, to the battle of Bull Run, July 21st, 1861.

It is brilliant, well-proportioned, full of interest; written with intense convictions of right, an impatient contempt of opposite opinions, and a disposition not to mince words, but unhesitatingly to call treason treason, and civil war conspiracy. The intimate friend and private secretary of the first murdered President has no room in his mind to see the results of a long and gradual development under the blight of slavery; no time to waste in summarizing arguments about the rights of States, which distracted and divided the best minds in the country for seventy years, until the only possible end of the argument was war; no thought to give to the weakness of human nature, which clings so tenaciously to political power. To him it was all a miserable conspiracy of office-holders, dragging the people after them by political jugglery at conventions. We fear that this is not history, but contemporaneous partisanship. The American rebellion differs from all other unsuccessful rebellions in the fact that no rebel lost his head for treason: may we not hope that it will some day be equally remarkable for a history which both sides may accept?

Nothing, however, could be better than Mr. Nicolay's account of the uprising of the North, upon the first hostile act committed against the sovereignty of the United States. The successive steps in the transition from a condition of heated argument to a state of open and sanguinary war are narrated in logical sequence, in clear and vigorous language, in true perspective, and with discriminating and just criticism,—forming a vivid picture of the soul-stirring days of the spring of 1861. Finally comes the first pitched battle of Bull Run, where both sides tried their mettle, and where, to the surprise of victors no less than of vanquished, one side was suddenly and overwhelmingly defeated. The account of this battle is excellent, and may well take its place as the standard short history of it.

General Force's story of the early operations in the West is in every way a contrast to the book of Mr. Nicolay. Far from being brilliant, its style is simple and even monotonous; and instead of trenchant opinions there is nothing but facts, without any attempt at criticisms or judgments. It has hitherto been the fate of every military writer on the war, whose book was worthy of any special notice, to be attacked with malignant violence by critics who did not share his opinions. The battle of Shiloh has been particularly fruitful of such controversies throughout the well-nigh twenty years since it was fought. Possibly General Force resolved to avoid such controversies by adhering to narrative and expressing no opinions whatever. At all events, his story is quite colorless, and we are at times confused and puzzled to discover from his account what were the objects of the first campaign in Tennessee, what were its results, and what were the main features in its achievement. The details are all there, but the reader must do his own summarizing and draw his own conclusions. In fact, this campaign drove the rebellion once and for all out of Kentucky, it broke the rebel line from Columbus to Bowling Green hopelessly in pieces; it opened the Mississippi from Cairo to Memphis; it contained the first great Union victories; and at Donelson and Island No. 10, it received the first surrenders of rebel armies; it cheered and encouraged the North, going far to compensate the delays and defeats in Virginia, and was correspondingly depressing in its effect upon the South. It ended in the bloodiest battle ever fought up to that time on this continent, from which the substantial fruits were to the advantage of the Union arms.

This much of general information the reader must bring with him and bear constantly in his mind. It is the details only which are given by General Force; they are, however, given with conscientious accuracy and impartiality, and can be implicitly relied upon.

In the third and fourth volumes, we have the story of the two campaigns—McClellan's and Pope's—in Virginia in 1862. The actual events of these campaigns have long since been fully brought to light in the abundant mass of matter which has been written about them; little or nothing can be added to our knowledge of these events, and no attempt has been made to add anything in these volumes. But in the judgment to be passed on these events there has been the widest divergence of opinion, and those who have hitherto written about them have nearly all been engaged in proving certain preconceived theories

* Campaigns of the Civil War. *The Outbreak of Rebellion*, by John G. Nicolay. *From Fort Henry to Corinth*, by M. F. Force. *The Peninsula*, by Alexander S. Webb. *The Army under Pope*, by John C. Ropes. New York: Charles Scribner's Sons.

rather than in fair-minded historical investigation. In this respect, General Webb and Mr Ropes differ essentially from the majority of their predecessors. On every page of each volume there is abundant evidence that the author is not so much concerned about the reputation of the commanding general, as about historical truth. It is needless to say that, investigated in this spirit, both campaigns prove to be total failures, the larger part of the responsibility of which falls on McClellan and Pope by reason of their incompetence to command troops on the field of battle; at the same time, Halleck was a constantly vicious factor, marring and thwarting every project in which he took a part; and the President's course, though guided by sound instincts as to the necessity and possibility of greater activity in the field, was not free from mistakes, due to his lack of knowledge of military details—a defect of which he was painfully conscious. It was a sad complication of untoward circumstances, and its inevitable result was defeat and disaster.

In attempting to fix the responsibility of these defeats, we believe that these two volumes come nearer to what will be the final verdict of history than any which have preceded them; and they will have no small share in helping to form that verdict. They are invaluable from the fact that they lead people to think of these campaigns, not as an eternal controversy for or against McClellan or Pope, but as an epoch of the war in which these officers failed of success, from causes partly within and partly beyond their own control.

Mr. Ropes's opinions are evidently convictions resulting from long and patient research in a subject in which he never had cause to be biased; General Webb, on the contrary, has always been known as one of "McClellan's admirers," but his opinions will carry none the less weight because thorough investigation has caused him to abandon many of the beliefs which he has hitherto cherished.

Histories of the war written in the judicial spirit of nearly all the chapters of those so far published in this series have long been looked for, and they will quickly take their place as standards.

Miss Hutchinson's "Songs and Lyrics." *

Few will have other than gracious words for such a book as this. It is rightly named, for in truth the songs sing themselves, and the lyrics are so lyrical as to go without singing. Of both there are only as many as there are weeks in a year, but the poetry is pure, and of a quality to make us wish for more. There is a distinct and delicate tone in this new voice; it is so fresh and unworn that one is pleased to find it managed with that art which too seldom comes till some natural charm has gone—not so much the exquisite and intricate art of our modern sonneteers, as the trick of dainty Ariel, loving to revive the woodland cadences of English melody in its spring-time. In their concord of sweet sounds, evasive beauties, and sudden *tirra-lirras*, these verses do bear a resemblance to those with which the very air was tuneful in the days of Queen Bess.

* Songs and Lyrics. By Ellen Mackay Hutchinson. With frontispiece from a painting by George H. Boughton. Boston: James R. Osgood & Co. 1887.

Miss Hutchinson's sentiment and feeling are modern enough and cling to the land of her forbears. She has drawn her own ideals for the Puritan maidens of the stock from one branch of which, it may be, she inherits an historic name. Her *Roses* and *Priscillas* take the air most sweetly and demurely, and her Quakeress has a different grace of her own:

"Sun and shadow on her hair,
Flowers about her feet,
Pale and still and sweet;
As a nun all pure and fair,
Through the soft spring air,
* * * * *
Deborah walks abroad."

Here is a tiny poem that has a wandering perfection, and which no poet could have composed with an ear the very least at fault:

"MOTH-SONG."

"What dost thou here,
Thou dusky courtier,
Within the pinky palace of the rose
Here is no bed for thee,
No honeyed spicery,—
But for the golden bee,
And the gay wind, and me
Its sweetness grows.
Rover, thou dost forget;
Seek thou the passion-flower
Bloom of one twilight hour.
Haste, thou art late!
Its hidden savors wait.
For thee is spread
Its soft, purple coverlet;
Moth, art thou sped?
—Dim as a ghost he flies
Through the night mysteries."

The poem of "Harvest" is one of the more varied and mature pieces in this collection, beginning with idyllic fancies and closing with a reverent invocation most poetically intoned. Many lyrics follow, by turns light or tender, but all clearly conceived and finished, and scarcely one that it were better to omit. "A Cry from the Shore," amid all this fineness, is resonant and strong, as any stanza will show:

"Come down, ye graybeard mariners,
Unto the wasting shore!
The morning winds are up,—the gods
Bid me to dream no more.
Come, tell me whither I must sail,
What peril there may be,
Before I take my life in hand
And venture out to sea!"

The maker of these "Songs and Lyrics," unpretentious as they are, will gain a hearing. They are strangely simple for these days, and as strangely sweet. Miss Hutchinson thoroughly comprehends her range and purpose, and never goes beyond them,—so that we can allot no bound to her, except that which she here elects to occupy, but we none the less surmise that she will live to broaden it.

"L'Art." Seventh Year: Parts I., II., and III.*

THE occasion has never presented itself before to notice the unusual compliment to this magazine paid by "L'Art" (Paris), in the first volume of its issue for the current year. Mr. Comyns Carr contributed a paper on the present state of wood-engraving in America, and wood-cuts which formerly appeared in

* L'Art. Revue Hebdomadaire Illustrée. Septième année. Tomes I., II., et III. Paris: J. Rouam. New York: J. W. Bouton.

this magazine were used as illustrations. It is noticeable that, in spite of the high perfection to which the editors of "L'Art" have carried the finer work of illustration, their reproductions of our wood-cuts do not equal the originals. The reason for this lies simply in the printing. The art of printing wood-cuts as delicately engraved as these does not seem to be thoroughly understood in Europe, and the pictures suffer by contrast with the American work. This is seen in the Bryant by Wyatt Eaton, and still more in the "Lady in White" by Whistler. In touching on the most burning questions between some of the older and some of the younger American engravers, Mr. Carr writes cautiously, but on the whole inclines in favor of the new men. "In fine, wood-engraving has always been, and is still, with few exceptions, an art of reproduction."

Daubigny, the last to die of the modern French landscapists who deserve the title of master, has posthumous honors in the second volume of "L'Art" at the hands of M. Frédéric Henriët. His biographer makes a fine distinction among those of his special guild who have gone over to the "great majority." Herpin, Daliphart, "are valiant soldiers"; but Rousseau, Corot, Millet, Chintreuil, and Daubigny are *generals*. It is plain that, like Corot, Rousseau, and Millet, Daubigny drew inspiration from the great Dutchmen; an autograph letter printed in fac-simile displays his eccentric handwriting in a note from Dordrecht. But this letter belongs to a period subsequent to his arrival at worldly success, nor does his biographer mention any early visit to Holland. What one sees of Dutch art in his work, must be due to the Dutch pictures of the Louvre, but before he was twenty he had succeeded, by taking all sorts of commissions, by painting clock-faces, tobacco-boxes, walls, and pictures which are not considered by artists the highest kind of game, in effecting the obligatory tour to Italy.

Daubigny was born in Paris, of a family of painters; both father and uncle were artists; the father was a landscapist. He painted Paris streets and nooks of French rivers from a decided natural preference; although it also appears that he was able to please Paul Delaroche very much when he entered his *atelier* and engaged in academical work under his direction. On breaking loose from the methods of Delaroche he had to struggle with the *Salon*; events changed the management, and Daubigny had a chance to show the world what stuff was in him. It is odd now to think of Daubigny as an extremist or a revolutionary painter; yet in his day his methods, and especially in color, his greens, were thought as incendiary as any vagary of Courbet or Manet. Nor does Lalauze's sketch of the artist show anything uncommon or eccentric about his person. A rather comely and most urbane person, one gathers from it. In 1871 he writes to a friend: "The last eight days we have been in blonde Holland, as blonde as the women of Rubens. What a ravishing country! We return toward the end of May. * * *." So it appears that before he died, Daubigny not only saw the land where his real masters painted, but put in practice on Dutch rivers his own system of painting landscape from a barge, which he had first used many years before on the Seine and Loire. The article is not in itself one of the most remarkable in this volume. It is noted at length for the sake of the man who was very nearly the last of a series of painters of whom France is now very proud,

and whose places are apparently not to be filled for many a year to come.

Better articles, by far, are such biographies as Gindriez has made of the old sculptor Rude, or as Dr. Schmarzow contributes in a paper on Bramante at Loretto. Félix Regamey makes an elaborate report of the state of the fine arts and instruction therein throughout the United States. If not complete, it is far fuller than the one supplied by *L'Année Artistique*. In *L'Architecture Moderne à Rome*, H. G. Montferrier assumes the ungrateful task of pointing out to the Italians the want of originality among their modern architects, and is forced to explain, what everybody, however, knows already, that the imitation of French architecture may be flattering, but is most unwise. The essay of Léon Hugonnet on Oriental Architecture, is, all things considered, the event of this volume of "L'Art." Not that he can be followed in his widest generalizations. M. Hugonnet lays too exclusive a stress on Egyptian architecture, and insists on considering it certainly as the origin of all others. Alas, it is not Italy alone that is having her finest old cities vulgarized by the tasteless architecture of modern Paris. M. Hugonnet shows that Constantinople is being ruined in beauty and picturesqueness in the same way, and as much more rapidly as the sultans are richer than Italian municipalities or Italian joint-stock companies.

Volume third maintains the same degree of excellence as the others, and is enlivened by a piece of editorial self-justification on the part of M. Véron, which will be read with interest. It appears that "L'Art" criticised severely the "artists" who supplied illustrations to a catalogue for the sale of the Beurnonville collections. They entered suit against him for 26,000 francs, but the French judge found that reputations and feelings together had been hurt only in the sum of 2400 francs. Even this the ungracious M. Véron refuses to pay, alleging, among other things, that the magazine was started seven years ago with the express purpose of counteracting the indulgence in soft and complaisant criticism which its conductors considered fatal to French art. He says, with perfect truth, that personal considerations have never influenced "L'Art" in the distribution of its blame.

De Forest's "Bloody Chasm."*

MR. DE FOREST has done himself a decided injustice in giving so sensational a title to his latest book. The probabilities are all violated, it is true, in the many incidents, and there are other weak places in the story. But these defects are in great measure compensated for by much that is really good. The work is too unequal to make it correct to say that the characters are well drawn, but there are unquestionably many capital touches of character, many clever sayings, and a good tone. The interest is well sustained throughout, though the work is so unequal. The "bloody chasm," it is scarcely necessary to say, is the gulf which divided the two sections after the civil war. The *motif* of the story is the bridging over of this gulf in the case of the two principal characters, who are made representative types of the North and the South.

* The Bloody Chasm. A Novel. By J. W. De Forest, author of "Kate Beaumont," etc., etc. New York: D. Appleton & Co. 1885.

HOME AND SOCIETY.

Lawn Tennis.

HINTS FOR BEGINNERS—SCIENTIFIC PLAY—LAWS OF THE GAME.

A LEVEL piece of turf is the best site for a lawn tennis court, which should be frequently cut, rolled, and watered. By wearing rubber-soled shoes, the player will secure a sure footing, and save the court, since ordinary heels cut the turf. Lay out the court as in the accompanying diagram, the lines being marked with white-wash or paint, or with cord piping fastened down with hair-pins. First mark the sides of a parallelogram, A B (twenty-seven feet), B D (seventy-eight feet), which, with the parallel lines D C and C A, form the boundaries of a single court for a two-handed game. Extend A B to E F (thirty-six feet), and C D to G H, and draw the lines F H and E G, to indicate a double court for four-handed games. Drive stakes at L and M, midway between E and G and F and H. These are to support the net, L M, which will sag too much in the middle (where it should be three feet high) unless the stakes are held in position by cords running outward to pegs in the turf. A B and C D are called "base lines." Twenty-one feet from the net, draw the "service lines," N O and P Q. Then draw the center line, I J, and the court is complete for two, three, and four handed games.

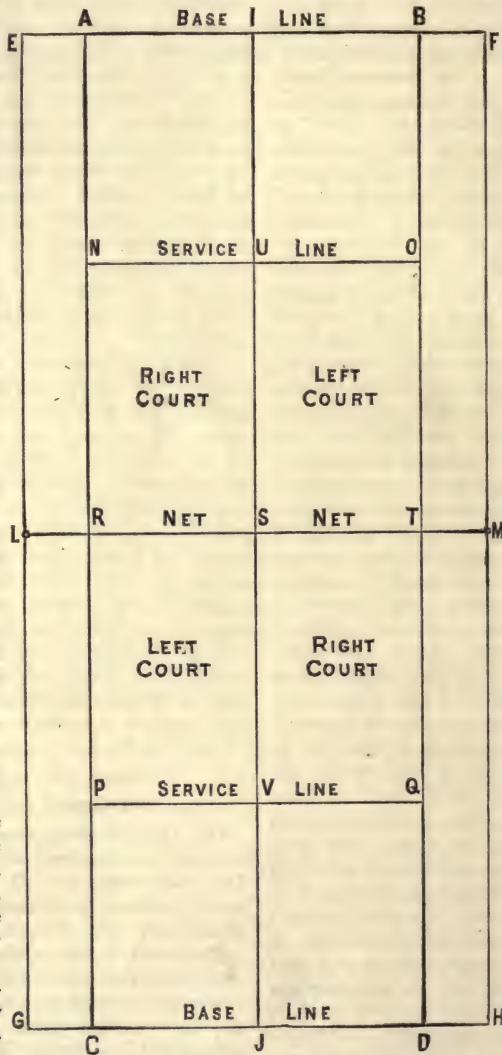

A few moments' observation of lawn tennis in play enables the novice to understand this simple game. It is another thing to play it well, since proficiency is a matter of natural aptitude and constant practice. For the instruction of persons who have no opportunity of seeing the game in operation, the elementary steps may be accurately indicated with the aid of the diagram. Where two persons play, one is called "striker-in," or "server," and the other, "striker-out." Suppose the server to be playing from the side A B R T, he places

one foot on, or within, the base line A I, and the other foot without. In this position he strikes the ball with the racket so as to serve it over the net into the corresponding right court, S T Q V, where the striker-out awaits it, behind the service line V Q. The striker-out lets the ball bound once, and before

it reaches the ground a second time, he must strike it back over the net so it will fall anywhere within A B T R. Now, the server is required to send it back so it will fall anywhere within C D T R, and to do this he may "volley" the ball (that is, strike it before it reaches the ground), or strike it after one bound. The ball is sent thus back and forth so long as it is in play, that is, until it twice touches the ground, or is struck out of court or into the net, or strikes the person of either player, in which case the ball is said to be "dead."

When a service ball strikes the top of the net, yet passes over, it is called a "let," and does not count. A failure to keep the ball in play makes a score for the opponent. A ball is not in play until it has been served as above into the court of the striker-out. A failure to serve within the court of the striker-out is called a "fault." Two successive faults count a score against the server. The second ball is served from the left base line, I B, into the left court, R S V P; and so on from right to left until the game is out. The modern game is counted like ancient tennis. Before either player has scored, the score is called "Love all." The first score, or ace, counts 15; the second, 15 more, or 30 all told; the

third, 10 more, or 40; and the fifth scores game. When both sides are 40 at the same time, it is called "deuce"; then two successive scores, on either side, are necessary to win. The first score after deuce is called "advantage." If the next score is in favor of the opponent, then it is deuce again, and so on until one or the other makes two successive scores. In the second game, the striker-out becomes the server, or striker-in. They

PLAN OF LAWN TENNIS COURT.

alternate as servers until one side has won six games, thereby winning the "set." E F H G indicate the boundaries of the court for four-handed games. Partners are right and left. They alternate in serving; and, in striking out, the right partner takes all balls served into the right court (his partner covering his flank to stop missed balls), and the left partner takes all balls served into the left court. The partner who is not serving usually plays in near the service line, toward his own side, or the center, it being the duty of the server to defend the rear of the court. In three-handed games, it is two against one, the partners playing as in four-handed games.

We now come to the art of the game. First, as to rackets. No good player cares to use another's racket, or to lend his own. In choosing the racket, many things should be considered. Its weight should be in proportion to the strength of the player, but it by no means follows that a weak player should choose a very light racket. There ought to be a certain proportion between the weight of the racket and of the ball. If the regulation balls manufactured by Ayres, of London,

FIG. 1.—UNDERHAND SERVICE.

are used, the racket should be fully fifteen ounces for a gentleman and thirteen for a lady. As soon as the game is over, the racket should be fastened in the racket-case, and put away in a dry place, but it should never be placed near a fire, which would impair its elasticity. The player who goes to a store where the best English and American rackets are sold will be not a little puzzled with the various shapes and varied manner of stringing. He will hear recounted the comparative advantages of the "grip," the "Olympian," the "knotted," the "ordinary," the "double strung," etc. We prefer an ordinary strung racket. The "knotted" and the "grip" cut the ball. The "Olympian" cannot be depended upon for accuracy of stroke. Rackets of different make vary as widely in shape as in manner of stringing. They are skewed and bowed in different ways; some are flattened at the tops, and some are oval. Which is the best? Each player must choose for himself or herself, for all wrists are not alike. If, holding the racket close up to the face, the center line of the net-work of the racket is in a straight line with the arm, you do not want any skew in the racket, but if not, you do. Besides, a slight bend in the racket

FIG. 2.—OVERHAND SERVICE.

facilitates the taking of half-volleyed balls off the ground. When playing, the bend of the racket should always be uppermost.

There are three ways of serving, the underhand, the overhand, and the high service. For the simple underhand service, grasp the racket in the middle of the handle, and stooping, drop the ball, striking it with the racket full-faced. (Figure 1.)

To put "side" on the ball, strike it with the racket nearly horizontal but slightly inclined forward. This will put a right-hand twist on the ball, so that when it bounds it will skew toward the striker-out in a very puzzling way. If he is prepared for a straight stroke he must alter his position or play a back-hander.

The overhand service (Figure 2) is made with the racket held nearly on a level with the shoulder. To produce a twist, turn the racket nearly face uppermost

FIG. 3.—HIGH SERVICE.

FIG. 4.—FORE OVERHAND STROKE.

and drop the ball on to the surface, cutting rather than striking the ball. This will give a strong left-hand twist, so that on striking the ground the ball will bound away from the opponent's right.

The same result, to a greater extent, may be produced by the high service. In making it, throw the ball up nearly in a line with the right shoulder, and in striking, hold the racket on a slant so that it will strike the ball on the right side (Figure 3). If this stroke is cleverly made, it will cause the ball to swerve while in the air, so strong is the effect of the twist, and when it strikes the ground it will bound outward.

There is another, the cut service, now not so frequently used. It is played overhand as above, but with the racket slanted to an angle of about thirty degrees. It drives the ball up with a strong rotatory movement, contrary to its course. The result of this is that when it strikes the ground it rises straight up, and not at the normal angle. It forces the player,

FIG. 5.—FORE UNDERHAND STROKE.

who is prepared for an ordinary service, to run forward.

In returning a service ball, or a ball in play, the player should always endeavor to drive as near the top of the net as possible without cutting into the net. All "lobs" up (to lob a ball is to drive it high above the heads of the players) are bad play unless specially required, as in the case of a forward player, when it is desirable to play over his head. There is a right and a wrong moment for taking a ball. After bounding, it should be struck when its upward momentum is spent and it is about to fall. The reason of this is clear. If the ball is struck on the rise, it will leave the racket at an obtuse angle equal to that of its incidence. In other words, it will lob up. The same principle must be borne in mind in taking a "skyer." It will leave the racket at a descending angle equal to that at which it strikes the racket. In fast play, you must take the ball how and when you can. It is better to hold the racket long. But for ordinary forehand play, especially where the driving is not hard, the better

FIG. 6.—BACK OVERHAND STROKE.

plan is to hold the racket short and let the stroke be given more from the shoulder than the elbow.

There are eight principal strokes at tennis, each of which should be thoroughly mastered. In order to do this, a person anxious to become a good player should practice each separately, having the ball pitched to him at a certain spot, and standing so as to play one particular stroke until it can be played with certainty. Some strokes only occur at rare intervals, and, consequently, unless practiced separately, are never really learned. The first and principal stroke is the fore overhand. For this stroke, hold the racket short, well up to the face, with a very slight backward incline (Figure 4). In order to play a ball in this manner, you should stand about eighteen inches to the left of its course, and strike it as it passes you. While it is of the utmost importance to be quick, more misses are made from being too quick than too slow. You should let your racket hover, as it were, a moment before striking. If you do this there will be no force in the stroke except that intended for the

FIG. 7.—BACK UNDERHAND STROKE.

ball. When you have to run forward to a ball, recollect to deduct the force of your run from the force of the stroke, or you will strike out of court, and, if you run back, increase the force, as your run will deduct so much from the blow. Try to strike the ball well in the center of the racket. If you hit the wood, it is almost sure to score against you. In making this stroke the left foot should be forward, and the right back.

Fore underhand is a stroke made with the racket held at the extreme end of the handle (Figure 5). It is most useful in taking half-volleys, quick services, and long drives. When the play is very fast and the ball is returned close over the net, the ball rises only a few inches after striking the ground. Consequently it must be taken underhand, or not at all. In good underhand play the ball should not be lobbed up in the air. Be sure to turn the elbow well in, and return as close to the top of the net as you can.

The high stroke: Where a ball passes over the player, but at a pace that will cause it to fall behind him and within the court, he should play it down just over the net. Such a ball played either at the opponent's feet or in some undefended part of the court, is almost sure to score. Be careful not to cut into the net.

Back overhand (Figure 6): In case a ball twists suddenly, or is returned so quickly that you cannot get to the left of it so as to take it forehand, you must strike backhanded. The difficulty is to get behind the ball in time. The right foot should be well forward and the left back. Turn the body from the waist well to the left, so as to throw its whole weight into the stroke. The racket should be held long or half-handle.

Back underhand (Figure 7) is a stroke given with the right foot forward and the left back. The racket must be held at the extreme end of the handle, and, as in the preceding stroke, turn the body well to the left.

Forward play overhand and underhand: These strokes are required chiefly for volleys and twisting balls. For the overhand, hold the racket short and firm. When the ball is driven very hard, little more than its own returned momentum is required to send it back over the net. A very telling play in single games, when you are near the net and your opponent is at or near the base line, is to loosen the racket in the hand when the stroke is given. This stops the

ball without returning its force, and drops it just over the net, where it falls long before the opponent can get to it (Figure 8).

Forward underhand strokes, like back underhand, are the most difficult in the game. They should be played with the elbow forward and well up (Figure 9). The effect of this is to keep the ball from rising, and to return it just over the net.

The back stroke is very seldom used. It is a "show" play, and provokes great applause. When a ball twists so suddenly that you cannot get the racket behind it in time, pass the racket behind your back and play as in Figure 10.

Guard and attack must always be in a player's mind, the object being to protect his own court and assail his adversary in a weak point. As to the first: After every stroke, get back to the center of your court; if the play is fast, be near the base line; if it is slow, near the service line. It is always easier to get forward to a ball than back to it. No one can play a forward game without being skillful in volleying. It is a means of attack and defense in which the great beauty of the game consists. Half-volleys are strokes when the ball is close to the ground and about to bound or "pitch." There are two styles of volley play, at the net, and on the service line. The first is always played overhand. It is a showy but a dangerous play, except in four-handed games, because it leaves so much of the court unprotected. The answer to it is to play the ball up over the opponent's head where he cannot get it, or obliquely across the court out of his reach. Volleying from the service line is a safer and a much more effective play. At the service line, if the ball is not struck hard by the opponent, so as to carry it out of court, it will be approaching the ground, and may be half-volleyed or taken underhand. To do this and to return close over the net is the *ne plus ultra* of play. Half-volleys have been described by some writers as the stroke of despair. So they may be to an inferior player, but when well played, and placed, they are almost sure to score.

And now as to "placing," which consists in returning the ball to that spot in the court where the

FIG. 8.—FORWARD OVERHAND STROKE.

FIG. 9.—FORWARD UNDERHAND STROKE.

opponent is not and cannot get. If he is forward, play over his head; if he is near the base line, drop the ball just over the net. Also drive the ball to his right or left, whichever way will make the return most perplexing. A good player will keep his opponent racing from side to side till he tires him out. Thus, if the ball be played so that while striking the ground in the right side of the opponent's court it twists outward, he must go out of his court to take it. If it be returned with a volley to the left side, it is almost impossible for him to get there in time. When a ball cannot be played away from an opponent, the most embarrassing play is to place it at his feet. He must then step back to take it, and will very likely miss.

Much of the success and all of the elegance of the game depend upon correct attitudes. It is scarcely necessary to say that the dress should be loose, and the arms and shoulders absolutely free. The skirt of the dress worn by ladies should be short enough to allow the feet to be raised in running without danger of tripping. So far as the upper part of the dress is concerned, there should be no straps, bands, or anything that will deduct half an ounce of force from a stroke. The dress should not be tied tightly back, and above all, French heels should be dispensed with. In taking a service, the striker-out should stoop slightly, with the feet a little apart and the knees bent. This enables him to see more clearly what sort of a twist the server is giving the ball, underhand or overhand. If the twist is underhand, it will swerve toward the striker-in, and he should be ready to play it backhanded. If the twist is overhand, it will pass to his right, and he must be prepared for a run or a long reach. It is as well to pose in front of these balls, and if they have no twist, to play them forward underhand. We would enforce three maxims: (1) Always keep cool; repress any excitement, and let there be an imperturbability about you which no good or ill fortune can disturb. Of course you must move quickly from place to place, but always have your movements well in hand; get there in time and be ready for the ball,—a millionth part of a second in advance is sufficient. Let the stroke and the run be two different move-

ments. (2) Never try to "show off." Play steady strokes until your adversary gives you an opening, and then do your best. Do not try to be always clever. An opportunity for a great stroke does not occur once in six. You cannot always make difficult returns. (3) Do not be in too great a hurry to strike the ball. Watch its pitch, its twist, and its rise, and then strike. Try to save yourself as much running about as possible. If you are a master of backhanded strokes, it will save you many a run to and fro. If your opponent is skillful at twists, be ready to play them as in Figures 8 and 9.

In four-handed games, one partner plays forward and the other back. The non-server should stand well to the right or left, so as not to interfere with his partner's service, and come forward to the center of the court the moment the ball is in play. The forward partner should take those strokes that come fairly to him, leaving the others to his partner. He should not be too anxious to volley, but should play these strokes only when it can be done with effect. It cannot be too frequently enforced on the attention of beginners that steady play wins more games than clever play. The player who keeps well back on the base line, and drives hard to the opposite base line, is a more formidable opponent than he looks. In such play a forward partner should not interfere till he can do so with effect. For instance, if he sees both opponents right or both left, he may volley into the unguarded space. This is useful and good play, but to dance about at the net, striking some balls and missing others, is bad play. The back partner should be, as it were, captain of the team, and call out to his partner when to leave a ball or take it. In general, the back player should keep the game going, and carefully return balls. The forward player should try to puzzle the opponents. In other words, the forward player should be principally occupied with the attack, and the back player with the defense.

When first introduced, lawn tennis required little more skill than battledore and shuttlecock. The only art practiced was to strike as in the original game of tennis, with the racket slanting, so as to put "cut" on the ball. This play was soon changed by the introduction of swift service and swift return, which drove the

FIG. 10.—BACK STROKE.

"cutter" to the base line of the court, and rendered cutting impossible. Up to this point the ball had always been taken after its bound, but Mr. Renshaw, of Cheltenham, first introduced the volley at the net. He was tall, and possessed a long reach, with which he covered a great part of the net, and, standing close up, he played the balls down into his opponent's court in a manner that rendered their return impossible. Among his opponents was Mr. Lawford. This gentleman was easily defeated by Mr. Renshaw. He was not fully disposed of, however, for he invented an answer to Mr. Renshaw's play, partly by tossing the balls over his opponent's head and partly by oblique drives across the court out of his reach. Thus science triumphed over volleying at the net, and Mr. Renshaw retired defeated. At the next meeting at Wimbledon, the latter re-appeared with an entirely new play. He volleyed now from the service line. This gave him a great advantage. He had more time to get to the ball and more space to return it in. But if this play is safer in point of position, it is much more difficult of execution. Most of the returns approach the ground, and must be half-volleyed or taken underhand. The other player must judge every return with the nicest accuracy, and, if possible, so return as to drive his opponent away from the service line.

Lawn tennis is being played with success in the Seventh Regiment Armory, and the game will probably become a popular in-door sport for the winter months. The ball may be made to bound nearly as it does on turf, by stretching heavy carpeting or druggut within the boundaries of the court.

RULES OF LAWN TENNIS.

The accepted rules of the game are:

1. The choice of sides and the right of serving during the first game shall be decided by toss; provided that if the winner of the toss choose the right to serve, the other player shall have the choice of sides, and *vice versa*. The players shall stand on opposite sides of the net; the player who first delivers the ball shall be called the *Server*, the other the *Striker-out*. At the end of the first game, the striker-out shall become server, and the server shall become striker-out; and so on alternately in the subsequent games of the set.
2. The server shall stand with one foot outside the base line, and shall deliver the service from the right and left courts alternately, beginning from the right. The ball served must drop within the service line, half-court line, and side line of the court which is diagonally opposite to that from which it was served, or upon any such line.
3. It is a *fault* if the ball served drop in the net, or beyond the service line, or if it drop out of court, or in the wrong court. A fault may not be taken. After a fault, the server shall serve again from the same court from which he served that fault.
4. The service may not be *wolleyed*, *i. e.*, taken before it touches the ground.
5. The server shall not serve until the striker-out is ready. If the latter attempt to return the service, he shall be deemed to be ready. A good service delivered when the striker-out is not ready annuls a previous fault.
6. A ball is *returned*, or *in play*, when it is played back, over the net, before it has touched the ground a second time.
7. It is a good service or return, although the ball touch the net.
8. The server wins a stroke if the striker-out volleys the service; or if he fail to return the service or the ball in-play; or if he return the service or ball in-play so that it drop outside any of the lines which bound his opponent's court; or if he otherwise lose a stroke, as provided by Law 10.
9. The striker-out wins a stroke, if the server serve two consecutive faults; or if he fail to return the ball in-play; or if he return the ball in-play so that it drop outside any of the lines which bound his opponent's court; or if he otherwise lose a stroke, as provided by Law 10.

10. Either player loses a stroke if the ball in-play touch him or anything that he wears or carries, except his racket in the act of striking; or if he touch or strike the ball in-play with his racket more than once.

11. On either player winning his first stroke, the score is called fifteen for that player; on either player winning his second stroke, the score is called thirty for that player; on either player winning his third stroke, the score is called forty for that player; and the fourth stroke won by either player is scored game for that player; except as below:

If both players have won three strokes, the score is called deuce; and the next stroke won by either player is scored advantage for that player. If the same player win the next stroke, he wins the game; if he lose the next stroke, the score is again called deuce; and so on until either player wins the two strokes immediately following the score of deuce, when the game is scored for that player.

12. The player who first wins six games wins a set; except as below:

If both players win five games, the score is called games-all; and the next game vantage-game for that player. If the same player win the next game, he wins the set; if he lose the next game, the score is again called games-all; and so on until either player wins the two games immediately following the score of games-all, when he wins the set.

NOTE.—Players may agree not to play advantage-sets, but to decide the set by one game after arriving at the score of games-all.

13. The players shall change sides at the end of every set. When a series of sets is played, the player who was server in the last game of one set shall be striker-out in the first game of the next.

THREE-HANDED AND FOUR-HANDED GAMES.

The above laws shall apply to the three-handed and four-handed games, except as below:

In the three-handed game, the single player shall serve in every alternate game.

In the four-handed game, the pair who has the right to serve in the first game may decide which partner shall do so, and the opposing pair may decide similarly for the second game. The partner of the player who served in the first game shall serve in the third; and the partner of the player who served in the second game shall serve in the fourth; and so on in the same order in all the subsequent games of a set or series of sets.

The players shall take the service alternately throughout each game; no player shall receive or return a service delivered to his partner; and the order of service and of striking-out once arranged shall not be altered, nor shall the strikers-out change courts to receive the service, before the end of the set.

CHANGES IN THE LAWS.

At the meeting of the United States National Lawn-Tennis Association, held in New York last May, the following alterations were made in the preceding rules:

1. The balls must now only vary from two and a half to two and nine-sixteenths inches in diameter, and from one and seven-eighths ounces to two ounces in weight.
2. In matches where umpires are appointed, their decision is final.
3. The server must stand, when delivering the service, "with one foot beyond (*i. e.*, farther from the net than) the base line, and with the other foot within or upon the base line.
4. If the server does not stand as directed in the above law, or if he delivers the service from the wrong court, it is a fault; but,
5. Having served from the wrong court, and so made a fault, he shall deliver the next service from the court from which he should have served before; and,
6. It is further provided that "a fault may not be claimed after the next service has been delivered."
7. A service, whether good or a fault, so delivered, counts for nothing.
8. A return in which the ball touches the net is still considered good; but if the ball served touch the net, the service, provided it be otherwise good, counts for nothing.
9. No player must touch the net, nor any of its supports, while the ball is in play; nor must they volley the ball before it has passed the net, on penalty of losing the stroke.
10. The umpire, on appeal from either party, before the toss for choice, may direct the players to change sides at the end of every game, if, in his opinion, either side have a distinct advantage owing to the sun, wind, or any other accidental cause; but if the appeal be made after a match has been begun, the umpire can only direct the players to change sides at the end of every game of the odd and concluding set.

BENJAMIN HARDWICK.

THE WORLD'S WORK.

Protection for Workmen.

THE hydraulic shield for protecting workmen standing before steel furnaces, from the heat, and already described in this department, has proved useful in a number of works. Any apparatus of this kind that is really efficient should be welcomed and adopted. The vital force that is required to resist heat, cold, dust, rain, or bad air, is just so much taken from the force the workman has to expend at useful work in his trade. Anything that adds to his comfort is therefore a good commercial investment. The latest device in this direction is the making of masks or shields of thin sheets of mica. Mica is now found in abundance in this country, and sheets large enough to cover the face are comparatively cheap. It is a good non-conductor of heat, is light, and may be bent sufficiently to form a curved mask over the head. It is transparent enough for all purposes, and worn before the face, it protects the eyes and skin from the heat, and from flying particles of metal thrown off from a forge or grinding wheel. The mica shields are made of single pieces or sheets, as thin as possible, and are fastened to a hood or cap for the head. There is room for eyeglasses beneath the mask, and for a circulation of air. For dusty places, as in mills or in grinding-works, a tube is fixed to the lower part of the mask to admit fresh air through a damp sponge. Provision is also made for the escape of the respired air at the top of the mask. The lower part of the mask may also be fitted to fire-resisting clothing worn over the head and shoulders. It is to be hoped that so simple and useful a device as this mica mask will not be patented. If the men are permitted to make them, or can buy them for a low price, they will be largely used. If a bonus must be paid the inventor, it would be better for some manufacturing company to purchase the patent and make it free.

New Material for Wall Decoration.

A NEW material for covering interior walls has recently been introduced into the United States that deserves attention. The material has already been thoroughly tried in England, and appears to have met with general favor. From the samples examined, it appears to be one of the best substitutes for wallpaper ever introduced. It comes in rolls or sheets, is pliable, like stiff cloth or leather, and is from two to seven millimeters thick, according to the use to which it is to be applied. The basis of the material is linseed oil, mixed with a light and elastic material to give it thickness and body. Coloring matter is also incorporated with the oil, so that when finished the sheets are of one solid color and may be cut or carved without injury. The oil is dried or oxidized till it is perfectly hard and impervious to moisture, and to give it the proper form as thin sheets, it is spread on canvas, which forms a backing. It is tough, strong, elastic, and pliable, so that it may be bent to cover curved surfaces, and it will stand quite severe

blows without injury. It may also be washed with soap and hot water or with weak acids. It readily takes the printing-roller and may be stamped into any raised pattern, or be painted, gilded, or bronzed. The material examined was in the form of wall covering, as thin sheets printed like wall-paper in oil colors, or as plain sheets in various colors incorporated in the body of the material. The cheapest form is a simple sheet having a slight mat, on which the decoration is applied. More expensive kinds examined had ornamented surfaces in relief, either in a single color or painted, gilded, or bronzed after it was put in place on the wall. Another and very useful form in which the material is made enables any one wishing to decorate a part or the whole of a wall, a fire-screen, panel, sideboard, columns, wood-work of all kinds, and any surface intended to be ornamented, to apply the decoration without the aid of a paper-hanger. For this purpose the material is made in the form of panels and tiles of all sizes, borders, bands, and narrow strips. These can be fitted to any surface, either flat or curved, that will hold a tack or paste. The sheets may be nailed into position or may be fastened by a mixture of paste and glue (two-thirds paste, one-third glue). The making of the material in these shapes and sizes gives a large field for ingenuity and skill in household decoration, and the low price at which it can be sold will no doubt make it popular. Small tiles from ten to thirty centimeters square cost from twenty-five to fifty cents each, and narrow borders from five to ten centimeters wide are about fifty cents a meter (or yard). A large piece of paneling for a wall or fire-screen will cost from ten dollars upward, according to the richness of the design.

Mechanical Refrigerator.

A LOW temperature is now as useful in many arts as a high temperature, and within a few years a number of inventions in the form of ice machines, chill rooms, and refrigerators have been successfully introduced. Among these, perhaps, the most simple and the most convenient for use on land or shipboard is a new process for obtaining cold air by mechanical means. The apparatus consists essentially of a compressor driven by steam, a supplementary engine driven by compressed air, and a cold room or freezing chamber. It does not appear important what form of air-compressor is used, though in the machine examined the steam cylinders are directly connected with the air-compressors, one piston-rod serving for both. The heat generated in compressing the air is reduced by a jet or spray of water thrown into the compressor at the time the compression takes place. The air is then taken to an upright tank or tower, where it is cooled still more by passing through a shower of water. The air-pipes for conveying the compressed air from the tower are carried into the chill room through other pipes, in which the air is cooled still more. It then returns to a cylinder placed beside the steam-engine. In this cylinder the compressed air

expands while doing useful service, as this cylinder is directly connected with the steam-engine, and assists it in its work. The exhaust from this cylinder is then allowed to enter and expand in the chill room. The novel feature of this system appears to be in the use of the compressed air to drive the supplementary engine. It is claimed, and apparently with good reason, that by employing the air to do useful work in an engine, it enters the chill room at a very much lower temperature than if allowed simply to expand naturally on entering the chill room. The process has been applied to steam-ships, and one vessel is reported to have brought a cargo of frozen fish from Hudson's Bay to England in good order, while a larger cargo of fresh meat was brought from Australia in safety.

Novel Method of Molding Plastic Materials.

IN making parabolic mirrors for reflectors for lamps, it has been found that the familiar potter's wheel could be used to make such reflectors in an entirely new way. Upon the wheel, which is driven by some convenient power, is placed a circular vessel, the vertical axis of the vessel corresponding to the axis of the wheel. That is, a vessel resembling a wash-basin is placed exactly on the center of the horizontal wheel. This vessel is filled with some plastic material, like plaster of Paris in a liquid form. The wheel is then driven at a moderate and perfectly uniform rate of speed, when the liquid plaster rises by centrifugal force around the sides of the vessel. The surface of the liquid sinks in the center, and assumes a parabolic form. The motion of the wheel being maintained, the particles of plaster are practically at rest, and the whole mass hardens and becomes stiff while in the form given to it by the centrifugal force developed by the motion of the wheel. The shells thus made are taken out of the vessel, and may be silver-plated on the inside for lamp-reflectors. In experimenting with this ingenious device, it has been found that the vessel that is placed on the potter's wheel should be of a hemispherical shape, so that the plastic mass that is placed in it will readily rise at the sides and assume the parabolic form. Plaster of Paris, a solution of mastic, and fusible metals have been tried in this way with most interesting results. In making other forms, such as flatter mirrors, or hollow vessels of all kinds, different shapes may be used. One thing, however, appears to be indispensable. The motion of the wheel must be uniform, for variations of the speed at which it turns produce changes of form in the plastic mass while it is hardening. Steam-power seems to be too irregular in this respect, and dynamo-electric machines, moved by a battery, are found to be the best motors. The plastic material, when put in the revolving vessel, should be quite thin and liquid, so that it will harden slowly and not become fixed before sufficient speed is attained to give it the right shape. This invention, while it did not originate in the pottery trade, is one that may yet prove of the greatest value in the manufacture of plastic ware. It is practically a new extension of the potter's art, and should be made the subject of thorough experiment to test its value. Thin "slips," or very liquid clay, placed in vessels of different forms, and given on the

potter's wheel different rates of speed, will, no doubt, give some new forms of plates, and other vessels. The liquid, while revolving in the vessel, can be made to assume different forms by altering the speed, or by placing wooden guides on the inside of the vessel to direct the liquid into any shapes desired. Gas flames could also be used to solidify the liquid when the revolving vessel has caused the clay to assume the desired form.

New Gas-motor.

GAS-ENGINES have proved so useful in places where a low and easily managed power is in demand, that many efforts have been made to reduce the cost of such motors, and to make them as effective as possible. Of these motors one, at least, has proved quite successful, and has been already described in this department. A more recent invention in this field deserves attention, because it appears to give a decided gain in economy over others of its class. This springs from the fact that every second stroke of the piston, or every revolution, develops power, some other motors of this class giving power only on every fourth stroke. No gas-engine appears likely to develop power on every stroke, as the mixture of air and gas burned in the cylinder will not escape, like steam, from the cylinder after it has done its work. It appears to be necessary to wash or sweep out the products of combustion after each explosion in the cylinder, to make the machine work.

In the new machine two cylinders are employed, one called the displacing cylinder (or displacer), and the other the working cylinder. It is the duty of the displacer to remove the products of combustion, and then to recharge the working cylinder after each outward stroke. This motor is interesting because of the peculiar arrangement and duties of these two cylinders. Their actual position and connection with the other parts of the machine are of less importance, and need not be considered. The displacing cylinder is much larger than the working cylinder, and they may, for our purposes, be imagined as placed side by side, with the piston rod of each connected with the crank-shaft at right angles. If the engine has just completed a working stroke, the piston of the displacing cylinder is just ready to advance. During the first half of its stroke, it draws into the cylinder the mixture of air and gas that is to be burned in the working cylinder. At mid-stroke the inlet port is closed, and another is opened, admitting pure air during the remainder of the stroke. At this point the piston in the smaller cylinder is just finishing its effective stroke, and the connection between the two is opened. The fresh air, taken in during the last half of the stroke of the displacer, is now free to enter the working cylinder, and, as its exhaust is still open, the pure air enters and passes through the working cylinder, driving out the products of combustion and escaping, in turn, after washing or cleaning it out on its way. At the right moment the exhaust is closed, while the explosive mixture that follows the pure air enters and fills the cylinder. The piston, on its return, compresses the mixed air and gas, and at the right instant it is fired, and the explosion drives the piston back on its effective stroke. The points of interest here appear to be in the employment of the second

cylinder, and the use of pure air to wash out the working cylinder and drive off the products of combustion before the gas is admitted and compressed. There is, besides the gain of making the working cylinder perform its duty at every second stroke, the economy of moving a lighter piston to prepare the charge of gas at the same time that work is being performed. The current of pure air forced through the working cylinder cools the parts, and puts out any sparks that might still burn after the explosion, and that, if not extinguished, might cause a premature explosion. This motor has been made the subject of exhaustive experiment, and was exhibited at work at the Paris Electrical Exposition, where it seemed to meet with approval.

The Hydromotor.

A GREAT many attempts have been made, both in America and in Europe, to employ steam power in moving vessels by the use of some machinery other than the screw and paddle-wheel. The object sought has been to apply the power in such a way that the motion of the screw or wheels will not create troublesome waves, as it is well known that the waves made by passing boats sometimes cause great damage to river banks by washing away structures put up to restrain floods or to control the current. The plan hitherto followed, and with some success, has been to put a steam-pump on the boat, and to take in water at or near the bows, and to propel the vessel by driving the water out by means of the pump through a much smaller pipe at the stern. The form of the nozzle used in ejecting the water has varied greatly, from a single opening to many small openings arranged along the under side of the hull; sometimes thin sheets of water have been tried.

The most radical improvement in this direction has been tried with apparent success recently upon a steamship 33.55 meters (110 feet) long, 5.18 meters (17 feet) beam, and drawing 1.83 meters (6 feet). The water-jets are discharged from two large nozzles, placed one on each side of the keel, and close to the boiler and engine. The chief interest in this steamer lies in the new motor used to force the water through the nozzles. The engine is evidently based on the form of steam-pump known as the pulsometer, in which the direct action of the steam is used to move the water in the pump. The engine consists of a pair of upright cylinders, each being connected at the lower end with a large pipe leading to the two discharge-nozzles outside the boat. At the top of each cylinder is an inlet for the steam and an outlet for the exhaust that is taken by a short pipe to the surface condenser. There is also a large inlet at the base of each cylinder, and a pipe communicating with the condenser, so that seawater can be taken from outside the boat through the circulating pipes of the condenser to the cylinder. This inlet is provided with a valve opening inward. Inside each cylinder is a float that nearly fills it, thus making a loose-fitting piston. The piston has a rod extending upward through the top of the cylinder, that controls by the movement of the piston the steam and exhaust ports.

To understand the action of this novel water steam-engine we may imagine one cylinder to be full of seawater. The piston floating on top of the water is at

the top of the cylinder, and in this position its rod opens the steam-port. Steam under high pressure enters the cylinder and drives down the piston, expelling the water with great force through the nozzle under the boat. The recoil of this jet against the outside water is the direct means of moving the boat ahead. When the water is all driven out of the cylinder, the piston through its rod opens the exhaust-port (the steam-port having been closed at the right time by the same means), and the steam escapes into the condenser. The partial vacuum then created in the cylinder opens the inlet valve below, and the cylinder is quickly filled with sea-water. A small quantity also enters through the nozzle at the same time. The piston, raised to its first position, again admits the steam, and the action is continued precisely as in an ordinary steam-engine. The cylinders are always worked in pairs, alternately, and any number of pairs may be used that seems desirable, or that the boilers will supply with steam. Each pair has its own set of discharge-pipes under the boat, or they may all combine their streams into two large jets.

In addition to the two nozzles directed astern, the hydromotor is provided with a smaller pair turned the other way, and intended to move the boat backward. These are closed by valves and gates while the boat is steaming ahead, and to reverse, it is only necessary to open them, and the full force of the engine is directed the other way in an instant, and without shutting off steam or stopping the engine. A small steam-engine is placed near the discharge-pipes of the cylinders, and by the movement of a lever in the pilot-house steam can be admitted to this engine, and a single stroke of its piston closes the larger nozzles, and opens the valves into the smaller pair. Thus the main engines are practically reversed by the pilot without signaling the engineer or stopping the engines.

In this motor, it is readily seen, the expansive force of the steam is brought to bear directly and with very little loss from friction. Though the amount of water driven by such an engine through the nozzles may be less than could be delivered by a centrifugal pump driven by an ordinary marine engine using the same amount of steam, yet the results obtained are regarded as satisfactory. The economy of space and reduction of cost in the engine are certainly greatly in its favor. All the expense and cost of maintenance of the shaft and screw are dispensed with, and the boat moves through the water with probably much less disturbance than by screw or paddle. Compared with the *Waterwitch* and the *Rival*, two much larger boats than the *Hydromotor* and both using hydraulic systems of propulsion, it appears from reliable reports that the new engine drives its jets from the nozzles at a much higher speed, and in less volume, and at a great economy of power. No comparison of the speed of the boats has been made, nor has the new boat been compared with screw-steamers.

Novel Air and Water Pump.

LOCOMOTIVES intended to run long distances without stopping are often fitted with apparatus for taking up the water they need without stopping at the usual water-tanks. Long, narrow, and rather shallow tanks are placed between the rails, and kept full of water by a stream from some neighboring brook or spring. The

tender is provided with a pipe, bent into a quarter-circle, that may be lowered between the rails till the open end of the pipe dips into the water in the long tank. The forward movement of the engine drags the pipe through the water, and it rises in the pipe and pours in a powerful stream into the tank on the tender. This simple device for lifting water into a moving train has been made the basis of a new kind of pump, in which the theory is the same while the process is reversed. Instead of causing the bent pipe dipped into the water to move, the vessel containing the water, and consequently the water itself, is made to move rapidly while the bent pipe remains stationary. Centrifugal force is used to give the water a high velocity. This, it may be observed, has been employed before in raising water. An upright cylinder, having a series of vanes placed on a vertical shaft inside, has already been used in lifting water. When the vanes are made to revolve rapidly, the water that fills the lower end of the pipe rises and overflows at the top. Such pumps have been used to raise water 39.95 meters (131 feet). In the new pump the upright shaft carries a flat circular vessel, designed to be kept full of water by a pipe from the source of supply. The cylinder or turbine is nearly closed, so that there is only a small annular space on top, next the upright shaft. The supply-pipe is simply turned down into the turbine. The pipe through which the water rises turns outward, on entering the turbine, till it reaches the outer edge under the cover. Here the open end is exposed toward the water, in the opposite direction in which it moves. This rising main is so arranged that it will present the least resistance to the water, and has a sharp edge to guide the water past the pipe with the least disturbance. On causing the shaft to revolve rapidly, the water entering the turbine is driven by centrifugal force to the outer edge. It meets the fixed pipe in the line of its movement, and a part enters the pipe and rises to a great height. From the experiments made with this form of pump, it is said that the height to which the water may be raised is only limited by the resistance of the materials of which the turbine is made to the centrifugal force which tends to pull it to pieces.

The position of the pump may be varied in regard to the source of water supply. It may be placed at the level of the water to be raised, or it may be put at any point between the supply and the point to which the water is to be lifted. If the pump must be placed above the water supply,—and this is the most common position of every pump,—the turbine must be fed from a reservoir at the same or a higher level. The stream delivered by the pump is taken downward to the source of supply, and here the pipe enters a hollow cone suspended under the water, the cone being connected by a pipe with the reservoir above the pump. The pipe and cone act as an injector, and the stream from the pump carries up with it a portion of the water surrounding the injector. The stream of water flowing from the reservoir must be subtracted from the amount actually raised by the pump; on the other hand, the head or force given to the water by its descent from the turbine must be added to the force given to it by the movement of the pump.

This form of pump has also been used as an air-pump. In this case the delivery-pipe from the pump is

made to enter an upright cylinder and deliver its jet directly upward. At the top of the cylinder is a second pipe or nozzle, in the shape of an inverted cone. This nozzle increases in diameter inside, just beyond the open end, and the two nozzles are in a direct line, and the jet of water from the lower nozzle enters the upper nozzle with nearly its whole force. The cylinder in which these two pipes meet is connected with the air-receiver that is to be exhausted. The action of the water-jet in passing from one pipe to the other is to carry along with the water a small quantity of air. This air, as soon as the water meets the open reservoir above, escapes from the water in bubbles that rise to the surface. The water returns by another pipe to the turbine, and goes again upon its circuit.

Economy of Heat.

THE plan of heating the air needed for combustion, and known as the regenerative plan, invented by Siemens, has successfully been applied to iron and steel furnaces, and lately to gas-burners and common domestic grates. The waste heat of the fire or lamp is used to warm the air needed for combustion, at a very great gain in the amount of heat or light obtained from the fuel. A later improvement, by the addition of steam power, brings the regenerative system more directly and thoroughly to ordinary stationary boilers, at an undoubted economy of fuel. Upon the top of the boiler, at the rear, next the chimney, are placed two blowers to be driven by steam power, the "Root" pattern being suggested as the best. The products of combustion pass from the fire-box under the boiler to the rear, and return through the tubes to the front. At the top of the boiler-casing, and extending backward to the chimney, is a flue divided into a number of small tubes by partitions. The best thing it can be likened to is a surface condenser, for through half of these tubes flow the products of combustion toward the stack, and through the other half flows the air needed for combustion. The blowers each control one of these currents, as the cold-air current would require some pressure to drive it through the pipes that are heated by contact with the smoke-pipes. The cold-air pipes are carried downward into the ash-pit to assist combustion, and to openings over and behind the fire. The smoke and flame, drawn through the small tubes by the blowers, impart their heat to the air passing downward through the adjoining pipes, so that it enters the fire at a high temperature. This is a great gain, as more heat is obtained from a given amount of fuel when the air needed to make it burn is heated, than when it is cold. The heat thus saved would be, in the ordinary furnace, totally lost by escape up the chimney.

The invention is certainly an improvement over any regenerative system that has been applied to steam-boilers. At the same time, it might be suggested that a double stack, or a chimney having two divisions, each filled with fire-brick loosely laid in, would probably be better. The products of combustion could be sent up one stack till it was well heated, and then directed into the second stack. The air for combustion could then be taken downward through the hot brick-work, precisely as in the regenerative furnace. As far as can be learned, no experiments have yet been made in this direction, and this is only offered as a suggestion.

MASKWELL'S COMPENDIUM

For the Middle-aged and the Distinguished.

Many efficient aids exist for the instruction of the young in penmanship, but it has been left to Prof. Maskwell to attempt the reclamation of the famous and the infirm. The illegibility of the handwriting of our public men has been a source of great concern and inconvenience to thousands. On this account many of our politicians are unable to make clear their positions on great public questions, while it is next to impossible for a Last Will and Testament to be interpreted as the deviser intended. The visiting-cards of many of our best society are so badly written as to fail to command the respect really due to the breeding of their owners. There is no more sure test of refinement than an elegant handwriting, and there is no accomplishment more rare, because, unless acquired in middle age, it is difficult to attain it in later years. In this connection, we may call attention to the fact that Maskwell's system can be learned in a very short period of time, and at odd hours. One New York gentleman writes us that he has acquired an elegant and rapid style merely while getting on or off the trains of the Elevated Railway; this is probably the quickest recorded time of acquisition. A Western laborer learned to write a flourishing style with his left hand while sawing wood with his right. A special edition of the Compendium has been issued for use in railway restaurants, and Maskwell coupons are now attached to through tickets, so as to enable the tourist to take three lessons a day *en route*. The only objection ever made to this system is that it is too easy.

READ THE FOLLOWING TESTIMONIALS:

[From the Editor of the People's Magazine.]

DEAR SIR:—By the aid of your Compendium, I am now able to sort out good and bad contributions without the annoyance of reading the MSS. With thanks and regrets, very truly yours,

The EDITOR.

[From a Concord Pundit.]

DEAR MR. MASKWELL:—Since the wonderful results of your Compendium have become the subject-object of all conversation, the Concord School of Philosophy has instructed me to procure from you seven copies of Mr. R. W. Emerson's poem, "Brahma," written in your plainest style. Mr. Emerson has given us an autograph copy, but no one seems able to make it out to his satisfaction. I am, devoted to Kant, yours,

J. BRONSON JONES.

[From a Dealer in Oughtographs.]

VASSAR COLLEGE, Poughkeepsie, N. Y., Sept. 7, 1881.

PROF. MASKWELL—Dear Sir: Seeing your advertisement in the "Waverly Magazine," I wrote for your Compendium, and have now used it for twenty-four hours. It has quite simplified my business. Heretofore I have had to resort to great ingenuity

The best specimen of improvement this month, all things considered, comes from Mr. F. E. SPINNER, formerly Treasurer of the United States. We give below his autographs, both old and new, together with his portrait:

Maskwell

HERKIMER CO., FLORIDA,
September 7, 1881.

DEAR SIR:—Your Compendium arrived this morning, and I have been practicing a little—with what result you will see. The ink was hardly dry on the old style before I had acquired the new. In my opinion, the present flourishing condition of the country is largely due to the general introduction of Maskwell's Compendium.

Very truly yours,
F. E. SPINNER.

We give below other examples of good work.

C. D. Washburne

The Garland of Rachel.

On the 1st of January, 1642, Mademoiselle Julie-Lucine d'Angennes de Rambouillet, the famous beauty, of whom Tallemant des Réaux affirmed that she had been more besung than any woman since Helen of Troy, received a birthday present which has become historical. The donor was her suitor, the Duc de Montausier, whom popular tradition confuses with the "Misanthrope" of Molière, but who, notwithstanding the critical faculty attributed to him in the play, was still capable of producing very indifferent verses. Indeed, it was a collection of madrigals which he now presented to the lady he had patiently wooed for some ten years, and he had done himself the honor of composing no less than sixteen of the pieces in question. His colleagues, twenty-eight in number, included most of the *beaux-esprits* of the day, as Chapelain, Colletet, Corneille, Malleville, Scudéry, Tallemant des Réaux, and others. Their work was engrossed on vellum in the finest style by the celebrated calligrapher, Nicolas Jarry. There was a frontispiece by the miniaturist Robert, in which Zephyr was shown flinging lightly upon the air a garland of twenty-nine different flowers, each of which, also painted by Robert, is repeated, separately, on twenty-nine of the succeeding pages, duly accompanied by one or more appropriate pieces of verse. The title of the book was the "Guirlande de Julie," and it was superbly bound in red morocco, by Le Gascon. It is still in existence, and is (or was) in the possession of the Duc D'Uzès, a descendant of the lady to whom it was originally presented. When it made its first appearance, in 1642, it was a nine-days-wonder; and it may even be supposed to have somewhat abridged the rigors of the obdurate "Philonide" (as she is called in the "Grand Cyrus"), since she afterward condescended, at the mature age of thirty-eight, to become Duchess of Montausier. After a lapse of two hundred and forty years, the "Garland" of Julie de Rambouillet has had a remote successor in a little book recently issued from a private press at Oxford. In September, 1880, there was born to the Rev. H. Daniel, of Worcester College, a daughter. Being a man of energy and resource, and (what is more) an enthusiastic amateur printer, he resolved to celebrate this event by an unique publication. Friends fell readily into so laudable a scheme, and he was, besides, able to secure the services of not a few among the younger "*parnasse contemporaine*," who contributed verses. As a result, the first birthday of little Miss Daniel was marked by the issue of a volume delicately bound in creamy Oxford vellum, printed on old Dutch paper, and bearing on the outside, in a panel, the words, "Garland of Rachel." The type employed was that given to the University of Oxford in the seventeenth century by Dr. Fell, and the book was set up and pressed by Mr. Daniel himself. Rubricated initials

were added by Mrs. Daniel, and a rebus printers' mark and head-pieces, of which the accompanying are *fac-similes*, were contributed by Mr. Alfred Parsons, the landscape-painter. Only thirty-six copies of the book were struck off. Each of the writers received a copy bound as above, and having a separate title-page, in which, by an ingenious and politic arrangement, the recipient is represented as the contributor in chief.

The poems which the book contains are seventeen in number. After some graceful prefatory verses, which, though unsigned, are obviously by Mr. Daniel, and a Latin quatrain bearing the initial "W.," Mr. Austin Dobson leads off with some charming lines, in which, recognizing the difficulties of the undertaking, he endeavors to compromise with the future by forecasts

"So discreet,
That keeping chance in view,
Whatever after-late you meet
A part may still be true,"

and concludes by wishing the object of his muse

"A joy of life, a frank delight,
A moderate desire,
And if you fail to find a Knight,
At least, a trusty Squire."

Mr. Andrew Lang follows with one of those "ballades" of which he is so accomplished a master. This is its central verse:

"Ah Time, speed on her flying days,
Bring back my youth that flew,
That she may listen to my lays
Where Merton ring-doves coo;
That I may sing afresh, anew,
My songs, now faint and rare,
Time, make me always twenty-two,
And Rachel always fair."

After Mr. Lang comes Mr. J. Addington Symonds, and next Mr. Robert Bridges, from whom we borrow a stanza:

"Thou, when thou hast known
Joy, wilt laugh not then:
When grief bids thee weep
Thou wilt check thy tears;
When toil brings not sleep,
Thou, for others' fears
Tearful, shall thine own
Lose and find again."

Mr. "Lewis Carroll" comes next, and his contribution, done into Latin by Sir Richard Harington, a descendant of the Elizabethan translator of the "Orlando Furioso," forms the piece that immediately succeeds. A beautiful lullaby by Miss A. Mary F. Robinson comes next to Sir Richard Harington's Latin, of which the first verse runs thus:

"Lullaby, Baby, and dream of a rose,
The reddest and sweetest that Eden knows.
There flowers in Eden a rose without thorn,
For every baby that ever is born.
Some bloom completely,
Some white and small,
And some smell sweetly,
Some not at all."

Mr. E. W. Gosse sings the changes of "ripening girlhood":

"I watch the fresh unclouded eyes,
The sparkling lights, the glancing showers,
Shades of mysterious thoughts that rise
In pensive hours.

"Nor less the blithe and hurrying wings
Of ripening girlhood hail with glee,
Nor grieve because her spring-tide brings
Its snows for me."

But it is impossible to give a full account of the other verses in the volume. Mr. F. W. Bourdillon has a sonnet; Mr. W. E. Henley an exceeding dexterous ballad in French; Mr. F. Locker three stanzas entitled "Hypnerotophasia"; Mr. T. H. Ward (of the "English Poets") some neatly pointed quatrains, and the whole is concluded by Mr. Ernest Myers, Mr. M. L. Woods, and Mr. Courthope, the author of the "Paradise of Birds," and the new editor of Murray's "Pope." The book is so great a typographical curiosity that if any of the thirty-six copies ever get into the market they will probably "exercise" the cupidity of bibliomaniacs. Meanwhile we can only hope that the unconscious object of all this homage may not grow up with

"a grand
Platonic hate for bards,"

and that she may duly realize the parental hopes expressed in the introductory stanzas.

A Literary Success.

AN honest—therefore poor—young man, just cut adrift from college, Was driven to devise a plan for bartering his knowledge. He thought and thought a weary while, then off his coat he stript, And in one heat reeled off some seventeen pages of manuscript, Note size, and written only on one side, from which you'll guess That it was meant for nothing less than "copy" for the press. Naught mean about this youth: He quoted French, and Greek, and Latin; He pressed ancient and modern history into service; and, though he had only a small stock of metaphysics on hand, he didn't hesitate to work *that* in.

Then straightway he concealed the article upon his person, And went on publication day (he couldn't have chosen a worse one)

To the office of a weekly, where he somehow found the editor, Who eyed him with an ugly glare, as though he were a creditor. The editor clutched the manuscript; fumbled it half a minute, Looked at the first page, then the last, and knew all that was in it. He gave it back. "It's very good," he said, "but we can't use it. We should have to plow up several acres of flowers of rhetoric, translate, boil it down, and put a head on it; and, as there is no news in it, anyhow, though it is a capital article, I fear we must refuse it."

The young man went away, and pondered. "It's quite plain," said he, "That what I've written is *too good*. What a genius I must be! Ergo, if I could but contrive to write a little badly, The editor, undoubtedly, would take my matter gladly." He set to work again, and all his powers he put a tax on, Until he had produced a piece of rough-hewn Anglo-Saxon. He tried to make it seem abrupt, and to have the language terse. "I've got along without quotations and metaphors," he said, "and tethered myself to plain statements, and have used only two or three kinds of epithets; on the whole, I couldn't write much worse."

He went again to the editor, with a kind of sense of shame. "If you should see fit to publish this," he said, "don't use my name." The editor turned the pages o'er with evident interest. "It's better than the last," he said, "though hardly in request." "I won't give up," the young man said, as he sadly walked away. "I've got to harness my genius down, if I want to make it pay." So he tried once more, and, after nights of labor, he succeeded In writing such a shockingly bad thing that he didn't dare look it over. He broke away from every cherished tradition; crammed whole paragraphs into a short sentence; hunted up slang and spattered it about; and put the whole together in such an uncouth way that his old teachers would have said a First Reader was what he needed.

He didn't like to go with this. His heart began to fail. So he borrowed a dozen postage-stamps and sent it through the mail. He waited tremblingly. An answer came that very night, Which said the editor had found the article all right. He sent a check in payment, and he hinted, at the end, That he'd take as much of that sort as the young man chose to send. From that day forth the said young man has prospered more or less, And he always tells his friends that a careful cultivation of bad taste, total abstinence from college rhetoric, and a tight muzzling of the genius that is in him, are the secrets of his success.

MARCH, 1882.

No. 5.

FROM MORELIA TO MEXICO CITY ON HORSEBACK.

It may be only women who sentimentalize over their old clothes, and become clairvoyant at the touch of a shabby garment, long embalmed in that subtle odor which clothing will distill from the place where it has been worn; but, even if it be a purely feminine confession, I am not ashamed to confess that memory was stronger than sight as I put on my old Colorado habit, the morning of our start, and perceived that faint, pungent smell of Indian-tanned leather, tobacco, and the smoke of wood-fires. It was not the half-packed trunks that I saw, or the *maletones*, buckled ready to be slung over the mules' backs, or Ascension sweeping the damp corridor;—it was a low cabin room, with a hammock swung across the chimney corner—the blackened trails of fire-wasted pine-woods, and the long, windy reaches of the valley of the Arkansas—I do not mean the broad, sallow stream which weds the Mississippi in its prosaic middle-age, but the wild, snow-born Arkansas in its infancy, swift as the arrowy speed of a fish through clear water, and so narrow that a horse might leap across.

I put on my old habit with an indulgent eye for its infirmities, and peering into the dim, swinging glass on the dressing-table, powdered my face white as a plaster-cast, as a defense against the sun of Mexico, which the ladies had assured me I would find *my fuerte*. The ensanguined countenances of the two blonde engineers, who had already tested its power, were sufficient warning of what I might expect. My defensive preparations were completed by a small silk face-mask, to be worn during the heat of the day, when the reflection from the unsheltered roads is scarcely less powerful than the vertical rays of the sun. We rode, a party of four—the two mining engineers, a Mexican colonel of cavalry, and

myself. Our friends in Morelia, Michoacan, had given us a magnificent outfit for the journey. We were traveling like persons of consequence,—with a retinue of six mounted men, four pack-animals, and arms and munitions enough to have enabled us to have “cleaned out,” in Western parlance, every little Indian village between Morelia and Mexico City. Nothing, however, could have been more peaceful than our mood as we rode out of the hospitable court of the beautiful Casa G——. We were deeply touched by all the kindness we had received in the city of strangers, and by the breaking of those slight threads of pleasant intercourse, which are so quickly woven even between strangers when they meet on the common ground which exists for all races. The morning sun was already hot in the street, long shadows laced the pavement and followed the languidly moving figures. All the houses where the pretty girls had looked out and fluttered their fingers to us, on our way to the Paseo, were close shuttered, the balconies deserted; only the rows of water-spouts thrust out from the eaves of the flat roofs seemed to stare at us, and flout us with their long shadows, all pointing toward the city gate. So, past the fountain, near the entrance of the aqueduct to the city, where troops of animals are watered at morning and evening, past the Alameda and San Pedro, with its aisles of arching trees, and vistas of checkered shadow, we came to the outer gate. During the first hour of our ride we had the company of Mr. —, chief of the Morelia division of the railroad, to whom we owed many kindnesses. It was his influence which had procured for me the petted saddle-horse of a friend—no “galled jade,” hardened in gait and temper, such as are kept for hire on long journeys, but a neatly made, light-footed

pony, of the red-roan color called in Mexico *rosillo*. I hope my pony's condition, on his return, showed his obliging master that I neither "whipped him, nor slashed him, nor rode him through the mire"—like that naughty lady in the nursery rhyme, who is so justly held up to the children's disapprobation.

I never felt him gather his nimble feet beneath him for one of our long, refreshing cantering in the cool hours of the morning, each untired muscle responsive, each hoof striking true, his lively ears jealously attentive to the

breast of some hovering bird, whose vivid plumage may have furnished the mantles of Montezuma's queens with their gorgeous dyes.

A—— and I riding together, restfully silent, as people are apt to be who have ridden together a good many times before, had always in front of us the figures of the Scotch engineer and the Mexican colonel,—significant figures, if one chose to regard them so,—contrasted as the Knight of the Leopard and Saladin, on their journey across the burning Syrian desert. The bullets in their Winchesters clinked in unison, their shoulders kept the

A MEXICAN MAN-SERVANT.

horses behind him, without a tacit repetition of my thanks for my *Rosillo*—the chiefest pleasure of the ride, or rather the pleasure on which all others were dependent!

All the way to Charo,—the Indian village where we were to rest at noon,—the long white road stretched away between the cactus hedges, softened by willows in the wet hollows. The nopal-cactus still bore its incipient blossoms, which the untimely snow had nipped; the organ-cactus sends up from its main stalk long, prickly shoots, like organ-pipes, whose melodies are expressed in color instead of sound, as they chord with the deep blue sky, the yellow climbing-bill, and the

same movement in time to the tread of their horses' feet.

José Maria, the trusted *mozo* of Mr. —, who had lent him to us for the ride, preceded us by some distance, announcing our arrival at the stopping-places, and keeping a wary eye out for suspicious-looking fellow-travelers. Don Pepe, a veteran of the Mexican war, who acted as our commissary in charge of the "outfit," by tacit arrangement rode behind me; the *mozos de camino*, Bonifacio and Augustin, followed; and then came the queer, solemn little pack-train, the two loaded mules, and the led mules, in charge of Rafael and his assistant—a long,

THE FOUNTAIN AT CHARO.

brown stripling, "clothed all in leather," except for his wide cotton under-trowsers, which escaped from the buttonless seams of his leather ones. All leather trowsers in Mexico are buttoned down the outside seam, with very military and ornamental effect. I despair of conveying any idea of Rafael's placid, expressionless progress, sitting bolt upright on his mule, very near its tail, his wide straw hat opposed to the angle of the sun's declination and framing his head in a halo of shadow. The long youth dashed about in pursuit of straying mules or "U-lu-u-d" to them, but Rafael's repose was never disturbed. He was the only Mexican we saw who had a distinctly humorous quality. Others were gentle, and tragic, and grotesque, and repulsive, and queer to the verge of extravagance, but Rafael was the only one I ever saw who could inspire a hearty laugh without a latent misery in it. Rafael was our one embodied joke all the days of our ride; in that character alone he would have been worth his services—whatever they may have been. I could never discover that

he did anything except change the angle of his hat with the changing shadows, as if he were some movable species of sun-dial.

At Charo, the houses are built in long, low lines of gray, unstuccoed adobe, and they look as if the top story had been blown off them. The top of the spire seemed also to have been blown off the great church on the hill overlooking the village, or perhaps it had never been put on. The empty bell-chamber was open to the sky, with tufts of grass growing aloft where the bell should have hung. It is a humble little village street, with a fountain, and Biblical-looking women, with Rebecca-at-the-well draperies and jars, coming and going to and from it. José Maria had announced us, and several of these women, brown-cheeked Rebeccas, with long, black braids of hair, were patting and frying tortillas in the dark kitchen, which is separated by a low, deep arch from the dining-room of the inn.

I had time to make a sketch of this room before dinner, but the best part had to be left out—the queer, mongrel dogs and children that filled the clear space before the

arch; they could not have kept still, and the artist could not have drawn them if they had. They were subjects for Velasquez or Fortuny. The cool stone water-filter in the corner of the room dropped its contents, like the sands of an hour-glass, into the great brown *olla* in the wooden frame below. A collection of pottery vessels, as various in sizes and colors as the children, were arranged on the walls—as if they had been humble household gods—above a deep, sunken cupboard like a shrine. We bought a small memento of Charo in the shape of a pottery pitcher, with native decoration on the unglazed clay. Bonifacio, with ill-concealed scorn of our taste, put it for safe keeping in a little bag made of aloefibers, which he swung at the pommel of his saddle.

The *hacienda* of Quieréndero is said to be about twenty-five miles from Morelia. We had been recommended by a letter of introduction to the hospitality of the *administrador*, and we pressed on through the noon-day and heat, hoping to arrive in time to rest before dinner. The road, for the greater part of the way, was in broad sunlight. Occasionally we took a short canter under the shelter of a lane of willows by the roadside. We met no travelers except the itinerant Indians. Among these occasionally we observed little signs of consideration on the part of the men toward the women, as in the case of one who had given his broad hat to the woman behind him and himself walked bare-headed,

his coarse thatch of hair shining like shoe-blackening in the sun. The woman bore the sweet burden of womanhood, a sleeping child, hanging heavily in the folds of her *rebozo* and softly swaying with her steps. Beside her walked a straight-backed girl, with that peculiar thick aquiline nose which gives a sensuous kind of pride to the profile of these dull faces. She carried her shoes, of light sheepskin, and a rude guitar, at her back, and looked at us fixedly with her great black eyes, lifting one corner of the blue cotton head-cloth she wore, folded like that of an Italian *contadina*. We arrived at Quieréndero about four o'clock. It presents to the outside only massive stone walls, with gate-ways like those of a fortress. Within are two great courts, surrounded by stone buildings one story in height with tiled roofs,—the outer court, hot, unpaved, unshaded, opening through a stone gate-way, with fine contrasting effect, into the lovely inner *patio*, green-sodded, and planted with young orange-trees—a little heaven of cool refreshment to our road-weariness.

We were received by the *administrador* in the *patio*, and conducted into a large, bare room which might have been the office. There were book-cases nearly filling one end of the room, a low, broad divan across the other end, a commodious writing-desk, and a few light chairs. The glass doors opened on the corridor. Across this space of cool shadow the eye followed the light outward to the sunny, grass-paved *patio*, the young orange-

A MEXICAN KITCHEN

trees, and the sky of Mexico, of the very tint to have humming-birds and flowers of vivid hue enameled upon it.

After we had been presented to the ladies of the house, we went to our rooms, closed out the afternoon light with the heavy shutters, and slept the sleep of a short summer night. After a long summer day, it was bewildering to find it still the same day when we woke a little after sunset, and went out into the *patio*. At dinner our host placed me, to my great embarrassment, in his own seat at the head of a feudal board, with many faces of retainers seated around it in order of their rank. The engineers were on my left, my host and his wife on my right, and the colonel, their countryman, next the engineers. Our men-servants, Bonifacio and Augustin, served us, together with those of the household. After dinner we returned to the *sala* by way of the corridor, which supplies the place of a hall. A lighted torch burning in the *patio* sent a Christmas glow about on the summer greenery.

That evening at Quieréndero gave a new association to the wistful *grito* of the crickets on a summer night. It was February, but summer nights may come in the dead of winter in Fairyland. We were speaking of the Indian women, who carry their burdens by a strap across the forehead (they are not all princesses in Fairyland). The *señora* with the beautiful Spanish name told us they have no *aspiraciones*, these Indian women of the province with dull faces and heavily molded forms. Life must be very hard for a woman with no "aspirations"—not even an aspiration toward a change in the fashion of her clothes bi-annually, at least. The Indian women weave and wear the garments of their dimmest progenitors, and make their pottery vessels of the same shape of those their greatest-grandmothers bore to the immemorial fountain.

Quieréndero is a private estate, but we were received at half an hour's notice—a party of four, with six servants, twelve horses, and four mules, fed and lodged and charmingly entertained—without making an apparent ripple on the serene current of its activities. Our host did us the honor to rise at daybreak to speed the parting guests. Quieréndero was beautiful in the low morning light. Men and cattle going to their day's work; the patient, homely figures of the laborers, in garments with simple folds, that have been shaped by their attitudes of continuous toil; the long shadows stretching across the carefully tilled land, a record in itself of centuries of labor,—all this reminded me of Millet's solemn epics of the poor.

No American who has never been out of

the United States can imagine such a peasantry as this. It is not probable that each individual has suffered the equivalent of that dull sadness which is expressed in the faces of all. It is a sadness which mothers must have given to their children before the conquest of the Toltec by the Aztec, or the Aztec by the Spaniard. Even Humboldt, who was not looking for the sentimental aspects of the Indian tribes of Mexico, speaks of this national sadness. Nor can it be wondered at in a people who had the awful drama of human sacrifices for their amusement during one long, dark epoch, succeeded by the bullfight and the cock-fight during another. The muscles which encircle the mouth (parenthesis-like), springing from the root of the nostril, have, in the Indian face, that thickened, rigid look which we see in the head of a Medusa, or the tragic mask.

The prosperity of the rich valley culminated long ago in the cities of Acambaro and Zinepecuaro, and their prosperity reached its highest in the great stone cathedrals which tower above the poor streets, like a feudal castle above the village of serfs at its feet. The church's power is broken in Mexico, but thoughtful, patriotic Mexicans appreciate these significant contrasts.

"*Pobre Mejico!*" the Colonel would often exclaim, as we rode through some village of earth-colored adobe huts, with its church of hewn stone overlooking them. "*Muchas iglesias! No escuelas! Todas, todas para los padres! Para la gente—nada!*" (Poor Mexico! Many churches! No schools! All, all for the priests! For the people—nothing!)

Beyond Zinepecuaro, we left the *camino real*, and followed one of those winding trails which are so tempting to a rider. Crossing a bare upland, with little vegetation except the nopal and the wild acacia, the main trail subdivided into many obscure lesser ones, diverging, intersecting, yet following a common impulse eastward, toward the mountains. Here was opportunity for feminine persistence to stray off into tempting but delusive by-ways, admonished by masculine superiority of judgment, and to return after sharp scrambles through thorny acacia-thickets—inwardly discomfited, but outwardly flushed with triumphant achievement. The professional eye detected traces of obsidian outcropping for some distance along these bare ascents, marking the locality of the ancient mine of the Aztecs, from which they obtained this natural bottle-glass for their obsidian implements, their weapons, and the sacrificial knives of the priests. We descended again into a winding defile, a ragged cut through the hill; and here we closed up our straggling ranks. The

A VAQUERO OF QUIERÉNDERO.

Winchesters pressed to the front, for it was an "ugly place." As the shadows shortened, we were steadily climbing toward the divide which separates the great valley of Morelia from that of Maravatio.

All these valleys are lofty table-lands, between the ranges themselves not less than six thousand feet above the sea level. The many trails become one, and that one rises more and more steeply. The nopal and cactus give place, as we climb, to oaks, pines, and firs. We meet the wood-carriers with their donkeys—the latter struggling down the narrow, precipitous trail, each with a long stick of timber lashed on either side, which he must steer as well as drag. The view of the valley, looking back from the highest point of the trail, is very beautiful,—the white cities, the long-walled *haciendas*, the lake of Cuitzeo, green young crops, plains, woodland, and water,—a view to turn one's back on with regret.

The Colonel expressed our common thought as he turned in his saddle for the last look, and said, "*Adios! Morelia y Morelianos, y Morelianas!*"

Whoever has taken long journeys on horseback or by rail must know the effect of the rhythmic movement on one's thoughts—how a phrase or a word or a scrap of melody will repeat itself in time to the jar of the car-wheels or the tread of the horses' feet, until the senses become dulled as by an opiate. For hours of our six days' ride we tramped, and shuffled, and jingled together along the lengthening roads—horses, and saddles, and rifles, and spurs, mules and mule-packs, each contributing its characteristic sound to the dactylic measure of our march. Quieréndero! Quieréndero! had repeated itself in my lulled brain all the sunny leagues of our morning's ride, and now "*Adios Morelia!*" took up the burden and carried it all the rest of the way, in the silences of the ride, to Maravatio.

From the mountain-trail we came out on a noble breadth of table-land, with stalwart oaks and pines journeying across it—pausing on a descent as if in silent amazement at the view, or gathered in the hollows as for consultation, like a band of explorers penetrating an unknown country.

A CHARCOAL CARRIER.

Here we found water and a few moment's rest at a poor Indian's hut, on the shadowless hill. The offered silver piece was declined with a gentle apathy of manner, the soft "*Nada, nada!*" sounding like a reproach in which pride had no part.

Under the stimulus of the brief rest and refreshment we made a burst of speed across the windy slope. There was something inspiring in the way it shouldered up against the sky, like a headland from which one might behold the sea-line rising to meet the eye. Out from that headland one looks down only on the hazy inland sea of valley and plain.

At noon, we rested at Urequio. This place will always be associated with the pretty young Indian girl who made me welcome to the best the poor place could offer in the way of repose and comfort—a cool, dark bed-chamber, windowless, lighted only by the door, the floor clean and sprinkled with sand,

a palm-mat by the bed. The bed itself spotlessly neat, its coarse linen ornamented with the drawn-work in which the Mexican women are so skillful, and above the bed, on the wall, a collection of child-like offerings and a rosary, hung against a square of bright-colored silk, beneath a rude picture of the Virgin.

After Urequio there were leagues of hot sunlight and dogged progress. The Scotch engineer from time to time repeated a line from "Cicely":

"Sun in the east in the morning,
Sun in the west at night."

The Colonel derisively apostrophized his black broncho, whom he called "*Napoleon Ter-cero!*" We revived from the "Uncle Remus" lore the tale of the race between "Brer Tarrypin" and "Brer Rabbit," and found that "Brer Tarrypin's" warning cry, "Yere I come

a-bulgin'," "Yere I come a-bilin'," aptly described our descent, in single and almost perpendicular file, of a precipitous hill, where the loose stones that composed the trail came clattering after us, dislodged by our horses' feet. A—— would have had me dismount and walk down, but the little Rosillo perfectly understood his work; with a firm girth, a loose rein, and his wary feet picking their way with *staccato* precision, I would have trusted him to carry me down a staircase.

While the sun was still high, the shadow of the range sheltered us, stretching before us across the rolling table-land which descends, wave after wave, to the valley of Maravatio. We traveled fast, for the white town was still many leagues away. I recall nothing on our journey more delightful than our gallop across this glorious plain in the broad shadow of the mountain. We crossed the valley, not by the *camino real*, but keeping the trail between the rich *hacienda* lands. Once we came to a stone fence barring our progress, and without a word, all our *mosos* rode forward and attacked it at once, making a breach for me to ride through. I was dismayed at this depredation, but they did not even stop to repair the fence, because of a slight alarm which sent them all clattering to the front again. Three men, well mounted, had ridden down into the gulch just before us, and had not ridden out again; it might be well to investigate their movements. They turned out to be "good men," as the Colonel assured us; and, indeed, the rich valley, dotted with *haciendas*, not three leagues from Maravatio, was hardly a place to expect *ladrones*. It was a good opportunity, however, to test the efficiency of our escort. We rode into Maravatio just on the edge of twilight. José Maria had found rooms for us at the Hotel de la Diligencia—our old quarters. The weariness which had become almost a stupor woke with the aching protest of every muscle as we crawled from our saddles, along the corridor, to our rooms. The men of the party were obliged to keep up a show of cheerfulness, but I, having no dignity of a superior sex to maintain, could repose myself upon my prerogative, and lie down in my dusty habit without a struggle—refusing to stir for supper or any other consideration. At the outset of our journey, when the whole distance had been divided into the number of leagues it would be necessary to make each day, the Colonel had protested that it was "*Muchas leguas para la señora*" (many leagues for the lady); but at this period of the ride the Colonel's favorite witticism was, "*Muchas leguas para los señores, para la señora nada, nada!*" The

engineers gayly took up the phrase, and at all the crucial moments of our ride they sympathized with themselves, as "*Pobres señores! Muchas leguas para los señores!*" It would have ill-become the *señora* to have exalted herself over *los pobres*, considering the odds in her favor. Had she been mounted on one of the leaden-paced, stony-hearted brutes from which the poor gentlemen suffered, she would have rolled out of her saddle in despair, like "the Duchess," at the end of the first day's journey, and meekly resigned herself to be bumped about in the hot, dusty diligence the rest of the way to Mexico. No better horses could be procured for a journey of this kind. "Regular" is the philosophic adjective the Mexicans apply to them. They will make between four and five miles an hour, for many successive days, at a monotonous, dislocating trot, which a Mexican accommodates himself to, as he does to so many other insupportable discomforts, by letting himself "go limber," as the children say.

We were all very stiff the next morning, and I heard the engineers muttering to each other something that sounded very much like "—— same old place!" as they exchanged grimaces from their saddles. It was impossible to say, as to our first canter, whether it was "the pain that is all but a pleasure," or "the pleasure that's all but pain." With the second we began to revive, and, before the sun had dried the dews in the valley, we were lounging along gayly to the familiar tramp and jingle of the road chorus. It is very much to my discredit that I have so few valuable facts to offer about the unique country through which we passed. Perhaps it is to my companions' discredit that they did not tell me facts, or insist on my seeing them; but, on the whole, I cannot but be thankful to them for permitting me to jog on the foot-pathway, protected by feminine incuriousness from the stings of awakening knowledge. The fatigue of the journey was really very great, and I believe the mind instinctively sympathizes with bodily weariness, and closes its outward avenues in a kind of stupor, as the eyelids instinctively shelter the eyes from the too intense glare of the sun. This is my poor excuse for seeing so little of importance on the journey. I remember the shadows that were long in the valleys and short on the ridges we climbed between, the dark faces of our escort, the laughing and talking of the morning hours, the dogged silence at noon, the bursts of speed and gayety as the sun sank low, the lethargic weariness of the "home stretch." We always slept in a valley, at some town or *hacienda*, which looked very near from the summit, and re-

ceded as we approached, it seemed, like a mirage, holding out from the distance a delusive promise of rest. José Maria had ridden ahead with our letters of introduction to the *administrador* of the *hacienda* of Tepitongo, and at two o'clock we rode into its gates.

Tepitongo, with its mansion and *castillo*, or fortress, for refuge and defense in unsettled times, its *corrâles*, out-buildings, and dependencies, great and small, forms in itself a village in the solitude of the pastoral plain which surrounds it. At sunset, as we sat in the long colonnade which crosses the end of the mansion facing the road, we saw the arrival of a strange procession of travelers. A troop of about twenty Indians, loaded with *camote* in osier crates, halted in a row, with their faces toward us, their backs to the wall of the *corrâl*, rested their packs on the wall, and sank on the ground beneath, each man below his own pack, like trained beasts of burden. Here they lay in motionless attitudes of rest. Only once did they stir. When the *administrador* rode past, with his four-year-old son,—a miniature *caballero* mounted on a pony, with a servant walking at his side,—each silent figure lifted itself from the ground, took off its wide straw hat, and then sank down again. At the hour of *oración*, we heard the voices of the Indian children chanting the vesper service in the chapel. Again there was a stir among the dark figures below the wall, as every one made the sign of the cross, and muttered

a brief prayer. Beyond the *hacienda* walls, the bare plain rose into low hills, and these into a mountain range, above which, in a cloudless sky, the glow of sunset was fading. The wayfarers now rose, and, each resuming his burden and long stick, they trotted off again along the single track that crosses the plain. They were loaded with about seventy-five pounds of *camote* apiece, and we were told they would travel nine miles farther that night.

The *administrador* took us the rounds of the out-buildings before supper, which is served very late in the Mexican household. We were shown the threshing-floor, a stone-paved amphitheater over one hundred feet in diameter, very slightly concave, sinking toward a large circular flat stone in the center. It was surrounded by a circle of low stone buildings, tile-roofed and supported on stone pillars. Here in this peaceful arena, for twenty decades, the crops of the *hacienda* have been flung, to be trampled by the beasts of burden—a bloodless immolation, as grand in its pastoral dignity as the fierce dramas of the gladiators. From the threshing-floor we climbed a stone-paved gang-way, broad enough for ten men to walk up abreast, to the *aventadero*, or winnowing-chamber. The threshed grain is carried in baskets up this incline and emptied on the winnowing-floor—another vast, circular pavement, not of stone, but of large tiles set in mortar. All around this pavement runs a low, broad parapet of stone, pierced with loop-holes for defense (in case

INDIAN CART AND POTTERY OVENS.

the harvesters of Tepitongo should be called to lay aside the sickle for the musket). On the parapet rest the short, heavy stone pillars which support the massive timbers of the tent-shaped roof. Between the roof and the parapet this great circular chamber is open to all the winds of the table-lands. We looked out over the low parapet across the darkening plain. Not even the diligence was in sight on the road, which seemed the only slender clew leading out into the world. Our host of Tepitongo will never know what an entertainment he gave us that night. Before we could call it ended, the moon added the last charm of distinct shadows as she brightened above the low circle of corrugated roofs surrounding the threshing-floor. Now, if a troop of the dark harvesters could come out and perform a slow, symbolic dance in the empty arena, or the white-robed maskers of the Cerealia, wandering with their lighted torches in search of the lost Proserpine!

At supper we sat down to a mediæval board like that of Quieréndero, "with vassals and serfs" around us. We were invited to consider the house and everything in it as our own. Our *mozos* had the freedom of the kitchens and the stables, our host gave up his place at the head of the table, and, in effect, the entire establishment was placed at our disposal, with a courtesy as graceful as it was irresistible.

After supper we walked in the cloistered court—a lovely, secluded precinct, with formal trees planted in open spaces left in the pavement. We were very grateful for this our last moon of Mexico. We left it, when we returned to our winter evenings, and fire, and lamp-light, hanging large and low over the Gulf.

From the *patio* we entered the *sala*—a long, tile-paved room, with a sofa at one end, the place of honor for the lady guest, the members of the family occupying the arm-chairs which are ranged on either side, at right angles with the sofa. It is considered a discourtesy for a guest to sit down in any of the chairs, instead of walking through the room to the sofa. As there were no ladies at Tepitongo, I was obliged to sit alone on the long sofa. The engineers, the Colonel, our host, and another unbidden guest like ourselves, who had found shelter for the night, occupied the arm-chairs.

After awhile, I ventured to ask the *administrador* to take the seat beside me. It may have been an enormity on my part, but at all events our host was too well-bred to exhibit any horror at the situation. The little four-year-old boy whom we had seen on his pony came shyly into the room, and stood by his

father's knee. He was a charming little man, dressed in a suit of leather, with a tiny pair of spurs strapped to his baby shoes; but in spite of his spurs and his horsemanship, he was not unwilling to sit in my lap and be coaxed into friendliness. The lisping Spanish vowels of this little motherless child were exquisite. But there was other "music of the country" in store for us. At the lower end of the room a company of musicians gathered by the light of candles clustered on a table: a striking group, with violins, a violoncello, guitars, a harp—I cannot recall all the instruments, but the music and the scene it would not be easy to forget.

Our day's ride had been much shorter than usual, and we were not too tired to enjoy the picturesque hospitality of Tepitongo. Our host did us the great favor to recommend us by letter to his cousin, the *administrador* of Tepititlan, another estate about forty miles distant from Tepitongo, where we were sure of much better entertainment than at the town of Istlahuaca, where we had expected to stop.

We made a good start from Tepitongo in the early morning. There were long canters across the valley, and climbing of hills as we neared the boundary line between the State of Michoacan and the State of Mexico. Here we passed the troop of Indians with *camote*, resting by the way-side. We left the *camino real*, and crossed, by a trail, the "bad lands" before reaching the *hacienda* of La Jordana. I am not quite certain as to the name of this *hacienda*, but La Jordana is singularly appropriate to its wild cheer.

The sun was still high when we passed through San Felipe, a distractingly picturesque old Indian town, with wonderful stone barns, and churches, and narrow streets. Tepititlan is not to be reached by the main road, and the trail which we followed "up and down, by valley and hill," seemed endless. Ten leagues! Surely it was not less than sixteen! We rode, and we rode, and we *rode*,—as in the stories we tell to the children,—and we kept on riding, across windy valleys, rich in young crops and blossoming peach-trees, up narrow, winding trails, skirted by Spanish bayonet, past little groups of Indian huts—a woman in the door-way of one weaving, on a hand-loom, a strip of woolen cloth for her petticoat.

The Colonel mourned over *los pobres señores*, and the *señora* tried to "brace up" triumphantly, but could only lop about in her saddle, and wonder if those long, low, reddish roofs miles and miles away could be Tepititlan, because, if they were!—Happily, they weren't! Tepititlan was not far distant, and presently, at a turn of the trail, we beheld its sheer gray

walls, sweeping around the crest of a steep hill, bristling with nopal. Tepititlan is a little castle, overlooking the broad valley. We rode below its walls to the gate-way of the outer court, where the brother of the *administrador* met us; the *administrador* himself welcomed us at the gate of the second court.

A timely cup of coffee and an hour or two

autumn in the long, rolling plain over which the low fortress of Tepitongo looks out; and in winter to seek the shelter of the rich valley and the commodious comfort of Quieréndero. Tepititlan has a beautiful church inclosed in her outer court, where we saw an image carved and painted by the Indians, representing the patron saint of the estate as a laborer plowing

A SPANISH CREOLE.

of blissful rest in a dark, cool room prepared us to enjoy, under our host's guidance, the mediæval stateliness of Tepititlan. Of the three beautiful and historic estates, one might say that Quieréndero was the most peaceful and lovely, Tepitongo the most typical and picturesque, and Tepititlan the grandest! And yet each could lay claim to all of these characteristics.

One would like to spend the summer in the windy fastness of Tepititlan, queen of the crops and herds of the valley; the spring and

with a team of oxen, with a long, lance-like goad in his hand, and a nimbus around his head. This image is carried about the fields at the planting season, to bless the coming crop. During the year, offerings of fresh flowers and little sheaves of each new crop are laid before it.

We were shown some very interesting carvings by the Indians of saints' heads, which bore a curiously intimate relation to the Aztec-idol period of their religious art. We visited the milk and cheese rooms, the

granaries and threshing-floor, and the lovely old garden, where pansies were blossoming under the shade of a great pear-tree near the wall. As we returned to the *patio* through the *corral*, a troop of fine young horses were driven in for the night. One of them was admired by the Scotch engineer, and our host assured him that it was *á la disposición de Vd.* (at your disposal). The engineer very naturally left him, with "a thousand thanks," at the disposition of his owner.

I did not feel mediævally inclined that night with regard to supper, and was served by Bonifacio in my room. Bonifacio could be relied upon in any capacity. He could cook and serve a meal, he could saddle our horses and pack our traveling-bags, or make the beds in the great stone bed-chamber assigned us; his hat came off if you looked at him, his comfortable, guttural "*Si, niña*," was always ready. He slept on the stone floor of the corridor outside of our door, with his *sarape* for a bed, his arm and his great straw hat for a pillow. At a word he was ready to spring up, *cap-à-pie*, in his leather suit, as man-at-arms or lady's maid. In short, he was a *mozo de camino*!

The mistress of Tepetitlan came out in the corridor next morning to bid us good-bye. She had been too ill to see us the night before. We had seen the children of the family, all handsome, well-grown, and almost all fair, with bright color.

The hospitality of Tepetitlan did not leave us at its gates. The two brothers rode with us across the valley by a trail to the neighboring *hacienda* of Enejeje. As we left the outer gate the *administrador* pointed out to us the *calzada*—a long walk shaded by willows, the promenade, in pleasant weather, for the ladies of the *hacienda*. The next object of interest was a matched herd of magnificent black oxen—a bronzed black which took a rich luster in the sun. The *administrador* pointed them out with pardonable pride.—Our horses had evidently been well cared for at Tepetitlan. They were particularly fresh and lively. Even our afternoon gallop before Maravatio was less delightful than that morning ride to Enejeje, across the pastures, along the ditches, between the young, green crops, in the fresh, soft air of a spring morning. The *administrador* showed us the "monuments"—massive gray stone posts—marking the boundaries of the *haciendas*. At Enejeje we rested a short time, walked in the shaded garden, and took a cup of coffee with the lady of the *hacienda*—a pretty little dark-eyed mamma, with a group of dark-eyed little children clinging about her, and looking shyly at the *Americanos*. We left Enejeje, our numbers strengthened by two

more gentlemen—the *administrador* and his nephew, and a servant from the estate. Our horses, fortified by the good cheer of Tepetitlan, did their best in the long canters we took across the level stretches beyond Enejeje. During the first three days of our ride, the Rosillo had constantly fretted at the pace, and my arms became very tired from the steady pressure on his bit; but on this, our fourth day, he was perfect. He was ready, but not impatient; he never lost his elasticity of step, and when the moment came to lift the relaxed rein from his neck and let him go, he became an embodied joy, a joy in flight. But these little flights of joy were very hard on the other horses, with heavier saddles, heavier riders, and a Winchester to carry, and we had hard work before us still. The gentlemen bade us good-bye about fifteen miles from Tepetitlan, leaving the servant from Enejeje to guide us across the hills, where the trail was blind. We lunched at a very poor wild *hacienda* in another valley, surrounded by dry pasture-lands. The church-bells of Toluca were ringing for vespers as we trailed wearily along the level road, which is so long in reaching it. Twilight was brightening into moonlight. Three mounted men passed us, with a wary exchange of salutations. Something in the Colonel's manner as he looked at these men induced one of the engineers to ask if they were *buenos hombres*. "*Si*," the Colonel replied; "*buenos hombres, con Winchesters*." He patted his rifle with a smile. "*Sin Winchesters—quien sabe?*" (They were good fellows, with Winchesters. Without them—who knows?) It was bright moonlight when we rode through the streets of Toluca, and into the court of the Hotel de la Diligencia. A—— had been suffering all the afternoon from an acute attack of illness, which made it impossible for us to continue our journey the next day; but early on the following morning we took the road again. From Toluca to Mexico we followed the *camino real*, through the deep dust, during the hot, sunny hours, thankful that we were not imprisoned in the diligence. A traveler had been robbed the day before on the Las Cruces Pass, but, with such an outfit as ours, a whole gang of *ladrones* would have given us "*Buenos días!*" and passed us amicably by. The view of the valley was again a magnificent surprise. We had it before us all the way down the mountain. The Colonel recalled the glories of ancient Tenochtitlan, and the barbarous murder of the Aztec nobles by Alvarado on the night they were all gathered together at a religious feast. "*Todos, todos, martados en una noche!*" The Colonel spoke no English, and our Spanish

was composed chiefly of adjectives, substantives, and exclamation points.

Our little company disbanded at Tacubaya, the suburban city four miles from Mexico. The horses of the gentlemen were suffering, and we were all quite ready to step out of the middle ages into a comfortable nineteenth-century hack. The servants led the horses into the city, and we rejoiced in the prospect of our carriage. But none was to be found—not one. So we ignominiously jingled into the city in the horse-cars!

Don Pepe had been requested to bring our faithful *mozos* to the hotel the next evening, to receive the usual *pourboire*, and to say good-bye. They were all there except Rafael. When inquiries were made for him, a smile went around, and Bonifacio mildly suggested that Rafael was "*con las mulas*." Bonifacio had broken my pitcher of Charo, to his sorrow and mine, and now produced another as a substitute,—a very good substitute, indeed, which was always to be called Bonifacio's pitcher. After all had gone there came a soft, uncertain tap at the door, and Rafael entered—his placidity exalted into a trance-like blissfulness. His eyes saw nothing; he stretched out his

arms vaguely to embrace those "noble gentlemen," the engineers, who gently evaded him, slipping some money into his hand; then with an unexpected impulse he turned toward me, huskily murmuring, "*Adios, niña!*" Whereupon A—— plucked him between the shoulders by his jacket, and shunted him out of the door. And so the dusky *dramatis personæ* of our ride made their exit, and went their way back into the middle ages. We had ridden about two hundred and fifty miles in six days. This same ride has since been repeatedly made by an English gentleman, traveling with but one servant, in three days!

Our elaborate outfit represented not so much the necessities of the journey, as the magnificent courtesy of our friends in Morelia.

To them also we owed our entertainment at the *haciendas*—those unique feudal communities set in the solitude of a vast country, traversed at present by but one high-road. In another year the railroad will thunder past the gray stone defenses of Tepitongo, and startle the herds grazing in the green levels of Quieréndero. Tepititlan will keep its seclusion on the height, withdrawn above the valley.

A RAMBLE IN OLD PHILADELPHIA.

PHILADELPHIA is, perhaps, of all American cities the most unpromising at first sight to the artist. The narrow, straight streets and the rows after rows of uniform brick houses give a monotonous effect. Except that some streets are lined with shops, while others are monopolized by dwelling-houses, one is very like another. A casual observer might walk along Second street in this city and think that it was now given over entirely to small tradesmen, and that nothing could be more hopelessly commonplace than the cheap shops which extend almost from one end of it to the other. The inquiring pedestrian, however, will discover in it inns which perhaps, like old dowagers, have put on false fronts to conceal the ravages of time; he will dive into court-yards and inn-yards, which one might think had been brought spinning through the air, like the house of Loretto, from an English, Dutch, or Italian town; he will pick out narrow lanes and alleys rich in Revolutionary tradition; in short, he will, if you follow him in his wanderings, make it seem to you as if you had entered into a world of the past, and had lost a century.

It is instinctive in the artist, be he of pencil

or pen, to describe old inns,—possibly for the reason that, as it is the association with humanity which makes ancient houses interesting, inns, as having been more crowded, must be proportionally more attractive. "Do you object to talk about inns?" asks Thackeray in one of his "Roundabout Papers"; "it always seems to me to be very good talk. Walter Scott is full of inns. In 'Don Quixote' and 'Gil Blas' there is plenty of inn-talk. Sterne, Fielding, and Smollett constantly speak about them." This "inn-talk" is especially dear to English authors; for, from Chaucer down to Dickens, there is scarcely a popular writer who has not drawn for us at least one inn, with which we are as familiar as with our own houses.

This thought originated in a visit I paid, one cool November morning, to the Plow Tavern of Second street, Philadelphia. On this street, between Pine and Lombard, there is an old market-place which, like many Philadelphia markets, occupies the center of the street. On Wednesdays and Saturdays it is the scene of great confusion and bustle. Hucksters, and butchers, and fish-merchants carry on an active trade. The street is filled with market-wagons, and the air is alive

YARD OF THE PLOW HOTEL.

with the high-pitched cries of women and the gruff voices of men, all—as in Corinth of old—bent on driving a hard bargain. This busy spot is necessarily the home of much traffic, and suggests at once to the practical mind an excellent locality for a tavern or lodging-house. Therefore, I was not surprised to find to the east of the market a respectable, comfortable-looking tavern. At first sight, there is nothing very remarkable about this establishment, unless it be its sign, on which is painted a house, with a glimpse beyond of green trees and blue sky, and further ornamented with the name “Plow Hotel” drawn in very large letters, forming altogether a charming little piece of naïve or unconventional art. The tavern window is like all other windows of the kind. In one corner, “Fritz” Emmet smiled at us roguishly; in the other, a tragic melodramatic actress clutched her hair in a transport of rage; while in

the center, a modern tragedy queen leaned on the spear of her subdued barbarian. But above the window I saw a wall like a checker-board of red-and-black bricks, in the real old Philadelphia fashion—a fashion which may possibly have suggested the regular, checker-board-like plan of the city. Truly, the early Quakers did all things on the square. People no longer build houses in this style, nor do we often see queer little rounded arch-ways like that which separates the lower part of the Plow Hotel from the house next to it.

Passing through this arch-way, I at once left modern Philadelphia and the nineteenth century, and went back into good old colony days, when we were under the King. I looked at the rambling porches and at the stable at the foot of the court-yard; I examined the thin, whitewashed pillars which run in a line by house and stable alike, supporting

IN A SIDE STREET.

the first floor of the latter and the porch of the former. There was a noise on the street, and I was almost sure I heard the coachman's horn. The stage-coach would arrive directly, and then —

Just at this moment a man came out of the stable. His costume was very modern. He called to some one within, but his language was not at all like that I have heard when journeying with Dr. Smollett or the Rev. Mr. Sterne. A vehicle came rolling through the arch-way. It was a Jersey wagon, which will be a curiosity some day, but which was not the expected coach, and then I knew that I had been dreaming dreams. Thus awakened to reality, I looked around me more coolly and critically. The stable was quite empty. It was evidently not market-day. In one corner was a high pile of dust and ashes, which looked like the accumulation of years. Lying in the only spot where the sun's rays had, as yet, reached the inn-yard, was a cat lazily eating the head of a fish. An empty bird-cage hung above her on the outer wall. Could there be any chain of events, I wondered, linking the emptiness of the one with the appetite of the other? The landlady opened the door and looked out. She was not accustomed to see people, plainly not beggars,

loitering around her premises, and eagerly examining every stone and brick, from her garret to her basement. She may have taken us for well-dressed burglars. We said "Good-morning" to her, politely, and she showed willingness to enter into conversation.

"Have you been here long?" I asked.

"Only since last March," was her answer.

With some confused recollections of clever peasants and humble householders, in various parts of the world, who have had the legends of their country or their own particular neighborhood at their fingers' ends, I attempted to draw her out.

"This is a very old house," I remarked, blandly and insinuatingly.

"So folks tell us," assented the landlady.

"Such an old house must have many stories, told about it," I said, coming to the point, but she gave no answer. I looked longingly through the half-open door, and asked her if the house was as queer inside as out. She invited us at once to enter. We saw a long, narrow room in dim light. A long table, probably that at which the farmers sit at dinner, was pushed to one side, and on it all the chairs of which the room could boast were piled. From this I concluded it was cleaning-day in the Plow Hotel. Mine host-

ess showed us, with awakening pride, the only staircase there is in the house. It was steep, narrow, dark, and antique. At the sight of this stair-way, hope for the marvelous revived within me. What a superb scene for a ghost-story!

"You must have some ghosts in your house," I said to the landlady, in imploring tones.

"No ghosts, but when we first came there were plenty of rats, which are quite as bad," broke in mine host, who had joined our party.

Rats! Notwithstanding this last disappointment, we said good-bye amiably, for though our landlady could not give us what we wanted, it was not her fault, and she had entertained us to the best of her abilities.

We left the Plow Hotel and the marketplace in which, as early as the year 1745, Edward Shippen and Joseph Wharton erected stalls, and started to walk northward. The morning was cool and bright, and business seemed brisk. Less than a hundred years ago this was the fashionable part of the town. Despite the modern shops, there still lingers here and there a touch of antiquity. Men hardly old can remember when all of Second street was thus quaintly old-time-like. In those days the one low step of the front door was almost level with the ground, and the parlor fire-place was set with blue tiles of Liverpool make. My uncle, Mr. Charles G. Leland, who went with me to see the old buildings, tells me that the chimney-piece of the room in which he was born, in Chestnut street, below Third, was such a curiosity of this kind as to be visited in a small way by strangers, as one of the ancient marvels of the city. Then the swallow flitted across the streets at noonday, and people talked for years about Lafayette's visit as the last great event. In colonial days, and during the Revolutionary period, matrons and maidens in neat, fresh costumes used, toward twilight, to sit in front of their houses. With skirts well spread out by the enormous hoops then worn, and feet daintily shod in high-heeled slippers and clocked silk stockings, the belles calmly waited for their admirers, who at this hour walked leisurely along Second street. Neighbors exchanged greetings, and discussed the latest news from the mother country or the daring deeds of the Indians. The cares of business were set aside, and social enjoyment became, for the time, the only duty. It was a cheerful, old-fashioned custom, which still survives in some Southern towns and country villages, but has long since disappeared from Philadelphia.

We passed the corner where Mr. McCall,

the India merchant, lived and had his private zoological garden. We passed the spots where the houses of General Cadwalader, Edward Shippen, and Charles Wharton once stood, and which were then the headquarters of a growing aristocracy. When the British were in possession of the city, General Howe stationed himself in this neighborhood, and later, when England sent her minister, he also had his residence here. As we walked through these old haunts of fashion, we contrasted the glory that had been with the degeneracy of the present. Not far from where beaux and belles and brave officers used to congregate, now stand what seemed at first sight to be rows of smartly dressed chained and manacled convicts. On nearer view, this phenomenon was explained. The goods of cheap-clothing shops were placed on the pavement, in tempting array. A wire stand wearing an overcoat, the sleeves of which are joined together by an iron chain, while its breast is ticketed with its price, has at a distance the effect of a prisoner, jauntily dressed, wearing the convict's badge.

A favorite witticism of an earlier generation was associated with Christ Church. Judging from this specimen of a *bon mot*, we can understand why Washington Irving was so painfully bored by the puns and jokes of Philadelphia wits. The witticism was this: One young man meeting another would exclaim: "Did you hear that there was a brilliant ball in Second street last night?" The second youth, hurt and mortified to think that he had been neglected by the gay world, would ask, angrily, "Where?" Then the other, with a laugh, would retort, "Why, on Christ Church steeple." One of the first rectors of this church was a Rev. Mr. Coombe. He was a loyalist, and during the early days of the rebellion returned to England, where he finally became chaplain to George III. It was probably after him or one of his family that an alley a short distance above Christ Church, and running eastward, was named. Coombe's Alley was at first known as Garden Alley. This name would be very inappropriate now, for the alley is dreary and dirty, though it bears traces of better days. Here it was that William Penn, Jr., who had cut away from all restraints of his Quaker training, once got into a brawl. He was spending an evening in Enoch Story's inn, when he fell to quarreling with some of his fellow-citizens who were acting as the watch, as was then the custom, and received a severe beating.

A gutter runs down the center of the street. A horse and wagon occupied the sidewalk. We wondered which of the houses

which looked as if they had been unearthed for our benefit was the scene of young Penn's un-Friendly conduct. It is well known that clergymen's sons are apt to be of all men the most unclerical, and in like manner many of the second generation of Pennsylvania Quakers were neglectful of the precepts of their fathers. We can imagine the grief of the elder William Penn when he found that his own son was one of the foremost in disturbing the peace of the City of Brotherly Love. A fine trait in this reprobate was his honesty. Even before he came to Philadelphia he told James Logan in a letter that he knew an ill reputation had preceded his coming, but that he was firmly resolved not to become a prey to the Church party. In his day, Coombe's Alley was a prosperous quarter. In 1795, it had a very large population for such narrow limits. It had its half a dozen boarding-houses, its merchants and laborers, its soldiers and mariners, its bakers and hucksters. Nor was it entirely without its cares and troubles; for during the famous epidemic of 1793, thirty-two people died in the course of a year in this one small street. The old houses still standing in it are built of red and black bricks. Though fine glazed black bricks are now often made, the cheap ones which were so plentiful in Penn's days have disappeared. These began to be used in Philadelphia as early as 1700, when the Old Swedes Church was built in the checkered style, but the fashion went out about 1785. The last building in which they were used is the Catholic Church of the Holy Trinity, at the corner of Spruce and Sixth streets. It has been supposed that the bricks were imported by the colonists from England or Holland. But the truth seems to be that they were made in New Jersey before Penn settled in Philadelphia, and soon after this city was founded they were manufactured in its immediate neighborhood. Odd wooden projections, like unfinished roofs, divide the first story of the houses in Coombe's Alley from the second, making the latter look as if it had been an afterthought. These have entirely gone from two houses, but marks in the bricks show where they were once fastened to the walls.

Besides the horse, which was apparently its own master, and a small, ragged child who examined us curiously, there were no signs of life in the alley the morning we visited it. Yet the houses, with the exception of two, were occupied. The door of one was open; the stairs leading to it were so rickety that we decided there must be some private mode of egress and ingress known to the people who live there. I glanced carelessly through the door and saw by the wainscoting, now

fast moldering away, that the house in its prime was one of great respectability, if not of elegance. These old houses make one melancholy. They have all the shabby-genteel look of men who have seen better days. Next to one of them is a carpenter's shop, which looks very spruce and neat by the side of decayed gentility. Its sign is charming. It consists of a young man, of the painted wooden toy-soldier type, who is clasping a beam of wood and stepping boldly out into the air, as if he were veritably starting forth to seek his fortunes.

Running from Coombe's Alley to Arch street, and parallel with Second street, is Chancery Lane. Its original name was Chancellor Lane, and it was so called, Watson says, because a certain Captain Chancellor, a sail-maker, once lived there. In London there is a lane of the same name, and this, some would-be authorities declare, is derived from the fact that the street is always full of chance sellers or peddlers. As the Artful Dodger would say, this is explanatory, but not satisfactory. My first impression of Chancery Lane was that its human population had retired before an invasion of cats, for there were cats in the gutter, cats on the sidewalk, cats on the door-steps. The people of some countries believe that unless cats are well treated by the laundresses, they bring rain on wash-day. This superstition must be current here, for all the cats I saw had a fat, prosperous look, as if they were well cared for. On the east side of the street stands a house which is fresh and clean, and nicely painted. On the door is a brightly polished brass knocker. Inside the windows are white shades. Opposite to it is a real old-fashioned blacksmith's shop, next to which are two more black-and-red checkered houses. In one, two women were washing. When they saw us they paused, leaning on their elbows, and stared at us as if visitors were seldom seen in their neighborhood, and as though they had determined to enjoy the novelty to the utmost. One of them, an old Irish woman, wearing a white frilled cap, opened the door, and I then saw what I had not noticed before, that it was made in two pieces, the upper part of which can be opened while the lower half remains shut. In the summer months, the houses in Chancery Lane are decorated with flowers and plants. Poverty cannot always crush beauty, and a few simple flowers during the warm weather are to the poor what a trip to the mountains or the seashore is to the richer class. Cold as it was in November, one or two hardy shrubs still remained on the window-sills.

If we go from Chancery Lane to Arch

NEAR THE NEW PUBLIC BUILDINGS.

street and walk eastward, we must, to reach Water street, descend the rather steep hill which slopes down to the Delaware. On the top of this hill a party of gay young men met one night, during colonial days, and sent rolling into the river grindstones, which they had carried off from an iron-monger's shop on Second street. Their noisy prank could not escape unnoticed, and the next day their pleasure was lessened when they found their parents were obliged to pay costs and damages to the defrauded tradesman. Water street, or King street, as it was at first called, is as narrow as an alley. On either side are tall brick buildings, five and six stories high, with "not a single front awry," which breathe an atmosphere of merchandise. Ancient legend states that through this very street Captain Kidd was wont "to strut and

stride," followed by his troop of rollicking pirates. Now it is blocked by horses and wagons. Bales and boxes of goods obstruct the sidewalk, so that the passer-by is often forced to cross the muddy cobble-stones. Indeed, our walk for two or three squares was almost as intricate as the twistings and turnings of an old-fashioned country dance.

It is in this street that some of the most interesting relics of the earliest colonial times are to be found. The steepness of the river bank, which could not be done away with, was provided for by stair-ways, which were regulated by laws. The plans for laying Water street were made in 1690, and it was then resolved that stone stair-ways leading up to Front street should be built for public use, and should be placed at intermediate distances between the streets running from the river. They were

RED HORSE INN YARD.

to be kept in order by the property-owners in their immediate vicinity. These stair-ways still stand, and make a curious picture, breaking in like dream-views of the past upon the busy modern street. From the foot of the stairs, one can look up into the street above and see the gas-lamps, the signs of shops, and the heads of people, and the tops of wagons going to and fro, until it seems like watching the scenes of a well-managed panorama. Funny little wooden balconies project from the houses on either side over the steps, and on these, sometimes, hangs the week's wash of one of the families living in the upper stories. The white clothes, blowing backward and forward in the wind, give a pleasant touch of white to the otherwise somber picture. Opposite the stairs, a narrow, dark alley leads to the river. Through it we caught a glimpse of the water. The view was somewhat broken by thick, detached rafters which stretch from one house to the other, and which are probably intended to give them additional support. However, we could see the gulls flying across the water, and as we watched them a boat came sailing by.

Not many years ago there was in Water street, not far from the stairs, a rum-cellar with the sign of "The Boy and the Barrel." The boy had Bacchus—Bacchus riding a barrel as Silenus rode the ass, not an uncommon sign in olden time. But the word Bacchus would have been a puzzle to seamen, so it was changed to The Boy. Near "The Boy and the Barrel" was the tavern known as "The Battle of the Kegs," so that one

could then say very literally that Bacchus led the way to Battle. Sailors about 1785 must have been hard-drinkers, for we have a long list of the taverns that stood in Water street in that year. In one square alone, besides the two above mentioned, there were the "Green Tree," the "Jolly Tar," the "Three Jolly Irishmen," and the "Red Cow." In this neighborhood there is a very old and very picturesque house, one of the few survivals of old Philadelphia. It is low and wide, and is like a dwarf "between the houses high." The lower part is at present used as a broom warehouse. The proprietor, a Mr. Snellbaker, greeted us with great kindness, and we stopped for a minute to speak to him. The room we entered was on the ground floor, and the ceiling was so low that our heads almost touched it. Brooms and brushes hung all around us, and we stood on the only vacant space visible. There was not much to be seen, and there was still less to be heard. The upper part of the house, Mr. Snellbaker told us, was occupied by a Dutchman. We could only examine the exterior of the premises, but this in itself was sufficiently attractive. The first floor, like that of the old Loxley House, projects far out beyond the second, and its roof makes a very pretty porch, which is partly sheltered by the roof above. A strange effect is given by the fact that every story is on a different angle. On wires which run from the bottom to the top of the porch a few leaves of a trailing vine still clung. In summer this vine makes the second story of the house look like a beautiful bower, but the

MAMMY SAURKRAUT'S ROW.

space thus hidden was open when I saw it, and gave full view of the windows, which are rambling, and irregular in size.

All along the lower part of Race street are wholesale stores and warehouses of every description. Some carts belonging to one of them had just been unloaded. The stevedores who do this—all negroes—were resting while they waited for the next load. They were tall, powerful-looking men, selected, probably, for their strength, and were coal-black. They wore blue overalls, and on their heads they had thrown old coffee-bags, which, resting on their foreheads, passed behind their ears and hung loosely down their backs. This made a wonderfully effective Arab costume. One of them was half-leaning, half-sitting on a pile of bags, his Herculean arms were folded, and he had unconsciously assumed an air of dignity and defiance. He might have passed for an African chief. If we were in Cairo and saw such men, we would be eloquent in their praise. The mixture of races in our cities is rapidly increasing, and we hardly notice it, because we have gradually grown accustomed to it. Yet it is a strange and interesting fact that a large part of our population is Dutch and Irish, that our streets are full of Italian fruit-dealers and organ-grinders, that Jews from Jerusalem peddle goods on our sidewalks, that Chinamen are monopolizing the washing and ironing trade, and that many of the laboring class are Norwegians, Bohemians, and blacks.

The prim provincial element which still predominated in my younger years has not been able to resist the influx of foreigners, and Quaker monotony and strong conservatism are vanishing, while Philadelphia becomes more and more cosmopolite.

As we left the handsome negroes and continued our walk on Water street, an Italian passed us. He was very dirty and dilapidated, his clothes were of the poorest, and he carried a rag-picker's bag over his shoulder; but his face, as he turned it toward us, was really beautiful.

"*Siete Italiano?*" (Are you an Italian?) asked Mr. Leland.

"*Sì, signore*" (Yes, sir), he answered, showing all his white teeth, and opening his big brown eyes very wide.

"*E come lei piace questo paese?*" (And how do you like this country?) said Mr. Leland.

"Not at all. It is too cold," was his honest, straightforward answer, and, laughing good-humoredly, he continued his search through the gutters. He would have made a perfect model for an artist, for he had, what we do not always see in Italian immigrants, the real Southern beauty of face and expression. Next we met a woman, decently enough dressed, with black eyes and hair, and looking not unlike a gypsy. "A Romany!" I cried with delight. Her red shawl made me think of gypsies, and when I caught a glimpse of her eye I saw the indescribable flash of the *kaloral*, or black

blood. It is very curious that Hindus, Persians, and gypsies have, in common, an expression of the eye which distinguishes them from all the other oriental races, and this characteristic is especially noticeable in the Romany. Captain Newbold, who first studied the gypsies of Egypt, declares that, however disguised, he could always detect them by their glance, which is unlike that of any other human being, though something very much like it is often seen in the ruder type of the rural American. I believe myself that there is something in the gypsy eye which is inexplicable, and which enables its possessor to see further through that strange millstone, the human soul, than I can explain. Any one who has ever seen an old fortune-teller of "the people" keeping some simple-minded maiden by the hand, while she holds her by her glittering eye, like the Ancient Mariner, with a basilisk stare, will agree with me. As Schele De Vere writes: "It must not be forgotten that the human eye has, beyond question, often a power which far transcends the ordinary purposes of sight and approaches the boundaries of magic."

My companion whispered:

"Answer me in Romany when I speak, and don't seem to notice her."

And then in a loud tone he remarked, while staring across the street:

"*Adovo's a kushto puro rinkeno kër adoi!*" (That is a pretty nice old house there!)

"*Avali rya*" (Yes, sir), I replied.

There was a perceptible movement on the part of the party in the red shawl to keep within earshot of us. Meister Karl resumed:

"*Sa kushto coova se ta rakkerav a jib te kek Gorgio jinella.*" (It's nice to talk a language that no Gentile knows.)

The Red Shawl was on the trail.

"*Je crois que ça mord,*" remarked my companion.

We allowed our artist guide to pass on,

when, as I expected, I felt a twitch at my outer garment. I turned, and the witch-eyes, distended with awe and amazement, were glaring into mine, while she said in a hurried whisper:

"Wasn't it Romanes?"

"*Avali,*" I replied, calmly. "*Mendui rakker sarja adovo jib. Butikumi ryeskro lis se denna Gorgines.*" (Yes, we always talk that language. Much more genteel it is than English.)

"*Te adovo wawero rye?*" (And that other gentleman?) with a glance of suspicion at our artist friend.

"*Sar tacho*" (He's all right), remarked Meister Karl. Which I greatly fear meant, when correctly translated in a Christian sense, "He's all wrong."

But there is a natural sympathy and intelligence between Bohemians of every grade all the world over, and I never knew a gypsy who did not understand an artist. One glance satisfied her that he was quite worthy of our society.

"And where are you *tannin kennā?*" (tenting now) I inquired.

"We are not tenting at this time of year: we're *kairin*"—i. e., house-ing or home-ing. It is a good verb, and might be introduced into English.

"And where is your house?"

"There. Right by Mammy Saurkraut's Row. Come in and sit down."

I need not give the Romany which was spoken, but will simply translate. The house was like all the others; we passed through a close, dark passage in which lay canvas and poles, a kettle, and a *sarshta*, or the iron which is stuck into the ground, and by which a kettle hangs. The old-fashioned tripod, popularly supposed to be used by gypsies, in all probability never existed, since the Roms of India to-day use the *sarshta*, as Mr. Leland

NEAR THE CALLOWHILL-STREET BRIDGE.

STONE-YARD ON THE SCHUYLKILL.

tells me he learned from a *ci-devant* Indian gypsy Dacoit, or nomad thief, who was one of his intimates in London.

We entered an inner room, and I was at once struck by its general indescribable unlikeness to ordinary rooms. Architects declare that the type of the tent is to be distinctly found in all Chinese and Arab or Turkish architecture; it is also as marked in a gypsy's house—when he gets one. This room, which was evidently the common home of a large family, suggested, in its arrangement of furniture and the manner in which its occupants sat around, the tent and the wagon. There was a bed, and also a roll of sail-cloth which evidently did duty for sleeping on at night, but which now, rolled up, acted the part described by Cowper:

“A thing contrived a double part to play,
A bed by night, a sofa during day.”

There was one chair and a saddle, a stove and a chest of drawers. I observed an en-

graving hanging up, which I have several times seen in gypsy wagons. It represents a very dark Neapolitan boy. It is a favorite, also, with some Roman Catholics, because the boy wears a consecrated medal. The gypsies, however, believe that the boy stole the medal. The Catholics think the picture represents a Roman, and the gypsies call it a Romany, so that all are satisfied. There were some eight or nine children in the room, and among them more than one whose resemblance to the dark-skinned saint might have given color enough to the theory that he was

“— one whose blood
Had rolled through gypsies ever since the flood.”

There was also a girl of the pantherine type, and one damsel of about ten, who had light hair and fair complexion, but whose air was gypsy, and whose youthful countenance suggested not the golden but the brazenest age of life. Scarcely was I seated in the only chair when this little maiden, after

keenly scrutinizing my appearance and apparently taking in the situation, came up to me and said :

"Yer come here to have yer fortune told. I'll tell it to yer for five cents."

"*Can tute pen dukkerin aja?*" (Can you tell fortunes already?) I inquired.

If that damsel had been lifted at that instant by the hair into the infinite glory of the seventh sphere, her countenance could not have manifested more amazement. She stood stock-still, staring with wide-opened mouth.

"This 'ere rye," remarked Meister Karl, affably in Middle English, "is a hartist. He puts 'is heart into all he does. That's why. He aint Romanes, but he may be trusted. He is come here—that's wot he has—to draw this 'ere Mammy Saurkraut's Row, because it's interestin'. He aint a tax-gatherer. We don't approve o' payin' taxes, or wastin' money. Who was Mammy Saurkraut?"

"I know," cried the youthful be-be fortune-teller. "She was a witch."

"*Toot yer chiv!*" (Hold your tongue) cried the parent. "Don't bother the lady with stories about *chovahanis*" (witches).

"But that's just what I want to hear," I cried. "Go on, my little dear, about Mammy Saurkraut and you will get your five cents, if you only tell me enough."

"Well, then, Mammy Saurkraut was a witch, and a little black girl who lives next door told me so. And Mammy Saurkraut used to change herself into a pig of nights, and that's why they called her Saurkraut. This was because they had pig-ketchers going about in them old times, and once they ketched a pig that belonged to her, and to be revenged on them she used to look like a pig, and they would follow her clear out of town, way up the river, and she'd run, and they'd run after her, till, by and by, fire would begin to fly out of her bristles, and she jumped into the river and sizzed."

This I thought worth the five cents. Then Meister Karl began to put questions in Romany.

"Where is Anselo W.—he that was *staruben* for a gry?" (imprisoned for a horse).

"*Staruben apopli*" (imprisoned again).

"I am sorry for it, Sister Nell. He used to play the fiddle well. I wot he was a canty chiel'. And dearly lo'ed the whusky, oh!"

"Yes, he was too fond of that. How well he could play!"

"Yes," said Meister Karl, "he could. And I have sung to his fiddling when the *tatto-pani* [hot-water, *i. e.*, spirits] boiled within us and made us gay, O my golden sister! That's the way we Hungarian gypsies always call the ladies of our people. I sang in Romany."

"I'd like to hear you sing now," remarked a dark, handsome young man, who had just made a mysterious appearance out of the surrounding shadows.

"It's a *kamaben-gilli*—a love song," said the Rye, "and it is beautiful, deep Romanes, enough to make you cry."

There was the long sound of a violin, clear as the note of a horn. I had not observed that the dark young man had found one to his hand, and, as he accompanied, the Rye sang, and I give the lyric as he afterward gave it to me, both in Romany and English:

AN ANGLO-AMERICAN ROMANY BALLAD.

"KE TRINALI.

"Tu shan miri pireni
Me kamava tute,
Kamlidiri, rinkeni
Kames mandy buti?"

"Sa o miro kushto gry
Taders miri wardi,—
Sa o boro buno rye
Rikkars lesto stardi,—

"Sa o bokro dré o char
Hawala adovo,—
Sa i choramengeri
Lels o ryas lovoo,—

"Sa o sasto levinor
Kairs amandy matto,—
Sa o yag adro o tan
Kairs o geero tatto,—

"Sa i puri Romni chi
Pens o kushto dukk'rin,—
Sa i gorgi dinneli
Patsers lakis pukkrin,—

"Tute taders tiro rom
Sims o gry, o wardi,
Tute chores o ze adrom
Rikkars sa i stardi.

"Tute haws te chores m'ri ze.
Tute kairs me matto,
Tiri rink'ni, kali yakk
Kairen mande tatto.

"Tu shan tachi choo'hani
Tute's dukked buti,
Tu shan miro jivabén
Me t'vel paller tute.

"Paller tute sarasa
Pardel puv te pani,
Trinali—o krallisa!
Miri Chovihani!"

"TO TRINALI.

"Now thou art my darling girl,
And I love thee dearly;
Oh, beloved, and my fair,
Lov'st thou me sincerely?"

"As my good old trusty horse
Draws his load or bears it,—
As a gallant cavalier
Cocks his hat and wears it,—

"As a sheep devours the grass
When the day is sunny,—
As a thief who has the chance
Takes away our money,—

"As strong ale when taken in
Makes the strongest tipsy,—
As a fire within a tent
Warms a shivering gypsy,—

"As a gypsy grandmother
Tells a fortune neatly,—
As the Gentile trusts in her
And is done completely,—

"So you draw me there and here,
Where you like you take me;
Or you sport me like a hat—
What you will you make me.

"So you steal and gnaw my heart,
For to that I'm fated!
And by you, my gypsy Kate,
I'm intoxicated.

"And I own you are a witch,
I am beaten hollow;
Where thou goest in this world
I am bound to follow,—

"Follow thee where'er it be,
Over land and water,
Trinali, my gypsy queen!
Witch and witch's daughter!"

"Well, that *is* deep Romanes," said the woman, admiringly. "It's beautiful."

"I should think it was," remarked the violinist. "Why, I didn't understand more than one-half of it. But what I caught I understood."

"My children," said Meister Karl, "I could go on all day with Romany songs. And I can count up to a hundred in the Black Language. And I know three words for a mouse, three for a monkey, and three for the shadow which falleth at noonday. And I know how to *pen dukkerin, lel dudikabin te chiv o man-zin apré latti.*" *

"So *kushto bak!*" (Good luck!) I cried, rising to go. "We will come again."

"Yes, we will come again," said Meister Karl. "Look for me with the roses at the races, and tell me the horse to bet on. You'll find my *patteran*" (a mark or sign to show which way a gypsy has traveled) "at the next church-door, or may be on the public-house step. Child of the old Egyptians! Mother of all the witches! Sister of the stars,—fare-well!"

This bewildering speech was received with

admiring awe, and we departed. I should like to have heard the comments on us which passed that evening among the gypsy denizens of Mammy Saurkraut's Row.

We finished our walk by visiting another inn on Second street, between Callowhill and Vine. This last was the Black Horse, many squares north of the Plow Hotel, and probably the older of the two, as it is mentioned in the Directory for 1785. It is immediately distinguished from the surrounding houses by the black steed, with forehoof gracefully uplifted, that decorates its sign. To one side is the customary arch-way. The inn-yard is long and tolerably wide. At the end is the stable, on one side is a meat-market, and on the other the inn itself. A covered porch runs along the second story of the back building, and windows open out upon it. The place is very clean, and must have been well renovated within the last few years. Notwithstanding the butchers and the butchers' wagons, one immediately thinks of it as the head-quarters for a line of coaches. With the invention of the steam-engine and rapid means of transit coach after coach disappeared, and the decay of staging brought with it the decline of inns, and lessened their importance as social and commercial centers. They have deteriorated into lager-beer saloons and farmers' lodging-houses, and are interesting only as relics of a former age and a different mode of life. They are among the few remaining links which bind us to the pre-steam age.

Long after the new settlement on the banks of the Delaware had begun to look quite city-like, the country around the Schuylkill remained wild and uncleared. Colonists often made up large parties to penetrate through the thick forest of oaks and sycamores that lay so near their houses, and that was full of grape-vines, berries, and all the loveliest of American wild-flowers. Foxes and raccoons made excellent sport for huntsmen, while the sky was often blackened by the large flocks of wild ducks and geese. As the colony grew larger and richer, the wealthy built their country-houses out by this river, and several of these are still to be seen in Fairmount Park. But in the city proper there are no old haunts near the Schuylkill like those which are to be found near the Delaware, since that part of the town has been comparatively but lately built. But the river is rich in picturesque scenery. The boats and bridges on the water, and the stone and lumber yards on the banks, make up a picture to attract the artist. From the bridge just without Fairmount, as one looks down the river, the view is especially fine. On one side the houses are close to the water's edge. By the shore lie long, flat canal-

* A brief resumé of the most characteristic gypsy mode of obtaining property.

boats. The west side of the river is more broken and varied. Meadows, russet-green in hue, run back for many feet; at high-tide they are often completely immersed. Covered coal-yards stretch far into the water,

and in the background is a bridge. It is a view such as Turner would have loved to paint. The majority of men, unfortunately, are not so quick in discovering the picturesque as artists.

THE COPYRIGHT NEGOTIATIONS.

NEGOTIATIONS between Great Britain and the United States for an international copyright treaty have now been pending for a considerable time, and through the various publications put forward on both sides of the Atlantic the public has obtained already a pretty accurate general knowledge of their character. The present movement originated with American publishers, who discovered, as it was long ago predicted they would ultimately discover to their cost, that the manufacturers of books have quite as much at stake in the protection of copyright as the writers of them. There was a species of poetical justice in the rude manner in which their eyes were opened to the real facts of the case. The stock argument which the great piratical houses had always employed on the subject of copyright had been that, if international copyright was protected, cheap literature in this country would be at an end. It was piracy, they said, and piracy alone, that enabled persons of moderate means to get good books, and the general advancement of learning was thus made to appear bound up in the perpetuation of the primitive right of private theft. But with a curious and instructive inconsistency, the very publishers who advanced this argument soon began to insist that, while as against the foreign author the right was inalienable as well as necessary for the protection of the public against dear books, as between themselves it had no existence, but that there must be a right of first discovery and appropriation somewhat analogous to that recognized by maritime nations with regard to new territory—*i. e.*, that the American publisher who first announced his intention to take the work of a foreign author was entitled to the profits of his piratical venture as against all domestic comers. This was known as the "courtesy of the trade," and under it a sort of volunteer copyright system grew up, the large publishers paying a royalty to the foreign author for the right of "authorization," and securing this right as against competitors in this country by means of the courtesy of the trade. It was always difficult to understand how the growth of this

practice was reconcilable with a zeal for cheap books, because of course the payment of royalties increased the price of books just as so much copyright would have done. The new generation of piratical publishers who have come into existence since the war understand all this perfectly. They have broken up the courtesy of the trade, through an ingenious system of piracy within piracy, and their piratical editions of foreign books constitute the cheapest literature that the country has ever seen. If the old arguments on the subject were to be relied upon, the United States would now be an intellectual paradise; anybody can pirate, and the price of books has been fabulously reduced. But the publishers who used to insist that piracy was necessary for just this purpose, now that their ideal is attained, strongly object to it, and insist that the foreign author must be protected against the causes which have produced it.

But if the road has been long, and its course tortuous, the result is none the less satisfactory. To authors who have watched as curious, but not indifferent, spectators the various ingenious arguments by which the appropriation of their property was excused, justified, or extolled, the end of the long discussion in a general agreement among the publishers of both countries that literary property must in some way be protected, cannot but be very gratifying. Hitherto the supposed conflict between the interests of publishers and authors has been the main obstacle in the way of arriving at any understanding on the subject. That publishers now generally see that there is a real identity of interest, and that, to protect themselves, authors must be protected too, is a proof that we have arrived at a stage of the copyright discussion which must ultimately lead to international copyright.

But whether the present negotiations are destined to result in anything is a very different question. The general scheme of the treaty which is proposed is that of giving the English author the right to an American copyright on the condition of his publishing

his book here within a certain limited time from the date of publication in England, and *vice versa*. This period was originally fixed at three months, but the shortness of the time allowed for securing a foreign publisher has excited so much hostile criticism that it is thought that the publishers most active in the matter may be willing that it should be extended considerably. But the feature which seems to be considered essential is that the enjoyment of copyright shall be absolutely dependent upon an arrangement, in the case of an English book, for the manufacture and publication by an American publisher. There are a good many practical objections to such a treaty, which the movers in it have not as yet suggested any way to meet. For authors of established reputation it will be very easy under it to make an arrangement for publication in both countries simultaneously; that is, the author would not part with his copyright at all until he had made an arrangement for both countries, so that to him the limitation of time would be of no consequence. But with an author whose reputation is still to make (and this is the case with the majority of authors), the result would be very different. He must get a publisher where he can, and of course he does not go abroad for one. There was, for instance, a generation or so ago in England, an obscure young author of whom no one had ever heard, named George Eliot, who wrote some sketches called "Scenes of Clerical Life." The book attracted little or no attention, but years afterward the copyright became valuable, through the success of subsequent books. At the time it first appeared it would have been an impossibility to find a publisher for it in this country; and consequently, under a treaty with a limit of time, the copyright would have been lost. This is a very common case. On the other hand, if there is such a limit, and the book is of a character likely to suit the American market,—for instance, a new novel by Trollope, or a popular scientific book by Huxley,—what is to prevent the English publishers who secure the copyright first from making a cheap edition (there is no law of nature which makes it necessary that novels in England should be printed in three volumes at an extravagant price: the reason of the practice is merely that it suits English fancy and custom to have it so), and from sending it over here in a sufficient quantity to flood the market and make an American reprint impossible? Of course there would be duties to pay, but with a very low price would this be an insurmountable obstacle?

In considering the probable effects of such a treaty, one consideration will force itself

upon the mind, which suggests, at least to any one who is not a publisher, a good many puzzling questions. Under any system of domestic copyright, or such as that in England or the United States, the publication of the same book by two rival houses is something entirely unknown. No publisher will take the risk of any such competition, and therefore he always purchases from the author, in advance, the entire right for the whole country. But the proposed copyright treaty contemplates both an English and an American publisher for any book copyrighted on both sides of the Atlantic—at least, in all cases where the publishing firm on one side is not merely a branch of the concern on the other. In such a case each publisher would have to take the risk of his market being interfered with by importations, were it not that the treaty contemplates a reciprocal prohibition of imports from either country into the other. Prohibition of piratical imprints is one thing; such prohibition is provided for by any domestic system of copyright. But the reciprocal prohibition of the importation of books copyrighted internationally seems a novelty. Does not this bring us face to face with the fact that the primary design of the treaty, which seems to be protection to publishers, can only be effectively and permanently secured by forcing the books manufactured in either country to be sold "on the premises"? But why should we force protection against American manufactures of any kind on England? Even those who believe protection to be a panacea for American industry are not anxious to have foreign countries retaliate on us by keeping our products out of their markets.

Such suggestions as these are not advanced in any spirit of hostility to the treaty, if that is the best thing that can at present be got; but the negotiations have been dragging on for a long while, and the one thing patent about them is that there is no general agreement as to how the treaty is going to work. Its more prominent advocates, to judge from some of their publications on the subject, are irritated by the gross ignorance displayed by every one else who writes about it. But the fact is that we are ignorant about it. We find it a complicated subject, and a scheme the remote effects of which are hard to foresee in all their details. What the public have a right to demand in so important a matter is that its innocent ignorance shall not be treated as a sign of prejudice, but shall be dispelled, if possible, by those who have the means of enlightening them. There are, after all, public interests involved.

Thus far, however, it must be confessed private interests have seemed much more prominent in the discussion which the scheme

has received. The negotiations were set on foot by an American publishing house, and the details of the proposals made by it have been sharply criticised in the interests of English publishers, and now it appears that the Canadian publishers are going to be represented in Washington by a colonial diplomat, who will insist that no treaty be adopted which does not protect the "interests of Canada." These interests are entirely those of Canadian publishers. Canada is a flourishing industrial and agricultural community, which has produced no body of literature and probably will not for a long time. But it has publishers of its own, some of whom are believed to have connections, involved in much mystery, with houses in the United States. Canada, like all new and flourishing branches of the great Anglo-Saxon race, has its own copyright law, which has "absolutely no connection" with any other concern of the kind. The Canadians have just the same passion for cheap books that we used to have, and have resorted to substantially the same means to get them. The report of the English Copyright Commission of 1878 contains a very valuable account of the history of Canadian copyright, which is altogether too long to be reproduced here; but one or two facts are worth mentioning in connection with the appearance of a demand for the protection of "Canadian interests" in the treaty. The Canadians, having always been mainly rather consumers than producers of literature, perceived, as soon as the practice of pirating English books in the United States sprang up, that the strictness of the mother-country on the subject of literary property was so much clear loss to them, for they were compelled to buy expensive copyrighted English publications, when on the other side of the border there were literary factories turning out the same books for a mere song, and they were all the time denied access to them. If the Canadians had really been as great moralists with regard to copyright as their nationality ought to have made them, they would not have longed or asked for permission to buy the cheap American reprints; but their desire for cheap literature overcame them, and they insisted that they ought to be allowed to benefit by American piracy. Accordingly they promised that, if they should be permitted this, they would pass an act themselves for the protection of the British author. In consideration of this, the English Government granted permission for the importation of American reprints into Canada, while the Canadian legislature imposed a duty of twelve and a half per cent. upon these, which was to go to the British author in compensation for the infringement

of his rights. The reader will bear in mind that the theory on which the legislation was based was, first, that the English author would be completely protected by the English copyright legislation; then that he would be robbed in the United States, and finally, that the Canadians would import the stolen goods through the custom-house, and levy upon themselves a tax sufficient to compensate the author for the original robbery. Robbery and restitution were to go hand in hand, and the author was to be left just where he would have been if there had been no legislation at all. The robbery was in the end to profit not only the American and Canadian reading public, but even the author who was robbed. The actual result of the scheme cannot be better stated than in the words of the commissioners:

"So far as British authors and owners of copyright are concerned, the act has proved a complete failure. Foreign reprints of copyright works have been largely introduced into the colonies (the act applied to all the colonies), and notably American reprints into the Dominion of Canada, but no returns, or returns of an absurdly small amount, have been made to the authors and owners. It appears from official reports that, during the ten years ending in 1876, the amount received from the whole of the colonies which have taken advantage of the act was only £1155 13s. 2½d., of which £1084 13s. 3½d. was received from Canada; and that of these colonies seven paid nothing whatever to the authors, while six now and then paid small sums amounting to a few shillings."

The Canadian copyright question has been still further complicated by the passage of a local copyright law, so that there are now an English copyright statute and a Canadian act, the workings of which are both affected by the reprints act, but to what extent, or precisely how, does not appear to be known. Enough, however, has been said to show that the work of making an international treaty will not be simplified for the appearance on the scene of the Canadian publishers. In fact, it will chiefly tend to strengthen the impression that the negotiations are rather between rival publishers and importers, each one of whom is endeavoring to get what protection he can for his own business, than between two countries endeavoring to establish a right of property on a secure footing.

Is it too late, even now, to suggest that there is nothing to prevent this country acting independently, and giving to English authors the rights which the English Government is perfectly ready to accord to all foreign authors? One effect of the present negotiations has been to confuse people's minds as to their object, and to introduce questions of expediency into a matter in which

they have no proper place. It is not the rights or interests of publishers which are primarily involved, but those of authors, and this is the first time in the history of literary property that the positions of the two classes have been reversed, and authors' rights brought up as a ground for legislation to protect the manufacturer of books. From one point of view this is an advantage; from another, a positive detriment. If the manufacturer of books is to be protected against foreign competition, let him be protected; but let it be after we have redressed the injustice which we have so long inflicted upon authors. The one thing that the discussion about the proposed treaty makes clear is that no one can predict how it will work. The example of Canada just cited shows how little can be told in advance about the actual operation of the most ingenious scheme for reconciling conflicting interests. When several countries, and different tariffs and business customs and local laws are involved, the elements which enter into the determination of the result are too numerous to permit their remote results to be estimated in advance. There is one thing, however, which we do know, and that is that if the author is put upon precisely the same footing in England and America, if the citizen of either country is given full protection to his rights in both, he will no longer be exposed to pillage and spoliation as he is now, and that the question of his rights will no longer be confused as they are now with the business interests of the manufacturer. Whether this is done by an act of Congress or by a treaty makes very little difference; it must be confessed that the long delay in the negotiations for the proposed treaty is beginning to make people who have hoped for its success from the first skeptical as to the result.

It is understood that the old objection to any recognition of copyright—that it tends to make books dear, and so throw an obstacle in the way of the education of the masses—will be raised in the Senate when the pending treaty, or any treaty, comes before it. This is really a difficult objection to meet, because with any one whose mind is in that curiously primitive condition in which he thinks that it is argument against acquiring property by purchase that pillage is less expensive, it is hard to find any common premises to start from. It is, of course, for the interest of the masses that they should have cheap clothes and cheap food, but nobody advises them to plunder their neighbors to secure these desirable objects. In early times it used to be done in the case of clothes and food, just as it is now in the case of books. In fact, there is no

article of necessity or luxury that at some period of the history of the world has not been regarded alternately as property at home and spoil abroad. But the progress of civilization has convinced the world, as to all other kinds of property, that the universal recognition of ownership is the only guarantee, in the long run, of continuous and cheap production.

But to those whose historical associations and sentiments are so strong as to blind them to the economic facts of the case, it may be suggested that the noble old system under which we have lived so long has already produced a cheap literature such as the world has never seen. No copyright treaty can be made retroactive, and the great body of English books have been already stolen. They are now and will always be accessible to the student at a ridiculously low price, and as this is an age of compromise, the wonderfully successful "steal" that has been accomplished might fairly be offset by conservative senators as so much clear profit against the measure of justice for the future which authors, and publishers for them now demand.

The benefit to the United States from the establishment of some just system of international copyright is not limited to the pecuniary advantages to be derived from it by the publishers. The statutes of this Government, which secure to authors the ownership of their copyright for a limited time, were passed for the object of encouraging the literary production of this country—that the United States might, as time went on, take its place among the most advanced nations of the earth in letters and science. In doing this, we formally renounced all belief in the stale fallacy that, because literature will be produced whether we protect it or not, therefore it should not be protected. Like other modern civilized nations, we recognize the fact that the first step in the promotion of any human industry is to guarantee the enjoyment of the results of their toil to those who carry it on. If we compare the scanty literature of the ancient world with that of modern times, we see that what was once the luxury of the wealthy has become a common necessity. This is necessarily attributed to the printing-press. But does any one suppose that the wonderful activity of the printing-press would be one of the phenomena of our civilization if the advancing protection of literary property had not made it possible for men to devote their lives to literary production with the same certainty of remuneration and profit that the merchant, or the manufacturer, or the cotton-picker, or the hod-carrier enjoys? Our domestic laws for the protection of copyright have played

their part in fostering the literature which has been developed in this country within the past generation; and we have reached the point at which American authors look abroad as well as at home for a public, and the time is rapidly approaching when the whole English-speaking race will be the natural constituency of the American no less than the English author. To promote the cause of American letters now requires that we should take such means as will insure the fruits of our literary labor in foreign countries. The continuance of the present system would merely mean that our Government, for the sake of permitting the robbery of the citizens of other countries here, is glad to have its own citizens robbed abroad.

American authors have, besides this, another direct stake in the matter, which is sometimes strangely overlooked. The facility of indiscriminate pillage afforded by the present condition of the law between the two countries diminishes the interest of the domes-

tic publisher in the literature of his own country. As long as he can republish the latest novel or the latest history or book of travels without paying anything for it, why should he be at the trouble and expense of finding a market for American books, for the copyright of which he has to pay? If this does not have the effect of diminishing his interest in American literature, there must be something in the business of publishing books which makes the love of country a more powerful motive than it usually shows itself to be in other branches of trade. The publisher is governed, after all, by ordinary human motives, and if his love of gain does not lead to the absolute rejection of American books for the sake of the greater profit to be made by piratical editions of foreign works, it must at least tend to reduce the royalty which he is willing to pay to the home author, and in this way the general value of American copyrights must remain below their natural value until international protection is assured.

THE FLEMISH BELLS.

The bells cast by the famous molder Van den Gheyn, of Louvain, are said to have lost all the sweetness they had a hundred years ago.]

SADLY he shook his frosted head,
Listening and leaning on his cane;
"Nay—I am like the bells," he said,
"Cast by the molder of Louvain.

"Often you've read of their mystic powers,
Floating o'er Flanders' dull lagoons;
How they would hold the lazy hours
Meshed in a net of golden tunes.

"Never such bells as those were heard,
Echoing over the sluggish tide;
Now like a storm-crash,—now like a bird,
Flinging their carillons far and wide.

"There in Louvain they swing to-day,
Up in the turrets where long they've swung;
But the rare cunning of yore, they say,
Somehow has dropped from the brazen
tongue.

"Over them shines the same pale sky,
Under them stretch the same lagoons;
Out from the belfries, bird-like fly,
As from a nest, the same sweet tunes;

"Ever the same,—and yet we know
None are entranced these later times,
Just as the listeners long ago
Were, with the wonder of their chimes.

"Something elusive as viewless air,
Something we cannot understand,
Strangely has vanished of the rare
Skill of the molder's master hand.

"So—when you plead that life is still
Full, as of old, with tingling joy,—
That I may hear its music thrill,
Just as I heard it when a boy;—

"All I can say, is—Youth has passed,—
Master of magic falls and swells,—
Bearing away the cunning cast
Into the molding of the bells!"

BISMILLAH.

FORTH from his tent the patriarch Abraham stept,
And lengthening shadows slowly past him crept.

For many days he scarce had broke his fast,
Lest some poor wanderer should come at last,

And, scanty comfort finding, go his way,
In doubt of God's great mercy day by day.

But deep contentment in his calm eyes shone
When he beheld, afar, a pilgrim lone,

Fare slowly toward him from the flaming west,
With weary steps betokening need of rest.

When that he came anear, straightway was seen
An aged man of grave and reverend mien.

"Guest of mine eyes, here let thy footsteps halt,"
The patriarch said, "and share my bread and salt."

Then calling to his kinsfolk, soon the board
Was laden richly with the patriarch's hoard.

And when around the fair repast they drew,
"Bismillah!" said they all with reverence due;

Save only he for whom the feast was spread:
He bowed him gravely, but no word he said.

Then Abraham thus: "O guest, is it not meet
To utter God's great name ere thou dost eat?"

The pilgrim answered, courteous but calm,
"Good friend, of those who worship fire I am."

Then Abraham rose, his brow with anger bent,
And drove the aged Gheber from his tent.

That instant, swifter than a flashing sword;
Appeared and spake an angel of the Lord.

In shining splendor wrapt, the bright one said:
"An hundred years upon this aged head

God's mercy hath been lavished from on high,
In life and sun and rain. Dost thou deny

What God withholds not from the meanest clod?"
The patriarch bowed in meekness. Great is God.

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER X.

As HE was saying it, Bertha had gone back to her sofa, and sat there with the faint, troubled smile still on her face.

"He was angry," she said, "and so was I. It made him look very large, but I was not at all afraid of him—no, positively, I was not afraid of him, and I am glad of that. It is bad enough to remember that I was emotional, and said things I did not mean to say. It is not like me to say things I don't mean to say. I must be more tired out than I knew. Ah, there is no denying that he was in the right! I will go away and stay some time. It will be better in every way."

For some minutes she sat motionless, her hands clasped lightly upon her knee, her eyes fixed on a patch of sunlight on the carpet. She did not move, indeed, until she heard the sound of her husband's foot upon the steps and his latch-key in the door. He entered the room immediately afterward, looking rather warm and a trifle exhilarated, and all the handsomer in consequence.

"Ah, Bertha, you are here!" he said. "I am glad you were not out! How warm it is! Fancy having such weather early in May! And three days ago we had fires. What a climate! There is something appropriate in it. It is purely Washingtonian, and as uncertain as—senators. There's a scientific problem for the Signal Service Bureau to settle,—Does the unreliability of the climate affect the senatorial mind, or does the unreliability of the senatorial mind affect the climate?"

"It sounds like a conundrum," said Bertha, "and the Signal Service Bureau would give it up. You have been walking too fast, you foolish boy, and have overheated yourself. Come and lie down on the sofa and rest."

She picked up the cushion, which had fallen, and put it in place for him. There was always a pretty touch of maternal care for him in her manner. He accepted her invitation with delighted readiness, and, when he had thrown himself at luxurious full length upon the sofa, she took a seat upon its edge near him, having

first brought from the mantel a large Japanese fan, with which she stirred the air gently.

"Why were you glad that I had not gone out?" she said. "Did you want me?"

"Oh!" he answered, "I always want you. You are the kind of little person one naturally wants—and it is a sort of relief to find you on the spot. How nice this Grand Pasha business is—lying on cushions and being fanned—and how pretty and cool you look in your white frills! White is very becoming to you, Bertha."

Bertha glanced down at the frills.

"Is it?" she said. "Yes, I think it is, and this is a pretty gown. Richard!"

"Well?"

"You said it was a sort of relief to find me on the spot. Did you say it because I am not always here when you want me? Do you think I go out too much? Does it ever seem to you that I neglect you a little, and am not quite as domesticated as I should be? Should you be—happier—if I lived a quieter life and cared less for society?"

There was a touch of unusual earnestness in her voice, and her eyes were almost childishly eager as she turned them upon him.

"Happier!" he exclaimed, gayly. "My dear child! I could not easily be happier than I am. How could I accuse you of neglecting me? You satisfy me exactly in everything. Whose home is more charming, and whose children are better cared for than mine? It is not necessary for you to cook my dinner, but you are the most delightful sauce to it in the world when you sit at the head of the table. What more could a man want?"

"I—I don't know," she said, slowly, "but I could not bear to think that I was not what I should be in my own home. It has always seemed to me that there could be no bad taste and bad breeding so inexcusable as the bad taste and bad breeding of a woman who is disagreeable and negligent in her own house. One has no need to put it on moral grounds even—the bad taste of it is enough. I don't think I could ever be disagreeable—or that you could think me so—but it struck me——"

"Don't let it strike you again," he interrupted, amiably. "It has struck me that there were never two people so well suited to each other as our married life has proved us to be. I don't mind admitting now that once or twice during the first year I thought that you were a little restless or unhappy, but it was when you were not well, and it was quite natural, and it all passed away, and I don't think it would occur to any one in these days to ask whether you are happy or not."

Bertha was playing with his watch-chain, and she separated one charm upon it from another carefully as she answered him in a soft, natural voice:

"There is a legend, you know," she said, "that the first year of one's marriage is always uncomfortable."

"Oh, mine was not uncomfortable," he returned,—"*it was delightful, as all the other years have been; but—just occasionally, you know—there was a—well, a vague something—which never troubles me now.*"

"I must have behaved badly in some way," said Bertha, smiling, "or it would not have troubled you then."

And she stooped and kissed him on the forehead.

"I have a horrible conviction," she said after it, "that I was a vixen. Was I a vixen? Perhaps I was a vixen, and never suspected it—and no one suspected it but you. Poor boy! Why didn't you return me to papa with thanks? Well, as you have kept me so long, you must make the best of me. And it is very nice and polite in you to pretend that I am satisfactory, and don't make you wretched and your hearth a wilderness by being a hollow worldling."

"You are exactly what I want," he responded. "I am a hollow worldling myself. If I were a brick-layer, my idea of domestic bliss might be to spend my evenings at home and watch you mending stockings or knitting, or doing something of that sort, but even then I am afraid I should tire of it, and secretly long for something more frivolous."

"For something as frivolous as I am?" she said, with a nervous little laugh. "Quite as frivolous, Richard—really? But I know you will say so. You are always good to me and spoil me."

"No, I am not," he answered. "It is simply true that you always please me. It is true I am a rather easy-natured fellow, but I know plenty of good-natured fellows whose wives are terribly unsatisfactory. You are clever and pretty, and don't make mistakes, and you are never exacting, nor really out of humor, and it is impossible for me to tire of you——"

"Really?" she said, quickly. "Is that last true?"

"Entirely true."

"Well," she commented, the color rising in her cheek, "that is a good deal for one's husband to say! That is a triumph. It amounts to a certificate of character."

"Well," he admitted, after a second's reflection, "upon the whole it is! I know more husbands than one—but no matter. I was going to add that long ago—before I met you, you know—my vague visions of matrimonial venture were always clouded by a secret conviction that when I had really passed the Rubicon and had time for reflection, things might begin to assume a rather serious aspect."

"And I," said Bertha, a little thoughtfully, "have never assumed a serious aspect."

"Never," he replied, exultantly. "You have been a perfect success. There is but one Bertha——"

"And her husband is her prophet!" she added. "You are very good to me, Richard, and it is entirely useless for you to deny it, because I shall insist upon it with—with wild horses, if necessary—which figure of speech I hope strikes you as being strong enough."

She was herself again—neither eager nor in earnest, ready to amuse him and to be amused, waving her fan for his benefit, touching up his cushions to make him more comfortable, and seeming to enjoy her seat on the edge of his sofa very much indeed.

"Do you know," she said, at length, "what I have thought of doing? I have thought quite seriously of going in a day or so to Fortress Monroe, with the children."

She felt that he started slightly, and wondered why.

"Are you surprised?" she asked. "Would you rather I would not go?"

"No," he answered, "if you think it would be better for you. You are tired, and the weather is very warm. But—have you set any particular day?"

"No," she said, "I should not do that without speaking to you first."

"Well," he returned, "then suppose you do not go this week. I have half-invited Senator Planfield, and Macpherson and Ashley to dinner for Thursday."

"Is it because you want them to talk about the bill?" she said. "How interested you are in it, Richard! Why is it? Railroads never struck me as being particularly fascinating material. It seems to me that amateur enthusiasm would be more readily awakened by something more romantic and a little intangible—a tremendous claim, for instance, which would make some poor,

struggling creatures fabulously rich. I am always interested in claims—the wilder they are the better, and it invariably delights me when the people get them 'through,' to the utter consternation of the Government. It has faintly dawned upon me on two or three such occasions that I have no political morality, and I am afraid it is a feminine failing. It is not a masculine one, of course, so it must be feminine. I wish you had chosen a claim, Richard, instead of a railroad. I am sure it would have been far more absorbing."

"The railroad is quite absorbing enough," he answered, "and there is money enough involved in it. Just think of those Westoria lands, and what they will be worth if the road is carried through them—and as to romance, what could be more romantic than the story attached to them?"

"But I don't know the story," said Bertha. "What is it?"

"It is a very effective story," he replied, "and it was the story which first called my attention to the subject. There was a poor, visionary fellow whose name was Westor, to whom a large tract of this land came suddenly as an inheritance from a distant relative. He was not practical enough to make much use of it, and he lived in the house upon it in a desolate, shiftless way for several years, when he had the ill-fortune to discover coal on the place. I say it was ill-fortune, because the discovery drove him wild. He worked, and starved, and planned, and scraped together all the money he could to buy more land, keeping his secret closely for some time. When he could do no more he came to Washington, and began to work for a railroad which would make his wealth available. His energy was a kind of frenzy, they say. He neither ate, slept, nor rested, and really managed to get the matter into active movement. He managed to awaken a kind of enthusiasm, and, for a short time, was a good deal talked of and noticed. He was a big, raw-boned young Westerner, and created a sensation by his very uncouthness in its connection with the wildly fabulous stories told about his wealth. He had among his acquaintances a man of immense influence, and at this man's house he met the inevitable young woman. She amused herself, and he fell madly in love, and became more frenzied than ever. It was said that she intended to marry him if he was successful, and that she made his poor, helpless life such an anguish to him that he lost his balance entirely. There came a time when he was entirely penniless, and his prospects were so unpromising, and his despair so great, that he went to his boarding-house one day with the intention of kill-

ing himself, and just as he finished loading his pistol a letter was handed in to him, and when he opened it he found it contained the information that another distant relative, affected by the rumors concerning him, had left him twenty thousand dollars. He laid his pistol in a drawer, and left the house to begin again. He had an interview with his lady-love, and one with his man of influence, and at the end of a few weeks had bought more land, and parted in some mysterious way with the rest of his money, and was on the very eve of success. Poor fellow!"

"Poor fellow!" said Bertha. "Oh! don't say that anything went wrong!"

"It would not be half so dramatic a story if everything had gone right," said Richard, with fine artistic appreciation. "You could never guess what happened. Everything he did seemed to work to a miracle; every train was laid and every match applied. On the day that was to decide his fate he did not go near the Capitol, but wandered out and took his place on one of the seats in the park which faced the house at which the young woman was visiting, and sat there, a lank, unshorn, haggard figure, either staring at her window or leaning forward with his head upon his hands. People actually heard of his being there and went to look at him, and came away without having dared to address him. The young woman looked out from behind her blind and was furious, and even sent word to him to go away. But he would not go, and only glared at the man who was sent to him with the message. He sat there until night, and then staggered across and rang at the bell, and inquired for the man of influence, and was told—what do you suppose he was told?"

"Oh!" cried Bertha, desperately. "I don't know."

"He was told that he was occupied."

"Occupied!" echoed Bertha.

Richard clasped his hands comfortably and gracefully behind his head.

"That's the climax of the story," he said. "He was occupied—in being married to the young woman, of whom he had been greatly enamored for some time, and who had discreetly decided to marry him because he had proved to her that the other man's bill could not possibly pass. It could not pass because he had the energy and influence to prevent its doing so, and he prevented its passing because he knew he would lose the young woman otherwise. At least that is the story, and I like the version."

"I don't like it!" said Bertha. "It makes me feel desperate."

"What it made the poor fellow feel," Rich-

ard went on, "nobody ever found out, as he said nothing at all about it. On hearing the truth he sat down on the steps for a few minutes, and then got up and went away. He went to his boarding-house and had an interview with his landlady, who was a kind-hearted creature, and when she saw him began to cry because his bill had not passed. But when she spoke of it she found he knew nothing of it—he had never asked about it, and he said to her, 'Oh! that doesn't matter—it isn't any consequence particularly; I'm only troubled about *your* bill. I haven't money enough to pay it. I've only enough to take me home, and you'll have to let me give you the things I have in my room for pay. I only want one thing out of there—if you'll let me go and get it, I won't take anything else.' So she let him go, and stood outside his door and cried, while he went in and took something out of a drawer."

"Richard!" cried Bertha.

"Yes," said Richard. "He actually found a use for it after all—but not in Washington. He went as far as he could by rail, and then he tramped the rest of the way to Westoria—they say it must have taken him several days, and that his shoes were worn to shreds, and his feet cut and bruised by the walk. When he reached the house, it had been shut up so long that the honeysuckle which climbed about it had grown across the door, and he could not have got in without breaking or pushing it aside. People fancied that at first he thought of going in, but that when he saw the vine it stopped him—slight barrier as it was. They thought he had intended to go in because he had evidently gone to the door, and before he turned away had broken off a spray of the flowers which was just beginning to bloom—he held it crushed in his hand when they found him, two or three days later. He had carried it back to the edge of the porch, and had sat down—and finished everything—with the only thing he had brought back from Washington—the pistol. How does that strike you as the romance of a railroad?"

Bertha clenched her hand, and struck her knee a fierce little blow.

"Richard," she said, "if that had happened in my day, I should have turned lobbyist, and every thought and power and gift I had would have been brought to bear to secure the passage of that bill."

Richard laughed—a pleased but slightly nervous laugh.

"Suppose you bring them to bear now," he suggested.

"There would not be any reason for my doing it now," she answered, "but I shall certainly be interested."

Richard laughed again.

"By Jove!" he said, "the poor devils who own it would think there was reason enough!"

"Who owns it?"

"Several people, who speculated in it because the railroad was talked of again, and on a more substantial footing. It fell to Westor's only living relation, who was an ignorant old woman, and sold it without having any idea of its real value. Her impression was that, if she kept it, it would bring her ill-luck. There is no denying that it looks just now like a magnificent speculation."

"And that poor fellow," said Bertha,—
"that *poor* fellow——"

"That poor fellow?" Richard interposed. "Yes—but his little drama is over, you know, and perhaps there are others going on quite as interesting, if we only knew them. It is very like you, Bertha—and it is very adorable," touching her shoulder caressingly with his hand, "to lose sight entirely of the speculation and care only for the poor fellow. You insist upon having your little drama under all circumstances."

"Yes," she admitted. "I confess that I like my little drama, and I have not a doubt that—as I said before—I could not have lived in the midst of that without turning lobbyist—which is certainly not my vocation."

"Not your vocation?" said Richard. "You would make the most successful little lobbyist in the world!"

Bertha turned upon him an incredulous and rather bewildered smile.

"I!" she exclaimed. "I?"

"Yes, you!"

"Well," she replied, after a second's pause given to inspection of him, "*this* is open derision!"

"It is perfectly true," was his response, "and it is true for good reasons. Your strength would lie in the very fact that you would be entirely unlike your co-laborers in the field. You have a finished little air of ingenuousness which would be your fortune."

She shook her head with a pretty gesture.

"No," she said. "I am very clever, and of course you cannot help observing it, but I am not clever enough for that."

He gave her a glance at once curious and admiring.

"By Jove!" he exclaimed, "it is my belief you are clever enough for anything."

"Richard," she said, "shall I tell you a secret?"

"Yes."

"And you will bury it in the innermost recesses of your soul, and *never* divulge it?"

"Certainly."

"And brace yourself for a shock when I reveal it to you?"

"Yes."

"Well, here it is! My cleverness is like what you—and two or three other most charming people—are good enough to call my prettiness. It is a delusion and a snare!"

"Come!" he said. "You are attempting to deceive me."

"No," she answered. "I am attempting to undeceive you. I am not really pretty or clever at all, and it has been the object of my life to prevent its being detected."

She opened her eyes in the most charmingly ingenuous manner and nodded her head.

"I discovered it myself," she said, "long ago—comparatively early in life—and resolved to conceal it. And nothing but the confidence I repose in you would have induced me to mention it."

"Well," he replied, "you have concealed it pretty well under the circumstances."

"Ah!" she said, "but you don't know what a burden it is to carry about, and what subterfuges I have to resort to when I seem on the very verge of being found out: There is Larry, for instance—I am almost sure that Larry suspects me, especially when I am tired, or chance to wear an unbecoming gown. You know how particular I am about my gowns? Well, that is my secret. I haven't an attraction, really, but my gowns and my spirits and my speciousness. The solitary thing I do feel I have reason to pride myself on is that I am bold enough to adapt my gowns in such a way as to persuade you that I am physically responsible for the color and shape of them. You fancy you are pleased with me when you are simply pleased with some color of which I exist on the reflection or glow. In nine cases out of ten, it is merely a matter of pale blue or pink, and silk or crêpe or cashmere; and in the tenth it is nothing but spirits and speciousness."

"Oh," he said, "there is no denying that you would make a wonderful lobbyist."

"Well," she answered, rising and going to the table to lay her fan down, "when you invest largely in Westoria lands and require my services in that capacity, I will try to distinguish myself. I think I should like to begin with the Westoria lands if I begin at all. But in the meantime I must go upstairs and talk to the seamstress about Janey's new white dresses. You are cool enough now to enjoy your lunch when the bell rings, and you shall have some iced tea if you would like it."

"I would like it very well, and—by the bye, did Tredennis bring the 'Clarion,' as he said he would?"

"Yes—it is here," and she handed it to him from the table. "You can read it while I am upstairs."

"Have you read it?" he said, opening it and turning to the editorial.

"Not yet. I shall read it this afternoon."

"Yes, do. The facts are put very forcibly. And—you will decide not to go to Fortress Monroe just yet?"

She hesitated a moment, but he did not observe it.

"I must be here when your friends dine with you, of course," she said. "And a week or even a little more does not make so much difference, after all. It may be quite cool again to-morrow."

And she went out of the room and left him to his paper.

CHAPTER XI.

It was two weeks after this that Arbuthnot, sauntering down the avenue in a leisurely manner, on his way from his office, and having a fancy to stroll through Lafayette Park, which was looking its best in its spring bravery and bloom, on entering the iron gateway found his attention attracted by the large figure of Colonel Tredennis, who was approaching him from the opposite direction, walking slowly and appearing deeply abstracted. It cannot be said that Mr. Arbuthnot felt any special delight in the prospective encounter. He had not felt that he had advanced greatly in Colonel Tredennis's good opinion, and had, it must be confessed, resigned himself to that unfortunate condition of affairs without making any particular effort to remedy it—his private impression being that the result would scarcely be likely to pay for the exertion, taking into consideration the fact that he was constitutionally averse to exertion.

"Why," he had said to Bertha, "should I waste my vital energies in endeavoring to persuade a man that I am what he wants, when perhaps I am not? There are scores of people who will naturally please him better than I do, and there are people enough who please me better than he does. Let him take his choice—and it is easy enough to see that I am not his choice."

"What is he thinking of now, I wonder?" he said, a vague plan for turning into another walk flitting through his mind. "Are his friends, the Piutes, on the war-path and actively engaged in dissecting agents, or is he simply out of humor? He is not thinking of where he is going. He will walk over that nursemaid and obliterate the twins—yes, I thought so."

The Colonel had verified his prophecy, and aroused from his reverie by the devastation he had caused, he came to a stand-still with a perplexed and distressed countenance.

"I beg your pardon," Arbuthnot heard him say, in his great, deep voice. "I hope I did not hurt you. I had forgotten where I was." And he stooped and set the nearest twin on its feet on the grass and then did the same thing for the other, upon which both stood and stared at him, and not being hurt at all, having merely rolled over on the sod, were in sufficiently good spirits to regard with interest the fact that he was fumbling in his coat-pocket for something.

The article in question was a package of bonbons, which he produced and gave to the nearest toddler.

"Here!" he said. "I bought these for another little girl, but I can get some more. They are all right," he added, turning to the mulatto girl, whose admiration of his martial bearing revealed itself in a most lenient grin,—"they won't hurt them. They can eat them all without being harmed."

And then he turned away, and in doing so caught sight of Arbuthnot, and, somewhat to the surprise of the latter, advanced toward him at once with the evident intention of joining him.

"It is rather a curious thing that I should meet you here," he said. "I was thinking of you when I met with the catastrophe you saw just now. Do you often go home this way?"

"Not very often," Arbuthnot replied. "Sometimes, when things look as they do now," with a gesture indicating the brilliant verdure.

"Everything looks very fresh and luxuriant," said Tredennis. "The season is unusually far advanced, I suppose. It is sometimes a great deal too warm to be pleasant."

"It will be decidedly warmer every day," said Arbuthnot. "We shall have a trying summer. The President is going out to the Soldiers' Home next week—which is earlier than usual. There are only two or three of the senators' families left in the city. The exodus began weeks ago."

"Such weather as we have had the last few days," said the Colonel, with his slight frown, "must be very exhausting to those who are not strong, and who have gone through a gay winter."

"The best thing such people can do," responded Arbuthnot, drily, "is to make their way to the mountains or the sea as soon as possible. Most of them do."

Tredennis's reply was characteristically abrupt.

"Mrs. Amory does not," he said.

"No," answered Arbuthnot, and he looked at the end of his cigar as if he saw nothing else.

"Why doesn't she?" demanded Tredennis.

"She ought to," said Arbuthnot, with calm adroitness.

"Ought to!" Tredennis repeated. "She should have gone months ago. She—she is actually ill. Why in heaven's name does she stay? She told me two weeks since that she was going to Fortress Monroe, or some such place."

"She had better go to a New England farm-house, and wear a muslin gown and swing in a hammock," said Arbuthnot.

"You see that as well, do you?" said the Colonel. "Why don't you tell her so?" and having said it, seemed to pull himself up suddenly, as if he felt he had been unconsciously impetuous.

Arbuthnot laughed.

His smile had died completely away, however, when he gave his side glance at his companion's face a moment later.

"She was quite serious in her intention of going away two weeks ago," he said. "She told me so; nothing but Richard's dinner-party prevented her departure in the first place."

He spoke in an entirely non-committal tone, but there was a touch of interest in his quiet glance at Tredennis.

"You dined there with Planefield and the rest, didn't you?" he added.

"Yes."

"I didn't. Richard was kind enough to invite me, but I should only have been in the way." He paused an instant, and then added, without any change of tone or manner, "I know nothing of the Westoria lands."

"Was it necessary that you should?" said Tredennis. "I did not."

"Oh," Arbuthnot answered, "I knew they would discuss them, and the bill, as it pleases Amory to be interested in them just now."

"I remember that the matter was referred to several times," said Tredennis; "even Mrs. Amory seemed to know a good deal of it."

"A good deal!" said Arbuthnot. "In favor of the bill?"

"Yes," Tredennis answered. "She had been reading up, it appeared. She said some very good things about it—in a laughing way. Why does she waste her time and strength on such folly?" he added, hotly. "Why—why is she allowed to do it?"

"The New England farm would be better for her just now," said Arbuthnot—again adroitly.

"Why should Amory waste his time upon it?" the Colonel went on,—“though that is his affair, of course, and not mine!”

They had reached the gate by this time, but they did not pass through it. Finding themselves near it, they turned—as if by mutual consent, and yet without speaking of doing so—into the walk nearest them.

It was after taking a few steps in silence down this path, that Colonel Tredennis spoke again, abruptly:

"When I was thinking of you just before we met," he said, "I was thinking of you in connection with—with the Amorys."

He knew the statement had a blunt enough sound, and his recognition of it irritated him, but he was beginning to be accustomed to his own bluntness of statement, and, at any rate, this led him to the point he meant to reach.

Arbuthnot's reply was characteristic. It was not blunt at all, and had an air of simple directness, which was the result not only of a most creditable tact and far-sightedness, but of more private good feeling and sincerity than he was usually credited with.

"I am always glad to be thought of in connection with the Amorys," he said. "And I am glad that it is perfectly natural that I should be connected with them in the minds of their friends. There has been a very close connection between us for several years, and I hope they have found as much pleasure in it as I have."

Tredennis recognized the tact even if he was not aware of the good feeling and far-sightedness. The obstacles had been removed from his path, and the conversation had received an air of unconstrained naturalness, which would make it easier for him to go on.

"Then," he said, "there will be no need to explain what I mean by saying that I was thinking specially of your interest in Mrs. Amory herself—and your influence over her."

"I wish my influence over her was as strong as my interest in her," was his companion's reply. "My interest in her is a sincere enough feeling—and a deep one. There is every reason why it should be."

"I—," began the Colonel, "I ——" And then he stopped.

"Your interest in her," Arbuthnot went on, seeming to enjoy his cigar very much, "is even a more natural feeling than mine—

though I scarcely think it can be stronger. It is not a matter of relationship so much,—as a rule, relationship does not amount to a great deal,—but the fact that you knew her as a girl, and feel toward the Professor as you do, must give her a distinct place in your mind."

"It is a feeling," said Tredennis, "which disturbs me when I see that she is in actual danger through her own want of care for herself. Are women always so reckless? Is it a Washington fashion? Why should she forget that her children need her care, if she does not choose to think of herself? Is that a Washington fashion, too?"

"You were thinking," said Arbuthnot, "and flattering me in doing it, that what I might say to her on the necessity of leaving the city might have some little effect?"

"Yes," Tredennis answered. "And if not upon herself, upon Amory. He is always ready to listen to you."

Arbuthnot was silent for some moments. He was following a certain train of thought closely and rapidly, but his expression did not betray him at all.

"She would have gone two weeks ago," he said quietly next, "if it had not been for Richard's engagements with Planefield and the rest. He has had them at his house two or three times since then, and they have made little parties to Mount Vernon and Arlington and Great Falls. Planefield is a lady's man, and he finds Mrs. Amory very charming."

"What!" exclaimed Tredennis, with intolerant haughtiness,—“that coarse fellow?"

"He isn't a nice fellow," said Arbuthnot, "but he won't show his worst side to her—any more than he can help. He is a very powerful fellow, they say."

Here he stopped. They had reached their gate-way again.

"I'll do what I can," he said. "It won't be much, perhaps—but I will do what I can. I fully appreciate the confidence you showed in speaking to me."

"I fully appreciate the manner in which you listened to what I had to say," said Tredennis.

And, somewhat to Arbuthnot's surprise, he held out his hand to him.

WILLIAM DEAN HOWELLS.

IT is now a little more than twenty years since Mr. Howells made his first visit to Boston, bringing in his carpet-bag a number of poems, which were soon printed in "The Atlantic Monthly." He had already sent to the East some of his verses, which had appeared in the same magazine. Many of these, by their form, and still more by their deep, cheerless gloom, showed that their author had a great admiration for Heine, the wonderful master of epigrammatic sadness. With years and actual experience the sadness—which was of the willful sort that belongs to youth—wore away, but Mr. Howells's hand retained the neatness of touch which is apparent in even the slightest of these verses. At about the same time he published a few longer poems, in a narrative form, and it is curious to see in these some of the qualities that are familiar to us in his later novels. It was a novelist, for instance, who heard and told the "Pilot's Story" about the man

"Weakly good-natured and kind, and weakly good-natured and vicious,
Slender of body and mind, fit neither for loving nor hating,"

who gambled away the quadroneer girl, his mistress. In every one of his stories, too, we come across bits of humorous or pathetic insight which might have stood by themselves as the subjects of little poems; and in all his subsequent work we find the poetic flavor which was here asserting itself. It was some time, however, before Mr. Howells tried the more serious business of writing novels. This delay is only natural; views about life are common property, but knowledge of what life really is is a rarer thing and more difficult of attainment.

These poems had been written by Mr. Howells in the scant leisure moments of a busy youth. He was born in Ohio, in the year 1837; his father was editor and publisher of a country newspaper, and it was at a very early age that the subject of this article began to set type and learn the printer's trade. Throughout his boyhood, and in fact until 1859, he worked in his father's printing-office, although for two or three years before that date he had exercised his pen as a legislative reporter, and then as "news editor" of "The Ohio State Journal" at Columbus. What intervals his work granted him were taken for reading and, in time, for writing, and the early fruits of his pen appeared in a volume called "Poems of Two Friends," which was published at Columbus, in Decem-

ber, 1859. The other writer, who indeed was the author of the greater number of the poems, was Mr. J. J. Piatt, who has since written many pleasing verses. These two young poets had worked together in a printing-office, where they spent the years which so many young men waste in college. In the summer of 1861 Mr. Howells wrote a life of Lincoln, a book which had a large sale in the West, and in the autumn of that year he was appointed consul at Venice.

This appointment was one of the sort which, doubtless, the stern civil-service reformer will have to condemn, in public, at least; but in private he will only congratulate himself upon it, as an Englishman might have done for the unsound system which found a place in Parliament for men like Pitt and Burke. Moreover, if the duties of a consul in Venice were slight,—and the *Alabama* was at work beginning the warfare against American commerce which has since been carried on by legislators,—there was the more leisure for the study of this fascinating city. Indeed, the change from an Ohio city to Venice was the most complete that could be imagined. Even Havre or Bordeaux, with strictly commercial flavor, would have seemed like a glimpse of paradise to a young, untraveled, poetic consul, but to go to Italy, and of all Italian ports, to Venice! It must have seemed as if life had nothing more to grant to the imaginative young official.

It is with this new life that Mr. Howells's literary activity really begins, and the two volumes, "Venetian Life" and "Italian Journeys," bear witness to the impulse he received from this transplanting. These books are made up of essays and letters which were saved from the swift oblivion of bound magazines and newspapers. They are delightful reading, and they bear the promise of the future novelist in them. When he traveled to Italian towns he was studying human nature, and, fortunately, there have been preserved in these two books a vast number of little studies, minute observations, such as in abundance go to make the outfit of a writer of fiction. Thus:

"I think some of the pleasantest people in Italy are the army gentlemen. There is the race's gentleness in their ways, in spite of their ferocious trade, and an American freedom of style. They brag in a manner that makes one feel at home immediately. * * * Three officers who dined with us at the *table d'hôte* of the Stella d'Oro, in Ferrara, were visibly anxious to address us, and began not uncivilly, but still in order that we should hear, to speculate on our nationality

among themselves. It appeared that we were Germans; for one of these officers, who had formerly been in the Austrian service at Vienna, recognized the word 'bitter' in our remarks on the *beccafichi*. As I did not care to put these fine fellows to the trouble of hating us for others' faults, I made bold to say that we were not Germans, and to add that 'bitter' was also an English word.

"Ah! yes, to be sure," one of them admitted; "when he was with the Sardinian army in the Crimea he had frequently heard the word used by English soldiers."

The officers found out that these foreigners were Americans:

"Did we think Signor Leencolen would be re-elected?"

"I supposed he had been elected that day," I said.

"Ah! this was election day, then. *Cospetto!*"

"At this the Genoese frowned superior intelligence, and the Crimean, gazing admiringly upon him, said he had been nine months at Nuova York, and that he had a brother living there. The poor Crimean boastfully added that he himself had a cousin in America, and that the Americans generally spoke Spanish. The count from Piacenza wore an air of pathetic discomfiture, and tried to invent a transatlantic relative, as I think, but failed. I am persuaded that none of these warriors really had kinsmen in America, but that they all pretended to have them, out of politeness to us, and that they believed each other."

Or take this account of the "patriarch," the government guide who accompanied Mr. Howells to Capri, and induced him to see the "tarantella" danced for two francs, "whereas down at your inn, if you hire the dancers through your landlord, it will cost you five or six francs. But," Mr. Howells goes on,

"The poor patriarch was also a rascal in his small way, and he presently turned to me with a countenance full of cowardly trouble and base remorse: 'I pray you, little sir, not to tell the landlord below there that you have seen the tarantella danced here; for he has daughters and friends to dance it for strangers, and gets a deal of money by it. So, if he asks you to see it, do me the pleasure to say, lest he should take on (*pigliarsi*) with me about it: 'Thanks, but we saw the tarantella at Pompeii.'"
It was the last place in Italy where we were likely to have seen the tarantella; but these simple people are improvident in lying, as in everything else."

Imagine a touch like that in Addison's "Remarks on Italy"!

These two volumes were not all that Mr. Howells brought back with him to America, when he returned home in the autumn of 1865. They show, however, how rich was the experience he had acquired, and with what a keen eye he had observed this foreign life. If he who knows two languages is twice a man, how much more can this be said of one who knows two peoples!

After doing a little journalistic work on "The Nation" in New York, Mr. Howells was invited by the late Mr. J. T. Fields to take the place of assistant editor of "The Atlantic Monthly,"

and in 1871 he assumed the full charge of that magazine, a position which he held until the spring of 1881. Much of his time and attention went into the composition of book-notices, a sort of writing which the public often neglects, and which is apparently without influence on writers; but he wrote a number of essays, which he collected into a volume called "Suburban Sketches," published in 1870, and "The Wedding Journey," which appeared serially in the year 1871, showed that he was gradually feeling his way to becoming a novelist. There was all the setting of a novel without a conventional plot; there were plenty of incidents, but they existed solely for their own sake; it was a prolonged sketch, full of all those qualities which readers have learned to associate with Mr. Howells's books.

The first of these to strike the reader's attention is the delightful humor, which is not the derisive horse-play of some of those writers who in foreign parts have acquired a reputation for American humor. Although that term is applied without much discrimination to very diverse ways of arousing laughter, varying from wit to buffoonery, we find in him, rather, a subtle, evasive humor, without geographical limitation, because it is so rare that no country can lay claim to its exclusive possession. Here is one bit, a trifle, to be sure, but a characteristic trifle; while going up the Hudson River there had been a slight accident, and the passengers had gathered on the deck to recount all the horrors which they had ever seen, or just escaped seeing:

"Well," said one of the group, a man in a hard hat, 'I never lie down on a steam-boat or a railroad train. I want to be ready for whatever happens.'

"The others looked at this speaker with interest, as one who had invented a safe method of travel.

"I happened to be up to-night, but I almost always undress and go to bed, just as if I were in my own house," said the gentleman of the silk cap. 'I don't say your way isn't the best, but that's my way.'

"The champions of the rival systems debated their merits with suavity and mutual respect, but they met with scornful silence a compromising spirit who held that it was better to throw off your coat and boots, but keep your pantaloons on."

Mr. Howells's humor is more noticeable when he is writing about women and their ways. Thus, when the couple whose journey is the subject of the book get to the furthestmost of the little islands in the channel at Niagara, the heroine,

"—without the slightest warning, sank down at the root of a tree, and said, with serious composure, that she could never go back on those bridges; they were not safe. He stared at her cowering form in blank amaze, and put his hands in his pockets. Then it occurred to his dull masculine sense that it must be a joke; and he said, 'Well, I'll have you taken off in a boat!'

"O, do, Basil, do, have me taken off in a boat," implored Mabel; "you see yourself the bridges are not safe. Do get a boat."

He goes on with his ill-timed pleasantry, and she bursts into tears. He tries sarcasm, then kindness, proposing to carry her.

"No, that will bring double the weight on the bridge at once."

"Couldn't you shut your eyes, and let me lead you?"

"Why, it isn't the sight of the rapids," she said, looking up fiercely. "*The bridges are not safe.* I'm not a child, Basil. Oh, what shall we do?"

Then when he tells her some one is coming,—"Those people we saw in the parlor last night,"—she walks calmly back without a word. He asks her why she had so suddenly acted reasonably.

"Why, dearest! Don't you understand? That Mrs. Richard—whoever she is—is so much like me."

Or take that other instance, when "she rose with a smile from the ruins of her life, amidst which she had heart-brokenly sat down with all her things on."

If it is fair to make another quotation from this book, which, however, is wholly made up of these accessories, there is this:

"They were about to enter the village, and he could not make any open acknowledgment of her tenderness; but her silken mantel slipped from her shoulder, and he embracingly replaced it, flattering himself that he had delicately seized this chance of an unavowed caress, and not knowing (O such is the blindness of our sex!) that the opportunity had been yet more subtly afforded him, with the art which women never disuse in this world, and which, I hope, they will not forget in the next."

Laughter at the alleged inconsequence of women is nothing new in literature, but it has not always been accompanied with the kindness and reverence which Mr. Howells never fails to show. Occasionally, we come across a novelist who detects or fancies a resemblance between a woman and the domestic cat. With this slender stock in trade, he turns off numerous stories swarming with cat-like women, who purr, glide over carpets, and, at times, scratch. This amount of lore is commonly taken for profound knowledge of the female heart, and the wrath of women over the analogy is taken for the shame of detection. Women have no cause to be indignant with Mr. Howells's kind comprehension of them; what he feels for them is not the exultation of a man who has found them out, or the pity of a superior being for attractive inferiors, but the sympathy of a man who understands them, and what we are all hungry for is not so much that we may be loved, as that we may be understood. Possibly, at times, we are overhasty in assum-

ing that if we were understood we should be loved. There can be no dark doubt of this kind, however, in the case of Mr. Howells's girlish heroines. Take them in succession, and see their naturalness and consequent charm. The heroine of "A Chance Acquaintance" is not the same person as Lydia, the heroine of "The Lady of the *Aroostook*," or that of "Dr. Breen's Practice." Yet they are alike in their fearlessness before others and timidity before themselves, in their gracious innocence and generosity. No one has drawn such uncontaminated souls more delicately than Mr. Howells, because no one has drawn them more exactly. In the great whirl of life, they would have but little show by the side of intenser people, more practiced plotters, and the victims of fiercer emotions; their kingdom, so to speak, is just out of the busy world, in some quiet corner, whence fancy and poetry are not banished.

Fond as Mr. Howells is of these independent girls with their romance awaiting them, he has also written about another sort of heroine, the full-blown coquette, the mature flirt, and he has made a most thorough study of her antics. The coquettes whom we meet in novels have commonly but one trick, although, to be sure, this is generally irresistible, or said to be irresistible; he has shown us accomplished experts in the gay science, who are not simply arch, or mischievous, or appealing, but much more, for at times they are frank. The art with which he draws his coquettes is most admirable, because here, as everywhere, Mr. Howells describes what he sees, and his eyes are exceedingly sharp. They see not only the grim, decrepit New England village in the brief season when "boarders" assemble, but also the perturbing flirt, the unworthy cause of tragedies, who is not condemned or apologized for, but is simply put before us.

There can be but little doubt that, whenever we are fortunate enough to have a novelist writing for us, we are only too apt to insist that he is not an artist, writing for his own delectation as well as ours, but that he is a political economist, or a patriot, or certainly a moralist, in disguise. To be sure, we are led into this error by the fact that every story, exactly in proportion to its truth to life, carries with it some lesson, just as all experience does; but that, I take it, is as secondary, in all real novels, as instruction in perspective is foreign to a painter's intentions. Yet we go on imagining that a novelist has anything in his mind except a story which exists for its own sake, and we torment one another with wondering what moral we were meant to draw, when the real question before us is: What is the fable? Do the little fishes talk

like whales, or like little fishes? We may besure of one thing: if the novelist will take care of his story, the moral will take care of itself.

Mr. Howells's novels have not wholly escaped discussion of this sort. Of late years, the American girl has become an object of great public interest, and the opinion seems to be held in some quarters that Mr. Howells has been retained, like a scientific expert, to support the views of one side of a controversy concerning the American young person, whereas it would be fairer to suppose that he chooses a certain sort of girl for his heroine, writes about her, and reads with wonder all the lessons that his critics find in the pages of his story.

And what charming girls they are! There is Florida Vervain in "A Foregone Conclusion," which is, perhaps, the most poetic of Mr. Howells's novels; we have here a distinctively American girl, with her keen moral sensé, receiving a declaration of love from an Italian priest. That is the climax of the story, and the reader will recall how beautifully the whole tale is told, and how the girl's pity for the poor man is described. No other feeling would have served the author's purpose. Indignation would have been unnatural; any answer on her part to his affection would have repelled the reader, and her very pity makes his position the more hopeless. It is only the more cruel in its effect on the priest that the heroine, in absolute unconsciousness of what her words conveyed, had given the priest the very encouragement of which he stood most in need, that he should look upon himself as a man.

"Would you be my friend," he asked eagerly in lower tones, and with signs of an inward struggle, "if this way of escape were for me to be no longer a priest?"

"Oh, yes, yes! Why not?" cried the girl; and her face glowed with heroic sympathy and defiance. It is from this heaven-born ignorance in women of the insuperable difficulties of doing right that men take fire and accomplish the sublime impossibilities. Our sense of details, our fatal habits of reasoning, paralyze us; we need the impulse of the pure ideal which we can only get from them. These two were alike children as regarded the world, but he had a man's dark prevision of the means, and she had a heavenly scorn of everything but the end to be achieved.

"He drew a long breath. 'Then it does not seem terrible to you?'"

"Terrible? No! I don't see how you can rest till it is done! * * * Such a man as you ought to leave the priesthood at any risk or hazard. * * * With your genius once free, you can make country, and fame, and friends everywhere. Leave Venice! There are other places. Think how inventors succeed in America' —."

When he ventures to take her really at her word, and discloses his long pent-up love, he sees the whole truth. Her cry, "You? A priest!" shows him the hopeless-

ness of his passion; and her pity only seals his doom. Nothing could more completely sum up the book than the passage in which the heroine, as she bids farewell to the priest, throws her arms about his neck and kisses him, sealing, as it were, the impossibility of his love for her. With this, the story might well have ended; that the heroine should return to this country and marry an unromantic Yankee was, perhaps, inevitable, but was it not a sacrifice to conventionality?

In "The Lady of the *Aroostook*" we have the young girl, wholly, without experience, triple-armed in her innocence, who is thrust fresh from South Bradfield, Mass., into semi-disreputable foreign society in Venice, after crossing the ocean with no other woman on the ship, and two young men—for the little sot need not be counted—for her fellow-passengers. Certainly it would be hard to find a more dramatic contrast, and Mr. Howells is very fond of this plot—of placing an unconventional figure before all the complications of modern society, and letting the new-comer settle everything by her native judgment.

In so many formless English novels we see the frank acceptance of conventional rewards, the bride and the money-bags awaiting the young man who has artificially prolonged a tepid courtship, that the reader grows weary of the implied compliment to wealth and position. There is a truly national spirit in the way Mr. Howells shows the other side—the emptiness of convention and the dignity of native worth. Struggle as we may against it, it is one of the main conditions of American, if not of modern, society, that inborn merit has a chance to assert itself. The quality by which distinction is adjudged is, to be sure, too often unrelenting social ambition in combination with a long purse, but the destruction of old lines is going on, and even if movements of this kind could be stopped, society could not revert to its original condition of rigid divisions. As it is, however, these movements are irresistible—they move in any direction, save backward, and the democratic hero has done much in literature since Rousseau gave him citizenship in his "Nouvelle Héloïse."

After all, what can realism produce but the downfall of conventionality? Just as the scientific spirit digs the ground from beneath superstition, so does its fellow-worker, realism, tend to prick the bubble of abstract types. Realism is the tool of the democratic spirit, the modern spirit by means of which the truth is elicited, and Mr. Howells's realism is untiring. It is, too, unceasingly good-natured. Whether he is describing the Italian officers, or the

wife in "Their Wedding Journey," with her firm devotion to Boston, or country people in "Dr. Breen's Practice," we feel that Mr. Howells is scrutinizing the person he is writing about with undisturbed calmness, and that no name and no person can impose upon him by its conventional value. His country-people are simple, shrewd, unimpassioned rustics; they are neither pastoral shepherds nor boors—they are human beings. In his "Wedding Journey" Mr. Howells introduces a conversation which he overheard in a steam-boat, between a young man who traveled "in pursuit of trade for the dry-goods house he represented," and two girls, "conjecturally sisters going home from some visit, and not skilled in the world, but of a certain repute in their country neighborhood for beauty and wit." I will not quote the details of their romping flirtation, but these words of Mr. Howells deserve attention: "Ah! poor real life, which I love, can I make others share the delight I find in thy foolish and insipid face!"

This is his attitude throughout, and it is the one most fitting the writer who stands as interpreter between the world and his readers, who knows that it is his duty to tell us what he sees, not to pervert the truth according to his whims or prejudices. It would have been easy enough to sneer at these hoydenish girls and their bold admirer, but there is no ill-nature in the few lines devoted to them, and certainly no tendency to exaggerate their importance. This, it seems to me, is a saner way of looking at the world than that which we sometimes notice in "Punch," when "Arry" comes under public censure. So long as realism gives us what is seen by intelligent eyes, without telling us what the emotions are with which we should dilate, it will have at least the charm of novelty. Although the tendency of modern literature is toward truthfulness, only a few writers dare to be honest, or, even if they dare, know how to be so. We can all sit down and write a very passable essay on the merits of cheerfulness, of punctuality, of patriotism, but how many people have the gift of seeing what goes on about them, and of stating it concisely, impressively, and yet dispassionately? They are few, indeed, and most of them, if they were to write a novel, would be likely to manufacture a story after the accustomed model, which would at least be safe.

After all, the world is very unfair to novelists; we all know that life is made up of disappointments, that the fervor of youth gives way to a chilly content with compromise, that no one carries his ideals far, but exchanges them for maxims of worldly prudence. We know all this, I say, and we tell novelists,

above all things, to paint life as they see it; yet the moment one does so and gives us anything but the customary ending,—such as we see on the stage at about twenty-five minutes past ten o'clock, when the actors form in a semi-circle, and the green curtain begins to show signs of animation,—we are enraged, and we denounce the novelist as a foe to his kind. We ask, too, for faithful studies of men, yet it is seldom that a novelist gives us these; for one season the heroes are all consumptive, in the next they are all muscular. We are great sticklers, too, for the social position of the people we may meet in our reading; we do not care to make strange acquaintances.

For all these prejudices Mr. Howells has no patience, and in his pages one finds a tolerably full collection of the amusing figures who go to make up the American public. We pass them in the street without knowing them, and when we get home we groan over the monotony of American civilization; but they have not escaped the eyes of this busy student of his kind. The vulgarest of them he has put before us in their relations to some romantic incident; they are not merely collected and, as it were, pinned on the wall—they are brought into subservience to some romantic story. Of course, the mere accumulation of incidents does not make a novel, any more than the accidental juxtaposition of colors makes a picture: the informing spirit must control the selection and arrangement which go to every work of art. For my own part, I fail to feel the same interest in "Dr. Breen's Practice" that I feel in "A Foregone Conclusion" or "A Chance Acquaintance," or, indeed, in most of the others. But Mr. Howells is himself responsible for making his readers hard to please.

May I say the same thing about his plays, or, as they might be more properly called, his dramatic scenes? A novelist may well be anxious to set his characters on the stage, to see them walking before him, endowed with flesh and blood for at least a few hours' life, for the play promises to be more vivid than the printed page; yet often it is not. The lighter the play, the greater is the demand upon the skill of the actors, and there are but few of them who are capable of giving in the theater those delicate shades and implications which form the setting in which Mr. Howells always lays his scene. Occasionally we see a delicate French piece, such as one of Alfred de Musset's *proverbes*, in an English rendering; but all the graceful ease and finish of the original are evaporated in the removal from Paris, as if they were delicate wines incapable of transport. Mr. Howells's plays suffer from this very lightness, and we miss what are so

noticeable in his novels—his own comments and ingenious side-remarks, which have no weight as stage directions, especially when translated into the ordinary gestures and motions of the stage. What endears his books to us as much as anything is what we see of the author in them; he lets us see through his eyes. Thus, in "The Lady of the *Aroostook*," Lydia is on the deck of the ship, talking with Staniford. He says:

"I wish I could be with you when you first see Venice!"

"Yes?" said Lydia.

"Even the interrogative comment, with the rising inflection, could not chill his enthusiasm."

"It is really the greatest sight in the world."

"Lydia had apparently no comment to make on this fact. She waited tranquilly awhile before she said:

"My father used to talk about Italy to me when I was little. He wanted to go. My mother said afterward—after she had come home with me to South Bradfield—that she always believed he would have lived if he had gone there. He had consumption."

"Oh!" said Staniford, softly. Then he added, with the tact of his sex: "Miss Blood, you mustn't take cold, sitting here with me. This wind is chilly. Shall I go below and get you some more wraps?"

Or take this from the same book. Staniford says:

"But we shall not see the right sort of Sabbath till Mr. Dunham gets his Catholic Church fully going."

"They all started, and looked at Dunham, as good Protestants must when some one whom they would never have suspected of Catholicism turns out to be a Catholic. Dunham cast a reproachful glance at his friend, but said, simply:

"I am a Catholic—that is true; but I do not admit the pretensions of the Bishop of Rome."

It is in just such scenes as these that Mr. Howells's peculiar power of seeing and putting before us little shades is most clearly marked, and we may be sure that we find these subtle distinctions more clearly presented in the story, with the aid of his lines or half-lines of characterization, than they are likely to be on the stage, where we are accustomed to broader effects and cruder methods. The delicate half-tints in which he works are too

nearly indistinguishable in the dazzling, garish blaze of the theater. Such, at least, is one spectator's experience.

The traditions, too, of the stage are obstinate and would be slow in making themselves over, whereas Mr. Howells has made over the American novel, taught it gracefulness and compactness, and, with one predecessor and one or two contemporaries, given it a place in literature along with the best of modern work. That he has delighted us all, we all know. He has shown us how genuine, how full of romance, is the life about us which seems sordid and has a fine reputation for sordidness; and he has proved that realism does not mean groping in the mire. The main distinction, however, does not lie in the subject, but in the character of the man who writes about it. That is what gives the aroma of sincerity, sympathy, respect for what is honorable, or the contrary impression, to literary work. It is the tone of the author's mind that makes the mark upon that of the reader, and who that knows Mr. Howells's work does not feel that he learns new sympathies and gentler judgment from his generosity and careful study? The reader is not moved by eloquence to unknown feelings, which fade away when the book is closed, and give place to a critical reaction; no, he sees things in a new light: Mr. Howells touches his shoulder, and points out the beauty hidden in simple actions, the pathos lurking beneath seemingly indifferent words,—in short, the humanity of life.

Above all, he does this with reverence, with the sort of regard which science has for small things as well as great. That small things are unimportant is a matter of convention, and, as we have seen, Mr. Howells does not care for conventions. What he cares for is to see and describe things as they are; and he does this with such sympathetic comprehension that our admiration for his books is enriched by a feeling of affection for the writer.

COME, DEATH!

COME, Death, and stretch him on his bier!
He would not linger longer here.
He and the world were long at fight;
He was the weaker and he fell.
Come, Death, and ring his passing bell.

The hound is howling at his door;
Strange fires are dancing on the moor;
The light of the huge blood-red moon
Fills the cold chamber where he lies.
How sound he sleeps! When will he rise?

Hark! hark! the wind is moaning loud!
It drives the snow, the earth's cold shroud;
Hark! how it weeps around the walls!
But let it moan and let it weep,—
It cannot wake him from his sleep.

MY OWN.

BROWN heads and gold around my knee
Dispute in eager play,
Sweet, childish voices in my ear
Are sounding all the day;
Yet, sometimes, in a sudden hush,
I seem to hear a tone
Such as my little boy's had been
If I had kept my own.

-And when, oftentimes, they come to me,
As evening hours grow long,
And beg me winningly to give
A story or a song,
I see a pair of star-bright eyes
Among the others shine,—
The eyes of him who ne'er has heard
Story or song of mine.

At night I go my rounds, and pause
Each white-draped cot beside,
And note how flushed is this one's cheek,
How that one's curls lie wide;
And to a corner tenantless
My swift thoughts fly apace,—
That would have been, if he had lived,
My other darling's place.

The years go fast; my children soon
Within the world of men
Will find their work, and venture forth,
Not to return again;
But there is one who cannot go,—
I shall not be alone:
The little boy who never lived
Will always be my own.

OPERA IN NEW YORK.

I.

FIFTEEN miles is the limit of vision on the surface of the sea; so the temporal vision of the average denizen of New York, as he looks backward, seems to be bounded in like manner by a horizon about fifteen years off. And like the folk of the dark ages, he looks upon the limit of his knowledge as the end of his world:—*that* is the jumping-off-place. Nor is this narrowness in scope of knowledge, even in things material, confined to the heterogeneous mass of men drawn together by trade and chance in the great commercial town. Not long ago, one of the leading journals of New York remarked seriously that a certain poet, having made his reputation before the war, must be regarded, "in so young a country, as belonging to ancient history." It happened that the bard in question had ceased publishing before the war, and was therefore little known to the ephemeral public for which that newspaper was that day published; for which reason there was, to a large proportion of its readers, a semblance of truth in its assertion, which, so far as it had any effect, went to nourish and confirm the notion that in some queer way connects our first civil war with the beginning of our social culture, if not of our civilization, and looks upon the time "before the war" as a period of national hobbledehoydom. Yet, not

to turn to our elder generation of living authors such as Bancroft, Longfellow, Holmes, and Whittier, of whom Prescott, and Motley, and Hawthorne were contemporaries, we have, in the generation which succeeded them, Lowell, Curtis, Whipple, Baker, Stedman, Parton, Bret Harte, Aldrich, Stoddard, Leland, and we may add Howells, who are now in what should be the richest productive period of their lives, and all of whom had not only published but had made their reputations before the war. It need hardly be said that, among the writers who have come before the American public since that great event, there are a few whose names are already distinguished; but most of these have commanded attention rather by the nature and the novelty of their subjects than by their native force or their literary skill. What has been done here in literature and in art will doubtless be not only equaled hereafter but surpassed, notwithstanding the unfavorable conditions, both material and moral, of our society in that regard. It is only that the men who are to accomplish this have not yet appeared.

None the less because of the date of our best literary work, is fifteen years the boundary not only of the average New-Yorker's, but we may even assert of the "average American's," knowledge of the society in which he finds himself, and of which we can hardly say that he forms a part—he being rather one of a chance assemblage of isolated items. This

is true of him, unless he happens to be a native Bostonian or Philadelphian, who is likely to have roots that bring him social nourishment and knowledge from a deeper soil. As for the average New-Yorker, his very title to that designation is in much the greater number of cases merely the barren fact that he lives in New York, has lived there a few years, and hopes to live there always. Hence that superficial apprehension of things, and that looking from to-day, not beyond yesterday nor further forward than to-morrow, which has become a peculiarly New York trait. For it is not with the young alone that this short-sightedness prevails; nor is it a sign of ignorance greater than might be reasonably looked for, considering the elements of the population of New York, in all conditions of its society—considering how many of the inhabitants of the great trade-mart have come into it within fifteen years, and know nothing and care to know nothing of it beyond that limit. More than one-half the people who dwell upon Manhattan Island were born in Europe; and of the remainder, quite one-half have drifted upon it from other countries within the Union, which, more or less remote, are all so far away and so strange that these, too, although not political aliens, are socially foreigners.

This ignorance as to the recent past, which is generally accompanied by a complacent assumption as to the present, is upon no subject more complete and self-satisfied than upon music. Even the writers upon music in New York newspapers of the better class assume that musical taste is a recent development among the people whom they instruct. They look back to the building of the Academy of Music (if they can see so far) as the beginning of Italian opera in the United States, and regard Steinway Hall as the cradle of our orchestral music of the higher order. But, on the contrary, the truth is that the strangely named Academy of Music is merely the result of a series of long unsuccessful attempts to get from large and popular audiences that support for Italian opera which it had received in no country in the world in which there was not a large wealthy, leisurely class, who were disposed to pay lavishly for its support—doing this less from the pleasure taken in it by most of them, than because it was an expensive, fashionable, and socially exclusive pastime. Steinway Hall and Chickering Hall, useful appendages to the business of the eminent musical manufacturers whose names they bear, are mere make-shifts for the present; and in regard to the past, they are poor substitutes, which have very imperfectly and unsatisfactorily supplied the place of a concert-room

which New York lost “before the war,” and which in size, in beauty, in convenience, and in its acoustic qualities was unsurpassed, if it were equaled, by any other in the world. Its entrance was in Broadway, opposite Bond street. It was approached, not by climbing narrow and dangerous stairs, but by a broad corridor on a level with the street, and the sight of its lofty and beautiful proportions and rich but chaste decorations was a never-tiring pleasure. Jenny Lind was the name of her who first awoke its echoes, which hardly died away when they were again aroused by Marietta Alboni. And this was years “before the war.” Metropolitan Hall was burned in 1854. Before the building of the Academy of Music New York had, in Astor Place, an opera-house so admirable in design, so well adapted to its musical purpose, so beautiful, and so skillfully contrived for the exhibition of its audience, as well as its artists, that not only traveled Americans, but foreigners of extended acquaintance with the capitals and the elegant gayeties of Europe, pronounced it the most beautiful theater of its kind in the world. In form and in color it pleased the eye, and it was in one point singularly admirable: large enough for imposing display, both on the stage and off, it was not too large. Singers were not obliged to strain their voices to make themselves heard in it; beaux and belles were not obliged to strain their eyes to see each other's attractions, even without opera-glasses; nor did the elder ladies have any difficulty in criticising one another's dresses to the minutest particulars. At this time, too, the opera audience of New York was not so large nor so promiscuous but that most of those who composed it had more or less knowledge of one another. Hence, not only the visiting from box to box and sofa to sofa between the acts, but the mere presence together of friends and acquaintances, and of those who, although not acquainted, were yet familiar with one another's faces, for the common enjoyment of a great and refined pleasure, made the opera at Astor Place a very delightful form of society. But one of this beauty's chief charms was the cause of its ruin. It was too small. It would hold comfortably all the frequenters of the opera; but on special occasions, first nights, and the performance of very popular operas, it would not accommodate the unusual throng; wherefore, the treasury suffered sorely; for it is upon such occasional floods that places of public entertainment depend for that supply of money which makes the difference between failure and success.

But New York's greatest enjoyments of Italian opera have not been in houses specially built for the lyric drama. Before the building

of any opera-house between its two rivers, New York had known and appreciated operatic performances by artists of a higher grade than any of those who have appeared only on the boards of its opera-houses proper; and it is worthy of remark that, since the time when Italian opera made its first splendid entrance into the New World through the portals of New York, the most renowned singers, the grandest music, and the most delightful, if not the most complete, operatic performances have been presented to its public within profane, unconsecrated walls. This period of musical experience and culture extends so far back that it reaches the time of our grandfathers.

The annals of opera in New York are records of more than half a century. Before 1825 our stage knew only such musical performances—English operettas, they were called—as correspond to the French *vaudeville*. In these Mrs. Oldmixon, Mrs. Hilson, and Mrs. Holman—singing actresses from the London theaters—pleased the ears and the eyes of gentlemen in enormous white cravats and high shirt-collars, who wore their hair in a Brutus crop, and among whom there might be seen, at rare intervals, some old-fashioned fellows with queues tightly tied in black silk ribbons. In 1823, however, “*Der Freischütz*” was performed in English at the Park Theater, and was very successful. Two years afterward, the history of opera proper in New York begins, not in feebleness or uncertain obscurity, but in pomp and triumph, and a blaze of splendor.

The first Italian opera heard in America was Rossini’s masterpiece “*Il Barbiere di Siviglia*,” which was produced at the Park Theater in 1825 by the famous Garcia Company. Angrisani appeared as *Basilio*, Garcia as *Almaviva*, and Signorina Garcia as *Rosina*. Angrisani was one of the best Italian-singing basses of his day. Garcia had then hardly a rival among tenors; and his daughter, Signorina Garcia, soon became, as Madame Malibran, to Italian opera what Rachel was afterward to French tragedy; and she began her wonderful career in New York, where her talent was first recognized and was first appreciated at its real value, and where she soon became the idol of the public, tasting here first that intoxicating adulation which she was afterward to drink without measure.

Manuel Garcia was a Spanish Hebrew who had risen to operatic distinction in Paris as a tenor, both *di forza* and *di grazia*, and who, in such parts as *Otello*, *Almaviva*, and even *Don Giovanni*, was without an acknowledged equal. His daughter, Maria Felicità, after some years of pupilage under her father, and some

little operatic experience in Italy as his supplement and support, went with him to London when she was sixteen years old, and was engaged at the Italian opera there, in 1824, as a chorus singer! Only a year afterward, when the prima-donna—the great prima-donna of the day—fell suddenly ill, Garcia, who never lost anything for lack of confidence, boldly offered the services of his girlish daughter in place of those of—Pasta! They were accepted, and, on the 25th of June, 1825, she appeared before a London audience as *Rosina*, and so pleased her audience that she was engaged for the rest of the season, six weeks, at a salary of £500. She afterward sang at the Manchester, York, and Liverpool festivals; but, notwithstanding some splendid manifestations of her talent, by one of which she provoked the jealous wrath of Velluti, the eminent *musico*, or male soprano, of his day (the last of his sexless sort who attained distinction), she had not yet reached a recognized position, and, indeed, her fortunes were so low that she was on the point of accepting an offer of marriage from a humble orchestral musician.

Fortunately, just at this time her visionary and eccentric father projected a scheme of Italian opera in America, and put it at once into execution. The rapidity of his movements are not less remarkable than his daring. On the 29th of November of the very year in which, in June, she had made at London her first appearance in “*Il Barbiere*,” she appeared in the same opera at the Park Theater, in New York. When we remember that, after the close of the London operatic season, about the 1st of August, the Garcias had made a concert tour through England, and that at that time the ocean was crossed only in sailing vessels by a few people who had prayers put up in churches for their safety, and when we consider, too, the painful and protracted negotiations which are now necessary to secure the presence of a company of second-rate artists, the sudden appearance of the Garcia company in New York approaches the marvelous.

The success of the strange art and of the stranger artists, especially that of Signorina Garcia, was, like the performances, something quite unknown before in America. Nor was it the ephemeral consequence of novelty and surprise. The performances went on twice a week until the end of August, 1826, nearly a year. To “*Il Barbiere*” were added “*La Cenerentola*,” “*Otello*,” “*Semiramide*,” and “*Don Giovanni*,”—each of them a new experience, an unimagined delight, to the audience—each of them a new occasion of triumph to the young prima-donna, “the

MADAME MALIBRAN GARCIA. (FROM THE DRAWING BY JOHN HAYTER. PUBLISHED BY J. DICKINSON, LONDON, 1829.)

Signorina" as she was fondly called by the musical people of the day.

Maria Garcia was the most accomplished vocalist, the most dramatic singer, in all respects the most gifted musical artist, of modern days; and she had such beauty of person and charm of manner that she became the most supreme of prima-donnas—a sort of women who from their first appearance have been accustomed to see the world at their feet. She was the idol of society in New York, and was hardly less admired and beloved by the general public. Such a creature had not been seen before for half a century, and was not to be seen again for quite as long. Her voice was a contralto, but it was a contralto which enabled her to sing with equal ease the music of "Sémiramide" and of "Arsace." She had at ordinary command three full octaves, from this

note  to this ; and in private

she could surpass even this wonderful compass. As an actress she was made by

nature equally mistress of the grand, the pathetic, and the gay. Her face was, perhaps, not in all points regularly beautiful; but it was full of beauties each eminent in its kind, and had an ever-enduring, always-varying charm. Her dark, bright eyes fascinated all on whom their brilliant glances fell, and by her smile, which revealed brilliant and beautifully shaped teeth, not only all men, but even all women, seem to have been carried captive. Her figure was so exquisitely beautiful in all points that it was somewhat extravagantly said that she might be studied for an improvement upon the Venus de' Medici. The poise of her daintily shaped head upon her shoulders was an appeal to admiration, and her graceful carriage would have been dignified had she been a little taller. To the power of varied expression in her face there seems to have been no limit; but that most natural to it, and most commonly seen upon it, was a fascinating radiation of happiness from her own soul to all within her influence. Nor did her manner and her look belie her nature. According to all evidence, she was as good as she was beautiful and fas-

MARIA F. MALIBRAN. (FROM THE PORTRAIT BY CHALON, R. A.)

cinating—"as good as an angel." There is no record of any other such supremacy, personal, vocal, and dramatic, except in the great Gabrielle, who turned the head and won the heart of all Europe three-quarters of a century before her; and Gabrielle was far below her morally, and in all that makes woman most admirable and lovable.

It is greatly noteworthy that the career of such a woman as this should have been really begun and shaped in New York, the New York of 1825. But so it was. In New York she received the first recognition of her talents; in New York she first felt the glow of triumph, and was conscious of the possession of sustained power. In New York, too, she passed from maidenhood to wifehood, and acquired the name by which, notwith-

standing a second marriage, she was afterward always known and will be known while the world reads the history of music. She had not been long upon the stage of the Park Theater when M. François Eugène Malibran, a French merchant of New York, proposed marriage to her. He was fifty years of age, she seventeen; but she was willing; and after a brief opposition on the part of her father she became Madame Malibran in March, 1826—only four months after her appearance here, and in the midst of her operatic and social success. Garcia's opposition to this marriage was purely selfish; as its sad event proved. His concern was not for his daughter's happiness, but for her salary—the gain which he expected to reap as her father and business manager from her brilliant future, to which he was looking. As to her, she may have sought an escape from his selfishness, tyranny, and brutality—for he was selfish, tyrannical, and brutal beyond measure and past sufferance; but she also, as the experience of the world has shown, may have been fond of this man who was old enough to be her father. It is necessary to look for no other motive on his part than that of passionate love for a girl so beautiful, so gifted, so charming, and so good. But, sad to relate, it does seem as if he had a base and selfish motive in his proposal, and that, with a Frenchman's eye to the profit of marriage, he sought a wife whose income, so long as she had health, could not but be very large. For she had been a wife but a few months when her husband, who had overcome her father's opposition by promising him a present of a hundred thousand francs for the loss of his daughter's services, was bankrupt and (as the

PARK THEATER AND PART OF PARK ROW, 1831. (FROM AN OLD PRINT.)

old laws on such matters were then in force in New York) a prisoner for debt. It is hardly probable that a merchant of his sort was ignorant of the calamity that was impending over him; and his subsequent conduct confirms this natural conclusion. The young wife gave up for the benefit of his creditors all claims which she had upon his property—an act which added greatly to her popularity. Her father abandoned her in his disappointment and rage, and, going to Mexico with his family, left her alone and penniless, with an imprisoned and disgraced husband, among strangers. She, not losing courage, renewed the study of English, and of English song, which she had begun in England (for, with the departure of her father, performance of Italian

first half of the nineteenth century, as singing the soprano parts of psalm tunes and chants in a little church in a small town then less known to the people of London and Paris and Vienna than Jeddo is now. Grace Church may well be pardoned for pride in a musical service upon the early years of which fell such a crown of glory, and which has since then been guided by taste not always unworthy of such a beginning.

Malibran, however, soon wearied of this life; and breaking loose from her selfishly dependent husband, she went to Paris, where she arrived in 1827. Thus in a short time she had crossed the Atlantic twice,—then no trifling matter, of course,—had achieved the success of a great prima-donna, had become

NEW YORK THEATER, AFTERWARD BOWERY, ERECTED 1826. (FROM THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

opera was of course at an end); and before long she appeared at the Bowery Theater, then newly built and called "The New York." Her first appearance there was in "The Devil's Bridge"; her next in "Love in a Village." Success again crowned her efforts; her performances were very profitable to the manager; and from every night's receipts a certain sum was regularly sent to M. Malibran. She also sang in the choir of Grace Church, then at the corner of Broadway and Rector street. It is rather startling to think of the greatest prima-donna,—not only of her day but of modern times—the most fascinating woman upon the stage in the

a wife, had seen her husband ruined and imprisoned, had been deserted by her father and her family, and, left alone in a strange country, had mastered a new domain of her art and a new language, had won a new popularity, and had filled the humble position of a choir-singer;—and she was a girl not yet eighteen years old. Thenceforward her life belongs to the history of music in Europe; but her career and her success as an artist, and her joys and sorrows as a woman, began in New York. She awoke an enthusiasm and an admiration, mingled with high regard, which surpassed all the attainments in this respect of her predecessors, so far as we can

learn, and of all her successors, as we know. Before her first were wreaths of flowers and coronals cast upon the stage. It was at Paris when she performed "Tancredi" at the *Théâtre Favart*, for the benefit of Sontag, her rival; but when this first homage from Flora to Euterpe fell before her feet, we may be sure that it brought up to her never-forgetting and tenderly grateful soul the memory of the New York experience that first gave her assurance that she was a great dramatic singer.

The incidents of Malibran's later life are so well known to all who take an interest in musical affairs, that any particular recounting of them would be superfluous here, even irrespective of the limits and the purpose of these articles. There is one story of her, however, which does not appear in her memoirs, and I believe has never been in print. When she was singing at Covent Garden Theater, in London, the tenor was Templeton, a Scotchman with a beautiful voice and fair vocalization; but dull, without style or expression, and a mere split-stick upon the stage. All at once, Malibran declared she would not sing with Templeton. The manager, supposing that she objected to him as an artist, and knowing her kindness and good-nature, asked her the reason of her decision. After a little hesitation she replied, "Last evening Mr. Templeton was going to kiss me." The manager, who knew Mr. Templeton as well as he knew Malibran, sent for the tenor immediately, and in the presence of the haughtily shrinking prima-donna, told him of her accusation. "Modum Molly Brawn," was the stolid Scotchman's reply,—*"Modum Molly Brawn, I wadna kuss ye on ony accoont."* "Molly Brawn," who was then pestered by a gilded throng made up of half the male butterflies in London, appreciated the situation instantly, broke into a peal of laughter, and matters were restored to their former condition.

Malibran worked all her wonders and achieved all her triumphs in the little space of ten years. Within three years from the time when she soared into happiness upon the applauses of the Park Theater, she had conquered the whole musical world of Europe, where she queened it gently for a short, glorious reign of six years. Her only rival was Henrietta Sontag—Sontag, to whom we shall strangely have to give a place in these sketches at a very much later date. They had their partisans; they were both great singers; both were beautiful; they were jealous; they were publicly compared; their several successes were made thorns in each other's sides. Malibran fully acknowledged the talent of her rival. She would sometimes weep and say, "Why does she sing so divinely?" At last

the two were reconciled. It was at a concert at the house of the Countess Merlin. There was a little scheme among the musical amateurs to bring them together; and in the course of the evening it was proposed to them to sing the great duo from "Tancredi." There was in both a brief shrinking—natural and inevitable—from the struggle; but soon they consented, and approached the piano-forte, excited not only by their own emotions, but by the murmurs and applause of the whole company. The performance more than fulfilled all the high expectations it had awakened, and caused so profound a sensation of delight and admiration that, at the end of the duet, they looked a moment in each other's eyes, then silently clasped hands and kissed—a sight to see. Thereafter they were friendly rivals; but Malibran, because of her superior dramatic power and greater versatility (a trait of her genius which was most remarkable), attained an unquestioned superiority, which she maintained while she lived. When she was at the fullness of her power, and at the highest pinnacle of her art, she was thrown from her horse, and received injuries from which she never recovered, and she died in 1836, at the youthful age of twenty-nine—being, in the shortness of her life and the suddenness of her rise to undisputed eminence, as singular among prima-donnas as she was in the splendor of her vocal and mental gifts, and in the charm of her person and the beauty of her character.

The point in her history which is of peculiar interest to us at present is that she received the first recognition of her eminence in New York. As we have seen, when she came to this country she had no reputation in Europe, although she had been heard there in the principal parts of operas, and as a solo singer at the great festivals in England. But her audiences, bound up in their admiration of the great prima-donnas of the day, chiefly Pasta and Fodor, failed to appreciate her at her real value. They listened and looked, and were much pleased, and they mildly approved; but they did not perceive the exquisite quality of her art; they did not feel the magnetism of her gifts and graces. In New York, partly because of the novelty of this form of musical art, partly because of the absence of the overshadowing fame of prima-donnas of long-established eminence, but partly also, we must believe, because of a quick sensitiveness of apprehension which is one of the few distinctive traits of the English race in America, she was at once recognized as a great artist and a noteworthy personage. It need hardly be said that musical criticism in America was then less searching

because less informed and less experienced than it is at present. It was not until a score of years had passed that the combination of musical organization, technical knowledge, and literary skill required for that criticism appears in the journalism or in the periodical literature of America. But if Malibran was not criticised here with the musical expert's knowledge of vocalization and of the art (or, as it is sometimes vainly called, the science) of music, her art as a whole was fully appreciated, and her personal power as an actress was acknowledged with a submissive delight. Nor was her vocal eminence without such a degree of intelligent and competent recognition as might be looked for at that time. It is interesting to see the impression which this enchanting artist and woman made upon a public in which there were comparatively very few who had ever heard a complete opera (for in "Der Freischütz," the only opera which had then been performed here, the dialogue was spoken); I therefore quote here extracts from the first brief article written in America on Italian opera. It is from the "Evening Post" of the 30th November, 1825:

"An assemblage of ladies so fashionable, so numerous, and so elegantly dressed was probably never before witnessed in our theatre. † * * * In what language shall we speak of an entertainment so novel in this country, but which has so long ranked as the most elegant and refined among the amusements of the higher classes of the Old World! All have obtained a general idea of the opera from report. But report can give but a faint idea of it. Until it is seen, it will never be believed that a play can be conducted in recitative or singing, and yet be nearly as natural as the ordinary drama. We were last night surprised, delighted, enchanted; and such were the feelings of all who witnessed the performance * * *. The daughter, Signorina Garcia, seems to us a being of new creation, a 'cunning pattern of excelling nature,' equally surprising us by the melody and tones of her voice, and by the propriety and grace of her acting."

But remark upon the new entertainment and upon the artists by whom it was presented was not confined to such brief phrases of glowing generality. The same journal copies from another publication an article on the third performance of "Il Barbiere" which fills one and a half of its ample columns, the purport and quality of which may be gathered from the following passages, which give the critic's impressions of the first Italian prima-donna heard in America:

"But how, or in what terms, shall we speak of Maria Garcia? How can our feeble pen portray the loveliness of this admirable creature's face and figure, and give to our distant readers any conception of the wildering wonders of her almost unequalled voice!

Compass, sweetness, taste, truth, tenderness, flexibility, rapidity, and force do not make up half the sum of her vocal powers; and her voice is only one of the rare qualities with which nature has endowed her. She possesses in as high a degree as any actress we remember to have seen that exquisite perception of propriety in action, that delicate appreciation and graceful execution of the duties of her part, which constitute requisites so indispensable in the practice of her difficult profession. * * * Her embellishments are sparingly introduced, and never when they are not wanted. On such occasions, however, as call for the exhibition of her skill, she pours forth a rich stream of overflowing and almost overpowering melody, the more surprising as it is evidently the mere effect of a relaxation of the restraint which her good taste has imposed upon her powers of execution. Her *shake* is good; her *appoggiaturas* beautiful; and her roulades, whenever introduced, are thrown off with rapidity and ease."

This criticism, indeed, is not very exact nor very searching. We may not unjustly suspect that the writer's notion of the *appoggiaturas* which he pronounced so beautiful was rather vague; and his remark upon the "delicate appreciation and graceful execution of the duties of her part which constitute requisites so indispensable in the practice of her difficult profession," is of that confused, unmeaning sort which comes from feeble and confused thinking, and the groping effort to say something fine and critical without anything in mind that needs to be said. But praises not only less indiscriminate but equally meaningless have been recently lavished in high journalistic quarters upon the inferior successors of Malibran. Nor was this sort of comment upon musical performances peculiar then to New York. An examination of the London newspapers of that day discovers that the criticism there was much on the same level—little if any higher. It is only within the last thirty-five years that true æsthetic criticism of art has been known in the journalism even of England. And, moreover, it should be remarked that the high quality of Signorina Garcia's style,—its largeness, purity, and simplicity,—was recognized by all the New York writers on music of that day, and by the public, and was contrasted, to her great advantage, with the more florid and less chastened style of her father. And yet again, the writer quoted (who manifestly had heard opera in Europe) distinctly recognizes in another passage the supremacy of Maria Garcia's genius, and in plain terms pronounces her "the future rival of Pasta and Fodor." This she proved to be, not after years of effort and improvement, but immediately on her return to Europe, and not only their rival but their superior. During the few years that she lived and sang after her twelve-month's sojourn in America, the eulogies of her European critics and the

MRS. AUSTIN. FROM A LITHOGRAPH AFTER THE PAINTING BY H. F. BRIGGS, R. A.
(FROM THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

ecstasies of her European audiences were only magnified echoes and prolonged repetitions of the praises she received and the delight she gave during her year in New York.

Nor did New-Yorkers at this time fail to offer encouragement to other musical artists, or to enjoy other operatic music and Italian singing. Signora Bartolini, an artist of fair European repute, was engaged at the Chatham Garden Theater,—a place in Chatham street, not far from the City Hall, and something like the Niblo's Garden of after years,—where she sang operatic airs between the two or three plays which at that time almost always made up an evening's theatrical entertainment.

Italian opera, however, was soon followed by English opera, and the beautiful Spanish-Hebrew prima-donna by an English vocalist very unlike her in person and in style, and vastly her inferior as an artist, yet charming and almost as beautiful. This was Mrs. Austin, who, two years after the departure of

Malibran, came before the New York public, and also at the Park Theater. Mrs. Austin had a mezzo-soprano voice of delicious quality, and she sang in the best style of the Anglo-Italian school of her day. She was very beautiful, in what is regarded as the typical Anglo-Saxon style of beauty—"divinely fair," with blue eyes softly bright, golden brown hair, and a well-rounded figure. She was very much admired as *Ariel*. The operas in which she appeared were chiefly Arne's "Artaxerxes," Weber's "Oberon," "The Marriage of Figaro," "Cinderella," "Tancredi," and "Dido," with Rossini's music adapted by Mr. Charles Horn, an English tenor and musician who was prominent in New York's music during the second quarter of the century. But it would be tedious and useless to undertake to recount all the operas in which Mrs. Austin appeared. She remained in New York several years, very much admired by all lovers of music and by all attendants at the theater, because of her beauty and her pleasing man-

MASTER BURKE IN CHARACTER. (FROM COLLECTION OF THOMAS J. MCKEE, ESQ.)

ners. She appeared not only in opera but in singing parts in plays. It would seem that she had little dramatic ability, either as a singer or as an actress; but for five years she was the most prominent musical person in New York and the surrounding country. At first, however, she was neglected, she having come before the American public in a neighboring city. For already had the public of New York arrogated to themselves the exclusive right of deciding upon the merits of artists of any pretensions who visited the country professionally. And it is true that if they received the approbation of New York, it was a favorable introduction to the public of other towns. Not so, however, with those who chose Philadelphia or Boston as the scene of their *début*. The selection was in itself regarded by the Manhattanese as a tacit acknowledgment of inferiority, or as a slight

to their pretensions as arbiters; and in such cases they were slow at bestowing their approval, however well it might be deserved.

Mrs. Austin owed her success in New York hardly more to her voice and her beauty than to the efforts of Mr. Berkeley, a member of a noble English family, who accompanied her, and managed all her affairs with an ardent devotion far beyond that of an ordinary man of business. Mr. Berkeley wrote quite well, and was a musical critic of fair abilities for his day. The constant support which his beautiful charge received from his pen, in the New York papers, not only gained for her before long the recognition which she deserved, yet might otherwise have been without, but did much to educate the musical taste of the New York public, and to prepare the way for a higher kind of musical criticism in New York journals.

MONTRESSOR. (FROM A WATER-COLOR DRAWING IN COLLECTION OF THOMAS J. MCKEE, ESQ.)

Notwithstanding her attractive person, her sweet voice, and the efforts of her champion, Mrs. Austin had a rival in popular favor, and one who, as an artist, was her superior. Madame Feron had attained a very considerable reputation in Europe. She was even said by Oxberry, a well-known London critic of the day, to be second to no English singer, and inferior to no Italian but Pasta—an opinion, by the way, strongly illustrative of Malibran's lack of European reputation at that time. Madame Feron made her first appearance at the Park Theater, in November, 1828, as *Floretta*. She produced a strong impression, and had an unqualified success. Her voice was a soprano, of fine quality and very considerable power. As a vocalist she stood, if not in the second rank (the first including only such rare artists as Pasta and Malibran), at least in the third. Her style united boldness, flexibility, and finish; and she was not without a very considerable dramatic power. Those who attended operatic performances for the sake of music, pure and simple, preferred her to Mrs. Austin, and with reason. But Mrs. Austin possessed rare beauty; Madame Feron escaped homeliness only by a certain intelligence and character in her face. She was dark, almost swarthy, and without the grace of person and charm of manner that won Mrs. Austin half her triumphs. Opera is not a mere musical entertainment; and before long Mrs.

Austin's popularity quite overtopped that of her more accomplished rival. Madame Feron appeared in 1829, at the Bowery ("New York") Theater, in "Il Trionfo della Musica," with Charles Horn, Angirisani, the bass of the former Garcia troupe, and a Madame Brichita, a contralto who was here for some years, and who attained a very considerable degree of popular favor. Madame Feron, after long absence and much wandering, returned to New York, and made her last appearance at the Park Theater, in 1833, as *Cinderella*; the *Baron Pompolino* of the occasion being the celebrated "Master Burke," who, as a boy, astonished the world by his histrionic and musical abilities, and who, in his maturer years, known as Mr. Joseph Burke, was a much admired violinist and an esteemed member of the musical profession.

Before this re-appearance of Madame Feron, however, a French opera company took brief possession of the boards of the Park Theater, in 1830. Their merit was not great, nor did the company contain any artist whose name deserves record here. It is worth while to remark that their performances were not left without severe and discreet criticism in the New York journals of the day. They, however, enabled New York people to hear operas like Boieldieu's "Jean de Paris" and Auber's "Fiancée" in their original form. After them, New York had Mrs. Austin and Madame Feron again, in English opera—"John of

L. FORNASARI. (FROM COLLECTION OF THOMAS J. MCKEE, ESQ.)

Paris," "Artaxerxes," "The White Lady," "The Marriage of Figaro," and "Cinderella"—the last of which had a long run (forty-five nights), which was brought to an end by the illness of Mrs. Austin, who soon disappears with her ardent business manager and eulogizing critic, and is heard of no more.

And now there comes a great change over the fortunes of the lyric drama in New York. Suddenly brought forward as a surprise by Garcia, known afterward only in a kind of hybrid form (as it was most commonly in England), and taking its chance, hap-hazard, on the boards of the ordinary theater, it was now to be presented with due dignity and consideration in its individual and self-contained proportions. New York was to have "an Italian opera."

The uninformed New-Yorker of middle age who should visit the corner of Varick and Charlton streets, which is about half a mile below Fourteenth street and about a quarter of a mile from the Hudson River, would hardly suspect that at that spot his father, if he were a music-lover and a theater-

goer, made his first acquaintance with Italian opera in a complete and well-appointed form. But so it was. There stood what for some years was known as the Richmond Hill Theater. Richmond Hill was Aaron Burr's villa home. After his ruin it passed through many vicissitudes; but at last, during his life, it became a sort of suburban place of entertainment like Vauxhall, and was known as Richmond Hill Garden. One of its attractions was a small theater, which was not frequented by ladies who were fastidious as to their public associations. This little theater during Burr's lifetime became, in 1832, the stage of the first complete Italian opera company known in musical annals as pertaining peculiarly to New York.*

* Burr lived until 1836. I remember that as I was walking one day, in my early boyhood, with my father in Maiden Lane, he pointed out to me a little, shambling old man, with a rumpled white cravat, hair whiter than his cravat, and a rusty black coat—a very forlorn and doleful-looking creature. "When you are older," my father said, "the time will come when you will remember that you have seen that man: that is Aaron Burr."

It was on the 6th of October, 1832, that the Montessor company appeared there for the first time, in Rossini's opera, "La Cenerentola." Montessor, who was the first tenor as well as the manager of the company, had a voice of agreeable quality, without much power, a tolerably good style of vocalization, and an easy, gentleman-like carriage. He became a favorite. The prima-donna, Signorina Albina Stella, although she was a very good singer, failed to produce any impression. But, on the 17th of October, musical New York had its first sensation since the apparition of Maria Garcia. On that night Signorina Pedrotti came before it as *Elisa* in Mercadante's opera, "Elisa e Claudio." Not much had been said of her, for she had sung only in Lisbon and in Bologna, and had little reputation. But she took musical New York off its

eye upon him immediately. The street was almost deserted, and I saw him as if he were posing before me. He was very tall; his head looked like that of a youthful Jove;—dark hair in flaky curls; an open, blazing eye; a nose just heroically curved; lips strong, yet beautifully bowed, sweet and persuasive; and, withal, a large and easy grace of manner that belongs only to men from Mediterranean shores. He was dressed in a complete suit of light tawny pongee silk, and wore on his superb head an undressed Panama hat much of the same color. I had never seen such a man before; and when I got home I said to an old lady who had talked to me about musical matters, "I have seen Fornasari." "Nonsense, my boy," was the reply; "Fornasari went to Europe years ago." But I persisted in my belief that there could not be two

RICHMOND HILL HOUSE, OR THEATER. (FROM THE COLLECTION OF GEORGE P. ELDER, ESQ.)

feet again. She had a fine mezzo-soprano voice, of sympathetic quality; and, although she was far from being a perfectly finished vocalist, she had an impressive dramatic style, and a presence and a manner that enabled her to take possession of the stage. She was a handsome woman, tall, nobly formed, with brilliant eyes, and a face full of expression. She carried the town by storm.

Hardly less successful was the primo-basso of the company, Signor Fornasari, who was afterward to achieve European distinction. Fornasari had a noble voice, the most attractive Italian manner, and was long spoken of by New York women as one of the handsomest men that ever lived—not without reason, as I know. For, years afterward, as I was walking down Broadway one summer afternoon, I saw a man approaching me whose appearance was so striking that it fixed my

such men in the world at once; and it proved that I was right. The basso was passing through New York on his way from Cuba or Mexico.

With this company came some musicians of distinguished talent, whose after influence upon the musical taste and culture of New York was important. Chief among them were Baglioli, the musical director, Rapetti, first violin and leader of the orchestral band, and Casolani, contra-bassist. Baglioli became afterward a very successful singing-master in New York. Rapetti was a very accomplished violinist of the best Italian school, and for many years he ably led all the principal operatic performances in New York, and was a favorite instrumental performer at concerts of the best class. Casolani was much admired. Before his appearance no one in America ever thought of playing the double-bass except as

a support and emphasis for the fundamental harmony, nor of handling its huge strings without a glove. He played it almost as if it were a violoncello, and with a small white hand, from the fine wrist of which he turned back his wrist-bands, with the double purpose of convenience and display. He was a notably handsome man; and for the first time the double-bass became a favorite instrument with ladies. His reign lasted many years. He and Fornasari had, doubtless, no small part in effecting the change which was recorded by a journalist of the day when he said that the Montessoro company "has taught our belles the road to Richmond Hill."

But, although society did astonish the remote purlieus of Richmond Hill by its unwonted presence, and although the Montessoro company was in great favor with the New York public, its performances soon came to a ruinous end. Mismanagement and lack of adequate financial support brought it quickly to the same grand disastrous *finale* to which all Italian operatic enterprises were, and are, almost sure to come. As we follow the annals of music in New York we shall have to record failure after failure for Italian opera, and, on the other hand, frequent financial success for English. The reason of this is not any lack of liking for the performances of the Italian artists, nor the fact that their language is not understood. There has never been any difficulty in finding audiences for Italian opera in New York; the difficulty has been in finding money. Italian opera is by far the most expensive form of public entertainment. Italian singers and Italian instrumentalists must, notwithstanding the poverty of their country, receive much higher pay than English; and, besides, there must always be more of them for the same work. The expenses of a moderately well-appointed Italian opera company are quite twice as much as those of an English company of corresponding grade. The first operatic venture in New York, that of Garcia, was successful in every way. It was so profitable that, as we have seen, the "season" was prolonged to nearly a year without intermission; and it was brought to an end only by the imprisonment of the prima-donna's husband, and the wrathful disappearance of the manager and first tenor, her father. Not improbably, too, these first performances of Italian opera in New York were, in all the most important respects, the most admirable that have ever been heard there. For there can hardly be a doubt that three such artists as Malibran, Garcia, and Angrisani have never again been heard together on the American stage. But the performances of this company were deplora-

bly incomplete. The principal singers were of the very first quality; but the minor parts, the chorus, and the band were merely such as served the ordinary needs of a provincial theater, or as could be hastily procured for the occasion. They received little and they deserved less. Their performances were sometimes of so dreadful a nature that the irascible and sensitive Garcia was driven mad. One night the noble *finale* to the first act of "Don Giovanni" was so mangled by them that he, who was the *Don*, broke furiously away from his part, and rushing to the foot-lights, sword in hand, stopped the performance and made the band begin again.

The performances of the Montessoro company were soon followed by those of an English, or rather Scotch, prima-donna of very considerable reputation—Mrs. Wood, who appeared at the Park Theater in September, 1833. Mrs. Wood had attained distinction in London as Miss Paton. Her voice was powerful, of uncommon compass, and agreeable in quality, although not sympathetic. Her vocalization was moderately good; her style brilliant; and as a *bravura* singer she could hold her own even with all but the greatest of the Italian prima-donnas of her day. It

MISS PATON (AFTERWARD MRS. WOOD) AS MANDANE.

MISS PATON, OF THE THEATER ROYAL, COVENT GARDEN. AFTER THE ENGRAVING ON STEEL BY R. NEWTON FROM A MINIATURE BY W. J. NEWTON. (FROM COLLECTION OF THOMAS J. MCKEE, ESQ.)

was in finish of vocalization, in purity and simplicity of style in *cantabile* passages (supreme test of high vocal art), and in expression that she fell short of their excellence. She was a "fine woman," but not handsome—her mouth being so large that, when she opened it, it became cavernous, with stalactic teeth. But her eyes were bright, and her face when she was acting pleased her audiences. She had been married to Lord William Lenox, a squint-eyed scapegrace, who treated her so brutally that she obtained a divorce from him, and eagerly accepted as her second husband Joseph Wood, a tall, handsome pugilist, whose fine but quite uncultivated

tenor voice took him out of the prize-ring, and who won her heart by giving her noble husband a thrashing.

The Woods soon rose very high in popular favor, and their performances were profitable to themselves and the theaters of New York, Boston, and Philadelphia. They sang English versions of "Cinderella," "The Marriage of Figaro," and "The Barber of Seville." To look forward a little, they were afterward joined by Mr. Brough, an Irish bass singer, who had a rich, heavy voice, but little style or skill; and with him they brought out "La Sonnambula" in an English version, which was one of the greatest operatic successes

JOSEPH WOOD. (FROM AN INDIA-INK DRAWING IN POSSESSION OF THOMAS J. MCKEE, ESQ.)

ever attained in America. Bellini's feminine genius was just then winning the popular ear away from the brilliant melodies of Rossini. The prettiness and, at times, the pathos of his sweet but somewhat feeble strains took the general public captive; and the dramatic interest of the librettos which he was fortunate in obtaining gave a great and a new zest to the enjoyment of his operas. Of all this the Woods first had the advantage in America. "La Sonnambula" was the delight of all music-loving people, cultivated and uncultivated, from North to South, from East to—but then there was no West. Nothing but "Still so gently o'er me stealing," or "Hear me swear now," was heard from the throats of singers, the fingers of piano-forte thrummers, and even the lips of whistlers; for never before was there such a pathetic pucker. Mrs. Wood was worshiped almost as if she had been a beauty. I remember, being at boarding-school, in the lowest form, how a young gentleman in the highest, the cock and the swell of the school,—an awful being who had attained the mature age of perhaps seventeen years, and of whom it was said that he "could raise whiskers,"—returning from Philadelphia, after the long vacation, brought

with him a lithographic portrait of Mrs. Wood as *Amina*. This he had had framed and hung in the most conspicuous part of his room, with a crimson cushion before it, upon which he compelled all his visitors to kneel, at least once, on pain of exclusion from his apartment and his good graces. The Woods preserved their popularity here until, on occasion of a petty quarrel with a New York actress named Conduit, there was a cabal raised against them, the American eagle screamed defiance, and, amid a disgraceful disturbance, which attained almost the proportions of a riot, they were driven from the stage of the Park Theater in 1836.

Among the remarkable men in the New York to which the present corner of Varick and Charlton streets was an almost suburban spot, was Lorenzo Daponte, an Italian poet of the minor order, who had been exiled from Venice because of a satirical sonnet, had afterwards been Latin secretary to the Emperor Joseph II., and a friend of Mozart, and who was the author of the libretto of "Don Giovanni." He had finally come to New York, where he taught Italian, and where his charming manners and his noble beauty won him great social favor. He was much interested in the

LORENZO DAPONTE. (FROM COLLECTION OF THOMAS J. MCKEE, ESQ.)

Montessor opera venture, and, after its failure, did all in his power to promote the establishment of an Italian opera in New York by subscription. He succeeded; an association was formed, land purchased, and an opera-house built, which was opened to the public in the autumn of 1833, only eight years after the first performance of Italian opera here by the Garcias. The company, known as the Rivaflinoli troupe, took its name from the Cavaliere di Rivaflinoli, who was its projector and mismanager. The Cavaliere's intentions were largely beneficent; his promises and announcements were very imposing. Indeed, the affair, from beginning to end, was of an exquisiteness and a splendor such as has not since been seen in New York. The house, on the corner of Church and Leonard streets, was decorated by some of the most skillful Italian artists of the day, who were brought from Europe for this special purpose. The scenery was painted by similar hands. It was crowned by a dome, and lighted by a splendid chandelier. In this house first there was a parterre (since queerly called *parquette*), entered from the first balcony, so that ladies might sit in this part of the auditorium, which was not to be thought of when it was the old "pit." The seats in the parterre were mahogany chairs, upholstered in blue damask. In the first balcony the seats were mahogany sofas, upholstered in the same manner. The whole of the second balcony was occupied with pri-

vate boxes, which ran from the front quite back to the vestibule, and which were upholstered alternately in crimson and in blue silk, the fronts being decorated with crimson silk curtains, caught up by gilt cords and tassels. The price of these boxes was six thousand dollars each. The house was carpeted throughout. The audience was composed of the most exquisite people in the city—"exceeding soft society." A writer in the "Mirror" of the day (very plainly, I think, Willis himself—who, by the way, was as innocent of any intelligent knowledge of music as if he had no ears), remarking upon the audience, said: "As we looked at the pit at the opera, we drew a comparison between it and the House of Representatives, as we recollected to have seen it, and the result was unfavorable to the latter. In orderly demeanor and true gentlemanly breeding, the pit of the opera might be a pattern to our hat-crowned locomotive guardians of the public weal." Into the sacred precincts of the second tier the general public was not admitted. That was reserved for subscribers, each of whom owned a box—it might be for one night, or it might be for ever. It was told of a man who had suddenly risen to what was then great wealth, that, having taken a lady to the opera, he was met by the disappointing assurance that there were no seats to be had.

"What! nowhere?"

"Nowhere, sir; every seat in the house is taken, except, indeed, one of the private boxes that was not subscribed for."

"I'll have that."

"Impossible, sir! The boxes can only be occupied by subscribers and owners."

"What is the price of your box?"

"Six thousand dollars, sir."

"I'll take it."

And, drawing out his pocket-book, he filled up a check for six thousand dollars and escorted his lady to her seat, to the surprise and, indeed, to the consternation of the elegant circle which saw itself completed in this unexpected manner.

As to the singers who made their appearance under such splendid auspices, they were good, but not of a very high quality: Signora, or rather, as she was called, Madamigella, Fanti, soprano; Louisa Bordogni, mezzo-soprano; Madame Schneider-Maroncelli, contralto; Signor Fabj, tenor; De Rosa and Porto, bassos. In the orchestra were Boucher, an admirable violoncellist, who remained in New York as the principal performer on his charming instrument until his death, about fifteen years ago; Gambati, the first of those imposing *cornet-a-piston* players, who have since dominated our summer theaters and summer hotels; Cas-

lani, the handsome contra-bassist; and Cioffi, one of the greatest trombone-players that ever lived since the time when the sackbut and psaltery were heard on the plains of Dura.*

It was on Monday, the 18th of November, 1833, that the first performance of this company—the great social and musical event of the day—took place. The opera was “*La Gazza Ladra*”:—Fanti as *Ninetta*, Schneider-Maroncelli as *Pippo*, the tenor and bass parts distributed among the male members of the company aforesaid. It was a success socially, brilliant—quite overpowering, indeed; musically, moderate, and not in any way overpowering. The contralto had the best of it. She was a very pretty woman, with a lovely figure and a delicious voice. She was known and much esteemed as a teacher of music for many years afterward in New York. She was the wife of Piero Maroncelli, the friend and fellow-prisoner of Silvio Pellico, and her husband taught Italian and music in many of the old New York families. But of public singing, operatic or other, this company did little after its season was, with difficulty, worried through. It produced no very strong impression upon the American public, and, indeed, left no mark, in our musical experience, but that of its appearance and its extinction. Fanti had

that success which is called of esteem, because those to whom it is awarded are esteemed very little; Bordogni pleased by girlish beauty (she was but seventeen years old), and—well, that was about all. There was no merit in the company to equal it to that in which Montessor, and Pedrotti, and Fornasari appeared, or even to surpass the Woods, to say nothing of the Garcias and Angrisani; and so the writers in the journals plainly told the *Cavaliere de Rivafinoli*. There were sixty performances of the operas of the day—Rossini operas, and Bellini operas, and the operas of all time, including the first and last performances in America of that charming composition, “*Il Matrimoni Segreto*,” the greatest opera of the old Italian school. There were the usual benefit performances; and there was a benefit for Signor Daponte; and then the Rivafinoli opera troupe troops off, amid the wailing of disappointed prima-donnas, and the growling of bassos, and with an odor of explosion, and is no more heard of; and the splendid opera-house, with its dome and its chandelier, and its painted walls and carpeted floors, its damask-covered mahogany seats, and its exclusive row of private boxes awful in splendor—not to be invaded by common people except at the cost of six thousand dollars cash down, stands empty, gaping awhile, and is then put to base uses.

* The trombone is a modified form of the ancient sackbut.

ITALIAN OPERA-HOUSE, AFTERWARD NATIONAL THEATER. FROM A LITHOGRAPH AFTER A DRAWING BY R. BENGOUGH. (FROM COLLECTION OF GEORGE P. ELDER, ESQ.)

LEIGH HUNT.

[Photographed by Giulio Rossi, Milan, from a pencil sketch made in 1815 by Wageman at the request of Vincent Novello, when Leigh Hunt left prison after the libel on the Prince Regent.]

It is a peculiar point, in the gratification I feel on being requested to give further reminiscences of the poet whose friendship so much honored and charmed me, that the request comes from America,—a country that gave birth to his ancestors, and a country of whose regard for himself and his writings he was so affectionately proud. In the very last letters he ever wrote to us (quoted in our "Recollections of Writers," pages 267, 269, and 270), he confides to my beloved hus-

band and myself the keen delight he takes in America's sympathetic admiration for his "Works."

In his "Autobiography," Leigh Hunt gives a lively portrait sketch of his father, which foreshadows to me something of his own personal fascination, where he says: "My father took the degree of Master of Arts, both at Philadelphia and New York. When he spoke the farewell oration, on leaving college, two young ladies fell in love with him, one of

whom he afterward married. He was fair and handsome, with delicate features, a small aquiline nose, and blue eyes. To a graceful address he joined a remarkably fine voice, which he modulated with great effect. It was in reading the poets and other classics of England that he completed the conquest of my mother's heart. He used to spend the evenings in this manner with her and her family—a noble way of courtship; and my grandmother became so hearty in his cause that she succeeded in carrying it against her husband, who wished his daughter to marry a wealthy neighbor."

The only points in variance with the son's appearance are the "fair" complexion, the "aquiline" nose, and the "blue" eyes; for Leigh Hunt was dark-complexioned, with small, straight nose, and nearly black eyes. But the "handsome" face, the "delicate features," the "graceful address," and the "remarkably fine voice" were all there; together with the irresistible attraction that won him all women's hearts and most men's interest as soon as they had interchanged but a few words with him, and had seen him face to face. Even those who differed with him in professed opinions, and were strongly prejudiced against him on public and party grounds, had no sooner met him than they succumbed to the winning charm of the man himself. Then the force of Pope's couplet describing Belinda,

"If to her share some female errors fall,
Look on her face, and you'll forget 'em all,"

was livingly exemplified. None could withstand the grace, the bewitching look, tone, and cordial bearing that held the eyes, the ears, the thoughts captivated and spell-bound as he spoke. A few—a very few—men I have seen possessed this peculiar fascination of aspect in their approach and address to women. Elliston, the famous actor of gay gallants, had it in look and manner—a kind of "breathing earnestness" (as Leigh Hunt himself once called it) at once respectful and eager, a mingling of deference and ardor; with eyes that were full of expressive eloquence, smiling yet serious. But Elliston's was mere "aspect," while Leigh Hunt's was aspect confirmed by spontaneous speech, impulsive, effusive, appealing. Elliston's words were those of others, uttered with exquisite meaning and inflection of voice; while Leigh Hunt's words were his own, genial, poetically conceived and poetically turned, flowing out of the emotion of the moment, and poured forth with the musical intonation of immediate feeling. Then his first accost, his very way of shaking hands, were the perfection

of ability in setting a stranger at ease with him. The delightful little paper "On Shaking Hands," which he himself wrote in the "Indicator" for the 12th of July, 1820, shows how accurately he understood the subject; and his own method of giving that truly English salutation afforded a complete specimen of how it could be best accomplished. How restfully, how confidently, how warmly one's hand found itself within his! How gently, yet how sufficiently, it was clasped! How contentedly it lay folded there! I think of the last time mine felt one of his round it, his other holding my husband's in friendly grasp, the while he looked at us both and then gave me his farewell kiss, taking leave on our going to settle abroad. In reply to a letter I sent him telling him how the thought of that moment would go with us in proud remembrance to the end of our lives,—and confessing some romantic purposes of my youth, among which figured a project of taking a pilgrimage to Italy on foot, that I might lay at his an imagined fortune, had one come to me,—Leigh Hunt wrote us a letter interpenetrated with his kindest delicacy of feeling: so interpenetrated, indeed, that I should hardly venture, even now, to give it to the world, were it not that the world has grown more and more to appreciate the true beauty of his nature, and were it not that the very feeling itself does honor to himself and to him of whom he so affectionately speaks therein:

"To C. and M. C. C.

"HAMMERSMITH, Oct. 9th, at night, 1856.

"MY VERY DEAR FRIENDS:

"You will not suppose that I am going to expect any 'more last words' to such a letter as yours, and at such a moment. Most unreasonable would the expectation be during your hurry, and most unreasonable in itself at any time, precious as all and any such words must be to me ever. But you will as little wonder that I cannot help sending you a few more last words of my own, to thank you for such glorifications of my poor self with your loving hearts, and to add, that all which you could wish me, or ever could have wished me, to feel or think, relatively to yourselves, is with the exactest correspondence felt and thought, and has been so expressed or intimated, I think, as far as ever you warranted me in conceiving that I had a right to say it. It could not have been possible for either of you to admit me to any share of your confidence that would not have met with the like thorough understanding of sympathy. I recollect well, and ever gratefully, the 'pilgrimages' to Horsemonger Lane, but had no idea of the one that was

wished for to Italy; though the moment I hear of it, I recognize the future biographer of the girlhoods of Shakespeare's heroines. What an honor to me to have given occasion to such an impulse! and how worthy of one of the friends and gentlemen in Shakespeare not to have had it grudged me by him who knew the pilgrim afterward, and who gathered her fine idealizing heart into the realizing goodness of his own! Well may you both Shakespearianize as you do, and help in improving the community with the graces of his nature and of your own. Little, however, have I felt inclined to smile even 'my tenderest smiles' at such enthusiasm. I retain too much serious faith in it,—I will not say 'even now,'—for I can imagine no 'now' at which I have ever feared to lose, or can lose it. I still believe in it, in spite of vicissitudes, calamities, calumnies; still love it; still act upon it; should feel, if I did not, that I had no longer any right to be loved by friends living, or to rejoin those who are dead; and therefore I was moved to tears of mingled admiration for others and pity for myself, to think what a world of love there had been in me,—*is* in me,—of a twentieth part of which few persons have had the slightest conception, even of those who fancied they had. (Far am I from blaming; I only lament.) Most kind, and considerate, and affectionate was the reception given to the parting kiss which my old lips ventured upon; and enhancing it was the allowance conceded by one who seems to possess the veritable privilege of growing younger with time. Even I—— But hold. The most grateful occasion, and the most Shakespearian good reasons, must not tempt me into words possibly misjudgeable by any chance eyes inferior to those of you two; and not knowing whether you may not have set off before this letter comes to Bayswater, I cannot be sure into whose hands it may fall. Think the kindest of me always, whatever it be.

"Your most obliged, grateful, and loving friend,
LEIGH HUNT.

"Mrs. Hunt is a great deal better, which puts me in good spirits."

Leigh Hunt's sensitive delicacy was one of his most marked characteristics, and one that peculiarly impressed itself on those who enjoyed personal communion with him. He was delicate as a woman in conduct, in words, in ways of thinking. I have heard him use paraphrase in speaking of things that the generality of men are accustomed to mention plainly, as a matter of course; and though he could—on occasion—use very

straightforward terms in treating a poetical subject warmly, or in reprobating a vice sternly, and employ very playful terms when treating a humorous subject wittily, I never heard him utter a coarse or a light word in the many times I have heard him converse with freedom among intimate friends. Airy elegance, sportive fancy, marked his lively talk; levity, never. But though Leigh Hunt was almost womanly in his scrupulous delicacy, he had not the very least touch of effeminacy in his composition. He was essentially manly,—of that fine type of manliness which includes the best gentleness and tenderness of womanly nature, blended with the highest moral fortitude of manhood. We know that the man who created *Imogen*, *Portia*, *Viola*, *Rosalind*, *Hamlet*, *Romeo*, *Troilus*, *Othello*, comprised this dual womanly and manly nature in his own; and we know that Nelson, who knew not what fear was, desired when dying to have a kiss from the lips of his faithful lieutenant, Hardy. So with Leigh Hunt: he was sensitive as a woman, yet in every fiber—moral, intellectual, and physical—thoroughly a man. A notable instance of his extreme sensitiveness recurs to me that I witnessed once, when he was writhing under the attacks of a brother-writer, made upon him at the time his book entitled "Lord Byron and his Contemporaries" first appeared. The attack was acrimonious, ungenerous; and Leigh Hunt had just seen it when he called upon my father, and was smarting under the peculiar pain it gave him, for various reasons. The surprise and indignation to find a fellow-author attack him, the necessity he felt to resent it openly, the prevision of the probable consequences to both when he should express his resentment, the hatred of animosity, the shrinking from contention—all agitated him extremely. But he asked there and then for pen, ink, and paper, and made his first sketch of a stinging retort he intended immediately to publish. It was in sharp, brief, rhyming stanzas; and I remember begging for the rough copy, when he had made a clear one, before leaving the house. Also, before he left, he gave vent to some of the emotions that filled him at the thought of a possibility suggested by friends then present. They thought it very likely that the publication of this "stinging retort"—bitterly contemptuous as it was—might provoke a challenge from the writer of the "attack," and the subject of dueling was animatedly canvassed. Leigh Hunt confessed to his feeling extreme dread—nay, terror—at the thought of having to fight a duel; and proceeded to explain the source of this fear in almost the exact words he has put into the mouth of Sir Philip

Herne, in his spirited (so-called) novel of "Sir Ralph Esher." Sir Philip, owing to his friend the fear he felt of having to meet his injurer in the field, says: "He is a human being; and the idea of encountering a human face in hostility, with all its mysteries of life, and death, and suffering, is very dreadful to me. I am courageous enough in principle, and can do anything for it; but I am all fear in imagination—I may add, all sympathy." This "imagination" and this "sympathy" were at the root of much that struck the world as inconsistent and incomprehensibly wavering in Leigh Hunt's conduct at times; in the alterations he made in the various editions of some of his poems, for instance, and in the changes of opinion that he avowed at different epochs with regard to public men. He was so sensitively conscientious, and so swayed by imagination and sympathy respecting motives, characteristics, and possible causes, that he occasionally doubted his own previous conclusions, and felt it incumbent upon him to render justice by avowal and retraction and frank redress. His own candor and generosity on such occasions did not always meet with equal candor and generosity on the part of those who judged him, and he was often misunderstood and maligned where he ought to have been comprehended and appreciated. Since his death, indeed, the greater breadth and liberality of opinion that has grown in the world—and which breadth and liberality he himself was greatly instrumental in promoting—has permitted truer estimation of Leigh Hunt's character and sentiments. Even during the latter part of his life, men had come to understand him better; but, in the earlier portion, he was misjudged to a degree acutely felt by himself, and which can scarcely now be believed by men of the present day, when freedom of opinion and latitude of thought are more generally tolerated and more leniently treated. Into the characters of Sir Philip Herne and of Sir Ralph Esher (in the work above alluded to) Leigh Hunt has put several of his own peculiar qualities, embodying, as it were, in these two men respectively, the two sets of characteristics which were singularly united in himself. Sir Ralph Esher, all sprightly ease, vivacity, good temper, high spirits, facile disposition, social grace and accomplishment, represents the mercurial temperament and lively portion of Leigh Hunt's self; while the grave sweetness, the constancy, the sensitive conscience, the high principle, the noble heart and mind of Sir Philip Herne, portray the graver side of the author's individuality. It is a delightful book—in itself and as an autographic sketch—to

those who know, as I do by experience, how remarkably and clearly it depicts its writer; and to those who are now told this fact, it will become doubly and trebly interesting henceforth.

Some of Leigh Hunt's briefest notes contain concentrated and characteristic tokens of his blendedly serious and cheerful nature. The following few lines, written to my father, who had just sustained the loss of a favorite child, Sydney, give evidence of this:

"July —, 1820.

"This comes from Leigh Hunt, merely to say that he often thinks of his friend Vincent Novello, and to hope that, when he has vented his first natural feelings on the death of one so dear to him, he will think of others to whom he himself is dear, and let them see him as soon again and as cheerful again as possible."

And in another letter, dated "Florence, 11th June, 1825," there is a passage affording similar evidence:

"Remember me to him [C. C. C.], and all friends. Is it really possible that I may see you all again before long, or has the question for the present been already settled against me? I shall exert myself to do my best, either way. Necessity, besides her striving daughter Invention, has a strong one, not quite so lively, yclept Patience. I know a little of the one, and am an old friend of the other."

In another, dated "3d January, 1831," with a parenthesis under the date ("many happy New Years to all"), and making pathetic allusion to pressure of work, as well as to pressure of other kind, he concludes thus, with mingled earnestness and playfulness:

"God bless you, my dear Clarke. I will come and see you all very shortly, and shall be highly gratified to know of the work you mention. What is it, pray? I long to be peeping, since you are so pleased yourself.

"Closing my note at this height in the page, seems as if I had gone to the top of the house to take leave of you, instead of the street door. Ever cordially yours,

"L. H."

The "work" above alluded to was "Tales from Chaucer," first published in 1833. And here is a characteristic passage from yet another letter, dated "21st August, 1823, Albaro":

"How comfortable you are all going to be in your new house! Make room for me some

night among you, and imagine I am there, and drink to me. If you would do so, and send me, amongst you, the observations you all addressed to me, it would delight me to answer. That ox's foot! It is a horrible thing, and I hope you have had the last of it. I once had a real horse tread on my toes—a horrible, blind, deaf, and unfeeling tread; I seem to feel it now; but the metaphorical tread is worse than the literal."

It may be needful to explain that "trodden upon by the ox's foot" is an old English metaphorical phrase for depression of spirits, dejection, melancholy; and Johnson, in his Dictionary, quotes from Camden: "The black ox hath not trod on his foot."

In the same year as the one dating the last-given excerpt, my father received a memorable letter from Leigh Hunt, which was written to be printed in "The Liberal," and which afforded a curious specimen of the conditions then to be observed in sending a letter by the post. It was written on an immense sheet of paper, as it was legally requisite that a letter should be all contained in one single sheet, and yet the matter of this one demanded considerable space. So cramped was the legitimate room allowed, and so little was left at the close, that Leigh Hunt had to scribble in minutest characters and almost outside, after filling the folds-down; and he thus concludes: "God bless you and all friends. If I write another word, my illegitimate signature will stare the post-man in the face." Modern correspondents, rejoicing in the blessings inaugurated by Rowland Hill, and who now can send a letter across the globe for twopence-halfpenny, will learn with a smile of surprise that the postage of this letter amounted to three shillings and tenpence! There are two passages in this letter that I shall quote, because they discuss points concerning Genoa that are singularly borne out by my own experience in recent years. The first, upon music, has special interest, as being addressed to a musician; the second (upon the spirit of contempt for truth and upright dealing which, alas, is a marked blemish in Italian character) is now noted, in the sincere hope that it may strike with desire to effect a self-cure those Italians who may chance to read the extract in question:

"To Vincent Novello.

"March, 1823.

"MY DEAR N.:

"I write you, as you request, 'a very long letter, on the largest-sized paper and in the smallest handwriting.' You call the request a modest one, and I cannot but allow it has

some pretensions to bashfulness, not only inasmuch as it comes in the corner of another, but because it is—let me see—just twenty lines long. However, you see what I think your twenty lines worth; and you are so accustomed, in the matter of intercourse, to have the part of obliger to yourself that it would be indecent to haggle with you about the tare and tret of an epistle. If you send me forty lines, I suppose I must write you a quarto.

"You ask me to tell you a world of things about Italian composers, singers, etc. Alas! my dear N. I may truly say to you that, for music, you must 'look at home'—at least, as far as my own experience goes. Even the biographies which you speak of are, I fear, not to be found in any great quantity; but I will do my best to get them together. Both Pisa and Genoa have little pretensions either to music or books. We ought to be at Rome for one, and Milan for the other. Florence, perhaps, has a reasonable quantity of both, besides being rich in its galleries; but I will tell you one thing which, albeit you are of Italian origin, will mortify you to hear, namely, that Mozart is nothing in Italy, and Rossini everything. Nobody ever says anything of Mozart since 'Figaro' (tell it not in Gothland!) *was hissed at Florence*. His name appears to be suppressed by agreement, while Rossini is talked of, written of, copied, sung, hummed, whistled, and demi-semi-quavered from morning to night. If there is a portrait in a shop-window, it is Rossini's. If you hear a song in the street, it is Rossini's. If you go to a music-shop to have something copied,—'An air of Rossini's?' Meyer, I believe, is the only German who takes the turn with him at the Opera here; but Mozart, be assured, never. I believe they would shut their ears at a burst of his harmony, as your friends, the Chinese, did at Lord Macartney's band. I suspect, however, that there are more reasons than one for this extraordinary piece of intolerance, and not altogether so unhandsome as they appear at first sight. As to theatres, I need not tell you the dislike which singers have to compositions that afford them no excuse for running in their own quavers and cadences. They hate to be

'Married to immortal verse.'

They prefer a good, flimsy, dying sort of a 'do-me-no-harm, good man,' whom they can twist about and desert as they please; this is common to theatres everywhere. But in Italy, besides a natural prejudice in favor of their own composers, there has always been another, you know, against that richness of accompa-

niment with which the Germans follow up their vocal music; turning every air, as it were, into a triumphal procession. They think that if a melody is full of nature and passion, it should be oftener suffered to make out its own merits, and triumph by its own sufficing beauty: like Adam in the poem, when he walked forth to meet the angel,

‘— without more train
Accompanied, than with his own complete
Perfections.’

Or Eve afterwards, when she received him,

* Undecked, save with herself; more lovely fair
Than wood-nymph, or the fairest goddess feigned
Of three that in Mount Ida naked strove:
* * * * * No veil
She needed virtue-proof; no thought infirm
Altered her cheek.

“(What poetry is there! What sentiment! What delicacy! What words full of meaning!) You know what I think on this subject, when the composer is a truly great one, like Paesello: and I know what you think, too, when the air is one of his divinest, like ‘*Il mio ben*’ in the opera of ‘Nina.’ But Rossini is not Paesello? True. He gives us a delightful air now and then; but, in the hurry of his industry and his musical spirits, pours forth a torrent of commonplaces. His is not a flow of music.

‘Whose foam is amber, and their gravel gold.’

It is for the most part common water, quick in its course, and bringing down only grains of gold, however worth sifting. Nevertheless, he has animal spirits; he runs merrily; his stream is for the most part native; and the Italians are as willing to be made merry with ‘thin potations’ as with old hock: I meant to show you how it was they were prepared to undervalue Mozart; and I think I can now explain to you, in one word, how it is that they contrive to render themselves deaf to the rest of his merits, and to the inspiration which he himself drank at an Italian source. Mozart was a German. I do not mean simply that he was a German in music, but he was a German by birth. The Germans in Italy, the lords over Italian freedom and the Italian soil, trumpet his superiority over Italian composers; and however right they may be,—at all events with regard to modern ones,—this is enough to make the Italians hate him. It mortifies them the more because they know he is an exception to the general dullness of their conquerors; and not even the nonchalance of his own conduct toward kings and emperors (which was truly edify-

ing*) could reconcile them to the misery of preferring anything German to the best thing Italian.

“The Genoese are not a musical specimen of the Italians; but the national talent seems lurking everywhere you go. The most beggarly minstrel gets another to make out a harmony with him, and some sort of an instrument, if only a gourd with a string or two. Such, at least, appeared to me a strange-looking ‘wild-fowl’ of a fiddle, which a man was strumming the other day,—or rather a gourd stuck upon a long fiddle of deal. Perhaps you know of such an instrument. I think I have seen something like it in pictures. They all sing out their words distinctly, some accompanying themselves all the while in the guitar style, others putting in a symphony now and then, even if it be nothing better than two notes always the same. There is one blind beggar who seems an enthusiast for Rossini. Imagine a sturdy-looking fellow in rags, laying his hot face against his fiddle, rolling his blind eyeballs against the sunshine, and vociferating, with all the true open mouth and syllabical particularity of the Italians, a part of one of the duets of that lively master. His companion, having his eyesight and being, therefore, not so vivacious, sings his part with sedate vigor; though even when the former is singing a solo, I have heard him throw in some unisons at intervals, as if his help were equally wanting to the blind man, vocal as well as corporeal.”

* Leigh Hunt here subjoined the following note:

“Even when this great musician was a child he felt the superiority of genius over rank. If his flatterers, however high their station, exhibited no real feeling for the art, he played nothing but trifling pieces for their amusement, and was insensible even to their flattery. When called upon to display the astonishing prematurity of his powers before the Emperor Francis I., he said to His Majesty, with a simplicity that must have been somewhat frightful at court:

“‘Is not Mr. Wagenseil here? We must send for him; *he understands the thing.*’

“The Emperor sent for Wagenseil, who took His Majesty’s place by the side of the performer.

“‘Sir,’ said Mozart, ‘I am going to play one of your *concertos*; you must turn over the leaves for me.’

“The Emperor Joseph II. said to him once, speaking of his opera ‘*L’enlèvement du Sérail*’:

“‘My dear Mozart, this is too fine for my ears; there are too many notes.’

“‘I beg your Majesty’s pardon,’ replied Mozart: ‘there are just as many as are necessary.’

“The example of Mozart might be instructive to certain German men of talent, who do not blush to fall in with all the nonsense of the allied sovereigns. How delightful would it be, for instance, if Mr. Gentz, when about to write some legislation under his master’s eye, were to say, ‘Is Mr. Bentham here? We must send for him; he understands the thing.’ Or the Emperor should say to him, ‘My dear Gentz, this is too fine for my notions; there are too many popular provisions,’—for Mr. Gentz to answer, ‘I beg your Majesty’s pardon: there are just as many as necessary.’”

With regard to the earlier portion of the above extract, I myself heard Mozart's operatic masterpiece, "Don Giovanni," performed at the Carlo Felice theater of Genoa in 1867, by first-rate artists; yet it was received with a coldness amounting to dislike, and was only tolerated for a very few nights.

The second extract is the following:

"From what I have seen myself (and I would not mention it if it had not been corroborated by others who have resided in Italy several years), there is a prevailing contempt of truth in this country that would astonish even an oppressed Irishman. I have heard instances of falsehood, not only among money-getters, but among 'ladies and gentlemen' in ordinary, so extreme, so childish, and apparently so unconscious of wrong, that the very excess of it, however shocking in one respect, relieved one's feelings in another, and showed how much might be done by proper institutions to exalt the character of a people naturally so ingenuous and so ductile. The great Italian virtues, under their present governments, are being catholic—not being 'taken in' by others and taking in everybody else. Persons employed to do the least or the greatest jobs will endeavor to cheat you through thick and thin. It is a perpetual warfare, in which you are at last obliged to fight in self-defence. If you pay anybody what he asks you, it never enters into his imagination that you do it from anything but folly. You are pronounced a *minchione* (a ninny), one of their greatest terms of reproach. On the other hand, if you battle well through your bargain, a perversion of the natural principle of self-defence leads to a feeling of real respect for you. A dispute may arise; the man may grin, stare, threaten, and pour out torrents of reasons and injured innocence, as they always do; but be firm, and he goes away equally angry and admiring. If you take them in, doubtless the admiration as well as the anger is still in proportion, like that of the gallant knights of old when they were beaten in single combat. An English lady told me an amusing story the other day, which will show you the spirit of this matter at once. A friend of hers, at Pisa, was in the habit of dealing with a man whose knaveries, as usual, compelled her to keep a reasonable eye to her side of the bargain. She said to this man one day, 'Ha, so-and-so, no doubt you think me a great *minchione*.' The man, at this speech, put on a look of the sincerest deference and respect; and in a tone of deprecation not at all intended, as you might suppose, for a grave joke, but for the most serious thing in the world, replied: '*Minchione! no! è gran furba lei*' (You a ninny! oh no, ma'am; you are a great thief)."

Perhaps "*gran furba*" might be translated more in consonance with what an Italian means when he uses these words as an idiomatic expression by the English phrases "a deep one," "a knowing customer," "a cunning hand," "a sly fox"; but Leigh Hunt, of course, preferred the stronger antithesis, and the more startling one, as an intended compliment.

The portrait appended to the present written sketch of Leigh Hunt gives an excellent idea of his personal appearance when I first knew him. It is taken from a pencil-drawing by Wageman, to whom Leigh Hunt sat in 1815 (at the request of my father, Vincent Novello), just after leaving Horsemonger Lane jail, where he had suffered two years' imprisonment for a libel on the Prince Regent in the "Examiner" newspaper. The slender proportions of the figure at that period, the mixture of thought, sweetness, and brightness in the countenance, the eyes penetrating yet kindly, the mouth grave yet glad ("grave with glad thoughts," to use his own expression in his "Hero and Leander"), are all traceable in that little picture; and I prefer it to any portrait of him that I have ever seen. The dress, too,—that simple frock-coat, with the loosely worn shirt-collar, then first allowed to pend easily downward,—is there truly represented. At the time when the Prince Regent (to hide a defect produced by disease) and his fashionable imitators (to ape him even in his least creditable modes) enveloped their throats with cravats of enormous size and voluminous folds, bolstered high around their necks and surmounted by stiff stuck-up collars, it became almost a party-badge and a sign of ultra liberalism with Hunt, Byron, Shelley, Keats, and their admirers to wear soft turn-down collars—easy, graceful, commodious.

When I first remember Leigh Hunt, he had a quaint way with children, of making the one he chanced to be noticing a theme for a kind of breathless running comment, or string of humorous fancies—clear enough to himself and his grown hearers, but strangely puzzling to his juvenile auditor. Once, after dinner, at my father's house, "the children" came in to dessert according to established wont when there was company; and one of my younger sisters was taken upon Leigh Hunt's knee. In the eagerness of conversation, he did not quite finish the almonds and raisins upon his plate; and the child, spying the last neglected plum, drew his attention by pointing to it, looking up in his face, and saying, "There's a raisin!" He, thinking the little girl probably had hopes for herself relative to the disregarded sweet, laughingly

replied, "You've a *reason* for showing me that *raisin*"; and followed up his Dogberian pronunciation and pun with a volley of quips and quibbles on the word, ever after calling her "Little Reason." Those who have read Leigh Hunt's bright sparkle of fancies strung together in rhyming stanzas entitled "To J. H., four years old," beginning:

"Ah, little ranting Johnny,
For ever blithe and bonny,
And singing nonny, nonny,
With his hat just thrown upon ye;
Or whistling like the thrushes
With voice in silver gushes;
Or twisting random posies
With daisies, weeds, and roses,"

will understand the peculiar whimsicality of his ways at that time with other children, from this address to his own little son.

A habit of cultivating cheerful thoughts and surrounding himself by lovely objects conducive to inspire refined and beautiful ideas, was a main feature in Leigh Hunt's daily life, and one that, early cherished, never forsook him to the very last. He carried out, in his own small writing-room,—wherever it might chance to be,—the wisdom inculcated (at a time when such tastes were rarer than they have become now, thanks in great measure to the teachings of Leigh Hunt himself) in such essays as the one called "Casts from Sculpture and Gems," in "The Indicator" for 17th Nov., 1819, where he tells his readers of the plaster copies from classical statues in these persuasive words, with a touch of characteristic playfulness in them:

"There is the Venus de' Medici, the Gladiator, the Quoit-player, the Antinous, the Piping Faun, the Apollo Belvedere, all after the antique; and there is a couching Venus, after John of Bologna, the original of which must have been like Venus re-appearing from the antique world. Few people are aware how cheaply these things are sold. The little statues are three or four shilling apiece, perhaps less; and a profit is got upon the head of Sappho at eighteen-pence. You may set a price upon Paris's head, and have the knave brought you at two shillings. * * * Thus for eighteen-pence a room may be adorned with a cast after the antique. And it must be a very fine picture, in our opinion, which can equal the effect even of a bust, much less of a large statue. There is a kind of presence in sculpture, which there is not in the flat surface and more obvious artifice of painting. It is more companion-like; or, rather, it is more god-like, intellectual, and predominant. The very beauty of its shape becomes meditative. There is a look in its calm, sightless eyes that seems to dispense with the common medium of vision,—a perceiving thought, an undisturbable depth of intuition."

The same graceful persuasion—similarly followed out by his own constant practice—runs through that enchanting essay in the

"London Journal" for 2d July, 1834, entitled "Breakfast in Summer." After picturing the least promising kind of room as the one to which poverty may possibly limit the reader, he suggests that "perhaps the morning sun comes into his room," adding: "The sun is ever beautiful and noble, and brings a cheerfulness out of heaven itself into the humblest apartment, if we have but the spirit to welcome it." Then he goes on to suppose a room where even the sun does not enter, and asks:

"What ornament is there, what supply of light or beauty could we discover, at once exquisite and cheap, that should furnish our humble board with a grace, precious in the eyes of the most intelligent among the rich? Flowers. Set flowers on your table, a whole nosegay if you can get it, or but two or three, or a single flower—a rose, a pink, nay, a daisy. Bring a few daisies and buttercups from your last field-walk, and keep them alive in a little water; aye, preserve but a branch of clover, or a handful of flowering grass,—one of the most elegant as well as cheap of nature's productions,—and you have something on your table that reminds you of the beauties of God's creation, and gives you a link with the poets and sages that have done it most honor. Put but a rose, or a lily, or a violet on your table, and *you and Lord Bacon* have a custom in common; for that great and wise man was in the habit of having the flowers in season set upon his table. * * * Flowers on a morning table are specially suitable to the time. They look like the happy wakening of the creation; they bring the perfumes of the breath of nature into your room; they seem the representations and embodiments of the very smiles of your home, the graces of its good-morrow, proofs that some intellectual beauty is in ourselves or those about us, some house Aurora (if we are so lucky as to have such a companion) helping to strew our life with sweets, or in ourselves some masculine mildness not unworthy to possess such a companion, or unlikely to gain her.

"Even a few leaves, if we can get no flowers, are far better than no such ornament—a branch from the next tree, or the next herb-market, or some twigs that have been plucked from a flowering hedge. They are often, nay, always, beautiful, particularly in spring, when their green is tenderest. The first new boughs in spring, plucked and put into a water-bottle, have often an effect that may compete with flowers themselves, considering their novelty, and indeed

'Leaves would be counted flowers, if earth had none.'

* * * For our part, as far as ourself alone is concerned, it seems to us that we would not be mastered by the blackest storm of existence, in the worst pass that our pilgrimage could bring us to, as long as we had shelter over our heads, a table with bread and a cup of tea upon it, and a single one of these green smiles upon the board, to show us that good-natured Nature was alive."

And well and nobly and truly did Leigh Hunt fulfill the pledge conveyed in that closing sentence! He bore adversity firmly,—nay, smilingly; and no less won admiration from those who had the privilege of knowing him when alive, than he secured lasting esteem and affection after he left earth.

HAS UTAH A REPUBLICAN FORM OF GOVERNMENT?

It has been generally supposed that, aside from the custom of plural marriage prevailing among the Mormons, there was little to distinguish them from other religious communities. It is quite as generally believed that if means could be devised to suppress the practice of polygamy in Utah, no other evil of such magnitude as to require special attention from Congress or the people of the United States would remain to be corrected. A very cursory examination of the Mormon system will show that polygamy is only one of a series of evils, attracting attention by its prominence rather than its preëminence over its fellows. About thirty bills, more or less elaborate in character, have been introduced into the national Congress within the last six years, designed to cure the evils prevailing in Utah, and while most of them contained provisions intended to uproot polygamy, nearly all presented conclusive evidence that their authors had found other evils of the most vital character requiring treatment.

It is, indeed, somewhat remarkable, in view of this record in Congress, that any writer should fall into the error of supposing that the hostility of the Gentiles of Utah to the Mormon Church is chiefly on account of polygamy, and that with the extinction of this system, which it is declared will be brought about by natural causes, there would remain nothing serious to be remedied in the political or social organization of the Territory. The historical facts are that Mormonism grew, flourished, and acquired some of its most dangerous features, and brought itself into violent collision with settled principles of the American system of government, before polygamy was grafted on its creed. If the president of the Mormon Church should tomorrow decree by a special "revelation" that the practice of polygamy was no longer necessary to "celestial exaltation," and that all such marriages heretofore contracted (and recorded only in the secret archives of the Church) were null; if the President of the United States should issue his proclamation of amnesty for all past offenses in this regard; if Congress should legitimize the thousands of children born of polygamous parents, and if the territorial legislature should make suitable provision for each discarded plural wife and her offspring out of her husband's estate or the coffers of the Church—if

every part of this very improbable combination could be brought about, there would still remain grounds as strong as those removed for the hostility of the Gentiles of Utah to the Mormon Church, and reasons as powerful for Congressional legislation before Utah could safely be placed in the line of progress toward American statehood.

The facts are that the Territory of Utah has never been organized in accordance with the genius and spirit of American institutions. There exists there to-day a government within a government, an *imperium in imperio* almost as dangerous to the future of the West as the slave oligarchy of the South was to the peace of the nation thirty years ago; moreover, the peculiar institutions of Mormonism are defended, as was slavery, with an ominous similarity of phrase and logic, as being merely "domestic concerns," with which other States and Territories have no right to interfere, and which "only ask to be let alone." The gravity of the situation must not be underestimated, and it must not be supposed that Mormonism is confined to Utah alone. It holds the balance of power in Idaho, and wields an important influence in Wyoming, Arizona, Colorado, and Nevada. Its organization rests upon principles hostile to those upon which the Government of the United States is founded and its teachings are everywhere subversive of freedom, morality, and progress.

The condition of affairs in Utah is this: Outside of the handful of Federal officials, whose authority is generally held in contempt by the Mormons, and whose reputations are invariably, and often successfully, traduced just in proportion as they prove unyielding to the demands of the Mormon leaders, all power is virtually lodged in the ecclesiastical organization commonly known as the Mormon Church, but self-styled "The Church of Jesus Christ of Latter-Day Saints." This body is primarily controlled by a president and twelve apostles, whose authority is recognized by their devotees as absolute and supreme. Unquestioning "obedience to counsel" is demanded from every member of the Church, and so complete is the surveillance established that it is seldom this obedience is refused, and never without serious consequences. If the control thus exercised were confined to religious matters there would be no just cause of complaint.

But it enters into trade, politics, and all the other secular business of life.

Prior to 1850, when Congress gave to Utah a territorial government similar to that of the other Territories, the handful of Mormons resident there framed a State government, calling it the government of the "State of Deseret," and this unauthorized organization, with Brigham Young (President of the Mormon Church) as governor, with its officers, legislative, executive, and judicial, was persistently maintained by the Mormons for many years after the establishment of the legal territorial government. Brigham Young took the oath of office as Governor of Utah Territory before the Chief-Justice of this "State of Deseret," and, as late as 1872, Albert Carrington, one of the twelve apostles, declared, in a sermon preached in the Salt Lake Tabernacle, in the presence of the three Federal judges of the Supreme Court and an audience of thousands of people, "that the territorial government of Utah was a gross usurpation, totally unconstitutional, null and void."

The legislative power of the Territory is vested by the organic act in the Governor and a legislative assembly supposed to be chosen by the people. As this last-named body was in harmony with the executive for the first eight years of its existence, the spirit of Mormonism will be fully shown by a brief reference to the legislation of those years. The first act, in date Oct. 4, 1851, is found in the compiled laws of 1870. It is a grant to Brigham Young of all the waters of City Creek and all the timber of the City Creek cañon, for a consideration of five hundred dollars. The grantee in this act was the Governor, whose approval was required to give it the semblance of validity. City Creek furnished the water-supply for Salt Lake City and vicinity, and the cañon was the resort of the inhabitants for building-timber and fuel. Under authority of this grant, for twenty years Brigham Young exacted one-third of all the timber taken out of the cañon, and distributed the water to whomsoever he pleased. During the same session of the legislature, all the timber in the cañons of the Big Cottonwood and Mill creeks, and the "next cañon north of Mill Creek," was granted to Brigham Young's first counselor, and to one of the twelve apostles, while the control of all the timber in the cañons on the east side of the "next mountain" was given to George A. Smith, another of the twelve. On the same day, the control of all the waters of Twin Springs, and all the timber in the cañons on the west side of the Oquirrh Mountains, was

granted to Ezra T. Benson, another apostle. By these half-dozen acts, all the water and all the timber in the two counties of Salt Lake and Tooele, now having a population of forty thousand people, were placed under the control of five persons. The same legislature granted to Brigham Young, in proprietorship, the two islands in Salt Lake, called Stansberry and Antelope islands, containing over thirty thousand acres of land. Suffice it to say that, up to 1870, the majority in number and bulk of the Utah statutes was composed of special acts making grants of land, timber, water privileges, charters for bridges, ferries, and roads to individuals; and charters for cities and towns to private societies and associations.

The laws of a general nature were equally objectionable. The Probate Court judges elected by the people of the different counties were declared to possess jurisdiction in all cases, civil and criminal, at common law and in chancery, and the spectacle of a Mormon bishop, who knew nothing about law, trying a defendant for a felony or on a capital charge was of common occurrence till the act of Congress known as the Poland Bill, passed June 23, 1874, put an end to these exhibitions. These probate courts even usurped the right to release, under writs of *habeas corpus*, persons charged with crimes and duly committed by the Federal judges.

With the double purpose of withdrawing large tracts of arable land from settlement by non-Mormons, and of placing all municipal legislation in the hands of Mormon city councils, and thus evading the veto of the Governor, large numbers of towns and cities were incorporated, and municipal courts were created, with wide powers, for the trial of both civil and criminal causes. Thirty-seven towns and cities were thus created, and though most of them were, and still are, mere hamlets, their corporate limits range all the way from fifteen to fifty square miles in extent each. A sample of this scheme for preventing settlements on the public lands is found in the charters granted to the towns and cities of C  che Valley. Beginning with a village situated in the southern end of the valley, a series of eight incorporated towns and cities was created, to include the entire valley, nearly forty miles in extent, while there are to this day wide intervals without a single habitation. One farm, called the "Church Farm," containing seven thousand acres of the finest lands in the Territory, lies in this valley, and was thus withheld from settlement until squatters, under the direction of Brigham Young, secured the title from the United States, which they immediately conveyed to the Mormon prophet.

When Gentile prospectors began the development of the vast mineral wealth of Utah, repeated efforts were made by the Mormon legislature to tax the mines out of existence—efforts which were only defeated by the absolute veto of the Governor. As recent instances of this attempted legislation, reference is made to Governor Emery's veto of the bill to suppress smelters in the Territory (*Journal of Legislature*, 1876, page 261), and also to the Governor's veto of the bill levying a tax on the mines and a double tax on their products (*Journal of Legislature*, 1878, page 321).

Jurors, even in criminal cases, were not required to be citizens of the United States but the officer was directed "to summon twelve judicious men" (chapter 30, January 21, 1853, section 9). The same act (section 24) provided "that the property of a person accused of an offense shall be held depending the execution of the judgment." The oppression of seizing the property of a person simply accused of an offense has probably not been felt anywhere else in modern times.

The election laws were such that the proceedings were a farce. The act prescribing the qualifications of voters was passed January 21, 1859, more than eight years after the organization of the Territory, and the reason for this is made apparent by the fifth section, which excluded soldiers and officers of the United States from the privilege of voting. The army of General Johnstone, after subduing the Mormon rebellion, was then in quarters at Camp Floyd, and, it was feared, might lighten its military duties by an attempt on the ballot-box. The act "regulating elections" was passed January 3, 1853, but contained not a syllable defining the qualifications of voters, and had not the advance of the army made it necessary to exclude non-Mormons, the subsequent law of 1859 would never have seen the light. Under the earlier statute, which was unchanged until 1878, every ballot was numbered and the name of the voter written on it, so that by no possibility could a vote be cast which the Mormon priesthood could not examine. After the passage of the act of February 12, 1870, giving every woman of the age of twenty-one years, "or who is the wife, widow, or the daughter of a native-born or naturalized citizen of the United States," the right "to vote at any election" in the Territory, the elections have been a most unseemly mockery. Polygamous wives, foreign-born, without the pretense of having been naturalized, minors who were the daughters of citizens, and many persons who claimed to have been naturalized by proceedings in the probate courts which were utterly

void, have assumed the right to deposit their votes in the ballot-box. Even the act of 1878, providing ostensibly for a secret ballot, only prohibits the marking of the envelope containing the ballot. The marking of the ballots is no more prohibited now than before. The restraints upon male voting under this law are such as virtually to disfranchise the anti-Mormon population, and this is conclusively shown by the diminished anti-Mormon vote. Out of a voting capacity of at least three thousand in the county of Salt Lake alone, the last election disclosed an aggregate of about one-tenth of that number.

The law of taxation is equally open to criticism and the charge of favoritism and discrimination. Under it, while the cooking-stoves and sewing-machines of the poor were being seized for the payment of taxes, the county courts were "remitting" the taxes of the president of the Church and of Mormon railroad corporations to large amounts.*

Nominally a school system was established, but in practice it is a scheme to compel the erection of Mormon "meeting-houses" at the expense of the public. All the abominable doctrines of the Mormon Church are taught in such schools, and the non-Mormon is thus forced to support by his purse the system he detests, and meanwhile to provide private schools for his children.

While this objectionable legislation has been the rule, and not the exception, the failure to provide wholesome laws has been conspicuous. Until 1874, there was no statute of frauds, or conveyances, or for the record of deeds, etc. The result is needless insecurity and difficulty where titles, coming directly from the Government, should be of the simplest kind. There is no statute on the subject of the relations of the sexes, except a divorce act so notoriously infamous that it was recently amended. There is no law on the subject of marriage; no one is authorized to celebrate it; no witnesses are required, and no record is made of it. By the act of February 15, 1872, the wife is deprived of right of dower and all property rights in her husband's estate, and by the act of March 4, 1852, in force until 1878, she was made liable to imprisonment for five years if she even trod upon the grass in her husband's door-yard against his command (secs. 44, 45, and 46). The brutal language of the statute is:

"The preceding sections severally extend to a married woman who commits either of the offenses herein described, though the property may belong wholly or in part to her husband."

* Act of Jan. 20, 1864, sec. 14.

Is it any wonder that women obey implicitly the masters who hold them by such chains in their hopeless bondage—that suffrage placed in such hands drives from the polls in utter disgust the free-born American citizen who looks upon this right as a sacred trust and the palladium of his liberty?

In 1878, the Mormon legislature repealed all statutes against seduction, lascivious cohabitation, and incest. A man may marry his own sister without coming within any statutory restraint, and adultery and fornication have no penalty under the law. Instances of the marriage of a man to his brother or sister's children are by no means uncommon, and when, a few years since, a Mormon bishop was removed from the position of postmaster because he had committed matrimony with two of his brother's daughters, the whole priesthood protested against it as a gross persecution on account of his religion.

Further instances of Mormon misrule might be multiplied indefinitely. Those presented sufficiently show that the body committing or permitting such outrages is unfitted to exercise legislative power. Of the thirty-six members of the legislative assembly now in session in Utah, thirty-two are officers of the Mormon Church, twenty-eight are living in polygamy, though it is a felony under the act of Congress, and all are Mormons. They meet simply to do the bidding of the Church, but their mileage and *per diem* compensation are paid by the United States.

On the 15th of February, 1873, Senator Frelinghuysen, now Secretary of State, reported from the Judiciary Committee Senate Bill 1540—"a bill in aid of the execution of the laws in the Territory of Utah, and for other purposes," which showed a thorough knowledge of affairs in Utah, and went far toward providing means of redress. It proposed to repeal and annul many obnoxious laws, provided remedies for many evils of the elective system, and afforded protection to a large class where it did not provide for redress. The bill was bitterly antagonized by Senator Sargent of California, and resulted in a measure which finally passed Congress June 23, 1874, which, while equipping the courts with jurors so drawn as to make a trial in which the Mormon Church or its leaders were interested result in inevitable disagreement, still gave to non-Mormons a chance for justice. Priestly cunning has, since its passage, been engaged in circumventing its operations, and its inadequacy is admitted. The impulse given by this legislation to the study of the difficulties of enforcing the law in Utah has resulted in wide discussion, and the late President Garfield, after giving the subject thorough con-

sideration, declared his views in his inaugural in the following forcible language:

"In my judgment, it is the duty of Congress, while respecting to the uttermost the conscientious convictions and religious scruples of every citizen, to prohibit within its jurisdiction all criminal practices, especially of that class which destroy the family relations and endanger social order. *Nor can any ecclesiastical organization be safely permitted to usurp, in the smallest degree, the functions and powers of the national Government.*"

In consultation with Mr. Willits, a leading member of the Judiciary Committee of the House of Representatives from the State of Michigan, during the past summer, President Garfield strongly advocated the adoption of a measure which has since been introduced into the present Congress by Mr. Willits. This bill is in principle the same as the act of Congress passed at its first session under the Constitution, providing for the government of the territory north-west of the Ohio. Instead of the legislative power being vested in the Governor and the judges, as in that act, a council of nine citizens of the Territory who are qualified voters is, upon the appointment of the President and confirmation by the Senate, authorized to exercise the law-making power over all rightful subjects of legislation, subject to the approval of the Governor, the power to annul and disapprove of its acts being reserved by Congress. The present government of the District of Columbia, with a population of one hundred and eighty thousand, is more arbitrary than the scheme provided in this bill. The abuses in the District of Columbia, which led Congress to abolish its territorial government, were trifles compared with the long series of wrongs which have disgraced the governmental history of Utah.

The Utah question is in no just sense a "problem." It involves the simple question of enforcing the laws of the United States in Utah as they are enforced elsewhere. The execution of the law against theft and murder is no longer regarded as a "problem" requiring very grave deliberation or extraordinary statesmanship. The execution of the laws in Utah involves only the adaptation of simple means to the end proposed, and resistance to their firm and fair execution will cease when the determination to execute them is backed by the means. We are told by optimists and superficial observers that the immigration of non-Mormons, intercourse with the world, schools and the printing-press, will in time cure the evils of which the non-Mormons complain. If this be so, why is it that the laws which forbade and punished seduction, adultery, lascivious cohabitation, and incest have all

recently been repealed, and these social crimes purged from the criminal catalogue of the Territory? Why is it that, while the railroad and the telegraph and the press are exposing the evils of polygamy to the gaze of the nation, polygamous marriages are being contracted at a greater rate than heretofore? The truth is that the friends of good government are increasing in Utah, but the Mormon Church power is relatively gaining still more rapidly. Wealth, intelligence, and enterprise shun a region governed by such influences. Some are driven out by Church oppression. Many refuse to abide where liberty is but a name, civil government a farce, and a fanaticism that palsies enterprise

and pollutes the hearth-stone reigns unchecked. While the philosopher is waiting for public opinion and schools and commerce to revolutionize Utah, the hardy immigrant who, in looking to the valleys of the Rocky Mountains for a home for himself and his family, arrives in Utah, surveys the prospect, and with disgust that such a condition of things is tolerated under the flag of the country, moves on to Montana, Idaho, or Washington Territory. Year by year this stream flows steadily into Utah, and as steadily out of and beyond it. This will go on until the proper remedy is applied, and this cancer in the breast of the nation shall be cured.

BRYANT AND LONGFELLOW.

IN THE forthcoming biography of Mr. Bryant, a pleasant glimpse is given us of the early relations of Bryant and Longfellow (relations, we may add, continued to the end), of which the biographer furnishes us a brief sketch. It seems that, long ago as 1826, when Mr. Bryant was acting as editor of the "New York Review," he had occasion to notice the "United States Literary Gazette," a Boston periodical, of which he said:

"Of all the numerous English periodical works, we do not know any one that has furnished within the same time as much really beautiful poetry. We might cite, in proof of this, the 'April Day,' the 'Hymn of the Moravian Nuns,' and the 'Sunrise on the Hills,' by H. W. L. (we know not who he is), or more particularly those exquisite *morceaux* 'True Greatness,' 'The Soul of Song,' 'The Grave of the Patriots,' and 'The Desolate City,' by P., whom it would be affectation not to recognize as Dr. Percival."

The H. W. L. of whom the critic knew nothing was an under-graduate of Bowdoin College, who since has come to be known everywhere as Henry W. Longfellow.

Mr. Bryant and Mr. Longfellow did not meet till some time in 1835, when they came together at Heidelberg, where, we may suppose, they took many a walk in the solemn shades of the pine-forests, or had many a laugh over the trout breakfasts of the Wolfbrünnen. A great deal of what they talked about no doubt got into "Hyperion," which Mr. Longfellow published shortly after his return home, and which Mr. Bryant hailed as a work of great merit. Indeed, as each successive poem or book of the younger poet appeared, it found a ready admirer in him who was already a veteran in the service of the Muse.

When, in 1845-6, the illustrated edition of Longfellow's poems came out in Philadelphia, from the press of Carey & Hart, Mr. Bryant wrote to its author as follows:

"NEW YORK, January 31, 1846.

"MY DEAR SIR: I have been looking over the collection of your poems recently published by Carey & Hart, with Huntington's illustrations. They appear to me more beautiful than on former readings, much as I then admired them. The exquisite music of your verse dwells more agreeably than ever in my ear, and more than ever am I affected by their depth of feeling, and their spirituality, and the creative power with which they set before us passages from the great drama of life.

"I had been reading aloud to my wife some of your poems that pleased me most, and she would not be content until I had written to express to you some of the admiration which I could not help manifesting as I read them. I am not one of those who believe that a true poet is insensible to the excellence of his writings, and know that you can afford to dispense with such slight corroboration as the general judgment in your favor could derive from any opinion of mine. You must allow me, however, to add my voice to the many which make up the sum of poetic fame.

"Yours very truly,
"W. C. BRYANT."

To this the younger poet replied with frankness and becoming gratitude:

"CAMBRIDGE, Feb. 5, 1846.

"MY DEAR SIR: I am very much obliged to you for your friendly letter, which has given me, I assure you, the sincerest pleasure. Your expressions of praise and sympathy are very valuable to me; and I heartily thank Mrs. Bryant for prompting your busy hand to write.

"In return, let me say what a staunch friend and admirer of yours I have been from the beginning, and acknowledge how much I owe to you, not only of delight but of culture. When I look back upon my earlier verses, I cannot but smile to see how much in them is really yours. It was an involuntary imitation which I most readily confess, and say, as Dante says to Virgil:

'Tu se' lo mio maestro, e 'l mio autore.'

"With kind remembrance to your wife, to Julia, and to the Godwins,

"Faithfully yours,
"HENRY W. LONGFELLOW."

Again, on the publication of "Evangeline,"

in 1848, Mr. Bryant expressed his high sense of its beauty in the columns of the "Evening Post." His friend, Richard H. Dana, of Cambridge, was disposed to think that he had estimated it too highly; but Mr. Bryant wrote a letter to Dana, and thus justified his opinion:

"NEW YORK, Sept. 12, 1848.

" * * * I did not, I am sure, make any such comparison of Longfellow's 'Evangeline' with other American poems as you have ascribed to me. What I said was that it had given me altogether more pleasure in the reading than any poem which had lately appeared,—than any poem which had been published within several years. And this is true. I have never made any attempt to analyze the source of this pleasure. The poem interested and affected me strangely. Whatever may be said of parts, they are all harmonized by a poetic feeling of great sweetness and gentleness which belongs to the author. My ear admits, nay delights in, the melody of the hexameter as he has managed it, and I, no doubt, expressed my satisfaction with the poem in warm terms. * * *"

Mr. Bryant's ear may have delighted in Longfellow's hexameters, but we may add that it does not seem to have delighted in his own; for when he began his translation of Homer's "Iliad," he began it in hexameters, but before long he found them impracticable, and he was glad to recur to what we think infinitely better in English,—the iambic pentameter, or blank verse, as it is called. None the less, Mr. Bryant's hexameters, in our judgment, limp along as readily as those of anybody else—even Longfellow's, which he so much enjoyed. Let the reader take a specimen from the fifth book of the "Odyssey," the description of Ulysses coming to the grotto of Calypso—a passage, by the way, which Pope has rendered more charmingly than almost any other in the epic:

"Now, when he reached in his course that isle far
off in the ocean,
Forth from the dark-blue swell of the waves he
stepped on the sea-beach;
Onward he went till he came to the broad-roofed
grot where the goddess
Made her abode, the bright-haired nymph. In her
dwelling he found her;
There on the hearth a huge fire glowed, and far
through the island
Floated the fume of frankincense and cedar wood
cloven and blazing.
Meanwhile sweetly her song was heard from the
cave, as the shuttle
Ran through the threads from her diligent hand,
and the long web lengthened;
All round the grotto a grove uprose, with its verd-
urous shadow,
Alders and poplars together, and summits of sweet-
smelling cypress.
'Midst them the broad-winged birds of the air built
nests in the branches,
Falcons and owls of the wood, and crows with far-
sounding voices,
Haunting the shores of the deep for their food. On
the rock of the cavern
Clambered a vine, in a rich, wild growth, and heavy
with clusters.

Four clear streams from the cliffs poured out their
glittering waters,
Near to each other, and wandered—meandering
hither and thither;
Round them lay meadows where violets glowed, and
the ivy o'er-mantled
Earth with its verdure. A god, who here on the
isle had descended,
Well might wonder and gaze with delight on the
beauty before him."

While speaking of Mr. Bryant, let us express our regret to learn that he has left no unpublished poem of any great length or merit behind him. It was generally inferred from the phrases "A Fragment" or "From an unpublished Poem," which frequently appear in his printed works, that he had reserved a *magnum opus* for posthumous publication: but such was not the case. Three times in his life he appears to have projected a great narrative-poem, but he was never successful in carrying out his intentions. Once, when he was still a young man, he conceived the plan of an Indian epic, the scene of which was to be laid in the old Pontoosuck forests, amid which he was born, but he wrote only an introduction to it, in the manner of Scott's "Lay of the Last Minstrel" and "The Lady of the Lake." A little later, about 1823, while a practicing lawyer in Great Barrington, he began a romantic tale in verse, which was to be called "The Spectre Ship," and was founded on a story told by Cotton Mather, in his "Magnalia Christi Americana," of a ship that sailed out of New Haven Bay, with a large number of returning pilgrims on board, and was never heard of again, although the form of it was seen for many years afterward hovering about the coasts, particularly in stormy weather. Mr. Longfellow wrote some lines for "Graham's Magazine" on the same subject, beginning:

"In Mather's Magnalia Christi,
Of the old colonial time,
May be found in prose the legend
That is here set down in rhyme."

Mr. Bryant finished only about two hundred verses, and then threw them aside.

Writing to Mr. Dana, who was continually urging him to undertake a more elaborate production than any he had yet written, Mr. Bryant says, under date of Great Barrington, July 8, 1824:

" * * * You inquire whether I have written anything except what I have furnished to Parsons [of the "United States Literary Gazette"]. Nothing at all. I made an engagement with him with a view, in the first place, to earn something in addition to the emoluments of my profession, which, as you may suppose, are not very ample, and in the second place, to keep my hand in, for I was very near discontinuing entirely the writing of verses. As for setting myself about the great work you mention, I know you make the sug-

gestion in great personal kindness towards myself, and I cannot sufficiently express my sense of that unwearied good-will which has more than once called my attention to this subject. But I feel reluctant to undertake such a thing, for several reasons. In the first place, a project of that sort on my hands would be apt to make me abstracted, impatient of business, and forgetful of my professional engagements, and my literary experience has taught me that it is to my profession alone that I can look for the steady means of supplying the wants of the day. In the second place, I am lazy. In the third place, I am deterred by the difficulty of finding a proper subject. I began last winter to write a narrative poem, which I meant should be a little longer than any I had already composed; but finding that would turn out at last a poor story about a 'Spectre Ship,' and that the tradition on which I had founded it had already been made use of by Irving, I gave it up. I fancy that it is of some importance to the success of a work that the subject should be happily chosen. The only poems that have any currency at present are of a narrative kind—light stories, in which love is a principal ingredient. Nobody writes epic, and nobody reads didactic, poems, and as for dramatic poems, they are out of the question. In this uncertainty, what is to be done? It is a great misfortune to write what everybody calls frivolous, and a still greater to write what nobody can read."

As far as one is able to judge from the two or three hundred lines that remain of this poem, love was "the principal ingredient." The story involved the fortunes of a young man who sailed in the ill-fated vessel in which he experienced all the disasters of shipwreck, leaving behind him an orphan girl, to whom he was betrothed, who experienced the still more terrible disaster of captivity among the Indians—a scheme, it must be confessed, admitting of a good deal of wild romance and of vivid description of both forest and ocean. How the phantom element was to be brought in, is left to conjecture.

Mr. Bryant says, in the letter just cited, that he was deterred from prosecuting his design by the fact that Irving had "already

made use of the subject": but we cannot recall any piece of Irving in which that was done. Irving wrote a tale called "The Spectre Bridegroom," but that is of German origin, and has nothing in it resembling the legend which Mather reports. In his story of Dolph Heylinger, also, he refers to the Pilgrim superstition of a missing ship that re-appeared on the coasts, in bad weather, as a faith more or less prevalent in all the colonies, but he makes no use of it further than to remark upon it in the course of his narrative. Perhaps some of our readers can tell us more distinctly what it was in Irving that drove Mr. Bryant off the field.

A third one of his attempts related, as far as we can now judge, to a hermit who, having run through the varied experiences of life, and seen what there was to be seen of our continent and climate, from the sea-coast to the Mississippi, withdraws to the solitudes of the forests, where, in his hut, he tells to some adventurous boys the story of his career. He was to do duty, we conjecture, as Wordsworth's peddler does in "The Excursion,"—that is, he was to serve as the lay figure on which the poet was going to hang his fine descriptions of nature. Nothing more, however, came of this scheme than of the others, unless we are permitted to suppose that "The Fountain," the "Evening Reverie," "Noon," and one or two more of his pieces in blank verse, were parts of this projected whole. It would have been very easy to connect these pieces together, by some little story of this kind; but we are not sure that the readers of poetry would have been the gainers. "The Excursion" is not now read as a whole, only in its episodes, and the narrative which is meant to give it unity only gives it length and heaviness.

THE BLACK BEAR.

THE black bear (*Ursus Americanus*) derives its name from its fur, which is a rich, warm, and extremely glossy jet black, except on the muzzle, where, beginning at the mouth, the hair is a fawn color, which deepens into the dark tan color of the face, and ends in rounded spots over each eye. These color-marks and its peculiarly convex facial outline are the distinguishing marks of the species. The tan color becomes, with age, a brownish gray. The largest black bear I ever saw weighed five hundred and twenty-three pounds, and measured six feet and four inches from the tip of the nose to the root of the tail. One of this species seems to possess the power of transforming himself at will into a variety of

shapes. When stretched out at length he appears very long; when in good condition, short and stout; when upright, tall; and when asleep, he looks like a ball of glossy black fur. The black bear of to-day may be termed omnivorous, inasmuch as fish, flesh, fowl, vegetables, fruit, and insects are all eagerly devoured by him. He mates in October, and the period of gestation lasts one hundred and twenty days. Two to four cubs form a litter. The cubs are always jet black, and not ash color, as some of the older naturalists affirm. If, according to Flourens, the natural life of an animal be five times the period of its growth to maturity, I should think that the black bear's limit was about twenty years. I knew of a

cub which increased in size until his fourth year, when he appeared to have arrived at maturity.

Many country people and some experienced hunters have seen, as they believe, another species of the black bear, which they name a ranger, or racer. He is described as being a longer, taller, and thinner animal than the black bear proper, extremely savage, and distinguished by a white star or crescent on his breast. Marvelous tales are related of his ruthless doings, and any act of more than ordinary ferocity and daring, such as the wanton destruction of a large number of sheep, in daylight, in sight of the farm-house, is always attributed to a ranger. It is also said of him that he never hibernates, but prowls about all winter, seeking what he may devour, and keeping the farmers constantly on the alert to protect their stock. I have never had sufficient proof to warrant belief in the existence of a ranger bear, but have occasionally met with specimens of the black bear answering in some points to the above description. For instance, I have seen several black bears with white crescents on their breasts. The truth probably is that at times, during mild winters, a stray black bear may be seen prowling about when, in accordance with all accepted ideas on the subject, he should be fast asleep. This probable fact, and the variation in size and form common to all animals, no doubt account for the popular belief in the existence of the ranger bear.

The time when the black bear selects the den in which his long winter nap is taken depends on the openness or severity of the season. In any season he is seldom met abroad after the first of December, and is not seen again until the first warm days of March. He does not seem particular as to the character of his den, provided it shields him from the inclemency of the weather. A retreat dug by his powerful claws under the roots of a windfall, a rocky cave on the hill-side, or a hollow log, if he can find one large enough to admit him, will serve for a winter home. When he is ready to hibernate he is in fine condition and his fur is at its best. It is at this season that the hunters redouble their efforts to capture him. When he comes out in the spring he is in a sorry condition, and is seldom molested unless he makes himself troublesome to farmers. Numerous, and curious beyond belief, have been the theories and explanations offered by naturalists to account for the suspension of the functions of nature during hibernation. An Indian whom I have found to be trustworthy has often called my attention to fir-trees which had been freshly

stripped of their bark, to a distance of five or six feet from the ground, and has told me that it was the work of bears that were after the balsam, large quantities of which, according to the Indian, they eat every autumn before going into their dens. It was his theory that the balsam prevented bodily waste, and that when the bears came out in the spring they dug up and ate large quantities of a root which had the effect of restoring bodily functions that had been suspended during the period of hibernation. The den is sometimes revealed by a small opening over his place of concealment, where the snow has been melted by his breath. When efforts are made to dislodge him by making a fire of boughs and moss at the entrance to his den, he will attempt to trample the fire out, and often succeeds. He has, however, a natural dread of fire, and at the first signs of a forest-fire becomes greatly alarmed, and flies to the open clearings and road-ways. I once passed on horseback through a forest-fire which was burning on each side of the road, and most of the distance I was accompanied by a big black bear, which was following that avenue of escape.

It would seem improbable that the young of the black bear were liable to fall a prey to the fox and black cat, or fisher, yet such is the fact. This happens, of course, when the cubs are very young, and incapable of following their dam in her search for food. The black cat is the most successful cub-slayer. The fox, notwithstanding his proverbial sagacity, is often surprised by the return of the bear, and killed before he can escape from the den. An Indian hunter, who knew of two litters of cubs which he intended to capture as soon as they were old enough to be taken from their dam, was anticipated in one case by a black cat, and in the other by a fox. The latter paid the penalty of his adventure with his life, and was found in the den literally torn into shreds by the furious bear. The fox had killed one of the cubs, and the old bear, hoping to find a more secure place, had gone off with the two remaining cubs. The Indian overtook and slew her, and captured the cubs. Upon another occasion, he was not so fortunate. Stimulated by the large price offered by the officers of a garrison town for a pair of live cubs, he was indefatigable in his endeavors to find a den. One day, when accompanied by his little son, a boy of ten, he discovered unmistakable traces of a bear's den, near the top of a hill strewn with granite boulders, and almost impassable from the number of fallen pines. One old pine had fallen uphill, and its up-reared roots, with the soil clinging to them,

formed, with a very large rock, a triangular space into which the snow had drifted to a depth of ten or twelve feet. The Indian was about to pass on, when he detected the whining of bear-cubs. By making a *détour*, he reached a place on a level with the bottom of the boulder, and there saw the tracks of an old bear, leading directly into the center of the space between the tree-root and the boulder. The old bear, in her comings and goings, had tunneled a passage under the snow-drift. Getting down on his hands and knees, the Indian, with his knife held between his teeth, crept, bear fashion, into the tunnel. After entering several feet, he found the usual bear device—a path branching off in two directions. While pondering what to do under such circumstances, a warning cry came from his little son, who was perched on the top of the boulder, and the next instant the old bear rushed into the tunnel, and came into violent contact with the Indian, the shock causing the tunnel to cave in. The Indian, after dealing the bear one blow, lost his knife in the snow, and seized the bear with his hands; but she proved too strong for him, and was the first to struggle out of the drift, when, unfortunately, she met the little Indian boy, who had climbed down to his father's rescue. He received a tremendous blow on the thigh from the bear's paw as she passed, which crippled him for life. Four days afterward the Indian, determined to avenge the injury of his son by slaying the old bear, returned to the den, and discovered her lying dead upon the snow in front of the boulder: his one blow had gone home, and the poor creature had crawled back to her young to die. The Indian dug away the snow, and found three cubs; one was dead, and the others died before he could reach his camp.

The principal strongholds of the black bear at the present day are the great forests of Maine and New Brunswick. My own observation and the reports of farmers lead me to think that Bruin is growing more carnivorous and discontented with a diet of herbs. Assuredly, he is growing bolder. He is also developing a propensity to destroy more than he can eat, and it is not improbable that his posterity may cease to be frugi-carnivorous. It is fortunate that an animal of the strength and ferocity which he displays when aroused, seldom attacks man. The formation of his powerful jaws and terrible canine teeth are well adapted to seize and hold his prey, and his molars are strong enough to crush the bones of an ox. His great strength, however, lies in his fore-arm and paws. His mode of attacking his prey is not to seize it

with his teeth, but to strike terrific blows with his fore-paw.

Bruin's weakness is for pork, and to obtain it he will run any risk. When the farmers, after suffering severe losses at his hands, become unusually alert, he retires to the depths of the forest and solaces himself with a young moose, caribou, or deer. He seldom or never attacks a full-grown moose, but traces of desperate encounters, in which the cow-moose has battled for her offspring, are frequently met with in the woods. The average value of a bear, including the bounty, is twenty dollars. This being the case, it may appear surprising that larger numbers are not taken. But the black bear combines extreme cunning with great sagacity, and every year he seems to be getting more on his guard, and suspicious of all devices intended for his capture. Large, full-grown animals are seldom killed. A black bear skin, taken at the proper season, is not excelled by any other kind of fur. If properly dressed, it possesses great softness and a gloss peculiar to itself. The fur is highly esteemed in Europe, where it is used for sleigh and carriage robes, and coat linings and trimmings. It is also in much request in England and other parts of Europe, for the shakos of certain infantry regiments and the housings and trappings of cavalry.

In the autumn of 1879, in the Red Rock district, Province of New Brunswick, eighteen bears were killed, only two of which had arrived at maturity; some of them were only yearlings. Only ten or twelve settlers and their families inhabit the district, and during that year seventy-three head of stock, including sheep, hogs, and horned cattle, were destroyed by bears. This district, situated on the extreme outskirts of civilization, is the bear's paradise. The houses in most cases are built of logs, and the occupants are a stalwart simple race, whose manners and customs carry you back to the frontier life of half a century ago. They are hospitable to a degree not often met with at the present day. The farms on which they live are clearings in the primeval forests. During a visit to this district, I had the luck, unexpectedly, to see Bruin at home in one of his wildest retreats. North of the settlement a range of rocky hills rises perpendicularly from the shores of a forest lake. The hills are strewn with gigantic boulders, over which the hunter must pick his way with no little difficulty and danger. But by that expert climber, the black bear, such rugged ground is easily traversed. Our tramp had been a long one, and on our return my Indian guide proposed that we should cross the Red Rock hills, and thus save much time. Disregarding the old adage that "the longest way

HEAD OF *URSUS AMERICANUS*.

round is the shortest way home," I was deluded into following the guide's advice. Great black clouds threatened an autumn storm. After much hard climbing, we reached a place where the whole hill-side seemed riven apart. On every side we were surrounded by precipices and deep gulches, partly filled with great boulders and sharp fragments of rocks. Although the dangers were not of Alpine magnitude, they might just as well have been, inasmuch as they were greater than we had any means of overcoming. In attempting to find a way out, we clambered along a ledge of rocks that afforded only insecure footing, and gradually diminished in width until all farther progress in that direction became impracticable. Retracing our steps, almost in despair of finding an outlet, we came to a fissure in the cliff just wide enough to admit one at a time. For a distance of twenty feet we were able to walk in an upright position; then the pass-

age narrowed rapidly, and we had to crawl upon our hands and knees in almost perfect darkness. Presently we came to a place where the opening was so low that, if one attempted to straighten up, his back came in contact with a solid wall of rock; thence the passage took a sharp downward pitch, at the bottom of which we found a space sufficiently large to permit us to regain an upright position. The darkness was now complete, and, not daring to move for fear of getting a fall, I thought it prudent to return to the ledge, and imparted my intention to the guide. I received no reply, and called out in a louder voice. To my surprise, the answer came in a muffled tone from a locality apparently directly under me. By this time, my eyes had become accustomed to the gloom, and I detected a bluish, glimmering light on the rocky wall overhead, proceeding from a distant corner of the space in which I stood. Creeping to the source of the light, I found a wedge-like opening, decreasing

INDIAN HUNTER WAITING FOR A BEAR.

in width as it descended. While debating with myself what to do next, the guide's head appeared at the bottom of the opening. He called to me to come down. Entering in a recumbent position, feet foremost, I slipped down and discovered that the passage led into another chamber-like space, with the difference that it was in open daylight, the sky being visible beyond an overhanging ledge of rocks. The rocky platform was strewn with bones, and plentifully sprinkled with porcupine quills. The information of the guide was not needed to convince me that we were in the ante-chamber of a bear's den, and that the room above was the den proper. It seems almost incredible that the black bear should permit such an offensive animal as the porcupine to occupy the same den with him, but there is good reason to believe that he sometimes does so. Although it was too early in the season for Bruin to seek permanent winter quarters, I did not feel at all certain that he might not pay occasional visits to his den, and urged the guide to get out of the place as soon as possible. As there was likely to be more than one entrance to the den, we looked about us

and discovered that, by climbing over a jutting ledge of rock, we should be able to get upon a lower and much more extensive plateau of rock immediately under the den. We reached the platform safely, and, selecting a spot where we were sheltered and concealed by boulders, we called a halt, and lighted our pipes. A slight tap on the shoulder caused me to turn around, and, looking in the direction indicated by the guide, I saw a large bear seated on his haunches and looking intently at something. Farther away I saw another bear, crossing a chasm on an old pine-log that bridged it, and that afterward helped us out of our dilemma. Another tap on the shoulder, and another surprise in store for me. For up the hill-side, above the den, sat another bear with his head partly turned to one side, and looking in an inquiring manner at the two bears below him. By this time the one on the log had nearly crossed over, and the one sitting on his haunches growled frightfully. We were not fifty yards from him, and he might at any moment detect our presence; fortunately, we were well to leeward of him. We had been exploring a stream, connecting a string of lakes, to examine a very extensive and perfect beaver-dam, and, not expecting to hunt, had left our rifles at the camp.

THE BEAR PASS.

A DEAD-FALL TRAP.

All I had to fight with was a solid sketch-book, while, by some strange fatality, the Indian had even lost his knife out of its sheath in our climb. I was looking about for some way of escape, when I noticed that the bear on the hill-side had vanished, and the one that crossed over on the log had moved toward the one sitting on his haunches. They sat about ten feet apart, and made the strangest noise I ever heard. Commencing with the sniff peculiar to the bear, the noise was prolonged into a deep, guttural growl, accompanied by a peculiar champing of the jaws. At that moment, a large stone, evidently dislodged by the bear that had vanished from the hill-side, came tumbling down the ravine. It struck on the solid ledge on which we were crouching, and broke into pieces. Instinctively looking up, in apprehension that the fragment might be the advance guard of an avalanche, we lost sight of the two bears, and never saw them again. Alarmed by the falling stone, they had swiftly and stealthily gone away. The guide said that the two bears which were on the ledge with us were males, and that, as it was the pairing season, the growling we were treated to was merely the preliminary of a terrible fight. During the pairing season, the males congregate in bands and scour the forest, growling, snarling, and fighting. On such occasions, all prudent hunters avoid an encounter with them. The females are savage when suckling their young, and will fight to the death in their protection. At all other seasons both males and females avoid a meeting with

human beings, but if attacked and wounded, or brought to bay, the black bear is a foe to be dreaded. Their keen scent and acute hearing enable them to detect the approach of an enemy, and to keep out of his way.

Sometimes the black bear is hunted with dogs trained for the purpose. The dogs are not taught to seize the game, but to nip his heels, yelp round him, and retard his progress until the hunters come up and dispatch him with their rifles. Common yelping curs possessed of the requisite pluck are best adapted for the purpose. Large dogs with sufficient courage to seize a bear would have but a small chance with him, for he could disable them with one blow of his powerful paw. Another way of hunting is to track Bruin to his winter den, and either smoke or dig him out, when he may be dispatched by a blow on the head with the poll of an ax as he struggles out. Various kinds of traps, set-guns, and dead-falls are also employed against him. A very efficient means of capture is a steel trap, with double springs so powerful that a lever is necessary in setting it. The trap is placed in runs or pathways known to be frequented by bears, and concealed, care being taken not

SKULL, FORE AND HIND PAWS OF THE BLACK BEAR.

to handle the trap. A stout chain, with a grapnel or a large block of wood attached, is fastened to the trap. Even with this an old bear often manages to escape altogether, his sagacity teaching him to return and liberate the grapnel or block whenever it catches upon anything and checks him. He dies eventually, of course, if unable to free him-

reach it. The string has connection with a piece of wood which props up the dead-fall, consisting of a heavy log of beech or birch timber, weighted with other logs. When the bear pulls at the bait, the prop is drawn from under the heavy timber, which falls across his back. It sometimes happens that the hunter, to his discomfort, finds that his dead-

BEAR AND CUBS.

self from the trap, but in some cases he has been known to gnaw off a part of his paw and leave it in the trap. This mode of capture is open to the charge of cruelty, as the bear is usually caught by a paw, and sometimes by the snout, and the injury not being immediately fatal, the animal may die a lingering death of great agony. The set-gun, if properly arranged, kills the bear instantly. The gun is placed in a horizontal position, about on a level with a bear's height; one end of a cord is fastened to the trigger, and brought forward in such a way that when the bait is attached to the other end of the cord it hangs over the muzzle of the gun, and the least pull on the bait discharges the gun, which is protected from the weather by a screen of bark. The ordinary dead-fall consists of a number of stout poles driven in the ground in the form of a U. In front of the opening is placed a heavy log. The bait is suspended from a string within the inclosure, so that it will be necessary for the bear to place his fore legs over the log in order to

fall has proved fatal to one of his own or his neighbors' cattle.

In the autumn, bear-hunters take advantage of Bruin's known partiality for raspberries, blackberries, and blueberries, and set traps and dead-falls in the approaches to the patches. He also frequents the beech-forests, and his expertness as a climber enables him to obtain the rich mast on which he grows corpulent. In the spring, when he first comes from his winter quarters, he feasts upon the ants and grubs he discovers by industrious digging, or by turning over decayed logs. Later in the season, when the herrings and alewives run up the streams to spawn, Bruin turns fisherman, and captures the fish by intercepting them as they pass over shallow places, and scooping them out with his paws. His taste for pork and molasses often encourages him to visit the camps of lumbermen.

If captured when very young and carefully trained, the black bear becomes tame, but I doubt if he ought to be trusted as a pet. My own efforts to tame young bears have not

SACKING A LUMBER CAMP.

always proved successful. It is unpleasant, on returning from a journey, to find your house surrounded by the neighbors armed with old muskets and pitchforks, the windows broken, the gardens trodden down, your family imprisoned in the dining-room, and to be told by your man-servant, who has prudently kept outside of the house, that the pet bear, in a state of ferocity, is in possession. Nevertheless, if one is willing to endure that sort of thing, a vast amount of amusement can be got out of a tame bear.

I really think that Bruin possesses the sense of humor; at all events his actions point that way, and there is no doubt that he is extremely cunning and observing. I once had an English friend visiting me, who played the flute. He was in the habit of marching up and down, while playing, near a tame bear I had at the time. The bear had a piece of stick about two feet long, which he tossed about for amusement. After a time, he came to handle the stick very much as my friend did his flute. This annoyed my sensitive friend, and in revenge he teased the bear with uncouth noises. Bruin

sniffed and whined, and waited his opportunity for delivering a tremendous blow with his paw at his enemy, whose tall hat was knocked completely over his eyes. He escaped being scalped by dropping flat and rolling out of the reach of the bear. This bear spent much of his time in the tree to which he was chained, and when climbing usually got his chain twisted over and under the branches in a most intricate manner, but never failed to take out every turn as he descended. A friend who owned a tame bear told me that, for a long time, he could not account for the mysterious way in which the poultry disappeared. Observing, at different times, a good many feathers around Bruin's pole, he began to suspect that the bear was the culprit. Close watching confirmed his suspicions. When Bruin thought he was unobserved, he would seize any unfortunate hen or chicken within his reach and devour it; but if any one approached before he could complete the meal, he would sit upon his prey until the danger of discovery had passed. He was betrayed, at last, by the cackling of an old hen, that he had failed to silence.

THE DANISH SKATE-SAIL.

WHEN the ice closes the Baltic ports, the pilots and sailors of the island of Amager, opposite Copenhagen, devote a part of their enforced leisure to ice-boating and skate-sailing. Little attention has been paid to the latter sport in this country, but in Canada a skate-sail has been in use,—to manage which, however, two skaters are necessary. It is a bungling contrivance, and lacks that yacht

obtuse angle, sliding down easily instead of falling with star-making directness. The sensation when going at full speed is peculiar. At first, you feel that you have lost your hold on the earth, and your whole attention is drawn downward toward your skates; you wish they were heavier, so as to afford more ballast. But soon you gain confidence, a feeling of security takes possession of you, and if the ice is favorable and the road clear, you will attain what must be very similar to the sensation of flying. You seem scarcely to touch the ice, which appears streaked. Now you must keep your ankles stiff, but the rest of the body must be held easily poised and under ready control.

Simplicity of mechanism is the most noticeable feature of the Danish skate-sail, whose parts and dimensions are indicated by the diagram (Figure 1). For the material of the sail, use light cotton duck or heavy drilling. Fancy patterns of the cloth commonly used for awnings may be used with picturesque effect, such as may be seen in the sails of the small craft of Mediterranean ports. The sail is cut like a "square rigger's" lower sail and top-sail, the two being in one piece. The diagram gives the

FIG. 1.—DIAGRAM OF THE SAIL.

and clipper-like trimness which is always the pride of a sailor whether on the ice or on the water. This objection cannot be urged against the Danish rig, which, under sail, has a decidedly rakish aspect. Moreover, in handling it there is no need of consulting with another man, as with the Canadian sail, when you wish to "luff" or "square away" before the wind. With the Danish rig you are boat, sail, captain, and crew, all in one. It will lay within five points of the wind, and any evolution which an ice-boat or yacht can perform, the skate-sailor can also execute, in less time, in less space, and with equal grace. Although this sail can be managed by any boy large enough to skate, there is sport enough in using it to afford excitement for a strong man, whose skill will be taxed in keeping the sail "ship-shape" and in acquiring the greatest speed possible under given conditions. Some falls will naturally occur, but I have never heard of a serious accident to a skate-sailor. When he does fall, it is generally backward, which means against the wind, the sail thus helping to let him down easily. If he loses his balance while under great headway, owing to the high velocity, he will strike the ice at a more or less

obtuse angle, sliding down easily instead of falling with star-making directness. The sensation when going at full speed is peculiar. At first, you feel that you have lost your hold on the earth, and your whole attention is drawn downward toward your skates; you wish they were heavier, so as to afford more ballast. But soon you gain confidence, a feeling of security takes possession of you, and if the ice is favorable and the road clear, you will attain what must be very similar to the sensation of flying. You seem scarcely to touch the ice, which appears streaked. Now you must keep your ankles stiff, but the rest of the body must be held easily poised and under ready control. Simplicity of mechanism is the most noticeable feature of the Danish skate-sail, whose parts and dimensions are indicated by the diagram (Figure 1). For the material of the sail, use light cotton duck or heavy drilling. Fancy patterns of the cloth commonly used for awnings may be used with picturesque effect, such as may be seen in the sails of the small craft of Mediterranean ports. The sail is cut like a "square rigger's" lower sail and top-sail, the two being in one piece. The diagram gives the dimensions of a sail for a man who carries one hundred and forty pounds of ballast under his jacket. But the sail can be made smaller or larger in proportion to the weight and strength of the wearer. The sail here indicated is seven feet wide at the bottom; it tapers slightly to a width of six feet two inches at the main or shoulder yard, and to a width of five feet ten inches at the top-sail-yard. The height of the sail above the shoulder-yard is two feet, and the depth below the shoulder-yard is three feet eight inches. The sail should have a hem an inch wide at the edges, and square laps at the lower corners, to which are fastened the ends of

FIG. 2.—BEFORE THE WIND UNDER FULL SAIL.

FIG. 3.—BEFORE THE WIND. TOP-SAIL DOWN.

the hand-sprits. Double eyelets are made where the shoulder-yard crosses the sail, through which cords bind the sail to the yard at intervals of six inches. Single eyelets, six inches apart, at the top of the sail, serve to bind the top-sail-yard to the sail. Reef-points should be fastened on a line midway between the yards, and on both sides of the sail. By loosening the cord that in a cross knot binds the top-sail-yard to the topmast, the top-sail may be rolled on the top-sail-yard to the reef-points, and the yard tied there to the topmast; or if the top-sail is not needed at all, it may be completely wound up and fastened at the ends to the shoulder-yard. The yards and hand-sprits should be of some light, tough wood, like thin spruce-poles. Bamboo poles, such as are used for fishing-rods, might be found serviceable. The yards should be about four inches longer (two inches on a side) than the width of the sail where they are bound to it. The top-sail-yard may be lighter than the shoulder-yard. The topmast, which fastens to the middle of the shoulder-yard by a gaff,—which may be of thin strap-iron or stout leather,—may be extended beyond the top-sail-yard so as to form a top-gallant-mast, from which the sailor may fly a pennant. The hand-sprits should be between six and a half and seven feet long. Two stout straps or heavy strings, fastened by nooses to the shoulder-yard on each side of the gaff, serve to fasten the rig to the sailor. The cords are passed over the shoulders, crossed over the breast, and after being carried around the waist at the back are brought forward and tied at the belt.

It will be observed in the pictures showing

the skaters under sail, that the hand-sprits serve as “tacks” and “sheets” (in nautical phrase the ropes fastened to the lower ends of sails to hold the sail in position for tacking, and to extend and hold in position the lower part of the sail). The rigid hand-sprits enable the skater to shift sail with rapidity and precision, and to keep it in the required position. The skater should have some experience with a reefed sail in a light breeze before attempting to carry full sail in a stiff breeze. Figure 2 shows the skater going full sail before the wind. The top-sail may be lowered (Figure 3) by running slightly into the wind, after which the skater may go before the wind, or on either tack, with the top-sail down. He may raise the top-sail at pleasure simply by bending the body forward, and allowing the wind to get under the top-sail. When sailing “on the wind,” or on any course except “right away” before the wind, the windward foot should be a little in advance of the leeward foot, as seen in the starboard or right tack (Figure 4) and the port or left tack (Figure 6). The knees should be bent slightly, as that position assists in keeping one’s balance. When “going about” in a stiff breeze (Figure 5), preparatory to changing the course (going on a new tack), the skater should “luff up” into the wind, and allow the top-sail and main-sail to fly out astern. With the speed acquired he will make a considerable distance windward before he swings around and is ready to set sail on the other tack. As the top-sail is supported

FIG. 4.—ON STARBOARD TACK.

FIG. 5.—“GOING ABOUT.”

by the topmast leaning against the head, it is advisable to wear a soft, thick cap.

The degree of speed attainable by an expert skate-sailor is lower than the speed of the fastest ice-boats only because of the inability of the skater to keep his full weight upon the ice, except in sailing before the wind. But with the wind “abeam” or on the quarter, the skater must lean to windward to preserve his balance, and a part of his weight is shifted thereby from the ice to the wind-supported sail, and his hold upon the ice is weakened. This disadvantage can be partly overcome by bending the head and allowing the top-sail to press downward on the neck and shoulders. When sailing with a stiff breeze abeam, if the skater should meet another craft on the other tack, he should go either to the windward of him or give him plenty of room, for if he allows the stranger to pass him close to windward, the stranger will take the wind out of his sail, which will place him in danger of capsizing. Skate-sailing can be practiced on ice too rough for fancy or common skating; in fact, very hard and smooth ice is not the best for this sport, and even a little snow is no obstacle to good sailing.

The sail which served as the model for these drawings was made more than twenty-five years ago. It is of stout cotton duck, the spars are spruce-poles, and the gross weight is seven pounds. When rolled up in shape for carrying, it is only a little more bulky than an old-fashioned cotton umbrella. As to skates, the old-fashioned kind with long, thin, grooved blades and square heels are the best, but a club-skate will answer the purpose very well.

One sunny, breezy, winter day, I joined a small party of Danish skate-sailors in a cruise

on the sound between Denmark and Sweden. Three or four miles from land we espied at a distance something black on the ice, for which we steered, supposing it to be a wounded wild duck or goose. It proved to be a large fox, which was out after wounded water-fowl. When he saw us bearing down upon him he made for the nearest land, but was soon overhauled and nearly surrounded. We had no difficulty in following him at his greatest speed. When we came too close he would turn his head and snap at our legs. While we were thus flying over the ice, discussing between ourselves what a nice skating-cap his pelt would make, and dividing in advance the brush, pelt, and nose, Reynard suddenly came to a full stop, while we all flew past him. He then broke for the land, and nearly reached it before we could tack and come up with him again. We enjoyed the chase too much to dispatch him at once. But his foxship soon learned the principles of skate-sailing, and watching his opportunity, he dodged us again, set his course nearly into the wind's eye, where we could not follow him, and nose, pelt, and brush soon disappeared in the dry grass on the shore. Danish sportsmen sometimes use

FIG. 6.—ON THE PORT TACK.

the skate-sail to carry them to duck and goose hunting-grounds, where, as I have done with success, they can make shooting-boxes out of the sails.

LORD BEACONSFIELD.

THOSE who talk, as we constantly hear people do, of the uncertainty of history, seldom reflect that such uncertainty as belongs to it is only a part of the difficulty which every human being finds in ascertaining the truth about any other. Nobody quite knows himself, though the Greek sage has directed us all to the inquiry; how much less can he know any one else? We find different views entertained, different judgments passed by historians on the famous men who have gone before us, just because their characters, like all characters, presented so many different aspects, and the larger the figure the more striking these differences. In most instances, it would be found that the difficulty of forming a fair and penetrating estimate of a man is greater, rather than less, in his own time than it is to those who come after; the criticisms of history are truer than the criticisms of contemporaries.

This remark is suggested by the thought which has lately risen in many minds, what fifty years hence people will say about Lord Beaconsfield. He will seem a strange problem. Opposite views regarding his aims, his ideas, the sources of his power, will divide the learned, and perplex the ordinary reader. Men will complain that history cannot be good for much when, with the abundant materials at her disposal, she cannot frame a consistent theory of one who played so great a part in so ample a theater. Yet the riddle will not be harder, it will not be so hard, as it is for us, from among whom the man has even now departed. Of those who in England know or care at all about public affairs, perhaps a third part revere him as a profound thinker and a lofty character, animated by sincere patriotism. A still larger number hold him for no better than a cynical charlatan, bent through life on his own advancement, who permitted no sense of duty, no human tenderness or compassion, to stand in the way of his insatiate ambition. The rest do not know what to think. They feel in him the presence of power; they feel also something that repels them. They cannot understand how a man who seemed hard and unscrupulous could win so much attachment and command so much obedience. His death, following quickly upon the fall of his government, has, of course, disposed people to speak more leniently regarding him; but it would be a mistake to suppose that it, or the details of

his private life (which after all have been few and uninteresting) that have been made public, have substantially altered the general sentiment, or toned down the sharpness of the contrast between the friendly and hostile views of his character. Many years must elapse before one who praises or blames him will cease to be suspected, in England at least, of doing so from a merely partisan point of view. The present writer is sensible that he will incur this suspicion. He does not wish to conceal that he belongs to the opposite party, and entertained an unfavorable opinion of Lord Beaconsfield's policy in general, and particularly of that foreign policy which has latterly been a main theme of controversy in England. Nevertheless, he has sought as far as possible to set politics on one side, and look at Lord Beaconsfield as a man instead of as a party leader, endeavoring rather to explain his policy by his personal qualities and the circumstances of his position than to proceed from a condemnation of his public acts to a judgment upon their author. Of course, one who holds many of those acts which his followers applauded to have been grave mistakes, must necessarily have an estimate of his wisdom and foresight different from theirs. All I desire is to explain that I do not write for the sake of attacking his policy and party, but in the sincere desire of trying to approach to such a view of his personality as historians may take when half a century has softened the rancors of the present. Human nature is far more interesting, far better worth studying, than any problem of politics.

First, a few words about the salient events of his life—not by way of writing a biography, but to explain what follows.

Mr. Disraeli was born in London, in 1804. His father was Isaac Disraeli, a literary man of cultivated tastes and independent means, whose "Curiosities of Literature" may be found in most good libraries. He belonged to that division of the Jewish race which is called the Sephardim, and traces itself to Spain and Portugal; but he had ceased to frequent the synagogue,—had, in fact, broken with his coreligionists. He had the access to good society, so that the boy saw eminent and polished men from his early years, and, soon after he quitted school, began to make his way in drawing-rooms where he met the wittiest and best-known people of the day. Samuel Rogers, the poet, took a fancy to him, and had him

baptized at the age of nine. He was often to be seen with Count d'Orsay and Lady Blessington. It is worth remarking that he never went either to a public school or a university. In England, school-masters and the writers of school-boy's books have succeeded in persuading the public that there is no preparation for success in actual life comparable to the training of a great school. Such a superstition is sufficiently refuted by the examples of men like Pitt, Macaulay, Bishop Wilberforce, Disraeli, Cobden, and Bright. He first appeared before the public in 1826, when he published "*Vivian Grey*," an amazing book to be the production of a youth of twenty-two. Other novels—"The Young Duke," "*Venetia*," "*Contarini Fleming*," "*Henrietta Temple*"—maintained without greatly increasing his literary reputation during the next ten years. Then came two political stories, "*Coningsby*" and "*Sybil*," in 1844 and 1845, followed by "*Tancred*" in 1847; with a long interval of silence, till, in 1870, he produced "*Lothair*," in 1880 "*Endymion*." Besides these he published in 1839 the tragedy of "*Alarcos*," and in 1835 the more ambitious "*Revolutionary Epic*," neither of which had much success. In 1829 he took a long journey through the East, visiting Constantinople, Syria, and Egypt, and it was, no doubt, then, in lands peculiarly interesting to a man of his race, that he conceived those ideas about the East and its mysterious influences which figure largely in some of his stories, notably in "*Tancred*," and which in 1878 had no small share in shaping his policy and that of England. Meanwhile, he had not forgotten the political aspirations which we see in "*Vivian Grey*." In 1832, just before the passing of the Reform Bill, he appeared as candidate for the petty borough of High Wycombe in Buckinghamshire, and was defeated by a majority of twenty-three to twelve, so few were the voters in many boroughs of those days. After the Bill had enlarged the constituency, he tried his luck twice again, in 1833 and 1835, both times unsuccessfully, and came before two other boroughs also, Marylebone and Taunton, though in neither case did a contest take place. Such activity in a youth with little backing from friends and comparatively slender means marked him already as a man of spirit and ambition. His fourth attempt was lucky. At the general election of 1837 he was returned as member for Maidstone. His political professions during this period have been keenly canvassed; nor is it easy to form a fair judgment on them. In 1832 he had sought and obtained recommendations from Joseph Hume and Daniel O'Connell, and people had therefore set him down as a radical. Although, however, his professions of politi-

cal faith included dogmas which, like triennial parliaments, the ballot, and the imposition of a land-tax, were part of the so-called radical programme, still there was a vagueness about some of his utterances, and an obvious aversion to the conventional Whig way of putting things, which showed that he was not a thorough-going adherent of any of the then existing political parties, but was trying to strike out a new line for himself, and attract men's minds by the promise of something fresher and more striking than the recognized schools offered. In 1834, his hostility to Whiggism was becoming more pronounced, and a tenderness for some Tory doctrines more discernible. Finally, in 1835, he appeared as an avowed Tory, accepting the regular creed of the party, declaring himself a follower of Sir Robert Peel, but still putting forward a number of views peculiar to himself, which he developed not only in his speeches, but in his novels. "*Coningsby*" and "*Sybil*" were meant to be a kind of manifesto of the Young England party—a party which can hardly be said to have ever existed out of his own mind, though a small knot of aristocratic youths who caught up and repeated his phrases seemed to form a nucleus for it.

The fair conclusion from his deliverances during these early years is that he was at first much more of a Liberal than a Tory, yet with a distinctive position which made him appear in a manner independent of both parties. The old party lines seemed to have been almost effaced by the Reform Bill struggle; and it was natural for a bold and inventive mind like his to imagine a complete new departure, and put forward a programme in which radicalism was mingled with other ideas of a different type. But when it became clear after a time that the old divisions still subsisted, and that such a distinctive position as he had conceived could not be maintained, he then, having to choose between one or other of the two recognized parties, chose the Tories, dropping some doctrines he had previously advocated which were inconsistent with their creed, but retaining much of his peculiar way of looking at political questions. How far the change which passed over him was a natural development, how far due to interested motives, there is little use discussing: perhaps he did not quite know himself. He seems to have received more blame for it at the time than he deserved, and in one thing he was consistent then, and remained consistent ever after—his hearty hatred of the Whigs. There was something about the dry, cold pride of the great Whig families, their stiff constitutionalism, their belief in political economy, perhaps also their alliance with the Nonconformists, which roused all

the antagonisms of his nature, personal and oriental.

When he entered the House of Commons he was already well known to fashionable London, partly by his striking face and his powers of conversation, partly by his novels, whose satirical pungency had made a noise in society. He had also become, owing to his apparent change of front, the object of much adverse criticism, and a quarrel in which he became involved with Daniel O'Connell, in the course of which he challenged the great Irishman to fight a duel, each party having described the other with a freedom of language which would now be thought scurrilous, had made him, for a time, the talk of the political world. Thus, there was much more curiosity evoked by his first speech than usually awaits a new member. It was unsuccessful, not from any want of cleverness, but because its tone did not suit the temper of the House of Commons, and because the hostile audience sought to disconcert him by their laughter. Undeterred by this ridicule, he continued to speak, though in a less ambitious and artificial vein, till after a few years he had become one of the best known among the unofficial members. At first, no one had eulogized Peel more warmly, but after a time he edged a little away from the minister, whether repelled by his coldness, which showed that in that quarter no promotion was to be expected, or shrewdly perceiving that Peel was taking a line which would separate him from the bulk of the Conservative party. This happened in 1846, when Peel, convinced that the import duties on corn were economically unsound, proposed their abolition. Mr. Disraeli, who, since 1843, had taken repeated opportunities of firing stray shots at the powerful Prime Minister, now bore a foremost part not only in attacking him, but in organizing the Protectionist party, and prompting its leader, Lord George Bentinck. In embracing free trade, Peel carried with him his own personal friends and disciples, men like Gladstone, Sidney Herbert, Sir James Graham, and Cardwell, and some sixty or seventy others, the intellectual *élite* of the Tory party. The far more numerous section who clung to protection had numbers, wealth, respectability, cohesion, but neither brains nor tongues. An adroit tactician and incisive speaker was of priceless value to them. Such a man they found in Mr. Disraeli, while he gained an opportunity beyond his previous expectations of playing a leading part in the eyes of Parliament and the country. In 1849, Lord George Bentinck, who had been Mr. Disraeli's mouth-piece rather than an independent leader, died, leaving our hero indisputably the first

man in the Protectionist party. In 1850, Peel, who might perhaps have brought that party back to its allegiance to him, was killed by a fall from his horse. The Peelites drifted more and more toward Liberalism; so that when Lord Derby, who, in 1852, had been commissioned as head of the Tory party to form a ministry, invited them to join him, they refused to do so, imagining him to be still a Protectionist, and resenting the behavior of that section to their master. Being thus unable to find one of them to lead his followers in the House of Commons, Lord Derby turned to Mr. Disraeli, giving him, with the leadership, the important office of Chancellor of the Exchequer. The appointment was thought a strange one, because Mr. Disraeli brought to it absolutely no knowledge of finance and no official experience. He had never been so much as an Under-Secretary. The Tories themselves murmured that one whom they still regarded as an adventurer should be raised to so high a place. After a few months Lord Derby's ministry fell, defeated on the Chancellor of the Exchequer's Budget, which had been vehemently attacked by Mr. Gladstone. This was a beginning of that protracted duel between him and Mr. Disraeli which has lasted down till 1881.

For the following fourteen years, Mr. Disraeli's occupation was that of a leader of opposition, varied by one brief interval of office in 1858. His party was in a permanent minority in the country, so that nothing was left for its leader but to fight with skill, courage, and resolution a series of losing battles. This he did with admirable tenacity of purpose. Once or twice in every session he used to rally his forces for general engagement, and though always defeated, he never suffered himself to be dispirited by defeat. During the rest of the time he was keenly watchful, exposing all the mistakes of the successive Liberal governments in domestic affairs, and when complications arose in foreign politics, always professing, and generally manifesting, a patriotic desire not to embarrass the Executive, lest the common interests of the country should suffer. Through all these years he had to struggle, not only with a hostile majority in office, but also with secret disaffection among his own followers. Many of the landed aristocracy could not bring themselves to acquiesce in the leadership of a new man, of foreign origin, whose career had been so strange, whose ideas they found it hard to follow. Ascribing their long exclusion from power to his presence, they more than once conspired to dethrone him. But as it happened, there never arose any Conservative speaker in the House of Com-

mons of gifts at all comparable to those which in him had been matured and polished by long experience, while he had the address to acquire an ascendancy over the mind of Lord Derby, still the titular head of the party, who, being a man of straightforward character, high social position, and brilliant oratorical talents, was, nevertheless, somewhat lazy and superficial, and therefore disposed to lean on his lieutenant in the Lower House, and to borrow from him those astute schemes of policy which he was fertile in devising. Thus, by Lord Derby's support, and his own imperturbable confidence, he frustrated all the plots of the malcontent Tories. New men came up who had not witnessed his earlier escapades, but knew him only as the bold and skillful leader of their party in the House of Commons. He made himself personally agreeable to them, encouraged them in their first efforts, diffused his ideas among them, stimulated local organization, and held out hopes of great things to be done when fortune should at last revisit the Conservative banner.

While Lord Palmerston lived, these exertions seemed to bear little fruit. That minister had, in his later years, settled down into a sort of practical Toryism, and both parties acquiesced in his rule. But, on his death, the scene changed. Lord Russell and Mr. Gladstone brought forward a Reform Bill strong enough to evoke the latent Conservative feeling of a House of Commons which, though nominally Liberal, had been chosen under Palmerstonian auspices. The defeat of the bill was followed by the resignation of Lord Russell. Lord Derby and Mr. Disraeli came into power, and, next year, carried a Reform Bill which, as it was finally shaped in its passage through the House, really went further than Lord Russell's had done, enfranchising a greater number of the working classes. To have carried this bill remains the greatest of Mr. Disraeli's triumphs. He had to do it in a hostile House of Commons by wheedling a section of the Liberal majority, against the appeals of their legitimate leader. He had also to persuade his own followers to support a measure which they had all their lives been condemning, and which was, or, in their view, ought to have been, more dangerous to the Constitution than the one which they and the moderate Whigs had thrown out in the preceding year. He had, as he happily and audaciously expressed it, to educate his party into doing the very thing which they (though certainly not he himself) had always denounced. The process was scarcely complete when the retirement of Lord Derby, whose health had given way, opened his path to the premiership. He dissolved Parliament, expecting to

receive a majority from the gratitude of the working class whom his bill had admitted to the suffrage. To the boundless disgust of the Tories, a Liberal House of Commons was again returned, which drove him and his friends once more into the cold shade of opposition. He was now sixty-four years of age, had suffered an unexpected and mortifying discomfiture, and had no longer the great name of Lord Derby to cover him. Disaffected voices were again heard among his own party, while the Liberals, re-installed in power, were led by the rival whose genius and unequaled popularity in the country made him for the time omnipotent. Still Mr. Disraeli was not disheartened; he fought the battle of apparently hopeless resistance with his old tact, wariness, and tenacity, losing no occasion for any criticism that could damage the measures—strong and large measures—which Mr. Gladstone's government brought forward.

Before long the tide turned. A reaction in favor of Conservatism set in, which grew so fast that, in 1874, the general election gave, for the first time since 1846, a decided Conservative majority. Mr. Disraeli became again Prime Minister, and now a Prime Minister no longer on sufferance, but with the absolute command of a dominant party, rising so much above the rest of the cabinet as to appear the sole author of its policy. The use he made of his power, especially in guiding the action of England abroad, is a matter of such recent and embittered controversy that any criticism on it might appear to be dictated by party animosity. Enough to say that his policy in the affairs of the Turkish East, in Afghanistan, in South Africa, while it received the enthusiastic approval of the military class and the richer people generally, raised no less vehement opposition in other sections of the nation, and especially in those two which, when heartily united and excited, are masters of England—the Nonconformists and the working classes. An election fought with unusual heat left him in so decided a minority that he resigned office in April, 1880, without waiting for an adverse vote in Parliament. A year later he died.

Here is a wonderful career, even more wonderful to those who live in the midst of English politics and society than it can appear to observers in other countries. A man with few external advantages, not even that of education at a university, where useful friendships are formed, with grave positive disadvantages in his Jewish extraction and the vagaries of his first years of public life, presses forward, step by step, through slights and disappointments which retard but never dishearten him, assumes as of right the leadership of a party,—the aristocratic party, the party peculiarly

suspicious of new men and poor men,—wins a reputation for sagacity which makes his early follies forgotten, becomes in old age the favorite of a court, the master of a great country, one of the three or four arbiters of Europe. We have here more than one problem to solve, or, at least, a problem with more than one aspect. What is the true character of the man who has sustained such a part? Has he held any principles, or has he merely played with them as counters? By what gifts or arts did he win such a success? Has there been really a mystery behind the veil which he has delighted to wrap around him? And how, being so unlike the Englishmen his lot was cast among, did he so fascinate and rule them?

Imagine a man of strong will and brilliant intellectual powers, belonging to an ancient and persecuted race, who finds himself born in a foreign country, amid a people for whose ideas and habits he has no sympathy and little respect. Suppose him proud, ambitious, self-confident; too ambitious to rest content in a private station, so self-confident as to feel sure of winning whatever he aspires to. To achieve success, he must bend his pride, must use the language and humor the prejudices of those he has to deal with; his pride avenges itself by secret scorn or scarcely disguised irony. Accustomed to observe things from without, he discerns the weak points of all political parties, the hollowness of institutions and watchwords, the instability of popular passion. If his imagination be more susceptible than his emotions, his intellect more active than his moral feelings, the isolation in which he stands and the superior insight it affords him may render him cold, calculating, self-interested. The sentiment of personal honor will remain, because his pride will support it: and he will be tenacious of the ideas which he has struck out, because they are his own. But for ordinary principles of conduct he may have small respect, because he has not grown up under the conventional morality of the time and nation, but has looked on it merely as a phenomenon to be recognized and reckoned with, because he has noted how much there is in it of unreality or pharisaism—how far it sometimes is from representing or expressing the higher judgments of philosophy. Realizing and perhaps exaggerating the power of his own intelligence, he will revolve in secret schemes of ambition wherein genius, uncontrolled by fears or by conscience, makes all things bend to its purposes, till the sympathies and scruples and hesitations of common humanity seem to him only parts of men's cowardice or stupidity. What success he will gain when he

comes to carry out such schemes in practice will largely depend on the circumstances he finds himself among, as well as on his gift for judging of them. He may become a Napoleon: he may fall in an imprudent collision with the law.

In some of his novels, and most fully in the earliest of them, Mr. Disraeli sketched a character and foreshadowed a career not altogether unlike that which has just been indicated. It would be unfair to treat as autobiographical—though some of his critics have done so—the picture of Vivian Grey. What it does show is that, at an age when his contemporaries were lads at college, absorbed in cricket matches or Latin verse-making, he had already meditated profoundly on the conditions and methods of worldly success, had rejected the ideal life of philosophy, had conceived of a character isolated, ambitious, intense, resolute, untrammelled by scruples, who molds men to his purposes by the sheer force of his intellect, humoring their foibles and luring them into his chosen path by the bait of self-interest.

To lay stress on the fact that Mr. Disraeli was by birth a Jew is not, though some of his political antagonists stooped so to use it, to cast any reproach upon him: it is only to note a fact of the utmost importance for a proper comprehension of his position. The Jews are still foreigners in England, not only on account of their religion, with its mass of ancient rites and usages, but also because they are filled with the memory of centuries of persecution, and perceive that in some parts of Europe the old spirit of hatred has not died out. The antiquity of their race, their sense of its purity and of the intellectual achievements of those ancestors whose unmixed blood flows in their veins, leads them to revenge themselves by a kind of scorn upon the upstart Western peoples where their lot is cast. Thus they are the more prone to mockery, such as in Heinrich Heine mingled itself with a poet's tenderness. Even while imitating, as the wealthier of them have latterly begun to imitate, the manners and luxury of those nominal Christians among whom they live, they retain their feeling of detachment, and so far from sharing, regard with a coldly observant curiosity the beliefs, prejudices, enthusiasms of the nations of Europe. The same passionate intensity which makes so much of the grandeur of the ancient Hebrew literature still lives among them, though often narrowed by ages of oppression, and gives them the peculiar effectiveness that comes from turning all the powers of the mind, imaginative as well as reasoning, into a single channel. They produce, in proportion to their

numbers, an unusually large number of able and successful men, as any one may prove by recounting the eminent Jews of the last thirty years. This success has usually been won in practical life, in commerce, or at the bar, or in the press (which over the European continent they so largely control); sometimes also in the higher walks of literature or art or science.

Mr. Disraeli had three of these characteristics of his race in full measure—detachment, intensity, scorn. Nature gave him a resolute will, a keen and precociously active intellect, a vehement individuality,—that is to say, a consciousness of his own powers, and a determination to make them recognized by his fellows. In some men, the passion to succeed is clogged by the fear of failure; in others, the sense of their greatness is self-sufficing and indisposes them to effort. But with him ambition spurred self-confidence, and self-confidence justified ambition. He grew up in a cultivated home, familiar not only with books but with the brightest and most polished men and women of the day, whose conversation sharpened his wits almost from childhood. No religious influences worked upon him,—for his father had ceased to be a Jew in faith without becoming even nominally a Christian,—and there is nothing in his writings (of his private life it would be presumptuous and unbecoming to speak) to show that he had ever felt anything more than an imaginative, or, so to speak, historical interest in religion. Thus his development was purely intellectual. The society he moved in was a society of men and women of the world—witty, fashionable, without seriousness or reverence. He felt himself no Englishman, and watched English life and politics as a student of natural history might watch the habits of bees or ants. English society was then, and perhaps is still, more complex, more full of inconsistencies, of contrasts between theory and practice, between appearances and realities, than that of any other country. Nowhere so much dullness among the noble, so much pharisaism among the virtuous, so much vulgarity among the rich, mixed with so much real earnestness, benevolence, and love of truth; nowhere, therefore, so much to seem merely ridiculous to one who looked at it from without, wanting the sympathy which comes from the love of mankind, or even from the love of one's country. It was natural for a young man with such gifts to mock at what he saw. But he would not sit still in mere contempt. The thirst for power and fame gave him no rest. He must gain what he saw every one around him struggling for. He must triumph over these people whose follies amused him; and the

sense that he perceived and could use their follies would add zest to his triumph. He might have been a great satirist; he resolved to become a great statesman. For such a career, his Hebrew detachment gave him some eminent advantages. It enabled him to take a cooler, a more scientific, view of the social and political phenomena he had to deal with. He was not led astray by party cries. He did not share vulgar prejudices. He calculated the forces at work as an engineer calculates the strength of his materials, the strain they have to bear from the wind and the weights they must support. And what he had to plan was not the success of a cause, which might depend on a thousand things out of his ken, but his own success, a simpler matter.

A still greater source of strength lay in his Hebrew intensity. It would have pleased him, so full of pride in the pure blood of his race, to attribute to that purity the singular power of concentration which the Jews undoubtedly possess. They have the faculty of throwing the whole stress of their natures into the pursuit of one object, fixing their eyes on it alone, sacrificing to it other desires, clinging to it even when it seems unattainable. He was only twenty-eight when he made his first attempt to enter the House of Commons. Three ignominious repulses did not discourage him, though his means were but scanty to support such contests; and the fourth time he succeeded. When his first speech in Parliament had been received with laughter, and the world was congratulating itself that this adventurer had found his level, he calmly told them that he had always ended by succeeding in whatever he attempted, and that he would succeed in this, too. He received no help from his own side, who regarded him with much suspicion, but forced himself into prominence, and at last to leadership, by his complete superiority to rebuffs. Through the long years in which he had to make head against a majority in the House of Commons, he never seemed disheartened by his repeated defeats, never relaxed the vigilance with which he watched his adversaries, never indulged himself (though he was naturally indolent and often in poor health) by staying away from Parliament, even when business was slack; never missed an opportunity for exposing a blunder of his adversaries, or commanding the good service of one of his own followers. The same curious tenacity was apparent in his ideas. Before he was twenty-two years of age he had excogitated a theory of the Constitution of England, of the way England should be governed at home and her policy directed abroad, from which he hardly swerved through all his later

life. Often as he was accused of inconsistency he probably believed himself to be, and in a sense he was, exceptionally true to the same set of views; and one could discover from the phrases he employed how he was really following out these old notions, even when his conduct seemed opposed to the traditions of his party. The weakness of intense minds is their tendency to narrowness, and this he had in so far that, while always ready for new expedients, he was not easily accessible to new ideas. Indeed, the old ideas were too much a part of himself, too much stamped with his own individuality, to be forsaken or even varied. He did not love knowledge, he did not enjoy speculation for its own sake; he valued views as they pleased his imagination or as they carried practical results with them; and having framed his theory once for all and worked steadily upon its lines, he was not the man to admit it had been defective, and to set himself in later life to repair it. His pride was involved in proving it correct by applying it.

With this resolute concentration of purpose there went an undaunted courage—a quality less rare among English statesmen, but eminently laudable in him, because for great part of his career he had no one to lean upon, no family or party connections to back him up, but was obliged to face the world with nothing but his own self-confidence. So far from ever seeking to conceal his Jewish origin, he openly displayed his pride in it, and refused all support to the efforts which the Tory party made to maintain the exclusion of Jews from Parliament. Nobody showed more self-possession and (except on one or two occasions) more perfect self-command in the fierce strife of Parliamentary life than this suspected stranger. His enemies learnt to fear one who never feared for himself; his followers knew that their chief would not fail them in the hour of danger. His very face and bearing had in them an impassive calmness which magnetized those who watched him. He would sit for hours on his bench in the House of Commons, listening with eyes half-shut to furious assaults on himself and his policy, not showing by the movement of a muscle that he had felt a wound; and when he rose to reply would discharge his sarcasms with an air of easy coolness. How far this indifference was simulated remains still in dispute, for it was his pleasure to surround himself with mystery, and appear too self-reliant to need a confidant.

Ambition such as his could not afford to be scrupulous, nor have his admirers ever claimed scrupulosity as one of his merits. He who sets power and fame before him as the great

objects of his pursuit, will think less and less about the lawfulness of the means he employs. From such as are obviously low and dishonorable, pride may hold him back; others he may reject because he knows that the opinion of his fellows, those whose good-will and good word he must secure, would condemn them, and him for using them. But he will not allow kindness or compassion to stand in his way. A strenuous will, if it be not controlled by moral principles, is a relentless will, and crushes those who bar its path. Truth, also, will be apt to come badly off. To a politician, who must necessarily, however honest, have many facts in his knowledge, or many plans in his mind, which he cannot reveal, the temptation to put questioners on a false scent, and to seem to agree where he really dissents, is at all times a strong one. No one can hope altogether to escape in such a life the subsequent censure of his own conscience. The wonder rather is that, all things considered, the standard of truthfulness among English public men should be so high as it is. Lord Beaconsfield certainly fell short of it. There is no use concealing the fact that people did not take his word for a thing as they would have taken the word of the Duke of Wellington, or Lord Derby, or Lord Russell, or even of that not very strict moralist, Lord Palmerston. Instances were not wanting even as late as 1877. His behavior toward Sir Robert Peel, whom he plied with every dart of sarcasm, after having shortly before lavished praises on him, and sought office under him, has often been commented on. Mr. Disraeli was himself (as those who knew him have often stated) accustomed to justify it by observing that he was then an insignificant personage, to whom it was of paramount importance to attract public notice and make a political position; that the opportunity of attacking Peel, Prime Minister, yet disliked by his own party on account of his change of opinion on the Corn Laws, was too good a one to be lost; and that he was therefore obliged to assail him, though he had himself no particular attachment to the Corn Laws, and believed Peel to have been a *bona fide* convert. It was therefore no personal resentment against Peel, but merely the exigencies of his own career, that drove him to this course, whose fortunate result proved the soundness of his calculations.

This defense will not surprise any one who is familiar with Lord Beaconsfield's novels. They are as far as possible from being immoral; that is to say, there is nothing in them unbecoming or corrupting. Honor, friendship, love, are all recognized as powerful and worthy motives of human conduct. That which

is wanting is the sense of right and wrong. Very rarely does any one of his personages ask himself whether such and such a course is right. They move in a world which is polished, agreeable, dignified, averse to baseness and vulgarity, but in which conscience and religion do not seem to exist—a world more like that of Augustus or Lorenzo de' Medici than like modern England. Though the men live for pleasure or fame, the women for pleasure or love, both are capable of making sacrifices at the altar of affection. But the idea of duty does not cross their minds.

The best excuse that can be made for Lord Beaconsfield's behavior toward Peel, and indeed for his political morality as a whole, is to be found in the circumstances of his position and early training. Few of us reflect how much of what we call our moral principles and rules of conduct we owe, not to settled convictions which we have reasoned out for ourselves, but to habit, association, the influence of those among whom our boyhood has been passed, the restraint imposed upon us by our family connections, our friends, the opinion of the society in which we move. This appears a truism, but it is one of those truisms which people are constantly forgetting to apply, and whose neglect leads them into judgments unduly harsh. Men who were brought up under religious influences, for example, when they have in later years ceased to regard the dogmas or the worship of Christianity, fancy that the morality on which they plume themselves is all their own, not reflecting that the habit may remain when the motive has departed. Mr. Disraeli was brought up neither a Jew nor a Christian. The elder people who took him by the hand when he entered life—people like Samuel Rogers and Lady Blessington—were not the people to give lessons in morality. Lord Lyndhurst, the first of his powerful political friends, and the man whose example most affected him, was, with all his admirable gifts, conspicuously wanting in political principle. Add to this the isolation in which the young man found himself outside the common stream of English life, not sharing its beliefs, perceiving with marvelous keenness the hollowness of much that passed for virtue and patriotism, and it is easy to understand how he should have been as perfect a cynic at twenty-five as painful experience of the world makes many at fifty. If he had been possessed by a great love of truth or of humanity, all might have come right; he would have quickly worked through his youthful cynicism to something higher. But pride and ambition, the pride of race and the pride of genius, left no room for these sentiments. His intellect was skeptical. His

heart was somewhat cold. Before him lay a world in which fame and power were to be won by the gifts which he knew himself to possess; the laurels of others would not let him sleep; and he threw all his soul into the pursuit of fame and power.

It was a poor ideal. But he seems to have thought it the only ideal, and probably looked on those who strove after some other as either fools or hypocrites. Early in his political life he said one day to one of the foremost of his political opponents (from whom the present writer heard the anecdote), as they took their umbrellas in the vestibule of the House of Commons: "After all, what is it that brings you and me here? Fame! This is the true arena. I might have occupied a literary throne. But I have abandoned it for this career." The external pomps of life, wealth and its trappings, titles, grand houses and splendid parks, all those gauds and vanities with which a sumptuous aristocracy surrounds itself, had through his life a singular fascination for him. He liked to mock at them in his novels, but they fascinated him none the less. One can understand how they might fire the imagination of an ambitious youth who saw them from a distance—might even retain their charm for one who was just struggling into the society which possessed them, and who desired to feel himself the equal of the possessors. It is far stranger that, when he had risen to be the master of the English aristocracy and was driving them where he pleased, he should have continued to admire such things. So, however, it was. In his will he directs that his estate of Hughenden Manor, in Buckinghamshire, shall pass under an entail as strict as he could devise, that the person who succeeds to it shall always bear the name of Disraeli. His ambition is the common, not to say vulgar, ambition of the English *parvenu*, to found a "county family." In the novel published a few months before his death, the hero, starting from small beginnings, ends by becoming prime minister: this is the crisis of the book, the crown of his career, the triumph which the author evidently regards as the noblest an Englishman can achieve. It might have been thought that one who had been through it all, who had realized the dreams of his boyhood, who had every opportunity of learning how little enjoyment is to be had from power or fame, how empty are the grand-ours which the populace admires, would have formed some other conception of the end of human life than this of personal success. With most men the flower they have plucked withers, and they value it no more. Even if he had discovered nothing nobler or purer, one might have expected that a man of such profound

skepticism, such keen irony, would have been at least disillusionized, or have wished to seem so. But it was not thus with him. He had gained what he had sought, and, so far as appears, he was satisfied and could imagine no higher ideal. Most men who have had great success are no doubt proud of it. But they do not usually tell the world so naïvely of their self-content; and they have commonly a feeling that this is not enough, that a self-centered life is, after all, a poor and unsatisfying life. They pay to disinterestedness at least the homage of outward professions.

To say that Lord Beaconsfield's heart was somewhat cold is by no means to say that he was heartless. He was one of those strong natures who will let nothing stand in their way; if another will not make place, he must take the consequences. His theory was that politics had nothing to do with sentiment; so those who appealed to him on grounds of humanity appealed in vain. No act of his life ever so much repelled the English people as the light fashion in which he tossed aside the tales of the Bulgarian massacre of 1876. It incensed sections who were strong enough, when thoroughly roused, to bring about his fall. But he was far from being unkindly. He knew how to attach men to him by friendly deeds as well as friendly words. He seldom missed an opportunity of saying something pleasant and cheering to a *débutant* in Parliament, whether of his own party or the opposite. He was not selfish in little things; was always ready to consider the comfort and convenience of those who surrounded him. It is pleasant to note that age and success, so far from making him morose or supercilious, seem to have softened the asperities of his character and developed the affectionate side of it. His last novel, published only a few months ago, contains far more human kindliness, a fuller recognition of the worth of friendship and the nobility of sisterly and conjugal love, than do the writings of his earlier manhood. What it wants in intellectual power it makes up for in a mellow and more tender tone. Of loyalty to his political friends he was a model, and nothing did more to secure his command of the party than its sense that his professional honor, so to speak, could be implicitly relied upon. Toward his wife, a warm-hearted woman older than himself, and inferior to him both in birth and education, he was uniformly kind and indeed devoted. The first use he made of his power as Prime Minister was to procure for her the title of viscountess. A story used to be told how, long ago, when his political position was still far from assured, he and his wife happened to be with the chief of the party, and that chief so far forgot good

manners as to quiz Mrs. Disraeli at the dinner-table—not malignantly, but with a spice of satire. Next morning Mr. Disraeli, whose visit was to have lasted for some days longer, announced that he must leave immediately. The host besought him to stay, and made all possible apologies. But Disraeli was inexorable, and carried his wife off forthwith. To literary men, whatever their opinions, he was always ready to give a helping hand, representing himself as one of their profession. Success did not turn his head, nor make him assume the airs of a *grand seigneur*. In paying compliments he was singularly expert, and made good use of his skill to win friends and disarm enemies. He knew how to please Englishmen, and especially the young, by entering into their tastes and pleasures, and, without being what would be called genial, was never wanting in *bonhomie*. In society he was a perfect man of the world—told his anecdote apropos, wound up a discussion by some happy epigram, talked to the guest next him as he would to an old friend. In short, he was excellent company. But he had few intimates; nor did his apparent frankness unveil anything more than he chose to reveal.

He was not of those who complicate political opposition with private hatreds. Looking on politics as a game, he liked, when he took off his armor, to feel himself on friendly terms with his antagonists, and often seemed surprised to find that they remembered as personal affronts the blows which he had dealt in the tournament. Two or three years before his death, a friend asked him whether there was in London any one whom he would not shake hands with. Meditating for a moment, he answered, "Only one," and named a conspicuous antagonist, who had said hard things of him, and to whom, when on one occasion in his power, he had behaved with cruelty. For the greatest of his adversaries he felt, there is reason to believe, genuine admiration, mingled with inability to comprehend a nature so unlike his own. No passage in the striking speech which that adversary pronounced, one might almost say, over Lord Beaconsfield's grave—a speech which may probably go down to posterity with its subject—was more impressive than that where he declared that he had the best reason to believe that, in their constant warfare, Lord Beaconsfield had not been actuated by any personal hostility. It is usually so with brave men; if they cannot like, they can at least respect, a redoubtable antagonist.

His intellect was singularly well suited to the rest of his character—was, so to speak, of one piece with it. One often sees the opposite—

intellects which are out of keeping with the active or emotional parts of the man. One sees persons whose thought is vigorous, clear, comprehensive, while their conduct is timid; or a comparatively narrow intelligence joined to an enterprising spirit, or a calm, sober, skeptical turn of mind yoked to an ardent and impulsive temperament. It is the commonest source of what we call the follies of the wise. Not so with him. His intelligence had the same boldness, intensity, concentration, simplicity—that is to say, singleness, as opposed to complexity—which we discover in the rest of the man. It was just the right instrument for the work he wanted it to do, and this inner harmony was one of the chief causes of his success, as the want of it has caused the failure of so many powerful natures. Its range was not wide. All its products were like one another: none of them give a reader the impression that it could have, had its master so wished, done a wholly diverse kind of work. It was not logical nor discursive, loving to amass and arrange great stores of knowledge, and draw conclusions from them. It was not analytically subtle, evolving new truths from profound reflection, bent on reducing everything to some principle. Nor was it judicial, with the power of calmly weighing reasons and pronouncing a decision which recognizes all the facts and is not confused by their seeming contradictions. There was in it a speculative element, no doubt, but it was primarily an artist's mind, capable of deep meditation, but meditating in an imaginative way, not so much on facts as on its own views of facts, on the pictures which its own creative faculty had called up. The meditation became dreamy, but the dreaminess was corrected by an exceedingly keen and quick power of observation—not so much the scientific observation of the philosopher, as the enjoying observation of the artist who sees how he can use these characteristic details, or of the forensic advocate (an artist, too, in his way) who perceives a way of fitting them into his presentation of his case. There are, of course, other qualities in his work: as a statesman, he was obliged to learn how to state facts, to argue, to dissect an opponent's arguments. But the characteristic note, both of his speeches and of his writings, is the combination of a few large ideas, clear, perhaps, to himself, but generally expressed in a vaguely grandiose way, and often quite out of relation to the facts as other people saw them, with a wonderfully acute discernment of small incidents or personal traits, which he used occasionally to support his ideas, but more frequently to conceal their weakness—that is, to make up for the absence of practical argu-

ments, such as his hearers would understand. Everybody is now and then conscious of having theories of whose soundness he is fully convinced, but which he is not prepared to prove, by voice or writing, to a given audience, partly because it is too much trouble to trace out the whole process by which they were reached, partly because the uninstructed listeners could not be made to feel the full cogency of the arguments on which he relies. Lord Beaconsfield was always in this condition with regard to his political and social doctrines. He believed them, but as he had not gained them by pure logic, it was not easy for him to establish them by it; so he picked up some plausible illustration, or attacked the opposite doctrine and its supporters with a fire of raillery or invective. This non-ratiocinative quality of his thinking was a source both of strength and of weakness; of weakness, because he could not prove his propositions; of strength, because, stated as he stated them, it was not less hard to disprove them. That mark of a superior mind, that it must have a theory, was never wanting. He could not rest content, like the mass of his followers, with a prejudice, a tradition, a stolid suspicion that refused to move or answer. He would not acquiesce in negation. He must have a theory, a positive theory, to show not only that his antagonist's view was a bad one, but that he had himself a more excellent way. These theories generally had truth and value in them for any one who could analyze them; but as this was exactly what the rank and file of the party could not do, they got into sad confusion when they tried to talk his language.

He was not a well-read man, nor with varied intellectual interests. His education had been imperfect, and had not taught him how to study a subject seriously; natural indolence and the occupations of political life had kept him from learning much from books, while, in conversation, what he liked best was persiflage. Physical science seems to have had no attraction for him; political economy he hated and mocked at almost as heartily as Carlyle. People have measured his knowledge of history and geography by observing that he placed the Crucifixion in the reign of Augustus, and thought, down till 1878, that the Andes were the highest mountains in the world. But these are subjects which a man of affairs does not think of reading up in later life: he is content if he can get information on them when he needs it. There are some bits of metaphysics and some historical allusions scattered over his novels, but usually of a flimsy order. He amused himself and the public by now and then propounding doctrines on agricultural matters, but does not

really seem to have mastered either that or any other economical or commercial subject. It was not in his way : he had been so little in office as not to have been forced to apply himself to such matters, while the pursuit of knowledge for its own sake would not have commended itself to a mind so concentrated and self-absorbed.

The artistic quality in him was evident in his fondness for particular words and phrases—a taste which allied itself in an interesting way with his cynical view of mankind. There is a passage in “Contarini Fleming” (which is one among those of his novels that contains the most of himself), where this is set in the clearest light. Contarini tells his father that he left college “because they taught me only words, and I wished to learn ideas.” His father answers, “Few ideas are correct ones, and what are correct, no one can ascertain; but with words we govern men.”

He went on acting on this belief in the power of words till he became the victim of his own phrases, just as people who talk cynically for effect often grow at last into real cynics. When he had invented a phrase which happily expressed the aspect he wished his view, or some act of his policy, to bear, he came to believe in the phrase, and to think that the facts were altered by the color his expression put upon them. During the contest for the extension of the parliamentary franchise, he declared that he was “in favor of popular privileges, but opposed to democratic rights.” When he was accused of having assented, at the Congress of Berlin, to the dismemberment of the Turkish Empire, he said that what had been done “was not dismemberment, but consolidation.” No statesman of recent times has given currency to so many epigrammatic phrases: “organized hypocrisy,” “England dislikes coalitions,” “plundering and blundering,” “peace with honor,” “*imperium et libertas*,” “a scientific frontier,” are a few, and not the best, though now the best remembered, of the many which issued from his fertile mint. This turn for epigram, rare among Englishmen, sometimes led him into scrapes which would have damaged a man of less imperturbable coolness. No one else could have ventured to say, when he had induced the Tories to pass a Reform Bill stronger than the one they had rejected from the Liberals in the preceding year, that it had been his mission “to educate his party.” His opponents were indignant at such audacity, and many old Tories gnashed their teeth in silence. But the country only laughed. “It was Disraeli all over.” And they liked him all the better.

• If his intellect was not of wide range,

it was within its range an admirably powerful weapon, of the finest flexibility and temper. Like Fitzjames's blade in Scott's poem, it was sword and shield in one. It was ingenious, ready, incisive. It detected in a moment the weak point, if not of an argument, yet of an attitude or a character. Its imaginative quality made it often picturesque, sometimes even impressive. Lord Beaconsfield had, indeed, the artist's delight in a situation for its own sake, and what people censured in him as insincerity or frivolity was frequently only the zest which he felt in posing, not so much because there was anything to be gained, as because he realized his aptitude for improvising a part in the drama which he always felt himself to be playing. The humor of the situation was too good to be wasted. It was, perhaps, partly this love of merry mischief, of startling people by doing just what they did not expect, that sometimes led him to confer honors on those whom the world thought least deserving.

In inquiring how these gifts qualified him for practical statesmanship, it is well to distinguish the different kinds of capacity which an English politician needs to attain the highest place. They may be said to be four:—He must be a debater; he must be a parliamentary tactician; he must understand the country; he must understand Europe. This last is, indeed, not always necessary: there are happy times when Europe may be left to itself, when England may look to her own affairs only; but when it is necessary, the necessity becomes terrible.

As an orator Lord Beaconsfield did not greatly shine. Indeed, in the highest sense of the word, he was no orator. He lacked ease and fluency. He had no turn for the lucid exposition of complicated facts, nor for the conduct of a close and cogent argument. Sustained and fiery declamation was not in his way. And least of all had he that truest index of genuine eloquence, the power of touching the emotions. He could not make his hearers weep, but he could make them laugh; he could put them in good humor with themselves; he could dazzle them with brilliant rhetoric, and he could pour upon an opponent streams of ridicule and scorn more effective than the hottest indignation. When he sought to be profound or solemn, he was usually heavy and labored. For wealth of thought or splendor of language his speeches will not bear for a moment to be compared—I will not say with Burke's, but with those of three or four of his own contemporaries. Even in his own party, Lord Derby, Lord Ellenborough, and Lord Cairns surpassed him.

There is not one of his longer harangues which can be read with interest from beginning to end. But there is none, or at least hardly any, which does not contain some striking passage, some image or epigram, or burst of sarcasm, which must have been exceedingly effective when delivered. It is partly upon these isolated passages, especially the sarcastic ones, and still more upon the aptness of the speech to the circumstances under which it was made, that his parliamentary fame rests. If he was not a great orator he was a great debater, who watched with the utmost care the temper of the audience, and said just what his instinct told him was needed at the moment to disconcert an opponent or to put heart into his friends. His repartees were specially happy, and must often have been unpremeditated. One must not forget to add that as he had not the ardent temperament of the born orator, so neither had he the external advantages which count for so much before large assemblies. His voice was not remarkable either for range or for quality. His manner was somewhat stiff, his gestures few, his countenance inexpressive. Yet his delivery was not wanting in skill, and often added point, by its cool unconcern, to a stinging epigram.

What he wanted in eloquence he more than made up for by tactical adroitness. No more consummate parliamentary strategist has been seen in England. He had studied the House of Commons till he knew it as a player knows his instrument—studied it collectively, for it has a collective character, and studied the men who compose it: their worse rather than their better side, their prejudices, their foibles, their vanities, their ambitions, their jealousies, above all, that curious corporate pride which they have, and which makes them resent the least approach to dictation. He could play on every one of these strings, and yet so as to conceal his skill; and he so economized himself as to make them always wish to hear him. He knew how in a body of men always listening to talk, and most of it tedious talk, about matters in themselves uninteresting, the desire for a little amusement becomes almost a passion: and he humored this desire so far as occasionally to err by excess of banter and flippancy. He had a happy knack of appearing to follow rather than to lead, and when he made an official statement it was with the air of one who was taking them into his confidence. A good deal of this he had learned from observing Lord Palmerston: but the art came far more naturally to that statesman, who was an Englishman all through, than to a man of Mr. Disraeli's origin. As leader

of his party in opposition, he was at once daring and cautious. He never feared to give battle, even when he knew he was sure to be beaten, if he felt that it was necessary, with a view to the future, that the judgment of his party should have been pronounced in a formal way. On the other hand, he was wary of committing himself to a policy of blind or obstinate resistance. When he perceived that the time had come to yield, he knew how to yield with a good grace, so as both to support a character for reasonableness and to obtain valuable concessions as the price of peace. If difficulties arose with foreign countries he claimed full liberty of criticising the conduct of the Government, but studiously abstained from obstructing or thwarting its acts, declaring that England must always present a united front to the foreigner, whatever penalties she might afterward visit on those who had mismanaged her concerns. When he came into office at the head of a majority, he was not equally successful, and certainly made less use of his power than might have been expected. But he was then an old man, weakened by disease, feeling already that his time was short. As regards the inner discipline of his party, he had great difficulties to surmount in the jealousy which many Tories felt for him as a new man—a man whom they could not understand and only partially trusted. Conspiracies were repeatedly formed against him; malcontents attacked him in the press, and sometimes even in Parliament. These he seldom noticed, maintaining a cool and self-confident demeanor which disheartened the plotters, and discharging the duties of his post with the same steady assiduity. He was always on the lookout for young men of promise, drew them toward him, encouraged them to help him in parliamentary sharp-shooting, and fostered in every way the spirit of party. The bad side of that spirit was seen when he came into office, for then every appointment was given from party motives; and men who had been loyal to him were rewarded by places or titles to which they had no other claim. But the unity and martial fervor of the Tory party was raised to the highest point, and Mr. Disraeli himself, thanks to his unflinching tact, was never personally unpopular with his parliamentary opponents, even when he was most hotly attacked on the platform and in the press.

To know England and watch the shifting currents of its opinion is a very different matter from knowing the House of Commons. Indeed, the two kinds of knowledge are in a measure incompatible. Men who enter Parliament soon begin to forget that it is not, in the last resort, Parliament that governs, but

the people. They grow absorbed in the daily contests which they witness or bear a part in, and estimate them above their true importance. They come to think that the opinion inside must necessarily be the opinion outside. When they are in a minority they are depressed; when they are in a majority they fancy that all is well, forgetting their masters out-of-doors. This tendency is aggravated by the fact that the English Parliament meets in the capital, where all the rich and luxurious congregate and give their tone to society. The House of Commons, though many of its members belong to the middle class by origin, belongs practically to the upper class by sympathy, mixes in what is called the "best society" of the capital, and can hardly help believing that what it hears every evening at dinners or receptions is what the country is thinking. A member of the House of Commons is, therefore, ill placed for feeling the pulse of the nation, and in order to do so must study the provincial press, and must frequently visit and communicate with his constituents. If this difficulty is experienced by an ordinary private member, it is greater for a minister whose time is absorbed by official duties, or a leader of opposition, who has to be constantly thinking of his tactics in the House. In Lord Beaconsfield's case there was, of course, a keenness of observation and discernment far beyond the common. But he was under the disadvantage of not being really an Englishman, and of having never lived among the people. The detachment which has been referred to above here came in to weaken his power of judging of popular sentiment, of appraising at their true value the various tendencies that sway and divide a nation so complex as the English. Early in life he had formed theories about the relations of the different classes of English society—nobility, capitalists, workmen, peasantry, middle-class people—which were far from containing the whole truth; and he adhered to them even when the changes of half a century had made them less true. He had a great aversion, not to say contempt, for Puritanism, and for the Dissenters among whom it chiefly holds its ground, and pleased himself with the idea that the extension of the suffrage which he carried in 1867 had destroyed their political power. The Conservative success in 1874 confirmed him in this belief, and made him also think that the working classes were much more ready than they really are to follow the lead of the rich. He perceived that the Liberal ministry of 1868-'74 (rightly or wrongly, I do not stop to inquire) offended the national pride of certain classes by appearing too modest or too neutral

in foreign affairs, and fancied that the great bulk of the nation would be dazzled by a war-like mien, and an active, even aggressive, foreign policy. It was congenial to his own ideas, congenial to the society that surrounded him; it was applauded by some largely circulated newspapers; and thus he was, perhaps, more surprised than any other man of similar experience to find the nation sending up a much larger majority against him in 1880 than it had sent up for him in 1874. One takes this as the most striking instance of his miscalculation; but the fact is that he had all through his career a very imperfect comprehension of the English people. Individuals, or even an assembly, may be understood by dint of keen and long-continued observation; but to understand a whole nation, one must also have sympathy, and this his circumstances, not less than his character, had denied him.

It was partly the same defect that prevented him from understanding the general politics of Europe. Of course, there is a sense in which no single man can pretend to understand Europe. Prince Bismarck himself does not: the problem is too vast, the facts to be known too numerous, the tendencies too complex. One can speak only of more or less. If Europe were now what it was a century ago, Lord Beaconsfield would have had a far better chance of being fit to become what it was probably his dearest wish to become—its guide and arbiter. He would have taken the exact measure of the princes and ministers with whom he had to deal, would have seen and played on their weaknesses with admirable skill. His novels show how often he had revolved diplomatic situations in his mind, and how expertly he would have dealt with them. Foreign diplomatists are all agreed that at the Congress of Berlin he played his part to admiration, spoke seldom, but spoke always to the point and with dignity, had a perfect conception of what he meant to secure, and of the means he must employ to secure it, never haggled over details or betrayed any eagerness to win support, never wavered in his demands, even when they seemed to lead straight to war. Dealing with individuals, representing material forces which he had gauged, he was perfectly at home, and deserved the praise he obtained. But to know what the condition of South-eastern Europe really was, and understand how best to settle it, was a far more difficult matter, for which he wanted both the previous study and the requisite insight. In the Europe of to-day, peoples count for more than the wills of individual rulers: one must comprehend the passions and sympathies of peoples if one is to forecast the future. He never cared to do this. He always treated with contempt the

national movement in Italy; made no secret of his good-will to Austria and his liking for Louis Napoleon—a man to whom, though far his inferior in ability and in courage, his own character had some affinities. His imagination, his fondness for theories, and disposition rather to adhere to them than to study and interpret facts, made him the victim of his own preconceived ideas. A great adversary once said of him that he had only two ideas in foreign policy—the one the maintenance of the temporal power of the Pope, the other the maintenance of the Turkish Empire. We have seen the one expire; we are watching the agonies of the other. He was possessed by the notion, seductive to a dreamy mind, that all the disturbances of Europe arose from the action of secret societies; and when the Eastern Question was re-opened by the insurrection in Herzegovina and the subsequent war of Servia against Turkey, he explained the phenomenon in a famous speech by saying, “The secret societies of Europe have declared war against Turkey”—the fact being that the societies, which in Russia were promoting the Servian war, were public societies, openly collecting subscriptions, while those secret “social democratic” societies of which we have since heard so much were strongly opposed to the interference of Russia, and those other societies in the rest of Europe, wherein Poles and Italians have played a leading part, were either hostile or indifferent.

There was one instance in which he displayed a foresight, or, at least, a reserve, in foreign affairs for which he deserves every credit. He was the only leading statesman on his own side of politics who did not embrace and applaud the cause of the South in the American civil war of 1861–65. Whether this arose from a caution that would not commit itself where it knew its own ignorance, or from a sound perception of the superior strength of the Northern States (a perception which one who visits the South is constantly astonished that so few people in Europe should have had), it is not easy to decide; but whatever the cause, the fact is a conspicuous evidence of his prudence or sagacity. Nor ought it to be forgotten that one or two of his earliest speeches display an insight into the sources of Irish suffering and Irish discontent which the English nation is only now beginning to reach.

In estimating his statesmanship as a whole, one must give due weight to the fact that it profoundly impressed foreigners, as well as his own party in England. No English minister has for a long time past so fascinated the opinion of Germany and France. They looked on him as the man who had given back to Britain her old European position; they

attributed to him profound designs, a penetrating insight almost equal to what his domestic admirers revered. In some of our Conservative clubs, there hangs a large photograph of Lord Beaconsfield, wearing the well-known look of mysterious fixity, under which is inscribed the line of Homer: “He alone is wise: the rest are fleeting shadows.”* It was a happy idea to go for a motto to the favorite poet of his rival; and whatever we may think of its appropriateness, the fact remains that this is the belief he succeeded in inspiring. He did it by virtue of those very gifts which often brought him into trouble: his taste for large and imposing theories, his power of clothing them in vague and solemn language, his persistent faith in them. Very few people were able to judge whether his imperial ideas were right or wrong—that is, how far they were sound and feasible; but every one saw that he had theories, and many fell under the spell which a grandiose imagination knows how to exercise. It is chiefly this gift which lifts him out of the line of mere party political leaders, the line in which his position was won, and makes him an interesting study. If he sometimes failed to see how much the English are impelled by their emotions, he did see that they may be swayed through their imaginations. Obvious; yet it was almost his discovery.

His novels are too valuable a revelation of his mind to be passed over, but in themselves they need not occupy us long. They are brimful, nay, foaming over, with cleverness; indeed, “Vivian Grey,” with all its youthful faults, gives one a greater impression of purely intellectual brilliance than anything else he ever wrote or spoke. There is some variety in their subjects,—“Contarini Fleming” and “Tancred” are more romantic than the others, “Sybil” and “Coningsby” more political,—as well as in their merits; the two latest, “Lothair” and “Endymion,” works of his old age, being markedly inferior in spirit and invention. But the general characteristics are the same in all—a lively fancy, a knack of hitting people off in a few lines, considerable power of describing the superficial aspects of society, a swift narrative, a sprightly dialogue, a keen insight into the selfishness of men and the vanities of women, with incessant flashes of wit lighting up the whole stage. But it is always a stage. The light is artificial light, not open-air sunshine. Nothing is really like nature. There is not one of the characters whom we feel we might have met and known; nor any whom we should like to know. Heroes and heroines are

* Used of Tiresias, in the world of disembodied spirits. (Od. xi.)

theatrical figures; their pathos rings false, their love, though described as passionate, seems superficial; it does not spring from the inmost recesses of the soul. The studies of men of the world, and particularly of heartless ones, are the most life-like; yet, even here, any one who wants to feel the difference between the great painter and the clever sketcher need only compare Thackeray's Marquis of Steyne with Disraeli's Marquis of Monmouth, both of them suggested by the same original. There is, in short, an absence of real dramatic power in these stories, just as there is in his play of "Alarcos"; and if we read them with pleasure it is not for the sake either of plot or of character, but because they contain so many sparkling witticisms and reflections, setting in a strong light, yet not always an unkindly light, the seamy side of politics and human nature. The slovenliness of their style, which is often pompous, but seldom pure or correct, makes them appear to have been written hastily—an impression heightened by the undoubted fertility of invention in the earlier ones, where we feel that the sketches the author gives are, so to speak, only a few out of a large portfolio. The less they profess to be serious, the better they are; and, consequently, the most vivacious of all are two classical burlesques, written at a time when that kind of composition had not yet become common,—"*Ixion in Heaven*" and "*The Infernal Marriage*,"—little pieces of funning worthy of Thackeray, I had almost said of Voltaire. Whether Lord Beaconsfield would have taken high rank as a novelist if he had thrown himself completely into the profession may be doubted, for his defects were such as pains and practice would hardly have lessened. The literary vocation he was best fitted for was that of a journalist or pamphleteer; and in this he might have won an unrivaled success. His dash, his verve, his brilliancy of illustration, his scorching satire, would have made the fortune of any newspaper, and carried dismay into the enemy's ranks.

The question we set out with still remains to be answered: How did such a man, possessed, no doubt, of remarkable powers, but also weighted in his course by great disadvantages, by his Jewish origin (which no one who looked at him could forget), by the escapades of his early career, by the want of confidence which his habitual cynicism inspired, by the visionary nature of so many of his views,—how did he, in a conservative and aristocratic country like England, triumph over so many prejudices and enmities, and raise himself to be the head of the Conservative and aristocratic party, the trusted counselor

of the Crown, the ruler, almost the dictator, of a free people? Mainly, no doubt, by the great gifts of intellect and still more remarkable powers of will which have been already described. But there were other secondary and incidental causes which deserve to be taken into account. The ancients were not wrong in ascribing to Fortune a great share in human affairs. He to whom it comes must, of course, have the capacity of using it. But he to whom it does not come, or comes too late, may never be able to display his power. Now, among the secondary causes of Mr. Disraeli's success, chance played no insignificant part.

Of these causes one or two may be particularized. The first lies in the nature of the party to which he belonged. The Tory party differs from the Liberal party in two important points. In the first place, it usually contains a smaller number of able men. When J. S. Mill once called it the stupid party, it did not repudiate the name, but pointed with some force to its strength and its earnestness as showing how many things besides mere intellect go to make political greatness. Hence it has been generally easier for a person of superior gifts to rise to eminence among the Tories than in the ranks of their opponents. Such a person has fewer competitors, and the comparative rarity of the phenomenon makes it more highly prized. This was signally the case after Peel's defection. That statesman had carried off with him the intellectual flower of the Conservatives. Those who were left behind to form the Protectionist opposition in the House of Commons were broad-acred squires, of solid character but slender capacity. Through this heavy atmosphere Mr. Disraeli rose like a balloon. Being the only man in his party with either strategic or debating power, he became indispensable, and established in a few months a supremacy which years of patient labor would not have given him in a rivalry with the distinguished band who surrounded Peel. And, what is hardly less remarkable, during the twenty years that followed till he became Prime Minister, no man of genius rose up in the Tory ranks to dispute his throne. The conspiracies against him might well have prospered could a candidate for the leadership have been found capable of crossing swords with the chieftain in possession. Fortune was true to her favorite, and suffered none such to appear.

In the second place, the Tory party is far more of a party than are the Liberals. The latter are (not, indeed, at this moment, but usually) a confederation of three parties, generally acting together, but liable, unless dominated by some extraordinary mind or animated by some extraordinary enthusiasm,

to fall asunder, perhaps to fire into each other's ranks. But the Tories, being the party of the property-holders, and having not to advance but to stand still, not to propose changes but to resist them—having bonds of interest as well as of sentiment to draw them close together, possess a coherence, a loyalty to their chiefs, a vehement corporate spirit, far exceeding those of their adversaries. Thus, when any man wins a conspicuous place among the Tories, he acquires forthwith a right to the support of all its members; and, when he becomes its leader, he is followed with a devotion, an unquestioning submission and confidence, which places his character and doctrines under the ægis of the party. The whole party feeling takes shape in applause of his words and attachment to his person. This was of infinite value to Mr. Disraeli. The historical past of the great Tory party, its associations, the social consideration which it enjoys, all went to ennoble his position and efface the remembrance of the less satisfactory parts of his career. And, in the later days of his reign, when no one disputed his supremacy, every Tory was, as a matter of course, his advocate and admirer, and resented attacks on him as insults to the party. It was a mistake on the part of the Liberals—a mistake, however, into which their foremost leaders did not fall so much as the minor lights—to make these attacks so bitter, for they only confirmed the loyalty of the Tories, leading them to identify themselves still more completely with their chieftain's policy.

Finally, he had the great advantage—an advantage whose weight is often forgotten—of living long. Many a statesman has died at fifty, leaving a second-rate reputation, who might have become world-historical with twenty years more of life. Had Lord Beaconsfield's career closed in 1854, he would have been remembered as a parliamentary gladiator, who had produced a crude Budget and some brilliant social and political sketches. The higher qualities of his character would have remained unknown. True it is that a man must have greatness in order to stand the test of long life. Some are found out, like Louis Napoleon. Some lose their heads and run to seed, like Lord Brougham. Some prove incapable of growth and development, like Prince Metternich, or, to take a far superior instance, M. Guizot. Lord Beaconsfield not merely stood the test, but gained immensely by it. He gained by rising into a position where his strength could show itself. He gained also by so impressing his individuality upon people as to make them accept it as an ultimate fact, till at last they came, not so much to blame him for what he did in consistency

with his established reputation, as rather to relish its expressions, to enter into the humor of his character. As they unconsciously came to judge him by a standard different from that which they applied to ordinary Englishmen, they hardly complained of deflections from accuracy which, in other persons, would have seemed grave. He had given notice that he was not like other men—that his words must not be taken in their natural sense, that he was to be regarded rather as the skillful player of a great game, the consummate actor in a great part, than as one who was battling for a cause he believed in. And, once more, he gained by the many years during which he had opportunities of displaying his fortitude, patience, constancy under defeat, unwavering self-confidence—gifts rarer than mere intellectual power, gifts that deserve the influence they bestow. Nothing so fascinates mankind as to see a man equal to every fortune, unshaken by reverses, indifferent to personal abuse, maintaining a long combat against apparently hopeless odds with the sharpest weapons and a smiling face. They fancy he must have great hidden resources of wisdom as well as of courage. When some of his predictions come true, when the turning tide of popular feeling begins to bear his party toward power, they believe that he has been all along right and the rest of the world wrong. When victory at last settles on his crest, even his enemies can hardly help applauding a reward which seems so amply earned. It was by this quality, more perhaps than by anything else, by this serene exterior with an unfathomable reserve below, that he laid his spell not only on so large a part of the English people, but upon the imagination of Germany and France.

Singular career, which appears hardly less singular when one has sought everywhere for explanations of it: a Jewish adventurer climbing from nothing, by no single stroke of luck, but by patient and unaided efforts, to sway a vast empire, and make himself one of the four or five greatest personal forces in the world. If it is not a career to be recommended for imitation, if his aims were mainly selfish, if one must confess that he did something to lower the tone of English public life, yet may it not fairly be held that as, while he sat in the House of Commons, no one was prouder of it, or more jealous of its dignity and privileges, so, too, when at last the destinies of England fell into his hands, he felt the greatness of the charge, and strenuously sought to secure what he believed to be her imperial position in the world? Whatever judgment history may ultimately pass upon him, she will find in the long annals of the English Parliament no more striking figure.

SOME OF THE UNION LEAGUE DECORATIONS.

THE UNION LEAGUE CLUB HOUSE. (ARCHITECTS: PEABODY AND STEARNS.)

THE Union League Club House (Fifth Avenue, New York) has, it is hardly fanciful to say, the qualities of its defects. The latter have been frequently pointed out in detail since the completion of the building, but, so far as they strike the ordinary eye, they may be pretty sufficiently summed up in saying that the edifice seems an architectural negation of repose. Repose, to be sure, has been regarded hitherto as an important quality of a monumental building, at least; and if in America we now seem to be divorcing domestic building from the necessity of a reposeful motive, and enduing it with new, different, and more varied possibilities, it will still remain difficult for some time to come, probably, to reconcile the general cultivated taste to the absence of architectural dignity as a prominent element in buildings of the size and importance of the Union League Club House. Nevertheless, there is to be noticed, together with this defect (as the most kindly disposed

critic must consider it), and in great measure, no doubt, dependent upon it, a certain animation and sprightliness, which in themselves are by no means displeasing. The very novelty of their presence brings some refreshment to a catholic mind, which, at the same time, need not mistake its relief from the commonplace monotony characteristic of our monumental buildings, in general, for a positive delight in surprises whose main merits are their unexpectedness and eccentricity. The Union League Club House, in other words, arrests attention and produces divers sensations, and thus has a comparative claim of some importance upon the consideration of any one who has reached it after a walk of five miles up Broadway from the Battery, although he may be able cordially to admire only its large red mass and the unusual circumstance that it has a visible, instead of merely an inferable, roof.

This is especially true of the interior deco-

he might generalize the proposition that variety, even when pushed to the extremity of exaggeration and eccentricity, should nevertheless be, for the most part, upon the same plane of merit. This, at all events, is the ideal to be kept in view in contriving *bizarrierie* on a large scale, and it must be admitted that the architect of the Union League lost sight of it constantly, if, indeed, he did not deliberately forego it at the outset. Of course, however, the difficulty of attaining it is as great as the necessity, and no one will feel disposed to be hard upon short-comings in this respect. Only as a general criticism is it to be observed that to avoid monotony is not in itself sufficient if one's details, however violently conflicting, are partly bad as well as wholly diverse: in other words, there is at least one kind of monotony the mere variation of which is not in itself happy—the monotony of merit, namely. If you have a room to decorate, for example (to avoid the temptation to illustrate by instances more nearly in point), the variety obtained by giving the ceiling to Mr. Whistler, say, and the walls to the decorator Garibaldi is distinctly not a desirable variety.

Perhaps this is the great difficulty with the Union League Club House as a whole, if we

rations, which make no attempt to secure the ordinary advantages of unity of design, or even of general character, but make the most of variety, and have the air of relying for success upon giving the beholder something new to think of, or, at least, something different to look at, each time he turns his head. There is, to be sure, one criticism to be made upon this system of interior decoration, if one may venture to so term it; and it seems to be justified by the net result in the present case, from which alone, if one had never seen other examples of the practice,

WINDOW FROM GRAND STAIRCASE.
(TIFFANY.)

A CORNER OF THE ALCOVE DINING-ROOM. (FRANK HILL SMITH.)

IN THE SMOKING-ROOM.

accept the point of view of the architects, that repose has grown old-fashioned, and interest is to be sought in variety of intention and manifestation. At all events, any one who does not accept this view will be puzzled from the start. For example, to take one of the most obvious peculiarities of the edifice; it is necessary to suppose, when one observes that columns of large diameter are employed on the Thirty-ninth street façade to support a balcony precisely identical in every respect with that on the Fifth Avenue side, which is carried on very thin pilasters, that the advantage architects sometimes take nowadays—and, of course, in the Middle Ages always took—of constructive opportunity, has here been abandoned at the outset. This one of many similar incidents of the construction is sufficient to classify at once the intention of the architect as averse to what is ordinarily termed the architectural expression of purpose, or even of ideas. Here, of course, it is intended to deal only with the decoration of the building, and to have nothing to do with the architecture thereof, but, nevertheless, it happens to be true that one gets as good a clew to anything from a large and evident detail as from a small one, and the credit of the interior of the Union League Club must, on the whole and *en masse*, be awarded to the architects of the exterior. The halls of the building were consigned to the taste and skill of Mr. Louis C. Tiffany, and, of course, they leave the strongest

impression upon any casual visitor to the Club on account of their size and—shall we say?—their *quasi*-splendor. Splendor is a quality, however, which in general has an unfortunate drawback. If it fails to please, it offends. Any one who sets out to decorate halls as Mr. Tiffany has here decided to decorate them, ought to consider this. In that event perhaps a nearer approach to the mean which is acknowledged to be golden would be more easily reached. On the other hand, it would have been very simple to make these corridors perfectly inoffensive to the most exacting taste, and any one who has tried to do more than this is, of course, entitled to great credit. Green and silver may not be agreeable to many tastes, but it is necessary to admit that they at least avoid commonplace. In fact, they do more; they avoid the look of professional decoration. Mr. Frank Hill Smith, to whom, in accordance with the general architectural plan, some of the rooms were intrusted, has not been quite so successful in this respect, for example. If one seeks, in his apartments, for any spontaneity such as Mr. Tiffany has so abundantly shown, he is sure to be disappointed. The services of Mr. Warner are certainly not to be frittered away, and they certainly have not been used here to their utmost advantage in the little plafond corners, which, graceful enough in themselves, might have been modeled by anybody as well as by the best—or, as persons prefer, one of the two best—sculptors that we have.

FISH CURTAIN IN THE DINING-ROOM. (TIFFANY.)

The large room which the Messrs. Cottier have done is certainly far better than Mr. Smith's, for the reason that it is frankly professional. No one need find any fault with it from the professional decorator's point of view, and from any stand-point the windows are agreeable.

The windows, too, of the main hall are the best portions of Mr. Tiffany's work, in our opinion at least. It should not be forgotten, in saying this, that there is elsewhere a great deal of commendable effort, but if success has anywhere indubitably attended his efforts, it is in the little window on the third landing of the main staircase, which is very pretty, simple, and unconventional. The larger ones on the first landing it is hardly possible to admire so much, unless one's taste exactly fits in with them, in which case, of course, they are triumphant successes. And it is undoubtedly fortunate that mere taste plays so large a part in the judgment of such art-

products as stained-glass; otherwise one might urge as an objection to a window, that it was opaque or muddy or anything else, and—according to the logic of transparent material—the objection would be fatal.

The dining-room (in the top story) was assigned to Mr. La Farge. It should, however, be mentioned that such details as can be called architectural had been inexorably furnished him. It is a little difficult to separate the two things, and not allow one's impression of the construction to influence that made by the decoration. Probably every one who has seen much of Mr. La Farge's interior decoration experiences, upon entering the dining-room, a feeling of disappointment, after having been told that it is his work; and some time elapses before it is possible to trace the feeling to its source in the contracted and fanciful modeling of the cubical contents of the apartment—so to speak—and in such details as the angular scroll-work in plaster relief which

adorns the concave division of the ceiling, the *lightening* of oak wainscoting and chimney-pieces by soapstone fire-places of massive proportions, and the very uncomfortable weight of constructed timber decoration which, to the eye, performs the function of supporting with considerable to-do a point whose irresistible tendency is to spring upward, and has the effect of limiting the vision in various directions. There was only too little space left for effective treatment by the decorator after the general plan of the ceiling had been determined upon. But for the architect and painter-decorator to have pulled together and mortised their work with cordial intimacy would certainly have been stranger still than what evidently happened in this case. There is as chronic an incompatibility between these (except, of course, in the unique instance of the Associated Artists' comity) as, notoriously, there is between both of them and the critic (*soi-disant* or other) whom malevolence inspires to point out this, or, indeed, any fact connected with their work.

Though it cannot be said that its original conditions have been absolutely circumvented, and a just impression of the work is, as already intimated, the result of some little reflection, the decorator has contrived opportunities for the exhibition of a great deal of very charming form and color. Indeed, the general effect, after one is fairly within the room and has placed things, is very distinct and harmonious. Ideas of elegance and luxury are expressed by it with much discrimination—indeed (judging by what we have in America that falls into the same category), with great refinement and tact, whereby luxury and elegance seem rescued from association with grossness or commonness of any kind, and seem (as in point of fact they undoubtedly are) valuable ideas in and of themselves. It is not at all a banquet-hall for a Lucullus. On the purely sensuous side, too, the decoration, as a whole, is correspondingly agreeable. It is light and yet rich, bright without empty glitter, and soft without being subdued. Its success here is particularly noteworthy, because such success

ALCOVES IN THE LIBRARY. (COTTIER.)

PART OF THE DINING-ROOM CEILING. (LA FARGE.)

is so rare and difficult, and yet seems so easy and simple on account of the simplicity of the elements combined to create it. There is a great deal of oak and gold and blue glass-tiling, one sees at a glance; and, reasoning hastily, is hardly apt to avoid the conclusion that the pleasing result is to be ascribed to the excellence of these materials and their affinity for each other, rather than to any special felicity in their composition. Of course, such an inference as this in regard to a work of any elaborateness, is generally an undesigned eulogy, recalling the memorable remark of the candid critic, who, after expressing a hearty admiration for one of Titian's portraits, inquired why portraits were not always painted thus and not otherwise, inasmuch as Titian's was clearly the right way to paint portraits. This is clearly the way to arrange gold and blues and light browns in a room like this dining-room. You gild the peaks of the ceiling down to within about six feet of the concave division, where, of course, you paint a band of grotesques. These should not be flagrantly ecclesiastical, but they should hint by association at something sufficiently removed from the suggestion of dinners and luncheons (sufficiently removed from "expressing the function" of the apartment, *pace* rigid authority to the contrary) to give some play of a poetic kind to the fancy of the higher varieties of club man. Naturally, wings are

to be furnished them, and any one's sense of color would suggest pricking them out with red and white and a bit of blue from the general golden mass. The tyro in decoration knows the sumptuous results of justly combining gold and white, and he must know also (one argues standing under this ceiling) that, in general, these elements are combined either tamely or violently, and that to secure the effect of richness and softness a great deal of subtlety must be called to one's aid. Supply subtlety in sufficient quantity, however, and success is assured. Similarly with the bed of blue glass-tiling in either gable of this unique room. Blue, especially of the ultramarine or cobalt varieties, is recognized to be a difficult color to use to advantage in any decoration that is not distinctly scientific, and has parted company with the schemes of color contemplated in grammars of ornament. But one is here immediately reminded how effective a primary color can be, even in a color-scheme of some delicacy. The soft, velvety masses at either end of the central division of the ceiling are very harmonious and delightful. The mere non-selection of the tiles, so to speak, is seen to have a value and a purpose, and the accidental variation of quality and the consequent play and movement are plainly desirable properties.

Just here, indeed, one might press this way

BASS-RELIEF OF "VICTORY" IN THE DINING-ROOM. (LA FARGE.)

of treating Mr. La Farge's work to its utmost limits without injustice, and recognize that the faults of the decoration are as frank as its merits: another artist would hardly have been content with the manifest difference in shade between the upper and lower halves of the tiling at the north end of the ceiling. However, when one is bothered about the fitness of an escutcheon, for example, and is considering whether or no its colors are not a little flat and raw in the midst of so much mellow softness, one may easily omit to secure sufficient carelessness in the choice of tiles for the background of the real perplexity. And as to the strict appositeness of the charming figure of "Victory" which hangs opposite this last, does any one imagine that the inventor of its extremely agreeable proportions and general movement is a less competent judge than another of the fitness of artistic things? When a decorator, that is to say a painter-decorator, is called upon to decorate a room of this description, it is certainly asking too much to demand that he exhibit a strict regard for such unities of idea and form as may commend themselves to the general observer, who is always, it is well known, addicted to a *a priori* criticism. Why should a "Victory" be here at all, this observer may ask; though if he be of an ultra-

logical turn of mind, an answer might be found by some enthusiastic member of a club which has always displayed pugnacity and often enjoyed such success as attends the victor in games of the kind in which it contends. It would be pushing logic altogether too far, the strictest constructionist would admit, to object to this "Victory" that its idea is evidently poetical, whereas the thing it should symbolize is of the essence of prose. What, one must ask, would be the fate of interior decoration if logic of this sort—*i. e.*, logical logic—really obtained currency among its practitioners? And (not meaning, by the way, to insist upon any conspicuous lack of harmony between this figure and its surroundings) still further one may ask himself if hanging a delightful piece of art on the walls of a room arranged on the plan of this, instead of calling it part of the decoration, is not in one view a tribute of conformity to the essential *bizarrierie* of the architectural motive? To have followed in the frame of the "Victory" the lines of the neighboring moldings, or, indeed, to have considered these latter in any respect whatever, would doubtless have been to admit the introduction of an element into the general problem the presence of which would have complicated it considerably, and on the whole un-

SMALL WINDOW ON THE STAIRCASE. (TIFFANY.)

wisely, as we have hinted. No considerations at all are needed in order to appreciate the beauty of the detail in question. It is, in execution, the work of Mr. La Farge and the Messrs. St. Gaudens, and of Mr. W. H. Low, who assisted in painting it. As an object of the decoration, it arrests the eye at once, and keeps the attention longest perhaps—

which circumstance has also, no doubt, a disadvantage, since there is no other object adequately to share the blame of individual emphasis. On second thought, however, there is at least, one other such detail, and perhaps there are many who will find Mr. La Farge's rose-window in the west gable more attractive even than the "Victory."

A WOMAN'S SECRET.

HID in the deep recesses of this heart
 There lies a chord which thrills to one dear name,
 Though whose it be I may not now impart,
 Lest unrequited love should cause me shame.
 But do I love thee? Let me pause and say:
 My world would be no desert lacking thee;
 My sun shines brightly still and thou away,
 Although its gladness seems less glad to me;
 Life, e'en without thee, seemeth very sweet—
 Small pleasures charm me, though the chief I miss;
 Thee I but need to make all joy complete.
 Can loving be so cold a thing as this?
 Yet, should thy friendship more than liking prove,
 I, who love not, could show thee how to love!

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

XI.

THE loggers pulled off their boots and got into their bunks, where some of them lay and smoked, while others fell asleep directly.

Bartley made some indirect approaches to Kinney for sympathy in the snub which he had received, and which rankled in his mind with unabated keenness.

But Kinney did not respond.

"Your bed's ready," he said. "You can turn in whenever you like."

"What's the matter?" asked Bartley.

"Nothing's the matter, if you say so," answered Kinney, going about some preparations for the morning's breakfast.

Bartley looked at his resentful back. He saw that he was hurt, and he surmised that Kinney suspected him of making fun of his eccentricities to Mrs. Macallister. He *had* laughed at Kinney, and tried to amuse her with him; but he could not have made this appear as harmless as it was. He rose from the bench on which he had been sitting, and shut with a click the penknife with which he had been cutting a pattern on its edge.

"I shall have to say good-night to you, I believe," he said, going to the peg on which Kinney had hung his hat and overcoat. He had them on, and was buttoning the coat in an angry tremor before Kinney looked up and realized what his guest was about.

"Why, what—why, where—you goin'?" he faltered in dismay.

"To Equity," said Bartley, feeling in his coat-pockets for his gloves, and drawing them on, without looking at Kinney, whose great hands were in a pan of dough.

"Why—why—no, you aint!" he protested, with a revulsion of feeling that swept away all his resentment, and left him nothing but remorse for his inhospitality.

"No?" said Bartley, putting up the collar of the first ulster worn by a native in that region.

"Why, look here!" cried Kinney, pulling his hands out of the dough, and making a fruitless effort to cleanse them upon each other. "I don't want you to go this way."

"Don't you? I'm sorry to disoblige you; but I'm going," said Bartley.

Kinney tried to laugh.

"Why, Hubbard—why, Bartley—why, Bart!" he exclaimed. "What's the matter with you? I aint mad!"

"You have an unfortunate manner, then. Good-night." He strode out between the bunks, full of snoring loggers. Kinney hurried after him, imploring and protesting in a low voice, trying to get before him, and longing to lay his floury paws upon him and detain him by main force, but, even in his distress, respecting Bartley's overcoat too much to touch it.

He followed him out into the freezing air in his shirt-sleeves, and besought him not to be such a fool. "It makes me feel like the devil!" he exclaimed, pitifully. "You come back, now, half a minute, and I'll make it all right with you. I know I can; you're a gentleman; and you'll understand. *Do* come back! I shall never get over it, if you don't!"

"I'm sorry," said Bartley, "but I'm not going back. Good-night."

"Oh, good Lordy!" lamented Kinney. "What am I goin' to do? Why, man! It's a good three mile and more to Equity, and the woods is full of catamounts. I tell ye 'taint safe for ye." He kept following Bartley down the path to the road.

"I'll risk it," said Bartley.

Kinney had left the door of the camp open, and the yells and curses of the awakened sleepers recalled him to himself.

"Well, well! If you will *go*," he groaned in despair, "here's that money." He plunged his doughy hand into his pocket, and pulled out a roll of bills. "Here it is. I haint time to count it; but it'll be all right, anyhow."

Bartley did not even turn his head to look round at him.

"Keep your money!" he said, as he plunged forward through the snow. "I wouldn't touch a cent of it to save your life."

"All right," said Kinney, in hapless contrition, and he returned to shut himself in with the reproaches of the loggers and the upbraiding of his own heart.

Bartley dashed along the road in a fury that kept him unconscious of the intense cold; and he sat up half the night, when he was once more in his own room, packing his effects against his departure next day. When all was done, he went to bed half wishing that he might never rise from it again. It was not that he cared for Kinney; that fool's sulking was only the climax of a long series of injuries of which he was the victim at the hands of a hypercritical omnipotence.

Despite his conviction that it was useless to struggle longer against such injustice, he lived through the night, and came down late to breakfast, which he found stale, and without the compensating advantage of finding himself alone at the table. Some ladies had lingered there to clear up on the best authority the distracting rumors concerning him which they had heard the day before. Was it true that he had intended to spend the rest of the winter in logging; and *was* it true that he was going to give up the "Free Press"; and was it *true* that Henry Bird was going to be the editor? Bartley gave a sarcastic confirmation to all these reports, and went out to the printing-office to gather up some things of his. He found Henry Bird there, looking pale and sick, but at work and seemingly in authority. This was what Bartley had always intended when he should give up, but he did not like it, and he resented some small changes that had already been made in the editor's room, in tacit recognition of his purpose not to occupy it again.

Bird greeted him stiffly; the printer-girls briefly nodded to him, suppressing some little hysterical titters, and tacitly let him feel that he was no longer master there. While he was in the composing-room Sally Morrison came in, apparently from some errand outside, and catching sight of him, stared, and pertly passed him in silence. On his inkstand he found a letter from Squire Gaylord, briefly auditing his last account, and inclosing the balance due him. From this the old lawyer, with the careful smallness of a village business man, had deducted various little sums for things which Bartley had never expected to pay for. With a like thriftiness the landlord, when Bartley asked for his bill, had charged certain items that had not appeared in the bills before. Bartley felt that the charges were trumped up; but he was powerless to dispute them; besides he hoped to sell the landlord his colt and cutter, and he did not care to prejudice that matter. Some bills from store-keepers, which he thought he had paid, were handed to him by the landlord, and each of the churches had sent in a little account for pew-rent for the past eighteen months: he had always

believed himself dead-headed at church. He outlawed the latter by tearing them to pieces in the landlord's presence, and dropping the fragments into a spittoon. It seemed to him that every soul in Equity was making a clutch at the rapidly diminishing sum of money which Squire Gaylord had inclosed to him, and which was all he had in the world. On the other hand, his popularity in the village seemed to have vanished overnight. He had sometimes fancied a general and rebellious grief when it should become known that he was going away; but instead there was an acquiescence amounting to airiness.

He wondered if anything about his affairs with Henry Bird and Sally Morrison had leaked out. But he did not care. He only wished to shake the snow of Equity off his feet as soon as possible.

After dinner, when the boarders had gone out, and the loafers had not yet gathered in, he offered the landlord his colt and cutter. Bartley knew that the landlord wanted the colt; but now the latter said:

"I don't know as I care to buy any horses, right in the winter, this way."

"All right," answered Bartley. "Just have the colt put into the cutter."

Andy Morrison brought it round. The boy looked at Bartley's set face with a sort of awe-stricken affection; his adoration for the young man survived all that he had heard said against him at home during the series of family quarrels that had ensued upon his father's interview with him; he longed to testify, somehow, his unabated loyalty, but he could not think of anything to do, much less to say.

Bartley pitched his valise into the cutter, and then, as Andy left the horse's head to give him a hand with his trunk, offered him a dollar.

"I don't want anything," said the boy, shyly refusing the money out of pure affection.

But Bartley mistook his motive, and thought it sulky resentment.

"Oh, very well," he said. "Take hold."

The landlord came out.

"Hold on a minute," he said. "Where you goin' to take the cars?"

"At the Junction," answered Bartley. "I know a man there that will buy the colt. What is it you want?"

The landlord stepped back a few paces, and surveyed the establishment.

"I should like to ride after that hoss," he said, "if you aint in any great of a hurry."

"Get in," said Bartley, and the landlord took the reins.

From time to time, as he drove, he rose up

and looked over the dash-board to study the gait of the horse.

"I've noticed he strikes, some, when he first comes out in the spring."

"Yes," Bartley assented.

"Pulls consid'able."

"He pulls."

The landlord rose again and scrutinized the horse's legs.

"I don't know as I ever noticed 't he'd capped his hock before."

"Didn't you?"

"Done it kickin' nights, I guess."

"I guess so."

The landlord drew the whip lightly across the colt's rear; he shrank together, and made a little spring forward, but behaved perfectly well.

"I don't know as I should always be sure he wouldn't kick in the day-time."

"No," said Bartley, "you never can be sure of anything."

They drove along in silence. At last the landlord said:

"Well, he aint so fast as I *supposed*."

"He's not so fast a horse as some," answered Bartley.

The landlord leaned over sideways for an inspection of the colt's action forward.

"Haint never thought he had a splint on that forward off leg?"

"A splint? Perhaps he has a splint."

They returned to the hotel and both dismounted.

"Skittish devil," remarked the landlord, as the colt quivered under the hand he laid upon him.

"He's skittish," said Bartley.

The landlord retired as far back as the door, and regarded the colt critically.

"Well, I s'pose you've always used him too well ever to winded him, but dunn 'f he don't *blow* like it."

"Look here, Simpson," said Bartley, very quietly. "You know this horse as well as I do, and you know there isn't an out about him. You want to buy him because you always have. Now make me an offer."

"Well," groaned the landlord, "what'll you take for the whole rig, just as it stands—colt, cutter, leathers, and robe?"

"Two hundred dollars," promptly replied Bartley.

"I'll give ye seventy-five," returned the landlord with equal promptness.

"Andy, take hold of the end of that trunk, will you?"

The landlord allowed them to put the trunk into the cutter. Bartley got in, too, and, shifting the baggage to one side, folded the robe around him from his middle down and took his seat.

"This colt can road you right along all day inside of five minutes, and he can trot inside of two-thirty every time; and you know it as well as I do."

"Well," said the landlord, "make it an even hundred."

Bartley leaned forward and gathered up the reins.

"Let go his head, Andy," he quietly commanded.

"Make it one and a quarter," cried the landlord, not seeing that his chance was past. "What do you say?"

What Bartley said, as he touched the colt with the whip, the landlord never knew. He stood watching the cutter's swift disappearance up the road, in a sort of stupid expectation of its return. When he realized that Bartley's departure was final, he said under his breath: "Sold, ye dummed old fool, and serve ye right," and went in-doors with a feeling of admiration for colt and man that bordered on reverence.

XII.

THIS last drop of the local meanness filled Bartley's bitter cup. As he passed the house at the end of the street he seemed to drain it all. He knew that the old lawyer was there sitting by the office stove, drawing his hand across his chin, and Bartley hoped that he was still as miserable as he had looked when he last saw him; but he did not know that by the window in the house which he would not even look at, Marcia sat self-prisoned in her room, with her eyes upon the road, famishing for the thousandth part of a chance to see him pass. She saw him now for the instant of his coming and going. With eyes trained to take in every point, she saw the preparation which seemed like final departure, and with a gasp of "Bartley!" as if she were trying to call after him, she sank back into her chair and shut her eyes.

He drove on, plunging into the deep hollow beyond the house, and keeping for several miles the road they had taken on that Sunday together; but he did not make the turn that brought them back to the village again. The early sunset was slanting over the snow when he reached the Junction, for he had slackened his colt's pace after he had put ten miles behind him, not choosing to reach a prospective purchaser with his horse all blown and bathed with sweat. He wished to be able to say: "Look at him! He's come fifteen miles since three o'clock, and he's as keen as when I started."

This was true, when, having left his baggage at the Junction, he drove another mile into the country to see the farmer of the gen-

tleman who had his summer-house here, and who had once bantered Bartley to sell him his colt. The farmer was away, and would not be at home till the up-train from Boston was in. Bartley looked at his watch, and saw that to wait would lose him the six o'clock down-train. There would be no other till eleven o'clock. But it was worth while: the gentleman had said, "When you want the money for that colt, bring him over any time; my farmer will have it ready for you." He waited for the up-train, but when the farmer arrived, he was full of all sorts of scruples and reluctances. He said he should not like to buy it till he had heard from Mr. Farnham; he ended by offering Bartley eighty dollars for the colt on his own account; he did not want the cutter.

"You write to Mr. Farnham," said Bartley, "that you tried that plan with me, and it wouldn't work; he's lost the colt."

He made this brave show of indifference, but he was disheartened, and having carried the farmer home from the Junction for the convenience of talking over the trade with him, he drove back again through the early night-fall in sullen desperation.

The weather had softened and was threatening rain or snow; the dark was closing in spiritlessly; the colt, shortening from a trot into a short, springy jolt, dropped into a walk at last as if he were tired, and gave Bartley time enough on his way back to the Junction for reflection upon the disaster into which his life had fallen. These passages of utter despair are commoner to the young than they are to those whom years have experienced in the impermanence of any fate, good, bad, or indifferent, unless, perhaps, the last may seem rather constant. Taken in reference to all that had been ten days ago, the present ruin was incredible, and had nothing reasonable in proof of its existence. Then he was prosperously placed, and in the way to better himself indefinitely. Now, he was here in the dark, with fifteen dollars in his pocket, and an unsalable horse on his hands; outcast, deserted, homeless, hopeless: and by whose fault? He owned even then that he had committed some follies; but in his sense of Marcia's all-giving love he had risen for once in his life to a conception of self-devotion, and in taking herself from him as she did, she had taken from him the highest incentive he had ever known, and had checked him in his first feeble impulse to do and be all in all for another. It was she who had ruined him.

As he jumped out of the cutter at the Junction, the station-master stopped with a cluster of parti-colored signal-lanterns in his hand and cast their light over the sorrel.

"Nice colt you got there."

"Yes," said Bartley, blanketing the horse, "do you know anybody who wants to buy?"

"Whose is he?" asked the man.

"He's mine!" shouted Bartley. "Do you think I stole him?"

"I don't know where you got him," said the man, walking off, and making a soft play of red and green lights on the snow beyond the narrow platform.

Bartley went into the great ugly barn of a station, trembling, and sat down in one of the gouged and whittled arm-chairs near the stove. A pomp of time-tables, and luminous advertisements of Western railroads and their land-grants decorated the wooden walls of the gentlemen's waiting-room, which had been sanded to keep the gentlemen from writing and sketching upon them. This was the more judicious because the ladies' room, in the absence of tourist travel, was locked in winter, and they were obliged to share the gentlemen's. In summer, the Junction was a busy place, but after the snow fell, and until the snow thawed, it was a desolation relieved only by the arrival of the sparsely-peopled through trains from the north and east, and by such local travelers as wished to take trains not stopping at their own stations. These broke in upon the solitude of the joint station-master and baggage-man and switch-tender with just sufficient frequency to keep him in a state of uncharitable irritation and unrest. To-night Bartley was the sole intruder, and he sat by the stove wrapped in a cloud of rebellious memories, when one side of a colloquy without made itself heard.

"What?"

Some question was repeated.

"No; it went down half an hour ago."

An inaudible question followed.

"Next down-train at eleven."

There was now a faintly audible lament or appeal.

"Guess you'll have to come earlier next time. Most folks doos that wants to take it."

Bartley now heard the despairing moan of a woman; he had already divined the sex of the futile questioner whom the station-master was bullying; but he had divined it without compassion, and if he had not himself been a sufferer from the man's insolence he might even have felt a ferocious satisfaction in it. In a word, he was at his lowest and worst when the door opened and the woman came in, with a movement at once bewildered and daring, which gave him the impression of a despair as complete and final as his own. He doggedly kept his place; she did not seem to care for him, but in the uncertain light of the lamp above them she drew near

the stove, and putting one hand to her pocket as if to find her handkerchief, she flung aside her veil with the other and showed her tear-stained face.

He was on his feet somehow.

"Marcia!"

"Oh! Bartley——"

He had seized her by the arm to make sure that she was there in verity of flesh and blood, and not by some trick of his own senses, as a cold chill running over him had made him afraid. At the touch their passion ignored all that they had made each other suffer; her head was on his breast, his embrace was round her; it was a moment of delirious bliss that intervened between the sorrows that had been and the reasons that must come.

"What—what are you doing here, Marcia?" he asked at last.

They sank on the benching that ran round the wall; he held her hands fast in one of his, and kept his other arm about her as they sat side by side.

"I don't know—I—" She seemed to rouse herself by an effort from her rapture. "I was going to see Nettie Spaulding. And I saw you driving past our house; and I thought you were coming here; and I couldn't bear—I couldn't bear to let you go away without telling you that I was wrong; and asking—asking you to forgive me. I thought you would do it—I thought you would know that I had behaved that way because I—I—cared so much for you. I thought—I was afraid you had gone on the other train——"

She trembled and sank back in his embrace, from which she had lifted herself a little.

"How did you get here?" asked Bartley, as if willing to give himself all the proofs he could of the every-day reality of her presence.

"Andy Morrison brought me. Father sent him from the hotel. I didn't care what you would say to me. I wanted to tell you that I was wrong, and not let you go away feeling that—that—you were all to blame. I thought when I had done that, you might drive me away—or laugh at me, or anything you pleased, if only you would let me take back——"

"Yes," he answered dreamily. All that wicked hardness was breaking up within him; he felt it melting drop by drop in his heart. This poor, love-tossed soul, this frantic, unguided, reckless girl, was an angel of mercy to him, and in her folly and error a messenger of heavenly peace and hope. "I am a bad fellow, Marcia," he faltered. "You ought to know that. You did right to give me up. I made love to Sally Morrison; I never prom-

ised to marry her, but I made her think that I was fond of her."

"I don't care for that," replied the girl. "I told you when we were first engaged that I would never think of anything that had gone before that; and then when I would not listen to a word from you that day I broke my promise."

"When I struck Henry Bird because he was jealous of me, I was as guilty as if I had killed him."

"If you had killed him, I was bound to you by my word. Your striking him was part of the same thing—part of what I had promised I never would care for." A gush of tears came into his eyes, and she saw them. "Oh, poor Bartley! Poor Bartley!"

She took his head between her hands and pressed it hard against her heart, and then wrapped her arms tight about him, and softly bemoaned him.

They drew a little apart when the man came in with his lantern, and set it down to see to the fire. But as a railroad employé he was far too familiar with the love that vaunts itself on all railroad trains to feel that he was an intruder. He scarcely looked at them, and went out when he had mended the fire, and left it purring.

"Where is Andy Morrison?" asked Bartley. "Has he gone back?"

"No; he is at the hotel over there. I told him to wait till I found out when the train went north."

"So you inquired when it went to Boston," said Bartley, with a touch of his old railery. "Come," he added, taking her hand under his arm. He led her out of the room to where his cutter stood outside. She was astonished to find the colt there.

"I wonder I didn't see it. But if I had I should have thought that you had sold it and gone away; Andy told me you were coming here to sell the colt. When the man told me the express was gone, I knew you were on it."

They found the boy stolidly waiting for Marcia on the veranda of the hotel, stamping first upon one foot and then the other, and hugging himself in his great-coat as the coming snow-fall blew its first flakes in his face.

"Is that you, Andy?" asked Bartley.

"Yes, sir," answered the boy without surprise at finding him with Marcia.

"Well, here! Just take hold of the colt's head a minute."

As the boy obeyed, Bartley threw the reins on the dash-board, leaped out of the cutter, and went within. He returned after a brief absence, followed by the landlord.

"Well, it aint more'n a mile'n' a half if it's

that. You just keep straight along this street, and take your first turn to the left, and you're right at the house; it's the first house on the left-hand side."

"Thanks," returned Bartley. "Andy, you tell the Squire that you left Marcia with me, and I said I would see about her getting back. You needn't hurry."

"All right," said the boy, and he disappeared round the corner of the house to get his horse from the barn.

"Well, I'll be all ready by the time you're here," said the landlord, still holding the hall-door ajar. "Luck to you!" he shouted, shutting it.

Marcia locked both her hands through Bartley's arm and leaned her head on his shoulder. Neither spoke for some minutes; then he asked, "Marcia, do you know where you are?"

"With you," she answered in a voice of utter peace.

"Do you know where we are going?" he asked, leaning over to kiss her cold, pure cheek.

"No," she answered, in as perfect content as before.

"We are going to get married."

He felt her grow tense in her clasp upon his arm, and hold there rigidly for a moment, while the swift thoughts whirled through her mind. Then, as if the struggle had ended, she silently relaxed, and leaned more heavily against him.

"There's still time to go back, Marcia," he said, "if you wish. That turn to the right, yonder, will take us to Equity, and you can be at home in two hours." She quivered. "I'm a poor man—I suppose you know that; I've only got fifteen dollars in the world, and the colt here. I know I can get on; I'm not afraid for myself; but if you would rather wait; if you're not perfectly certain of yourself—remember, it's going to be a struggle; we're going to have some hard times——"

"You forgive me?" she huskily asked, for all answer, without moving her head from where it lay.

"Yes, Marcia."

"Then—hurry."

The minister was an old man, and he seemed quite dazed at the suddenness of their demand for his services. But he gathered himself together, and contrived to make them man and wife, and to give them his marriage-certificate.

"It seems as if there were something else," he said, absently, as he handed the paper to Bartley.

"Perhaps it's this," said Bartley, giving him a five-dollar note in return.

"Ah, perhaps," he replied, in unabated perplexity. He bade them serve God, and let them out into the snowy night, through which they drove back to the hotel.

The landlord had kindled a fire on the hearth of the Franklin stove in his parlor, and the blazing hickory snapped in electrical sympathy with the storm when they shut themselves into the bright room, and Bartley took Marcia fondly into his arms.

"Wife!"

"Husband!"

They sat down before the fire, hand in hand, and talked of the light things that swim to the top, and eddy round and round on the surface of our deepest moods. They made merry over the old minister's perturbation, which Bartley found endlessly amusing. Then he noticed that the dress Marcia had on was the one she had worn to the sociable in Lower Equity, and she said, yes, she had put it on because he once said he liked it. He asked her when, and she said, oh, she knew; but if he could not remember, she was not going to tell him. Then she wanted to know if he recognized her by the dress before she lifted her veil in the station.

"No," he said, with a teasing laugh. "I wasn't thinking of you."

"Oh, Bartley!" she joyfully reproached him. "You must have been!"

"Yes, I was! I was so mad at you, that I was glad to have that brute of a station-master bullying *some* woman!"

"Bartley!"

He sat holding her hand.

"Marcia," he said gravely, "we must write to your father at once, and tell him. I want to begin life in the right way, and I think it's only fair to him."

She was enraptured at his magnanimity. "Bartley! That's *like* you! Poor father! I declare—Bartley, I'm afraid I had forgotten him! It's dreadful; but—you put everything else out of my head. I do believe I've died and come to life somewhere else!"

"Well, *I* haven't," said Bartley, "and I guess you'd better write to your father. *You'd* better write; at present, he and I are not on speaking terms. Here!" he took out his notebook, and gave her his stylographic pen after striking the fist that held it upon his other fist, in the fashion of the amateurs of that reluctant instrument, in order to bring down the ink.

"Oh, what's that?" she asked.

"It's a new kind of pen. I got it for a notice in the 'Free Press.'"

"Is Henry Bird going to edit the paper?"

"I don't know, and I don't care," answered Bartley. "I'll go out and get an envelope,

and ask the landlord what's the quickest way to get the letter to your father."

He took up his hat, but she laid her hand on his arm. "Oh, send for him!" she said.

"Are you afraid I sha'n't come back?" he demanded, with a laughing kiss. "I want to see him about something else, too."

"Well, don't be gone long."

They parted with an embrace that would have fortified older married people for a year's separation. When Bartley came back, she handed him the leaf she had torn out of his book, and sat down beside him while he read it, with her arm over his shoulder.

"Dear father," the letter ran, "Bartley and I are married. We were married an hour ago, just across the New Hampshire line, by the Rev. Mr. Jessup. Bartley wants I should let you know the very first thing. I am going to Boston with Bartley to-night, and, as soon as we get settled there, I will write again. I want you should forgive us both; but if you wont forgive Bartley, you mustn't forgive me. You were mistaken about Bartley, and I was right. Bartley has told me everything, and I am perfectly satisfied. Love to mother.

"MARCIA.

"P. S.—I *did* intend to visit Nettie Spaulding. But I saw Bartley driving past on his way to the Junction, and I determined to see him if I could before he started for Boston, and tell him I was all wrong, no matter what he said or did afterwards. I ought to have told you I meant to see Bartley; but then you would not have let me come, and if I had not come, I should have died."

"There's a good deal of Bartley in it," said the young man, with a laugh.

"You don't like it!"

"Yes, I do; it's all right. Did you use to take the prize for composition at boarding-school?"

"Why, I think it's a very good letter for me when I'm in such an excited state."

"It's beautiful!" cried Bartley, laughing more and more. The tears started to her eyes.

"Marcia," said her husband fondly, "what a child you are! If ever I do anything to betray your trust in me —"

There came a shuffling of feet outside the door, a clinking of glass and crockery, and a jarring sort of blow, as if some one were trying to rap on the panel with the edge of a heavy-laden waiter. Bartley threw the door open and found the landlord there all red and smiling with the waiter in his hand.

"I thought I'd bring your supper in here, you know," he explained confidentially, "so's't you could have it a little more snug. And my wife she kind o' got wind o' what was

goin' on—women will, you know," he said with a wink—"and she's sent ye in some hot biscuit and a little jell, and some of her cake." He set the waiter down on the table, and stood admiring its mystery of napkined dishes. "She guessed you wouldn't object to some cold chicken, and she's put a little of that on. Sha'n't cost ye any more," he hastened to assure them. "Now this is your room till the train comes, and there aint agoin' to anybody come in here. So you can make yourselves at home. And I hope you'll enjoy your supper as much as we did our'n the night *we* was married. There! I guess I'll let the lady fix the table; she looks as if she knowed how."

He got himself out of the room again, and then Marcia, who had made him some embarrassed thanks, burst out in praise of his pleasantness.

"Well, he ought to be pleasant," said Bartley, "he's just beaten me on a horse-trade. I've sold him the colt."

"Sold him the colt!" cried Marcia, tragically dropping the napkin she had lifted from the plate of cold chicken.

"Well, we couldn't very well have taken him to Boston with us. And we couldn't have got there without selling him. You know you haven't married a millionaire, Marcia."

"How much did you get for the colt?"

"Oh, I didn't do so badly. I got a hundred and fifty for him."

"And you had fifteen besides."

"That was before we were married. I gave the minister five for you—I think you are worth it. I wanted to give fifteen."

"Well, then, you have a hundred and sixty now. Isn't that a great deal?"

"An everlasting lot," said Bartley, with an impatient laugh. "Don't let the supper cool, Marcia!"

She silently set out the feast, but regarded it ruefully.

"You oughtn't to have ordered so much, Bartley," she said. "You couldn't afford it."

"I can afford anything when I'm hungry. Besides, I only ordered the oysters and coffee; all the rest is conscience money—or sentiment—from the landlord. Come, come! cheer up, now! We sha'n't starve to-night, anyhow."

"Well, I know father will help us."

"We sha'n't count on him," said Bartley. "Now *drop* it!"

He put his arm round her shoulders and pressed her against him, till she raised her face for his kiss.

"Well, I *will*!" she said, and the shadow lifted itself from their wedding feast, and they sat down and made merry as if they had

all the money in the world to spend. They laughed and joked; they praised the things they liked, and made fun of the others.

"How strange! How perfectly impossible it all seems! Why, last night I was taking supper at Kinney's logging-camp, and hating you at every mouthful with all my might. Everything seemed against me, and I was feeling ugly, and flirting like mad with a fool from Montreal: she had come out there from Portland for a frolic with the owner's party. You made me do it, Marcia!" he cried jestingly. "And remember that, if you want me to be good, you must be kind. The other thing seems to make me worse and worse."

"I will—I will, Bartley," she said humbly. "I will try to be kind and patient with you. I will indeed."

He threw back his head, and laughed and laughed.

"Poor—poor old Kinney! He's the cook, you know, and he thought I'd been making fun of him to that woman, and he behaved so, after they were gone, that I started home in a rage; and he followed me out with his hands all covered with dough, and wanted to stop me, but he couldn't for fear of spoiling my clothes——"

He lost himself in another paroxysm.

(To be continued.)

Marcia smiled a little. Then "What sort of a looking person was she?" she tremulously asked.

Bartley stopped abruptly. "Not one ten thousandth part as good-looking, nor one millionth part as bright as Marcia Hubbard!" He caught her and smothered her against his breast.

"I don't care! I don't care!" she cried. "I was to blame more than you, if you flirted with her, and it serves me right. Yes, I will never say anything to you for anything that happened after I behaved so to you!"

"There wasn't anything else happened!" cried Bartley. "And the Montreal woman snubbed me soundly before she was done with me."

"Snubbed you!" exclaimed Marcia, with illogical indignation. This delighted Bartley so much that it was long before he left off laughing over her.

Then they sat down, and were silent till she said,

"And did you leave him in a temper?"

"Who? Kinney? In a perfect devil of a temper. I wouldn't even borrow some money he wanted to lend me."

"Write to him, Bartley!" said his wife, seriously. "I love you so I can't bear to have anybody bad friends with you!"

BROTHER SESOSTRIS.

ON sultry August days, when our too brief but generous New England summer is lavishing upon us all its wealth of sweetness and fervor of heat; when the air is alive with the acrid note of the grasshopper, and from the grass, never so full as then of insect life, rises the shrill cadence of the cricket,—I love to stroll along the half-neglected by-road, partly grassed over for want of use, picking the stunted bitter blackberries that grow on the side, or, clambering over the broken fence, to follow the course of the brook, picking my way among the tall grasses and burdocks, stopping to pluck a sprig of the rank spearmint, or tossing pebbles in the shallows of the brook that, now broad, now narrow, winds through the meadow. Reaching a friendly apple-tree, and sinking down amid the tall grass, it is a luxury to lie there in the shade and look and listen.

On such a day I had been filling my hands with ferns and grasses, when I saw some

luxuriant bunches of thoroughwort, and remembered that Aunt Phebe had told me that "if I had to waste my time in the fields so, I might as well fetch her some thoroughwort."

I picked a huge handful and went round by the house to deliver it. Aunt Phebe and her brother Matthias were old neighbors, who jealously watched my goings and comings, and never failed to inform me of the number of times I had gone by the house.

I was in fault now, but trusted in the herb as a peace-offering. They had an insatiable liking for it, summer and winter; for colds, headache, and every other kind of ache they esteemed it a sovereign cure, and there was almost always a pitcher of the tea standing on the kitchen table, or a basinful steeping on the stove.

Reaching the house, I stopped beneath the huge button-ball at the gate, and looked at the modest, unpainted house—its front door, never opened, flanked on either side by an

old lilac and a blush-rose, the windows of the parlor carefully darkened by green paper curtains, never raised. In all the many years I have known them I have never penetrated into that mysterious front room, and never shall, unless I outlive them and go to their funeral.

At one side of the wide yard was the garden; a couple of rose-trees marked the boundary (more flowers would seem foolishness to Aunt Phebe); and on the grass-plot the white colt grazed,—a colt these ten years, but believed to be frisky still.

Going around to the kitchen door, I knocked, and presently hearing a chair creak and the slow pat-pat of carpet slippers cross the floor, I knew that Aunt Phebe was coming.

The door slowly opened and she confronted me. She was a tall woman with a long face which wore a placid look, though she slowly put out a distrustful hand and said:

"Why, you aint Miss Lincoln, be you? I see you comin' 'cross the field, and I questioned whether or no it wasn't you, but brother said he see you goin' towards the depot this morning and he thought likely you was goin' to Barford."

"Yes," I said, for I knew I should have to satisfy her sooner or later. "I did intend going, but put it off until mother is better."

"I want to know! Well, come in."

The door being shut, I presented her with my herbs, which were received graciously.

"Well, now, that comes just right. I was sayin' to brother only yesterday that we was all out of thoroughwort, and I didn't know what I should do if he should have one of his spells."

Uncle Matthias chimed in:

"Yes, I suppose sister would be put to it. She thinks there's nothin' like it."

"Why, now, brother, I'm sure you take as much as I do."

While this was passing, I surveyed the kitchen. The floor, once shining with yellow paint, had been scrubbed and worn until, except under the table and against the wall, all paint had long since vanished. By the sink was poor humpbacked Betsy washing dishes, with whom I exchanged a smile as she lifted her pathetic eyes to my face.

Behind the stove was the mantel-piece, far out of reach of ordinary people. On it were arrayed the irons and the whale-oil lamps to which they still clung, and below hung a fly-specked "Farmer's Almanac," and a patch-work holder; while under the table stood the never-failing basket, filled in summer with seasonable vegetables, at other seasons of the year with apples.

Aunt Phebe and her brother were poor, but I often wondered if that was the reason why she always wore a calico dress cut so old-fashioned, with an apron of another pattern, with a patent front that deceived no one, and such a painful cap,—and why Uncle Matthias's pantaloons should always be so short, and his stockings so clumsy.

Aunt Phebe was once an "uncommon pretty" girl, they said, and kept school, and Uncle Matthias was once well off, and drove a thriving trade, and was county clerk; before he broke his hip, and lamed himself for life; but misfortune and age pursue all, and they felt both. Aunt Phebe was now sixty and "enjoyed poor health." The beauty was gone, though not the peaceful expression of her eyes; and her brother was older yet, and, in spite of pain and years of privation (unprovoked by any deed of his), was a philosopher.

But Aunt Phebe had hung up her herbs, and her brother had reminded her to take me into the sitting-room. I followed her in, and sat down in the Shaker rocker, on a fat, round cushion of hens'-feathers. Uncle Matthias sat stiffly down in his particular chair arranged to fit his bad hip, and we began to talk.

On observing to Uncle Matthias that he did not look as well as usual, he responded:

"Well, I aint as well as common."

"No," Aunt Phebe struck in, "brother isn't feeling as well as usual. You heerd, I s'pose, that the colt run with him yesterday."

"Why, no," I said; "how was it?"

"Well, you see, brother was driving along into Scitico, and a team come up behind him."

"Yes," Uncle Matthias remarked, "a team come along behind me, and the man was partially drunk, I think, and ——"

"I tell brother he must have been heedless or he wouldn't let a man come up when he was driving the colt so, without noticing."

"Sister will have it I ought not to drive the colt at all."

"Well, brother, you know that colts are skittish, and she the most so of any."

"Now, sister, here is Miss Lincoln waiting to hear how I was hurt."

"Well?"

"Well, the man come up and run his wheel right onto the hub of mine, and startled Sarah, and she started up ——"

"Tipped it up, you know," explained Aunt Phebe.

"And run," continued Uncle Matthias, "and threw me out, and I thought I was hurt bad."

"Yes," said Aunt Phebe. "When they brought brother in, I thought he was injured consid'able."

"Well," Uncle Matthias went on, "I supposed I was, and didn't expect to sleep any, and neither did sister."

"No," said Aunt Phebe. "I thought it likely I should lie awake to worry about him."

"Yes. I thought likely sister would be thinking about me, but I went off to sleep, and so did she, and we both slept better than common."

Aunt Phebe knitted steadily away, and Uncle Matthias slowly jogged back and forth in his chair in silence for a few minutes, finally broken by Aunt Phebe observing:

"It makes it bad, Matthias being hurt so, for we were expecting to go to brother Sesostris's funeral day after to-morrow, and I do know as it'll be so's we can go."

"Yes, I told sister that it happened the worst time it could have for me. My old bones don't feel as if they'd bear much more shakin' up for a spell, but I'll have to risk it. Sister couldn't go alone, and it wouldn't do to disappoint the family."

"I sh'd kinder like to see the place ag'in, too," murmured Miss Phebe.

At the risk of seeming rude, I said:

"I didn't know you had a brother Sesostris."

"Oh, yes; why, he's older than I be," began Uncle Matthias. "Lives down to Squantum, about twenty mile from here. I haint been there—when was we there, Phebe?"

Aunt Phebe considered a moment, and said:

"Why, it's nine year, aint it, brother?"

"Yes, I guess it must be. I know it was in April, and we had an uncommon early spring and they was all plantin' when we got there. He was a well-to-do man, and made it all himself.

"You see, he understood how to drive. When he was a young man, he set his heart on marryin' Elder Bown's eldest daughter, and father told him he couldn't do much for him; but he could have a lot of about twenty-five acre. 'Twas real kind of swampy and wet, and I don't s'pose father thought he'd take him up, but he did.

"He asked the girl, and she agreed to have him, and he was over age then, and had his own time, and I put to work and helped him, and he and me hewed logs enough to make a log-house, and set it up on a piece that was rising a little, so's it wa'n't so wet—and he got married.

"His wife's folks wa'n't well off, and all she brought him was a calf she'd had a present of, and a cosset lamb she brought up, and six hens, and father give him a yoke o' steers and a colt, and they started.

"That was fall. That winter he hired out to do choppin' and haulin' wood for father,

and took his pay part in money and part in feed and such. And the next spring he put to work, and, with a boy he hired, he dreened that swamp—the hull on't—and brought it under cultivation, and kep' right on, and it seemed as if everythin' he teched turned to money."

"It wa'n't all his doin'," put in Aunt Phebe. "She worked as hard as he did, and so did the children. I consider that they all worked as hard as he did."

"Well, I do know but they did. They were dreadful workers. Sesostris had eight boys and two girls, and they all knew how! You see, Sesostris could manage. He got a sight of work out of his folks and his men, and yet they all liked him.

"He'd get up early in the mornin', cold mornin's, and put the men's boots before the fire so's they'd be good and warm, and then when they'd got into 'em he expected 'em to step around lively, and he always hed somethin' for 'em to do. In the fall, along late, on rainy days, he'd get the sleds into the woods and get 'em loaded up, and then first snow he was ready for haulin', and he kep' 'em at it.

"He hed a sight of woodland. He kep' a buyin' all the time, but always bought right 'round him. He settled on a corner first, where roads crossed, and kep' buyin' up until he owned three of the corners, and land runnin' off, of course, but he wa'n't never satisfied."

"I tell Matthias that was a kind of abidin' failin' with Sesostris. He was always reachin' after more."

"Well, sister, he wa'n't like a great many. He didn't want nothin' but what he paid for."

"I know that, but he pestered folks's lives out gettin' what he had, and actilly shortened his life, I believe, frettin' because he couldn't git the fourth corner."

"Were his sons and daughters like him?" I inquired.

"Jes' such workers. I always thought brother didn't think enough of schoolin'. The children didn't hev any to speak of, but, in spite of all, there was two of 'em that would hev it. Abner and George declared for't they wouldn't grind down to farmin', and so one of 'em took to civil engineerin', and he's laid out a sight of railroads; and one took to tradin' in cotton, and they're both rich, and so are all of 'em. I don't know how the property'll be divided, but it'll be all right."

"I suppose some of them staid at home?" I asked.

"Well, yes; that is, the youngest one, Luther, staid at home, and Jim was right by. Along when Jim was about twenty-five—or was it twenty-six, sister?"—

"Twenty-five."

"Well, along there; *he* built him a new house,—I mean a second one. The log-house he made into a barn before he'd been married many years. Well, this was a real nice house, and he built it on the opposite corner, so the houses, the old one and the new one, was facin' each other. After they'd moved in, he told Jim that it was time he was gettin' married, and he'd give him the old house and all the land that belonged to that corner for his share. Well, Jim thought it over for a spell, and looked around some the next Sunday, and so, finally, he fixed up Monday night and rode over to Eben Snodgrass's, and asked to see his daughter, and just put it to her what an offer his father made him, and if she was agreeable to it, he was, and asked her what she had to say."

"Now, brother, what kind of an idee do you s'pose you're givin' Miss Lincoln?"

"Idee? Why, of a young man that acted up to his principles of doin' up prompt and business-like."

"Well, I guess the girl was kinder taken aback. It *was* kinder an unusual way, and she told him she didn't know him."

"'Well,' says James, 'neither do I know you; but I know your folks, and you know mine, and you know all about me, and in my opinion you aint runnin' no risks; but I'll give you a fortnight to think it over, and if you're agreeable then, it'll be all right.'"

"Well, what was the result?"

"Oh, he went again the second Saturday, and she said 'Yes,' and they was married in the meetin'-house at the close of afternoon service the next day."

"I think it was ridiculous," said Aunt Phebe, "and I allers did. It wa'n't no way to do things in such a hurry, and it aint no way to talk of it now. I wonder at you, brother, talkin' so about your own relations!"

"Why, sister, it don't harm any one, and it's no discredit either. They got on just as contented as if they'd been courtin' for years. More folks would git married if such ways was carried on, and I always thought myself it waste of time runnin' after a girl that don't know her own mind half the time, just as like as not. Well, and so Jim has always lived right there, but then, he's hed his share. There'll be a plenty for the others, and the widow'll be provided for handsome, I haven't a doubt, and no quarrelin' over it either. They always was a lovin' family. Set a sight by each other; and Sesostris was a good man, and he wa'n't mean."

"I wonder you met so seldom," I ventured to say.

"Why, I don't know," answered Aunt

Phebe. "You see, it's a great undertakin' for Matthias and me, and Sesostris and his folks were allers workin', and never went nowhere, and I kinder dread goin' to-morrow. I don't like ridin' on the cars, and we don't neither of us want to trust the colt right off ag'in."

"Brother, there's some of them Early Har-vests in the closet; perhaps Miss Lincoln would relish one or two."

The apples were produced, and as I ate I looked around the room; on one side was the air-tight stove, on another a huge old lounge, covered with faded green moreen, while a claw-foot table stood between the windows, with an apoplectic cushion placed directly in the middle, with a great Family Bible on one side and two singing-books on the other, and the last county paper lying across them. Sprinkled around the room were a few high-backed, splint-bottomed chairs, while on the walls hung, above the lounge, Aunt Phebe's sampler, and over the table the picture that had often taken my attention. I finally asked what it was.

"Oh, that is a picture of the first train that was ever run on the railroad between Schenectady and Albany, and I rode. You remember that, don't you, sister, and how frightened you was?"

"Yes, I remember well enough."

"Well, that was a long time ago. Phebe was a handsome girl then, keeping school and company too, and I wasn't a lame old man. It seems like a dream—and sister was frightened and kissed me good-bye, because she never expected to see me again."

"Why do you bring up that foolishness, Matthias? You'd better tell Miss Lincoln something about the trip."

"There isn't much to tell. You can see about how the thing worked by that picture. Took the water along in hogsheads, and fed the boiler with a pail, and went slow enough. You wouldn't liked it."

"That must be an interesting thing to look back upon."

"Yes, yes. But my uncle, now—he could tell you things. Sister, you remember how he used to tell about the war?"

"What war?" I ask.

"Why, the Revolution, to be sure. Yes, Uncle Jim fit in the Revolution, and brother Enos, he that lives in Ferrisburg, hez his canteen that some of the generals have taken a sip out of."

"Tell Miss Lincoln about André's execution, brother. I guess she'll like to hear about that."

"Did your uncle see that?"

"Well, yes. You see, Uncle Jim, he was one of them that was app'inted to guard

the scaffold, and he stood by the steps as the poor young man went up. And André he let his handkerchief fall, and Uncle Jim handed it up; but he took no notice, and so he kep' it, and used to show it to us children sometimes when we was over to his house, and tell about it.

"Well, well! It was too bad. He was as fine a young man, uncle said, as he ever see, and every one felt it went against 'em; and Uncle Jim said he looked over to where Washington stood, and the tears was just droppin' down his face. And uncle always said he believed that General Washington was a feeling man."

"Brother," said Aunt Phebe, "aint you afraid that you're a-tirin' Miss Lincoln all out, telling her these things? Likely as not she don't want to hear of such old times."

It was in vain I protested. Nothing more was to be told, and Aunt Phebe proceeded to put me through the exhaustive course of questioning with regard to the whole neighborhood that I had been looking for all this time.

I then rose to take my leave, charged with many messages for my mother. As I went out of the gate, I saw one of the neighbors approaching in his rackety old wagon.

As I hesitated, he reined in his old nag, and called out most hospitably:

"Going up home? Get in, get in. It's a most amazin' hot day, I declare, and you'll be clean beat out before you git home. Hud-dup there! This old critter's so lazy she wont hardly stir. Well, you've been in seein' Uncle Matthias, eh? S'pose they're just as usual, so'st' crawl, aint they?"

"Why no, Mr. Wilson. Uncle Matthias has been hurt—thrown out of his wagon."

"Sho! I want to know? Aint broke any of his bones, I hope? Well, well, I'm sorry, but then, I guess he'll git over it."

"Did you know that Uncle Matthias's brother, Sesostris, was dead?" I inquired.

"No. Is he? Want to know! What did he die of?"

"I confess that I neglected to ask."

"When is he goin' to be buried?"

"Day after to-morrow."

"Well, I should admire to go myself, but, well, can't always do as ye would. Well, well, Sesostris has worked through to the end. Must have hated awfully to die. Poor creature! I pity him, for all he was so well off."

"Good man he was, too, first rate! I never see a man that help liked to work for better than they did him; and yet he kep' 'em on a keen jump; but then he had such a jolly, free kind o' way with him, and fed 'em up to the handle, too. Why, now, their kitchen table

was set all day, and all the year, for that matter. She was a master hand to cook, and as soon as the dishes was washed and the table wiped down, she and the girls would set pies and doughnuts and sich on it—and go in and it was, 'help yourselves,' and when the men came in, they must have a piece always, and come winter there was always nuts and apples and a big mug of cider set there, and he used to make amazin' good flip, too."

"I thought, by what Uncle Matthias said, that he was hard on his men."

"Hard? Well, one way he was, but then, as I said, he was always pleasant, and fed 'em well. Now, in hayin' he wouldn't hev any drink, but he'd hev root-beer—great jugs of it, and was a'ways goin' out into the field with a big pan of doughnuts, and he'd say, 'Here, boys, take a doughnut in one hand and rake along.' Then evenings, he'd always hev somethin' for 'em to do, of course, but he had sich a way with him that they'd just as live."

"He'd say, 'Come, boys, corn's got to be ready to go to mill in the mornin',' and he'd lead the way to the corn-crib, and sit and tell 'em stories while they was workin', and just keep 'em roarin'."

"Men always liked him. You see, let what would happen, he was always pleasant, and then he worked awful hard too."

"Well, well, if I hed worked as hard as hez I should be better off than I be, but Lord! I want to hev time to breathe—and now he's through with it all. I should jedge it would be hard work for him to rest. He wont know how."

"Did he work so to the last?"

"Why, I can't say as to the very last, I didn't know he was in his last sickness, you know, but along now some five years back, he's been a miserable man. He's been so's he couldn't dig in and work as he did. He hed to give it up pretty much, and it kinder worked on him and made him not reely crazy, but queer."

"First they see of it, to notice anythin' more'n that he fretted consid'able, was that he couldn't set to the table to eat his vittles. He'd kinder begin to push back as if he meant to rise as soon as he'd begin, and keep pushin' back and haulin' up his chair the whole time, he was in such a hurry to work, and couldn't do much either."

"Well, that went on for a spell and then he got so he couldn't set to the table at all,—couldn't spend the time, he said, and would jist take a piece in his hand and go back and forth from the house to the barn or field to see how things was."

"Next thing, he took to gittin' up all sorts of hours and lightin' his lantern and goin'

putterin' 'round the barns seein' to the critters. Kep' 'em roused up all the time.

"Finally the folks thought he must be crazy, for he took to complainin' of what was eat, and wanted his wife to scrimp on the food and *then* they hed a doctor to see.

"Well, he set, and talked to Sesostris for a spell, and watched him and heard what they hed to say, and finally told 'em that he wa'n't crazy, but hed a monomanie; that makin' money hed took hold on him so that he couldn't help it, and they'd hev to put up with it the best they could—and he went from bad to worse."

"Poor man!"

"Sure enough! He *was*. Well, well, it got to be so it was real tryin' livin' with him. They managed to put up with everythin' else, but they would have things to eat, anyway. Why, he got so he'd reely beg of 'em not to waste vittles so—and he was always contrivin'.

"Along late times, they say if he was left alone, he'd rise up and slack up the fire—put it out sometimes.

"You wont scurcely believe me, but now jist to show you—he got so that he used to stop the clock nights so'st' it wouldn't wear out so fast,—said they didn't want to know the time nights, and it would save the works."

"What a merciful relief his death must be."

"Well, I guess they feel it so," said the farmer, construing the remark in his own way. "Now, Sesostris and 'Thias are just as different as can be. Sesostris was always smilin' and fat, hed reddish hair, and you know what a kind of solemn man 'Thias is—always was, for that matter, kinder moderate. I've known Matthias now a good many years, and he's a good man, a straightforward, upright man, *I* call him—kinder near, may be, but then, he's hed to be. He's hed to scrimp so as to get along. He has his ways of givin', too."

"How has it happened," I asked, after a pause, during which the old mare had dragged up an interminable hill. "How has it happened that neither Uncle Matthias nor Aunt Phebe ever married?"

"Did you ever ask 'em?" said the old farmer, as he bestowed a glance on me.

"No, of course not, but Uncle Matthias once told me that he never married because Aunt Phebe didn't, and so they always staid together."

"He did! Well, I swan! Well, it's partly true, not but what they're uncommonly fond of each other, and always hev been, over and above what brothers and sisters usually be; but then, I guess Aunt Phebe would 'a' mar-

ried if she'd ever hed a good chance, and as for him, well! — You know my sister Dony, don't you? Lives to Miles' End—Mis' Elder that now is—married Jim Town when she was young, and he was killed by an onruly critter, and she married Elder when she was along thirty-five. Well, when she was about twenty, she was a reg'lar pictur', slim and straight as a candle. Well, Uncle 'Thias, he was a young man too, then, and he took a great notion to her, used to spark her consid'able, take her to singin'-school and such, and after a spell took to comin' reg'lar every Sunday night.

"He was likely then, and a dreadful worker, and our folks was pleased enough—and so was she.

"Yes," meditatively pursued the old man, as he flicked the mare with his whip, "those were times when you'd 'a' said that Uncle 'Thias would die a well-to-do man. He carried on a farm, and had a shop, and was well off. Why, there was a time when I s'pose if he'd had a mind to he could 'a' realized ten thousand dollars!

"Well, that was before he had a partner. You see, he made chairs (those you see to his house was of his own makin'), and he was gettin' on so that he wanted some one to take part of the care, and he had a partner, and it was the ondoin' of him.

"The fellow imposed on 'Thias's goodness, and ruined him. Then he put to work harder than ever, to make up, and then he broke his hip, and he just settled down small, and haint ever done nothin' sence, so to speak. Well, things is as they is, and we can't change 'em."

"But about your sister," I said. "You were going to tell me about your sister."

"Her and Uncle 'Thias? Yes, so I was. Well—(G'lang up there! Poky creature, she is)—Uncle 'Thias kep' goin' with Dony, and we all thought it was a settled thing. But there was one thing that riled her dreadful. He'd come and set up with her, and, well, you know he aint no great of a talker, best of times, and he used to get reg'lar tongue-tied come to be alone with her, and he'd set, and set, and say next to nothin' to her; and it riled her consid'able.

"We young ones found it out and pestered her. Well, she tried to wake him up. She'd get apples and cider, and pop-corn—and so. 'Twa'n't no good, and wust on't was that sometimes he'd go to sleep and set and snooze and make her as mad as pepper; and finally she told mother that if he didn't quit it she'd quit him, and give him a lesson, too.

"So one Sunday night, along in January, he come; and it was dreadful cold weather, and he'd rode six mile, you know—and 'twa'n't

much after ten when she see him gettin' sleepy, and she fired up and told him if he couldn't keep awake he couldn't care much for her, and if he kep' it up she should act accordingly.

"She was always hot-tempered, Dony was, and so he didn't set so much by what she said as he would otherwise, and though it roused him up for a spell, 'twa'n't long before he was sleepy ag'in, and finally he went reg'larly off, and she never said a word, but when he was sound she took the candle and left him; and so you see when he woke up he was there in the dark, and the fire was out, and he was ashamed to call anybody, and so I s'pose he hunted 'round and found his hat, and left—and never come near her ag'in, and that was the last of his courtin'.

"He was ginooally fond of her—no doubt of it—and I know it sp'iled him for any other gal. He's allers been a good friend to her, and we wondered whether he wouldn't make up to her when her first husband died; and mebbly he would, but he broke his bones just about then—and then for all he's been kind to her, I mistrust he never really forgave her.

"So you see it haint all been choice, his and Phebe's staying together so. I've been sorry for him a good many times, but then they get along kind of comf'table; but when folks, 'specially men, get along to be old, they want to hev their children 'round 'em, and be looked up to. I know how 'tis—I'm gettin' old myself.

"He! he! I s'pose you never heard of a joke that used to go around about Aunt Phebe. Well, you see when she was young, she was real good-lookin'. You can see what there is left of her looks now.

"Well, when she was gettin' on, some of us was in the store, kinder talkin' over folks and events, and one spoke up and said, 'I wonder what's the reason Aunt Phebe Abbott haint got married.' Well, one of the fellows burst out with a guffaw, and says he, 'I can tell ye,—'cause she wa'n't quick enough answerin'. You see, there was a man once in town that was goin' to be a missionary, and had got to leave just such a time, and he liked Phebe, and had been kinder leadin' up to it for some time, but didn't have courage to ask her until the night before he left town. He walked home from meetin' with her and told her, and said he was goin' in the mornin', and must have his answer then. You know what a slow creature she is, and I s'pose she couldn't git 'round to give him an answer, anyway she didn't—and they walked home, and finally parted, without his knowin' whether she wanted him or not.' I heerd the preacher asked her afterwards

about it, and she told him she thought she should 'a' said 'Yes' if he'd gin her time. Well, she's a good woman, and there aint many that would care for that poor hump-backed critter, that she hez, as she doos. She's a real care, but now they set a sight by her, and she's fond of them. But here we be—to home. Wont you come in and see my woman? Well, thank ye for your company, and good-bye to ye."

A week later, as I was weeding a flower-bed in the front yard, I heard the rattle of wheels, and, looking up, saw Mr. Wilson approaching. He stopped before the gate, and called out sociably:

"Good-mornin'! Working out in your posies, be ye? Dreadful hot, aint it? I dunno as I've felt the heat so much this summer as I do to-day. How's your ma?"

As well as usual, I informed him, and inquired after the health of the family.

Having answered my inquiries, he assumed a confidential air, and said:

"Well, Miss Lincoln, I went to Sesostris's funeral, after all."

"Did you, indeed?"

"Yes; you see the way of it was this: That day, you know, you was tellin' me of his death. Well, I didn't expect to go, no more than nothin', but Uncle 'Thias sent over that night, by Betsy, to know if I would take 'em over to the funeral; they was skeery of the colt. Things wa'n't reely in first-rate shape for me to go, but I like to be accommodatin' to a neighbor, and I finally agreed I'd go, and I did. We got over there the night before the funeral, and I staid to Jim's. Uncle 'Thias and Aunt Phebe went to *his* house. There was an awful sight of folks there already. You see, there's a large family of children, and they all had families of their own. All the relations from far and near was there, or come next mornin'. Well, it beat the beater!"

"What did?"

"Everythin'," replied the old man, examining the whip-lash with great care.

"What do you mean, Mr. Wilson? I don't understand you," I replied.

"Well, you see," he explained, pushing his straw hat back on his head and withdrawing his glance from the old mare's ears and fixing it on me, "Sesostris, he hild on to his ideas to the last, and they worked along through the funeral. You see, he didn't mean to have no extra expenses, and so he made 'em promise, solemn, not to put no mournin' on, and then they sot at the services, fully half on 'em in colors, same as usual.

"Of course they borried what they could, but it's a healthy neighborhood, and 'ceptin'

for a few widders that hed black, there wa'n't nothin' to speak of *to* have, and such a large family there wa'n't nothin' 'cept for the nearest.

"You see, Jim's wife, she told me she felt awful. As she said, they could 'a' put *to* and hed mournin' made; but they'd all gin their word not to. It did look bad to folks that didn't know.

"Everything was on the same plan. He'd made all the arrangements for the funeral some time ago,—about the mournin', you know,—and picked out his bearers and all, and he always wanted things as he wanted 'em, and he'd made 'em give their word they'd do as he said, and so they kep to it.

"Never knew none of that family to break their word; but it cut 'em up consid'able not to hev mournin'.

"Well, he's gone, and come to hear about it, I'm sorry for him, that's a fact."

"Were his last days so unhappy?" I asked.

"Yes, they was. They say he died of decline, but I shall always believe that that 'ere fourth corner was what killed him. But I s'pose you don't know what I'm talkin' about."

"Why, I know that he wanted the fourth corner, and tried to buy it, but couldn't. Uncle Matthias told me."

"Jes' so. Well, when I see you the other day, I didn't reely know how it had been, but come to talk with Jim's wife, I found out all about it. The rest of 'em are kinder clus-mouthed; it kinder worked on their feelin's all along to hev folks know how queer he was; but Jim's wife is different, and then she knew I'd always known him.

"Well, he always *hed* been crazy to git that corner, and it seems along late years it wore on him dreadful, and about six months ago he hed a sickness, and when he come out of it he'd kinder dropped his interest in some things—work and so, and turned all his idees to that corner, and they say that *since* he's spent the biggest part of his time runnin' down to Sam Stover's, that owned it, pesterin' the life almost out of him tryin' to git him to sell.

"Sam is just as set as he can be, and then that piece of land has always been in the family, and his house was there, and he wouldn't sell, anyway you could fix it. They say Sesostris almost wore Sam out, houndin' on him all the time. Why, as we was comin' back from the grave, Jake Smith told me how he was to the saw-mill one day last April, and Sam was there seein' to some lumber he was gettin' for a shed, and Sesostris come in and tackled Sam right off, and there they hed it, talkin' and talkin' most of the mornin', and Jake got so put out that he sez to him, 'Mr.

Abbott,' sez he, 'you're so graspin' that I believe if you hed the United States for a farm you'd be wantin' Novy Scoshy for a sheep-pastur!' but he said Sesostris never noticed it,—jes' kep' at Sam. He was around to Stover's the whole time, lookin' on to see what they did to 'his land' (he thought so much on't, it seemed so, I s'pose); then he'd make such a fuss if they cut down a tree or changed anythin', that it was real tryin'. Why, it was so that, this spring, Sam wanted to cut some trees down to sell the timber for ties, and he didn't dar'st to do it, and he come to Jim, and Jim advised him to chop 'em down in the night and take 'em off on the sly, and he did, and Sesostris he never found it out, or I don't know what he would 'a' done."

"I really should have thought," I said, "that this Mr. Stover would have sold, rather than have been so annoyed by Mr. Abbott."

"Well, some folks would, I s'pose; but then I told you he's set, Sam is, and the more Sesostris offered him, the more he set on it himself. Sesostris'd go and argy with him by the hour and couldn't move him, and then he'd go home and sit by the fire and say nothin' to any one, and Jim's wife said one time he spoke up, one evenin' when he was to their house, and sez he, 'The Abbotts hev always been a long-lived family,' sez he, 'and I shall live to be a very old man, and I'll wear Sam Stover out yit.'

"It used to be one of his sayin's, 'If a man could live *always*, he might make some calkilation,' but there it is, you see, he *calkilated* to live beyond Sam Stover any way, but he couldn't do it."

"And you think, then, that the worry wore him out?"

"*Know* it did. He kep' a failin' and kep' a harpin' on the same old story, and he got so he was too feeble to get out, and he made 'em set his chair so's he could look over that way, and he'd set, and set, and never minded how anything went. Finally he took to his bed, about two weeks ago, and they see he couldn't live long, and they hed the minister in to see him, and he sez, 'Well, Mr. Abbott, be you reconciled to die?' 'Not without that corner,' sez he.

"Well, there wa'n't no use talkin' to him. The last thing he said was—they thought he was gone, and he opened his eyes and beckoned to Luther, that was settin' by the bed—and sez he, 'I'm goin', but you'll try and git that corner, wont ye?' and Luther said 'Yes,'—hed to,—and it satisfied him. Well, when I heerd it all, thinks to me, 'Riches aint everythin'.' Everybody was sorry for him. They see he couldn't help it. I don't

wonder at Sesostris hangin' on to his property so. It's as nice a farm as I ever see, and that fourth corner was a pretty piece of land, and it would 'a' kinder rounded it out, so to speak."

"Were all his children there?"

"The most of 'em was; they're a good-lookin' set, too. I haint seen some of 'em since they was little shavers. Well, I must be gettin' along home. I hadn't ought to have stopped so long tálkin', but you seemed so kinder interested the other day that I thought you'd like to know. Good-day to ye."

As the old wagon lumbered off, I disengaged myself from the gate on which I had been leaning, and turned toward the house, when I heard a loud "Say, Miss Lincoln!"

I turned and saw the old farmer pulling up his horse. He screwed himself around on his seat, and said, in a loudly confidential tone:

"There's one thing I just thought of,—when they were fillin' up the grave I looked round and see Sam Stover lookin' as solemn as could be, and I stepped 'round to where

he stood, and we kinder walked along a ways, and sez he,

"'Wilson,' sez he, 'do you take any stock in these new ideas about heaven?' sez he.

"'Haow?' sez I. 'What views do you mean?'

"'Well,' sez he, 'you know where my daughter 'Nervy hez been working in the mills—it's a large place. She was making us a visit a few weeks ago, and she knows them that say that heaven is just like this world—some consid'able better, may be; but you jist keep a-workin' jist as you did here. She talked a sight about it to her mother and me, and I do' know as I believe it, but it's kinder unsettled me, and now, if it *is* so, heaven aint a-goin' to be no place for me, not if Sesostris is goin' to be there. For if it *is* so, and he finds it out, he'll spend all his spare time a-settin' by the gate watchin' for me, and when I come he'll tackle me before it gets shut to after me!'"—and giving me a sharp nod, and going off into a series of chuckles, Mr. Wilson gave a slap to his old horse with the ends of his reins.

BROKEN BANKS AND LAX DIRECTORS.

Of the two thousand one hundred and thirty national banks now in existence in the United States, it is safe to assume that at this moment one or two of them, perhaps several of them, are in an insolvent condition. A dozen or more of the fifteen thousand directors who are supposed to direct the affairs of these banks, and a hundred or more of the stockholders who own and receive dividends upon the stock, are at this moment duped,—“sold,” as the slang is,—and their stock is worse than worthless, and their esteemed teller or cashier is a thief and a liar.* Where is this rotten institution (if we assume there is but one) located? Perhaps in some bright and thrifty New England or New York village; perhaps in a smart, enterprising Western town, or, may be, in one of the great commercial centers or large manufacturing cities. If it is a country bank, its board of directors comprises say thirteen of the most wealthy and respectable citizens of the community,—doctors, farmers, merchants, lawyers, etc.,—men absorbed in their own affairs, quite ignorant of the details of banking, and

trusting everything to the cashier. A committee of three of the directors is perhaps appointed by the board to make an examination of the bank twice a year, before declaring the semi-annual dividend. This examination is conscientious, but not searching. The grocer does not insist upon going to the bottom of affairs, as he does when he thrusts his butter-trie through a firkin of butter that is offered him; the doctor does little more than examine his patient's pulse, and the lawyer entirely forgets the cross-examination. This board seldom dip into the bank-books, but feebly fumble about them, or open and shut them in a convincing manner. They are mildly or openly snubbed by the cashier. They carefully count his cash, and after two or three trials find it all there, or rather they find the amount which he says should be there; but they have never been known really to *prove* the cash by referring to the books and ascertaining what amount *should* be there. Probably they go over the bills discounted, and put down the amounts and foot them up, and find them correct; perhaps they glance at expense accounts, but they do not carefully scrutinize the other accounts in the

* On the day these lines were written, the cash of a teller in one of the Hudson River banks was discovered to be \$52,000 short.

general ledger, nor take off the balances from the dealer's ledger, nor analyze the sources of their earnings, to see if the bank has really earned the amount claimed. They take the most important things on trust; they do not want to seem to doubt their cashier. If he says they have half a million deposited with their New York correspondent, they take his word for it and ask no proof. Then they do not know what proof to ask for, and this fact also makes it awkward. A sufficient test would be to ask to be shown where or when the New York bank had credited them with interest on this deposit.

A few years ago, in a large village situated in a rich and prosperous agricultural section of New York State, there was a flourishing, but insolvent, national bank, whose stock commanded a high premium. It was an old institution, and its reputation was without a shadow of suspicion. Its president was a State senator, well known as a good banker as well as a shrewd politician. Its cashier was one of the most trusted and popular men in the community, active and influential in the church, a leader in public enterprises, treasurer of this, that, or the other railroad or corporation, and, the fall his bank failed, was a candidate for Congress, and came near being elected. And yet, for two or three years, both he and the president had been misapplying the funds of the bank and deceiving the Government examiner and the directors—the former by false entries and forged paper, the latter by taking advantage of their ignorance and credulity. The board of directors consisted of eleven or thirteen solid, respectable, shrewd business men, and when the bank failed, it seemed to them as if the solid ground had vanished into thin air before them. In their semi-annual examinations they had mainly taken "Charley's" word that it was all right. When they called for the other stocks and bonds on hand, Charley said they were on safe deposit in New York (they were really pledged with Charley's broker in Wall street); they did not ask for the key of the safe-deposit box, or for other evidence; when they went over the discounted notes, they found a large number of "dummies." Charley said they were in place of the notes themselves, which had been sent away to other banks for collection. If they had asked to see the acknowledgments of their receipt by the other banks, or if they had telegraphed to their New York correspondent for his balance, with a view to compare it with the account in the general ledger, Charley would perhaps have turned all sorts of colors; or if they had taken off a trial balance from the individual ledger, Charley would have been embarrassed in explaining

the discrepancy between it and the statement from the general ledger; for he owed depositors a good many more thousand dollars than his statement set forth. When, on one occasion, the bank-examiner came along and found very grave irregularities and delinquencies, Charley kept the directors away from him as carefully as if he had had the hydrophobia; and when, upon his report, the Comptroller of the Currency wrote to the directors, calling their attention to the state of affairs, Charley "gobbled" the letter. Another time, when Charley expected the bank-examiner, and his account in New York was short, he spouted the bonds of his customers left with him for safe keeping, and made the account good. Still another time, he borrowed the note of hand of one of the directors, a man reputed worth half a million dollars, had it discounted in New York, and with the proceeds helped himself out. If this director at their next meeting, or earlier, had told the board what he had done, the bank's downward career might have been checked. Or if the other director who had privately let the president of the bank, who was his son-in-law, have some U. S. bonds, ostensibly for some plausible purpose or other, but really to put up with his broker in Wall street,—if he also had let his act be known to the rest of the board, the bank might have been saved. But the usual result followed. One morning it was discovered that the cashier had absconded, and that there were no funds in the bank. An examination revealed that not only was the entire capital and surplus of the bank gone, but that a large assessment upon the stock would be necessary to pay the debts of the bank. The president was arrested, indicted, tried, and sent to State-prison, but the cashier is still a fugitive from justice in foreign lands.

Yes, gentlemen directors, you are probably the victims of your own credulity and ignorance. Your stock is worthless, and the stockholders who elected you are betrayed; you have not done your duty; you have let your cashier snub and hoodwink you. You have not assumed and exercised the authority that was rightfully yours. The officers are amenable to you; they are in your employ; let them understand that every act of theirs is to be open to your inspection, and subject to your approval or disapproval. It is not their bank—it is your bank; its business and funds are held in trust by you for the stockholders who elected you. Do not act as if you were interlopers when you appear in your own bank, or like passengers on a train who hesitate a long time before they dare ask the conductor a question. You are the conductor, and the train

must be run as you say, and if the cashier grumbles, put him off. When disaster overtakes a national bank, it will be found, in nearly every case, that the directors have left its entire management to its officers. They have used no authority. They have stood around and timidly approved of what the officers have done. Their ignorance of bank matters has been one source of their timidity, but their failure properly to appreciate their duties and responsibilities has been equally unfortunate.

Directors are apt to expect too much of the annual visits of the bank-examiner, as if he possessed some clairvoyant insight into the condition of every bank in his district. In the first place, the insides of the bank may be entirely eaten away between his visits. Secondly, he is a stranger, and can know little, except by hearsay, of the character and habits of the bank's officers, or of the security of its loans. Half the discounted notes might be forgeries, and the titles to its real estate worthless, without his discovering it. Thirdly, the examination of national banks by the Government is not undertaken directly in the interest of the stockholders and creditors of the bank, but in the interest of the requirements of the law. These banks are organized under an act of Congress, and they sustain a certain relation to the general Government; and it is this relation alone that the Government is bound to concern itself about. And it may be said here that this relation is not that of an agent to his principal, by which the latter becomes responsible for the acts of the former, but is that of a corporation to the law under which or according to which it is established. The Currency Act is full of restrictions and prohibitions; it points out the way the banks shall go, and the main duty of the examiner is to see that this way is faithfully kept.

For instance, the law requires every bank to keep on hand, in lawful money of the United States, a certain per cent. of its deposits. For country banks this amount is equivalent to six per cent. of its deposits; banks in the large cities must keep on hand twelve and one-half per cent. of their deposits. The law forbids a bank making loans upon the security of its own capital stock; forbids it making a loan, upon accommodation or other than business papers, to any one man or firm greater than ten per cent. of its capital stock; forbids (by implication) loans upon real estate; requires it to add ten per cent. of its net earnings before a dividend is declared to its surplus fund, until the same amounts to twenty per cent. of its capital; requires that at least half the capital stock

be paid in before it can be authorized to commence business; forbids the banks locking up greenbacks or national-bank currency by receiving them as collateral upon loans, and makes many other restrictions and requirements, all of which the Government is bound to enforce, and to which end it keeps the bank under its supervision, both by sending its agents to examine into their affairs and by requiring them to make periodical reports of their condition, under the oath of their officers and directors. "These restrictions," as Mr. Knox, the Comptroller of the Currency, says with great force in his last report, "are intended to protect these institutions by imposing upon them general rules, which experience has shown may be properly done by the Government *without its thereby becoming the guardian of the bank or of the moneys of its depositors or stockholders, or being in any way responsible for the management of its funds.*" The Government can not and does not assume in any way to take the place of the directors of the bank. While the will of the former should be the duty of the latter, it perpetually happens that directors of those national banks which are badly managed wink at open violations of the law, such as excessive loans, allowing the reserve to become low, allowing dividends to be paid without first wiping out the losses and attending to the surplus, allowing the bank to hold real estate beyond the limit fixed by law, allowing its capital to become impaired by losses, etc., and otherwise jeopardizing the legal status of their institution. Here again the bank-examiner steps in, and these abuses have to be corrected.

In the fourth place, while it is also clearly the duty of the bank-examiner to see that the funds of the bank are not embezzled or misapplied by its officers and clerks, yet in the limited time which he can afford to devote to the examination he cannot always unearth frauds of this kind, particularly in the case of collusion. They may be deeply buried in the various accounts, and carefully covered up by false entries and forged papers, and unless the examiner can take time to analyze and sift the business of the bank for the past year as shown by its books, which would be a work of weeks, he cannot be sure the bank is not being robbed by its officers. Bees carry off honey from the hive and leave the comb all intact, and cashiers have been known to exhibit as clean and straight a set of books as need be, when their accounts were little more than empty comb.

An examiner was recently asked by a cashier, whose bank he had just examined, if he would give him a certificate that the bank

was all right. The examiner promptly answered :

"No! In the first place, Mr. Cashier," he said, "my duty does not require that of me. In the second place, nobody knows better than yourself that, in the eight or ten hours I have spent here, I could not go to the bottom of all your transactions for the past year. You have shown me ten thousand dollars in United States bonds called for by your statement, but how do I know that these may not be the bonds of your special depositors left with you for safe keeping, your own having been spouted? How do I know that your receiving-teller may not have suppressed or tampered with some deposit? I find that your books call for so many certificates of deposit; how do I know there may not be many more outstanding, or for larger amounts than your books and stubs show? I have known a cashier to make false entries directly upon his dealer's ledger in the shape of fictitious charges against certain large accounts that he knew would not be disturbed for some time. This was to deceive the bank-examiner, and it did; the deposits were too low, but the trial balance proved, because these charges had not also gone upon the general ledger.

"The credits to your own individual account may be made up from the proceeds of paper left with you for collection; I cannot know unless I spend much time in analyzing it. I can verify the amounts due you from other banks and due from you to them, but for aught I know you may have borrowed fifty thousand dollars of some bank or firm whose name does not appear upon your books, and applied it to your own uses, pledging the credit of your bank for its payment. I have known such a thing to be done. A cashier recently, for some reason or other, allowed certain of his customers largely to overdraw their accounts, but he kept the accounts good upon his books by stealing and turning in the bonds and securities of the savings bank of which he was treasurer. The examiner found things all right, when the capital and surplus of the banks were entirely gone."

Yet bank-examiners frequently do uncover defalcations that have been going on for years, and they are perpetually detecting and pointing out infringements of the law by officers and directors. An examiner of a large and wealthy bank, in one of our commercial cities, one morning, partly by good luck and partly by his own shrewdness, put his finger upon a defalcation that had been going on for twenty-five years, and that had eaten away \$325,000 of the bank's assets. The general book-keeper, in collusion with the teller, had manipulated and falsified the books

for a quarter of a century. The book-keeper had never been a day away from his post in that time. He was a most diligent and praiseworthy employé. He watched those books as if he feared the lids would open and declare his secret. He was a superintendent of a Sunday-school. He came to the bank very early in the morning and opened the mail, and stole such drafts and checks as he could use, and then falsified his books. When the examiner called his attention to certain large charges upon the cash-book that had not been posted in the general ledger, or that had an extremely ugly look, he said very coolly and patronizingly that he guessed it was all right. The president and cashier said very coolly and re-assuringly that they guessed it was all right. The book-keeper went to making out the statement, but the examiner took it from him and told him he wanted none of his statements. Then his feathers fell; he stood like a man who saw his doom before him, and presently made a clean breast of it. He was locked up, but he died from the shock before he could be brought to trial.

Another delusion of directors and stockholders, brought to light by the failure of the Mechanics' National Bank of Newark, is, that in case the bank is robbed by its officers, they can fall back upon the Government for damages, as if the Government was the backer or trustee of the bank. The plea in the Newark case was that the Comptroller of the Currency had published false reports of the condition of the bank. Nothing could be more puerile. The Comptroller did not make and did not publish the reports by which the stockholders and creditors were deceived. The reports were made by the bank itself, by its cashier, and were attested as correct by three of the directors, and published in the local paper in accordance with the requirements of the law. The stockholders were deceived by their own agents. The reports which the examiners make are private to the Government, and are for its instruction and guidance, and are not made public. Who but the stockholders are responsible for incompetent directors, and who but the directors for dishonest officers? The aggrieved party in such cases is the Government itself, which is imposed upon by false statements, sworn to be true by persons whose veracity and standing it has far less opportunity of knowing than the stockholders themselves.

In fact, it is high time that the people who trust their funds in the custody of the national banks, and those who have invested their savings in their stocks, should thoroughly realize where the responsibility of their management lies, namely, with their directors. If

the directors were all competent, and did their duty fearlessly, disasters like the recent failures in Newark and in Boston would never happen. That ignorance and incompetency exist among directors and dishonesty among officers must be admitted; but ignorance can be enlightened and dishonesty weeded out.

Perhaps not one in three of bank directors throughout the country, to say nothing of the great mass of stockholders, understands, or in any adequate measure appreciates, the significance of the weekly balance-sheet of their own bank. To most it is a meaningless form. I have known an old cashier who, when his bank had suffered great losses, could not tell to what extent his capital was impaired; he could not make an exhibit showing what the bank was worth. Yet this balance-sheet, or statement from the general ledger, is very simple and is extremely convenient. Let us take a sample sheet. Here is the statement of the famous Mechanics' National Bank of Newark, for October, 1880:

RESOURCES.	
Loans and discounts.....	\$1,826,219.88
Overdrafts.....	
U. S. bonds to secure circulation.....	500,000.00
U. S. bonds to secure deposits.....	
U. S. bonds on hand.....	
Other stocks, bonds, and mortgages.....	
Due from approved reserve agents.....	1,749,587.43
Due from other banks and bankers.....	216,343.69
Real estate, furniture, and fixtures.....	30,500.00
Current expenses and taxes paid.....	4,958.70
Premiums paid.....	
Checks and other cash items.....	113,023.17
Exchanges for clearing-house.....	
Bills of other banks.....	38,111.00
Fractional currency.....	96.90
Specie.....	38,023.60
Legal-tender notes.....	227,513.00
U. S. certificates of deposit.....	
Due from U. S. Treasurer.....	32,500.00
Total.....	\$4,776,877.37

the circulating notes furnished the bank by the Government; the next item is the dividends yet on hand, not called for by the stockholders; the next item is the aggregate deposits of the bank's customers; the next two items represent the moneys that have come to the bank from other banks in the shape of checks, notes, etc., for collection—in all, \$4,776,877.37. This is the amount of money the bank had received, and had not paid back at the close of business on the day the report was made. This side of the account we call the "liabilities," because the bank as an institution is liable to its stockholders, to its customers, and to the Government for this amount. If it had settled up its affairs on that day, those are the amounts it would have had to pay out.

Now what has the bank done with all this money? Look on the other or left-hand side of the sheet. It has loaned out so much (first item); it has purchased so many United States bonds to deposit in

LIABILITIES.	
Capital stock paid in.....	\$500,000.00
Surplus fund.....	400,000.00
Other undivided profits.....	65,337.58
National bank notes outstanding.....	441,900.00
State bank notes outstanding.....	
Dividends unpaid.....	4,697.00
Individual deposits.....	3,098,953.49
United States deposits.....	
Deposits of U. S. disbursing officers.....	
Due to other national banks.....	183,256.84
Due to State banks and bankers.....	82,732.46
Notes and bills re-discounted.....	
Bills payable.....	
Total.....	\$4,776,877.37

This statement perhaps conveys no distinct idea or meaning to most of the persons for whose benefit it is published, and yet it is a simple exhibit, on the one hand, of all moneys the bank has received, and on the other, of the disposition made of said moneys. Every person who keeps account of moneys received and spent makes to himself or to his employer essentially such a statement; what he has paid out, with the cash on hand, must equal what he has received: the account must balance. In a bank statement, the right-hand side shows where the money with which the bank does business comes from; the left-hand side shows where it goes to. Every cent is accounted for. The first item on the right shows what was paid in by the stockholders when the bank was organized; the next two items show the bank's earnings or savings on hand; the next item is

Washington to secure its circulation; it has deposited with its reserve agent in New York so much (here is where the defalcation was concealed); it has sent checks and notes, etc., to other banks for collection, amounting to so much; it has purchased real estate and office furniture and fixtures amounting to so much; it has paid out as expenses since the previous July so much; its cash on hand, embracing checks, bills of other banks, fractional currency, gold and silver and greenbacks, amounts to the next five items; and lastly it has deposited with the United States Treasurer, as a standing fund for the redemption of its circulating notes, thirty-two thousand five hundred dollars. In the aggregate, the money it has loaned, invested, paid out, deposited elsewhere, with its cash on hand, exactly equals the amount it has received. This side is called "resources," because when

the bank closes up, or when it fails, the money with which its debts or obligations, on the other side of the account, are to be paid must be got out of these items. When, then, is a bank's capital impaired? When its losses in bad notes, or in real estate, or by other means, added to its expense account, more than equal its surplus fund and other undivided profits. If the Newark bank, with more than \$460,000 of surplus and undivided profits, had \$500,000 of bad debts, its capital would have been impaired to the extent of \$40,000 only. But it turned out that it had \$2,500,000 of false debt, or false charges, which swept away its capital and surplus more than twice over. Strike out on the side of resources the amount due from reserve agents, and see what a hole it makes in the sum total. How can you pay off the other side with what there is left? Sink the capital and the surplus, and you still fall far short. Supposing the accounts in this statement all to be good, no bad debts, etc., what premium is the stock worth? Simply deduct expense account from the aggregate of surplus and profits, and what is left is to be added to the capital, almost doubling it, or making it worth one dollar and ninety cents on the dollar.

A certain bank had on deposit in Washington, as security for its circulating notes, a one-thousand-dollar United States bond in excess of the amount required by law. The directors concluded to take up the bond and sell it, and they instructed their officers to place the proceeds to the credit of profit and loss account, in order that it might be divided up at the next dividend. This, of course, the cashier and president refused to do, and it came near leading to a rupture between them and the directors. Some of the stockholders even hinted darkly that the president and cashier could divide, if they had not already done so, the proceeds of that bond, because they refused to credit it to undivided profits. They did not or could not see that it was just as impossible for that money to go to those accounts, or to any account on that side of the sheet, as for two and two to make five. It would have been a falsification of the books of the bank, and would have rendered the officers liable to imprisonment if they had done it. It was not money earned or money made. The bank had paid a thousand dollars for the bond, and in selling it, it had got its money back again; of course, therefore, bond account had to be credited with it, else the books would never balance, and the proceeds went into cash, or into the amount due from one of its correspondents. When the bank was organized, it purchased with the money received from

its stockholders \$101,000 United States bonds, and it opened a bond account on its general ledger. It treats this account as if it was an account with a person or an institution, and says: "Mr. Bond Account, you have got \$101,000 of my bonds, and I charge you with them; when the bonds are sold and I get my money back again, then I will credit you with the money I receive, and we will square the account if we can. If the bonds bring more than their face value, then the premium I will credit to Profit and Loss, another person with whom I have dealings, and whom I owe all the money I earn or make. If they bring less than their par value, then I shall have to draw upon Profit and Loss, or upon Mr. Surplus, to make up the shortage. If there is not enough funds in either of these accounts to make the account with you good, then I shall be compelled to use the money due the stockholders to make up the deficiency." Just so with its other stocks and bonds on hand, and with its real estate. The bank opens an account on its general ledger under each of these heads. When it purchases bonds or stocks with its idle funds, it charges this account with the amount purchased; when it sells them again, it credits the account with enough of the proceeds to offset and wipe out the charge, and the surplus, if any, it carries to profit and loss. When a bank sells its real estate, if the proceeds be less than cost, it must draw upon the moneys it has saved up, to make good the deficiency.

And this is all there is in double-entry book-keeping, a term usually so bewildering to the uninitiated. Every transaction in a bank implies two entries upon its books, a charge to some account and a credit to some other, or *vice versa*. When A—— deposits money, we credit him with it, and virtually charge cash with the amount. We say, "Mr. Cash, you have got this money and I charge you with it. All the money I receive I charge to you, and credit the sources from which it comes; all the moneys I pay out I credit to you, for it comes from you, and I charge the persons or things that receive it." Hence, the books of a bank or of any mercantile house kept by double entry, if properly kept, will balance any day, any minute. Strike in anywhere, arrest the business, and the books should balance. That is, the debit side with the cash on hand (the cash is a debit item) should equal the credit side. I once found a book-keeper working late at night over his books, in which there was a difference of one cent between the two sides; he was hunting down that refractory cent.

The main difference between single and

double entry book-keeping is this: in the former we keep accounts with persons only, and the ledger shows the debits and credits to individuals alone; in the latter we keep accounts with things as well, and the general ledger contains a summary of the entire business. Books kept by single entry can only be balanced, or the condition of the business ascertained, by taking an "account of stock"; but in double entry, if a profit and loss account has been opened at the start, the balances as shown by the ledger are a complete exhibit of the condition of the business at that time. I touch upon these details, because a great many directors of national banks are merchants or traders who keep their books by single entry, and are quite helpless before a set of books kept by the more scientific system of double entry.

The quarterly statement, which is the exhibit of the general ledger of a bank, showing the debits and credits of its various accounts, should be sharply scanned by the stockholders and customers of the bank making it. If there is any defalcation or embezzlement it is hidden in one or the other of these items on this sheet, usually on the debit side, or side of resources; some of the resources are sham—mere empty comb in the hive. But it may occur on the other side also. The bank may owe depositors or other banks more than it sets forth. If the aggregate of the balances from the individual ledger, deducting the overdrafts, exceeds the amount called for by the statement, say by ten thousand dollars, then, unless there is a clerical error on the other side to offset it, that amount of money is not accounted for; it has dropped out, or dropped into the teller's or cashier's pocket.

When an examiner visits a bank he either takes off this balance-sheet from the general ledger, or asks the book-keeper to do it for him, in which case he goes over the accounts and verifies it. The directors should do the same thing, and, as they have much more time, should sift the accounts more thoroughly. One day an examiner of a New England bank struck a defalcation in the item on the side of resources called amounts "due from State banks and bankers." The amount called for under this head was seventy thousand dollars. The president of the bank, who was a man of the highest standing in the community and was supposed to possess an ample fortune, assured the examiner that this amount consisted of various railroad stocks placed in the hands of a well-known New York broker for sale, and that he had received notice that the bank could draw for seventy thousand dollars at any time. When the Comptroller of the Currency re-

ceived the examiner's report of the result of his examination, he wrote to the examiner in New York to verify this item. Word was flashed back over the wires: "No foundation whatever for the statement—no funds or stocks with the broker named." The president of the bank had perjured himself and robbed his stockholders. The result was his bank was placed in the hands of a receiver, and himself in the hands of the law.

When the directors examine their bank, they go sharply for the cash on hand. This is well enough as far as it goes, but they should go still more sharply for the cash not on hand, but reported due from this source and that. The cash of a defaulting bank-officer is the last to suffer. This is stealing too near home, and would at once lead to embarrassment.

In examining a bank, the question to be asked about the right-hand side of the sheet, the side called "liabilities," is this: are the amounts too low? The question to be asked about the left-hand side is, are the amounts too high? That is, has the bank properly credited all the moneys it has received to the accounts on the right, and has it made no false charges to the accounts on the left? When these two questions are satisfactorily answered, your bank is examined, and is correct. Let us say, then, the examining committee is ready to begin. They enter the bank with this balance-sheet in hand. The daily business of the bank is going on about them and all seems confusion; here are books and books, day-books and journals, bill-books and ledgers, paying cash, receiving cash, general cash, discount register, general ledger, individual ledger, etc. Let them not be confused by these, but go straight for the general ledger; here is the summary of the whole business—here is the pool in which all these various streams empty; if the general ledger is right, all is right. The sheet you hold in hand is made up from the balances upon its pages. Begin with the side of "Liabilities." The first item is "Capital Stock"; is it too low? Of course you know what your capital is, and there is no room for fraud here. Next is "Surplus"; open to this account on the ledger and see what the credits are—that is, the items that make up the amount. The law requires you to add, before paying each dividend, one-tenth of your net earnings to surplus, till the same shall amount to twenty per cent. of your capital. See if this has been done. Then see what the charges are against the account, and if they are legitimate, and such as were authorized by the directors. Then look at interest account; see if the interest on your bonds, and from other sources, has been properly credited. There

can be no charges here unless you pay interest to depositors, or upon a loan. Then turn to discount account. You can easily tell if the amount here is what it ought to be, by computing the interest on the average amount of your bills discounted, since the payment of the last dividend. Then look to profit and loss account, or to other undivided profits, if you have such, and see what the credits and charges are, and if they are legitimate. Against profit and loss are always charged, every six months, expenses, taxes, losses, and dividends. Any other charges should attract your attention. The credits to this account come every six months, from interest, discount, exchange, rent, and any other sources of income you may have. But these various accounts representing the bank's profits are seldom or never tampered with by defaulting officers, though I have known a cashier to run fictitious notes through his discount register, in order to swell his discounts received and be ready for the next dividend. Of course he had to make false charges on the other side or in the debit accounts of the ledger, to balance his books, and this he did by putting "dummies" in his bills discounted.

Next comes the circulation received upon your bonds deposited in Washington, which should be ninety per cent. of the same, if your capital does not exceed five hundred thousand dollars.

Then comes "dividends unpaid," and it is easy to tell if this amount be too low.

Now you come to an account where fraud is more frequently concealed than in any other of the credit balances, namely, "individual deposits." Sometimes defaulting cashiers or book-keepers, as they steal or misapply the bank's funds, will slowly lower these figures by false additions, or by other means. The amount due every depositor may show correctly upon the dealer's ledger where the accounts are kept, and yet the aggregate, as it appears upon the general ledger, be far too small. In a case to which I have alluded, of an embezzlement that had been going on for twenty-five years, \$200,000 of the deficiency was carried in this account. Therefore, let the examining committee now turn to the individual ledger and cause the book-keeper to take off every man's balance upon a sheet: the total footings of these amounts, less the overdrafts, should equal the amount called for by the account on the general ledger and by the balance-sheet in hand. But to be absolutely certain this account is correct, every depositor's book must be called in, written up, and his vouchers returned to him; then, and not till then, can you be sure that the deposits have not been tampered with.

Next comes the amounts due to the various other banks with which your bank does business. You can write to these banks and see what you owe them, or require your bank to settle with them at once. The same with the balances due the United States or its disbursing officers. If your bank has borrowed money, it should appear under "Bills Payable," and if the cashier has borrowed money and made no entry of it upon your books, but used it to stop up some hole he has already made in your assets, you can find it out by a careful analysis of the entries upon the general cash-book—a task which requires the services of an expert.

Now let us turn to the debit side, or side of resources, and see if any of these amounts are too high. First count the cash, and see if it agrees with the amount called for by the statement in hand and by cash account on the general ledger. If no cash account is kept on the general ledger, then cause one to be opened at once. I have known a teller's cash to be short fifty thousand dollars week after week, and the cashier, directors, book-keeper, and all, to be ignorant of the fact. The teller should make up his cash at night, and call the amount to the general book-keeper, who should tell him whether or not it is correct.

Having verified the cash, take the notes and bills discounted, and see if the footings agree with the amount called for by the statement.

Then comes the United States bonds to secure circulation, and which are on deposit with the Treasurer in Washington. There can be no fraud here.

Other stocks and bonds on hand are easily counted, and the amounts verified.

Then comes the amounts due from other banks, and it is in these items that the moth of speculation generally takes up his abode. If there is a false charge it is here, and generally in the account with your bank's redemption agent. With the other banks you settle every two or four weeks, and a false charge would be uncovered, but with your redemption agent you are supposed to keep a perpetual balance. Ask for the last statement of account current from that bank, and see how the balance at the end of the previous month agrees with your books on the same day. It should, as a rule, be more, because there are sure to be some drafts still out. If your bank has made or charged any remittance to that bank which has not yet been received and credited, find out what that remittance was, and why it is not credited. I know of a teller who took forty thousand dollars out of his cash on the seventeenth day of the month, and the general book-keeper made a false charge of that amount to the bank's New

York correspondent. When the statement for that month from the New York bank came, early the next month, the chief book-keeper compared it with the account upon their own books. He, of course, added to his amount the drafts not yet paid in New York, and deducted the remittances not yet received and credited there. Among these remittances was this false charge of forty thousand dollars, two weeks overdue, and yet he made no inquiry, and apparently thought it all right. He was a correct and most conscientious clerk, but the routine of the office for fifteen years had worn such a rut in his mind that no ordinary shock could throw him out of it. When the examiner came along, perhaps on the last of the month in which the false charge was made, his examination failed to reveal the fraud. The reason why it did not is curious, and worth explaining. He, of course, did not seek to verify all the charges in this account, but relied upon proving the balance by other means. He asked for the account current of the previous month, knowing that a comparison of this with the bank's would discover all fraud, except what might have occurred within the past few weeks. On examination, he discovered a discrepancy of say fifty thousand dollars; that is, there was not as much money in New York, at the end of the previous month, by fifty thousand dollars, as the books called for.

This proved to be a loan. The bank he was examining was required to keep on deposit in New York a certain amount of money; it had concluded, for the sake of a higher rate of interest than it was then receiving, to loan out a part of this fund on call, and had done so through its redemption agent, but for reasons had made no entries upon its books; and for aught the books showed the money was still on deposit with its redemption agent, though on the books of that bank the loan was properly charged. When the examiner made his visit, the loan was called and credited in New York, but the officers failed to tell him of the fact. Hence, when by correspondence the balance in New York was asked for, the loan was supposed to be still out, and the false charge of forty thousand dollars was not revealed. The teller went on stealing until he had taken twelve thousand dollars more before the discovery was made. If the amount due from other banks is exceptionally large in proportion to the bank's capital and its deposits, and is carried along from month to month, directors should be looking about for a good investment for their idle funds.

To further illustrate this point, let us take another bank statement. Again it is a New-ark bank, at present in the hands of a receiver. Here is its showing September 1, 1879, a short time before it failed:

RESOURCES.

Notes and bills discounted.....	\$ 189,049.41	
Overdrafts.....		
U. S. bonds to secure circulation.....	300,000.00	
U. S. bonds to secure deposits.....		
U. S. bonds on hand.....		
Other stocks, bonds, and mortgages.....		
Due from approved reserve agents, viz.:		
Third National, New York.....	\$12,882.73	
Central, New York.....	40,613.95	
Commonwealth, Boston.....	20,697.41	
		74,194.09
Due from other national banks.....	156,606.84	
Due from State banks and bankers.....	10,721.56	
Banking-house.....	152,572.26	
Other real estate.....		
Furniture and fixtures.....		
Current expenses.....	\$1,290.77	
Taxes paid.....	3,081.21	
		4,371.98
Premiums paid.....		
Exchange.....	15.81	
Checks and other cash items.....	41,587.27	
Exchanges for clearing-house, including gold checks.....		
Bills of other national banks.....	3,706.00	
Bills of State banks.....		
Fractional currency (including nickels).....	107.97	
Specie, viz.:		
Silver coin.....	\$3,581.00	
Gold coin.....	813.25	
Gold Treasury notes.....		
		4,394.25
Legal-tender notes.....	18,053.00	
U. S. certificates of deposit for legal-tenders.....		
5 per cent. redemption fund with Treasurer of United States.....	13,500.00	
Other funds with Treasurer of United States.....	4,923.95	
Cash short.....	42.01	
Total.....		\$973,846.40

LIABILITIES.

Capital stock paid in.....	\$300,000.00	
Surplus fund.....	62,584.25	
Discount.....	\$1,717.63	
Exchange.....		
Interest.....	244.74	
Premiums.....		
Profit and loss.....	4,533.84	
		6,496.21
Circulation received.....		
On hand and returned.....	270,000.00	
State bank circulation outstanding.....		
Dividends unpaid.....	524.00	
Individual deposits, viz.:		
Subject to check.....	291,968.46	
Demand certificates.....		
Time certificates.....		
Certified checks.....		
Cashier's checks.....		
United States deposits.....		
Deposits of U. S. disbursing officers.....		
Due to national banks.....	19,507.52	
Due to State banks and bankers.....	2,289.15	
Notes and bills rediscounted.....		
Bills payable.....		
Suspense account.....	20,476.81	
Cash over.....		
Total.....		\$973,846.40

Now, what are the unfavorable features in this report? In the first place, the bank is not earning much money. Its loans are less than its capital, or less than its deposits, which is one bad feature. The aggregate loans of all the banks in the country at any time is nearly double the aggregate capital, and far exceeds the total deposits.

The second unfavorable and even suspicious feature is the amount "due from other national banks." The bank is not doing a large business. The amount due to banks is not large. It keeps three accounts with banks in the reserve cities, New York and Boston, and through them would naturally do most of its collecting, and yet it reports due from other banks, State and national, \$167,000, nearly eight times as much as is due to banks. The banks of the country in the aggregate always show a much larger sum due to banks than from banks, because of the number of drafts and checks still outstanding. I do not know why this bank failed, but I venture to say that a large part of this sum due to other banks was found to be fictitious, and the charges were made to cover up stealings or losses.

Then the real estate item is very large; half the capital of the bank is locked up in an unproductive bank building. "Checks and other cash items" looks suspiciously large for the bank's business. There are probably several "Quaker guns" doing duty here.

In going over the discounted notes, directors should look particularly after notes due abroad and sent off for collection. Ask the cashier to show you copies of the letters in which they were sent. If he replies that no copies were kept, then at once make a rule that every business letter that goes out of your bank shall be copied, and the copy kept on file.

The two feet that the business of a bank goes upon are debit and credit; first the one, then the other, and the two are equal: one is just as long and as broad as the other; the total debits must equal the total credits, and *vice versa*. When a cashier makes a credit on one side of his books, unless he has the cash on hand to show for it, he must make a charge on the other, or his books will not balance. One lie necessitates another lie, and so on. An examiner, in analyzing the accounts of a broken bank, once came upon this item: The cashier had charged to his New York correspondent as a remittance a draft of thirty thousand dollars; the examiner looked on the other side of the books to see where the draft came from—to see if any customer had deposited it and been credited, or if it had come from any other bank. Nothing of the sort could be found. But there must be a credit to meet the charge, else the cash on the close of business that day would be thirty thousand dollars over. But the cash was not over. The charge was offset by the credit of three drafts

to the New York bank, of ten thousand dollars each. This made the books balance, but where the thirty thousand dollars came from was still a mystery. By inquiry at the New York bank, it was learned that the draft was drawn by a neighboring bank, and was payable to the order of the cashier of the broken bank; by continuing the inquiry at the neighboring bank, it was learned that the amount was a loan to the defaulting cashier. The drafts he had drawn against it were payable to fictitious names, and were used by himself in stock speculations. He had made a turn to pay the loan by means equally crooked, but which I will not go into here. Now this transaction is such a one as would be almost certain to be overlooked by a bank-examiner, unless he laid regular siege to the bank's accounts; and where is the director that would have unraveled it? The transaction, to have been straight upon the books, should have stood thus: The neighboring bank should have been credited with the loan upon the one hand and the New York bank to whom the amount was sent charged with it on the other; then the drafts drawn against it should have been duly credited, and charged to the persons who had them, or to cash. The cashier's account was not good for such an amount, and he appears to have been afraid to credit his account with so large a sum, in the first instance.

I have thus aired some of the ins and outs of banking, and some of the ways of bank officers that are dark and crooked, and pointed out a part of the duty of directors. The national banking system is perhaps as nearly perfect as any system that was ever devised, and the administration of the law is in thorough and efficient hands, and the total losses, upon an average holding of nearly eight hundred millions of deposits, in nineteen years have been but six and one-half millions, or less than one-twentieth of one per cent. annually. Yet as long as stockholders are indifferent and bank directors lax and ignorant, unacquainted with the character, habits, associates, engagements, etc., of the men they employ behind their counters, and to whom they trust the custody of their funds and accounts, and so long as they are unacquainted with the details of the business they have sworn to protect, and of the law they are pledged to uphold, so long will disasters like the recent ones overtake them, and the golden apple of bank shares and expected dividends turn to ashes on the lips of the possessor.

TOPICS OF THE TIME.

Ghosts in our Foreign Policy.

NOWHERE do ideas outlive their time so stubbornly as in the foreign policy of nations. The English jealousy of the hereditary enemy across the Channel persisted long after there was any need for it, and it is only in this generation that the people of the United States have entirely recovered from the anti-British feeling that came down from the days of George III. and Lord North. There are instances all through the pages of history of the survival of certain national antipathies, jealousies, fears, and the policy based on these sentiments, long after there was any occasion for them. Nations have been embroiled in destructive wars by the mere ghosts of ideas—post-pliocene survivals that walked the earth as though they had a legitimate place in the existing order of things.

It seems quite possible that the American fear of European interference may be one of these walking fossils. When that most clear-headed and straightforward president, James Monroe, in the middle of his second term, enunciated the doctrine that the American Government would neither embroil itself in Europe nor consent that the European powers should "extend their system to any portion of this hemisphere," his declaration was a timely and fitly spoken word. Monroe was president of twenty-four sparsely settled States containing about ten millions of people, of whom a million and a half were slaves. The country, almost up to the very beginning of his presidency, had been sorely divided between a party that leaned toward British traditions, and one that held to a French alliance and an antipathy to England. In Europe the "balance-of-power" doctrine reigned supreme, and there was danger that American alliances or conquests might be sought as make-weights. Mexico had but recently achieved her independence, and in the year the Monroe doctrine was promulgated had overthrown the short-lived empire of Iturbide, and, following the example of the United States, had become a republic. The future of the continent was beginning to disclose itself. America was to be republican. But there was ground to fear that the European governments, fresh from the re-establishment of Bourbonism in France, and hostile to every movement of republicanism, might attempt to arrest the course of events on the American continent. It was the master-stroke of statesmanship, at this juncture, to announce, as Monroe did, with the utmost candor and friendliness, that we should regard any attempt to extend the European system to this continent "as dangerous to our peace and safety." It was a declaration of independence for the hemisphere.

The doctrine has by no means become obsolete, though it has been sometimes seriously overworked. Any attempt to extend the European system to

America by conquest or forcible interference would be regarded as no less hostile to our peace now than such an attempt would have been in the time of the clear-sighted President Monroe. But the fears of that day are groundless in this. The national self-assertion necessary in the time of weakness is out of place now. In the fifty-eight or nine years that have passed since the Monroe doctrine was pronounced, the ten millions have grown to fifty and the face of European politics has changed. The great powers have recovered from their reaction against the French Revolution, and have grown more liberal. The European system is no longer what it was. But even if there were a disposition to introduce the European system into America to-day, the United States is clearly master of the situation, at least so far as the northern half of the continent is concerned. There is nothing that could resist the power of this Government if it were disposed to seize the whole of North America. We can afford to talk less about the Monroe doctrine; for nowadays it enforces itself.

As for the isthmian canal, it may be necessary to insist on special guarantees and it may not. At least, it would be unfortunate for the United States to be placed in a position of obstruction toward a work of world-wide interest. We have talked of a canal across the Panama isthmus for more than a generation. But our hands are filled with work that lies within our own bounds. Far-reaching railways, great bridges, delta improvements, and coast surveys have absorbed the engineering enterprise of the nation. On the other hand, it is natural that an old and cultivated country like France, under a liberal government and with a peaceful policy, should seek opportunities in America for her enterprise and skill. It would be a subject for regret if we should withhold our admiration from such engineers as the heroic Blanchet, for example, who a few weeks ago fell a victim to his zeal for the canal. No interest that we may feel in the rival schemes of American projectors, no ghost of possible European interference, should prevent our heartily applauding the courage and skill of the great French engineers who have undertaken the boldest work of the world.

There is already reason to fear that a scheme is on foot to revive the annexation movement, in connection with the canal excitement. One hears from some public men, in conversation, a vague intimation that Santo Domingo is a "strategic point" of great importance. It controls the isthmus, we are told, and if we do not get it, somebody else will; consequently it will be necessary for us to seize it. But no European power would care to become involved in a war with the United States for the sake of acquiring a West India island. It is not needful that we should rob a neighbor to prevent his being plundered by some one else.

The desire for adjacent territory was a natural one in the early history of the country, when Florida and the mouth of the Mississippi were held by foreign powers. But the policy of annexation is likewise a survival. We have no need of territory. To begin to annex islands or provinces filled with an uncongenial people would be to enter on a career fatal to our system of government. We have no machinery appropriate to the management of remote provinces, as the English have. Our attempt to handle Mormonism under a provincial system shows how difficult it is for a republic like ours, which has no prime minister, all powerful and wholly responsible, to govern in this way. Our system is not suited to schemes of conquest. This republic ought to make its citizenship so desirable that States beyond its limits would seek admission to it. But there should never be a single foot of ground in it peopled by subjugated inhabitants. We are strong enough and remote enough to enforce easily the non-interference of Europe. We do not want any "strategic points," however much they may be desired by American speculators and jobbing corporations. It is a good time to put a new doctrine alongside the Monroe doctrine, namely: that this republic does not wish to annex any territory but that which seeks annexation, and that it does not want any people who are not capable of autonomy under our federal system. All others are only a weakness to us.

Authors' Rights.

THE question of international copyright has so often approached a settlement, and so often failed to reach one, that our hopes for a favorable issue of the present movement are not glowing. We venture to predict, moreover, that so long as the question is taken up from the wrong end, so long as the rights of authors are essentially ignored, just so long will the question remain virtually unsettled, no matter what treaties are made or what statutes are passed. For it is idle to call the proposed treaty a scheme for the protection of authors. It is notoriously a scheme for the protection of publishers; and authors are by it protected only so far and so long as the proposed protection is supposed to be for the benefit of publishers. The treaty has been recommended to the authorities by a long list of American authors, but let no one suppose that authors as a class acquiesce therein, except as a compromise of their rights, and as "the half-loaf that is better than no bread."

Now we hold it to be self-evident that, in a question of absolute right, there can be no compromise that will last. The history of slavery in this country is a proof of this; and we do not hesitate to say that it was easier to frame a plausible justification of slavery from the Bible itself, than it is to justify the theft of literary property allowed under our laws, and justified by our law-makers. We do not lose sight of the fact that there have been and are English as well as American pirates, and that generous sums have been paid, for many years past, by all the principal American publishers to foreign writers. But it still remains true that American publishers, as a class, have been from the beginning opposed to any legislation which would put the English author on a par with other holders of salable property.

If it is denied—and it certainly is denied by many—that, under all circumstances, it is best to do right; and if it is found necessary to argue questions like this upon a lower plane—even in this case, the arguments of thrift lean to the side of justice. If all the leading publishers of the United States had long ago insisted, as a few of them did, upon a just and honorable international copyright law, in the interests primarily of the producers of literature, they would all at this moment have been in the undisturbed enjoyment of the most valuable modern literary properties, both at home and abroad, instead of being driven to the wall by the small fry of piratical publishers. Events have proved that publishers have been blind to their own interests in the past—we believe they are blind to their own interests in the present—in not insisting upon a more liberal, that is to say, a more just, convention between England and America. They propose to set up a convention through which the English publishers can, it is believed, drive a coach and four; and they call upon the British Government to "protect" English printers from their American rivals!

During generation after generation a gigantic wrong has been perpetrated by the Government and Congress of the United States upon the authors of both America and England. Against this injustice one great writer after another, in these countries, has risen up, and protested, and passed away, embittered in mind and comparatively poor in property—poor, while others have helped themselves on the road to wealth from the fruits of his labors. By reason of this injustice, the literary production of our own country has been cramped and well-nigh crushed.

But, at this late date in an unfortunate history, somebody suddenly finds himself hurt! Is it the author? No, for he was bruised, spat upon, and driven out-of-doors long ago. Is it the paper-maker? No; for he is doing a thriving trade. It is the "legitimate" publisher whose toes are at last trodden upon, and who now asks the governments of two great nations to devise some alleviation for his miseries! To our minds this is not a dignified spectacle. We respectfully suggest to Mr. Frelinghuysen that the first concern of the treaty should be the outraged rights of the producers of literature in America and England. It is a question whether the Administration cannot better afford to "fail" in the pursuit of absolute justice, than to "succeed" with a compromise.

On a Recent Social Phenomenon.

ADVENTURERS, dead-beats, frauds, impostors, charlatans, social pretenders, conscienceless cranks, and the whole tribe of the morally deficient would have comparatively little opportunity to do harm in this world, and would meet with but few of the emoluments and rewards which they crave, were it not for the weak and good-natured acquiescence of the upright. Just as, in the narrow circle of what is called society, if a person has been consistently rude and neglectful of polite obligations throughout a life-time, he or she is, though perhaps somewhat avoided, yet still generally forgiven,—so in society at large, if a man has once achieved the reputation of being morally crooked, his irregularities are more easily pardoned because they are numerous than they would be if they were ex-

ceptional; and if he possess a handful of the minor virtues his little crimes are all the more readily condoned. "If a fellow sing me a good song, or serve me a good dinner, what care I for the sanctity of his soul?"

But further than this, there is a downright sentiment of admiration, in the minds of many supposedly good men, of a successful "fraud." Speculators and adventurers in the financial world show an astonishing persistency in "defying public opinion." But beneath their bravado is the comfortable and well-founded conviction that if they can only make a "brilliant success," there will be a reserve of sincere admiration beneath the general condemnation of the community.

Especially is there admiration of those talents whereby even a bastard fame is secured. A fame which is nothing but notoriety is still something that affects the imagination of men. It is looked upon as a manifestation of power, and there are few indeed who do not respect power, of whatever kind. There are many who forget that, given a certain amount of ability, allied to callousness of conscience, or given good education, cleverness, and a lack of self-respect, a great many things can be accomplished which tend easily to notoriety. The moment a man of brains consents to accept notoriety in the place of good fame, he will find an easy path to his goal.

A few weeks ago, a British author visited America to make a second survey of its territory and institutions after an interval of eleven years. No important section of the country was left by him unvisited—from New England to California, from Oregon to Georgia. A historian ranking with the first of his generation in his own country, a professor in one of the great universities, a member of Parliament, and a friend of not a few of our leading men, he was received everywhere with sincere and unchronicled hospitality. Except in the notices of his public lectures, delivered in two of our leading cities, his comings and goings were scarcely mentioned in the papers. When he arrived in New York from England the newspapers contained the announcement in a single line; when he left, the "great dailies" did not dedicate so much as a paragraph to his departure. Yet he carried with him the respect and good wishes of the best portion of the community, and his visit here is likely to be not without effect upon at least some important part of the relations between the two countries.

About the time that Mr. James Bryce set sail for Europe, a young writer arrived on our shores, whose career here we do not intend to describe in detail, but which it is within bounds to say has been such as could only be possible with a person conspicuously lacking in both natural refinement and acquired taste. The author of a book whose good qualities have been heartily praised in these pages, he has lent himself to a double scheme of advertising (both of himself and of a dramatic caricature of himself) unprecedented in the annals of either literature or the stage, and has thereby counted himself out of the company of self-respecting men of letters. It was soon seen that what this young man wished for in America was not so much reputation and its legitimate rewards as notoriety, and the money and prestige that come that way. The people and the press at large understood the situation at once and exactly. But a certain portion of the society

that wishes to be amused at all hazards acted with the same insincerity that characterized the stranger's performances; played into the hands of his shrewd and business-like managers; and did all in its power to feed the vanity and thrift of one who has placed upon his own brow the stigma of a literary mountebank. Lurking beneath this insincere social acceptance it is easy to detect an admiration, cherished even by those who themselves keep to the straight path, for success achieved at whatever cost of dignity or conscience.

Kindness and Blindness.

It is no uncommon thing to hear a person who has been through sickness or trouble say: "It was worth while to undergo it, to find out how much kindness there is in the world." That is a common experience when trouble comes in such a form that those about the sufferer see it and know it. A man, living where he is well known, has a trying sickness, and friends and neighbors vie with each other in attentions—kind messages, delicacies to tempt the appetite, offers of watching and tendance. A poor woman on a railway journey loses her ticket and money, and the passengers, hearing of it, are quick to make up a purse for her. Let somebody find a case of destitution and suffering, and go about to tell his neighbors and ask their help, and he will find almost every one glad to help. There is in the heart of every Christian community a vast fund of latent kindness and sympathy, and the only thing necessary to call it out is the knowledge of somebody who needs it.

No doubt many people have asked themselves why it was that President Garfield's case called out such an immeasurable flood of sympathy and tenderness. The man's high worth partly explains it; his position as chosen chief of a great people, the tragic suddenness of his fall, the long suspense with its chills of fear and flushes of hope, the mutual excitation of millions of hearts under one emotion,—all these things helped to swell the tide. But at the center of it all was just this,—a suffering *man* and his suffering family. It was not what Garfield had in distinction from other men, but what he had in common with them, that touched most deeply the common heart; not that he was President, but that he had fought his way up, as other men fight theirs; not that he fell suddenly, but that he dragged through weary, languishing months, such as we all either have undergone or have seen in our friends. His mother and wife were held in the nation's heart, and in the world's heart, because every mother and every wife knows what it is to watch and pray for a life dearer than her own. It was the commonness of the experience, its typical and not its exceptional character, that made it so profoundly moving,—that, and the fact that the sufferers met their lot with such steadfast fortitude, such patience and submission and mutual love, as we all would wish for in our own hour of trial.

And what sent the matter deeper and deeper home to every one was the circumstance that day by day we knew all about it. Each phase of the disease, each incident,—the wife hastening to her husband's side, every fluctuation of hope and fear, the pathetic journey to Long Branch,—it all was told by the newspapers so minutely that we seemed to see it all before us.

While the President was slowly dying, there lay in hospital at Washington a wounded midshipman, who, after languishing for half a year, passed away just before the President. His case was barely mentioned by the papers, because the disease was pyæmia, and yielded some suggestion as to the probabilities of the more illustrious sufferer. But if by some chance that midshipman's case had been known to us from the first, as Garfield's was; his fortitude and gentleness had fully come to our knowledge; if we had known how, it may be, his mother or sister watched and prayed,—in that case, our hearts would have been touched with a tenderness not dissimilar to that with which we kept our long vigil beside the dying President.

The love of man for his brother man—that was the greatest meaning of the sorrow in which the whole world was united. That it was which must have made it, to purer eyes than ours, not a tragedy, but a triumph. For the sympathy flowing out from millions of hearts to that one sufferer brought those millions into a sublime community with one another. Before the bulletin-board, strangers spoke to one another like friends. Statesmen and patriots had vainly striven to reconcile North and South—and here, by this dying bed, North and South were one. America, England, France, Germany—the whole circle of Christian nations—were lifted for an instant into conscious brotherhood, a beckoning presage of the coming future when wars shall be no more.

The rod whose blow brought these waters from the rock was one case of patient suffering, brought closely and continuously home to the knowledge of all. So deep are the fountains of kindness and mutual love in the hearts of mankind!

Why is it, then, that so many of us live unloving and unfriended lives? Why is it that to countless lonely hearts the touch of loving sympathy is almost unknown? Nothing is more moving than the surprise with which people often greet some little delicate

attention or appreciation. Wordsworth might well say that it was not unkindness and ingratitude that to him were most pathetic:

"Alas! the gratitude of men
Has oftener left me mourning!"

—because glad surprise at a trifling kindness tells of a life to which kindness has been a stranger.

The wall that shuts out kindness is not cruelty—it is negligence and inattention. When trouble is thrust before our eyes, we are not indifferent to it. But it may lie close beside our path, and we fail to see it, because we are intent on our own pursuit. A man's personal interests tend all the time to harden into a shell of self-absorption, shutting out the sight of his neighbors. When some shock of catastrophe to a neighbor breaks through the shell, startles him, makes him see, he is ready and glad to help. For the average man among us is not at heart a heathen or a brute. Eighteen centuries of Christian influence have not been wasted. And yet every community, every street, almost every household, has its lonely, uncheered lives. All about such lives are great reservoirs of that human good-will—that appreciation, sympathy, friendly response—for which they are starving; and the reservoirs are sealed up only because people kind at heart have not learned to keep their eyes open. That is the consummate human accomplishment, the art of arts—to see. The most effective word which Jesus spoke to rouse benevolence simply set men on using thought and imagination to enter into other people's lives: "As ye would that men should do to you, do ye also to them." Put yourself in your neighbor's place; then almost instinctively you will do the right thing to him. To respond to a want or sorrow which thrusts itself in one's face—that any decent man will do. To divine the want which is not told, to read by a fine sympathy the story of the lives that touch ours—that is the "open sesame" before which the barriers go down, and the commonplace earth becomes a paradise.

COMMUNICATIONS.

Two Letters on the International Copyright Question.

THE QUESTION FORTY YEARS AGO.

THE following letter from Miss Harriet Martineau was found among the papers of the late Dr. Mackenzie, of Philadelphia. It is a melancholy warning to authors not to expect a satisfactory adjustment of their rights until some political leader has the statesmanship to see and the courage to insist that (as Mr. Towne says below) the question is primarily a moral and not an economic one, and must be treated on a moral plane:

TYNEMOUTH, Dec. 24, 1843.

SIR: The immediate effect of our memorial to Congress was to occasion the question of an International Copyright to be referred to a committee of the Senate, of which Mr. Clay was chairman. The committee reported in favor of such a measure, and presented the draught of a bill for the purpose; but the session

closed before the matter reached the other house, where, also, it was understood it would have been thrown out.

Since that time, our own Government has appointed another mode of proceeding. Parliament has empowered the Queen in council to proceed by treaty with the heads of other governments. Yet, the will of the President (even if Mr. Clay should be the next, which I strongly doubt) must, in such a case, depend greatly upon that of the people.

The popular will, however, is rapidly coming round to the point we wish. The chief benefit of our former proceeding was in causing a discussion of the question, far and wide. Some friends of mine obtained permission to argue the question in the New York "Evening Post," and it ended in the complete conversion of that respectable paper, and of many by its means.

Of late the American book-sellers have almost to a

man come round to us,—the authors being with us before. Some late failures of attempts on the part of the great house of Carey & Lea, of Philadelphia, to get the publishing of Lord Jeffrey's "Contributions," and of North's "Recreations," have converted these very potent enemies; and I have heard that our arch-enemy, the firm of the * * * * * are also coming round. However that may be, a great stir is making, and a petition for an international copyright treaty is to be presented to Congress this session, signed, it is said, by every author and every book-seller of eminence in the United States. I never hoped that the bulk of the people could see the matter in its true light till the book-sellers were with us. Now, I really hope it will not be long before the fitting thing is done. It would have made the entire difference in the fortunes of many of us, if such an arrangement had hitherto subsisted; for the circulation of our works is such as nobody here conceives of. Every person in the New England States being a reader, and every house from the Red River to the Bay of Fundy having a book-shelf, the diffusion of our works is such as cannot be imagined from the restricted circulation we have here.

The ingenuousness of your avowal of your own former indifference assures me that you will now do what you can to obtain justice to authors, by securing to them the property of their works.

My health cannot be reëstablished, thank you; but it is not worse than it has been for a long time past.

I will just mention that it is desirable to ply Mr. Everett well about this copyright matter. I am sure he is of our mind about it; and we must enable him to tell his Government how he is teased about it. Let us all ply him well.

I am yours, etc.,

H. MARTINEAU.

Dr. R. Shelton Mackenzie, Office of the "University Herald," Oxford.

THE REAL ISSUE.

TO THE EDITOR OF THE CENTURY.

SIR: In the negotiations that are understood to be pending, relative to a convention in the interest of an Anglo-American copyright, it is to be hoped that the question of the moral right of authors to dispose of their property in the way they think best will be kept clear of the questions of tariff and the business interests of publishers. Is it not plain that the only object of any international copyright law is that of placing the owners of copyright upon the same basis as the owners of any other species of property throughout the civilized world? Is not the real question for a convention to pass upon: Shall property be recognized as property wherever found, regardless of the nationality of the owner? If these questions are answered in the affirmative, authors would certainly be satisfied. An international law should only cover a general principle, and no "convention" should be asked to meddle with business details. The law should affect all books alike. It should give the author, or his assigns, the exclusive right to control the multiplication of copies. He should have the right to sell his copyright, if he pleases, as he would sell any other property he owns. Stripped of all complications, the simple

proposition for an Anglo-American treaty to settle is this: *An author has a right to property he has created in the form of a book, and that right cannot be taken from him without his consent.*

To declare by international law that an American author shall not be protected in his copyright in England unless he has his book manufactured in that country within ninety or any other number of days, would be entirely useless in certainly a vast majority of cases, and would imply, after all, that he has not the same right to his property in a book that he has to property in a watch or coat. Such a proviso would perpetuate the blunder in the statute of Queen Anne, 1709, by a second blunder committed by an Anglo-American congress in limiting the rights of foreign authors. Instead of benefiting an author it would be another and perhaps fatal step in the direction of legally confiscating to the use of the world the only property in existence now "pirated" with impunity.

The chief difficulty in the way of establishing our general principle, and thus restoring to authors the right in *perpetuum* which they held by common law previous to the statute of Queen Anne, 1709, lies in the words "limited times" in the Constitution of the United States. The true way to remove this difficulty would be to take the words out of the Constitution. Granting that this cannot be done, the next best thing is to give them their most liberal interpretation. "Limited times" may mean a few days, a few years, or a few million years. But they must be interpreted with reference to the intention of the framers of the Constitution. In the discussion of the question of copyright, it has more than once been suggested that *one hundred years* be fixed upon as the meaning of the words "limited times," and if this is the best that can be done, proprietors of copyright must be satisfied. The practical difference between the words one hundred years and the expression *in perpetuum* is not of much moment, so far as copyright is concerned. The real point to be gained is a universal recognition of the right of an author to the product of his labor. The details by which the property is to be made most valuable may safely be left to the energy, tact, and judgment of all parties concerned. The convention of Lord Clarendon without the American proviso is what is wanted, modified to give copyright a limit of one hundred years in both countries. All other civilized nations seem to be ready to unite in a convention having this general principle as its basis.

113 Liberty street, New York, Jan. 12, 1882.

The Weak Point of Mormonism.

TO THE EDITOR OF THE CENTURY.

SIR: An experience of some years in Utah has convinced me that Mormonism is a citadel which it is difficult to storm but easy to undermine, and that much as we may welcome any legislative improvements, the main resource of attack is to be found in education. Ideas alone can destroy it. Intellectually, Mormonism is puerile. Its peculiar notions, when not blasphemous, are childish. It cannot educate its own teachers, and is wholly destitute of intellectual incentives, spirit, and aims. Even were this not true, the task of educating its

own boys and girls would be far beyond its power. Utah is full of children, and, in many communities, children of school age comprise half the population. A people still very poor, after paying tithes, and money for temple-building, and expenses for civil matters and for support, would sink beneath a tax adequate rightly to instruct such numbers of children. Ideas alone can destroy such a system. Laws may be necessary; but law cannot remove the dense ignorance that envelops Mormon homes. This must be the work of teachers.

That the people will welcome such instruction admits of no doubt. There are in Utah to-day, known to the writer, Christian mission-schools, from fifty to seventy-five per cent. of whose pupils are children of Mormon parents. In these schools there are young men of such age as to require to be excused on election days to deposit their ballots; history classes of young men and women who are just finding out that the American flag is worthy of their pride, that their country is wider than Utah, and that John Taylor is not its president; and hundreds of children who are learning that Adam is not God, and that the true prophets are not Brigham Young, Heber Kimball, and George Q. Cannon.

By their fruits some of these schools have already been judged, and Mormons hitherto loyal to their faith have said: "If our church opposes this work, so much the worse for the church. If we must choose between ignorance and the church on the one side, and knowledge on the other, we can get along without the church."

For Mormonism, therefore, the school, sustained by Eastern benevolence and established in every hamlet, is a remedy which, compared with any other, is inexpensive, efficacious, and speedy. It will enable us to dispense with the menace of courts; it will obviate strife and divisions, and turn ignorant and threatening foes into intelligent and faithful citizens.

Yours truly,

CHARLES R. BLISS.

Boston, Jan. 14, 1882.

"The Increase of Divorce": A Correction.

TO THE EDITOR OF THE CENTURY.

SIR: Permit me to correct two errors in my article on "The Increase of Divorce," printed in the January CENTURY. The first is the statement that the statutes of Iowa give the courts power to grant divorces when in their judgment any just cause exists. A late authority misled me. The causes allowed by the Iowa statute are five, all strictly determinate, unless it be the last one, viz.: "Such inhuman treatment as to en-

danger the life." My informant tells me that this clause is "tortured more than it should be, and is made the avenue of escape from undesirable wedlock more than the other four together."

The other error was in following a misprint found in two different copies of Mr. Dike's paper on Divorce. Mr. Dike's investigation of the increase of crimes against chastity covered *ten* different crimes instead of *two*, as the types made him say. His comparison is therefore broader than mine instead of narrower. It should also be said that Mr. Dike did not attempt to show that the increase of divorce was the cause of the increase of crimes against chastity; he only pointed out the parallelism of the two movements.

Further study convinces me that, while his figures exaggerate the increase of this class of crimes, my own understate it. That offenses against chastity are relatively more numerous in Massachusetts than they were ten or twenty years ago seems to be clear. The patience, thoroughness, and judgment shown by Mr. Dike in his study of this question are admirable.

WASHINGTON GLADDEN.

Springfield, Mass., Jan. 13, 1882.

Honor to whom Honor is Due.

TO THE EDITOR OF THE CENTURY.

SIR: In an article reviewing General Garfield's efficient work in behalf of "Civil Service Reform," in THE CENTURY for January, you say:

"If we are not mistaken he [Garfield] was the first member of Congress to establish such [competitive] examinations to guide him in the appointment of West Point cadets and midshipmen at the Naval Academy."

General Garfield first entered Congress in December, 1863, while as early as April, 1862, Thaddeus Stevens appointed to the academies at West Point and Annapolis cadets who had passed the ordeal of a competitive examination. The "Old Commoner" undoubtedly inaugurated this method. What impelled him to institute the competitive system is clear when we know that a number of his appointees had been rejected and none had attained high standing; and the merit of the competitive method is sufficiently obvious when I state that of the six cadets from this district selected by competition who have since been graduated—three from West Point and three from Annapolis—two stood at the head of their respective classes, a third was No. 2, a fourth No. 13, and all were nearer the head than the foot.

W. W. GRIEST.

Lancaster, Pa., Dec. 28, 1881.

LITERATURE.

Mark Twain's "The Prince and the Pauper."

IN his new book, Mark Twain has so far divested himself of his usual literary habit, that the reader is

inclined now and then, as he follows the quaint story, to turn back to the title-page in the expectation of finding that the famous humorist and satirist has been writing, incognito, as Mr. Clemens. "The Prince and the Pauper" is a curious mixture of fact and fancy. As to the plot, it is enough to say here that the Prince of the story is the son of Henry VIII.,

*The Prince and the Pauper; A Tale for Young People of all Ages. By Mark Twain. Boston: James R. Osgood & Co.

afterward Edward VI., and the Pauper, a young beggar, Tom Canty, who is supposed to resemble the Prince in stature and feature. Tom is invited into the palace by the young Prince of Wales, and to gratify a fancy of each, they change apparel. The Prince, in Tom's rags, rushes to the palace gate to rebuke the guard who had struck Tom. But so far as the guard can see, the young vagabond, who storms like the Prince, is the same little beggar that entered the palace a few moments before. He drives the Prince away, the crowd jeers at his pretensions, and he becomes a wandering vagabond in the city. On the other hand, Tom, in his borrowed finery, is found by the Prince's guardians and by them and the king is accepted as the rightful Prince, while the Pauper's vagaries and solecisms are referred to a sudden derangement of the Prince's mind. By an ingeniously formed chain of circumstances, and incredible stupidities on the part of the living automata of the household of Henry VIII., Prince and Pauper become hopelessly mixed. On the death of the king, Tom is proclaimed Edward VI., while the rightful heir falls among roughs and outlaws. His mishaps come to an end on the day of the coronation. He arrives at the cathedral and proclaims his rights just as the crown is being placed on the head of Tom, who insists on changing places with the beggarly claimant, though the courtiers are loath to believe that Tom is not the true Prince.

In many respects, "The Prince and the Pauper" is a remarkable book; it is certainly effective as a story, though it is spun-out almost to tediousness. It appears also to be overweighted with purpose. The least interesting part of the story, and that which as a whole is not essential to the main narrative, proceeds from the author's purpose to vindicate the "humane and kindly" character of the Blue-Laws of Connecticut. Another purpose or effect of the story is to satirize kingcraft. This is cleverly done. The quiet satire, the ingenuity of the plot, and the clever development of the thoughts and motives of the Prince and the Pauper, in their changed circumstances, form the main interest of the story.

So far as it was the author's purpose to produce a work of art after the old models, and to prove that the humorous story-teller and ingenious homely philosopher, Mark Twain, can be a literary purist, a scholar, and an antiquary, we do not think his "new departure" is a conspicuous success. It was not necessary for the author to prop his literary reputation with archaic English and a somewhat conventional manner. His recent humorous writings abound in passages of great excellence as serious compositions, and his serious, nervous style is the natural expression of an acute mind, that in its most fanciful moods is seldom superficial in its view. Indeed, it is because Mark Twain is a satirist, and in a measure a true philosopher, that his broadly humorous books and speeches have met with wide and permanent popular favor.

Considered as a work of art, "The Prince and the Pauper" is open to criticism. The author has taken great pains to be "early English," as they say in "Patience," and his mild attempt to be æsthetic is almost necessarily artificial. In the conversation of the story, he attempts to reproduce the idiom of the time of Henry VIII., and the effort is well sustained.

But the descriptive parts in which (if we may take the style of the preface as the key-note of his purpose) he also intended to keep the flavor of "early English," are a mixture of old and modern idiom, and the artistic unity of the work is frequently disturbed by quotations from old writers, and by the use of an occasional Americanism. Some of the fun sprinkled through the story grates on the ear. In speaking of the king's "taster," whose duty it was to make sure that poison had not been put into the royal food, the author wonders "why they did not use a dog or a plumber." At his first royal meal, the Pauper drinks out of the finger-bowl. There is an air of antiquity about this bit of fun, but is it "early English"? A strangely obscure allusion appears on page 45. Here the reader is informed that the Prince "snatched up and put away an article of national importance." Five chapters farther on, it transpires that the great seal cannot be found, and at the end of the story the Prince proves his identity by remembering where he hid it. It will probably occur to few readers that the phrase "an article of national importance" is a synonym for "great seal."

Miss Preston's "Georgics of Vergil." *

THE problem of translation is a double one; the translator must efface himself—must make his version a transparent medium for the thoughts of his author, and at the same time he must write a poem which shall read like an original. Miss Preston's *Georgics* compares favorably with other metrical translations in English, and yet it is far from answering these almost unattainable requirements. It is probable that every generation will continue to demand new translations of the great poems of antiquity, and to find those already made unsatisfactory. Every translator gives a certain twist to his original. Dryden's *Virgil*, *e. g.*, is *Virgil plus* the style and meter fashionable among the poets of the English Restoration period, and Miss Preston's *Virgil* is quite as strongly tinged with the literary fashions now current. If Dryden's antithetic couplets, with his favorite interspersed triplets and alexandrines, have for readers of to-day associations ludicrously un-Virgilian, so we may be sure will many of Miss Preston's turns of verse and phrase to readers of a future generation. In other words, a perfect metrical translation is an impossibility; it must always admit something temporary and foreign to the original. It is not *Virgil*, but Miss Preston, for instance, who talks about "black immensities," and "queryings infinite"; and the voice of the nineteenth century sounds no less certainly in such expressions as "an emanation of the world-soul divine,"—*partem divina mentis*,—and in the lines

"For he is verily happy who hath known
The wonderful wherefore of the things of sense,"

which translate—

"Felix qui potuit rerum cognoscere causas."

It may not be much of a departure from the modern theory of fidelity to the original to render *imbribus actis*, "in the sweet light after rain"; but we cannot

*The *Georgics* of Vergil, translated into English verse by Harriet Waters Preston. Boston: James R. Osgood & Co. 1881.

help thinking that Miss Preston indulges herself too far when she gets

"The hosts of the uttermost stars come out to view"

from

"Nam neque tum stellis acies obtunsa videtur" —

literally,

"The edge of the stars no longer seems blunted";

or, as Dryden renders it,

"The stars shine smarter."

In general, however, Miss Preston's version follows Virgil far more closely than Dryden's, and in one important respect—a love for nature—she is more in sympathy with her original than it was possible for any English poet of Dryden's generation to be. A few lines taken from that *locus classicus*, the description in the first book of the prognostications of a coming storm, will illustrate her superiority in this particular:

"For when great winds are gathering, forevermore
The breast of ocean heaveth distressfully,
Dry shrieks are heard in the mountains, and from the shore
The inarticulate waves make harsh reply,
And mightily swells the murmur of the trees.
Oh! barely then the keel shall escape the seas,
When the fast gull cometh in from the outer deep,
Making the shore with a warining note and harsh,
When high and dry on the sand the cormorants leap,
And the heron spurs his haunt in the lonely marsh,
And overtops the very clouds in his flight."

This is at once more literal and greatly more spirited than Dryden's rendition of the same passage, who translates, *e. g.*, the line

"Cum medio celeres revolant ex æquore mergi"

by the tame paraphrase,

"When crying cormorants forsake the sea."

Miss Preston's

"When the fast gull cometh in from the outer deep"

preserves wonderfully the rush of the hexameter, and is one of the best lines in the volume.

Miss Preston reasons somewhat inconclusively in her preface about the choice of a proper verse into which to translate the Virgilian hexameter. She says: "It must have melody and it must have variety. It must, therefore, be rhymed," etc. Why therefore rhymed? There is plenty of blank verse known to mortals which is both various and melodious. She speaks of "making successive rhymes follow alternate, while avoiding a division into stanzas"; but she might just as well have spaced her pages frankly, since in point of fact the poem is in stanzas. Her frequent introduction of an anapestic movement into the iambic line imparts a variety which is wanting to the rigid couplets of Dryden, but it secures this effect at some sacrifice of dignity. In one respect Miss Preston's version is unsatisfactory: it constantly suggests an original behind it. The English has in many parts a certain awkwardness, as if the Latin still clung to it and impeded it. Dryden, while a loose and sometimes a mechanical translator, always uses plain idiomatic

English. His meaning is never obscure or his phrase straggling. In a few instances Miss Preston's scholarship is at fault. Thus, in line 127, Book III., she mistranslates

"ne blando nequeat superesse labori"

as

"forbidding them endure howso slight labour."

The words mean, of course: Lest he be unequal to his pleasant task. Purists, too, might object to the employment of such archaisms as "thole," or such monstrosities as "doingless"; but that would, perhaps, be captious. As a whole, the translation may be confidently commended to those who cannot read the original. Miss Preston has done her work lovingly, and, unless tried by an ideal standard, remarkably well. Notwithstanding the exceptions taken here to the work, it can be said that the translator of "Mirëio" has put English readers under renewed obligations.

Miss Lazarus's Translation of Heine.*

LOVE of the art of which Heine was master, rather than any hope of profit, must have been the incentive to this selection from his poems. Miss Lazarus has many precursors, and of Heine's cleaner work there is little left that has not found a translator before this. But she brings to the task a strong enthusiasm in the man and his work, and confirms her right to be heard by a delicate appreciation of the quality of Heine's verse. Perhaps of more use than the translations is the preface giving a short sketch of the poet's life: it is both sympathetic and well expressed.

The renderings from the original are remarkably close, and enjoy the same freedom from involution or straining after effect that makes most of Heine's work limpid, and places some of it at the very front of German literature. At times, Miss Lazarus does not succeed in giving the full shade of meaning to a line, not because she does not understand the original, it appears, but on account of the needs of rhythm or rhyme. The exceedingly generous use that the Germans are able to make of double or feminine rhymes is one of the greatest stumbling-blocks in the way of the conscientious translator who strives after a rendering which will give word for word, accent for accent, rhyme for rhyme. In the unrhymed and most charming little poem, "The Asra," all goes well until we reach the last line, where a slight, but yet important change has been made. Heine wrote:

"Und der Sklave sprach: ich heisse
Mohamet, ich bin aus Yemen,
Und mein Stamm sind jene Asra
Welche sterben, wenn sie lieben."

In the answer of the dying slave the translation loses the fineness of the point—the delicacy of his declaration—by directing the thought to himself, instead of to his whole tribe, as will be seen:

"Spake the youthful slave: 'My name is
Mahomet, I come from Yemen;
And by birth I am an Asra,
One who dieth when he loves.'"

* Poems and Ballads of Heinrich Heine, translated by Emma Lazarus. To which is prefixed a Biographical Sketch of Heine. New York: R. Worthington. 1881.

By throwing the blame of his death on a peculiarity of his tribe, Heine gave to the young Arab the dignity that belongs to the hand of fate. It invests his hopeless love with a wonderful pathos. It explains and condones his temerity; it also shields the princess from remorse. A light is thrown backward on his life, and we see him pining away without a word, although, by a sort of ancestral curse, he must surely die. Whether taken as spoken in good faith, or merely as the ruse of a detected lover, it is necessary to a complete appreciation of the poem to have this shade of meaning brought out, airy though it may at first sight appear.

Many such slips have not been noticed; they are themselves of the most pardonable kind, and testify to the difficulty of the task. Translation is always ungrateful, and doubly so when the original is Heine,—malicious, adroit, and concealing under the simplest garb many a sly hit and subtle turn of satire or of pathos.

Two features we have regretfully missed from the biographical sketch, viz., the consideration of Heine from the stand-point of an Israelite, and something authoritative as to his position in Germany, both as student and exile. We want something more definite than indignation for German discriminations against the Jews. And how do orthodox Jews regard the scoffing poet? What position has he really in German literature? What did his burlesques do in the way of enlightenment? Now that the *Judenhetze* is aroused once more in Prussia and Russia, it is the time for a well-informed co-religionist to be heard on these questions. Here is a chance for one so well-fitted by birth, education, and a poetical nature as Miss Lazarus. But if it be undertaken, it should be done seriously and, as far as possible, completely, use being made of any former translations that seem worth reproducing, and the poet being treated as a classic. In such a scheme expurgation is not permissible; the poems should be given entire or not at all. The main objective point would be the consideration of Heine as a Hebrew poet, who used German as his native, and French as his adopted, tongue.

Björnson's "Synnöve Solbakken" and "Arne." *

TO THE American reader it will undoubtedly seem strange that so small and unpretentious a tale as "Synnöve Solbakken" should have heralded a new epoch in the literature of Norway. Nevertheless, such was the case; and the reasons are not far to seek. First, it announced the appearance of a new poet (which in Norway is a far greater event than it is here), and secondly, it presented the first true and poetic picture of Norse peasant-life. The subtle and entirely unconventional flavor of this simple narrative can of course be but imperfectly rendered in a translation, and the readers of Professor Anderson's version will never have any conception of the more elusive qualities of Björnson's style. It must be admitted,

too, that a style like Björnson's, individual to the verge of eccentricity, presents unusual difficulties to the translator, and it requires delicate linguistic perceptions to interpret his laconic phrases, and to find their exact equivalents, both as regards sense and color, in a foreign tongue. Professor Anderson has performed this difficult task creditably, never sacrificing the sense, but, to our minds, frequently missing the color. We are also disposed to quarrel with him about several expressions, such as *chorister*, which does not correspond to the Norwegian *klokker*, *deacon* being approximately a more correct rendering; and the use of the word *force* in the sense of cataract, which, though admissible, is obviously in an American book an affectation.

It is refreshing, amid all the feverish, overwrought fiction of the day, to light upon anything so healthy and natural as this primitive tale of peasant life. The nineteenth century, with its noisy politics and its complex society, had, until very recently, no existence in the remote mountain valleys of Norway, and there was a patriarchal simplicity in the manners and speech of the people which seemed to offer but the slenderest resources to the novelist. It is in the way he has used these slender resources that Björnson has shown that he has the true artistic instinct. He introduces nowhere an extraneous element to heighten the effect. Relying upon the primitive passions of love, hate, and jealousy, which assert themselves as strongly in the lower as in the higher stages of civilization, and the psychological shades and contrasts which human life everywhere displays, he has composed a little pastoral drama of exquisite beauty and interest. His chief characteristics as a novelist are a self-restraint which never mars an effect by over-elaboration, and a simple straightforwardness of thought and speech which reminds one of the old Sagas. The Norwegian nationality has, after centuries of eclipse, re-arisen in its purity in him, and the people whose innermost life he has drawn, and whose longings he has interpreted, have recognized in him, as it were, their ideal self and their natural leader. Whatever he utters is vital and strong, although he himself regards "Synnöve Solbakken" and the other early tales upon which his fame abroad is chiefly founded as the first flutterings of his poetic wings, before he had yet gained strength for a high and sustained flight. The public, however, has clung with peculiar predilection to these pleasant novelettes, and has refused to subordinate them to his later labors, in which a pronounced social or political tendency is everywhere perceptible. We are glad to see that the publishers of the present volume intend to issue a complete edition of Björnson's writings, and thus enable the American public to gain an adequate conception of the work of this remarkable man.

"Arne," the second of Björnson's novels, has a previous hold upon the affections of many American readers, having been published some twelve years ago by the Cambridge firm of Sever, Francis & Co. It is in all essential respects a stronger piece of work than "Synnöve Solbakken," being less idyllic in tone and of more complicated action. It might be cited as a triumphant exemplification of the fact that, in the hands of a great poet, even the most repulsive incidents may become poetic. It is the unvarnished truth concerning

* Synnöve Solbakken. By Björnsterne Björnson. Translated from the Norse by Rasmus B. Anderson, author of "Norse Mythology," etc. Author's edition. Boston: Houghton, Mifflin & Co. 1881.

Arne. By Björnsterne Björnson. Translated from the Norse by Rasmus B. Anderson. Author's edition. Boston: Houghton, Mifflin & Co. 1881.

the Norwegian peasants (as they were thirty years ago) which Björnson has here related, and there is not a scene in the book which is not in the best sense typical. The disgraceful brawls and drunken revels at weddings and funerals, which are yet deplorably frequent in the more distant valleys of Norway, would, one would imagine, hardly furnish attractive material for an artist who, with all his vigor, is yet capable of such delicate workmanship as Björnson. But, like the late Prosper Mérimée, he has a strong predilection for the more primitive utterances of emotion, and he manages, while dealing with these remnants of barbarism, to give us such vivid glimpses into the depth of human nature that we quite forget to pass judgment upon the social condition which he portrays. Thus, there is a terrible barbaric wildness in a character like Nils the Tailor, and the scene of his death leaves an ineffaceable impression. Beautiful, on the other hand, and fresh as the morning dew, are the little introductory idyl, "How the Cliff was Clad," and the chapter entitled "The Nutting Party."

Matthews's "French Dramatists." *

MR. MATTHEWS has made a book that will stand the test of criticism now, and the far severer test of study and reference in the future. It is a comprehensive review of the growth of what the French call dramatic art since the beginning of the present century, when "Hernani sounded his trumpet, and the hollow walls of classicism fell with a final crash." It is a history told in half a score of biographies, a book of history that is also a commentary of sound critical value. There can be no question that such a book was needed. Dramatic composition in France is a dignified art—what is more, a living and vigorous art among other arts. Two Frenchmen, one great, one anxious to be, have, in this century, turned to the theater to fight for their literary opinions. Between the advent of Victor Hugo and the advent of M. Émile Zola, a long line of writers have labored, with more or less earnest purpose and hard-earned skill, for the French stage. It is about these men, their lives and their works, that Mr. Matthews's book is written. It is scarcely needful to say that the author is well equipped for his work; that his knowledge is the result of patient and thorough research; that he says what he has to say in a clear, fluent, and readable style. These things are, after all, no more than the man who undertakes such an ambitious task owes to the public. The value of the work lies in its strength as criticism. The matter it contains has been, in a cruder form, scattered through several magazines. Brought together in this volume, it shows the homogeneity and continuity of thought that make a book—a book with a positive personality behind it; a man who judges with sobriety,—with courage, if need be, as witness the passage that declares Victor Hugo a lyric dramatist, and not a great dramatic poet. Not that Mr. Matthews is always infallible. He has an almost superstitious reverence for the marrowless dry bones of certain dead folk; he worships at Sheridan's shrine; he is polite to the ghosts of Racine and Corneille, now fast slipping down to oblivion, with their

pseudo-classic robes huddled about them; he forgets, in his admiration for the cow-like placidity of M. Angier's somewhat *bourgeoise* muse, to pay fair tribute to the erratic genius of Alexandre Dumas *filz*. This is strange, that so keen-eyed a student can fail to see that, for all his posing and haranguing in the marketplace, for all his obvious charlatanry and inconsistency, the younger Dumas has long been an original, stirring, irritant force in the literature of his country—a man with a pure and earnest enthusiasm at the bottom of him, always at war with, always belied by, his superficial insincerity. But here the personal equation of opinion comes in, and Mr. Matthews has certainly won, in this book, the right to demand for the views he expresses a full share of the public's respect.

Von Falke's "Greece and Rome." *

A QUARTO volume, elegantly bound, and illustrated with that profusion of material which German archæology invites and the German artist delights in, and which certainly ought to brighten up the study-table of the American scholar, is no unworthy candidate in the book market for popular favor. The artist has gleaned in every field. Painting, sculpture, antiquities, tombstones, Pompeian crypts, Mycenaean burial-places, geology, geography, architecture,—the vast treasury which art and the antiquarian have made accessible,—this painstaking German professor has ransacked for his material, and with an eye to the average reader, who has no time for original investigation. In America, the students of Greek and Roman life are numbered by the thousand, and those who have a reflected, though not always a reflective, interest in antiquity are tenfold more. What this volume does for them, and does well, is to make the daily common life of that wonderful world of the ancients as real as pictorial representation can make it. We may, with its aid, not only visit the ruins of Athens, of old Troy, Mycenæ, and Rome, and see the great public buildings on the Acropolis and the seven hills of the queen city, but we may get a better notion than we have generally had of the natural scenery beyond the walls of towns,—the sea-shore of Athens, the quarries of Corinth, the rocks of the Piræus, the plains of Ægina and the far-away mountains, the waters about Syracuse, the chasms of Delphi and the broad fields of Krissa, the rugged coast of Thessaly, the beautiful vale of Tempe where the Peneus cuts its way among picturesque rocks along the base of Olympus, Mount Taygetus and the valley of the Eurotas, the Bay of Baïæ, the rocks of Parnassus, Hadrian's Villa, and way-side scenes innumerable. This is a special and charming feature of the book, and of more value to us than the attempts to reproduce, even though from the canvas of great painters, ideal scenes, as that of Nero's Torches, Tiberias at Capræa, the Suckling of the Roman Twins, the Banquet, and the three full-page illustrations by Alma Tadema, however excellent as pictures these may be. There is but little to complain of, however, in this latter particular; for the five hundred or more illustrations are remarkably well chosen for

* French Dramatists of the Nineteenth Century. New York: Charles Scribner's Sons. London: Remington & Co.

* Greece and Rome; Their Life and Art. By Jacob Von Falke. Translated by Wm. Hand Browne, Associate of Johns Hopkins University. Illustrated. New York: Henry Holt & Co.

their purpose of making visible the scenery and life of the ancients. The series of busts and full-length figures, copied from coins and temples, from frieze and glyptothek, serve as a valuable portrait-gallery of the most eminent men of Greece and Rome. To say nothing of the more common heads, we have some opportunity—the best there is—to get acquainted with Sappho, as the Herculanean bronze shows her, with Diogenes, Hannibal, Marcus Brutus, Messalina, Seneca, and about fifty more of the realities of the ancients, together with as many of their ideals—Venus, Jupiter, and the rest. The illustration of interior life is equally full and more enticing. The sports of the youth, the dress, ornaments, utensils, decoration, are all admirably pictured.

We are glad to welcome any attempt to give to America, in pictorial form, the riches of the European museums and galleries. Classical scholarship is probably as widely spread, though not so deeply rooted, in America as abroad; but the means for making the world of antiquity, in all its beauty and grandeur, real, are almost altogether wanting. We cannot see the natural scenery, the surroundings, the ruins, the *débris* of a life of which we all like to read, nor can we feel the charm of the Athenian sky, or hear the roar of the north-east wind as it sweeps down the Hellespont, scattering the fleets of Greece among the thousand isles of the *Ægean*. What we can get is, at best, but a remote and faint echo from a world which was far more closely allied to our own, in the underlying strata of policy, liberty, intelligence, incessant action, than it was to the foreign states to which, however, we are indebted for our main sources of information.

Of the historical text we cannot speak so warmly. It treats of the popular side of ancient life, its social, business, artistic, and religious aspects, its literature, methods in politics and professional life—in other words, it deals with the life of the people, and not so much with the policies of rulers and the changes of dynasties. This is as it should be, and the account is full of interest. It is derived from a great variety of sources, and everywhere keeps the level of common book-making, clear, however, and full of detail, thoroughly readable, nowhere brilliant or smacking of the great historians—never too dignified, sometimes a little gossipy. The translator often gets tired of good English, and lapses into a foreign phraseology. Nor does the good professor in the original keep an even and steady course among the many topics which he is called upon to harmonize. But while the well-read student will find nothing new in the historical account, he will find an effective grouping of details, and out of these and the really excellent special illustration, he will be able to make his own picture of ancient life.

The New Edition of Gilchrist's "Blake."*

THE interest felt in William Blake is very largely due to the enthusiasm of a single man. If Mr. Alexander Gilchrist, a young man without property or

special influence, but with single-minded devotion to his work and with a strong sense of Blake's genius, had not projected and perseveringly worked at the elaborate "Life and Writings" which appeared nearly twenty years ago, it is probable that the knowledge of Blake's genius would have been confined to a few collectors and special students. Now Blake's work has become a potent influence in art and literature, and both his designs and his poetry have been added to the imperishable store from which the world at large draws its profit and its pleasure. It is a very unusual instance of the rehabilitation of a man of genius.

Mr. Gilchrist died when his work was substantially done, but before his book had been published or even quite completed, and it is only right to connect with his name, as the reviver of Blake's fame, those of his wife, of Mr. D. G. Rossetti, of Mr. W. M. Rossetti, and of Mr. Macmillan, the publisher. Now, nearly twenty years later, during which time there has been a succession of interesting contributions to our knowledge and criticism of Blake, a new edition of the book has been published at the instance of the same faithful guardians of this trust, for so surely they must be regarded. The result is a positive advance even upon the first edition, and so thoroughly has the work of revision been done that it is difficult to believe in any further discovery of what may be told of Blake. Further criticism there may be, and possibly further publication of fac-similes of Blake's work; but the reader may be confident that, in buying these two rich volumes, he is securing what three generations hence will be received as still final and not to be superseded.

The text of the edition is substantially as before, except that criticism has discovered a few errors to correct, and that some important additions have been made from material lately brought to light. The typographic improvement is marked, and the book has gained especially in pictorial enrichment. The old photo-lithographic reproductions of the "Book of Job," which were singularly unhappy, have given place to a better series in the new photo-intaglio process. Better fac-similes have also been used, and some of the engravings made for the article on Blake which appeared in this magazine for June, 1880, have been effectively introduced. An important series of illustrations designed for "Young's Night Thoughts," recently discovered, are carefully described by Mr. F. J. Shields, and an article on Blake by Mr. James Smetham, which was published in the "London Quarterly," is given a permanent place here. The book, as it stands, reflects great honor upon all engaged in its reproduction, and the dignified, reverent sketch of her husband's life, given at the close of the work by Mrs. Gilchrist, will be welcomed by the many who have been interested in this conspicuous instance of a neglected poet and painter brought back into his proper place by the loyalty of his disciples.

Trowbridge's "Home Idyl."*

THAT the author of "The Vagabonds" is a genuine poet, the reader needs not to be told. There is a

* Life of William Blake. With Selections from his Poems and Other Writings. By Alexander Gilchrist. A New and Enlarged Edition. Illustrated from Blake's own Works, with additional Letters and a Memoir of the Author. In Two Volumes. London: Macmillan & Co. 1880.

* A Home Idyl and Other Poems. By J. T. Trowbridge. Boston: Houghton, Mifflin & Co. 1881.

sound core of wisdom, manly tenderness, and warm human sympathy in his poetry. He keeps close to the lines of actual life. The pathos of lowly fates, the beauty that shines from common things, are his theme. Many of the titles in this latest volume indicate his favorite walk: "Old Robin," "Pleasant Street," "The Old Lobsterman," "Old Man Gram." These are all idyllic or *genre* pieces, excellent of their kind.

In workmanship, Mr. Trowbridge is at the farthest remove from the daintiness of such a poet as Aldrich, for example. Homeliness is, perhaps, the best word to express the quality of his style, which often, indeed, becomes so prosaic that we find ourselves doubting whether he is writing poetry at all, or only a kind of metrical *oratio soluta*. Thus, in the name-piece of the present collection, "A Home Idyl," which is a narrative of pioneer family life in the far West, the poetry wears very thin in spots, the method of the story gets very pragmatic and matter-of-fact, and the bald, familiar language is jerked along in a most ungraceful meter:

"For the father, who frowned, at last has smiled,

Reconciled,

On the modest youth who has won his child.

'Right sort of chap; I like his way!

What d'ye say?

We'll have him at dinner Christmas-day," etc., etc.

But just as we are beginning to doubt, comes in a touch of imagination which lifts the verse for an instant into a finer air. Mr. Trowbridge's muse by no means abides in the atmosphere of Carleton's "Farm Ballads," but has in her on occasion "those brave translunary things" which distinguish true poetry from rhymed sentiment or rhymed wisdom. In "Two-score and Ten," "The Isle of Lambs," and "Recollections of Lalla Rookh," especially, the ideal is always lurking close at hand and flashing in through the crevices of the real. But "Under Moon and Stars" is, to our mind, the most impressive poem in the volume. It has a depth of feeling and a dignity of manner too often absent from the author's page, and is to his more loosely written idyls and ballads as Wordsworth's "Ode on the Intimations of Immortality" is to such pieces as "Peter Bell" and "The Idiot Boy." Here he shares the spiritual vision of all high poets of that "luminous realm of spirit" that flows round the world:

"Round our ignorance and anguish,

Round the darkness where we languish,

As the sunlight round the dim Earth's midnight tower of shadow pours,

Streaming past the dim, wide portals,

Viewless to the eyes of mortals

Till it flood the moon's pale islet or the morning's golden shores."

Guichard's Decorative Designs.*

THESE forty plates are executed with the utmost delicacy, and are printed on full folio sheets of thick

paper; together with the descriptive letterpress for each and the essay on decorative art supplied by Ernest Chesneau, the whole fills a thick portfolio where they may be always kept, unless it be preferred to have them bound. Very interesting, as may be supposed, when one thinks of the prominence France has had for several centuries in the making of beautiful furniture, is the essay by Chesneau. The editor is an ex-president of "L'Union Centrale des Beaux-Arts appliqué à l'Industrie," and the author of a work on furnishing and interior decoration. The essayist is a frequent contributor to "L'Art." It would surprise some of our "swell" decorators to see from what a high point of art M. Chesneau regards the arrangements of line, of curve, and of color in the furniture of houses by no means palatial. Especially does color occupy his attention, and his criticisms sound more like those addressed to paintings than articles of furniture meant for dwellings of the ordinary class. He deplores two things, which he hopes, however, that time will mend. One is the absence of a style belonging to our epoch; the other is the absence of individual character imposed upon industrial products by division of labor among the workmen and by the intervention of machines in fabrication. As to machines, he does not think to oppose them or decry them; he accepts the use of machinery as inevitable, but hopes that taste will rise superior even to their baleful influence. Much excellent advice is given as to the lines and moldings assumed by carpets, hangings, wall-papers, pieces of furniture, etc., etc. He yields with a good grace to the use of moldings for ceilings, etc., and of cast-iron instead of forged iron for balconies. Under some circumstances, these, he thinks, might be painted in bright colors, thereby repeating the bold experiment of Mr. Richard Hunt, the architect, of New York, who put up on Broadway a tall business building with iron façade, the pieces cast in Moorish shapes, and this façade painted in brilliant colors. But the timidity of the mercantile classes was too great for the experiment to be repeated; the building is there, but clad in one dull garb of paint. It is to be acknowledged, though, that the choice of colors, while not extremely violent, was not the best. It was the idea that was admirable; the carrying out was inferior. In his remarks on color, Chesneau refers to Chevreul, Brücke, and Schützenberger; in those on designs, he points out the wealth of material for novel combinations offered by the chalices and cross-cuts of flowers, and quotes Michelet the eloquent for proof that common insects have under the microscope a treasure-house of wonderful patterns and designs. The concise notices of plates speak of such great artists in furniture and the finer arts as Boulle, Delacroix, Gillot, Lebrun, Poussin (Nicolas), Prud'hon, and Puget. Four plates are after work by unknown masters. In addition to the notices there is a bibliographical table giving the chief events in the lives of the artists mentioned.

* Dessins de Décoration des Principaux Maîtres. Quarante planches. Sous la direction de M. Ed. Guichard. Étude sur l'Art Décoratif et des Notices par M. Ernest Chesneau. Paris: A. Quantin. New York: J. W. Bouton. 1881.

HOME AND SOCIETY.

House Construction. I.

FOUNDATIONS.

THE house-builder's first care is to secure a solid foundation. The best basis for this is either rock or gravel which has not been moved. Next come clay and sand, subject to the same conditions as gravel. Loose or soft, wet situations are more difficult of treatment, and require extreme care and scientific methods of procedure. Examination by means of wells or pits sunk at different places over the proposed site, down to or lower than the under side of the foundation, is the only sure means of determining the character of the ground. If a solid basis is found, it is only necessary to remove loose deposits and level all surfaces, so that the bases of the foundation may not be begun on inclined planes. In general, a site at the top of a hill is undesirable, because it is difficult to raise trees and shrubs there; and, as these elevations usually have a thin layer of soil above a rock substructure, rain will collect and produce springs. In the cutting of a cellar in such a position, considerable expense will be incurred in diverting springs by sinking channels. To these objections may be added the extra labor of walking, riding, or driving up and down a long hill, where gradual and easy ascent is not possible. Should it be thought advisable, however, to retain such a site, it is well to keep the cellar excavation as high as possible above the rock, grading judiciously to enhance the appearance of the building. Valley sites are as open to objections as those on hill-tops; for, when the valleys are long and deep, and there is much still water, dampness and unhealthiness of air are nearly always present. The best position for a country house is midway between these extremes, on the side of a hill and near broad sheets of moving water—such, for instance, as the slopes along the Hudson River and by the great inland lakes. In those regions, it will be found that spring is about two weeks earlier and autumn nearly two weeks later than in the same latitude east or west, where the relative conditions of land and water are less favorable.

Clay soils may be classed next to rock and gravel for stability as building sites, but they present unfavorable features on account of changes in their structure in dry and wet weather, their imperviousness to water, and the tenacity with which frozen clay adheres to masonry. Yet, by using care in draining the excavation, the foundation on clay may be made nearly as solid as that constructed on compact sand, and the site prove as conducive to health. Sand, from its porosity, forms an admirable drain, and helps to keep the cellar and substructure dry. If the soil is wet, special means must be employed to keep the cellar and walls free from dampness.

The site having been tested, the excavations are commenced. These excavations are generally, or, rather, ought to be, eight or ten inches wider than the

proposed area of the building. This space outside of the wall should be filled with gravel, and if the wall is built on dry, broken stone, the surface water will not be apt to penetrate the cellar. Such preparation, however, might not be sufficient in the case of a clay-bed whose upper surface was above the cellar level. In this case, trenches must be cut outside of the building, so as to conduct the

water to some main-road drain or to the foot of the slope. Sometimes the outside surfaces of cellar walls are coated with cement and sand, which is termed "rendering," and this helps to shed water in the soil. After this has been accomplished, the earth is filled in and thoroughly settled by ramming and wetting, called puddling, so as to pack it closely in

TYPICAL WELL-CONSTRUCTED CELLAR WALL.

DRY STONE DRAIN UNDER CLAY BED.

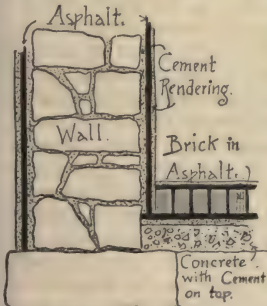

place; but particular care must be taken that the walls are settled and quite dry before this is done, for if the walls imbibe moisture, especially if built with lime-mortar, they rarely part with it, and wet gradually and surely rots the timbers resting on the foundations. To prevent a soakage of water through the earth packing, a course of brick should be laid underground, leaning toward the building, and this should be cemented very thoroughly. Where wet soils are encountered,

BRICK WATER-SHED.

moisture will be conducted by means of the wall into the dwelling. The surest protection against this is to use hot asphalt, which is carried over the cellar floor, through the foundation walls, and upon the outside of the foundation walls, thus forming a complete envelope to the building, which, if properly put on and carefully regulated as to special requirements, will make the cellar floor as dry as the attic, even when the level of summer water outside is several feet above the grade of the floor. If the cellar walls of an existing building are damp, and it is impossible to keep the

cellar floor free from moisture, the following method will make a dry cellar and add to the security of the household against disease. Nothing is more detrimental to the health of the inmates of a house or more conducive to the decay of the building than moisture. Diphtheria has developed from the fungoid growth on damp wall-paper in a house where the drainage was excellent. The first thing to be done is to take up the cellar floor, and level the soil about nine or ten inches below the finished grade of the cellar floor. In very bad locations, lay four or five inches of concrete, or, in more favorable ones, between four and six inches of coarse, clean sand. (Sand is clean when, being wet and then rubbed, it does not soil the hands.) This layer of sand should be well rolled or packed; then spread over the sand or the concrete an even layer of cement-and-sand mortar from three-quarters to one inch in thickness, and when this has well set, pour hot asphalt over the entire surface of the floor, carrying the same up on the walls above where the moisture shows. The outer surface of the cellar wall must be treated in the same way if the ground is unusually bad. Of course, a rough-stone wall will need to be brought to an even surface with cement mortar before applying the asphalt, and a second cement rendering should be placed outside of the asphalt on both sides of the walls and the floor. To make a good walking surface, which shall also be capable of resisting wear and tear, the cellar floor should be covered with bricks on edge, well grouted in cement. Or the bricks may be heated and dipped in asphalt, then laid on the asphalt bed, and afterward the cement may be spread over them.

DAMP WALL TREATED WITH HOT ASPHALT.

keeping walls dry are excellent when dry areas or air-drains cannot be conveniently constructed. Dry areas are cavities between the outside of the foundation walls and the retaining walls which support the soil. Sometimes these areas are covered with half-brick arches, or a flat stone a little below the surface of the ground. This entirely nullifies the anticipated benefit, for the surface drainage descends and injures the cellar wall even if it is cemented above the covering, while the dark passage becomes a harbor for vermin. The best form is that of an area which is open to the elements, covered at intervals with a movable grating, and is sufficiently wide to admit of being cleaned out. It should have a drain-pipe laid to grade at the bottom. This area, of course, may be utilized in giving light to rooms partially below the ground surface, such as kitchens, laundries, and sculleries, although it is not

well to have any working-rooms below the ground levels. The best possible arrangement would be to have the working department of a household in a semi-detached wing.

Damp courses are used to prevent the moisture which may get into the foundation walls from rising by capillary attraction. The absence of this simple precaution,

OPEN AREA TO PROTECT AGAINST MOISTURE.

especially in the so-called "jerry-builder's" work, while saving a few dollars to the contractor, ultimately results in the expenditure of hundreds, by the householder, in repairs and doctor's bills. In very cheap buildings, several courses of brick-work, laid in cement above the footings and below the floor, sometimes take the place of building the entire wall in cement. Another way is to bed thick slates in cement in courses with lapped joints through all the walls, whether large or small. This method, however, has fallen into disuse, either from the breaking of the slates by the superincumbent weight, or the want of adhesion of slates and ordinary cement. If Portland cement is used, it will, from its well-known adhesion to slate, prove more satisfactory. A layer of hot asphalt, sand, and tar, between the foundation walls and the superstructure, has proved very efficacious. Gas-tar mixed with lime it is said will resist the advance of moisture. In some of the old and well-constructed buildings of two centuries ago, sheet-lead was placed on the top of a wall to prevent any wet coming down from the gutters; what has worked so well on the upper portion has been suggested for the lower part of the wall, but it is an expensive method. Thus far, one of the best and cheapest means discovered to keep dampness out of a wall is to insert a damp proof course, which is made of vitrified pottery or stoneware. These blocks come in various sizes; they are perforated entirely through their lengths, which go across the width of the wall; each block has a half air-space, which remains open after the mortar-beds are laid on each side of the block. These slabs can be introduced into work already executed, by cutting out a course of bricks. Hollow walls have been used to accomplish the same all-important result, and also the layer of air, being a non-conductor, helps to keep the inside of the building at an equal temperature. The two portions forming the hollow wall have been variously placed as to their position and bonding. They have been arranged with the thin portion sometimes on the inside and sometimes on the outside. When the thin portion is inside, the bulk of the wall is exposed to the wet,

which may penetrate to within a few inches of the interior. The span of the roof has also to be increased, to bring the wall-plates on to the substantial part of the wall; this, however, can be avoided by building the upper portion solid, which will render that portion of the wall liable to damp. If the thin portion is on the outside, the damp is at once intercepted by the air-space; it does not attack the greater bulk of the wall, and is kept at a considerable distance from the interior of the structure. The roof will now rest on the interior, thicker wall, and the whole will be a more economical arrangement. If the outer or thinner portion, however, is built of bad bricks, the attacks of frost, for instance, will soon destroy it. In bonding or tying the two portions together, bricks like an S have been used; the end which goes into the outer portion being a course lower than the other end. This prevents any moisture running along the surface of the tie into the main wall. These bonders, as they are termed, are placed about two and a half feet apart in a horizontal, and about ten or twelve inches in a

DAMP-PROOF COURSE AND HOLLOW WALL BONDING.

vertical, direction. Wrought and cast iron ties, properly painted or tarred, with a depression or a twist at the middle to prevent water passing and to resist compression, are also of general use. Special hollow bricks have been used for the entire building, and sometimes the walls are built of ordinary bricks on edge, previously dipped in tar and asphalt, and with ordinary bricks as bonders from front to back. Or the bricks may be laid flat, with a two-inch space between; the headers or bonders will then be too short to span the width of wall, and must be filled out with "bats," or broken bricks. These methods, which may be used in constructing hollow walls with ordinary bricks, are defective in strength and durability as compared with those having special bonding-bricks or metal ties; for the durability of the wall is affected by the porosity of ordinary bricks, which conduct moisture to the inside wall, and thereby defeat the very object to be obtained in making the wall hollow. In the absence

of special bonding-bricks or metal ties, it is better to use pieces of slate-slab as thick as the courses of brick. Use may be made of this in the ornamentation of the front, by having the edge of the slab rubbed smooth where it is exposed to view, and if a Philadelphia brick is employed for the exterior, the deep contrasting color will produce a pleasing effect. Often a stone wall is lined on the inside with four inches of brick-work or three inches of fire-proof material, leaving a two-inch air-space between; this lining must be tied into the main wall, and will go from the foundations up to and between the beams.

If concrete is used in the foundations, care must be taken that it is made of proper materials, and that the mixing and laying are well executed. Concrete is an artificial compound, generally made by mixing lime or cement with clean, sharp sand, water, and some hard material, such as broken stone, gravel, burnt clay, bits of brick, iron slag, and breeze. The broken material for convenience is called the "aggregate," and the mortar which incases it the "matrix." If there is any choice about the aggregate, preference should be given to fragments of a porous nature, such as brick or limestone, in one and a half or two-inch cubes, rather than to those with smooth surfaces, because the cementing material will more readily adhere to the rough surfaces of the former. The following modes of mixing concrete are systematic, scientific, and practical: The proportions decided upon are measured out in boxes. The measured materials are then heaped together, and turned over with hoes and shovels at least three times; when thoroughly incorporated, the mass is sprinkled with water from a watering-pot. If too much water is added, the lime or cement is washed away. Another method, recommended by engineers, is to mix the matrix separately and then add the aggregate. In this method, the mortar should have about as much moisture as in ordinary brown sugar, and the aggregate should be thoroughly moistened in order not to abstract any moisture from the matrix. When the aggregate is in the form of a sandy ballast or gravel, the first method is better, as the expense of screening would have to be added if the second method were used. As a rule, mixing separately is more expensive, and for ordinary concrete need not be adopted. In laying concrete, the common practice has been to tip it from a height of ten or more feet, but this is considered objectionable, because the heavy and light portions separate in falling and the concrete is therefore not uniform. After thorough mixing, the concrete should be wheeled to the position desired and gently tipped from a height of not more than three feet, and be carefully rammed immediately, if a quick-setting cement is not used, in layers of from eight to twelve inches in thickness, and then not disturbed after setting has commenced. Before adding a layer, make sure that the one on which it rests is thoroughly set; the upper surface of the lower one should be swept clean, wetted, and made rough with a pick. When concrete is to be placed under water, it is deposited through shoots, or sometimes placed in oiled cotton-waste bags, which remain after it is laid. If footing-stones alone are used, without concrete, as a sub-foundation, it is well to see that these stones, if they have uneven beds, are fitted solidly on the gravel. An excellent way

to bed an irregular stone is to heap sand without pebbles around the stone in the trench, and then turn a hose on the mass; the water in sinking through the sand carries it into all interstices, and thus gradually makes a solid bed. When the foundation wall is built of stone, care must be taken that there are no cracks in the stone, which, even if almost invisible, will allow water to soak through, and unfit the stone for resisting a strain. Any suspicious stones when struck with a hammer will, if good, ring clear, and if there are seams in them, the dull sound which follows the blow will betray their presence. The stones should have nearly flat beds and be well bonded, and the side of the wall toward the bank should be as carefully pointed as that

on the inside,—that is, the joints should be well filled with mortar, and the mason should make what is called a “weathered joint,” by pressing the mortar in with the trowel, the point being held up.

If the filling of the trench, which must be either sand, gravel, cinders, broken brick, or stone-chips, should be in direct contact with the wall, this form of joint compels all water falling on the stones to trickle off and down until

the drain is reached, when further harm cannot be done. If brick is used in the foundation walls, some one of the before-mentioned methods for excluding moisture must be employed, otherwise it will be impossible to keep the house dry and wholesome. Even when stone is used, the utmost care and attention must be practiced to prevent country masons, in particular, from constructing the walls with long stones, which they will not break but set with the neat, fair face on the inside, and the projecting portion running into the bank, there to collect the water and conduct it to the interior of the building. The reprehensible practice in some localities of building the cellar walls without any mortar, of irregularly shaped

and after whitewashing, such a wall would pass muster as a first-rate one. But after heavy rains, streams of water will percolate, and finally pour into the cellar; rats and other vermin, finding easy lodgment between the stones, will soon push out the chips and pointing mortar, thus reaching the interior, while the earth, washed in by successive floods, will soon bring such a pressure that the cellar walls will bulge inward. Dry stone walls may suffice if proper means are taken to keep the bank from the outside, but as a general rule it is better to have the entire thickness of the wall compactly filled with cement-and-sand mortar.

That portion of the wall which shows above the ground is ordinarily made with a smoother face than the rest. Slabs of granite or freestone, or even an eight-inch brick wall, are used in low-priced work. Of the three, split granite is the best, because the others absorb moisture from the ground and from snow-banks. The most solid construction is obtained, however, by carrying up the stone wall the full thickness, and depending on neatly pointed joints for the appearance of the outside.

Another decidedly bad practice in country work should never be allowed; this is the reduction of the thickness of the wall to that of the sill, in order to allow of the accommodation of the atrociously bad framing in which the floor-joist is notched into the sill, so that their upper surfaces coincide, but so that the whole weight comes on the tenon, which is liable to split off. The proper way is to have the under surfaces of the beams flush with the lower part of the sill; the tenon can then be made deep

enough for safety, and the wall carried up the full thickness. An excellent mode of securing the sill to the wall is by bolts two feet long, set vertically in the masonry, about eight or ten feet apart; holes are bored in the sill, which is slipped over the bolts and secured by nuts and washers, care having been taken to spread previously a layer of soft-cement mortar as a bed, which, when the sill is hammered down, closes effectually all crevices against the frost. Another most effective means for keeping out the cold, stopping the spread of fire, and preventing rats from climbing over the wall and finding their way through the floor above, is to fill up the space between the beams from the sill, and the top of the stone wall to the under side of the floor-boards, with brick-work. The same object is attained in the West by dispensing with the sill, and using two floor-beams all around the building, so placed as to leave an air-space, which is blocked every two feet. These beams are so arranged that they project inward about an inch more than the studs above. The studs rest on a plate placed on the under flooring, which is laid diagonally. The advantages claimed for this method are security and warmth, with less cost of material than with beam-filling; greater stiffness than with sills; diminution of shrinkage, and greater height of walls with the same length of studs.

In preparing cellars or basements, it is often desirable to have board-floors. These floors may be laid on sleepers imbedded in concrete, or, if circulation is

OUTSIDE FILLING FOR CELLAR WALL.

stones, and depending partly for support on the soil backing, ought never to be countenanced. Such walls have the smooth faces of the stone on the inside, the side toward the bank having many projections. To make a presentable appearance toward the cellar, the crevices are filled with chips of stone and the joints are only pointed with mortar. On completion

wished under the floor and through the walls by means of air-bricks, the floor may be laid on the regular beams away from the ground surface, and ought to be "deafened" with "mineral wool," which, from its antiseptic and non-inflammable qualities, is

BRICK AND "UNDER-FLOOR" FIRE-STOP.

a most valuable and at the same time an inexpensive adjunct to good building. Mineral wool is prepared by passing superheated steam through ordinary iron slag, the resulting product being a white, almost weightless, woolly substance which is death to insects or vermin that enter it. Also, it is a non-conductor of heat, cold, and sound, is perfectly fire-proof, and costs

only a few cents a square foot about one inch thick. The beams are prepared for the wool by nailing fillets, from one to one and a quarter inches thick, say two inches below their upper surfaces. These fillets support a thin board bottom, on which the mineral wool is laid in a moderately compact mass until it is level with the top of the beams. If packed too tight, it loses many of its valuable properties; however, it should not be merely scattered between the beams. The trifling expense incurred will be repaid a hundred-fold by the comfort and security resulting from its use. As a fire-stop, the value of this material is only beginning to be known. If placed in partitions, behind furring, between floors and under roofs, many fires unaccountable in origin and difficult to get at, would be prevented.

Such, in brief, are some of the points which require attention in constructing a good foundation. With different conditions and novel requirements, special and novel means will be employed by a skillful architect to accomplish the desired ends. These hints are not given in order that the reader may become the architect of his own house, but in the hope that they will enable him to examine intelligently and to appreciate properly prepared plans and specifications for new structures, and in the hope that they may suggest simple means of improving dwellings already constructed.

GEORGE MARTIN HUSS.

THE WORLD'S WORK.

New Steam-boat and Engines.

In a new steam-boat now building upon the Hudson, an attempt is being made to produce a boat that shall be self-righting, that shall be very fast, and that cannot sink unless entirely torn to pieces. The boat is comparatively small, as it is intended only for an experimental or model boat. If successful, it is intended to build ocean steam-ships upon the same principle. It appears that the inventor's aim is to make a self-righting boat by carrying the sides over the deck in the form of a dome. The side frames are made continuous and meet over the center of the hull, or, in other words, the frames begin at one side of the keel, rise directly at an angle of about forty-five degrees to the water-line, and then curve inward over the deck and back on the same lines to the keel. A section of the hull taken in the center is thus of a wedge shape, with a sharp edge below and rounded top above. This wedge form is preserved through the entire length of the hull. There are no hollow lines in the boat, and the sharp, overhanging bow is intended to part the water near the surface and to form a long, tapering wedge. The widest part of the hull is exactly at the middle, both ends being precisely alike. This is quite different from the flat bottom and straight sides, with comparatively bluff or rounded bows, of the ordinary ocean steam-ship. The boat is intended to be much deeper aft than forward, and the deck will be much higher above water at the bows than at the stern.

There will be no houses or raised constructions of any kind on the deck, except the dome-shaped pilot-house, the ventilators, and the smoke-stacks. There will be an open railing around the center of the deck, so that it can be used as a promenade in pleasant weather or whenever the seas do not break over the boat. The object of this unbroken dome-shaped deck is to enable the boat to throw off all waves that break over the bows or sides in rough weather. It is thought that, instead of shipping tons of water and retaining it on deck till it can be drained off, the boat will shed or throw off the water from the long, sharp bows and open deck, and will at once relieve herself of the weight of the water. Waves striking the rounded deck will have no hold on the boat, and their force will thus be spent harmlessly. The sharp wedge-shape and rounded top of the hull, and the fact that even when fully loaded the center of gravity will be below the water-line, makes the model self-righting. From experiments with a small model, this claim of the inventor seems to be clearly proved. In laying out the boat, only the spar deck will be used for passengers, the main deck and all below being intended for cargo, coal, and engines. The state-rooms will be arranged along the outside, each room having a port in the side of the boat, while the ceiling will be formed of the curved deck above. The saloons will be the whole width of the ship, and on the spar deck. For lighting the saloons there will be sky-lights in the center, and as these in rough weather may be

covered by the seas that sweep over the deck, they will be very strong, and will be air-tight. To secure ventilation there will be steam-fans, kept in motion at all times, and maintaining a good circulation of air through every part of the boat. For this purpose the fresh air will be taken through wind-sails on the deck, and the exhaust air from the rooms will be turned into the blast used in forcing the boiler fires. No boats are to be carried on deck; the life rafts and boats will be kept in an apartment under the domed deck at the stern, and when they are to be launched, doors will be opened in the deck and the boats launched in the usual way from davits through these doors. The pilot-house will be at the bows, and will be entirely inclosed. It will not rise much above the deck, and will be entered from below.

There will be no masts or sails, as it is intended to depend wholly on the engines for propulsion. In constructing the hull, to secure great strength, three heavy trusses, or "hog frames," are to be placed on the keel, each one rising to the spar deck and securely fastened to the side frames of the boat. The ceiling will be double, and placed diagonally on the frames. In the larger steam-ships, the absence of sailing power will be compensated for by two extra engines and two supplementary screws, that can be employed in case the larger screw is lost or the main engines break down. For this purpose the three shafts will be placed one over the other. The two smaller shafts will be placed above and below the larger or main shaft, and each will have an engine. There will be a two-bladed screw on each shaft, and they will move above and below the main shaft. Behind those two small screws will be a second stern-post supporting the main screw-shaft, and to this will be fastened the large screw generally used in moving the ship. There will be behind this screw a third stern-post, carrying the rudder. On the second stern-post will be two extra rudders, one on each side, and when the smaller screws are not in use these two rudders will be turned forward and shut close against the main stern-post, and will be bolted from the deck above in this position. By this arrangement, the two small screws may be completely shut in out of sight and out of reach. The water will flow past the two rudders to the larger screw, precisely as if the second stern-post formed the real end of the hull. If the larger screw and rudder are broken or lost, or if the engine fails, these supplementary rudders may be unlocked, turned back, and used to steer the steamer, while the two small screws, exposed to the water by the opening of the rudders, may be brought into use to propel the ship. The supplementary engines can be used to handle the cargo, or do other work, when not employed in turning the screws.

The engines and boilers for the main engine are to be of a novel type. The engines will be double compound, that is, there will be two compound engines, each having two cylinders, the high-pressure cylinder being placed within the low-pressure cylinder. The piston of the larger cylinder will be annular shaped, and will have two piston-rods. The action of this style of engine will be easily understood. The steam will be admitted, say, at the top of the high-pressure cylinder, and driving the piston downward. The exhaust steam will escape below, directly into the bottom of the larger cylinder that surrounds the first cylinder,

and its expansion will drive the piston upward. In external appearance the engine will resemble a single engine having three piston-rods.

The boilers will be upright, with vertical water-tubes hanging down into the combustion chamber, somewhat like some forms of steam fire-engine boilers. All these tubes will be joined at intervals by horizontal tubes. The steam will be gathered in a larger tube in the center, where the steam will be disengaged from the water and will rise to the upper part, which will make a steam dome in the center of the boiler, and just under the throat of the stack. The boilers are to be very strong, as the engines are to be used under very high pressure and at high speeds. Further details of the construction and behavior of the model boat will be given as soon as she is launched.

Electrical Steering Apparatus.

EXPERIMENTS have been recently made in the use of electricity in steering or guiding steam-ships upon the open sea, and in controlling a light in such a way that the position of the light shall indicate the steamer's course. After the ship's course has been set, the helmsman's duty is simply to watch the compass and to move the wheel whenever the ship in her progress turns to the right or left from the course laid down. To enable the compass to steer the ship automatically, an index or pointer is fixed to the card of the compass in such a way that it may be fastened in any position on the card that may be desired—east, south-east, south, etc. When the course has been decided upon, and the index placed in the right position, the end of the index rests between two metal pins, each of which is part of an electrical circuit. When the movement of the ship out of her course, to the right or left, affects the compass, the card brings the pointer in connection with one of the pins. This closes one circuit, and the current, by the aid of suitable mechanism, controls one cylinder of the steam steering-engine, and this in turn controls the rudder. The ship, obeying the rudder, changes its course, and this in turn affects the position of the compass-card and the index is moved away from the pin, and the circuit is closed and the engine stopped. While such an arrangement of electrical and mechanical apparatus is quite possible, and while experiments with it have been successfully carried out upon at least one steamer, the invention cannot be regarded as one that will enable any ship to dispense with a helmsman or pilot. It might be suggested that, in place of employing the electric current to move the steam steering apparatus, it could be used to strike a gong. The sound of the bell would be a signal that the ship had left her course and required attention. By making the closing of the right-hand or left-hand circuit cause a bell of a different tone to ring, the deviation of the ship to the right or left could be clearly indicated. The circuits could also be extended to the captain's room, so that the ringing of the bells would inform him of the change in the ship's course. If the steering is made entirely automatic, there is danger that too much reliance might be placed on it by the pilot, and he might become careless or negligent at a critical moment, and place the ship in peril. By mak-

ing the apparatus merely ring a bell instead of controlling the steering engine, a watch would be set on the pilot at all times. The ringing of a bell should be the limit of this application of electricity to the compass. If not already patented, this suggestion will be free, and by its announcement here, all persons are debarred from taking an American patent on this application of electricity to a ship's compass. Another invention of somewhat the same character has been recently announced, that seeks, by means of a signal light, to give an indication in the night of a ship's course. A powerful light of some kind—an electric light being preferred by the inventor—is arranged near the bows in such a manner as to throw a beam of light directly ahead. Upon the ship's wheel are placed two electrical contacts, in such a position that while the ship is steered directly ahead no connection is made with either contact, precisely as the index on the compass-card is used in the first invention described. When the wheel is moved and the course changed, connection is made by the wheel with one of these points, and the current causes a reflector behind the lamp to move and deflect the beam of light to the right or left. This movement of the beam of light seen by approaching vessels indicates the change in the ship's course and the direction of the change. After the course has been changed and the vessel has fairly started in the new direction, the movement of the wheel opens the circuit and the reflector automatically returns to its first position of straight ahead. Approaching vessels see both the intended or changing course of the approaching ship by the movement of the beam of light, and are at the same time informed if the new course is maintained. A device resembling the one already suggested also rings a bell in the captain's room each time the reflector of the lamp is turned. A shutter, or shade, is also provided for preventing deceptive reflections on the water whenever an electric light is used with this apparatus. The movement of the reflector in the lamp, as first designed by the inventor, was to be performed by hand independently of the wheel, but the electrical arrangement is evidently better. This invention will not be patented, and is hereby given freely to the public.

White Slates.

SCHOOL slates are now being made of white cardboard, covered with a film formed by the action of sulphuric acid on tissue paper. This covering is probably a modification of celluloid. The slates can be used with a lead-pencil or with ink, and, to remove the marks, the slate is washed with cold water. A special ink is also prepared for use with the white slates. It is composed of harmless mineral coloring matter mixed with dextrine, and is aptly called "children's ink." It can be removed from the slate with a wet sponge. Another form of slate is made by coating the white card-board with water-glass. It may be used with lead-pencils or colored crayons. When the surface becomes soiled the water-glass may be rubbed off with sand-paper, and a new film may be put on with a sponge or brush dipped in water-glass. The ordinary black slate and white pencil is well enough for mere writing and outlines, but for pictures requiring shading it misleads the child by presenting the picture

with the lights reversed, or in a negative position. A white slate and black pencil is, therefore, better, as following nature in the matter of shading and giving pictures that are positives. The new slates have not yet been introduced in this country, but it would seem that they might prove of value in our schools. Perhaps a celluloid slate, if properly made, would be equally good, and might be sold at a low price.

New Tripod.

A NOVEL form of portable tripod for holding field cameras has been introduced which presents some features that may make the invention of value in a number of ways. It consists of three wooden legs, each eighty centimeters long, and hinged at the top to a small brass plate. This hinge is formed by a brass pin that passes through the top of the wooden rod or leg and gives it a free motion in two directions, while the frame of the hinge prevents any lateral motion of the rod. The screw for holding the camera on top of the tripod is fixed in the brass plate, and the camera is screwed down upon it by turning it round. This device saves the trouble of carrying a separate screw for this purpose. On the outer side of each rod is a T-shaped channel, cut in the wood the whole length of the rod. Three more rods of the same length are arranged with a projection on one side that will fit into the T-slots on the rods. These six pieces, when put together, one rod sliding on another, make a tripod that may be extended to a full length of one hundred and sixty centimeters (five feet three inches), or may be shut up to half the length. Brass rings hold the two parts of each leg together, and set-screws are used to keep each leg extended in any position desired. This arrangement enables the operator to adjust the tripod to any convenient height and to any uneven surface quickly and securely. When shut up, the tripod makes a small, light bundle, easily carried in the hand or trunk. By fixing a table to the top of the tripod, it may be used as a drawing-table for sketching out-of-doors, or for a dressing or dining table in camping out. It may also be used, by placing wooden leaves at the top, as a rack for holding sheet-music for bands. A larger tripod of wood or metal might also be used as a portable frame-work for a small field-tent, by covering the tripod with canvas or tarpaulin.

Improvement in Stoves.

THE tendency in the manufacture of all kinds of apparatus for burning fuel, whether it is merely to obtain heat for warming a room or in making steam, is toward a greatly increased radiating surface. The aim is to increase the radiating pipes, flues, or other parts of the stoves, so that as much heat as possible may be absorbed and given off to the air or water, instead of being thrown away up the chimney. The latest experiments in this direction have been made with a stove that was suggested by the ordinary surface condenser for steam. In this familiar apparatus, the exhaust steam from the engine is made to enter a chamber filled with a great number of small pipes. Through these pipes flows cold water, and the steam meets a large surface of the cold pipes and is condensed quickly, hence the name "surface condenser." In the

new stove, the chimney or stove-pipe over the fire-box was formed by a great number of small copper pipes placed in a cluster directly over the fire. The products of combustion were made to pass in many minute streams through this multiple chimney, and so great was the surface exposed to the air that only a very small percentage of the total heat of the fire was lost at the top of the chimney. It does not appear to make any material difference what kind of a stove or fuel is used, provided the tubes are small and enough of them are used to carry off all the gas and smoke. The experiments made seem to prove that it is possible to give a stove sufficient radiating surface to save nearly all the heat without making the collection of small pipes inconveniently large. The only objection to the use of a great number of small pipes in this way would be the trouble of keeping them clean, but the cost of cleaning would be probably more than offset by the economy of fuel.

New Water Meter.

A NEW apparatus for measuring the consumption of water has been introduced, that appears to have the

merit of simplicity and cheapness. It consists of two cast-iron cylinders, placed together at the bottom, and inclined from each other at an angle of about twenty degrees. They are supported on a pivot, and on this they are free to rock from side to side, as the weight of the water in one or the other causes it to move. These cylinders are connected with each other at the bottom, and are partly filled with quicksilver. There are also inlets and outlets for the water, controlled by the oscillation of the cylinders, which serves to move a registering device that marks the quantity of water that passes through the apparatus. The water, on entering one cylinder, drives out the quicksilver and it passes over to the other cylinder. Here the weight of the quicksilver serves to rock or upset the cylinder, and its movement on the pivot opens the outlet port and closes the inlet port. At the same time, a second inlet port is opened and the water flows into the second cylinder, driving out the quicksilver. The same operation follows in the first cylinder, and thus the continuous passage of the water is secured, while the oscillation of the cylinders controls the registering apparatus.

BRIC-À-BRAC.

The Old Ship of Zion.

OH! eb'rything's ready,—
De wind is steady,
An' de folks keep a-crowdin' to de gospel ship;
'Tis de best time to ride
On de Jordan tide—
Dar's no use o' waitin' for de 'scursion trip!

Dey's a-loosenin' de line,
An' soon she'll be gwine,
For yonder come de deck-hands to push her off de bank;
She's a-puffin'! she's a-puffin'!
An' she nebber waits for nuffin'—
Better git abode, sinners, 'fo' dey *pull in de plank!*

Absence of Mind.

[Scene : A sleeping-car. An absent-minded passenger suddenly arises from his seat and looks aimlessly around him.]

"A HEAVY weight is on my mind!
I know I've left *something* behind!
It cannot be the brazen check,
For trunks which baggage-masters wreck,
For here it is! My hat-box? No!
It safely rests the seat below!
It must be, then, my new umbrella,
My wife will taunt me when I tell her,
'Your fifteenth since the glad New Year!
Why, bless me, no! How very queer!
'Tis in the rack there, plain in sight!
My purse and ticket are all right!
What fancies crowd an addled head;
There's naught amiss! I'll go to bed."

Full peacefully he sank to rest,
If snores a peaceful sleep attest.
A tuneful hour had scarce slipped by,
When loud uprose an anguished cry—
A crazed man's moan of lamentation—
"I've left the baby at the station!"

Rafting.

(NASSAU MARSH, FLORIDA.)

THE tide ebbs out in Lockler's Creek,
And the moonbeams break through the trees
around
On the changing shore where the current sweeps,
And the night-owl hoots at the echoing sound,
As the raftsmen cheerily sings:
"Ho, Jennie, gal, oh! oh!
De tide ride high, and de tide run low,
And de water mus' hab its turnin';
But de ebb-tide car' de raf' along
Wid de binders stiff an' de current strong,
An' de trouble' stream a-churnin'."

The tide flows high o'er Nassau's banks,
And the hot sun lights the haze that floats
O'er the waving marsh-grass, tall and rank,
Where the marsh-hen pipes her pointed notes,
As the raftsmen dreamily sings:
"Ho! Jennie, gal, de work go slow,
For de tide mus' ebb an' de tide mus' flow,
An' de water am slow ob turnin';
For de flood-tide car' de raf' ashore,
An' we all mus' res' tell de water low'r,
Ef de noon-day sun be burnin'."

The white-caps break on Nassau's beach—
There's a rising wind and a lowering sky,
And out where the mists and the tempests meet
The circling sea-gulls flutter and cry,
As the raftsmen, jubilant, sings:
"Ho! Jennie, gal, de win' may blow,
An' de tide may ebb an' de tide may flow,
An' de water hab its turnin';
For de raf' ride safe in de cove alone,
An' I'm here wid you an' de boy at home,
Fo' de lighted fire a-burnin'."

The Taste Supply Association. (Limited.)

FOUNDED TO FURNISH SINGLE PEOPLE AND FAMILIES
WITH CORRECT AND HIGHLY CULTIVATED
TASTES OF ANY PERIOD OR
FASHION, IN
DRESS,
INTERIOR DECORATION,
OR
FOR HOUSEHOLD USE.

President.

MR. DANTE ATHELBERT HOSKINS.

OFFICES: { 1 Queen Anne Flats, New York,
and
South Kensington, London.

It is scarcely necessary to call attention to the fact that during the last few years there has been a great revival of Taste. No person who desires to hold any recognized position in society can hope to do so without possessing a clearly defined Taste. As Tastes are the result of close study and long and careful training, those persons who are engaged in business, or who have not the necessary leisure or assiduity, have hitherto found it impossible to procure them.

It is to remedy this state of affairs that the Taste Supply Association (Limited) has been formed—its directors and directresses being animated more by a spirit of philanthropy than by a desire for mere pecuniary gain; for they recognize it as utterly grievous that in the present enlightened period any person of means should be without special Tastes.

The staff has prepared a fine and very easily learned collection of Tastes, embracing every period and its various modifications, from the earliest Egyptian and Phœnician to the time of Queen Anne—later than whose reign nothing worthy of the disciples of Taste appears to have been produced.

All Tastes supplied by this Association will be guaranteed to be absolutely correct and unimpeachable. They will be personally imparted in a number of lessons varying with the difficulties and intricacies of the Taste selected. Those personally unable to attend may purchase rules for the formation of any desired Taste. These rules are clear and explicit, and are copiously illustrated with explanatory examples. We would, however, impress upon our patrons the fact that this study must be undertaken in a spirit of true earnestness.

The following are a few of the most useful and popular Tastes we have now on hand:

I. THE JAPANESE.

THIS is a simple and easily acquired Taste, in spite of its apparent complexity. It is an excellent Taste for beginners, and its cultivation generally forms the first stage of æsthetic development. Utter absence of consistency and homogeneity form its principal characteristic. This is, to a certain degree, true of all other fashionable æsthetic Tastes; but none other possesses this advantage to such an extent as the Japanese. It is very useful, also, in teaching novices to disregard that conventional fiction known as "the fitness of things." After a strict course of Japanese Taste, the æsthetic student will begin to understand that umbrellas are not made to carry over the head, but to hang up over doors or to put in front of empty grates; that plates are not fashioned for the table, but to be suspended in little tin frames; and that rugs made to be walked on should be used for *portières* by those who have the benefit of an Eastern civilization. The

course is brief and easy, although a little hard study is required at the first to enable pupils to distinguish between Japanese and Chinese wares. Chinese art, it should be remarked, is wholly unrecognized by the leaders of pure æstheticism. The stock for a fully developed Japanese Taste may be bought very cheap on Fourteenth street or Sixth Avenue, New York, and we have made very low

Terms for instruction.....\$2.50
Rules for self-instruction, by mail, postage paid. .25

II. THE ROCOCO.

THIS is the next step to the Japanese, and is slightly more complicated, although no great sense of consistency or uniformity is required. It is our object to show our patrons how to group odd bits of furniture, manufactured in France anywhere between the reigns of Louis XIII. and Louis Philippe, or in Massachusetts after old French models, in a perfectly harmonious and truly æsthetic whole; also to teach them how to meet, and rejoin to, the scoffs of precise and unimaginative moderns, who are apt to designate such collections as "hodge-podge," "heterogeneous ruck," and to use other quite too unsympathetic descriptive terms. This is a really cheap Taste to gratify, as excellent genuine Louis Quatorze and Louis Quinze furniture is now made by steam in this country, and several of the Michigan factories are about to establish *Directoire* departments.

Rules by mail.....1.50

III. THE QUEEN ANNE.

THIS is an effective and highly popular Taste. Its apparent simplicity has led many amateurs to attempt its cultivation without adequate instruction, going in on the broad principle that everything that is ugly is Queen Anne. This is not the case. Everything that is truly Queen Anne is ugly; but an implicit trust in the converse of the proposition leads the collector to infringe upon several other Tastes. Our system obviates all this difficulty. Just as we teach the student of the Rococo to walk about a room without stumbling over the curved and projecting legs of the tables, or knocking the ornate corners off the cabinets, or catching himself on the brass-work, so we teach the devotee of the Queen Anne style to sit down on a spindle-legged chair, and write at a still more spindle-legged desk, without breaking either.

Rules by mail.....2.50

IV. THE PURE CLASSIC.

THE Pure Classic is a very convenient Taste for those having large houses and very little furniture; but its use involves an extension of its principles into the realm of personal attire, which is often inconvenient, and, in a cold climate, sometimes positively dangerous, while it is at all times apt to bring a blush to the cheek of Philistines of exaggerated modesty. This Taste cannot very well be cultivated except by those living far out in the country, or, perhaps, in strictly private insane-asylums.

Terms for instruction.....\$35.00
Rules by mail.....3.50

V. THE MODIFIED CLASSIC.

THIS Taste is an invention of our own, and has been duly patented and will be protected by law. It

is a useful and ingenious combination of the principles of the Pure Classic and the Modern Tastes, so arranged as to admit of no objections on the scores of convenience, warmth, or propriety. It has all the advantages of the truly Classic with none of its disadvantages; it is eminently practicable, and the too absurdly low price at which we bill it puts it within the reach of all. The costumes may be easily and cheaply constructed. An excellent tunic, toga, or chiton may be made from an old meal-sack, or a mattress-ticking, drawn in about the waist with a bell-rope or a piece of curtain-cord. This Taste will be found particularly useful for young ladies' seminaries.

VI. THE EARLY ENGLISH.

THIS is the great original æsthetic Taste, and for too excessively additional consummateness it readily takes precedence of all others. It is not exactly easy to define the underlying principle of Early English art; but it may be briefly described as a purely perfect passion for angles. The attempts of a certain burlesque dramatist and his too supremely derisive musical coadjutor to belittle the beauty and sacredness of Early English art should be met with lofty contempt by the patrons and pupils of this Association. That the sweet comprehensiveness of the style embraces Florentine stamped velvet and Gobelin tapestries, and permits of the juxtaposition of bear-skins and peacock-feathers, merely exhibits its rich elasticity and its complete adaptability to modern means and opportunities of collection. The principles of Early English costuming are easily mastered by Parisian dress-makers, and even the Philistine genius of Worth, when chastened and sublimated by the mystic influence of mediævalism, may produce raiment not more than four or five centuries later in style than the pure Early English—a trifling anachronism, scarcely noticeable so long as the general effect of Intensity is preserved. As an instance of the growing popularity of the Early English Taste, we may mention that the fashionable shoe for gentlemen is gradually getting nearer and nearer to the pointed form of King Stephen's time.

VII. THE EARLY AMERICAN.

HERE we have a Taste at once practical, patriotic, and pleasing. To families of undoubted Cape Cod or Mohawk Valley ancestry, we can most confidently recommend this Taste as offering in itself an opportunity of social distinction. After a few weeks of study under our instructions, and a month or so spent in traveling about the country and collecting antique settles, chairs, spinning-wheels, samplers, Dutch ovens, spits, eight-day clocks, and shoe-buckles, a small family may fit up an ancestral hall at very slight expense, and may fairly claim to belong to the American aristocracy. Our course of study includes lessons in American history, and every graduate is presented with a pedigree, made out with careful reference to his inventory of antique possessions, so that he may attribute each article to an appropriate ancestor, and avoid anachronistic errors. We should warn our patrons against purchasing their heirlooms except under our supervision, as most of the simple-minded farmers who are willing, for a consideration, to part with old family furniture and china are agents of

Connecticut and Rhode Island manufacturers of antiques.

Terms for instruction.....\$12.00
Rules by mail..... 1.20

Applications by letter must be addressed to the Secretary, and must state very distinctly what kind of Taste is required. No rules sent out except on receipt of the regular fee.

Our rules, while calculated to prove of great advantage to our patrons in the rural districts, give merely the broad rudimentary principles of Taste, and we cannot too strenuously insist upon the immense advantages of personal instruction.

Disputed questions of Taste may be referred to the Association, and will be decided for a very moderate charge.

“ Ah, si Jeunesse savait ! ”

HAD youth but known, some years ago,
That freckled-faced small girls could grow
In most astounding way,
To lovely women, in whose eyes
The light a man most longs for lies—
Ah, si Jeunesse savait !

Had youth but known—my youth, I mean—
That you would walk as regnant queen
Of hearts in this new day—
That elfin locks could change to curls
Softer than any other girl's—
Ah, si Jeunesse savait !

Had youth but known the time would come
When I should stand, abashed and dumb,
With not one word to say,
Before you, whom, in days gone by,
I'd tease until you could but cry—
Ah, si Jeunesse savait !

I little dreamed in those old days
Of undeveloped winning ways
To wile men's hearts away—
When, wading in the brook with you,
I splashed your best frock through and through—
Ah, si Jeunesse savait !

Your pretty nose—ah! there's the rub—
I used to laugh at once as “snub,”
Is now *nez retroussé*;
Upon the one-time brown bare feet
You wear French kids now, trim and neat,—
Ah, si Jeunesse savait !

The brief kilt-skirt, the legs all bare,
The freckled face, the tangled hair—
These things are passed away:
You are a woman now, full grown,
With lovers of your very own—
Ah, si Jeunesse savait !

You'd plead to be my comrade then,
With tearful big brown eyes—Ah, when,
My winning, winsome May,
Will words like those your lips atween
Come back again? No more, I ween!
Ah, si Jeunesse savait !

Time turns the tables. It is meet,
Doubtless, that I here at your feet
Should feel your scepter's sway—
Should know you hold me 'neath your heel—
Should love you, and should—well, should feel.—
Ah, si Jeunesse savait !

A Successful Lawyer.

HE heaped the logic pile on pile, the evidence still higher,
 The counsel on the other side he hinted was a liar.
 He said his client was a well-known gentleman and scholar,
 And that his side had never paid their witnesses a dollar.
 He told them of the orphan's moans, the base oppressor's sneers,
 And, piling pathos mountain deep, moved all the Court to tears.
 He said: "I came not here for fame, nor yet for paltry gold;
 But justice is a thing, my friends, that never can be sold";
 And then at the rascality filled with indignant rage,
 Declared the act unparalleled in any previous age.
 He said that such a perjured wretch ne'er breathed beneath the sun,
 And, rising in his legal might, asked that the right be done.
 He quoted Blackstone, Chitty, Bumm, that no one could dispute,
 And said his "chain of reasoning" no lawyer could refute.
 He told the "honest, lawful men" to judge alone by fact,
 And not be swayed by empty speech and mere word-juggling tact.
 He wound up with a "glowing scene" that moistened every eye,
 And took his seat—to meditate on his stupendous lie.

The Pretty Toll-gate Keeper.

DOWN a valley fresh and fragrant, where a lake of silver sheen
 Lies embosomed in broad meadows of the deepest, purest green,
 Stands a busy rural village, with a touch of tower and spire,
 And its homes of squire and merchant in their plain and neat attire.

Many travelers go there daily,—some to talk and some to trade,
 Some with baskets, some with wagons,—man and woman, boy and maid;
 But whoever makes the journey is compelled, each time, to wait
 Long enough to drop some pennies at the tollman's rustic gate.

She who takes them is his daughter; sixteen years I heard her say
 Is her age; and she salutes me in so beautiful a way,
 With her pretty face in smiles, and her soft curls dropping down
 On her shoulders, that I think of her the whole long way to town.

I have business at the village every work-day of the week,
 And the reason why I go there is not very far to seek;
 I might take a shorter by-way, and see just as fair a land,—
 But I'd miss the tender softness of her white and pearly hand!

I am never in a hurry if she makes me stand and wait,—
 While I linger, half a dozen may have sauntered through the gate;
 But when my fee and fingers touch her fingers well outspread,
 What a sharp electric tremor tingles through my heart and head!

Yesterday I paused much longer than was needful to pay toll;
 One by one I dropped the pennies from my fingers' slow control;
 One by one I saw the blushes flame across her dimpled cheek;
 And, amidst the sweet confusion, I aroused my heart to speak.

It was just a simple question,—four short words and nothing more,—
 Yet a volume of intention filled the utterance they bore;
 Had I argued round a circle I might still be there to-day;
 So I put the matter frankly in the good old-fashioned way.

Then her face grew sweet and sober, and her blue eyes seemed so meek,
 That I caught at once the meaning which her lips were moved to speak.
 Let the busy gossips chatter,—I am willing they should prate,—
 For I'll now pay toll with kisses when I reach the rustic gate!

Her China Cup.

(RONDEAU.)

HER china cup is white and thin;
 A thousand times her heart has been
 Made merry at its scalloped brink,
 And in the bottom, painted pink,
 A dragon greets her with a grin.

The brim her kisses loves to win;
 The handle is a manikin,
 Who spies the foes that chip or chink
 Her china cup.

Muse, tell me if it be a sin:
 I watch her lift it past her chin
 Up to the scarlet lips and drink
 The Oolong draught. Somehow I think
 I'd like to be the dragon in
 Her china cup.

To a Bashful Lover.

(TRIOLET.)

YOU know it is late,
 And the night's growing colder;
 Still you lean o'er the gate!
 You know it is late,
 There's a fire in the grate,—
 Ah, sweetheart, be bolder!
 You know it is late,
 And the night's growing colder.

No. 6.

TUNIS AND ITS BEY.

ABOUT a year ago, the attention of the civilized world was drawn to Tunis, that corner of Africa which, in ancient times, was the pivot on which revolved Mediterranean history. At the beginning of the Tunisian troubles, little notice was taken of the rumors of the Arab insurrection on the Algerian frontier, or of the interference of France. Only those who were acquainted with the vicissitudes of European policy foresaw that the so-called intrusion of the savage Khoomir tribe into French territory would be taken as a pretext for the occupation of the regency of Tunis. Argus-eyed as is the European press, it succeeded in giving the public only scant information regarding the deliberations of the famous Berlin Congress, during which the fate of Tunis was sealed by an incident that was imparted to me by one of its leading members. France had long been casting covetous eyes upon the little state of Tunis, which nominally was under Turkish rule, but really was independent. It possessed the best, virtually the only, harbors of the northern coast of Africa. Lying immediately east of Algeria, it was an asylum for Algerian malcontents and the refuge of insurrectionary tribes. Algeria, since its first occupation by the French, has been a dangerous possession, and even at present it cannot be regarded as thoroughly conquered, especially in the southern districts bordering on the desert. The shortest and most practicable approach to these districts is by the Gulf of Gabes through Tunisian territory. Taking all these things into consideration, it was clear that France could not hold her African possessions in peace and security unless she could have full liberty of movement in Tunis. There was still another motive for the annexation. The French monarchy had added territory to

France and fresh laurels to her army by the conquest of Algeria; the Empire had given her Savoy and Nice; while the newly established Republic began its career by consenting to the loss of the two best and most fertile provinces of France. This reproach was an effective weapon in the hands of the monarchical factions. There was only one way to reestablish through the republic the lost prestige of France, and that was by conquest. Tunis, weak, poor, and misruled by an ignorant prince, and for many years an eye-sore to every Frenchman, was of course first thought of. But Italy and Turkey stood ready to protest. England and Spain were jealously watching every movement in north Africa, and, besides, France was in doubt as to the intentions of Bismarck. But at the Berlin Congress, when it was arranged that England, Austria, and Russia should each receive a part of the Ottoman Empire, Count St. Vallier, the French delegate, hinted the desire of his Government to have a share of the spoils, by opposing the dismemberment of Turkey. One day, while he was expressing his views to Bismarck in the presence of my informant, the chancellor shrugged his shoulders and said:

"Why not take Tunis for your share? —No one will oppose you."

From that moment Count St. Vallier withdrew his opposition. A few months later, when I arrived in Tunis, preparations for the French expedition were being carried forward with energy and secrecy. The representatives of some of the great powers in Tunis had received instructions not to oppose any measures that the French Resident, M. Roustan, might be pleased to take. Work was hastened on the railroad connecting Algiers with the capital of Tunis. Telegraph lines were

extended to every important point in the regency. So-called consular agents were appointed in the interior towns, and provided with money to prepare the inhabitants for foreign rule, and to reconcile them to it. Sometimes common Arabs who could not speak a word of French except *monsieur* and *bon jour*, were called to important offices. Bedouin sheiks were bribed, and officers at the Tunisian Foreign Office were promised high rewards. At first everything went smoothly, and M. Roustan soon became the most important personage in the regency. He contracted secret relations with most of

finally the parade march toward the capital. But the glory of the expedition was meager, for Europe was surprised at the incapacity shown by the newly re-organized French troops, at their very defective commissariat, and at the large number of sick. M. Roustan had made a careful study of the inhabitants, but little thought seems to have been given to the climatic dangers which the troops were to encounter, and to the scarcity of food and water. After the first blush of success, everything seemed to militate against the French, who, before they could firmly establish themselves, were confronted by the fanatical part

محمد الصادق باي تونس

PORTRAIT OF THE BEY, MOHAMMED ES-SADOCK, WITH HIS AUTOGRAPH.

the ruling Mamelukes, and was thus enabled to control the actions of the weak Bey and to prepare for the march of the French army toward the capital. No time was lost in massing a French army corps near the frontier; and, at an opportune moment, the curtain was lifted over the scene of the insurrection of the Khoomir tribe. On the pretext of chastising the Bedouins that had invaded Algiers, the French entered Tunisian territory. Then followed a series of so-called victories over the beggarly, unarmed, and half-starved Bedouin Arabs, the bombardment of the defenseless town of Tabarca, expeditions against an imaginary enemy, and

of the population of the interior, which hastened to arms to oppose the intruding unbelievers. A year has gone by without much change for the better, and many years will pass before the African possessions of France will be completely pacified.

While the great powers were disposing of some of the Turkish provinces, the Bey of Tunis and his Government continued to rule the country in the old-fashioned way, knowing very little, and seemingly caring little, about the affairs of the outside world. Even when the French troops were invading his territory, the Bey did not seem to comprehend that the last hour of Tunisian independ-

ARABS.

ence had struck. Who should volunteer him that information? Every member of the diplomatic corps knew that the French minister was the actual Pasha of Tunis. There was no European newspaper in the regency, His Highness the Bey never having given his gracious consent to the publication of one. The small, insignificant printed slips in Arabic that occasionally appeared were simply a chronicle of official transactions, and took as little notice of the outer world as if the regency were a lone star in the universe, its sun Mecca, and its moon Constantinople. At the Tunisian court there were only two persons who could read and write a foreign language, and only four others who were able to decipher the contents of a European newspaper. Neither His Highness the Bey, nor his prime minister, nor any other member of his cabinet, was acquainted with any other language than Arabic. The transactions with foreign courts and ministers were carried on through a dragoman or interpreter, whose knowledge of French rendered his position at court one of great influence. But he would certainly be the last to reveal to his master the dangerous situation into which he had been drawn. So when the moment for action arrived, the Bey was wholly unprepared.

Up to the time of the French occupation, Tunis resembled an oriental state of the mediæval age. European customs had gained little recognition beyond the adoption of the European military uniform. No Mohammedan country is within easier reach of the center of Europe, yet the stream of modern civilization seems to have left Tunis in a sort

of eddy. The only Christian country with which it had relations was Italy, for the bulk of the commerce of the regency was carried on with Genoa and Palermo, with which two steam-ship lines kept up semi-weekly communication.

It was from the deck of one of the Genoan steamers that I first obtained a view of the beautiful Gulf of Carthage. The ruins of that ancient capital were scarcely perceptible on the headland that sloped gracefully to the waters of Lake Bahira. On the bare summit of the hill near Goletta, the present sea-port of the city of Tunis, once stood Birsä, the fortress of ancient Carthage, while the farther hill is now crowned with a chapel, in which lie buried the remains of King Louis IX. of France, who died here during his crusade against Islam. The present harbor of Tunis can be entered only by the smallest sailing-vessels, and passengers who arrive by steamer are transported to the *dogana* (custom-house) of Goletta in small boats. On passing through the *dogana*, our curiosity was first excited by a Tunisian sentinel on duty. The dark-faced warrior was sitting cross-legged in front of his sentry-box, and, like any old woman, was knitting socks. His rifle and a pair of slippers lay at his side. Near by stood an officer, also on duty, who was quietly puffing away at his cigarette. The black uniform of the sentinel was torn in several places, disclosing the fact that the Tunisian army does not wear under-clothing. His bare feet showed that the socks he was knitting were not intended for himself, and I afterward learned the reason for his

diligence. The poor population of the regency is taxed to the utmost to support the Government and army, and the Minister of War annually receives appropriations for maintaining the troops, but this money passes through the hands of so many generals, colonels, captains, and inferior officers that the poor, half-starved privates often do not get any pay for months. Their daily rations are a loaf of bread and half a pint of oil,—just

servants, and the entire court and army; even the state prisoners are brought to Goletta, and remain there so long as His Highness chooses to enjoy his sea-baths. A railroad connects Goletta with the city of Tunis, which lies at the other end of the marshy lake El Bahira. Almost in the center of the lake is a small island, covered with the ruins of an old Spanish castle, one of the few relics of Iberian domination. In

TUNIS FROM THE HOUSE-TOPS.

enough to keep them from starving,—and their uniforms are little more than rags. No wonder, then, that the poor fellows endeavor to earn a trifle by knitting, basket-making, and rope-making. The watch-room at the prison of Goletta, which I afterward visited, looked like a workshop or bazaar, the soldiers and sergeants on duty being busily at work at various trades.

Goletta is situated on the sandy shore of the Gulf of Carthage. It is not only the principal port of the regency, but also a much-frequented watering-place, where the Bey resides during the summer months. An imposing fortress bristles with heavy guns, near the charming spot where the ruler of Tunis has his villa. It is the custom in Tunis for the whole Government to accompany the Bey wherever he may go,—the ministers, the

olden times the lake was the harbor of Tunis. Now only the smallest boats can cross from Goletta to the capital, and even these are in constant danger of running aground. The fact is that Tunis, with more than a hundred and fifty thousand inhabitants, has no sewer system. The surface drainage empties into the lake, and the refuse of the city is dumped into it. By this filling process the lake has become a shallow, pestilential marsh, where thousands of flamingos and other birds find their food. The scenery is essentially African. Mountain-peaks encircle the valley of the lake on three sides. Groups of cypress and palm trees wave their graceful boughs in the breezes; cactus, almond-trees, and prickly-pear are seen in the fields; the air is clear and the sky dark blue. At the south end of the lake may be seen the white cupolas

A STREET IN THE SUBURBS OF TUNIS.

and slender minarets of the capital. The outlines of the picture are so graceful that the Arabs give to Tunis the name "Burnoose (white cloak) of the Prophet."

On first entering Tunis, the traveler would scarcely believe that he was in one of the centers of oriental life. The railway station is situated outside the walls of the Mohammedan city, in the heart of the European quarter. An Italian carriage carries him through European streets to a French hotel, where he finds everything just as he would in Marseilles or Genoa. But as soon as he enters one of the gates of the great wall encircling the ancient city, he is captivated by strange and interesting scenes. Until lately, no Christian was permitted to reside within the walls of the Arabian quarter. The Jews have a quarter by themselves, and a filthy, dark, disgusting labyrinth it is. However, the Arabian quarter is not much better. The streets are somewhat wider and lighter, and the houses, which are two or three stories high, are built in Mohammedan style. The walls are without windows, and closely barred doors add to the lonely, almost desolate, appearance of the streets. Occasionally, people are seen shuffling along in their slippers toward the mosques, of which there are about five hundred in Tunis. The visitor passes through crowded arch-ways and

arcades lined with bazaars. Now and then he finds himself in the court of some Arab inn or caravansary, where heavily laden camels and mules crowd upon each other. A few more steps may take the visitor into some deserted, silent street, where he may meet a heavily veiled woman, covered from head to foot in a winding-sheet or cloak. And on turning a corner he may again find himself in a narrow street, in which men and beasts of burden are so indiscriminately mixed up that he wonders how it is people are not run over or trampled to death by the camels, and how, in a street about eight feet wide, laden camels manage to pass each other. No system whatever seems to have been adopted in laying out the streets of Tunis, unless it was a system of irregularity. In my wanderings through the Arabian quarter I seldom saw an open door or window. Some houses were covered with the most primitive daubs, representing wild beasts and fruits. In a market-place I entered an Arab *café*. The light was dim, for, besides the door, there was only one small opening or window to admit the sun's rays. The roof and upper parts of the walls were blackened with smoke. A low divan ran along the wall, and on this were squatting turbaned Moors. Their slippers lay on the floor in front of them. Some of these stolid-looking orientals were sipping coffee and smoking their *chibouques*

(pipes); very few smoked the *narghile* (water-pipe), which is now little used in Tunis. Others were playing checkers or chess. In the meaner parts of the Arab quarter I saw encampments of Bedouins, who had come from districts bordering on the desert to buy and sell in the market of the capital. Here lived also the water-carriers, pastry-cooks, and men from the oases and towns of the interior, who had come on with the caravans.

fort, the Kasba. The ruins of ancient Carthage were plundered by the Tunisians. In almost every second house may be seen cut stones bearing ancient inscriptions, or fragments of columns and capitals. If Tunis were destroyed, its ruins would be in great part the ruins of Carthage.

The regency does not number more than two and a half million souls, one million of whom are roving Bedouins. All are very poor,

THE HOLY MOSQUE OF KAIRWAN.

Between the Saituna mosque and the old Turkish fort, the Kasba, lies the fashionable quarter of the city. There wide and, what is more remarkable, clean streets are a sure indication that the palace of some great officer is in the neighborhood. The oriental does not understand what taking a walk means. The wealthy drive out in their carriages only to visit each other or to have an audience with the Bey. The merchants and proprietors of the bazaars, as soon as their business is over for the day, return to their homes, which they do not leave until the next morning. Hence, the municipality cleans only those streets where the great and influential people live; it scatters sand in those thoroughfares, and keeps the pavement in repair. The filth and garbage which the sweepers gather here they dump in the poorer streets or into the lake. The finest buildings are found in the neighborhood of the Bey's palace, "Dar el Bey," and of the old Turkish

yet the Bey and the leading officers of the Government live in gorgeous palaces, and spend with a lavish hand the money extorted from the people. In the capital there are several royal palaces, monumental in their proportions, which have been abandoned, and in some cases are merely ruins. Tunisian etiquette requires that no Bey should reside in a palace where one of his predecessors has died. The English, American, French, and German representatives live in some of these abandoned edifices, whose striking Moorish architecture, spacious corridors, and gorgeous halls convey to the visitor a fair idea of their luxuriousness when they were furnished with carpets manufactured in the holy city of Kairwan,* with divans and gauze curtains, and other products of Moorish art. Almost immediately after the burial of a Bey,

* The Beard of the Prophet is preserved in the holy mosque of Kairwan, the city being regarded by the Arabs as one of the four gates of Paradise.

ENCAMPMENT OF BEDOUINS.

the furniture of his palace begins to disappear. Even the doors and windows are stolen. One palace, called the Mohamedia, which was built in the vicinity of Tunis only forty years ago, by Mohammed Bey, at a cost of twenty millions of francs, is now a complete ruin. The tiles that covered the floor and the walls, and the columns that supported the arches of the doors and the roof, were all taken away and used for other buildings. These ruins are larger than those of the Tuileries at Paris. The present Bey of Tunis, who is the most civilized prince of the Husseinite dynasty, was not contented with the Dar el Bey and the Bardo, the Hammam en Linf, and many other palaces which he inherited, but built a new palace near the Bardo, about an hour's walk from the city.

The Bey's domestic life is as simple and uninteresting as that of an old European bachelor. He is called a woman-hater, and has lived apart from his wife for many years. He is a very religious man, and says his prayers with great regularity. Having very little state business to transact, he has time to gratify his taste for photography, in which he has become an expert. I was presented to the Bey in his summer palace at Goletta. Ostriches roamed at will over the palace-grounds; aids-de-camp, many of them mere boys, were lounging on the divans of the broad veranda; while guards in red-and-gold uniform, armed with long halberds, solemnly paced up and down in front of

the gate. After waiting a few minutes, my companion, the Austrian consul-general, and myself were ushered into the presence of the Bey. The reception-room was furnished in Parisian style. His Highness, who was seated on a low throne near one of the windows, rose to receive us, made three steps forward, greeted the consul very cordially, and shook hands with me, and then invited us both to take seats. Although he is about sixty-seven years old, his beard and mustache were black. He wore the uniform of a Tunisian general—a dark, military coat with gold lace and heavy epaulettes; red trousers with gold stripes; a *shashia* (red fez) on which was fastened a heavily jeweled clasp, that sparkled with the arms of the Husseinites; and finally a cimeter, with a very costly jeweled hilt, that hung suspended from the shoulder by a gold band. When in full uniform, as, for example, on the last day of Rhamadan, or on the occasion of the reception of newly accredited ambassadors, the Bey wears the insignias of about thirty grand crosses, among them those of the highest orders of England, France, and Germany, which his then prime minister, Mustapha ben Ismail, also possesses. The latter, the adopted son of the Bey, stood near the throne, for no Tunisian subject may sit in the presence of royalty. The dragoman stood between the Bey and us, the Bey speaking in Arabic and the dragoman interpreting in French. He asked me what I thought of his

country, and wished to know what parts had made the greatest impression upon me. I doubt whether the dragoman correctly interpreted my replies, for the Bey nodded his head with an air of complete satisfaction. He had not seen much of his own country, the only long journey he had ever made being to Zaghouan, while he was yet a young man. The audience lasted a long time. Being accustomed to the manners of European courts, where the visitor remains in the presence of the monarch until he himself gives the sign to withdraw, I waited patiently. The Bey looked at me in a grave manner, and so did I at him. The situation seemed very embarrassing. The consul, who sat just behind me, at last succeeded in giving me a sign to rise, as people are not permitted to speak to each other in the presence of the Bey. I rose, and, at the same moment, the Bey came down from his throne. From the prime minister he took the star of his order and fastened it on my breast. At my request he also gave me his photograph, beneath which he wrote his autograph, remarking that I was the first who had ever obtained the latter favor. With that the audience terminated. Afterward, I learned that visitors may stay as long as they please at the Bey's court, and that the less they say the more fashionable they are considered. The foreign ministers and consuls may obtain audiences with the Bey whenever they choose. He has dispensed with etiquette so far as to permit them to come into his

presence in plain frock-coats, and only at the great annual reception during the festival of the Beyram, or at the audience of a newly appointed consul, is the court dress required.

The great audience-chamber of the official palace is an immense hall, with lofty ceiling, and is furnished with carpets and fine tapestry. It would, indeed, be worthy of its name were it not for the half-dozen broken Parisian clocks, damaged vases, and crooked chandeliers that give it a half-dilapidated appearance. But this is an oriental palace, and one has only to open one of the doors that lead from this magnificent chamber to behold filthy passages and shabby, broken walls and pavements. At the farther end of the audience-hall, on a green-covered dais, stands the throne of the Bey, which is a large arm-chair, covered with gilt and embroidery, and surmounted by a baldachin with green curtains. Fine paintings adorn the walls. They are mostly life-size portraits of the European monarchs—including those of Napoleon, Emperor Francis Joseph, and Emperor William. I noticed among them the picture of a Christian saint, painted in the old Italian style, and wondered how it came to be hung in the palace of a Mohammedan prince. The history of the picture illustrates a curious feature of Tunisian life. Most Europeans who reside for any length of time in the Orient become infected with the vanity of decorations, titles, and other social distinctions. They make absurd efforts to obtain bits of

ribbon to fasten in their button-holes and the privilege of wearing a narrow gold border round the cap. Consuls in Tunis wear such caps as insignias of their office. It was principally on the solicitation of Europeans that the Bey's order, *Nishan Iftikhar*, was created; but what the European resident of Tunis chiefly aspires to is a consulship, of no matter how small and insignificant a government. The "*Almanac de Gotha*" and other year-books are carefully studied, and foreign visitors are besieged by these office-seekers. Even little Monaco, of gambling fame, is represented in Tunis by a consul-general, a consul, and a vice-consul, and there are also three or four *élèves consuls* (consular pupils), dragomans, and janizaries attached to the staff. Several years ago, one of the Italian resident physicians, a Doctor Lambroso,

THE DECORATION OF THE BEY.

AN OASIS IN TUNIS.

aspired greatly to become a consul, and as all the European states were already more or less worthily represented at the court of Mohammed es Sadock, Doctor Lambroso conceived the idea of becoming consul of the mountain republic of San Marino, the oldest state of Europe, but at the same time the smallest, as it contains not more than seven thousand inhabitants. The political and commercial relations existing between Tunis and San Marino may be easily imagined. Probably few people in either state knew of the existence of the other country. Nevertheless, Doctor Lambroso bought of the small Italian republic the title of consul at Tunis, and one day, accompanied by a glittering staff of vice-consuls, secretaries, and dragomans, he called at the palace and presented to the Bey his credentials. The Bey and his grand vizier received Doctor Lambroso in the same manner as they would have received the em-

bassador of France. The Bey inquired after the health of the chief of state, and expressed a desire to have his portrait. As San Marino has no such person, not even a president, Doctor Lambroso was somewhat embarrassed, but nevertheless communicated the Bey's request to his Government. The desired portrait soon arrived. It was evidently taken from an old church, and represented Saint Marino, the patron saint of the republic. Doctor Lambroso received a high decoration for himself and one for the chief of the republic. In exchange, San Marino sent the Bey the Grand Cross of St. Marino, and this exchange of civilities ended satisfactorily to all concerned.

Mustapha ben Ismail, the Bey's grand vizier at the time of my visit, was the constant companion of his master, and until the French occupation he was the most powerful man in the regency. In his youth he was a hair-

dresser's apprentice. The Bey took a fancy to the handsome youth, and made him his page. When the boy was sixteen years old, the Bey appointed him to a colonelcy; at twenty-two he was a general and commander of the guard, although Mustapha at that time could not read or write, and had never fired a gun or drawn a sword. At the age of thirty he was placed at the head

extensive one-story building, in Italian style, with large windows and green wooden blinds, situated in a large square, not far from the sea-shore. Round the palace were pitched the tents of the Bedouin life-guards of the Bey; the horses, saddled and bridled, were tethered to stakes; while the guards themselves, arrayed in picturesque costumes, with pistols and daggers bristling in their girdles,

BAZAAR AND MOSQUE IN TUNIS.

of the Government, as grand vizier and head treasurer. Upon such a man were conferred the highest orders of European potentates—the decorations which are worn by Bismarck and Andrassy. The impression which the grand vizier made upon me, when I first saw him at Goletta, was not an unfavorable one. His office was in the Government palace, an

lounge in the shade of their tents. The wide vestibule of the palace was crowded with Tunisian civil and military officers. A broad staircase led to the first story, where we entered the office of General Elias, one of the two Tunisian generals who could speak a foreign language, and here we awaited the arrival of the premier. Suddenly, a move-

A MUSICIAN.

ment among the assembled Bedouins and town Arabs indicated the arrival of His Excellency. A gorgeous state carriage, drawn by four mules in rich harness, and surrounded by officers mounted on mules, drove up in front of the governor's palace. A handsome young gentleman, dressed in European costume, alighted and answered the respectful salams of the crowd by a wave of the hand. It was the vizier. Had I met him in this attire on the Boulevards of Paris, or in the Ringstrasse in Vienna, I should have taken him for a banker's clerk. His appearance was improved immensely when he was dressed in oriental uniform, for thus I had occasion to see him later, during one of the religious festivals. As he ascended the spacious staircase, all the officers and high dignitaries humbled themselves before him.

Mustapha was vain, ignorant, and mercenary, and his rapacity was the talk of the whole regency. He sold high Government offices, and he sometimes appointed illiterate and ignorant Arabs to the most influential positions, which these men sought and held

only for the purpose of robbing their subordinates. He was at the same time the treasurer of the Bey's private income, as well as of the small revenues which the European powers had left to the Tunisian Government for conducting the administration. Most of the sources of revenue had been appropriated for the payment of the Tunisian state debt. How well Mustapha administered the revenue can be seen from the fact that, although his salary was only about thirty thousand francs a year, he had in his possession, on his retirement

SEAL OF THE BEY.

after ten years' service, nearly twenty-five millions of francs, and was regarded as the wealthiest man in the regency. The Bey's influence in the Government was limited almost to confirming the prime minister's orders, by affixing his seal to the documents which Mustapha submitted to him. Every oriental officer and man of business carries his own seal with him, and whenever his signature is required to any document, or even to a letter, this is made, not with a pen, but with a seal. Illiterate men, who do not possess a seal, mark their assent to a written agreement by dipping a finger into ink, and leaving an impress of it on the document. The Bey of Tunis never signs his name;

representatives of foreign governments may not visit the heir, and personally he is quite unknown to them. For a native to show him any mark of attention would be high treason, and such an act by a foreign consul would be regarded as evincing a want of respect for the Bey—every manifestation of regard for the heir being tantamount to an intentional allusion to the transitory power of the Regent, and to his eventual death.

Before the French stepped in, ministers of the regency were mere puppets, manipulated by Mustapha ben Ismail; they possessed no influence whatever, and had little to do. For instance, the Minister of Marine, whose fixed residence is at Goletta, had the assistance

WOMEN OF TUNIS.

his seal is made of a precious stone, and he wears it fastened to a long cord that is wound several times round his neck. When documents are presented to him for his signature, he unwinds the cord and hands the seal to the Keeper of the Great Seal.

The heir-apparent, Sidi Ali Bey, the brother of the reigning *Mushir* (Bey), is a portly person, with a full Turkish-trimmed beard, who possesses the esteem of the Arabs. But he is seldom seen. Oriental etiquette requires that the man who is to succeed the ruler should be completely ignored. No minister or state officer could visit him or communicate with him without running the risk of losing his office or of being exiled. Even the repre-

sentatives of foreign governments may not visit the heir, and personally he is quite unknown to them. For a native to show him any mark of attention would be high treason, and such an act by a foreign consul would be regarded as evincing a want of respect for the Bey—every manifestation of regard for the heir being tantamount to an intentional allusion to the transitory power of the Regent, and to his eventual death.

Before the French stepped in, ministers of the regency were mere puppets, manipulated by Mustapha ben Ismail; they possessed no influence whatever, and had little to do. For instance, the Minister of Marine, whose fixed residence is at Goletta, had the assistance

of two admirals and several captains in administering the affairs of his country's navy. I found a gravity and a business-like expression depicted on the countenances of these high functionaries, that led me to suppose they were overwhelmed with the onerous duties and heavy responsibilities of their office. But, in fact, the entire navy of Tunis consists only of two old abandoned passenger steamers, that were purchased from an Italian steam-ship line. One of these men-of-war has been aground for several years in the harbor of Porto-Farina, and the other lies in the mud in the military harbor of Goletta. There is a large naval arsenal at Goletta, which contains a few old iron anchors, a quan-

tity of rotten ropes, and three or four row-boats. Nevertheless, thousands of francs were annually appropriated for naval purposes! Half of this money, it is commonly believed, found its way into the pockets of the minister, the admirals, and the captains. A part was used in purchasing supplies, which, as soon as they were brought into the arsenal, were sold by the officers, who rarely received a penny of their salaries.

One of the most interesting places in Tunis is the public court of justice, held every Saturday under the presidency of the Bey himself. Thick palace-walls, barred windows, guards, and several cordons of court officers and ministers render it almost impossible for the ordinary Moslem to approach his sovereign, except at the weekly court of justice. In none of the oriental countries bordering on Europe have the mediæval methods of administering justice been so perfectly preserved as in Tunis. There are no regular judges, but the governors of provinces and the commanders of cities are judges within their respective districts. The highest judge in the land is the Bey in person, and an appeal can be made to him from the decision of any *cadi*, or provincial governor. Parties to any suit may refuse to have it adjudged by a bribe-taking *cadi*; they can go to Tunis, and submit their case to the Bey. I attended one of these sessions, and on my way to the palace saw crowds of people flocking thither. The crowd in the palace became a jam, and the broad staircase was thronged. At the stair-landing stood guardsmen in gold-and-red uniforms, armed with *cimeters* and Saracen lances. Even their *fezes* were bordered with gold, and instead of the usual blue tassels hanging from them, they wore bunches of white ostrich-feathers. At last the Bey arrived. The guards presented arms with the *cimeters*, the drummers beat a tattoo, and the waiting multitudes respectfully saluted, by placing the hand successively on the breast, lips, and forehead, while bowing low before their ruler, who with his ministers leisurely ascended the stairs, and entered the hall of justice. At one end of this hall was a platform, on which stood a throne covered with red velvet, bordered with gold. Here the Bey took his seat, while the princes of the house, with the exception of his brothers, ranged themselves on the left. The prime minister, the generals, ministers, heads of departments, the secretary of state, and the court clerks stood at the right of the throne. Back of them was stationed a detachment of the guards. After this medley of generals, Bedouin sheiks, guards, and courtiers had ranged themselves in proper order, a colossal colonel, who, I was afterward told, was the

chief of police, stepped forward into the open space before the throne, and exclaimed in stentorian tones:

"The Prince gives you his greeting, and is ready to administer justice."

A European, in dress-coat and white cravat, immediately came forward and offered the prince a lighted *chibouque*, whose stem was six feet in length and tipped with a diamond-incrusted mouth-piece. The Bey took several whiffs, and was ready for business. Two litigants approached. When within eight paces of the throne they halted, crossed their arms on their breasts, and bowed low. Then the complainant stated his grievance briefly, and the respondent made his defense. The Bey rendered his decision in a few words. Many cases were disposed of in this brief and summary manner. The penalties of the court are fines, imprisonment, bastinado, and hanging, but the last-named punishment is now seldom inflicted. Until very recently, Turks and Koolooghis (descendants of Turks) condemned to death had the privilege of being strangled by means of a silk noose, while Moors were beheaded, Arabs were hanged, and Jews were drowned. But several years ago, the hangman's rope was adopted as a uniform method of capital punishment. Imprisonment is nearly as bad, for should the prisoner happen to be a poor man, he may never regain his freedom. The treatment in the Tunisian prisons is barbarous and cruel in the extreme. Wealthy or influential criminals easily get off with the payment of a fine; but the poverty-stricken offender is cast into jail. The prisoners in the capital are fed by the Government, but those in the provincial prisons have to subsist on the gifts of charitable persons. These prisons usually have windows opening upon the street, and food can be thrown in. But public charity in Tunis is a very uncertain source of livelihood, and if a prisoner has no relatives the chances are in favor of his starving to death. Since the officers and policemen receive no pay from the Government, they manage to get their dues from the prisoners themselves. They do not let the prisoners out of their hands until a certain sum is paid for the service of capturing them. But in Tunis it is not so easy to capture a criminal, owing to the large number of places of refuge made sacred by the grave of a saint or a marabout, where the criminal, and even the murderer, is entirely safe. No law, no command of the Bey, could invalidate this ancient custom, and as there are in the city of Tunis not alone houses and yards, but entire streets of refuge, a great many criminals escape the hands of justice. As a rule, the refugees do

FEMALE MUSICIANS.

not remain long at these places; their relatives usually arrange matters amicably with the family of the victim, and also with the police, by paying a certain amount of money.

The Bey sometimes entertains the foreign consular body, and as neither dramatic nor musical entertainments nor—in the complete absence of ladies—court-balls can be given, he resorts to the barbarous and disgusting contortions of the Aissawiah—a religious order instituted about three hundred years ago by Ben-Aissa, a religious maniac and saint of the city of Mequinez. These charlatans and the *almees*, or female dancers,

enliven the Bey's social entertainments. A similar class of entertainments, I was told, amused the wives of the Mamelukes and rich Moors in the harems of Tunis. The downfall of Mohammedan glory may be attributed in part to the exclusion of women from public and even private life, and to their extreme ignorance. The Moslem looks upon woman as an inferior being, unfit to advise him or to share in his pleasures and sorrows. The higher the rank of a Tunisian lady, the less she will be seen in the streets and bazaars. As a rule, only women of the lowest order, beggars, and the wives of the poor country Bedouins, are seen in the

streets, and even these cover their faces with their hands whenever they meet a European. There is a general belief among Europeans that the Koran prescribes that women should be veiled when they appear in public. This is not the fact. The custom is not a religious duty, but a fashion. The chamberlain of an ex-grand-vizier gave me some curious information on this subject. The Pasha's wife was taken sick with small-pox. A European physician was called; guarded by two eunuchs, he was permitted to enter the chamber of the lady. Curtains concealed the bed. The physician insisted upon seeing the face of the suffering woman, but the eunuch refused, giving to the doctor a description of her face. When the doctor asked to see her tongue, her face was covered with a cloth in which a small hole had been cut; through this opening the sick woman showed her tongue. When the physician felt her pulse, her hands and arms were covered, and the doctor was asked to close his eyes while counting the pulse. Witchcraft and the charlatanism of old, cunning women are generally resorted to when women of the harems are sick. Many of the ladies of higher rank live and die without setting foot in the streets, or changing their abode, except once, when they leave the paternal roof to go to the house of their husband and master. With the exception of the nearest relatives, no man ever enters the harem. This is the reason why Moorish houses possess large door-ways, furnished with carpets and divans, for these vesti-

bules serve as general reception-rooms, and all business with the master of the house is transacted there, or in an adjoining chamber. The term "Sublime Porte," in its application to the Turkish Government, grew probably out of this custom, since formerly all state affairs were transacted under the high portal leading to the governmental palace. Should a Moor desire to give an entertainment to his friends at his own house, the women of the harem would be locked up in a distant part of the house. On the contrary, should any of his women desire to pay a visit to the wife of a high dignitary, the carriage is drawn within the walls of the harem-court, all doors and windows are closed, and the women, thickly veiled, conducted to the carriage by eunuchs. The doors of the carriage would then be locked, and the key given to a eunuch to keep until they arrive at their destination. It is well known that an Arab husband first beholds the features of his wife after the marriage has taken place. His mother or a near female relative is generally intrusted with the duty of looking out for a bride beautiful and rich enough to be an ornament of the suitor's household. As a rule the girls possess regular features, deep black eyes with a melancholy expression, thick jet-black hair, and small hands and feet. At twelve and fourteen they are graceful and slender, but female beauty in Tunis is measured by weight, and soon after this age they are fattened for the matrimonial market.

TO IMOGEN AT THE HARP.

HAST thou seen ghosts? Hast thou at midnight heard
 In the wind's talking an articulate word?
 Or art thou in the secret of the sea,
 And have the twilight woods confessed to thee?
 So wild thy song, thy smile so faint, so far
 Thine absent eyes from earthly vision are.
 Thy song is done: why art thou listening?
 Spent is the last vibration of the string
 Along the waves of sound. Oh, doth thine ear
 Pursue the ebbing chord in some fine sphere,
 Where wraiths of vanished echoes live and roam,
 And where thy thoughts, here strandered, find a home?
 Teach me the path to that uncharted land;
 Discovery's keel hath never notched its strand,
 No passport may unbar its sealed frontier—
 Too far for utmost sight, for touch too near.
 Subtler than light, yet all opaque, the screen
 Which shuts us from that world, outspread between

The shows of sense ; like as an ether thin
 Fills the vast microscopic space wherein
 The molecules of matter lie enisled.
 A world whose sound our silence is ; too wild
 Its elfin music beats, too shrill, too rare
 To stir the slow pulse of our thicker air.
 A world whose light our darkness is ; that lies
 With its sharp edges turned toward mortal eyes,
 Like figures painted on a folded fan—
 The broken colors of some hidden plan.
 The few who but an instant's look have had
 At the spread pattern broadwise have gone mad.
 As in a high-walled oriental street
 A sudden door flies open, and a fleet
 Departing dream the thirsty traveler sees
 Of fountains leaping in the shade of trees,
 So they who once have caught the glimpse divine :
 They have but wet their lips with goblins' wine,
 And, plagued with thirst immortal, must endure
 The visions of the heavenly calenture,—
 Of springs and dewy evening meadows rave,
 While hotly round them shines the tropic wave,
 And the false islands of mirage appear,
 Uplifted from some transcendental sphere
 Far down below the blue horizon line.
 And thirst like theirs is nursed by songs like thine.
 For thou, in some crepuscular dim hour,
 When the weak umber moon had hardly power
 To cast a shadow, and a wind, half-spent,
 Creeping among the way-side bushes went,
 Hast seen, spun like a cobweb 'cross the moon,
 A faint eclipse, penumbral, gone full soon,
 Yet marking on the planet's smoky ring
 A silhouette as of a living thing.
 Or on the beach making thy lonely range,
 Close upon sunset, when the light was strange
 And the low wind had meanings, thou hast known
 A presence nigh, betrayed by shadows thrown
 On the red sand from bodies out of sight ;
 Even as, by the shell of curving light
 Pared from the dark moon's edge, the eye can tell
 Where her full circle rounds invisible.

Teach me the path into that silent land.
 Take once again the haunted wires in hand,
 And pour the strain which, waking, thou hast heard
 Whistled when night was deep by some lone bird
 Hid in the dark and dewy sycamore,—
 When thou hast risen and unbarred the door
 And walked the garden paths till night was flown,
 Listening the message sent to thee alone.
 Ah ! once again thy harp, thy voice once more,
 Fling back the reflux tide upon the shore.
 All nature grows unearthly ; all things seem
 To break and waver off in shapes of dream,
 And through the chinks of matter steals the dawn
 Of skies beyond the solar road withdrawn.
 Oh, flood my soul with that pure morning-red !
 It is the sense that's shut, the heart that's dead :
 All open still the world of spirits lies
 Would we but bathe us in its red sunrise.

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER XII.

INSTEAD of making his way home at once, Arbuthnot turned up the side of the street on which the Amorys' house stood. As he reached the house, the door was opened, and a man came out and walked down the steps. He was a man with a large frame, a darkly florid complexion, and heavily handsome features. As he passed Arbuthnot he gave him a glance and a rather grudging bow, which expressed candidly exactly the amount of pleasure he derived from encountering him.

Bertha was in the parlor alone. When Arbuthnot entered he found her standing in the middle of the room, looking down at the roses on her gayly painted fan, and evidently not seeing them.

"Well," he began, by way of greeting, "I hope you have been enjoying yourself—with your senators."

She looked up, and made a quick, eager little movement toward him—as if she was more glad to see him than usual.

"Ah!" she exclaimed. "I believe I was wishing you would come."

"Thank you," he said, "but the compliment would be greater if you were sure of it."

"I think I am sure of it, now you are here," she answered, "though I don't know at all why I wanted you—unless it was to tell you that I have not been enjoying myself in the least—with my senators."

"I am delighted to hear it," he replied. "Nothing could please me better. They are always too numerous, and lately one is continually meeting them on the steps and being scowled at."

She shut her fan quickly, with a slight frown.

"Why scowled at?" she said. "That would be absurd enough."

"Absurd or not," he laughed, "it is true."

But notwithstanding his laugh, there was no change in her face he did not see.

They had seated themselves by this time, and Bertha was looking at her fan again, and opening and shutting it slowly.

"They are not my senators," she said. "They are Richard's, and—I am getting a

little tired of them, though I should not like to tell him so. When it is warm, as it is to-day, I am very tired of them."

"I should not think it at all improbable," remarked Arbuthnot, dryly. "It has struck me that it would be necessary for the mercury to be several degrees below zero before you would find the one who went out just now, for instance, especially exhilarating."

"He is not exhilarating at all," she said. "Richard likes him," she added, a moment afterward. "I don't know exactly why, but he really seems to admire him. They are quite intimate. I think the acquaintance began through some law business he gave him in connection with the Westoria lands. I have tried to like him on Richard's account. You must remember," she said, with a smile, "I first tried to like you on Richard's account."

"I hope you succeeded better than you will with Plane-field," he said.

"I might succeed with him if I persevered long enough," she answered. "The difficulty lies in the perseverance. Richard says I would make a good lobbyist, but I am sure I should not. I could not be persistently amiable and entertaining to people who tired me."

"Don't deplore your deficiencies until it becomes necessary for you to enter the profession," said Arbuthnot. "I don't like to hear you speak of it," he added, with a touch of sharpness.

"I don't deplore them," said Bertha. "And it is only one of my little jokes. But if the fortunes of the Westoria lands depended on me, I am afraid they would be a dismal failure."

"As they don't depend on you," he remarked, "doesn't it occur to you that you might as well leave them to Senator Plane-field? I must confess it has presented itself to me in that light."

"It is rather odd," she said, in a tone of reflection, "that though I have nothing whatever to do with them, they actually seem to have detained me in town for the last two weeks."

"It is quite time you went away," said Arbuthnot.

"I know that," she answered. "And I feel it more every day."

She raised her eyes suddenly to his.

"Laurence," she said, "I am not well. Don't tell Richard, but I think I am not well at all. I—I am restless and nervous—and—and morbid. I am actually morbid. Things trouble me which never troubled me before. Sometimes I lose all respect for myself. You know I always was rather proud of my self-control. I am not quite as proud of it as I used to be. About two weeks ago I—I positively lost my temper."

He did not laugh, as she had been half-afraid he would. His manner was rather quiet, on the contrary—it was as if what she said struck him as being worth listening to with some degree of serious attention, though his reply was not exactly serious.

"I hope you had sufficient reason," he said.

"No," she answered. "I had no reason at all, which makes it all the more humiliating. I think I have been rather irritable for a month or two. I have allowed myself to be disturbed by things which were really of no consequence, and I have taken offense at things and—and—resented trifles, and it was the merest trifle which made me lose my temper—yes, actually lose my temper, and say what I did not intend to say, in the most open and abject manner. What could be more abject than to say things you did not intend to say? You know I never was given to that kind of thing."

"No," he responded, "it cannot be said that you were."

"It was so—so revolting to me after it was over," she went on, "that it seemed to make me more weak-minded than ever. When you once give way to your emotions it is all going down-hill—you do it again and again. I never did it before, but I have been on the verge of doing it two or three times since."

"Don't go any farther than the verge," he said.

"I don't intend to," she answered. "I don't like even the verge. I resent it with all my strength. I should like to invent some kind of horrible torture to pay myself for—for what I did."

He was watching her very closely, but she was not aware of it. She had arrested his attention completely enough by this time, and the fact made itself evident in his intent and rather startled expression.

"I hope it was nothing very serious," he said.

"It was serious enough for me," she replied. "Nobody else was hurt, but it was serious enough for me—the mere knowing

that for a few minutes I had lost my hold on myself. I didn't like it—I didn't like it!"

There was an intensity in her manner, in her voice, in her face, in her very figure itself, which was curiously disproportionate to her words. She leaned forward a little, and laid her small, clenched hand upon her knee.

"In all my life," she said slowly, "in all my life, I have never had a feeling which was as strong as myself. I have been that fortunate. I have been angry, but never so angry that I could not seem perfectly still and calm; I have been happy, but never so happy that I could not have hidden it if I chose; I have been unhappy—for a moment or so—but never so unhappy that I had the horrible anguish of being found out. I am not capable of strong, real emotions. I am too shallow and—and light. I have been light all my life, and I *will* be light until the end.

"Only the children could make me suffer, really," she said after it,—"only the children, and all women are like that. Through Janey, or Jack, or Meg, my heart could be torn in two, if they were in pain, or badly treated, or taken from me—that is nothing but common nature; but nothing else could hurt me so that I should cry out—nothing and nobody—not even Richard!"

She stopped herself, and opened her fan again.

"There!" she exclaimed. "Why did I say so much then, and say it so vehemently, as if it was of consequence? Nothing is of consequence—nothing, nothing!" And she laughed, and rose and began to take up and set down again some trifles on the mantel.

Arbuthnot still watched her.

"No," he said, "you are quite right—nothing is of consequence really, and the sooner one learns that, the better for one's peace of mind. The worst pain you could have to bear could not last you more than a few score years, and you would get used to it in that time; the greatest happiness you could yearn for would not last any longer, and you would get tired of it in time, too."

"Tired of it!" she echoed. "One could tire of anything in three-score years and ten. How tired one must be of oneself before it is over—how tired! how tired!" and she threw up her hands in a sudden, desperate gesture.

"No," he answered, in a tone whose level coolness was a forcible contrast to her own. "Not necessarily, if one doesn't expect too much. If we take things for what they are worth, and don't let ourselves be deceived by them, there is plenty of rational entertainment to be had by the way. We mayn't like it quite as well as what we set out with ex-

pecting, but we can manage to subsist upon it. I hope I am logical. I know I am not eloquent." He said it bitterly.

"No," she returned, without looking at him, "you are not eloquent, perhaps, but you are speaking the truth—and I like to hear it. I want to hear it. It is good for me. It is always good for people to hear the truth—the bare, unvarnished, unadorned truth. Go on."

"If I go on," he said, still bitterly, "I shall begin to drag myself in, and I don't care to do it. It is natural that I should feel the temptation. I never knew the man yet who could talk in this strain and not drag himself in."

"Drag yourself in as much as you like," she said, even fiercely, "and be an example to me."

"I should be example enough if I said all I could," he replied. "Am I a happy man?"

She turned, and for a moment they looked into each other's eyes—his were stern, hard, and miserable.

"No," she cried out, "you are not. No one is happy in the world!" And she dropped her face upon her hands as she leaned upon the mantel.

"I might have been happier if I had begun right, I suppose," he said.

"Begun!" she repeated. "Does any one ever begin right? One ought to begin at the end and go backward, and then one might make something of it all."

"I didn't make much of it," he said. "I was not as wise as you. I began with emotions and follies and fires—and the rest of it, and the enjoyment I derived from them was scarcely what I anticipated it would be. The emotions didn't last, and the follies didn't pay, and the fires burned out—and that was the worst of all. And they always do—and that is worse still. It is in the nature of things. Look at that grate," pointing to it. "It looked different a week ago, when we had a rainy night and sat around it. We could have burned ourselves at it then if we had been feeble-minded enough to try it—we couldn't do it now; and yet a few days ago it was hot enough. The fire has burned out, and even the ashes are gone."

She stooped down, picked up her fan, and re-seated herself upon the sofa. She did not look quite like herself,—her face was very pale but for the two red spots Tredennis had seen on her cheeks when her display of feeling had startled him,—but all at once a change had taken place in her manner. There was a sort of deadly stillness in it.

"We are a long way from my temper," she said,—*"a long way."*

"Yes," he replied, "about as far as we could get in the space of time allowed us—and we have been a trifle emotional."

"And it was my fault," she continued. "Isn't it time I went somewhere cool and bracing? I think you must admit it is."

"Yes," he said, "it is time. Take my advice, and go."

"I'll go," she said, steadily, "the day after to-morrow. And I'll not go to Fortress Monroe. I'll go into the mountains of Virginia—to a farm-house I know of, where one has forests and silence, and nature—and nothing else. I'll take the children, and live out-of-doors with them, and read to them, and talk to them, and sew for them when I want anything to do. I always was happy and natural when I was sewing and doing things for them. I like it. Living in that simple, natural way, and having the children with me, will rest and cure me if anything will on earth—the children always—the children —"

She stopped and sat perfectly still; her voice had broken, and she had turned her face a little away.

Arbuthnot got up. He stood a moment, as he always did before going, but he did not look direct at her, though he did not seem to avoid her in his glance.

"It is the best thing you can do," he said,—"the very best thing. You will be thoroughly rested when you come home, and that is what you need. I will go now—I hear Richard, and I want to speak to him alone."

And by the time the door opened and Richard stood on the threshold, he had reached him and turned him around, throwing his arm boyishly over his shoulder.

"You are just in time," he said. "Take me into the museum, or the library. I want to have a confidential chat with you."

And they went out together.

CHAPTER XIII.

THE following day Richard presented himself to Tredennis in the morning, looking a little disturbed and scarcely in such excellent spirits as usual.

"Bertha and the children are going away to-morrow," he said. "And if you have no other engagement, you are to come and dine with us this evening and say good-bye."

"I have no other engagement," Tredennis answered. "I shall be glad to come. They are really going to Fortress Monroe to-morrow?"

Richard threw himself into a chair with a rather discontented air.

"They are not going to Fortress Monroe at all," he said. "They are going to bury themselves in the mountains of Virginia. It is a queer fancy of Bertha's. I think she is making a mistake. She won't like it, really, when she tries it."

"If she needs rest," said Tredennis, "certainly the mountains of Virginia——"

"The mountains of Virginia," interrupted Richard, "were not made for Bertha. She will tire of them in a week. I wish she would not go!" he said, with the faintest possible touch of petulance.

"You will miss her very much, of course," said Tredennis.

"Oh yes, I shall miss her. I always miss her—and I shall miss her specially just now."

"Just now?" said Tredennis.

"Oh," said Richard, straightening himself somewhat and clearing his slightly knitted brow, "I was only thinking of two or three plans which had half-formed themselves in my mind. I was looking at it from a selfish point of view, which I had no right to do. I suppose things might wait—until she comes back."

"Are you going with her?" said Tredennis.

"I!" exclaimed Richard. "No, I could not do that. My business would not allow of it. I have more than usual on hand just now. I shall run down to see them once a week, if possible. I must confess," with a laugh, "that I could not make up my mind to three months of it. Bertha knows that."

Taking all things into consideration, he bore the prospect of his approaching loneliness very well. He soon began to speak of other matters, and before he took his departure had quite recovered his usual gayety. As he talked, Tredennis regarded him with some curiosity.

"He has a fortunate temperament," he was thinking. "He would have been happy if she had remained, but he is not unhappy because she goes. There are men who would take it less lightly—though, after all, he is the one to be envied."

Tredennis did not feel that he himself was greatly to be envied. He had said that she ought to go, and had been anxious and unhappy because she had not gone, but now that she was going he was scarcely happier. There were things he should miss every day. As he remembered them, he knew he had not allowed himself to admit what their value had been to him. The very fact that they had not been better

friends made it harder. From the first he had been aware that a barrier stood between them, and in the interview which had revealed to him something of its nature, he had received some sharp wounds.

"There was truth in what she said," he had often pondered since, "though she put it in a woman's way. I have resented what she has said and done, often enough, and have contrasted it bitterly with what I remembered—God knows why! I had no right to do it, and it was all folly, but I did it and made myself wretched through it—and she saw the folly and not the wretchedness."

But now that her presence would no longer color and animate the familiar rooms, he realized what their emptiness would be. He could not endure the thought of what it would be to go into them for the first time and sit alone with Richard—no bright figure moving before them, or sitting in its chair by the table, or the window, or the hearth. The absence of the very things which had angered and disturbed him would leave a blank. It would actually be a wretchedness to see no longer that she often chose to be flippant, and mocked for mere mocking's sake.

"What!" he said, savagely. "Am I beginning to care for her very faults? Then it is best that she should go."

But his savageness was not against Bertha, but against himself and his weakness.

When he arrived at the house in the evening, he found Bertha in the parlor with Jack and Janey, who were to be allowed to share the farewell dinner.

As she advanced to meet him with a child on either side, he was struck by certain changes which he observed in her dress and manner. She wore a dark, simple gown, her hair was dressed a trifle more closely and plainly than usual, and there was no color about her. When she gave him her hand, and stood with the other resting on Jack's shoulder, her eyes uplifted to his own, he was bewildered by a feeling that he was suddenly brought face to face with a creature quite strange to him. He could not have said that she was actually cold and reserved, but there was that in the quiet of her manner which suggested both reserve and coldness.

"I have allowed the children to stay downstairs," she said, "and they are to dine with us if they will be good. They wished very much to see as much of you as possible—as it will be some time before they return—and I think they will be quiet."

"If you will seat one on each side of me," said Tredennis, "I will keep them quiet."

"You are very kind," she answered, "but I should scarcely like to do that."

And then she returned to her seat by the window, and he sat opposite her on the end of a sofa, with Janey leaning against his knee.

"You are not going to Fortress Monroe?" he said.

"No," she replied. "I am going to the Virginia mountains."

"I should think that would be better," he said, putting an arm around Janey.

"I thought so," she answered, "upon reflection. I am not as strong as I should be, and I think I dislike ill-health even more than most people do."

She held Jack's hand, and spoke in a quiet tone of common things—of her plans for the summer, of the children, of Richard; and Tredennis listened like a man in a dream, missing the color and vivacity from her manner as he had known he should miss her presence from the rooms when she was gone.

"Tell Uncle Philip something of what we are going to do," she said to Jack. "Tell him about the hammocks, and the spades we are to dig with, and the books. We are to live out of doors and enjoy ourselves immensely," she added, with a faint smile.

"Mamma is going to play with us every day," said Jack, triumphantly. "And we are going to lie in our hammocks while she reads to us and tells us stories."

"And there will be no parties and no company," added Janey. "Only we are to be the company."

"And Jack is to take care of me," said Bertha, "because I am growing old and he is so big."

Jack regarded her dubiously.

"You haven't any wrinkles," he said.

"Yes I have, Jack," she answered, "but they don't show." And a little laugh broke from her, and she let her cheek rest against his dark love-locks for a moment in a light caress.

Glancing up at the colonel's face at this juncture, Janey found cause in it for serious dissatisfaction. She raised her hand, and drew a small forefinger across his forehead.

"Uncle Philip," she said, "you are bad again. The black marks have come back, and you are quite ugly—and you promised you would try not to let them come any more."

"I beg your pardon, Janey," he answered, and then turned to Bertha. "She does not like my black face," he said, "and no wonder. I am rather an unfortunate fellow, to have my faults branded upon me so plainly that even a child can see them."

There was a touch of bitterness in the words and in his manner of uttering them. Bertha answered him in a soft, level voice.

"You are severe upon yourself," she said.

"It is much safer to be severe upon other people."

It was rather cruel, but she did not object to being cruel. There come to most women moments when to be cruel is their only refuge against themselves and others, and such a moment had come to her.

In looking back upon the evening when it was over, the feeling that it had been unreal was stronger in Tredennis's mind than any other. It was all unreal from beginning to end—the half-hour before dinner, when Arbuthnot and Richard and the professor came in, and Bertha stood near her father's chair and talked to him, and Tredennis, holding Janey on his knee and trying to answer her remarks lucidly, was aware only of the presence of the dark, slender figure near him, and the strange quiet of the low voice; the dinner itself, during which Richard was in the most attractive mood and the professor was rather silent, and Arbuthnot's vivacity was a little fitful at first and afterward seemed to recover itself and rise to the occasion, while Bertha, with Jack on one hand and Janey on the other, cared for their wants and answered Richard's sallies and aided him in them, and yet was not herself at all, but a new being.

"And you think," said the professor, later in the evening, when they had returned to the parlors,—“you think that you will like the quiet of the mountains?”

"I think it will be good for me," she answered, "and the children will like it."

"She will not like it at all," said Richard. "She will abhor it in ten days, and she will rush off to Fortress Monroe and dance every night to make up for her temporary mental aberration."

"No, she will not," said Arbuthnot. "She has made preparations to enjoy her seclusion in its dramatic aspects. She is going to retire from the world in the character of a graceful anchorite, and she has already begun to dress the part. She is going to be simple and serious and a trifle severe—and it even now expresses itself in the lines and color of her gown."

She turned toward him, with the sudden gleam of some new expression in her eyes.

"How well you understand me!" she said. "No one else would have understood me so well. I never can deceive you, at least. Yes, you are quite right. I am going to enjoy the thing dramatically. I don't want to go, but as I feel it discreet I intend to amuse myself, and make the best of it. I am going to play at being maternal and amiable, and even domesticated. I have a costume for it, as I have one for bathing and dining and making calls. This," she said, touching her dress, "is part

of it. Upstairs I have a little mob-cap and an apron, and a work-basket to carry on my arm. They are not unbecoming, either. Shall I run up into the nursery and put them on, and show them to you? Then you can be sure that I comprehend the part."

"Have you a mob-cap and an apron?" asked Richard. "Have you, really?"

"Yes, really," she answered. "Don't you remember that I told you that it was my dresses that were of consequence, and not myself? Shall I go and put them on?"

Her tone was soft no longer—it was a little hard, and so was the look which half hid itself behind the brightness of the eyes she turned toward him.

"Yes," he answered. "Put them on and let us see them."

She turned round and went out of the room, and Arbuthnot followed her with a rather anxious glance. The professor stirred his tea as usual, and Tredennis turned his attention to Janey, while Richard laughed.

"I have no doubt she has all three," he said. "And they will be well worth seeing."

They were worth seeing. In a few minutes she returned—the little work-basket on her arm, the mob-cap upon her head, the apron around her waist, and a plain square of white muslin crossed upon her bosom. She stopped in the door-way, and made a courtesy.

"There ought to be a curtain, and somebody ought to ring it up," she said. "Enter the domestic virtues."

And she came and stood before them, her eyes shining still, and her head erect, but—perhaps through the rather severe black and white of her costume—seeming to have a shade less color than before.

"I did not make them for this occasion," she said. "They have appeared before. You don't remember them, Richard, but I had them when Jack was a baby—and a novelty. I tried being maternal then."

"Why, yes," said Richard, "to be sure I remember them—and very becoming they were, too."

"Oh, yes," she answered. "I knew they were becoming!"

She turned and fronted Tredennis.

"I hope they are becoming, now," she said, and made her little courtesy again.

"They are very becoming," he answered, looking at her steadily. "I like them better than—the silks and brocades."

"Thank you," she said. "I thought you would—or I would not have put them on. Jack and Janey, come and stand on each side of me while I sit down. I have always congratulated myself that you were becoming. This is what we shall be constrained to do

when we are in Virginia, only we shall not have the incentive of being looked at."

"We will make up a party," said Richard, "and come down once a week to look at you. Plane-field would enjoy it, I am sure."

"Thank you," said Bertha. "And I will always bring out the work-basket, with a lace-collar for Meg in it. Lace-collars are more becoming than small aprons or stocking-mending. Do you remember the little shirt Mrs. Rawdon Crawley was making for her boy, and which was always produced when she was in virtuous company? Poor Rawdon was quite a big boy, and very much too large for it, by the time it was finished. I wonder if Meg will be grown up before she gets her collar."

She produced a needle, threaded it, and took a few stitches, bending her head over her task with a serious air.

"Does it look as if I had done it before?" she said. "I hope it does. I really have, you know. Once I sewed on a button for Richard."

But she did not sew many minutes. Soon she laid her work down in the basket.

"There!" she said, "that is enough! I have made my impression, and that is all I care for—or I *should* have made my impression if you had been strangers. If you had not known me, you would have had time to say to one another: 'What a simple, affectionate little creature she must be! After all, there is nothing which becomes a woman so well as to sit at her work in that quiet, natural way, with her children about her!' Come, Jack and Janey, it is time for you to say good-night, and let me make a pretty exit with you, in my mob-cap and apron."

She took them away, and remained upstairs with them until they were in bed. When she came back she did not bring the work-basket, but she had not taken off the cap and handkerchief. She held an open letter in her hand, and went to Richard and sat down by him. Her manner had changed again entirely. It was as if she had left upstairs something more than the work-basket.

"Richard," she said, "I did not tell you I had had a letter from Agnes Sylvestre."

"From Agnes Sylvestre!" he exclaimed. "Why, no, you didn't! But it is good news. Laurence, you must remember Agnes Sylvestre!"

"Perfectly," was the answer. "She was not the kind of person you forget."

"She was a beautiful creature," said Richard, "and I always regretted that we lost sight of her as we did after her marriage. Where is she now, Bertha?"

"When she wrote she was at Castellamare.

She went abroad, you know, immediately after her husband's death."

"He was not the nicest fellow in the world, that Sylvestre," said Richard. "He was not the man for a woman like that to marry. I wonder if she did not find out that she had made a mistake?"

"If she did," said Bertha, "she bore it very well, and it has been all over for more than two years."

She turned suddenly to Tredennis.

"Did not you once tell me——" she began.

"Yes," he replied. "I met her in Chicago, and Mr. Sylvestre was with her."

"It must have been two or three weeks before his death," said Bertha. "He died quite suddenly, and they were in Chicago at the time. Do you remember how she looked and if you liked her?—but of course you liked her."

"I saw her only for a short time," he answered. "We talked principally of you. She was very handsome, and had a sweet voice and large, calm eyes."

Bertha was silent a moment.

"Yes," she said next, "she has beautiful eyes. They are large and clear like a child's, but they are not childish eyes. She sees a great deal with them. I think there was never anything more effective than a way she has of looking at you quietly and directly for a few seconds, without saying anything at all."

"You wonder what she is thinking of," said Arbuthnot. "And you hope she is thinking of yourself and are inclined to believe she is, when there are ten chances to one that she is not at all."

"But she generally is," said Bertha. "The trouble is that perhaps she is not thinking exactly what you would like best, though she will never tell you so, and you would not discover it from her manner. She has an adorable manner—it is soft and well-bred, but she never wastes herself."

"I remember," said Tredennis, "that I thought her very attractive."

Bertha turned more directly toward him.

"She is exactly what you would like," she said,— "exactly. When I said just now that her way of looking at people was effective, I used the worst possible word, and did her an injustice. She is never effective—in that way. To be effective, it seems to me, you must apply yourself. Agnes Sylvestre never applies herself. Trifles do not amuse her as they amuse me. I entertain myself with my whims and with all sorts of people; she has no whims, and cares only for the people she is fond of. If she were here to-night, she

would look calmly at my mob-cap and apron and wonder what I meant by them, and what mental process I had gone through to reach the point of finding it worth while to wear them."

"Oh," said Arbuthnot, "I should not think she was slow at following mental processes."

"No," answered Bertha, "I did not mean that. She would reason clearly enough, after she had looked at me a few moments and asked herself the question. But in talking of her, I am forgetting to tell you that she is coming home, and will spend next winter in Washington."

"Congratulate yourself, Laurence," said Richard. "We may all congratulate ourselves. It will be something more to live for."

"As to congratulating myself," said Arbuthnot, "I should have no objection to devoting the remainder of the evening to it, but I am afraid——"

"Of what?" demanded Bertha.

"Oh," he answered, "she will see through me with her calm eyes. And as you say, she never wastes herself."

"No," said Bertha, "she never wastes herself. And, after all, it is Colonel Tredennis who has most reason to congratulate himself. He has not thrown away his time. I am obliged to admit that she once said to me of you, 'Why does he throw away his time? Does he never think at all?' Yes, it is Colonel Tredennis who must be congratulated."

It was chiefly of Agnes Sylvestre they talked during the rest of the evening.

"She is a person who says very little of herself," was Bertha's comment, "but there is a great deal to say of her."

And so there seemed to be. There were anecdotes to be related of her, the charm of her beauty and manner was to be analyzed, and all of her attributes were found worth touching upon.

It was Tredennis who took his departure first. When he rose to go, Bertha, who was talking to Arbuthnot, did not at first observe his movement, and when he approached her she turned with an involuntary start.

"You—are going now?" she said.

"Yes," he answered. "I wish you a pleasant summer and all the rest you require."

She stood up and gave him her hand.

"Thank you," she replied. "I shall be sure to have the rest."

It scarcely seemed more than the ordinary conventional parting for the night; to Tredennis it seemed something less. There were only a few words more, and he dropped her hand and went out of the room.

He had certainly felt that this was the last, and only a powerful effort of will held in

check a feeling whose strength he would have been loath to acknowledge.

"Such things are always a wrench," he said, mentally. "I never bore them well."

And he had barely said it when he heard Bertha cross the parlor quickly and pass through the door. He had bent to take up a paper he had left on the hat-stand, and when he turned she was close to him.

Something in her look was so unusual that he recognized it with an inward start. Her eyes were a little dilated, and her breath came with soft quickness, as if she had moved rapidly and impulsively. She put out both her hands with a simple, sudden gesture, and with an action as simple and unpremeditated he took them and held them in his own.

"I came," she said, "to say good-bye again. All at once I seemed to—realize that it would be months before I—we saw you again. And so many things happen, and ——" She stopped a second, but went on after it. "When I come back," she said, "I shall be well and strong, and like a new person. Say good-bye to this person," and a smile came and went as she said it.

"A moment ago," he answered, "I was telling myself that good-byes were hard upon me."

"They—they are not easy," she said.

This at least was not easy for him. Her hands were trembling in his clasp. The thought came to him that perhaps some agitation she wished to hide had driven her from the room within, and she had come to him for momentary refuge because he was near. She looked up at him for a second with a touch of desperation in her eyes, and then he saw her get over it, and she spoke.

"Jack and Janey will miss you very much," she said. "You have been very kind to them. I think—it is your way to be good to every one."

"My opportunities of being good have been limited," he said. "If—if one should present itself," and he held her hands a little closer, "you won't let me miss my chance, will you? There is no reason for my saying so much, of course, but—but you will try to remember that I am here and always ready to come when I am called."

"Yes," she said, "I think you would come if I called you. And I thank you very much. And good-bye—good-bye."

And she drew her hands away and stood with them hanging clasped before her, as if she meant to steady them, and so she stood until he was gone.

He was breathing quickly himself when he reached the street.

"Yes," he said, "the professor was right. It is Arbuthnot—it is Arbuthnot."

CHAPTER XIV.

WHEN he passed the house the next day, they were gone. The nursery windows were thrown open, and he fancied that the place wore a deserted look. The very streets seemed empty, and the glare of sunshine whose heat increased with every hour added to the air of desolateness he imagined.

"It is imagination," he said. "And the feeling will die away all the more quickly because I recognize the unreality of it. By to-morrow or the day after, I shall have got over it."

And yet a week later, when he dropped in upon the professor, one sultry evening, to spend an hour with him, his old friend found cause for anxious inspection of him.

"What," he said, "the hot weather begins to tell on you already! You are not acclimatized yet, that's it. You must spare yourself as much as possible. It doesn't promise well that you look fagged so soon. I should say you had not slept well."

"I don't sleep well," Tredennis answered.

"You are working too hard?" said the professor; "that is it, perhaps."

"I am not working hard enough," replied Tredennis, with a slight knitting of the brows. "I wish I had more to do. Leisure does not agree with me."

"One must occupy oneself!" said the professor. He spoke half-absently, and yet with a touch of significance in his tone which—combined with the fact that he had heard the words before—caused Tredennis to glance at him quickly.

He smiled slightly, in answer to the glance.

"Bertha?" he said. "Oh, yes, I am quoting Bertha. Your manner is not as light as hers, but it reminded me of her in some way—perhaps because I had a letter from her to-day, and she was in my thoughts."

"I hope she is well," said Tredennis, "and does not find her farm-house too dull."

"She does not complain of it," the professor answered. "And she says nothing of her own health, but tells me she is a little anxious about Janey, who does not seem quite herself."

Tredennis looked out into the darkening street. They were sitting by the opened window.

"She was not well when she went away," he said, a trifle abstractedly.

"Janey?" asked the professor, as if the idea was new to him. "I did not know that."

Tredennis roused himself.

"I—was thinking of Bertha," he said.

"Oh, of Bertha," said the professor, and then he lapsed into a reverie himself for a few

moments; and seemed to watch the trees on the street without seeing them.

"No, she was not well," he said, at length, "but I think she will be better when she comes back."

"The rest and quiet——" began Tredennis.

"I think she had determined to be better," said the professor.

"Determined?" repeated Tredennis.

"She has a strong will," returned the professor, "though it is a thing she is never suspected of. She does not suspect herself of it, and yet she has relied upon its strength from the first, and is relying upon it now. I am convinced that she went away with the determination to conquer a restlessness whose significance she is just awakening to. And she deliberately chose nature and the society of her children as the best means of cure."

"Do you think," asked Tredennis, in a low voice, "that she will get over it?"

The professor turned to look at him.

"I don't know," he answered, with a slight tone of surprise. "Why did you fancy I would?"

"You seem to understand her——" said Tredennis.

The professor sighed.

"I have studied her so long," he replied, "that I imagine I know what she is *doing*, but you can't safely go beyond that with women—you can't say what they are *going* to do—with any degree of certainty. They are absorbingly interesting as a study, but they are not to be relied on. And they rarely compliment your intelligence by doing what you expect of them. *She* has not done what I expected. She has lived longer than I thought she would without finding herself out. A year ago she believed that she had proved to herself that such an emotion as—as this was impossible to her. It was a very innocent belief, and she was entirely sincere in it and congratulated herself upon it." He turned to Tredennis again with a sudden movement and a curious look of pain in his face. "I am afraid it's a great mistake," he said.

"What?" Tredennis asked.

"This—this feeling," he said, in a tremulous and troubled voice. "I don't mean in her alone, but in any one, everywhere. I am not sure that it ever brings happiness really in the end. I am afraid there always *is* an end. If there wasn't, it might be different; but I am afraid there is. There are those of us who try to believe there is none, but—but I am afraid those are happiest who lose all but their ideal. There are many who lose even

that, and Fate has done her worst by them." He checked himself, and sank back in his chair.

"Ah!" he said, smiling half sadly. "I am an old man—an old man—and it is an old man's fancy, that the best thing in life is death. And Fate did not do her worst by me; she left me my ideal. She had gray eyes," he added, "and a bright face like Bertha's. Perhaps, after all, if I had won what I wanted, I should not feel so old to-night, and so tired. Her face was very bright."

He had not been wholly well for some days; and to-night seemed fatigued by the heat and languor in the air, but he was somewhat more hopeful when he spoke of Bertha than he had been.

"I have confidence in the strength of her will," he said, "and I like her pride and courage. She does not give way to her emotions; she resents them fiercely, and refuses to acknowledge their power over her. She insists to herself that her restlessness is nervousness, and her sadness morbid."

"She said as much to me," said Tredennis.

"Did she?" exclaimed the professor. "That is a good sign; it shows that she has confidence in you, and that it is a feeling strong enough to induce her to use you as a defense against her own weakness. She would never have spoken if she had not believed that you were a sort of stronghold. It is the old feeling of her girlhood ruling her again. Thank Heaven for that!"

There was a ring at the front-door bell as he spoke, and a moment or so later it was answered by a servant; buoyant feet were heard in the hall, and paused a second on the threshold.

"Are you here, Professor?" some one inquired. "And may I come in?"

Professor Herrick turned his head.

"Come in, Richard," he said; "come in, by all means." And Amory entered and advanced toward them.

The slight depression of manner Tredennis had fancied he had seen in him on the last two occasions of their meeting had disappeared altogether. He seemed even in gayer spirits than usual.

"I have come to tell you," he said to the professor, "that I am going away for a short time. It is a matter of business connected with the Westoria lands. I may be away a week or two."

"Isn't it rather a long journey?" asked the professor.

"Oh, yes," he replied, with no air of being daunted by the prospect—"and a tiresome

one, but it is important that I should make it, and I shall not be alone."

"Who is to be your companion?"

"Plane-field—and he's rather an entertaining fellow, in his way—Plane-field. Oh, it won't be so bad, on the whole."

"It is Plane-field who is interested in the lands, if I remember rightly," suggested the professor.

"Oh, Plane-field?" Richard replied, carelessly. "Well, more or less. He is given to interesting himself in things, and by Jove," he added with a laugh, "this promises to be a good thing to be interested in. I shouldn't mind if I —"

"My dear Richard," interposed the professor, "allow me to advise you not to do so. You'll really find it best. Such things rarely end well."

Richard laughed again.

"My dear Professor," he answered, with much good-humor, "you may rely upon me. I haven't any money of my own."

"And if you had money?" said the professor.

"I think I should risk it. I really do. Though why I should say risk, I hardly know. There is scarcely enough risk to make it exciting."

He was very sanguine, and once or twice became quite brilliant on the subject. The great railroad, which was to give the lands an enormous value, was almost an established fact, everything was being laid in train: a man influenced here, a touch given there, a vigorous move made in this direction, an interest awakened in that, and the thing was done.

"There isn't a doubt of the termination," he said, "not a doubt. It's a brilliant sort of thing that is its own impetus, one might say, and the right men are at work for it, and the right woman—"

"Were you going to say women?" asked Tredennis, when he pulled himself up somewhat abruptly.

"Well, yes," Richard said, blithely. "After all, why not? I must confess to finding the fact lend color and vivacity to the thing. And the delightful cleverness the clever ones show, is a marvelous power for or against a thing, though I think the feminine tendency is to work for a thing, not against it."

"I should like to know," said Tredennis, "how they begin it."

For a moment he thought he did not know why he asked the question; but the self-delusion did not last long. He felt an instant later that he did know, and wished that he did not.

"In nine cases out of ten," Richard replied, giving himself up at once to an enjoyable

analysis of the subject,—“in nine cases out of ten, it is my impression they begin with almost entire lack of serious intention, and rarely, if ever, even in the end, admit to themselves that they have done what they are accused of. Given a clever and pretty woman whose husband or other male relative needs her assistance: why should she be less clever and pretty in the society of one political dignitary than in that of another, whose admiration of her charms may not be of such importance? I suppose that is the beginning, and then come the sense of power and the fascination of excitement. What woman does not like both? What woman is better and more charming than Bertha, and Bertha does not hesitate to admit, in her own delightful way, that there must have been a fascination in the lives of those historical charmers before whom prime ministers trembled, and who could make and unmake a cabinet with a smile.”

“What,” was the thought which leaped into Tredennis’s mind, “do we begin to compare Bertha with a king’s favorite!” But he did not say it aloud—it was not for him to defend her against her husband’s lightness, and were they not her own words, after all? And so he could only sit silent in the shadow of his darkening corner and knit his heavy brows with hot resentment in his heart, while Richard went on:

“There are some few who make a profession of it,” he said, “but they do not carry the most power. The woman who is ambitious for her husband, or eager for her son, or who wishes to escape from herself and find refuge in some absorbing excitement, necessarily is more powerful than the more sordid element. If I were going in for that kind of thing,” he went on, settling himself in his favorite graceful, lounging posture, and throwing his arm lightly behind his head—“if I were going in for it, and might make a deliberate choice, I think I should choose a woman who had something to forget—a woman who had reached an emotional crisis—who was young and yet who could not take refuge in girlish forgetfulness, and who, in spite of her youth, had lived beyond trusting in the future—a woman who represented beauty, and wit, and despair—(the despair would be the strongest lever of all). There isn’t a doubt of it that such a woman, taken at such a turning-point in her existence, could move—the world, if you like—the world itself,” and he arranged himself a trifle more comfortably, and half-laughed again.

“But,” suggested the professor, “you are not going in for that sort of thing, my dear Richard.”

"Oh, no, no," answered Richard, "but if I were, I must confess it would have a fascination for me which would not permit of my regarding it in cold blood. I am like Bertha, you know—I like my little drama."

"And, speaking of Bertha," said the professor, "if anything should happen while you are away —"

"Now, really," said Richard, "that shows what a careless fellow I am! Do you know it never once occurred to me that anything could happen. We have such an admirable record to look back upon, Bertha and I, though I think I usually refer the fact to Bertha's tact and executive ability—nothing ever has happened, and I feel that we have established a precedent. But if anything should happen, you had better telegraph to Merritsville. In any ordinary event, however, I feel quite safe in leaving Bertha in your hands and Tredennis's," he said, smiling at the large shadow in the corner. "One is always sure, in the midst of the ruling frivolity, that Tredennis is to be relied on."

He went away soon after, and Tredennis, bidding the professor good-night, left the house with him.

As they passed down the steps, Richard put his arm through his companion's with caressing friendliness.

"It wouldn't do you any harm to take a run up into Virginia yourself, once in a while," he said. "You have been losing ground since the heat set in, and we can't submit to that. We need your muscular development in its highest form, as an example to our modern deterioration. Kill two birds with one stone when you have a day's leisure—go and see Bertha

and the children, and lay in a new supply of that delightful robustness we envy and admire."

"I should be glad to see Bertha," said Tredennis.

"She would be glad to see you," Richard answered. "And while I am away, it will be a relief to me to feel that she has you to call upon in case of need. The professor—dear old fellow—is not as strong as he was. And you—as I said before—one naturally takes the liberty of relying on your silent substantiality."

"Thank you," said Tredennis. "If it is a matter of *avoirduois* —"

Richard turned quickly to look at him.

"Ah, no," he said. "Not that—though being human, we respect the *avoirduois*. It's something else, you know. Upon my word, I can't exactly say what, but something which makes a man feel instinctively that he can shift his responsibilities upon you and they will be in good hands. Perhaps it is not an enviable quality in oneself, after all. Here am I, you see, shifting Bertha and the children off on your shoulders."

"If I can be of any use to Bertha and the children, why not?" said Tredennis, tersely.

"Oh, but one might also say 'Why?'" returned Richard. "We haven't any claim on you, really, and yet we do it, or, rather, *I* do it, which speaks all the more strongly for your generosity and trustworthiness."

"And you will be away —?" Tredennis began.

"Two or three weeks. It might be more, but I think not. We separate here, I think, as I am going to drop in on Planefield. Good-night, and thanks."

"Good-night," responded Tredennis, and they shook hands and parted.

(To be continued.)

THE AGE OF PRAXITELES.

COULD we be carried back to that era toward the close of the fifth century B. C., when the great men of Athens—Phidias, Sophocles, and Socrates—were passing away, we should find younger men rising to fill their places in carrying on the great mission of Hellenic culture. We should find that, as the fourth century dawned, the gifted sculptor Scopas was gaining fame, and that Cephisodotus, the father of the celebrated Praxiteles, was already in his prime, while his greater son was probably in his infancy. Although, through such men, the chain remained unbroken which united the earlier to the later times, yet great changes had come over the

Greek state and people, which left their impress on art. The civil war which had ravaged the land for nearly thirty years (431-405 B. C.) had humbled the victorious Athens of the Periclean age. In the midst of her other troubles a frightful plague had visited her, smiting a large part of her population, and counting among its victims many of the greatest and best men, including Pericles himself. This sudden calamity could not fail to have had a demoralizing effect upon the survivors. Agony and despair engendered the spirit of selfishness; through dread of the fatal contagion, the well neglected to care for their dying friends, and even the rites

of burial, which were held to be most essential and sacred in those days, were neglected. Thucydides laments, "The manly race of old Athens is swept away, and a worse one left behind." But this race, thus looked upon as worse by the older generation, developed many powers which had been lying dormant, and in what concerned philosophy and art proved itself to be by no means an unworthy heir of the former glory. Outward circumstances had radically changed with regard to the patronage of art, since, after the costly and humiliating war, the Athenian state remained a mere shadow of her former self. Her stores of gold and silver, which had seemed inexhaustible under the wise rule of Pericles, were now gone. The islands and cities which had paid their annual contributions into her coffers now refused their tribute, and her colonies, another important source of wealth, were in the hands of her enemies. The history of Athens from 400 B. C. was no longer the record of successful aggression, but of a struggle to maintain her own independence. Her patriots, indeed, sought to raise her to the place she had once occupied, but their efforts were spasmodic; and after each vain endeavor the city sank back, politically weaker than before, and more prone to give herself up to pleasures, abundantly provided by wily politicians who were in search of public favor. Consequently, during this century, Athens, as a state, offered little stimulus to great and monumental works. The Periclean age, with its costly temples and chryselephantine statues,—thank-offerings from a grateful people,—found no counterpart in the city now lying humbled before her jealous neighbors and enemies. Her sculptors, in consequence, were forced to look for commissions to private individuals, or to foreign states. While, in the olden time, the abodes even of great men like Miltiades, Themistocles, and Pericles had been simple, and the temples of the gods alone ornate and costly, now few temples were built, and the rich vied with one another in the magnificence of their dwellings, provoking the bitter reproaches of Demosthenes in an oration to the Athenians. That the private patronage of the arts was on no mean scale, appears also from the upbraidings of the orator Isæus to Dicaeogenes, who allowed dedicatory offerings, which he had inherited and valued at three talents (\$3540), to be left scattered about unconsecrated in the studios.

But the fame of Athenian culture had reached other shores, and this fact, in connection with the lull in public spirit in Athens itself, doubtless explains the custom prevailing during this century, among well-nigh all

the Athenian sculptors whose names are preserved to us, of leaving their city at some time in their lives to find employment elsewhere. Indeed, the most celebrated works by Scopas and Praxiteles, the two great Athenian masters of the fourth century, were executed for Asia Minor. Thus Athens, by her very misfortunes at home, was made to share with the outside world a part of the best of her great inheritance. Monuments, whether in gold, marble, or terra cotta, since found in Bœotia, Asia Minor, the remote Crimea or Southern Italy, all show the prevailing spirit of this Attic art. The Peloponnesian war not only opened up this wide sphere of activity to Athenian artists, but also caused great changes in the character of the people, which were reflected in subsequent works of art. The repeated and radical revolutions in the state could not but shake their faith in the old constitution, and the great misfortunes befalling them led each man to look to his own interests, regardless of the public weal. The gods, they easily came to believe, had deserted them, or even proved false, by giving at their oracles responses which had brought disaster in their train. Hence, it is not strange that trust in the older concrete gods became weaker, and that beings of a more abstract nature, such as Fortune (Tyche), Peace (Irene), and Riches (Plutus), came to enjoy equal honors with them, while minor gods played a more important part.

The Phidian age, with its sublime golden colossi of Zeus, Athene, and Hera, has now been left behind, and from the Olympian heights of majesty and repose the road slopes downward, through ravishing vales among the haunts of men and scenes of quiet, peaceful beauty, which have a charm which is their own, though they may be less sublime. In the former age the individual was merged in the whole, the private weal was subservient to the state; but now the individual man attained complete development, and many a character of rich beauty and symmetry sprang out of the new soil. Broader culture and altered circumstances were favorable to the unfolding of thoughts and forms, such as would have been inconceivable during the earlier sublime age. Indeed, this unfolding in society was in keeping with the whole tendency of the Greek mind, which unrolls before us in its literature a continual passing from the outer life to the inner, until finally the drama paints not actions, but the struggles of the soul which give rise to them, and finds her strength in the whole play of human passion. Thus slowly, and after many struggles, the old myths were worked over into broadly

human outlines; that which once repelled by its crudity and barbarism was made to quiver with noble human passion. The pathos of human sorrow, joy, and despair, and all the other emotions which move the heart and urge to action, pressed into the foreground. The storms of passion now beat even over the heights of Olympus, and the gods themselves are seen battling the tempest. The severer tragedies of Æschylus and Sophocles yield in the people's preference to the pathetic power of Euripides, who tears the veil from before the dwelling of the gods and immortal heroes, and reveals them as human beings like those about him, affected by the varying shades of joy and sorrow, from the wild passion of a Phædra to the desperate broodings of a Medea. In its outer forms, daily life had become more agitated. While Pericles had always appeared before the assembled people with unruffled mien, and sought to keep their temper quiet even in the fire of his eloquence, holding his voice and movements so under control that the very folds of his loosely hanging garment remained unchanged, those who came after him excited the people, and with violent gesticulations strode to and fro before their hearers, vehemently throwing their arms about them. The dignity and reserve characteristic of the earlier day had left its impress on art; but, with the change in the views and habits of society, this older art could have been retained only as a stereotyped and lifeless form. And so, as poetry assumed a more human character, sculpture also descended from its heights, and, assuming more familiar forms, held more intimate communion with men in their varying emotions. Fully to appreciate what is expressed in the sublime forms of Phidian art, fully to enter into their spirit and the devotion which produced them, something seems to tell us that we must be Greeks. But not so with this art of the fourth century; its ideal conceptions of rarest freshness and beauty come to us expressing traits common to all humanity, and addressing us to-day as strongly as they did the Greeks of old. This change in the conceptions of people and sculpture is evident in the choice of subjects, and in the different mode of treatment. Pious offerings were still to be made—no longer, however, mainly to the highest gods, but to those of a more human character. Thus, instead of Zeus, Athene, Hera, and their peers, we meet the fluctuating throng in which we see the forms of the maternal Demeter, proud Niobe, charming Aphrodite, bewitching Eros, raving Bacchantes, and pleasure-loving Dionysus. Here every familiar chord of human feeling is touched, and these

Greek forms of more than two thousand two hundred years ago express our joy, our sorrow, and our pleasure. To this changing panorama, with its varying charms of mood and feeling, the Attic sculptors of this time added an elegance and a captivating grace of form, stimulated by the lighter spirit of the people, not met before. After the stern days of the Peloponnesian war, there had developed among the Athenians an unwonted desire for what was pleasurable and diverting. This appears from many laws then made, in contrast to the severe heroic spirit of the older age. Even military discipline was relaxed and armies were disbanded, in order that the soldiery might return to Athens to share in public festivals. The surplus of the state income, which had in former times gone into the war fund, was now diverted to these festivities, and about 353 B.C. a law was passed making it punishable with death even to propose defraying war expenses with this money.

How the sculptors of this age caught its changing spirit, and with what exquisite grace and nobility they gave expression to what is pleasurable in art, will be shown in considering the forms created by Praxiteles and his contemporaries, whether they are found in humble vase-paintings or in imposing temple-statues. In their hands, the beautiful womanly Aphrodite will draw admirers around her, as well as the sublime but stern Hera or imperious Athene; the mild Apollo will be more gracious though less imposing than the supreme, almighty Zeus. But while swerving from the paths of their predecessors, the ideal tendencies of the earlier age are inherited by the later Athenian artists. No harsh realism disturbs the dream-land in which they live. Apollo singing to the notes of his lyre is not some particular lyre-player, but the very personification of musical inspiration. Hermes is no youth whom we chance to meet buried in pleasant thoughts—he is the incorporation of all that is possible of joy and beauty in the soul, caught and made eternal in marble. Thus, while the Phidian ideals of the highest gods were deserted, this later art was equally ideal in its bent, catching and expressing the momentary or lasting emotions of the soul in varied forms, and so widening and deepening the current of eternal beauty. As Plato and Aristotle in this century towered above the crowd of minor philosophers, so Scopas and Praxiteles represented the highest attainments in sculpture.

Praxiteles came of no mean family. His father, Cephisodotus, was connected by marriage with the renowned general, Phocion, and was besides a sculptor of repute, his works being in demand not only in Athens,

but also in the Peloponnesus. But the gifted son, born about one hundred years after Phidias (probably about 400 B. C.), was to eclipse the glory of his father, from whom, however, he doubtless received much, as a comparison of their works will show. Praxiteles appears, also, early to have enjoyed the acquaintance of his senior, the Parian Scopas, who made Athens his home about 375 B. C. If we are to believe the reports of the ancients, the career of Praxiteles was a very long one, and seldom was paralleled in productiveness and in the variety of his creations, nearly three-score works being mentioned as the fruits of his genius. They were scattered far and wide, many of them in different parts of Greece and Asia Minor. From this fact it is inferred that the life of Praxiteles, like that of many of his fellow sculptors, was spent partly in his native land and partly in the opulent Ionian satrapies of the Orient. How long he lived we are not told, but he probably witnessed the crushing blow given to the liberties of his country by Philip, 338 B. C. He may have watched the growing power of the young Alexander, although there is no evidence that, like some of his compatriots, he ever engaged in the service of that monarch. In a statue of Aphrodite, the gracious goddess of love and beauty, antiquity seems to have recognized the masterpiece of Praxiteles. Her statue at Cnidus is said to have made that sea-port town so attractive that people flocked thither from all parts to view the beautiful marble goddess. She stood in a shrine built purposely for her, and surrounded by shade-trees which formed a favorite resort for admiring strangers and citizens. But this statue has perished, although fondly cherished by the Cnidians. It was seen in its beauty by Lucian about 150 A. D. All that remain to us are feeble echoes of its grace, to be gathered from its effigy on a Cnidian coin, struck in honor of Plautilla, and from a few marbles, which fall far short of inspiring such rapturous descriptions as those of the ancients who saw the original, but which may suggest its beauty. Among these, a small head in Parian marble, recently discovered at Olympia and still there, is most attractive, showing more of what must have been the distinctive quality of the art of Praxiteles than the numerous indifferent copies discovered in Italy. This face has the long, oval shape, the high, pointed forehead, and the surface instinct with life so characteristic of Greek female heads from the fourth century B. C. Like so many ancient works, although only half life-size, it is made up of several pieces of marble, the back part of the head having been fastened on by a layer of cement, which is still to be seen. The

hair is sketchily treated, and was probably painted or gilded, as we know was often done, and forms a beautiful contrast to the skin and eyes, which are rendered with such exquisite finish and airy softness that we forget they are in obdurate marble. In the gentle turn of the head, the hair simply but gracefully surrounding the brow, and the eyes full of liquid tenderness, we seem to divine Aphrodite's true womanliness and power of love.

Although the original of this masterpiece of Praxiteles, the Cnidian Aphrodite, is lost, there is one group by him, of which less was said in antiquity, that has by good fortune been preserved to us. This is the youthful Hermes bearing on his arm the infant Dionysus, to be seen to-day at Olympia, where it was noted seventeen hundred years ago by Pausanias.* On the morning of May 8, 1877, while the German excavators were busy among the temple foundations, they suddenly came upon a marble statue a little more than life-size, lying on its face before a broken pedestal. Their feverish delight can scarcely be imagined as, on raising it, they recognized the very figure that Pausanias had described as executed by Praxiteles, nor would it be easy to conceive their joy on finding that the face, unlike that of most antique heads when unearthed, was perfect. How narrowly had this youth in the fine bloom of early manhood escaped a tragic fate! Precipitated from its pedestal upon its face, the figure had fortunately fallen upon a soft deposit of powdered brick: thus the delicate features had been protected, and, although a fine moss had gathered on the cheeks, the exquisite torso of the statue was not seriously marred. But the god's shapely marble legs and a part of the pedestal had been ruthlessly broken off and dragged away. Happily, one of the sandaled feet was dropped within the inclosure of the temple columns, and was found there only twenty-five centimeters below the surface, trodden into the earth. The god's right hand, raised on high and holding some object, perhaps a bunch of grapes, has not yet been discovered, and, as the excavations are completed, it is doubtful whether we shall ever be favored with a sight of the missing parts. Rude hands had, likewise, torn away the babe Dionysus from Hermes's arm. Its head was found dropped on a pile of rubbish, about eighty meters distant from the temple, and its little body was built into a wall in another and remote part

* [For a special and extremely valuable study of the Hermes, as elucidating the thought, life, and art of its time, see pamphlet by Dr. Charles Waldstein, of New York, now a professor at the University of Cambridge, England.—EDITOR CENTURY MAGAZINE.]

HEAD FROM THE TEMPLE OF HERA NEAR ARGOS.*

of the *allis*, while the draped legs were left to cling to their seat in the god's strong arm, and one little hand to press his shoulder. Thus enough of this group remains to make the identification unmistakable. Such beauty and grace is here transmitted to us, that we cannot fail to have some appreciation of the master's power in his still more famous works.

In the faith of the Greeks, Hermes, the Latin Mercury, was, after Apollo, the second youthful deity of Olympus. He delighted to be present when speedy relief was needed, as in the case of infant deities robbed of their parents. So he saves the babe Æsculapius, plays nurse to the young Hercules, and has especial care of the infant Dionysus when his mother Semele is consumed by the thunderbolts of Zeus. It was he who found for it a mother's love in the nymphs of Nysa. In this priceless statue, found at Olympia, Praxiteles shows us this Hermes, both watching over and playing with his baby brother. Full of childish enthusiasm, the little one almost springs from the strong arm on which it sits, and, tipping its head to look up into the face bending over it, reaches out the left hand beseechingly for the grapes which the elder brother holds tantalizingly on high, while with the right it presses the strong shoulder for support. How deep and tender the thought expressed here! Watchful love, childish confidence and glee, a revelation, as it were, of the sweetest and noblest in human nature, in forms of hitherto unconceived beauty and

* This head is a work of "The Phidian Age," and was described in the article of that name published in the February number of this magazine.

strength. On the curling locks—which are of a darker tone, indicating the presence of color—there once rested a wreath, perhaps of ivy, in metal, as appears from the depression in the back hair. The wonderful freedom, almost sketchiness, with which the hair is executed, may at first sight seem careless, but note how this very free treatment brings out the subtle, smooth texture of the skin, in a manner so peculiar to marble. Indeed, throughout the statue, the master's power of making marble speak its mellow language is apparent; it will be more evident on comparing this statue with ancient works in bronze, such as, for instance, the celebrated Siris bronzes, or the figure of a youth from Tarentum, which are in the British Museum. In these bronzes we see the lines are more sharply defined, and the details distinctly worked out, the strong reflections and shiny surface of opaque bronze requiring greater precision in treatment than translucent marble. By some it is supposed that the form of this face of Hermes may be traced back to that given at an earlier date by Myron to his athletes, but that, in this statue of the god of the athletes, Myron's conception has been clothed with new beauty by the later Praxiteles, the oval of the face being longer and more graceful, and the eyes more deeply set. Across the noble forehead there passes a thoughtful line, dividing a strong projection, which is most prominent over the nose, but disappears in the eyebrows. The eyes, deeply imbedded beneath the brows, at once bewitch us. Their upper lids arch proudly, but the lower ones, as if preparing for a smile, glide gently up on to the ball, in liquid lines of almost feminine grace. Most fortunately, the nose is preserved in its perfect lines to the tip. A comparison with the restored and sadly disturbing nose of the Venus of Melos will show what a piece of good fortune it is that we have a perfect face from an original Greek statue, and that statue the work of Praxiteles. Other lines producing beautiful effects are those from the outer corner of the eye to the ear. The temples, instead of swelling outward and forming a broad setting for the eye, as in representative Teutonic faces, here retreat directly. Most characteristic in this face are the quivering lines of the mouth, ready at any moment to break into a smile, and the playful dimple in the chin. The neck is columnar, and the shoulders broad and masculine, as becomes the sturdy athlete, but the graceful bend of the body, caused by the god's leaning on the tree at his side, brings out curves at the hips which greatly intensify the grace of this manly form. Throughout are seen the strongly pronounced

muscles, and yet the gently flowing skin above all melts the whole into exquisite harmony. Thus, while approaching in grandeur the so-called Theseus of the Parthenon, this Hermes far surpasses it in bewitching beauty. Only about the right knee is there apparent any of the lingering severity of earlier art. But, strange enough, the back of this otherwise perfect statue has been left unfinished. The chisel-strokes, varying from very fine to broad and deep, show the different stages of the work. How to explain this strange fact still remains a puzzle. But these unfinished parts are of value, as teaching us that Praxiteles used the same shaped tools as those employed by the sculptors of to-day. The child is small in comparison with Hermes, and yet his form does not express early infancy, as it would in modern art. The skull is small, and covered with long, well-arranged curling locks, bound by a band; the face is child-like, but has not the chubby, fat cheeks of babyhood. The form is too firm for infancy; the draping around its limbs is like that worn by older gods. This disproportionate smallness of the child may be intended to give greater prominence to the main figure of the group, to which all eyes are irresistibly drawn. The peculiarities of the child's form may also be explained, perhaps, by a glance at the vases and sculptures of the same era.

HERMES WITH THE CHILD DIONYSUS, BY PRAXITELES.
(OLYMPIA.)

from which it appears clearly that the infant form, with its melting, varying roundness, had not yet been attempted in marble, but was to be developed by a later generation. The master has wrought a wonderful contrast to the quiet form of Hermes by the arrangement of the drapery hanging over the tree at his side, and which in itself is covered with varying and broken lights and shades. It seems to be the god's thick woolen chlamys, with a border, sewed as it might be done by a modern sewing-machine, and quite different from the fluted edge of the Parthenon drapery. Its surface is, moreover, covered with wrinkles, likewise never seen in the Parthenon marbles, but which make the drapery intensely real; even the break of the folds at the corners is more angular than in that of earlier drapery. The peculiar beauties of this Hermes appear still more striking when compared with what we have of that which went before in Greek art. A glance at the sweet but impersonal faces of the Parthenon frieze, and then at the features of Hermes, so full of "capable tenderness," will reveal to us the new realm into which Praxiteles had entered.

There is a head in Parian marble, so akin in spirit and workmanship to the Hermes that we would fain associate it with the great master. It was discovered by Mr. Newton in 1858, at Cnidus, where the Aphrodite of Praxiteles was the center of all other attractions, and it now forms one of the choicest treasures of the British Museum. From neighboring inscriptions and the dress, there can be no doubt that Demeter, in Greek myth the mourning mother, is represented in this seated figure, which, alas! has suffered cruelly at the hands of Time. But enough remains for us to be moved by the look of maternal tenderness in this face, dispelling any impression that Greek art was cold and unimpassioned. Combined with this sweet mellowness there is an expression of the sorrow of her who anxiously sought her lost daughter Core, so gently told, however, in the quiet, peaceful lines of her face, that we scarcely know where it lurks. A matronly veil, severely simple, intended for covering, not ornament, falls over her head and long curls; her age is that of one who has passed the bloom and freshness of early youth, but upon whose face, though sorrow has left its impress, the years have not yet traced their furrows. The manner in which this sorrow is expressed is a fascinating study, as is well pointed out by Professor Brunn. It is a fact of daily observation that, when deep and long-continued sorrow and emotion are felt, the eyes become sunken, the adipose tissues in which they are imbedded diminishing in

volume, especially under the outer corners. This we see in Demeter's gentle face, which, however, does not have a haggard, painful look. Again we notice that, in life, when the mind is anxious the eye turns away, involuntarily, from near objects, and gazes forward and upward, as into an unseen and dreaded future; when the emotion is intense, or momentary, the eyebrows are strongly knitted, and the eyelids are convulsive in their lines. But Demeter's chastening sorrow has become a part of her being, and her lower lid moves only slightly upward at the inner corner over the eyeball, which is also raised, instead of looking forward, as does Zeus in his placid benignity, or gently downward, as does Hermes in pleasant thought. The curve of her eyebrows, indicative of sorrow, is also so subtle as scarcely to be perceived, but just in front of her temples we notice that the skin of the otherwise calm, high forehead is drawn up, forming a slight swelling, such as in nature ensues after long weeping. In life, moreover, it is no uncommon thing, when weeping is at hand, to see the mouth open and contract, the upper lip become pointed and raised, while the corners hang down. But how subdued these lines in Demeter's face. Her lips, slightly opened and drawn forward, sink at the corners, but so softly that at times it seems as though a smile of maternal love hovered about the mouth. Moreover, the mellow surface of this Madonna-like head is radiant with light and feeling, enhancing its benignity, and resembling the surface of Praxiteles's Hermes. If the Hermes presents incomparably the emotions of joy, this Demeter in the same inimitable manner reveals the softness and tenderness of grief. We do not know how many human passions Praxiteles, Scopas, and their contemporaries caught and made eternal in marble forms. But their scope, according to the ancient writers, was great, touching every chord of the heart, and was expressed in forms varying from the bewitching grace of the sorrowing Niobe family to the sweet sentiment of Eros, the abandoned ease of the satyrs, or the obese fullness of the aged Silenus. But, as we have seen, most of the masterpieces of the fourth century B. C. have disappeared, and we must look for witnesses of its art to humble monuments,—modest tombstones lining the highways about Athens, many of which have been given back to us by recent excavations. Although the names of most of the sculptors who executed these humbler marbles are not preserved to us, and the men and women honored by them are unknown to fame, still the spirit manifested in these unpretending sculptures brings us very near to the inner-

HERMES WITH THE CHILD DIONYSUS.

most life of the Athenians of old, and gives us rare glimpses of family devotion and private virtue. Still more, they show us the spirit of the art of that time, transforming by its magic wand of ideality all that is limited and fleeting into enduring forms, which appeal to our common humanity, and are possessed of a sweetness greater than that of the sculpture which preceded and more delicate than that which followed.

But, before wandering among the ruined homes of the dead, now eagerly explored in search of antiquities, and gazing upon the figured marbles there placed by surviving friends, let us turn aside for a moment to look into an ancient house of mourning. The dying person, having covered his face, breathes his last. Friends close the eyes and mouth of him

whose soul has gone to join the shades of the departed, the women and next of kin wash and anoint the body with perfumed oil, wrapping it in garments usually of white, as though decking it for a feast, and which by Solon were limited to three in number. Then preparations are made for the first of the three principal acts of burial, the solemn *prothesis*, or lying in state. The body is placed on a rich couch in the front vestibule of the house, in view of the street—a custom still observed in modern Greece. If it is a man, a wreath of leaves is placed upon the brow, but if a lady, born to riches, a diadem of gold; while upon that of her poorer sister one of painted terra cotta takes its place. Holy water, brought from a neighboring house, is placed at the door for the purification

HEAD OF THE HERMES.

of those who pass out, a similar custom being retained among the Greeks of to-day. The nearest relations, female servants, invited friends, and hired singers now surround the solemn bier. The next of kin raises the wail of mourning, whose refrain is echoed by the whole company. A quaint painted clay tablet, discovered in Athens and preserved there, pictures for us one of those funereal scenes, the house being indicated, as was usual in ancient art, by a simple pillar at the left side of the painting. The family are gathered about the rich couch on which lies the dead. His mother is foremost among the women, laying one hand on his pillow, and having the simple word "*meter*" inscribed by her side. The inscriptions tell us what each figure is, and we see that grandmother, younger sisters, father, and brothers are all there, the female members of the family standing about the head and sides of the couch and the males at its foot. The latter, with arms thrown out as if keeping time, and mouths opened as if singing, seem to be chanting the sad wail so often read of, and which consisted of responses, the strophe and antistrophe, while the women, with hands raised to the head, the ever-recurring and significant gesture of mourning, seem to be awaiting their turn to take up the dirge. Such scenes, intended to impress by their sadness, but often grotesque through the artist's lack of skill, are rarely found except on earlier vases. In later times, wedding and other scenes were represented, likewise, to decorate the tomb, and, even where the dead appears, a different spirit becomes evident. In a scene on a beautiful vase now in Athens, the heart-rending grief is not represented, but friends sadly conscious of their loss stand about the bier, one at the head having a fan, as if to keep off flies, while little winged forms, representing, it is thought, the fluttering, unseen spirit of the dead, hover about the group. Instead of such painful scenes, the vases of a more highly developed art in Athens show friends, sitting in silent thought at the grave, or speaking with a traveler along the highway, who pauses to drop a word of comfort to the mourners. Again, and most frequently, as in the exquisite painting now in Athens, friends come to deck the tomb with sacred sashes, or to pour out sweet ointment from vases, such as this very scene decorates. One beautiful woman, seated on the steps of the tomb, is giving gentle expression to her sorrow by letting down her full locks. On either side approaches a sympathizing friend, each bringing a basket with gifts for the grave. One holds out an alabastrum in her right hand, and in both baskets are sashes, to be added to those

already decorating the steps of the grave, and small vases, doubtless full of sweet-scented unguents, to be poured out to the dead or hung on the monument, from the top of which springs a full growth of acanthus. In glancing over the paintings, even on these humble ointment-vases, we see shining out brighter and brighter that beautiful spirit, so evident in Greek culture, which ennobles all it touches. Here the heart-rending mourning of friends is turned into the representation of their sweet offices of devotion to the memory of the dead, while their nobler thoughts come, as a matter of course, to be expressed in nobler forms.

But, to return to the ancient house of mourning: the first sad duty accomplished, the second one is undertaken. The night passed, the procession leaves the house before the rising of the sun, in order that the rays of Helios may not touch the dead, banished to dwell in the shades of the under-world. The course of this solemn train in winding through the narrow streets was fixed by law, and it was forbidden that the mourners should give violent expression to their grief by tearing their cheeks with their nails. A woman bearing a vase for the sacred libations at the grave heads the procession, and slaves of the house, or, if the dead is a man of note, chosen citizens, bear him, or horses draw the open hearse upon which he lies, while mourners, accompanied by the music of flutes, keep up their sad wail. Before the dead walked the men of the funeral train, while behind followed the nearest female relatives, all clad in somber robes of black or gray, and, as a principal sign of mourning, having the hair of the head cut short, some of the locks being placed in the hand of the dead or laid beside him in the grave. Having called the departed by name for the last time, thus taking a solemn farewell, and having placed in the mouth the coin to fee the inexorable ferryman Charon, the friends lower the body into the grave. When necessity required, as in the case of those dying of a pestilence, cremation took the place of burial. Coins for the dead have been found, of which there is a most interesting example in the British Museum. It is a small silver coin, still united to the jaw-bone, which was found in a beautiful urn from a tomb in Athens. With it was found a small but exquisitely modeled figure of a siren, kneeling on a rock and tearing her long hair in expression of intense grief. This is now to be seen beside the coin. A burial scene is also preserved to us on an ancient vase, where four slaves let the body down into the grave. Then, as excavations have shown, the body was surrounded with vases, vessels, and small images. In one grave near Athens, which was opened under

the eyes of Benndorf, were found more than a dozen graceful and gayly painted small vases arranged in several rows over the body of the dead. The numberless figurines found at Tanagra and elsewhere testify to the lavishness with which the dead were surrounded with statuettes. Some of them seem to have reference to the gods of the underworld and their worship, while the larger part appear to have been intended to make sociable and habitable the last home of the departed. In children's graves have been found toys, many of which are to be seen in the British Museum; and, in like manner, favorite garments and food are said frequently to have been laid away with the dead. If a large number of bodies were to be interred, as was the case after battles, the same solemn ceremonies were performed, and, in addition, a funeral oration was pronounced, which in Athens was spoken only over those who had fallen in war. After the funeral ceremonies all the relatives gathered again in remembrance of the dead, and for the first time partook of food, as did Niobe in mythic times. This custom obtained also in other lands, for David observed it after the death of his child; and it seems to be echoed in modern Greece in the portioning out of food among the relatives on the evening after the funeral. While these ceremonies were thus strictly observed, corresponding care was taken with the place of burial. This, in earliest times, was in the dwelling itself of the deceased, as may be gathered from ancient writers and from more than a hundred graves found among the houses of the oldest part of Athens. The great highways without the city walls became, however, the usual places of sepulcher, where burial monuments lined the way, recalling to the passer-by the memory of departed generations. Thus, beyond the Dipylum, the broadest and finest of the gates of Athens, along the roads over which the traveler passed on his way to the busy harbor or to the sacred shrines at Eleusis, were the tombs of many private families, as well as distinguished statesmen, like Pericles and his compatriots. Here each battle-field, except sacred Marathon, was represented, and monuments were erected over the bodies of the fallen, piously brought to this spot. When the remains could not be recovered, memorial tombs were erected for the lost. Here, as we gather from exquisitely colored paintings on numbers of vases discovered recently in Athens, friends decorated the grave with signs of victory, which were gayly colored sashes or fresh wreaths. For this purpose was often used the evergreen ivy, sacred to Dionysus, god of the mysteries, in whom the Greeks

recognized the idea of new life, or sometimes the deep-colored rose which sprang from the blood of Adonis, or the acanthus. Around the most important tombs were planted groves of cypress, poplar, willow, and elm, sacred to Core, the goddess who passed the winter months in the cheerless under-world, and took her place again in Olympus with returning spring.

These monuments of the dead, with their precincts, were regarded as consecrated spots, and to disturb them was an act of sacrilege, to prevent which stringent laws were passed. They seem to have been regarded as temples erected to the dead, just as the temples proper were often the tombs of the gods, and so graves became the scene of many religious offerings. Offerings of slain beasts were brought to appease the lower gods and make easy the reception of the departed, who, it was believed, until they had tasted of blood in which there was life, would not rest from wandering in darkness and pitiable unconsciousness. Upon the anniversary of death and other stated days, further offerings of food and drink were brought to the graves. Traces of these customs have been found in many tombs, while a trace of this ancient rite seems still to exist in certain parts of Greece, in the custom of pouring libations of dark wine upon graves on anniversary days. The care of the ancients for the last dwelling of their loved ones did not, however, end here. The tombstones were washed and anointed with sweet-smelling sacred oil; upon them also were hung garlands of flowers and vases of perfume, these love-offerings being accompanied with prayers to the gods. Thus it is said by Plutarch, in his life of Aristides, that the *archons*, once every year, washed and anointed the tombstones of those who fell in the battle of Plataea, and it is a well-known fact that there was in Attica, also, a yearly festival for the dead, an ancient All Souls' Day. Scenes similar to these here described are represented on the vases discovered in Attic tombs, and of these vases the Metropolitan Museum at New York has interesting specimens. Still more of these are shown in Benndorf's superb illustrated work, *Griechische und Sicilianische Vasenbilder*, and many are preserved in the British Museum. In vases from Southern Italy, the dead are represented as seated in their little temples, receiving libations and offerings from friends. The monuments about which friends once thus gathered, performing their solemn rites, were of different sizes, shapes, and styles, varying with the locality, the wealth of the people, and the times. Thus in the rich satrapies of Asia Minor they were often extensive structures, such as the

THE DEMETER FROM CNIDUS. (BRITISH MUSEUM.)

so-called Nereid monument from Xanthus. Often they attained colossal size, like the celebrated mausoleum of Halicarnassus, and called into play for years the activity of distinguished sculptors like Scopas. In Greece, the tomb-monument appears much less pretentious, but even there great variety in form prevailed, the fierce lion of Chæronea towering above the warriors of the unhappy battle-field being in strong contrast with the humbler monuments of private persons.

The opportunity offered to the Greek sculptors in their sacred monuments was far more limited, as far as space was con-

cerned, than that enjoyed by the Egyptian sculptor, but they learned to improve that opportunity, and came in the fourth century, B. C., to perpetuate with their chisel that which was beautiful and sacred in life. Glancing over the vast array of intensely interesting relics, we find that, while sculptured tombstones from the olden time were numerous in Attica, it is a remarkable fact that almost none are preserved from the fifth century, B. C.—that great age of triumph over the Persians, when temples were built, and colossal chryselephantine statues were erected to the gods. About 400 B. C., sculptured tomb-

stones began to appear in Athens, and were erected in great numbers down to later times. Their form changed, however, monuments of the rich being made more imposing than in olden times. The confined space of the older monuments—doubtless due to Solon's laws restricting extravagance, became more ample, the tomb being frequently modeled after the front of a temple, having a pediment, supported usually by two pilasters, between which were placed figures in relief, seated or standing, as if occupying the temple. These tombstones, having at first figures about half life-size, grew larger, until they attained a heroic size. But the law made by Demetrius Phalereus, toward the end of the fourth century, again restricted them. The chapel-like form of the tombstone was derived, doubtless, from their sacred character, for the pediment was a holy symbol, pertaining to the house of the deity, and not used about the dwellings of mortals. This shape was advantageous for the artist, since it gave him a retreating background for his figures. In the monuments from the earlier part of this century, these are in very low relief, but as they increase in size, the relief becomes higher, until the figures seem to be full statues, leaning against the wall. This appears on comparing the quiet monument of Hegeso, having much of the simplicity of the Parthenon frieze, with that of the two Athenian ladies, Dimetria and Pamphile, now in Athens. Frequently, the number of figures represented does not correspond with the number of persons mentioned in the inscription, and it would seem that the work was often not originally intended for any particular family or individual, but was made suitable for one by the addition of an appropriate inscription. The heads are often made of separate pieces of marble subsequently affixed; this occurs even in reliefs of the best period, as illustrated on a slab found in 1861, and it is an interesting fact that often painting and sculpture are combined on the same monument. Sometimes the grave was adorned with a simple column or standard, surmounted by the figure of a siren, with the head and body of a female and the legs and wings of a bird, a lyre being frequently borne on the arm. We are at a loss to know whether these birds represented to the Greeks the singing of the funeral dirge, or whether, as poetry tells us, they were thought to attach

themselves to the souls wandering over the asphodel fields of Hades, instructing the dead in the laws of the gods. By their music, we are told, they banished all memory of earthly things from the minds of the deceased, and filled them with love to the eternal and divine. When placed on the graves, the sirens would thus become the symbol of never-ending lament for the dead, and at the same time of comfort for the survivors, who were reminded that their loved ones were in safe keeping. Sophocles called them the daughters of Phorcys, who sing the ways of Hades; and Euripides called them the winged virgin daughters of earth, sent by Core to comfort

the mourner with their plaintive music. Such was the simple but significant decoration over the grave of the great Sophocles himself, and a huge siren of Pentelic marble, playing a shell-lyre, was discovered outside the Dipylum at Athens, and is now in the museum of the Theseum. Others appear simply in relief in the pediment of the monument, sometimes tearing their hair, but usually playing upon various musical instruments. Of the

TOMBSTONE INSCRIBED DAMASISTRATE AND POLYCLEIDUS. (ATHENS.)

latter class, one of the best-preserved examples is a small tombstone found in Athens, but now belonging to the Berlin Museum. Here we see, above the lady busy with her bracelet, and the attentive maid, two sirens facing one another. Although somewhat rudely executed, still the earnestness with which one of the sirens strikes her lyre, and the other blows her

double flute, is unmistakable, and forms a strange but significant contrast to the familiar every-day scene taking place below. More unique than the siren, and only recently understood, are those half-figures placed upon the grave, one example of which, to be seen in Athens, is most effective, though the hair and other parts are left unfinished. A veiled woman here appears before us, visible only to the waist. Her hand, fingering her veil, and her bended head, give an expression of sorrow which is more impressive than any gesture of violent grief, and must have been most touching, as it looked down from its ancient monument upon the passer-by on the highway.

Continuing our wanderings among the abodes of the dead, we shall find that still another favorite and beautiful monument in Attica in the fourth century, B. C., was a long, slender marble vase, in the shape of a colossal ointment-vase, its body decorated with reliefs. On one side of one of these vases, Myrrhine, a beautiful hesitating figure, is led away by Hermes, and on the other side, a curious play on the part of some sculptor deserves notice. In addition to the high relief surrounding the front of the vase, and representing a mounted youth, and others on foot, there is scratched in under the handle of the vase a relief of such grace in composition and execution, that we wish the sculptor had followed out his fancy and finished his sketch. In these outlines, we see seated one of those beautiful Athenian women, so often represented as busied with their toilet, who, while looking at something in her raised right hand, seems to listen to a remark concerning this object made by a young girl leaning confidently on her shoulder.

Turning now to the numerous reliefs on tombstones, we find in them a most pleasing variety, although the range of subjects is narrow. The sculptors do not tire of representing nearly the same scene over and over, but it is done with such exquisite variations that the subject seems always new. These scenes may be broadly classed in two great divisions—those which are reminiscences of

TOMBSTONE, PROBABLY OF A YOUTHFUL HUNTER. (ATHENS.)

holds a short, knotty club; his little attendant quietly sleeps at his feet, while on the other side his vigilant hound keeps watch, with nostrils to the ground. Unhappily, no inscription accompanies this grand monument to tell us whom its noble forms commemorate, or who was the artist whose masterly hand executed a work which has outlived the fleeting years and memories of his age, to be a joy to later generations.

Another large class of tombstone scenes, and one in which remarkable tenderness of feeling is exhibited, represents the family and friends gathered about the chair of one of their number, who is always larger than the rest, looking into one another's faces and joining hands. In a relief at Athens which, the inscription tells us, represents Damasistrate and Polycleidus, the latter holds the hand of the beautiful lady, who is seated. While she looks affectionately into his

TOMBSTONE IN ATHENS REPRESENTING MOTHER, CHILD, AND SERVANT.

life, giving us not actual portraits of the dead, as in earlier and later times, but their common affections, favorite occupations, or general traits in representations of ideal form; and those of the second class, which seem to have been developed toward the close of the fourth century, in which the dead are represented as heroes, and are worshiped by their families and kin. To the former class belong those vigorous reliefs which show us a strong youth engaged in close combat with an enemy. In some cases the relief shows the manner in which the dead came to his end. If he was a shipwrecked sailor, he may be represented as seated sadly on the shore in front of his ship. Oftener, however, the scene is taken from daily occupations, from family gatherings, or sports in the wrestling-school. Of wonderful perfection in composition and execution is a tombstone now in Athens, the figures of which are of heroic size. A glorious youth, in the full vigor of early manhood and the very picture of life, sits at ease on his mantle, which is thrown carelessly over a slab, surmounting two steps. He looks quietly out into the world, apparently undisturbed by the earnest gaze of the draped older man, who, with one hand thoughtfully resting on his beard, and the other clasping a long cane, forms a speaking contrast to the freedom and unconsciousness of his happier young companion. In one hand the youth

TOMBSTONE OF AMENOCLEIA, DAUGHTER OF ANDROMENOS. (ATHENS.)

face, she fingers her veil and seems to speak. Even the servant, in long sleeves and house-cap, behind her chair takes an eager interest in the conversation, while the friend or sister in the background stands sadly, with head bent forward and one finger resting suggestively against it. What a poem on friendship we may read in these simple, speaking gestures, and how can we sufficiently admire a people who made these common,

every-day scenes the vehicle of expressing so much that is noblest and best in our nature.

A mother's love could scarcely be more touchingly told than in another relief in Athens, where a figure bends gently forward over her child and embraces it with her left arm, while with the right hand she holds her matronly veil in place. Here the servant is evidently a quiet sympathizer in the family sorrow.

TOMBSTONE INSCRIBED HEGESO, DAUGHTER OF PROXENOS. (ATHENS.)

Thus we see that, if family gatherings are depicted, there are no violent signs of sorrow, but many of domestic peace and joy, tinged with faint suggestions of sadness, infinitely more elevating and ennobling than unbridled lamentation. Where ladies appear busied with the toilet, in every case there is so much dignity and grace about the whole that it does not appear a trivial act, but the expression of woman's nature, needing love, and instinctively seeking to win it by beautifying her person. Such is the tombstone, now in Athens, of Amenocleia, daughter of Andromenos the Athenian. She appears standing

within her little temple-like chapel, steady-ing herself on the servant's kerchiefed head, and holding one foot out, in order that the latter may arrange her sandal, in which operation the lady seems much absorbed. Opposite her stands another, apparently higher in station than the kneeling maid. She wears no cap or long sleeves, but appears as richly attired as Amenocleia herself. In her hand she holds ready the casket, which has often been looked upon as a sacred incense-holder; but the frequent recurrence of reliefs in which the lady lifts from the box a veil shows clearly that it is not connected with religious

rites, but simply with the toilet, and contains articles of personal adornment.

In the toilet scene on the tombstone from Athens now in Berlin, a seated lady, wearing large round ear-rings, a band in her hair, and a veil almost dropping from the back of the head, appears clasping about her wrist a bracelet, which she may have taken from a casket held by her no less graceful companion. The latter has ready also a fan, and seems much pleased with the adornment of the lady who is seated. The sirens above them alone remind us that this scene concerns those who have entered the realms of the dead. A comparison of two of the most beautiful of the toilet scenes will show the change which seems to have led to the decided expression of sadness in the tombstones of later date, even when such a simple scene appears. The older of these reliefs, one of the noblest monuments of its kind, discovered but a few years ago, and now in Athens, once stood over the grave of Hegeso, daughter of Proxenos. It is of Pentelic marble, in the form of a small temple with pediment. Between its pilasters there appear in profile two beautiful women. One is seated on a graceful chair, with feet resting on an artistic footstool, usually the sign of rank in ancient Greek sculpture. She looks with a gentle, womanly expression at some object she has taken from a casket, which is held open by a companion standing before her. The striking contrast between these two figures is significant. The one that is seated is richly clad, a veil falls over her head, and a short-sleeved chiton, buttoned over the shoulder, drapes her graceful form; her feet are sandaled, her hair is elaborately arranged, being gathered behind into a sling-like head-dress; two fillets wind through the wavy front-locks, which are separated from the forehead by a low diadem. The unaffected elegance of this lady "to the manner born" is evident in the easy pose, the bended head, and the graceful, dainty play of the fingers, while becoming simplicity marks the servant who holds the casket. A long chiton with tightly fitting sleeves, the garment of the foreign barbarian, clothes in easy, plain folds this smaller form, whose feet are entirely covered by shoes. Her beautiful face is so like that of her mistress that the two might be taken for sisters, were it not for the outward signs of distinction in rank. In this relief we have a high-born Athenian lady occupied with her toilet, furnishing another proof of the fondness of the Greeks for scenes of life rather than of death on their tombstones. Before this relief could be seen by competent judges, it had been thoroughly washed by its ignorant own-

ers, and the last traces of color, which once gave it the necessary finish in detail, had been entirely obliterated. In the base there is still a round hole, which doubtless often received the libations brought to the tomb of Hegeso by her kindred. In determining the age of this relief, the exquisite grace, devoid of all luxurious fullness, and the mere shadow of emotion flitting over these faces, as well as the harmonious adherence to true relief, remind us forcibly of the style and treatment of the Parthenon frieze. Nothing more is expressed than the noble, beautiful character of the persons as they are absorbed without affectation in the attractions of the toilet.

By way of comparison, let us turn to that other relief, now in the Piræus, found there in the vast necropolis. We are struck by the similarity in composition and general treatment. But the spirit breathed by this relief is different; the casket is only reluctantly opened, and the lady to be adorned sits bent with sadness, quite absorbed in thought, but little inclined to interest herself in its contents. Such is the gentle pathos of her pose that we seem to be able to divine her thoughts, and the sadness of life cut short takes possession of our souls.

While some have looked upon these scenes on tombs as representing the happy reunion in Elysium, and its occupations, the larger number of the students of antiquity consider the subjects of these reliefs as but the simple, unaffected mirror of Athenian life, with no mysterious reference to the hopes and joys of another world, such as were usually portrayed in Roman times. The absence of individuality, the strongly conventional type in the figures of these tombstones, is further explained as the expression of a peculiarity in the Greek civilization of that time, which regarded humanity in broad classes, and emphasized general characteristics. Thus, in their art, the man was represented in his traits as athlete, warrior, or husband, and the woman as maiden, wife, or mother. But the tendency was constantly asserting itself, more and more, to clothe with sensible form the various emotions and most subtle moods and feelings. How able the sculptors of this time were to express intense emotions, as well as the quieter ones, and yet to preserve the ideal type in faces and forms, appears from the spirited reliefs which once decorated the regal tomb of Mausolus at Halicarnassus, some of which are now in the British Museum. Very similar to these marble reliefs, in spirit and form, are two bronzes now in the British Museum, which, although only seven inches high, deserve the most careful notice on account of their grandeur of style. These are

TOMBSTONE FOUND IN THE PIRÆUS.

the celebrated bronzes of Siris, two groups in high relief, which once served as ornaments to a piece of armor, covering the buckles by which the breastplate and back-piece of a cuirass were united at the shoulder. These little bronzes were discovered in Southern Italy, within a small ruin near the ancient Grumentum (Saponara) and the river Siris. The fact that they were found in the vicinity of the spot where, about 280 B. C., Pyrrhus, King of Epirus, first gave battle to the Romans, nearly losing his life on account of the splendor of his armor, has led to the conjecture that these fragments were a part of the spoils of that engagement, and possibly the very armor of Pyrrhus himself. But that they were found within a ruin seems to indicate that they came either from a tomb or from a temple, where they had made part of a votive offering. They were purchased by the British Museum for £1000, and have been greatly admired, on account of the superiority of their workmanship and their masterly composition, as well as the passion displayed in the small faces. The subject of both groups is the same—that of a combat between a war-

rior and an Amazon. In the plate the female warrior has fallen on one knee, and her antagonist, a bearded and helmeted hero, has caught her by the hair,—a group calling to mind some figures in the frieze of the Mausoleum. Although the action is the same in the two reliefs, there is no monotonous repetition. The surface is modeled with great refinement as well as breadth. In Thorwaldsen's judgment, "these bronzes afforded the strongest possible proof that in art majesty is not dependent upon mere mass, since," as he says, "these diminutive works are truly great, while many modern colossal figures are, notwithstanding their size, petty and mean." This bronze possesses an additional charm in the pleading, sorrowful expression of the fallen Amazon, as well as in the stern, unrelenting face of the warrior, in whose overhanging brows vengeance seems to brood. The passionateness expressed, as well as the grouping, suggests to the mind the school of Scopas. A glimpse at the workmanship heightens our admiration of these ornaments. The bronze is not cast, but hammered out, like modern *repoussé* work, to an unrivaled thinness, and with great surety. The parts less convex are generally more massive, and more furnished with metal than those which have a greater projection. Where the relief is very strong, as in the heads, the plate is reduced to the thinness of a sheet of paper, and on the reverse we observe cavities nearly an inch deep. Remembering the difficulties attending this process, the accuracy of blow and knowledge of form required to bring out the exquisite anatomical details here seen, we cannot enough admire the artist's skill, while, if we remember that it was bestowed not upon a statue but upon armor, we realize how deeply the spirit of true art had permeated every handicraft.

We may not unfitly close this short survey of some of the marbles and bronzes of the fourth century before our era, by a glimpse at that national monument which marks a great crisis in the world's history, when the liberties of Greece were crushed in the battle of Chæronea, August 7, 338 B. C. On the Boeotian plain, spread out at the foot of Mount Parnassus, thirty thousand Macedonians, led by Philip and his son Alexander, then only eighteen years of age, met and annihilated the combined forces of Thebes and Athens. So terrible was the conflict, and so bloody the hand-to-hand fight, that the river which winds through the plain received the name of Hæmon, the stream of blood. When the battle seemed hopeless, three hundred heroic Theban youth, the "sacred band," threw

themselves into the conflict, but in vain, the whole number falling before the enemy. Over their common grave a grateful people raised a colossal monument, a lion of gray Boeotian marble. Into this grave we are privileged reverently to gaze, since, two thousand one hundred years after that battle, it has been opened, and the brave youths have been found as they were piously laid away, side by side, still showing the marks of the hopeless struggle. Cruel lance-points still pierce both thighs of one, another has his chin fearfully crushed, and a third his skull. This solemn tomb is again to be closed, and the brave dead left to rest in peace. Above them the Greeks propose to raise again the monument, placing upon it the lion, which, with its pedestal, will once more tower up thirty-nine feet against the blue sky of Greece, as Pausanias saw it centuries ago. He noticed the lion, and explained its presence as referring to the courage of the fallen, but the inscription, he says, is lacking, "Because, as I believe, fate has not crowned their bravery with the reward it deserved." The monument to these brave men, the lion, has also suffered. Later generations, thinking treasure might be concealed within, laid a mine and blew its colossal form into many fragments. Modern travelers have often passed by the spot where these were half-hidden in the earth, and Professor Mahaffy tells us he found wild bees at work in the mouth of the upturned head, while the honey-comb clung to the teeth. These scattered fragments, with the exception of one paw, have, however, been recovered, but it will be no slight matter to bring them into their places again. The paws, recently discovered, measure more than three feet in length, and the weight of the head is estimated at not less than four and a half tons. The back of the lion was left quite rough, but the utmost care was lavished upon the neck and belly, doubtless because these parts were most exposed to view. The head, of which there is a cast in the British Museum, is thoroughly natural. The jaws do not fiercely yawn upon the beholder, but between the slightly opened lips the teeth are shown, and the eyes seem directed on some near but hated object. The pupils are indicated by deep round cavities in the eye, over which swell powerful muscles. The idea embodied in this majestic beast seems to be that of a lion who, rising, growls at the enemy in low but ominous tones. It is thus a fit emblem of undaunted courage, and adds one more witness to the ability of the sculptor of the age of Praxiteles to render eternal the noblest emotions.

MATTHEW ARNOLD.

A FEW years ago it was a maxim with critics that, in writing about the productions of a man of genius, it was necessary to take into account the circumstances of his parentage, country, education, and all the more important facts of his environment. Lately there seems to have begun a reaction against this doctrine. We are told that it is only a man's work which should interest us—that we have no concern with his life. This is a hard saying, and yet it must be owned that the practice of looking into a writer's personal history may be carried too far. What should be a criticism may develop or degenerate into a chapter of social gossip, or a collection of casual anecdotes. This is one danger, and there is another danger lest, in getting together facts, we may suppose ourselves to be accounting for such an unaccountable thing as genius. M. Taine, the famous French historian of English literature, is rather apt to fall into this trap, and to think that, when he knows all about the water-sheds, rain-fall, climate, and vegetables of a country, he can explain the genius of a country's poets. Now, millions of us live under virtually identical conditions of climate, scenery, and so forth, but poets are rare in twenty millions of men. Yet even after making these deductions from what may be called the personal and historical method of literary criticism, that method has great advantages. In the first place, it is readable. As long as we are human beings, we are likely to care about the personality and the fortunes of people who have given us great thoughts and noble pleasures. Again, a man's environment does, to a distinct and obvious extent, affect his productions. Take the subject of this essay, Mr. Matthew Arnold. The earnestness of his morality would not be exactly what it is if he had not been at Rugby when "moral thoughtfulness was the chief characteristic of Rugby boys," as one of them is said to have confessed. The airy petulance of his manner, his "educated insolence," as Aristotle defined wit, would not be what it is, but for his training in that great school of this kind of humor, Oxford. Lastly, his poems, in a hundred places, plainly confess the feelings of a child of the mountains, of one whose years have often been spent in the shadows of Wordsworth's hills, and by the margins of his lakes. For this reason, because so much of the outer world in which he has lived

lives again, and immortally, in his verse and prose, I venture to write of Mr. Arnold in what may be called a personal and historical manner. There is this further excuse, that the method is the method of one whom Mr. Arnold has often called his master—the French critic, Sainte-Beuve. Once more: Mr. Arnold has always been himself a writer who introduced the personal element into his criticism. He has not spared "the cock of Lord Elcho's hat, one of the finest things we possess." He has described Dr. Russell, the "Times" correspondent, mounting his horse at Versailles during the Franco-German War, with the old Emperor holding the beast's head, and the Crown Prince at the stirrup. He has chaffed Mr. Frederick Harrison about his patent guillotine, and Mr. G. A. Sala about a presumed alcoholic anodyne against the painful reflection that life is a dream. He has spared neither bishops, nor peers, nor dissenters, neither Mr. Newman, nor Mr. Cattell, nor the Bishop of Gloucester, nor my Lord Shaftesbury. Hence, it may be inferred that he, at least, does not consider men and their work as two quantities irreconcilably apart. And there is little risk that a critic who has derived much pleasure from Mr. Arnold's verse, and much instruction from his prose, will venture on statements or researches of an impertinent kind. So with this apology for the method of our essay, we may go on to examine Mr. Arnold's writings and career.

Mr. Matthew Arnold, the son of the famous Dr. Arnold, head-master of Rugby, was born at Laleham, on the Thames, in 1822. Dr. Arnold was of a Suffolk family, and Suffolk is not a district that has produced many poets. But though the world knows Dr. Arnold best as a moralist, a historian,—above all, a disciplinarian,—the vein of poetry, of delight in the beauty of heroic actions and passions, and in the charm of nature, was very strong in his character. Laleham itself, which Dr. Arnold calls "this dear place," where the first six years of his son's life were passed, is no unfit cradle for the childhood of a poet. It lies, surrounded by trees, on a green bank of the Thames, opposite the old town of Chertsey, to which Abraham Cowley, the poet, withdrew from the bustling little London of the seventeenth century. The ancient Chertsey bridge, the great pool with its lasher, always foaming, and fresh, and cool on the shady side where the willows dip to the stream,—these, with the

clear back-waters, the trailing green water-weeds, the cool-rooted irises, the purple loose-strife, make the Thames very beautiful at Laleham. The banks are bordered here and there with poplars of great age and height, and from a boat in the streams of the back-waters you have a glimpse of low blue hills, such as are rare in the lowlands of England. Whether the influence of this country helped to make the boy who was born in it a poet (and an angler), it is not possible to say. But the Arnolds went from the pleasant Thames (1828) to Rugby, where the country is by no means so varied and beautiful. Laleham, said Dr. Arnold, was "like a place of premature rest." Rugby was a place of labor and of matter-of-fact. Dr. Arnold, though not precisely a sentimentalist, felt the necessity for something more of natural beauty than the midland flats could give, and made a home for summer and the holidays at Fox Howe, in Westmoreland. We may quote the Doctor's description of the place,—of a country so gracious and sweet that it seems the natural home of grave and pastoral poets:

"Our Westmoreland house [this was written in 1833] is rising from its foundation, and, I hope, rearing itself tolerably in *auras aethereas*. It looks right down into the bosom of Fairfield—a noble mountain which sends down two long arms into the valley, and keeps the clouds reposing between them, while he looks on them composedly with his quiet brow; and the *Rotha, purior electro* [more clear than amber], winds round our fields just under the house. Behind we run up to the top of Loughrigg, and have a mountain pasture in a bason on the summit of the ridge, the very image of those *saltus* [glades] on Cithæron where *Cædipus* was found by the Corinthian shepherd. The Wordsworths' friendship is certainly one of the greatest delights of Fox Howe, the name of our little estate."

Here, then, was a very proper home for a boy who was to be a poet, and whose poetry is haunted by the music of *Rotha*,—that stream clearer than amber,—and by the influence of Wordsworth, his father's friend. That poet was now, it may be said, beyond the reach of sneers and mockery, and was declining into a serene and peaceful age, in which poetry, nature, affection, were a threefold thread of happiness. Dr. Arnold says (1833):

"As far as scenery goes, I would rather have heath and blue hills all the year than mountains for three months and Warwickshire for nine, with no hills either blue or brown, no heaths, no woods, no clear streams, no wide plains for lights and shades to play over; nay, no banks for flowers to grow upon, but one monotonous undulation of green fields, and hedges, and very fat cattle."

Yet, at Rugby, among the green hedges, and fields, and fat cattle, Dr. Arnold's sons received most of their education: The out-of-door aspect of the school life; the cricket and

foot-ball in the close; the bird-nesting, bathing, and fishing; the enmities and friendships; the serious shadow which religion threw, now and then, across the merriment of boyhood, have been described, for the delight of all boys, in Mr. Hughes's "Tom Brown's School-days." It is enough to refer to "Tom Brown" for that section of Mr. Arnold's biography, and to Mr. Clough's letters for the state of mind of at least one school-boy who was, and remained, the friend of Mr. Arnold.

Mr. Arnold, on leaving school, where he won the prize-poem, was elected to a scholarship at Balliol. Under the mastership of Dr. Jenkins, an eccentric and despotic but practical man, Balliol had become the hardest-working college in the University. The scholarships were thrown open to general competitions, and were the first prizes which attracted ambitious boys from the public schools. Even now the Balliol scholarships are the most difficult to win. But, in 1840-44, they were held by a really remarkable set of young men, whom Principal Shairp, himself a Balliol scholar of the time, has commemorated in an interesting poem. The following passage describes how Mr. Arnold,

"Wide-welcomed for a father's fame,
Entered with free, bold step that seemed to claim
Fame for himself, nor on another lean.
So full of power, yet blithe and debonair,
Rallying his friends with pleasant banter gay,
Or half a-dream, chaunting with jaunty air
Great words of Goethe, scrap of Béranger.
We see the banter sparkle in his prose,
But knew not then the undertone that flows,
So calmly sad, through all his stately lay."

I do not like "jaunty."

The Oxford of Mr. Arnold's undergraduate years was very much what Oxford has always been. The majority of undergraduates lived in it "as in a great country-house"—a place full of amusements, riding, boating, cricket, and lounging. The memories of those pleasant days live perennially in the exquisite poem of "The Scholar Gipsy." (Poems. 1853.) Mr. Arnold was not distinguished, as far as I am aware, like many of his school-fellows, for success on the river or the cricket-field. If he pulled in the Balliol eight, or played in the eleven, tradition has retained no record of his exploits. Tradition, at college, has a very short memory and is very capricious in her choice of favorites. When the writer was an undergraduate at Balliol, fifteen years ago, the rooms which Mr. Clough was said to have occupied were shown to the inquiring freshmen. They were quaint and tiny garrets, in the roof of the old quadrangle which has since been pulled down (indeed, it was then tumbling down rapidly), and has been replaced by the

present amazing structure, so much more remarkable for point than for feeling. Tradition, in the person of an exceedingly old and venerable college servant, had some recollection of Mr. Swinburne, the youngest in the trinity of Balliol poets who won general reputation. But Mr. Arnold, in my time, was already professor of poetry; and pious tradition, following the advice of Freya in the "Saga," asked no questions about what he had done "in the morning of time." As a poet

"Breathed on by the rural Pan,"

to quote his own line in "Verses written in Kensington Gardens," it may be presumed that he preferred long rides and walks in the beautiful country, at a distance from Oxford, to the routine of the place—the dusty drive to Cowley marsh and cricket, the severe pull, twice a day, up and down the racing-course, from the Barges to Iffley Lock, and the mournfully monotonous "grind" around the parks and up Headington Hill. Perhaps the majority of undergraduates see little of Oxford scenery, except as displayed in these narrow circles—unless, indeed, they are hunting-men, or take enormously long walks on Sundays. But the author of "The Scholar Gypsy" must have known the "stripling Thames" as far up as Bablockhithe, as well as at Bagley Wood (now a preserve), or near the ruined abbey of Godstow, not far from the town. To Godstow, which is now a mere shell of gray, ivy-clad walls, with a large pig-sty in the sacred ground, was borne the body of Fair Rosamond, after her murder by the jealous Queen at Woodstock. The country has a curious kind of sentiment, that lingers, like the ivy and the water-weeds, about the old brown wooden bridges and the wandering streams of the divided Isis. Much is changed in all that quiet country. Woods that were open are closed, and large placards warn trespassers that they will be prosecuted. The Scholar Gypsy, if he had wandered into Bagley Wood, would have been arrested by the game-keeper of St. John's College, and all strollers are suspected of hostile intentions to pheasants.

'In the two Hinkseys nothing keeps the same;
The village street its haunted mansion lacks,
And from the sign is gone Sibylla's name,
And from the roofs the twisted chimney-stacks."

In one of Mr. Clough's letters occur the words, "M. has gone fishing when he ought to be reading." It is a very fortunate thing for us that "M." frequently went out fishing,—

"And with the country-folk acquaintance made
By barn in threshing-time, by new-built rick.
Here, too, our shepherd-pipes we first assay'd,"

—when he ought to have been reading. And, probably, it was fortunate for Mr. Arnold that he had an abundant lightness of heart in these undergraduate years. Oxford was in one of her hot fits of theological discussion when he was a scholar of Balliol. These hot and cold fits alternate curiously. In my own time, the stir caused by the Broad Church and "Essays and Reviews" was subsiding. We floated on the swell of that stormy sea, over which a queer kind of Anglican Hegelianism poured its smoothing oils. Probably something new in heresies or philosophies has come in since then, Mr. Herbert Spencer's ideas having had time to become a little threadbare, and his star, as the Rev. Joseph Cook beautifully says, inclining "behind the Western pines." In Mr. Arnold's undergraduate years, Oxford "was stirred to its depths by the great Tractarian movement. Dr. Newman was in the fullness of his popularity, preaching at St. Mary's, and in pamphlets, reviews, and verses continually pouring forth eloquent appeals to every kind of motive that could influence men's minds." Mr. Clough took all these things much too hard for his happiness. "Before he had attained his full intellectual development, he examined, and, in some degree, drew conclusions concerning the deepest subjects that can occupy the human mind."

"His piping took a troubled sound
Of storms that rage outside our happy ground,"

says Mr. Arnold, in "Thyrsis." Probably Mr. Arnold did not take these things too hard, and very likely he "went out fishing," instead of, like Cardinal Newman, discussing the nature of apostolical succession while walking round and round Christ Church meadows, between the Cherwell and the Isis. Religious thought, religious controversy, have moved away from those old fears about lapsing into the Monophysite heresy which frightened Newman into the Church. And there was, perhaps, little reason to fear that Mr. Arnold would be driven either to Rome or into the arms of the Monophysites.

"For rigorous teachers seized my youth,
And purged its faith, and trimmed its fire,
Shewed me the high white star of Truth,
There bade me gaze, and there aspire,"

writes the poet, in "Stanzas from the Grande Chartreuse." But, in trying to understand Mr. Arnold's thought, it is necessary to remember that his youth was passed in this heated air of discussion about politics, religion, and the relation of church to state. The mark of his father's influence abides in his attachment to the ancient and beautiful Estab-

lished Church. The spirit of the undergraduate who by no means allowed speculation to sober his spirit of enjoyment, survives in the wit and high spirits which make Mr. Arnold's writings on theology almost as readable as the "Provincial Letters" of Pascal. Even in these earliest years, the poet and critic was absorbing the experience, testing the ideas, which are the matter of his writings. He gained something better at Oxford than the academic distinctions which dozens of men obtain every year. Like Mr. Clough, Mr. Arnold did not obtain a first-class in the final examination. Like many men who have afterward become distinguished, as Dean Stanley and Mr. Ruskin, he obtained the English prize-poem, the "Newdigate." This is the prize which every one who can turn a line competes for, and which almost every one professes to despise. People scarcely write prize-poems in earnest, and one writer who has since made himself heard of in literature succeeded in pleasing the examiners with a poem which was of the nature of a practical joke. Yet, somehow, the prize-poem generally goes to good men. Mr. Arnold's topic was "Oliver Cromwell," and with his ideas about Puritanism, the theme seems uncongenial. The poet was chiefly impressed with the contrast between the love of freedom in Cromwell, a native of a flat, commonplace country, and the same sentiment in men born within sound of the voices of the mountains and the sea :

"All Freedom's mystic language—storms that roar
By hill or wave, the mountains or the shore—
All these had stirred thy spirit, and thine eye
In common sights read secret sympathy;
Till all bright thoughts that hills or waves can yield
Deck'd the dull waste and the familiar field;
Or wondrous sounds from tranquil skies were borne
Far o'er the glistening sheets of windy corn:
Skies that, unbound by clasp of mountain chain,
Slope stately down, and melt into the plain;
Sound, such as erst the lone wayfaring man
Caught, as he journeyed, from the lips of Pan;
Or that mysterious cry that smites with fear,
Like sounds from other worlds, the Spartan's ear.
While, o'er the dusty plain, the murmurous throng
Of heaven's embattled myriads swept along."

Though Mr. Arnold did not obtain a first-class, he was consoled, like Mr. Newman and Clough, by an Oriel fellowship (1845). In those days, the fellowships of Oriel were the highest prizes which Oxford had to offer to junior men. The college was, I believe, the first to throw its fellowships open to all members of the University, and thus often reversed the verdict of "the schools,"—that is, of the public examiners. Men were chosen for their ability, rather than for their knowledge of minute points of detail in Aristotle, Herodo-

tus, and Thucydides. A man might be elected even if he had forgotten how the Egyptians showed their veneration for the dead—yes, even though he hastily answered that "they showed it by making their parents into mummies." From this point, where his preparation for the work of life may be said to have ended, and the period of production to have begun, we need not follow the personal career of Mr. Arnold. His profession, apart from literature, that "good staff and poor crutch," as Sir Walter Scott called it, has been Education.

As an inspector of schools he has written on education in France, Germany, and England. And when Mr. Arnold asserts that Ireland will never be happy while the English middle classes are educated in their favorite and most worthless private schools, one feels inclined to reply, "*Vous êtes orfèvre, M. Josse*,"—"You are a public-schoolman, and the prophet of public schools."

Mr. Arnold's first volume of poems ("The Strayed Reveller, and other Poems, by A."; London, Fellowes, 1849) was published in the same year as Mr. Clough's "Ambarvalia." Mr. Arnold's volume was remarkable for its rare perfection within the limits imposed on himself by the author. He was already "the surest-footed of poets." Here, one might say, is nothing not complete and accomplished, nothing tentative, nothing uncertain, nothing fantastic, and nothing imitative. The influence of Greek literature and of Wordsworth may, indeed, be traced—the former showing itself in the calmness and repose of the work, the latter in the poet's view of nature, as the companion and instructor of man. But there is already apparent in Mr. Arnold's verse a certain resignation, "a sad lucidity of soul," an acceptance of life as worth living on its own merits, without regard to the possibility of a future, to which Wordsworth's piety did not attain. This resignation is a singular feature in the work of a man so young, of a poet writing at an age when doubt, if it exists, generally begets discontent and revolt. The beautiful poem of "Resignation" is suggested by one of those long mountain walks described by Dr. Arnold in a published letter—a walk retraced in manhood, ten years after it had been enjoyed in boyhood :

"Once more we tread this self-same road,
Fausta, which ten years since we trod;
Alone we tread it, you and I,
Ghosts of that boisterous company."

The moral of the melancholy follows :

"The world in which we live and move
Outlasts aversion, outlasts love";

and in this general life the poet finds his answer to all questions, and his ceaseless consolation in

"That Life, whose dumb wish is not missed
If birth proceeds, if things subsist:
The Life of plants, and stones, and rain:
The Life he craves; if not in vain
Fate gave, what chance shall not control
His sad lucidity of soul."

These lines seem to express the gist of Mr. Arnold's "criticism of life," as expressed in poetry, and these are the thoughts which later he put into the mouth of the world-weary philosopher, Empedocles. But one does not look in his verse, nor in that of any other poet, for the criticism of life alone, but for pictures of life, for melody of language, for shapes and sounds of beauty. And these are to be found without stint in this little volume of a hundred and thirty pages. Here appeared for the first time "Mycerinus," the story of that old Egyptian king, mentioned by Herodotus, whose virtue was rewarded by the gods with a brief span of existence, and who balked them by devoting that span to enjoyment:

"Six years—six little years—six drops of time!
Yet suns shall rise, and many moons shall wane,
And old men die, and young men pass their prime.
And languid Pleasure fade and flower again;
And the dull Gods behold, ere these are flown,
Revels more deep, joy keener than their own."

"The Strayed Reveller" is another gem of this volume—a scene in Circe's island, where a youth has lost himself, and meets the goddess and her captive Odysseus. About these things every one can speak only for himself, but I do not know anything else in English verse so full of the spirit of Greece as "The Strayed Reveller" and some of Mr. Arnold's other poems on classic themes. His persons seem to look at life and at death with the kind of calm, the enjoyment of all mortal experience, the grave smile of resolution, which we admire in the figures on the Greek sepulchral *stelæ*. In these monuments death itself is treated only as an incident like another, and the man who is to die stoops to caress his hounds, or takes his wife's hand for the last time, and turns to ride the horse of Death that waits at his door, with no sadder emotions than if he were starting for a day's sport in the hills. The Greeks looked at life as the gods are said to do in "The Strayed Reveller":

"The Gods are happy.
They turn on all sides
Their shining eyes,
And see, below them,
The earth and men.

They see the Centaurs
In the upper glens
Of Pelion, in the streams,
Where red-berried ashes fringe
The clear-brown shallow pools,
With streaming flanks, and heads
Reared proudly, snuffing
The mountain wind."

These unrhymed lines, in which Mr. Arnold has usually chosen to reproduce the intangible grace of the Greek choruses, seem to me to come like the last echoes of the antique world. Another poem, not less beautiful, in the earliest volume, is "The Sick King in Bokhara," with its admirable pictures of the hot Eastern life in Central Asia—a district which, for some reason, appears to have had much interest for the poet. Another piece, "To My Friends Who Ridiculed a Tender Leave-Taking," became the germ of the poems called "Switzerland,"—the poems of "Marguerite" in the edition of 1853,—which have their epilogue in "The Terrace at Berne," written ten years later and first published in "New Poems" (1867). In the verses "To My Friends" is the exquisite picture:

"Paint that lilac kerchief, bound
Her soft face, her hair, around,
Tied under the archest chin
Mockery ever ambushed in.
Let the fluttering fringes streak
All her pale, sweet, rounded cheek.
Ere the parting hour go by,
Quick! thy tablets, Memory!"

This set of verses is almost the only poetry which Mr. Arnold has dedicated to the passion of love. One might wish, perhaps, that the influence of Goethe were rather less perceptible in them, and they would be more pleasant reading if "The Terrace at Berne" had never been written, after that ten years' interval in which "young men pass their prime." The singular melancholy which life among the mountains engenders, and the charm of Senancour, the morbid French solitary, who wrote "Obermann" during the Revolution, do not appear in Mr. Arnold's first volume, but have left a deep mark on the verses in the volume of 1853. The most generally attractive poem of the first volume is, without doubt, "The Forsaken Merman," which it is impertinence to praise after the gorgeous eulogy by Mr. Swinburne: "The song is a piece of the sea-wind, a stray breath of the air and bloom of the bays and hills. Its mixture of mortal sorrow with the strange, wild sense of a life that is not after mortal law, the child-like moan after lost love mingling with the pure outer note of a song not human, the look in it as of bright, bewildered eyes with tears not theirs and alien wonder

in the watch of them, the tender, marvelous, simple beauty of the poem, its charm, as of a sound or a flower of the sea—set it, and save it apart from all others in a niche of the memory." In leaving the volume of 1849, one cannot but remark how certain lines in it hang in the memory, perhaps after a reader has forgotten their source. Such lines are this from "Resignation"—

"Where Orpheus and where Homer are";

and this, from "Stagirius," in which Love is spoken of as

"Hungry, and barren, and sharp as the sea."

If no more than fragments like these were left of Mr. Arnold's poems (and as evil a fate has befallen some of the Greeks), a competent critic of the far-off future would be able to say that the author of them was, in the truest sense, a poet. They have the unmistakable *cachet* of genius for verse.

Mr. Arnold's second volume of poetry, like his first, was published anonymously as "Empedocles on Etna, and Other Poems, by A." (London, B. Fellowes, 1852). These verses resembled their predecessors in austere tone of thought, in a simplicity and perfection of expression which only the study of Greek models can give, and can give only to a few, and in a singular felicity in the delineation of nature. The most important poem in the volume deals with the last day and night of the Sicilian poet-philosopher, Empedocles. We may with probability assign B. C. 480-470 as the period of Empedocles's activity. He came of a noble house, and his grandfather had won a victory at Olympia with a four-horse chariot—an event at least as important in Agrigentum as the success of "Iroquois" in New York. Though born of a noble house, Empedocles was a friend of the democracy, which he aided in recovering and maintaining its liberty. The throne, or rather the *tyrannis*, was offered to him; he declined, and presently the people, with accustomed gratitude, drove him out of Agrigentum. About his death various legends are current; Mr. Arnold has adopted that which makes him leap into the burning crater of Etna. Empedocles was an orator of the highest skill. He also professed magical arts, the power of raising and calming the winds, and of causing rain and drought. In a surviving fragment he boasts of the almost divine honors which were paid to him in the cities of Sicily. But we must make large allowances for the superstitious tales which a later credulity foisted into the legend of Empedocles. He lived in the age of Herodotus, while

Greece was still credulous, but when credulity was on the wane. Long afterward, after Christ, in the age of Alexandrian mystics, Greek philosophy fell back on the illusions of its childhood, and then, probably, the miracles were inserted into the legends of Empedocles and Pythagoras. As to the philosophy of Empedocles, preserved in fragments of his poetry, space does not permit us here to examine it at any length. "Empedocles, however earnestly he deplores it, finds on all sides in the present world strife and alternation, and his whole philosophy aims at the explanation of this phenomenon. His theories are confused by the presence of mythical abstractions like Love and Hate." This is the man, majestic, accomplished, the friend of his kind, the baffled philosopher, the baffled democrat, whom Mr. Arnold chose as his hero. He thought of Empedocles as wandering

"—between two worlds, one dead,
The other powerless to be born."

On the one side, as a prophet and a healer, Empedocles appeared to belong to the former heroic age

"Where Orpheus and where Homer are."

As a philosopher intent on solving the riddle of the world, he belonged more to the future age of Plato and Aristotle. In the poem he is represented as deeply conscious of failure, weary and ashamed of his repute for magical art, and inclined to rest in a philosophy of resignation. But his weariness overcomes him: he reckons up the possible chances of a future which may be a repetition of the dismal past, and, at length, buoyed up by a kind of returning mysticism,—

"—it hath been granted me,
Not to die wholly, not to be all enslav'd,"—

he rushes into the bosom of the elements and leaps into the crater of Etna and the "sea of fire." The very slight dramatic interest of the poem is found in the discussions between Empedocles and Parmenides, the superstitious *Wagner* of this Sicilian *Faust*. The charm of the work will be found partly in the long monody in which Empedocles unfolds his ultimate philosophy of resignation—"too near neighbour of despair," and in the beautiful lyric interludes of Callicles, the young harp-player, who tries, like David before Saul, to charm away the melancholy of Empedocles with his music. From the monody of Empedocles we may quote these lines on a future life—lines full rather of the resolution in face of gods and men which marked our Scandinavian fathers than of any feeling natural

to Greece. The old Northmen, when they had lost faith in Odin, and had not yet pleased their kings by worshiping "the White Christ," trusted to nothing but their own strength and courage, that had never failed them here, and in the hereafter—if there were a hereafter—would be no less trustworthy. Like them, Empedocles is contemptuous of future hope or fear:

"Fools! that so often here
Happiness mocked our prayer,
I think, might make us pray
A like event elsewhere—
Make us, not fly to dreams, but moderate desire.
* * * * *

Is it so small a thing
To have enjoyed the sun,
To have lived light in the spring,
To have loved, to have thought, to have done,
To have advanced true friends, and beat down baffling foes—
That we must feign a bliss
Of doubtful future date,
And, while we dream on this,
Lose all our present state
And relegate to worlds yet distant our repose?

"Not much, I know, you prize
What pleasures may be had,
Who look on life with eyes
Estrang'd, like mine, and sad:
And yet the village-churl feels the truth more than you—

"Who's loath to yield his life
Which to him little yields:
His hard-task'd, sunburnt wife,
His often labour'd fields;
The boors with whom he talk'd, the country spots he knew."

Thus the philosopher finds life worth living for the sake of its common experiences, being, at the lowest, a treasure of delight in comparison with the nothingness that was the day before we were born. It is a philosophy, I think, for a man whose "back is at the wa'," who is hardest pushed by doubt and by the misery in the world. But let us turn from the philosopher to the pastoral poet, to the boy Callicles, singing in Sicilian glades with a voice as sweet and in measures more various, with a vision as true, an instinct as divine, as the Daphnis or the Thyrsis of Theocritus. I confess to an admiration of the songs of Callicles so enthusiastic,—their melody, their sweet pictures of the beautiful life of gods and men in Sicily so charms me, carrying one happily away to a land of pure air, clear water, fragrant pine-forests,—that I do not care to try to praise them, still less to attempt to restate their beauty in lumbering prose. The two most beautiful passages appear to me to be the song of Cadmus and Harmonia, and the song of Marsyas. In both of these Mr. Arnold has done what so many of our poets have failed to do,—he has seen Greek mythology with

the eyes of a Greek. To us the naked stories of a king and queen changed into serpents, of a shepherd flayed by Apollo for failing in a musical contest, seem savage and strange. Writers like the author of "The Epic of Hades" try to screw some Christian morality into the Greek legends. Marsyas is represented as consoled for his skinning by an unselfish artistic pleasure in the triumphant melodies of his cruel conqueror. If modern writers do not thus intrude a high-flown modern moral, they try to allegorize the legends away into some fable about the Dawn, or the Night, or the wind in the reeds of the dry water-course. But to the poets of Greece their own myths were so familiar, and were seen through such a soft summer air of childish memories, that (except in the case of the most horrible legends of all) they handled them as if they had been obvious harmless incidents and subjects. As in sculpture the Amazon warriors fall and die in battle, beautiful in death, and more lovely than pitiful, so it was in poetry; pity scarcely intruded into a charmed land of repose, where neither curiosity nor morality was in place. To illustrate this Greek repose, and this wealth of beauty that comes in where only horror seemed to reign in the naked myth, I must find room for Callicles's song about Apollo and Marsyas—the story of the skinning:

"Oh, that Fate had let me see
That triumph of the sweet persuasive lyre,
That famous, final victory
When jealous Pan with Marsyas did conspire;

"When from far Parnassus' side
Young Apollo, all the pride
Of the Phrygian lutes to tame,
To the Phrygian highlands came.
Where the long green reed-beds sway
In the rippled waters grey
Of that solitary lake
Where Mæander's streams are born;
Where the ridg'd pine-wooded roots
Of Messogis westward break,
Mounting westward, high and higher,—
There was held the famous strife,—
There the Phrygian brought his flutes,
And Apollo brought his lyre.
And, when now the westerling sun
Touched the hills, the strife was done,
And the attentive Muses said,
Marsyas! thou art vanquished.
Then Apollo's minister
Hanged upon a branching fir
Marsyas, that unhappy Faun,
And began to whet his knife.
But the Mænads, who were there,
Left their friend, and with robes flowing
In the wind, and loose, dark hair
O'er their polished bosoms blowing,
Each her ribbon'd tambourine
Flinging on the mountain-sod,
With a lovely, frighten'd mien,
Came about the youthful God.
But he turn'd his beauteous face

Haughtily another way,
 From the grassy, sun-warm'd place,
 Where in proud repose he lay,
 With one arm over his head,
 Watching how the whetting sped.
 But aloof, on the lake-strand,
 Did the young Olympus stand,
 Weeping at his master's end;
 For the Faun had been his friend.
 For he taught him how to sing,
 And he taught him flute-playing.
 Many a morning had they gone
 To the glimmering mountain lakes,
 And had torn up by the roots
 The tall crested water-reeds
 With long plumes, and soft, brown seeds,
 And had carved them into flutes,
 Sitting on a tabled stone,
 Where the shoreward ripple breaks."

The landscape of the last eight lines seems to me almost unapproached for felicity in English poetry. Those lines about the Mænads, with their "lovely, frightened mien," were the first of Mr. Arnold's that I ever read. They were set to be rendered into Latin elegiacs, at a Balliol scholarship examination, and, though I did not attempt the elegiacs, the beauty of the poetry haunted me till I found the whole passage in "Empedocles," where it was republished in 1866, among "New Poems." Mr. Arnold withdrew the volume of 1852, after a small number of copies had been dispersed. He conceived that the situation of "Empedocles" was "morbid," and that the description of it must be "monotonous." And, therefore, the poem was withdrawn, and mere scraps of it, with a number of its shorter companions, were republished in 1853. The poems of 1853 were introduced by a remarkable essay on the functions of poetry, one of Mr. Arnold's earliest contributions to criticism. He is, perhaps, more widely renowned as a critic than as a poet, but that is not because he is "one of the fellows who has failed" in original composition. It will already have been made plain that we consider his poems by far his most important and most permanent contribution to literature. It will, therefore, be well to examine all his verse (very little of it has seen the light for many years) before considering his criticisms of life, of religious thought, and of literature. But we may pause to remark on Mr. Clough's review of his friend's earlier poems—a review published in an American periodical. In the tribute which Mr. Arnold paid to Mr. Clough at the close of his "Lectures on Translating Homer," he said "he had not yet traduced his friends, nor flattered his enemies, nor disparaged what he admired, nor praised what he despised. Those who knew him well had the conviction that, even with time, these literary arts would never be his." Mr. Arnold might have added that Mr.

Clough had not yielded to another literary temptation—what he admired he had not overpraised. Every reviewer, especially every young reviewer, knows the temptation to speak too enthusiastically of poems that are new, and the work of contemporaries and friends. Mr. Clough spoke, as we see now, almost too diffidently about "The Strayed Reveller" and "Empedocles on Etna." He talks of "the music of the boy Callicles, to which he chants his happy mythic stories, somewhat frigidly, perhaps." In "Tristram and Iseult" he finds "the mist of more than poetic dubiousness." If "Tristram" is "dubious," what is to be said of Mr. Brownning's "Sordello" or "James Lee"? He found even the dubious mist better than the "pseudo-Greek inflation" of "Empedocles." Generally, Mr. Clough demanded a clearer and more consistent moral thoughtfulness, and denounced "the dismal cycle of a rehabilitated Hindoo-Greek theosophy." There was more of purpose, a better "tone and matter," he seems to have held, in the work of Alexander Smith. Such is the vanity of criticism. Who is right—Mr. Clough with his petition for more morality, or the critics of to-day who blame Mr. Arnold for asking poetry to give men "a criticism of life"? As to the poetic merits of Alexander Smith, an excellent man whose name should never be mentioned without respect, the world seems to have made up its mind. He is not likely to be well known as a poet to the next generation. Apparently, Mr. Arnold wrote his poems for the generations that were to succeed rather than for that which was exactly contemporary with himself.

The chief additions to the "Poems" of 1853 (Longman's, London) were "Sohrab and Rustum," and "The Scholar Gipsy." Perhaps, in their separate styles, these, with "Thyrsis," the sequel to "The Scholar Gipsy," are the works of Mr. Arnold which his admirers know and like best. "Sohrab and Rustum," the tale of the fatal combat which the old Persian chief and his unknown son wage against each other, approaches more nearly, I think, to the spirit and manner of Homer than does anything else in our English literature. The strong, plain, blank verse is almost a substitute for the hexameter. The story is told with Homer's pellucid simplicity, with his deep and clear-sighted sympathy with all conditions of men, with his delight in Nature as man's friend and life-long companion. The spirit of the narrative, too, is Homeric, and the fall of the young warrior, in the pride of his beauty and strength, his death assuaged by resignation to fate and by consciousness of a courageous strife, are subjects of the sort that often moved the

singer of the Iliad to his most moving strains. The similes are, in spirit, directly borrowed from Homer. The Ionian compares Nausicaa, the princess of Phæacia, to a tall palm-tree growing by Apollo's shrine. And Sohrab is compared to

"Some young cypress, tall, and dark, and straight,
Which in a queen's secluded garden throws
Its slight, dark shadow on the moonlit turf,
By midnight, to a bubbling fountain's sound."

But I must leave "Sohrab and Rustum," being already much tempted to quote the whole of the concluding passage, beginning:

"But the majestic river floated on."

The reader will appreciate these exquisite lines far better in the context, where the description of the course of Oxus, and his final rest where

"— the new-bathed stars
Emerge and shine upon the Aral Sea,"

rounds off the tragedy of Sohrab, as "our little life is rounded with a sleep." So,—the poet suggests without saying it,—so the lives of men, be they long and victorious, or broken in their first fight, end at last, like the river's course, in a repose that is not without its triumph.

"The Scholar Gipsy," a poem founded on the tradition that a lad in the University of Oxford wandered away with the gipsies, in search of their strange lore, and still haunted the fields and water-side, has, perhaps, one defect. It is a poem that cannot, or can scarcely, be enjoyed to the full by any but children of the old and beautiful university seated at the meeting-place of Cherwell and Isis. I know that I probably esteem Scott's poems too highly, because so many of them are friends that speak to me of home; of peaceful green hills, and waste places of the shepherds; of familiar ruined towers; of streams where I know every stone that shelters a trout; of moors where, in childhood, I have half-hoped to hear the fairy bridles ring, or have dreaded the sudden apparition of the Red Spirit of the solitude. No one can sit down to criticise coldly verses that are such old acquaintances, and, if Scott's poems are the intimates of one's childhood, "The Scholar Gipsy" is like a college friend. Most Oxford men who read it must be moved at remembering the days when they, too, went gipsying.

"We'll go no more a-roving,"

says the saddest of songs. Too many of his readers must say, with the poet:

"Too rare, too rare, grow now my visits here;
But once I knew each field, each flower, each stick,
And with the country folk acquaintance made,
By barn in threshing-time, by new-built rick.

"Here, too, our shepherd-pipes we first assâÿ'd.

Ah me! this many a year

My pipe is lost, my shepherd's holiday!

Needs must I lose them, needs with heavy heart
Into the world and wave of men depart;

But Thyrsis of his own will went away."

Strangers across the Atlantic may be careless of our Oxford fields; they are like Proserpine in "Thyrsis"—

"But ah, of our poor Thames she never heard,
Her foot the Cumnor daisies never stirred."

Therefore it must suffice to say that the landscape of the Oxford poems—"The Scholar Gipsy" and "Thyrsis," the "monody to commemorate the author's friend, Arthur Hugh Clough"—is unequaled even by the Greek and Swiss and Westmoreland pictures in Mr. Arnold's other poems. All readers of poetical sensibility must feel their charm, but the sketches of deserted lashers, of the Cumnor hills, above all, of the "white and purple fritillaries," must necessarily appeal most to men who knew these places in their youth, and gathered fritillaries with some Thyrsis of their own.

The bibliography of Mr. Arnold's poems is uncommonly confusing. In the edition of 1853, many pieces from "The Strayed Reveller" and "Empedocles" were reprinted. Another "series" was given to the world in 1855 (Longmans, London). This contained more pieces from the volume in which "Empedocles" was first published, and also "Balder Dead," a poem on the most famous legend of Norse mythology. "Balder" is conceived and executed in the same style as "Sohrab and Rustum," and, perhaps in a slighter degree, has the same excellence—the same simplicity and grace and vigor. But the fate of the young man moves us more, I think, than even the fate of the young god in whom the learned Dr. Bugge sees—not, perhaps, with much reason—a myth reflected from Christianity.

In 1855, Mr. Arnold was still a young man, and much more poetry might have been expected from one who had begun so well. But it was rather ominous that he had, for some years, given the world so little that was new—that he had been breaking up and re-setting the old gems. Possibly we may attribute his long silences either to an increasing fastidiousness,—for where is his "Lucretius, an Unpublished Tragedy," which once supplied him with a quotation for a motto?—or perhaps the cares of the world, and the deceit-

fulness of criticism, and his interest in church and dissent, in education and the Irish Land Laws, may have subdued his muse, and made him "give to sermons what was meant for song." His "*Merope, a Tragedy*" (Longmans, London), was published in 1858. This is a tragedy in the Greek manner, on a topic which had already been handled by Euripides, Cardinal Richelieu, and Voltaire. The play of Euripides is lost; that by Richelieu may possibly be known to Mr. Saintsbury, who knows everything. As to Voltaire's serious poems, we may almost say of them, as he did of Dante's,—“their fame is likely to increase, for no one ever reads them.” Thus modern readers may probably agree that Mr. Arnold, more than was possible for Voltaire, restores to us the lost drama of Euripides. His "*Merope*" is, as Mr. Swinburne says, "a work of steady aim and severe success." But the success is somewhat limited. "*Merope*," a play on the Greek model, was attempted in the hope of satisfying that curiosity and interest about Greek art, that "nameless hope," which Mr. Arnold believed to exist even in the minds of those who have been brought up among the productions of the romantic school. But the Greek drama was, as Mr. Arnold recognizes in his admirable preface to "*Merope*," the child of peculiar social and theatrical conditions. We cannot, even at Harvard or Balliol, hope to bring back those conditions—that immense theater under the open air, filled with religious listeners, the whole population of a city. Now it seems improbable that any drama, not written to be acted, will ever have a strong dramatic life. Thus "*Merope*," like "*Erechtheus*" and "*Atalanta*," remains an interesting experiment rather than a natural English poem. The character of Polyphontes, the would-be honest tyrant, is excellently drawn. There is a beautiful chorus, too, illustrating what we have already said about Mr. Arnold's power of treating Greek mythology. The myth in question, that of Arcas and Callisto, is of the sort which prevails among red Indians and Australian black fellows. The Arcadians were a bear stock, as your Iroquois were bears, or wolves, or turtles. They believed that they were descended from a she-bear, which had once been a woman. The she-bear and her son were changed by the gods into stars (as is common in the legends of Mandans and Murri, Eskimo and Ahts), just when the hunter-son was about to shoot the animal-mother. Could any story be less Greek in spirit than this old fragment of fable, handed down by generations after generations of Arcadian priests? Mr. Arnold takes the legend as a Greek might have taken what

was too familiar to seem crude, and fills it with human feeling, till the savage legend becomes softened and beautiful. But, in spite of the merit of many passages,—the beautiful description of the drowning of the Prince of Arcady, for example,—"*Merope*" is never likely to be one of Mr. Arnold's more popular pieces. The preface contains, perhaps, the briefest and most lucid account ever yet given of the nature and aims of the Greek drama, and of the functions of the chorus.

Mr. Arnold's last appearance as a poet is, unhappily, an event of fourteen years ago. His "*New Poems*" (Macmillan and Co., London) were published in 1867. They, like most of his later volumes, are full of reprinted pieces. "*Empedocles*," in its entirety, heads the list. It was restored to English literature at the request of Mr. Robert Browning. The most remarkable additions are "*Thyrsis*," the Oxfordshire poem of which we have already spoken; "*The Terrace at Berne*," a somewhat sad and even cynical epilogue to the "*Poems for Marguerite*"; "*Dover Beach*," a piece equally admirable for thought, imagery, and music. In addition to these are the lines on Heine's grave, with the famous address to England as "the weary Titan." The stanzas on Obermann, the melancholy recluse who sought refuge in Switzerland from his own despair of the world and from the tempest of the French Revolution, are among Mr. Arnold's most admired and admirable poems. Not less often in our minds are the majestic and musical "*Stanzas from the Grande Chartreuse*." In the silent, ultimate retreat of men broken in the strife with the world, the poet is awed and charmed, but charmed in vain, by the repose which the Church offers to all who will come to her, and be hers. The charm is vain; other creeds have promised to take upon them the weight of the world, and to fight man's battle with the powers of earth and heaven. They have promised and they have not fulfilled, and every temple is the scene of a broken covenant:

"Not as their friend, or child, I speak.
But as, on some far northern strand,
Thinking of his own Gods, a Greek
In pity and mournful awe might stand
Before some fallen Runic stone—
For both were faiths, and both are gone."

Is this the conclusion of the whole matter,—are we of modern times to wander forever, like the companions of Panurge in Rabelais, among the ruinous fanes and broken altars of the Isle of the Macræones? The poet has here no answer to give:

"Our fathers watered with their tears
This sea of time whereon we sail;
Their voices were in all men's ears
Who pass'd within their puissant hail.
Still the same ocean round us raves,
But we stand mute, and watch the waves."

After all, this is only the wonderful and musical expression of one despondent hour. This is not the conclusion of the whole matter. Mr. Arnold does not by any means stand mute, but has been communicating to the world very freely his ideas about religion, the Bible, education, society, literature, the newspapers, and the condition of Ireland. His poetry, on the whole, to use his own words about Greek tragedy, aims at producing a sentiment of sublime acquiescence in the course of fate and in the dispensations of human life. In prose he has been able to say, more definitely, what he thinks as a critic of life, literature, and society. Not long since, in a preface to Mr. Ward's "Anthology of English Poets," Mr. Arnold spoke of poetry as if it might become a substitute for religion. Now, if we allow the word religion to include authoritative speaking on the interests of man's spirit and on the conduct of his life, Mr. Arnold's own experience bears hardly upon his argument. As long as he wrote poetry alone, the great public did not much mark him. I doubt if the Lord Mayors (our official patrons of literature) ever heard of Mr. Arnold, or asked him to dine with Mr. Sala, in the days when he was only a poet. But as soon as he began to talk about religion, morality, education, and literature in prose, the great public heard him, though not very gladly. As soon as he began to criticise the middle classes and their teachers—the newspapers—the middle classes and the newspapers pricked up their ears and listened, with many interruptions and remonstrances, to what he had to tell them. He spoke to them in a new voice to which they were not accustomed. He did not merely glorify England and everything English. He looked outside our country and our literature, to France, Germany, Italy. He employed a strain of humor and sarcasm, which has an extraordinary power of irritating his victims.

I believe Mr. Arnold has done us a great deal of good. The self-sufficiency of this country, our belief in our enterprise, trade, intelligent middle classes, jealous dissent, right of free speech, and so forth, were, fifteen years ago, perfectly incredible and intolerable. Events have since taken a good deal of our conceit out of us. Sadowa, Sedan, Isandhlana, and Majuba have opened the eyes of many of us. Ireland and the East have taught us a few lessons of self-distrust. But Mr. Arnold

has kept on enforcing the lessons. He will not let us rest for an hour in the delusion that our newspapers utter the voice of unmitigated wisdom; that our free speech is necessarily true or instructed speech; that our middle classes, or lower classes, or upper classes, are educated on sound principles; that our dissenters are living and working in a pure spirit of generous and liberal and genial Christianity. All our Dragons he has blasphemed. Our popular writers, our popular theologians, our popular philosophers, our popular philanthropists, he has touched with his irreverent wit. "These be thy Gods, O Israel!" he has cried, and the idols look as decrepit as "that twice-battered god of Palestine," or the superannuated Olympians in Bruno's satirical tract. In this pious and universal crusade, I do not mean that Mr. Arnold has always had right on his side. He has said things that seemed cruel, or otherwise indefensible. He has made the dissenters writhe with impotent desire to smite, controversially, this cool and agile opponent. Many people, doubtless, have quite shut their senses against him—like the adder who, says St. Augustine, thrusts the tip of his tail into one of his ears and lays the other in the dust. But even these deaf ones know and feel that the bubbles of British optimism are being pricked. They are less comfortable than of old among their idols. They may never repent and be converted, but their children and their kinsmen are beginning to listen to Mr. Arnold, and to try to winnow the wheat from the, perhaps, too copious "chaff" which he offers the public.

Mr. Arnold's first appearance as a critic was in the field of literature. We have already spoken of his interesting prefaces to "Merope" and a volume of poems. In 1857, his University recognized his merits by giving him almost the only official position in criticism which England has to offer. He was appointed to the Chair of Poetry in Oxford. The chair has been filled by Warton and Keble, in times when the lectures were delivered in Latin. Now the lecturer addresses his audience in English. He is appointed for a period of five years, generally extended to ten. Since Mr. Arnold's day the chair has been held by Sir Francis Doyle and Principal Shairp. The position, with its chance of influencing young men, seems an enviable one. But there are so many compulsory lectures at Oxford, and attendance thereon is such a weariness, that many, even of the undergraduates who care for literature, seldom go. I never, I am ashamed to say, availed myself of the opportunity of listening to Mr. Arnold, because his lectures were delivered in the afternoon, when cricket or the river seemed

more attractive than Apollo's lute. The first fruits of his appointment were two sets of "Lectures on Translating Homer" (Longmans, 1861, 1862). These are full of just and penetrating criticism. They also have the marks of Mr. Arnold's critical manner. He takes a few points, such as the nobility, simplicity, and speed of the Homeric manner; to these he constantly returns, enforcing his text by repetition. Again, he frequently uses ridicule and irony. Professor Francis Newman had just published a translation of the *Iliad*, stuffed with odd criticisms, and written in the meter of "Yankee Doodle." This unlucky translation was Mr. Arnold's butt, and he kept provoking his audience to mirth as inextinguishable as that of the Homeric gods, by reference to Mr. Newman. That poet spoke of "dapper-greav'd Achæans," of "Hector of the motley helm," and his heroes were "sly of foot and nimble"; while Helen was made to call herself "a mischief-working vixen"! These served Mr. Arnold as examples of the individualism, the whimsical eccentricity, of the English literary character, nor was he ill-pleased if he found Mr. Newman calling "a fine calf" a "bragly bulkin." The natural result was that Mr. Newman thought Mr. Arnold's judgment effeminate. But, on the whole, the genius of English literature has sided with Mr. Arnold, and Mr. Newman's is not the standard translation of Homer. As to Mr. Arnold's own theories on a point which it were out of place to discuss here, I agree with his premises, but cannot accept his conclusions. He admirably characterizes the genius of Homer, and then he tells us that English hexameters are the proper meter for the English translator. But it is rarely possible to scan Mr. Arnold's own English hexameters with certainty, nor is one's opinion altered by those of Mr. Longfellow, Mr. Clough, or Mr. Stedman. Hexameters seem foreign to the genius of English verse.

A large familiarity with foreign literature and Continental criticism has enabled Mr. Arnold to widen the scope of contemporary English literature. The judgments of French and German authors are now tolerably well known to the British reviewer; there is a free trade in ideas. Many Englishmen keep us acquainted with foreign opinion, while M. Scherer, M. Taine, and others enable France to understand what is being done and said in England. When Mr. Arnold published his "Essays in Criticism" (1865) this free trade was much more restricted. French, especially, was comparatively neglected. One of the recurring periods in which the French reacts on the English intelligence was just beginning, and Mr. Arnold helped the new move-

ment. He tried to raise criticism from its low estate—described by Wordsworth as "an inglorious employment." It can hardly be denied that his efforts have been successful, and that we have now a more studious, learned, disinterested, and careful sort of reviewers than of old. Mr. Arnold tried his best to make critics feel that their duty is to see things as they are. A poet is now rarely reviled because his opinions, as a private citizen, are Radical, or Tory; because he lives at Hampstead, or in Westmoreland; because he goes to church, or stays away. A somewhat higher standard has been set, even for journeyman-work, and, as far as an English looker-on can judge, American literature, too, has benefited by this increased earnestness of purpose, and this growing desire for wider and clearer knowledge. Our affection for ridiculous whims—about the Christian theology concealed in Homer, about the Jewish origin of our race, or its Egyptian affinities—is not extinct by any means; but Mr. Arnold's ridicule has helped to diminish this national failing in literature, in politics, in religion; he has succeeded in making many converts to the belief that, after all, we are not a "chosen people," that all our prejudices are not inspirations. He had the audacity to say that our "atmosphere" tells unfavorably even on men of genius, and "may make even a man of great ability either a Mr. Carlyle or else a Lord Macaulay." This was flat blasphemy fifteen years ago; but now there are but few readers but will acknowledge that the pleasure and instruction they derive from Mr. Carlyle's and Lord Macaulay's works are marred by their want of repose, by their obtrusion of eccentricities and personal peculiarities of style. Nay, we may go further, and hint that our "atmosphere" of insular eccentricity has harmed Mr. Arnold himself. "Physician, heal thyself," we might say, and regret some escapades of flippancy and, one might almost say, irreverence, which mar certain passages of Mr. Arnold's theological writings. But we are looking at the good his literary criticism has done,—at his wide appreciation of excellence, at his honest determination to state his own opinion, and not to be misled by a blind admiration even of Shakspeare, even of Burke, even of Shelley, even of Keats. After much reading, for example, of Mr. Ruskin, nothing can be more salutary than a return to Mr. Arnold's clearer and colder intellect,—not incapable of freaks, but occasionally indulging in them with an ironical knowledge of their true nature—not with a belief that they are "supremely" precious inspirations.

To any reader whose time for study is scanty, and who wishes to secure an adequate

impression of Mr. Arnold as a critic, one would especially recommend the volume of "Essays in Criticism." It contains the germs of all his later critical work, and his ideas and manner are there presented in the most engaging way. In purely literary matter there are the studies of Heine, Joubert, and the two Guérins. Mr. Arnold has never excelled these productions; in charm of style, in novelty of idea, in the attraction of a pleasant personality, they are matchless among his works and in the English literature of his time. In the papers on the Guérins, too, we have the earliest expression of his sympathy with the Celtic element in literature, with that "magical," sweet, and melancholy mood which perhaps the modern world owes to an ancient race, that has lost its lands, and almost lost its language, but never lost its rare, incommunicable gift of poetry. A fuller study of this topic is presented in Mr. Arnold's "Celtic Literature," a remarkable addition to what the world, as apart from specialists, knows about this topic. In the paper on Maurice and Eugénie de Guérin, he sufficiently indicated the nature of what we might call "the Celtic mood." It has a strange melancholy brightness and beauty, like that of a golden autumn day among the hills and lochs and birch-woods of Western Scotland.

And the Celtic mood has a singular nearness to nature. Any one can feel its charm who has listened to the pleading accents of a Gaelic song. That music is the music of a natural people—a *natur volk*. I have heard such a song, in Scotland, from a Gaelic poet; and shortly afterward have listened to another chant—a song of the wild folk of the Melanesian Islands. The two were strangely alike, and seemed to move one with the pathos of a people whose day is passed, whose glories are little more than a myth, but who have never lost their intimate sense of nature, and never been corrupted by the world. Mr. Arnold's Celtic studies, and his essays on the two French poets, brother and sister, have in their prose a touch of this old melody, and a sweetness derived from an elder day. In his essay on "Spinoza and the Bible," again, we seem to see the germ of his later and voluminous writings on religion, of his attempt to take theology and the Bible out of the range of a hard and too conjectural scientific criticism, and to bring them into the softer and more sympathetic air of literature. That attempt may not be wholly successful; something different seems to me to be needed both by the scientific and the ordinary reader. In spite of his sympathy with humanity, humanity still appears to be out of sympathy with Mr. Arnold's effort to purify its religion. Lastly, in

the preface, and in other parts of the "Essays in Criticism," we find the first of Mr. Arnold's humorous attacks on what he calls the "Philistinism" of his countrymen—or their arrogance, ignorance, and habit of mistaking mechanical means for ends. There is here a passage which one cannot help quoting—partly because it is so characteristic, partly because it is so appropriate to the flutter caused among us by a recent (June 30) murder committed on the Brighton Railway:

"My vocations led me to travel almost daily on one of the Great Eastern lines—the Woodford Branch. Every one knows that Müller perpetrated his detestable act on the North London Railway, close by. The English middle class, of which I am myself a feeble unit, travel on the Woodford Branch in large numbers. Well, the demoralization of our class,—which (the newspapers are constantly saying it, so I may repeat it without vanity) has done all the great things which have ever been done in England,—the demoralization of our class caused, I say, by the Bow tragedy, was something bewildering. Myself a transcendentalist (as the *Saturday Review* knows), I escaped the infection; and day after day I used to ply my agitated fellow-travellers with all the consolations which my transcendentalism and my turn for French would naturally suggest to me. I reminded them how Cæsar refused to take precautions against assassination, because life was not worth having at the price of an ignoble solicitude for it. I reminded them what insignificant atoms we all are in the life of the world. 'Suppose the worst to happen,' I said, addressing a portly jeweller from Cheapside,—suppose even yourself to be the victim, *il n'y a pas d'homme nécessaire*. We should miss you for a day or two upon the Woodford Branch; but the great mundane movement would still go on, the gravel walks of your villa would still be rolled, dividends would still be paid at the Bank, omnibuses would still run, there would still be the old crush at the corner of Fenchurch street.' All was of no avail. Nothing could moderate in the bosom of the great English middle class their passionate, absorbing, almost blood-thirsty clinging to life."

Was ever portly jeweller in such manner comforted? This is too constantly the attitude of Mr. Arnold toward his countrymen. He has a poet's love of England, and he sees England making herself ridiculous in the eyes of the world. He sees her policy shift with every alternation of popular sentiment, and he knows that popular sentiment, with all its good intentions, is ignorant, unsteady—now hot, now cold. These defects, and the conceit which accompanies them, make up what Mr. Arnold chooses to call Philistinism. This is how he defines Philistinism: "On the side of beauty and taste, vulgarity; on the side of morality and feeling, coarseness; on the side of mind and spirit, unintelligence." In literature, politics, religion, Mr. Arnold has made it his business to war against Philistinism, and especially against the Philistinism of these "great sophists," as Plato would have called them, the newspapers. A newspaperman myself,—a "pressman," as Mr. Swinburne would scornfully say,—I cannot but acknowl-

edge the errors of our profession, and wince beneath the birch of the son of Dr. Arnold. Let us conclude this survey of Mr. Arnold's performance by looking at one or two of his pitched battles with the armies of the Philistines who fight under the banners of the British press.

There was a literary contest even over that harmless thing, Celtic literature. A large number of our countrymen in Wales, and a smaller number in the West and North of Scotland, still speak Celtic dialects, and still preserve poetical traditions about the past of the Celtic race. In Scotland, these traditions have dwindled to tales told around the turf-fire, in the winter nights. The stories have been collected and published by Mr. Campbell, of Islay, and are most interesting to read, and most important materials for the student of human history. In Wales the Celtic language is preserved with more of pomp and dignity. Great meetings called *Eisteddfods* are held, in which poems are recited, prizes given, and the popular interest in the legendary past is thereby kept alive. As a professor of poetry Mr. Arnold was invited to attend one of those assemblies of the bards, and he expressed his friendly interest and sympathy, as surely no man of letters could fail to do. Almost all the old popular lore of song, and customs, and legend has been crushed out of our English laborers, whose lives, like Sir Tor's shield in the "Idylls of the King," are "blank enough." Mr. Arnold recognized the happier effect which their traditions of the past exercise on the Welsh. For this the "Times" fell foul of him with clumsy ferocity. "An *Eisteddfod* is one of the most mischievous and selfish pieces of sentimentalism which could possibly be perpetrated." "It is monstrous folly to encourage the Welsh in a loving fondness for their old language." Mr. Arnold was described as "a sentimentalist who talks nonsense, and whose dainty taste requires something more flimsy than the strong sense and sturdy morality of his fellow Englishmen." These are beautiful blatant expressions of the Philistinism against which Mr. Arnold did battle. That eternal bluster about "strong sense and sturdy morality" is one of the most provoking weapons of the "robustious" writer who is perpetually fingering his moral biceps in public. Well, the robust sense and sturdy morality of the "Times" has been wasted. English science has recognized the need of serious study of the Celtic literature, and professorships of Celtic have actually been founded in Oxford and Edinburgh. But, in the "Times's" Pumblechookian vein, when it blusters like the swaggering, stupid moralist of "Great Expecta-

tions," Mr. Arnold rightly recognizes one of England's difficulties in governing Ireland.

This brings us to the political warfare against Philistinism. It is impossible here to go into details about the burial of dissenters, the endowment of the Irish Church, the marriage with a deceased wife's sister, and other causes of battle. These things must be unintelligible in America; even here I do not quite understand the interest which Mr. Arnold feels in them. His general charges against his countrymen in politics are to be studied in a queer little book, "Friendship's Garland" (Smith and Elder, 1871)—the pretended memoirs of a German guide, philosopher, and friend of the author's. Arminius, the philosopher in question, does not spare us. He goes to Eton and sees young Plantagenet hit "that beast Bottles," full on the nose. He finds the spirit which delights in getting up a fight rampant in our newspapers. He finds our gentry, middle class, and populace almost equally underrated. He finds that we worship "mere liberty" as a fetiche. We are so certain that free speech deserves all the praise Herodotus gave it long ago, that we think it does not matter what we say, with our famous freedom of expression. "There are many lessons," says Arminius, "to be learned from the present war: I will tell you what is for *you* the great lesson to be learned from it—*obedience*. That, instead of every man airing his self-consequence, thinking it bliss to talk at random about things, and to put his finger in every pie, you should seriously understand there is a *right* way of doing things, and that the bliss is, without thinking of one's self-consequence, to do them in that way, or to forward their being done. This is the great lesson your British public, as you call it, has to learn, and may learn, in some degree, from the Germans in this war." Well, we have not learned the lesson. As I write, the "Standard" and the "Times," and other prints, are gravely lecturing all Europe: lecturing France for her "madness" in imitating in Africa our seizure of Cyprus; lecturing the Prince of Bulgaria; lecturing every one, insulting many, putting "a finger in every pie,"—and all this though we can no more back our words by deeds than we can move mountains. Pretty words, like "lie" and "liar," are being exchanged by the French and English press; and what resolute purpose have we at the back of all this show of words? Arminius said, ten years ago: "Lord Granville has behind him, when he speaks to Europe, your Philistines, or middle class, and how should the world know, or much care, what your middle class mean, for they do not know it themselves?" In 1879, they were, or

seemed to be, all for Lord Beaconsfield and advance. In 1880, they were all for Mr. Gladstone and retreat. A melancholy impression do the words of Arminius make upon Englishmen who love their famous ancient land, and can only hope that, when the evil day comes, England may at last read clearly in her own mind, and not lack her old force in action. Mr. Arnold's business is to insist on the paramount necessity of knowledge—of what he calls *culture*. Unfortunately, while his matter is so sound, a public accustomed to the pulpit and the press is repelled by the daintiness of his manner. One who jests is supposed to be incapable of speaking truth. And the stumbling-block of his manner trips up the public most when Mr. Arnold is writing about religion.

I do not propose to examine minutely Mr. Arnold's religious teaching. The subject cannot here be properly handled. His design is to retain the morality of the Old and New Testament, without retaining what he thinks superstitious excrescences—the miracles, the promises of a physical life after death, and the like. In his view, it was in righteousness, in "conduct," that the prophets and our Lord placed the kingdom of heaven. He, too, holds that happiness depends on morality, and that the Bible is the great teacher and inspirer of morality. On the Continent, it is being rejected because of its want of conformity to physical science. In England and America, where religion is still so strong, Mr. Arnold hopes to anticipate and weaken the crude skepticism which rejects what is true and divine, because it is mixed up with what is human and erroneous. One can scarcely expect very wide and satisfactory results from Mr. Arnold's efforts. He deprives his disciples of precisely those hopes (superstitions, in his view) which have always been offered by every successful religion. It is natural to fear that, if Christianity be robbed of her heaven, the unhappy people who find this world so hard will demand a new heaven from some fantastic new revelation—like that of spiritualism, for example. Again, Mr. Arnold's own hypothesis of the development of religion seems inconsistent with facts—a topic on which one could, with personal satisfaction, write a volume. Lastly, a trace of flippancy and scorn in his manner repels, and is likely to repel, many devout readers who are, at heart, in agreement with him on the essential topic of righteousness. Mr. Arnold, in his "Last Essays on Church and Religion," closes this chapter of his life's work. What he wished to say has been said. He has tried to import into popular religion the flexibility of mind and balance of judgment

which are (or, rather, which ought to be) the fruits of literary training. But let us take the case of a hard-working and convinced dissenter, or ardent ritualist, who lives in a parish where life, for the people, is either unbroken toil or semi-starvation; where the summer nights are a sweltering misery; where winter means cold, hunger, and death. How is he to comfort his people with Mr. Arnold's doctrine? In this grievous battle of life, he will think of the author of "Literature and Dogma" as Hotspur, at Holmedon fight, thought of "a certain lord, neat and trimly dressed * * * and still he smiled and talk'd." That judgment would be unjust, but it would not be unnatural, and as long as it is general, Mr. Arnold's religious writings will prove of but little avail. It is pleasant to think that he has returned to his own province—to literature, though he still hankers after politics, and still finds that we govern Ireland ill, because men like Dickens's "Mr. Creakle" educate our middle classes. Let us hope that Mr. Arnold will return, not only to literature but to verse, and add to that scanty golden store, that "eternal possession," his poetry. For whether Mr. Arnold is revealing to us our national faults, or criticising our earthly conception of religion, we hear a voice murmur his own lines addressed to the spirit of Heine:

"Ah, to help us forget
Such barren knowledge awhile,
God gave the poet his song."

We gladly acknowledge his clear sight, his cheerful patience, his skilled satire, and the "educated insolence" of the wit with which he plagues a whole Dunciad of "dissenters," journalists, bishops, and Parliament men. But he was born for other and better things. Sense and noble satire, though rare, are still not so rare as poetry. It is poetry that is scarce, and it is poetry that works on men's minds like a spell. "Sohrab and Rustum," or "The Sick King in Bokhara," does more for "culture" than a world of essays and reviews, and disquisitions on the "hideous" middle class. Some one has sent me from America the cheap and certainly not lovely reprint of Mr. Arnold's "Selected Poems." That pamphlet, bought at a railway station, perhaps, by some man who purchases at adventure, may do more to cultivate the love of beauty and the love of nature, to educate and console, than many great volumes of theology.

I have not tried to "place" Mr. Arnold—to give him his rank among modern English poets. Class-lists of that sort are impertinences. Mr. Arnold has not Mr. Tennyson's quantity of poetic force, nor his unsurpassed music of

diction, nor his variety of topic. Neither does he possess the fluency and sonorous emphasis of Mr. Swinburne. But to some readers his poems come more closely home than those of his contemporaries. His calm, his reserve, his stately numbers, sustain, and charm, and comfort. So we close with a dozen Greek words,—may they act as a spell,—the words with which the shepherd, in Theocritus, urges Thyrsis to sing :

πόταγ', ὦ γ' αἰθέ· τὰν γὰρ αἰοῖδαν
 Οὐτι παῖς εἰς Ἀΐδαν γὰρ τὸν ἐκλελάθοντα
 φυλαξεῖς.

"Sing on, for surely thou wilt not take thy song with thee to Hades, that puts music out of memory."

AT ROME.

FAREWELL TO BIANCA.

OUR feet so lightly brush the path, box-walled and needle-sown,
 Our timorous lizard takes no heed that dwells in the crannied stone
 He counts his hoard, his pointed snout is deep in the statue old:
 See—fright had almost made him blab where lies the hidden gold.

Though from the blue the generous lark scatters a wealth of glee,
 And in their shades pomegranates throb with richer minstrelsy,
 Bianca, the dry-leaf butterflies drift through the long dead grass;
 There is our toad in the ilex-tree, croaking an evening mass.

Their souls the aromatic herbs exhale beneath our feet,
 The fragrant moon of Italy with balsam breath to meet
 Leagues of a ruinous aqueduct bathe in a rosy mere.
 You weep; and a magpie on our left mocks with an impish leer.

Alas, these sights and sounds are yours—odors and paths of ease;
 Yours are the languors perilous that sigh within the breeze,
 Yours the old dream, the passiveness; they form of me no part.
 Love's in the saddle. Love stays not for one so faint of heart.

In circles strange the evening wind below the terraced grove
 Stirs the loose twigs. Ay, here's the spot first sacred to our love,
 Ere we ourselves knew where we were, or dreamed the other cared—
 Lie still, O leaves that shuddery gusts whirl under branches bared!

I am the new land, you the old. We love, but not for long.
 Your looks are backward, forward mine; a monkish chant your song.
 Be free I must; but you, O slave, to lay me snares are fain,
 As the slave elephant is taught her wild mate to enchain.

You talk of duty and of sin! Your duty lies with me.
 Your sin is that you let me go alone beyond the sea.
 No father's curse, no brother's gibe, no lady's courtly sneer,
 Fill those who love among my race with such unnobly fear.

Before you spur the jade of love; before our hearts have learned
 To beat unmoved, and hands to part in haste, ye lips that yearned
 Toward the odd Western heretic: utter the word of dole—
 Farewell—

Then go confess you, and shrive your wavering soul.

OPERA IN NEW YORK. II.

MME. CARADORI AS CREUSA. (AFTER THE DRAWING ON
STONE BY JOHN HAYLER. FROM THE COLLECTION
OF THOMAS J. MCKEE, ESQ.)

METEORS that blaze and burst into darkness, rockets that rush up in dazzling splendor and come slowly down again mere smoking sticks, prismatic bubbles that vanish into air, and leave behind but a drop of suds,—only these commonplaces of simile furnish an illustration of the course of Italian opera in New York in the years 1834 and 1835. It vanished utterly, not to appear again until ten years had passed, and then in a guise humbly contrasting with its former splendor. In 1836 the Opera-house became an ordinary theater; but even as a theater its prospects were clouded. A year would not have elapsed before the lease of such a beautiful house to a new manager but for a cause which had operated somewhat, perhaps, against the success of the Rivafinoli venture, and which would be much more likely to operate in case of an ordinary theater, or one used for English opera. This adverse circumstance was that at this time Church street was in worse repute than any other street in New York west of the Five Points. But as almost all ladies who

went to the Italian opera went in carriages, while a large proportion of those who went to English opera and to ordinary dramatic performances went on foot, this disadvantage of situation was of more importance after the going out of the Cavaliere Rivafinoli than before. The Opera-house passed into the hands of James W. Wallack, a very popular actor, the father of Mr. John Lester Wallack, but soon, with a notable consistency, passed out of them—in smoke. It was burned in 1839, having in its brief existence of six years brought misfortune upon all who had any connection with it. We shall hereafter turn to it, or rather to a new house built upon its site, to find the lyric drama established there in notable prosperity.

English now took the place of Italian opera as the favorite musical entertainment in New York; and for some years the performances and the performers were of no inconsiderable importance in the annals of music in America. In 1837, Caradori-Allan came to New York. She had not the highest position—that of Catalani or of Malibran; but she stood foremost in the second rank. Under the name of Caradori she had attained a world-wide reputation before she became Mrs. Allan; and she therefore retained the former name before the public. But even that name did not belong to her, and (in concession to a common prejudice) misrepresented her by its Italian form. Caradori was a German girl, of a highly respectable family named Munck. She had acquired her vocal skill by private instruction, and only for private and social enjoyment; but misfortune brought her before the public, when she assumed the name of Caradori. Her voice was a delicious soprano of unusual compass; her style was very pure; and within moderate limits, which she prudently did not attempt to pass, her vocalization was unexceptionable. She was beautiful, with large liquid blue eyes and golden hair, and a complexion of milk and roses; with a fine figure, too, so that she was quite as pleasing to the eyes as to the ears of her audience—a point hardly of secondary importance to a prima-donna. But Caradori, charming singer and beautiful woman, was entirely without dramatic power, and she therefore did not produce a great impression upon New-Yorkers as an operatic vocalist. She made her first appearance at the Park Theater in "The Barber of Seville," and afterward performed in Balfe's "Siege of Ro-

chelle," in "The Elixir of Love," and a few other light operas, all in English. But it was as a concert-singer that she won her popularity, and exercised a great and enduring influence for good upon the taste of the New York public. Her style was unimpeachable. No singing more pure and chaste than hers was ever heard; and its effect was greatly enhanced by her beauty and by the fact that singing, instead of distorting her face, increased the charm of its expression.* A favorite song of hers was Handel's "Angels ever Bright and Fair"; and when she sang it, so seraphic was her face and so did her voice seem imbued with the spirit of her song, that one of her enraptured hearers said that he would hardly have been surprised to see her soar out of sight on white wings heavenward. She often performed one little musical feat without making much fuss about it, as to which, nearly twenty years afterward, Jenny Lind's managers blew trumpets and beat drums—that of so mingling her voice with a flute accompaniment that it was difficult, indeed, almost impossible, to tell one from the other.† Her accompanist on these occasions was John Kyle, the son of a bassoon-player, who, having come to New York with some one of the Park Theater opera companies, had remained. He was in face and in manner the veriest John Bull that ever lived, so that when he was blowing away at his bassoon it seemed as if the British lion himself, with a pipe in his mouth, had got into the orchestra. But his son was a handsome, oval-faced young fellow, with very pleasant manners, and had the richest, sweetest tone on the flute that was ever heard.

* The author of "Musical Reminiscences of an Old Amateur," London, 1827 (anonymous, but known to be the eminent musical dilettante, the Earl of Mount Edgecumbe), says of Caradori: "Though from want of power she is not to be ranked in the first line of prima-donnas, it may truly be said that she is *without a fault*. Her voice is sweet, but not strong, her knowledge of music very great, her taste and style excellent, full of delicacy and expression. In a room she is a perfect singer."

† This sort of music is in great favor with a certain sort of music-lover who affects the critical. What the fancy leads to, is illustrated by the following extract from a musical criticism of the period:

"We must likewise enter our protest against a mode of trilling and embellishing which we noticed on several occasions when we were expecting a full and clear key-note. * * * In the duet, 'Gia veggio in quel volto,' she sang most admirably, and in such perfect unison with the harp that we could not distinguish the vocal from the instrumental sounds."

The opinion of a critic who could not distinguish the tone of a soprano voice from the snap of a harp-string, and who, instead of embellishment, expected a "full key-note," is of a value quite inestimable. But in the earlier years of New York's musical history the taste of the audiences was far more trustworthy than the knowledge of the critics.

He was for a long time an important musical figure in New York, and was one of the original members of the Philharmonic Society, of which he was first flute for eight years. His wife was a woman of remarkable and imposing beauty. She was the daughter of one of the captains of the Black Ball line of Liverpool ships,—the aristocracy of the mercantile marine,—and she had many suitors whose position and means made them regarded as very desirable husbands in social circles above her own. But John Kyle, with his handsome face, his agreeable manners, and his flute, carried off the blonde Juno, to the making of some little talk in Gotham. He was always called upon to play the flute on great occasions, and was Caradori's frequent accompanist. Her concerts were given in the City Hotel, which stood just above Trinity Church, between Thames and Cedar streets, where the Trinity building stands now. In this hotel was a large room, which was used in those days for the most fashionable assembly-balls, as they were called, and for the most fashionable concerts. Here the last remnant of New York's acknowledged aristocracy might have been seen in its dying days. Here at assembly and at concert (from which it was not "the thing" to be absent) appeared the last man who, in evening dress, wore a sword as a mark of his position as a gentleman,—the elegant Beverley Robinson. His sword had a plain polished steel handle and a velvet scabbard.*

Caradori, who remained nearly two years in America, was succeeded by an English-opera company which made a strong impression, which stood for some years at the top of popularity, and which exercised much influence for good upon the general musical taste, not only of the city of New York, but of the country generally. This was the Shireff, Seguin & Wilson company, which in 1838 began its performances at the National Theater, for so the Rivafinoli Opera-house was now called. The prima-donna of this company, Jane Shireff, was a young English-woman with a pleasing face and a beautiful figure, and she added to these a captivating manner. She was not a great singer, nor had she much dramatic power; but her voice was of delicious quality, her vocalization was very good, and she was a clever actress. She became a great favorite. Seguin had a rich bass voice and a good dramatic style; and Wilson, the tenor, although he was rather too fat for a hero, and although he did not

* This was as late as the year 1830; but I give this, of course, and all that has preceded it, upon information from those who themselves knew and saw what they told me.

sing in the grand manner, had a genuine tenor voice, of such pleasing quality, and so correct a style, that he was liked by the public and approved by the critics. This company appeared in Rooke's "Amilie, or the Love Test," and were so successful that they performed this opera, as nearly as I can discover, through the whole autumn and winter season. The following gem of musical criticism is in place here as part of the history of opera in New York. It is from the "New York Mirror" (27th October, 1838), the elegant weekly paper of that day. The subject is the opera of "Amilie," and its performance:

"This is one of the gems scattered with no unsparing hand through the opera. The *adagio* in E, four sharps, major, is perfectly thrilling. The words 'Thou art gone,' with the response of the wind instruments, cannot be too highly appreciated, and a brilliant polonaise forms a happy termination. This scene was given by Miss Shireff with a pathos and effect quite startling. Her clear, bell-toned upper notes rang out like a trumpet. * * * The moment Mr. Seguin opened his mouth, the corresponding feature of his audience assumed the same appearance; one universal gape seemed to infect all: such was the astonishment produced by his magnificent organ.† * * * There is no straining after double F's, or S's, or D's; they come round and full and harmonious. His aria 'My boyhood's home' is a composition replete with genius and expression, and caused an immense sensation. *Amilie* here rushes in to claim the assistance of her friends against the persecution of *José* in her recent calamity."

† This is the earliest example that I have observed of the use of this favorite and highly effective phrase.

There is a mortal column and more of this sort.

Miss Shireff afterward appeared at Niblo's Garden, which was on the corner of Broadway and Prince street, where the Metropolitan Hotel now stands. Here she performed in Auber's "Masked Ball," and other light operas (all of course in English), singing in a theater that was open on one side to the air; for Niblo's was a place of summer entertainment. It was a great New York "institution" in its day—perhaps the greatest and most beneficent one of its sort that New York has ever known. It may be safely said that most of the elder generation of New-Yorkers now living have had at Niblo's Garden the greatest pleasure they have ever enjoyed in public. There were careless fun and easy jollity; there whole families would go at a moment's warning to hear this or that singer, but most of all, year after year, to see the Ravels—a family of pantomimists and dancers, upon earth and air, who have given innocent, thoughtless, side-shaking, brain-clearing pleasure to more Americans than ever relaxed their sad, silent faces in the presence of any other performers. The price of admission here was fifty cents, no seats reserved; "first come, first served." Niblo had kept a little coffee-house down town, and made a fortune, which, like Mr. Barnum, he owed to the perception of the fact that there

were hundreds of thousands of people who were willing and able to spend fifty cents for an evening's innocent pleasure, where there were not hundreds who were willing and able to spend one, two, or three dollars. Miss Shireff and her companions were not great artists, but they sang good operas (yet not too good), in a wholesome style. They could be heard with little expense, and without much fuss of any kind, either as to apparel or otherwise; and the consequence was that they diffused a taste for opera widely through the general public, and lined their own pockets comfortably. Miss Shireff's beauty, of course, helped very much in all this. Her character was quite irreproachable, and her reputation was untarnished among those who really knew anything of her.

Of a very different style from those of the Shireff company was the next operatic performance which claims our attention. In 1839, Beethoven's great and only opera "Fidelio" was produced at the Park Theater. Rumors of the readiness with which money was gathered in America by singers, operatic and other, were now rife among the musical profession in Eng-

CITY HOTEL, BROADWAY. (FROM COLLECTION OF THOMAS J. MCKEE, ESQ.)

land, and they brought over on the gold hunt a company, consisting of Miss Inverarity, Miss Poole, Mr. Manvers, Mr. Giubilei, and Mr. Martyn, who thought to take New York by storm with the breath of their own reputations and Beethoven's. Miss Inverarity, who retained in public her maiden name, although she was the wife of Mr. Martyn, was a tall Scotchwoman, undeniably handsome, or at least "fine," and with all the airs

freshness might have given it had disappeared before she crossed the ocean. The tenor, too, failed to impress his audience very favorably; and Mr. Martyn, the basso-profundo, sang just as the husband of a Scotch prima-donna might be expected to sing. Two members of the company, from whom little had been expected, were at once received into favor by the public. These were Miss Poole, the contralto, a pretty, black-eyed, mischievous minx,

MISS SHIREFF, OF COVENT GARDEN THEATER. (FROM A STEEL ENGRAVING AFTER A DRAWING BY A. WIVELL. FROM THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

and expectations of an acknowledged beauty. She had, however, the misfortune to be taller than her tenor, and she careered (in these days "cavorted" might be the word) about the stage in rather too high-stepping a style for dignity and grace. She failed to captivate the New York people through their eyes, upon which she had evidently reckoned much. For as to her voice, it was worn; and like herself, never of first-rate quality, all the charm that

as plump as a partridge, with a deliciously rich voice, a style which if not irreproachable was very taking, and an arch manner, and Mr. Giubilei, an Anglicized Italian, who had a fine manly baritone voice and a goodly presence, not much marred by a squint that enabled him to see, or to seem to see, both sides of the house at once. These two singers the public warmed to without hesitation, taking little notice of the prima-donna and

the tenor. The company, however, deserved much at the hands of New-Yorkers—far more than they received—for the opportunity thus given to hear an opera of such quality, and so rarely heard, as Beethoven's "Fidelio." It has not been performed here since—for more than forty years. If the Inverarity company counts for little in the stream of operatic performers which has flowed pretty steadily through New York for more than half a century, the music which they presented, in at least a creditable and enjoyable style, entitles them to respectful remembrance. When they disbanded, Miss Poole and Mr. Giubilei remained in New York, and were for some years constantly before the American public.

Perhaps one cause of the failure of this company was the house in which they made their appearance. No public building not indecently dirty or unhealthily exposed could be less suited to the assemblage of elegant people for elegant pleasure than the Park Theater. It was in all respects the very reverse of the splendid house which had just opened and closed under the management of the Cavaliere Rivafinoli. Its boxes were like pens for beasts. Across them were stretched benches, consisting of a mere board covered with faded red moreen, a narrower board, shoulder-high, being stretched behind to serve for a back. But one seat on each of the three or four benches was without even this luxury, in order that the seat itself might be raised upon its hinges for people to pass in. These sybaritic inclosures were kept under lock and key, by a fee-expecting creature, who was always half-drunk except when he was wholly drunk. The pit, which has in our modern theaters become the parterre (or, as it is often strangely called, the parquet), the most desirable part of the house, was in the Park Theater hardly superior to that in which the *Jacquerie* of old stood upon the bare ground (*par terre*), and thus gave the place its French name. The floor was dirty and broken into holes; the seats were bare, backless benches. Women were never seen in the pit; and although the excellence of the position (the best in the house) and the cheapness of admission (half a dollar) took gentlemen there, few went there who could afford to

FANNY ELSSLER.

study comfort and luxury in their amusements. The place was pervaded with evil smells; and not uncommonly, in the midst of a performance, rats ran out of the holes in the floor and across into the orchestra. This delectable place was approached by a long under-ground passage, with bare whitewashed walls, dimly lighted, except at a sort of booth, at which vile fluids and viler solids were sold. As to the house itself, it was the dingy abode of dreariness. The gallery was occupied by howling roughs, who might have taken lessons in behavior from the negroes who occupied a part of this tier, which was railed off for their particular use.

Such was the principal theater in New York in 1840, and for ten years afterward. It had been called, in memory of its London counterpart, Old Drury, which name was derisively modified into Old Dreary. Yet here there was usually good and sometimes great acting of good plays and great singing of good operas. Shakspeare was heard ten times in New York then for once that he is heard now; and the stock company of the Park Theater would, at a day's notice, perform a first-rate comedy in very satisfactory style, with completeness in all the parts. Here, too, was seen such ballet-dancing as never before was seen in America, and perhaps never before or after in the world since the days of Herodias; for here, in May, 1840, Fanny Elssler appeared before a house into which not another hand, not to say another body, could have been

EDWARD SEGUIN. (FROM DAGUERRETYPE IN POSSESSION OF MRS. EDWARD SEGUIN.)

squeezed by hydraulic pressure. And here she danced the gay New-Yorkers of that day into a frenzy that made it seem as if their brains were as light as her heels. Large and naturally strong, training had given her the limbs of an athlete, and she encompassed the stage with vast, sweeping bounds. To this physical superiority she added a fine although not beautiful face, and an arch, coquettish manner.

New-Yorkers had previously had some education in ballet and in pantomime—those low-born but bold and presuming handmaids of opera. Madame Celeste, a Frenchwoman from Southern France, with a rich and vigorous physical nature, and a power of expressing by gesture emotion and even thought with a vivacity and intensity rarely equaled, had, for some years, danced and played dumb parts in almost all the theaters in the city. And in December, 1836, Auber's ballet-opera "*La Bayadère*" had been produced at the Park Theater, with the beautiful Mlle. Augusta as the dancing *Bayadere*. Its success was splendid and lasting, and its heroine became a reigning popular favorite. The impression produced by these two Terpsichorean artists has hardly yet faded out of the memories of the elder New-Yorkers who saw Augusta in her youth and Celeste in her maturity.

In 1840, also, we find the Woods again at

the Park Theater, singing "*La Sonnambula*,"—ever "*La Sonnambula*," varied with "*Fra Diavolo*" and the like; and there, too, but a little while before, the second act of "*The Elixir of Love*" and the third act of "*Fidelio*" had been sung by Miss Poole, Mr. Manvers, and Mr. Giubilei, on the same night, alternating with a comedietta, "*Is He Jealous?*" and the farce of "*A Nabob for an Hour*." Such were the fortunes of opera at "*Old Dreary*" forty years ago. But at the New National Opera-house, as it was called, there was, in the autumn and winter of this year, a combination of the best elements of the Seguin and Inverarity companies—Mrs. Seguin, soprano, Miss Poole, contralto, Mr. Horncastle, tenor, Mr. Giubilei, baritone,—flinging from his name an Italian aroma around the troupe,—and Mr. Seguin, bass, with a regular ballet; and there was great success, as, indeed, there should have been, and the performance of "*La Gazza Ladra*" and "*La Cenerentola*" and other of Rossini's operas in English, and triumphant success in the performance of "*Don Giovanni*," which was given every evening for some weeks; and, although the music of "*Non mi dir*" was not sung as Jenny Lind or even as Parepa sang it, or that of "*Batti batti*" as Malibran or as Alboni sang it, it was sung intelligently and

MRS. EDWARD SEGUIN.

conscientiously by artists of respectable abilities, and was enjoyed by audiences to whom the only attraction was the music. Let who will say that this was not a more reasonable scheme of opera, and more adapted to cultivate a genuine and elevated taste for music, than that adopted by the patrons of the Riva-finoli enterprise, with their six-thousand-dollar boxes.

It may be also here remarked that this scale of prices was monstrous, and would hardly have been tolerated in London. The rise in the price of admission to the opera in that city was very great at the end of the last century and the beginning of this; but it attained nothing like the extravagance of New York. Lord Mount Edgumbe is my authority (and there could be no better) for saying that, in the last quarter of the last century, the price of subscription to a box at the Italian opera, London, was twenty guineas a seat for fifty representations—two dollars a night; and this when there were but thirty-six private boxes in the house. These, and the balcony and pit, were filled only by the highest classes of society—always, of course, in full evening dress; and it was the custom after the performance for the company of the pit

and boxes to repair to the coffee-room attached to the theater, and there to sup, making this a reunion of the best society in London, private parties rarely being given on opera nights. When the number of performances was increased to sixty, the price of seats in private boxes rose to thirty guineas—being still, it will be seen, only two dollars and a half. It was Catalani who made the opera a luxury only to be enjoyed by a few rich people, or else by a great crowd in an enormous house, thus doing great injury to singers and to music. She suddenly doubled her demands, and the price of a whole box went up from one hundred and eighty to three hundred guineas. But three hundred guineas is only fifteen hundred dollars, and that is only one-quarter of six thousand dollars.

This year, 1840, saw the arrival in New York of one of the most remarkable singers the world has ever known—John Braham. His real name was Abraham, or Abrams, by both of which he was known when, as a boy, he made his first appearance at Covent Garden Theater as a singer of songs between the acts of plays. He had previously peddled pencils about London streets. His voice and his manner of singing were immediately the

SIGNOR GIUSEPPE DE BEGNIS, OF THE ITALIAN OPERA, LONDON. (ENGRAVED BY C. KNIGHT, FROM A MINIATURE PAINTED BY TITUS G. PERLOTTI. FROM THE COLLECTION OF THOMAS J. McKEE, ESQ.)

theme of general admiration. When his voice changed it became a pure tenor, and such a tenor as it would seem was never heard before and has not been heard since. He had a compass of two octaves and three notes, and his voice was no less admirable in quality and in power than in extent. He went to Italy, and studied for some years both composition and vocalization. His supremacy was acknowledged even in the land of song and of tenors. "*Non e tenore in Italia come Braham*" was the confession made in musical circles all over the Continent. He returned to London and sang constantly in English opera for many years, always writing the music of his own part. He accumulated a fortune, lived like a prince, and the pencil-peddler was taken into "society." He became enamored of the arch and charming prima-donna, Storace (born in England of an English mother by an Italian father), and traveled with her over the continent of Europe. He lost his money in speculations. His voice, however, lasted longer than his prudence or his money; and he was always sure of a handsome income. At last, in the autumn of 1840, being then sixty-six years old, he came to New York, and after two or three concerts at Niblo's, appeared at the Park Theater in December, in an opera, "The Siege of Belgrade," which, in spite of the name of its composer, a Mr. Cobb, had been popular in London. His failure was utter and speedy. His voice was worn; his florid style was not liked; he was as awkward as a figure on an Assyrian

marble; he was five feet three inches high; and when he did not wear some other, he wore a reddish-brown wig of George IV.'s fashion. He went about the country giving concerts in a somewhat doleful, forlorn, and solitary manner; and he who had been the greatest tenor in Europe, had lived like a prince, and was the father of the future Lady Waldegrave (now lately dead), might have been heard in the lyceums and the Sunday-school rooms of small towns in America, bawling out his once thrilling high notes and trundling forth his old-fashioned roudades before depressed audiences, not large enough to pay for the gas by which they saw his senile insignificance. In a history of opera in New York it is necessary to remark upon the visit of such an artist as Braham, but he exercised no influence whatever upon the public taste, nor upon the fortunes of his art in America; and this less because of his voice, which had lost nothing but its freshness, than

because of his style and of the music that he sung. These were found by the public of New York insufferably dull: and it should seem with reason. He soon returned to London, where he died in 1850. In the very year in which he came to America on his

FRANCES, COUNTESS WALDEGRAVE.

MADAME CINTI DAMOUREAU. (FROM THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

peripatetic singing tour, the pencil-peddler's daughter was married to the seventh Earl Waldegrave, she having been previously married to John Waldegrave, Esq., of Navestock. After the death of her second husband, within six years of her marriage, she became the wife of Grenville Vernon Harcourt, M. P., who dying said that he hoped that she might make some other man as happy as she had made him. She followed his advice and was married to her fourth husband, the Right Hon. Chichester Fortescue, M. P., in 1863, she being then at least fifty years old. What was the charm that brought this woman four such husbands it would be hard to tell. Certainly not beauty. For that her face lacked, while it had the peculiarities of her race.

Among the artists of reputation who were known in New York in the second quarter of this century, there was not a more remarkable figure than that of Signor Giuseppe De Begnis,

who was indisputably the great *buffo* of his time. He was a singer of the old Italian school, had been thoroughly trained in music from his childhood up, and would have been an accomplished artist even without his vocal gifts and his comic power. With him, buffo-singing did not mean buffoonery, and he thought great scorn of those who descended to low tricks to promote laughter. He had married the beautiful Ronzi, better known afterward as Ronzi De Begnis; but he was deserted by her, and after some years he came to New York, where he passed the rest of his life. He was a tall, well-made man, with a face which, once, perhaps, handsome, had been plowed and harrowed by small-pox, but without destroying its powers of expression. By a mere look he sometimes produced an irresistibly comical effect; and although his voice was rich and smooth, its inflections conveyed ludicrous ideas with a

delicacy and quickness which pierced his audiences with laughter. His principal operas were "Il Barbiere" and "Il Fanatico per la America." But he sang chiefly in concerts, at which he always appeared in breeches and silk stockings, shoes with large gold buckles, an enormous shirt-frill, and ruffles at his wrists. He had a well-secured competence, and he was quite indifferent about professional engagements except as a recognition of his position. He remained in New York simply because of his terror of the ocean—a dread not uncommon among Italian artists. The voyage over here filled him with such fear that he never returned. He lived a lonely life, this priest of the muses and of Momus; he had in all the world no one near enough of kin to be his legal heir; and at his death in 1849, his estate, valued at \$50,000, went into the hands of the public administrator.

In this same year, a French company which had been performing at New Orleans visited New York, and appeared at Niblo's Garden Theater. They had a distinguished success, and made their summer vacation very profitable, chiefly because of the attractions of Mlle. Calvé, their prima-donna, a charming singer in the light French style, and a captivating actress. The company, however, was an acceptable one generally, allowance being made for the thin, throaty, French way of singing; and the visit was of importance musically because it introduced to New-Yorkers the works of French composers, particularly those of Auber, such as "Le Domino Noir," "La Fille du Regiment," "Les Diamants de la Couronne," and the like, in their original form and sung by artists of the school for which they were written.

About this time there appeared in New York an artist who, as a dramatic singer, was surpassed by none and equaled by only one of his successors—the tenor Antognini, whose only equal upon the lyric stage was Ronconi. He was singing here in 1842, and, if a concert-bill in my possession is dated correctly, in 1841. He was the most supreme and absolute union of vocalist and actor that has been heard in this century, excepting Malibran and Ronconi. But although he was here in 1842, and perhaps in 1841, his proper place in this historical sketch is in our view of the next important venture in Italian opera, which was that of Palmò's Opera-house.

Ferdinand Palmò, a little Italian, with a long nose and a sharp chin, had kept a popular restaurant of the higher class in Broadway, just above Duane street. It was known as the *Café des Mille Colonnes*. Here the little Italian had striven and had accumulated a moderate fortune, which he determined to

venture in giving New York an Italian opera. Learning prudence from the failure of the pretentious Rivafinoli undertaking ten years before, he was moderate in his expenditure and modest in his expectations. He leased a building well known as Stoppani's Arcade Baths, in Chambers street, between Broadway and Center street. There were no boxes except in name. The seats were hard benches, with a board slat about shoulder-high as a support for the back. Upon these seats luxurious and extravagant people caused a covering of plush or of rep to be placed, with a modicum of hair stuffing beneath, all at their own expense. But rarely, if ever, has there been a keener enjoyment of Italian opera in New York than in this humble lyric shrine. It was opened in February, 1844. The conductor was Rapetti, who, as we have seen, came over with the Montessoro company. He was a fairly instructed musician, an admirable violin-player in the school of Rolla, whose pupil he was, and from the time of his appearance throughout his life he was an important musical figure in New York. The opera was "I Puritani," in which a Signora Borghese was the *Elvira*; the other artists do not merit special mention. Signora Borghese, although she does not take a place in the first rank of the brilliant array of prima-donnas by which opera was illustrated in New York between 1825 and 1860, should not be passed over without notice in such a sketch as this. She had a fine voice, although not a great one; her vocalization, regarded from a merely musical point of view, was of the corresponding grade, but as stage vocalization it had great power and deserved higher commendation. Her musical declamation was always effective and musico-rhetorically in good taste. She had a fine person, an expressive face, and much grace of manner. One might be content never to hear a better prima-donna if one were secured against ever hearing a worse. In her was first remarked here, among vocalists of distinction, that trembling of the voice when it is pressed in a *crescendo* which has since become so common as greatly to mar our enjoyment of vocal music. This great fault, unknown before the appearance of Verdi, is attributed by some musical critics to the influence of his vociferous and strident style. It may be so; but that which follows is not always a consequence of that after which it comes. Certain it is, however, that from this time forward very few of the principal singers who have been heard in New York—only the very greatest and those whose style was formed before Verdi domineered the Italian lyric stage—were without this tremble. Grisi,

Mario, Sontag, Jenny Lind, Alboni, and Salvi were entirely without it; their voices came from the chest pure, free, and firm. The following extract, from a not unintelligent criticism upon Borghese, in the "New World," is not only of interest as a contemporary record of the impression made by her, and as an example of the best style of the journalism of the period on such subjects, but as an illustration of that narrowness of view, that combination of ignorance and assumption in regard to the social and intellectual history of New York, which was remarked upon at the outset of these articles:

"Her voice is a soprano of unequal quality, the *mezza voce* being good, but somewhat weak, while the upper tones are produced with extraordinary power by means of the favorite Italian clap-trap, the vibrate style. She sings with intense passion, and throws so much soul into all that she does that she carries her hearers completely with her. Her execution is brilliant, although sometimes defective. On the whole, however, balancing her beauties against her defects, we conclude that she is the best singer—operatic—that we have heard on this side of the Atlantic."

Now, this writer had manifestly a more than common knowledge of music and of vocalization. The absurd remark with which this passage closes is plainly the result of ignorance. Signora Borghese was not worthy to tie the shoes of Malibran, or of Pedrotti, or Fanti, or Caradori, or even Mrs. Wood, and others

of less note whom we have passed in review were at least her equals. But of them this writer must have been quite ignorant. Probably he had not been in New York five years at the time of his writing.

The tenor Antognini made his first appearance at Palmo's on the 13th of March, 1844, as *Oronubello* in "Beatrice di Tenda." He produced a very great impression, and gave particular delight to the most cultivated part of his audience. Of all the tenors that have been heard in America, not excepting Mario and Salvi, this now utterly forgotten man was the undeniable superior. He was an artist of the first class, both by natural gifts and by culture. His voice, although not of notable compass, was an absolute tenor of a delicious quality and great power. His vocalization was unexceptionably pure, and his style was manly and noble. As a dramatic singer, I never heard his equal except Ronconi; as an actor, I never saw his equal, except Ronconi, Rachel, and Salvini. He had in perfection that power which *Hamlet* speaks of in his soliloquy, after he dismisses the players, when the speech about Pyrrhus is ended:

"Is it not monstrous that this player here,
But in a fiction, in a dream of passion,
Could force his soul so to his own conceit
That from her working all his visage wann'd;
Tears in his eyes, distraction in's aspect,
A broken voice, and his whole function suiting
With forms to his conceit!"

PALMO'S OPERA-HOUSE, AFTERWARD BURTON'S THEATER. (AFTER A WATER-COLOR DRAWING IN THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

I have seen the blood fade not only from Antognini's cheeks, but from his very lips, as he strode slowly forward to interrupt the nuptials in "Lucia di Lammermoor," and then flame back again as he broke into defiance of his foes. The inflections of his voice in passages of tenderness were ravishing, and his utterance of anger and despair was terrible. Nor was any tenor that has been heard here, not even Mario in his prime, his superior in that great test of fine vocalization, a sustained cantabile passage. His person was manly, his face distinguished and intelligent. He was one of those blonde Italians who are found on the northern border of the peninsula. Being all this, he nevertheless soon disappeared, and was forgotten except by a few of the most exacting and cultivated among his hearers; the reason of which was that his voice could not be depended upon for two nights together—not, indeed, for one alone. On Monday, he would thrill the house; on Wednesday, he would go about the stage depressed, almost silent, huskily making mouths at his fellow-actors and the audience. His voice would even desert him in the middle of an evening, thus producing an impression that he was trifling with his audience. No judgment could have been more unjust, for he was a conscientious artist; but the effect of this defect, as *Polonius* might say, was therefore no less disastrous, and he soon gave place to artists less admirable, indeed, but more to be relied upon.

In July, 1844, the eminent French prima-donna Cinti Damoureau appeared at Palmo's, she having come to this country on a professional tour with the violinist Artot. She had sung with Malibran and Sontag in "Il Matrimonio Segreto," and had held her own with them. Fetic pronounced her one of the greatest singers the world had known. Rossini wrote the soprano part of "Le Siège de Corinthe" for her, and Auber wrote for her "Le Domino Noir" and "L'Ambassadrice"—in the latter of which her elegance of manner as well as her beauty gave her great distinction. She was forty-three years old when she came to New York, but both her voice and her beauty were in fine preservation. Among the operas in which she appeared was "L'Italiana in Algeri," an early and rarely heard work of Rossini's, in which Antognini was the tenor. She sang also in many concert-rooms throughout the country, and her visit was of no little importance in the cultivation of a taste for the most delicate refinements of lyric music.

In October of this year, Signora Pico appeared at Palmo's, and was received at once into a place in public favor which she retained for some years. She was a swarthy, sweet-

lipped woman, in whose face that simple good-nature which is so peculiarly Italian found ceaseless expression; and her voice, a rich, creamy contralto, in no way very remarkable, was of corresponding texture and character. Her figure was as amply rounded as is compatible with theatrical success; and when she played page's parts, she stumped about the stage upon a pair of supporters that had something ludicrous in their heavy and yet not quite ugly shapelessness. She was the favorite contralto of New York for some three or four years.

Palmo did not fail at once, but fortune did not smile upon him. The operatic success of this period was again on the English side, and this time, it must be confessed, with small reason. In November of this year, 1844, Balfe's "Bohemian Girl" was produced at the Park Theater by the Seguias, who had with them this time, as first tenor, Mr. Fazer, a portly Scotchman. He had a very pleasing voice, and sang as well as a Scotchman can be expected to sing in opera. The success of "The Bohemian Girl" was phenomenal. It was performed through the whole season, and again, and yet again, through other seasons. Its trivial airs, with their vulgar rhythms and hideous intervals, were sung, and whistled, and thrummed, and hand-organed all day and all night the country over. One could not read or eat without hearing, in some form, "I dreamt that I dwelt in marble halls," and sleep was disturbed, if not by the dream, at least by the musical telling of it, the echoes of which have hardly yet died away. It was like the chanting of "*ti revedro*" all over Italy, and then all over Europe, after the production of "Tancredi." But with what a difference in the occasion! "*Di tanti palpiti*" is a melody the grace of which is not unworthy of Mozart in his happiest, sunniest mood; whereas a more vulgar air or a sillier song than "I dreamt that I dwelt in marble halls," was probably never heard upon the lyric stage. But the audiences of "The Bohemian Girl" were not those of "Don Giovanni," nor yet those of "La Sonnambula."

It is impossible in a sketch like this to give a record in detail of all operatic performances, or even to mention all the operatic artists that in their time attracted some attention; nor would such a detail be of interest even to the musical reader. We can but follow the general course of the operatic stream, and linger only where it is broadest and brightest. The year 1847 was notably fruitful in operatic events in New York. The January announcements at Palmo's present the names of artists of marked distinction. These were Clotilde Barili, a soprano; her brother, Antonio Barili,

SESTO BENEDETTI. (FROM INDIA-INK DRAWING FROM THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

maestro and conductor; Benedetti, a tenor; and Sanquirico, a buffo. The Barilis were children of Catarina Barili, a prima-donna of the old school, much admired in Southern Europe, and certainly even in her decadence one of the finest singers in the grand style heard in this country—Malibran, Jenny Lind, and Alboni of course excepted, as they always must be in making comparisons. Catarina Barili became the wife of a tenor named Patti, and by him was the mother of Carlotta and of Adelina Patti. Clotilde Barili was a finished vocalist, with a pure soprano voice remarkable only for its compass in the upper register. She could give F sharp above the lines easily and gracefully. But her voice was thin, and so was her figure, and she was cold and tame, and produced little impression on the New York public. Her pretty face, however, ere long won her a husband, the son of a rich man well known in New York, and she disappeared from public life. Her brother Antonio was an excellent *maestro*, and for some fifteen years was a teacher of singing in New York, and there could hardly have been a better. After all his success,

however, he returned to Italy in disgust. He did not find the New York public to his taste.

Among all the tenors who have appeared in America, not one took such a hold upon the musical public as Benedetti, although he had not a great voice, nor a finished style, nor a handsome person. His vocalization was often open to severe criticism; indeed, he was but a half-taught singer; and his face, with a shapeless nose and little, Chinese-looking eyes, was almost ugly; nor was this defect made up by beauty of figure. But there was in the tone and quality of his voice something to which the heart could not say no; and his style of singing as well as his bearing on the stage was the perfection of manliness. His passion was manly; his tenderness was manly. The women worshiped him, and the men forgave him this and admired him. He was for years the beloved of the New York public. His great part was *Edgardo* in "Lucia"; and at one time it seemed as if he might have sung *Edgardo* every opera night without intermission for a year. He was great only upon the

FORTUNATA TADESCO. (AFTER THE DRAWING ON STONE BY F. DAVIGNON, FROM THE DAGUERRETYPE BY P. HAAS. FROM COLLECTION OF THOMAS J. MCKEE, ESQ.)

stage, and in dramatic parts; in the concert-room he failed to carry his audience with him.

Sanquirico, artist and *impresario*, was a buffo of rare comic power, which yet depended greatly upon a peculiarity of his face and of his voice. He had a nose like Punchinello's, and the quality of his voice in recitative and in speech

was also exactly like that of Mr. Punch. The sight of his queer visage, and the sound of his cackling voice, never failed to send laughter through an audience. He became an opera manager in New York, and was much esteemed for his intelligence and his character. These artists performed "Lucia," "Linda di Chamounix," "I Lombardi," "Lucrezia," and,

ASTOR PLACE OPERA-HOUSE. (FROM AN OLD PRINT IN THE COLLECTION OF GEO. P. ELDER, ESQ.)

indeed, went through the general repertory of Italian opera of the period.

April of this year brought to the Park Theater an opera company from Havana. They came to the North to avoid the sickly season of the tropics. The company was large, including, with instrumentalists and chorus-singers, seventy-three persons. These were all in training, and the performances had a large completeness which was not common in opera anywhere but in Paris. Among the principal artists were Fortunata Tadesco and Caranti-Vita, prima-donnas; Badiali, baritone; Luigi Arditi, musical director; and Bottesini, contra-bassist,—the last two destined to attain the highest honors of their profession in Europe. I must hasten on, and I can only say that Arditi and Bottesini, like Malibran, received their first recognition in New York. Coming here absolutely unknown, their talent was at once appreciated, and they received approval, which Europe soon afterward could but confirm. Tadesco was a great, handsome, ox-eyed creature, the picture of lovely laziness until she was excited by music; and then she poured out floods, or rather gusts, of rich, clear sound. She was not a great artist, but her voice was so copious and so musical that she could not be heard without pleasure, although it was not of the highest kind. This company performed "Ernani," "I Due Foscari," "Norma," "Mose in Egitto," and Pacini's "Saffo" among other operas. Tadesco was its chief attraction. She had a noble voice, a beautiful head, she sang well enough and acted not quite so well, was charming at times, brilliant at others, pleasing always, and always pretty. But she stirred no depth of feeling, nor did she in any way educate the public musical taste.

Soon after her came Madame Anna Bishop, known in England first as the beautiful Miss Rivière, then as the wife of Sir Henry Bishop (Knt.), the composer, whom she left to make an extended tour in company with Bochsá, the harpist. She was well advanced toward maturity when they came to this country, but retained the remarkable beauty both of her face and her figure, the latter being conspicuous in the part of *Tancredi* when she sang the hero's grand *scena* in that opera, which she did in very good style and with clever

execution. But her voice, never of first-rate quality, was worn and somewhat husky; she failed to produce the impression which she had expected to make; and, indeed, this venture resulted in loss. The visit of such an artist must be remarked upon; but it was really of no musical importance. The confusion and bankruptcy which seem to be the natural attendants upon Italian opera soon brought poor Palmó's little venture to an end.*

TERESA TRUFFI. (AFTER THE DRAWING BY H. SARONY. FROM THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

His wit was not so sharp as his chin, and so his career was not so long as his nose. In the autumn of 1847 his little opera-house was deserted; and in 1848 it became Burton's Theater, where that most humorous of comedians made for himself, in a few years, a handsome fortune. Upon the site now stands the large and handsome building occupied by the American News Company.

The interest shown in the performances at Palmó's, however, particularly among the wealthy aspirers to "fashion," led to the formation of a subscription opera association or corporation, which built what was known as the Astor Place Opera-house, on the eastern end of the triangle formed by Astor Place, Eighth street, and Broadway. This opera-house, one of the most attractive the-

* It may be worth while to say that the prices of admission to Palmó's were, to the first balcony and the parterre, one dollar; to the second balcony, fifty cents.

MADAM BISHOP AS NINETTA (LA GAZZA LADRA). (AFTER THE DRAWING BY M. SALABERT.
FROM COLLECTION OF THOMAS J. MCKEE ESQ.)

aters ever erected, was opened on Monday, the 22d of November, 1847, with a performance of "Ernani," with this cast: *Elvira*, Signorina Teresa Truffi; *Ernani*, Signor Vietti; *Carlo V.*, Signor Avignone; *Silva*, Signor Rossi. This occasion was a musical event of the first importance in the musical annals of New York, and as such it was regarded by society and by musical amateurs generally. So elegant and socially impressive a spectacle as that presented by the house on the rising of the curtain had not been seen before in New York, and has not been seen since. New York had not then become quite the heterogeneous place it now is; and in such an assembly as that which graced the opening of the Astor Place Opera-house there was

a certain degree of congruity and of coherence. It may safely be said that there was hardly a person present who was not known, by name, at least, to a very considerable number of his or her fellow auditors.* A sociable feeling pervaded the assembly, and one almost of ownership in the elegant little house and in the enterprise, which added much to the glow of satisfaction with which they greeted one another and discussed the house and the artists. The impression produced by

* It is worthy of remark, in reference to a social evil connected formerly with theatrical entertainments, that the play-bill of the opening night at the Astor Place Opera-house, which is now before me, has the announcement: "No lady admitted unaccompanied by a gentleman."

the completely filled but not overcrowded house was somewhat peculiar. Rarely has there been an assembly, at any time or in any country, so elegant, with such a generally diffused air of good-breeding; and yet it could not be called splendid, in any one of its circles. At the Astor Place Opera-house that form of opera-toilet for ladies which is now peculiar to New York and a few other American cities came into vogue,—a demi-toilette of marked elegance and richness, and yet without that display, either of apparel and trimmings or of the wearer's personal charms, which is implied by full evening dress in fashionable parlance. This toilette is very pleasing in itself, and it is happily adapted to the social conditions of a country in which any public exhibition of superior wealth in places set apart for common enjoyment of refined pleasure is not in good taste. But we are neglecting the artists whom the lifted curtain revealed for the first time to the eyes of a New York audience. Of these, however, only two, the prima-donna and the bass, proved to be of sufficient importance to demand our particular attention.

Teresa Truffi stands first as a favorite among the operatic artists of the second rank who have visited New York. She was not a great singer; she was not a finished vocalist; she had not even a great voice, as Tadesco had. But there was that nameless something in the tone of her voice—nameless unless we call it the sympathetic quality—which enabled her to move her hearers when many a more finished vocalist would leave them as untouched as by the piping of a bulfinch. Her voice was noble, if it was not perfect—so noble, so touching, that all but the pedants of vocalization forgave its unmendable break between the two registers—a rupture which always appeared when she ran a scale. Her style was both admirable and charming; it impressed and it captivated. Her triumphs were those of feeling. She bore her audience away and aloft on a high tide of emotion. It must be confessed that this was partly due to her magnificent beauty and to her acting. She suggested the statue of a good and beautiful Roman empress, if there ever was one. The nobility of the woman's nature, bodily and mental, was so great and so strongly marked that she was far above coquetry or vanity, and she bore herself upon the stage as absolutely unconscious of her beauty and of its effect upon her audience as if she had been a seraph. She had much influence upon the taste of the generation that saw her. After her, they—those of them, at least, who were capable of the higher pleasures of art—could not easily tolerate frivo-

lous and vulgar artists, even when they were accomplished singers and pretty women. Truffi was naturally greatest in tragic parts,—in *Elvira*, in *Lucrezia*, in *Donna Anna Elisabetta*, in *Roberto Devereux*, and the like. She was, take her all in all,—dramatic singer, actress, and fitting person,—the greatest *Lucrezia* America has seen, not excepting Grisi. To hear her and see her in this part was like reading Italian history with living illustrations. In the scene in which *Lucrezia* resents *Don Alfonso's* severe treatment of her favorite *Gennaro*, Truffi seemed to embody the spirits of all the Italian viragoes of the *cinque cento* period. When she stood before him, taunting, upbraiding, threatening, in her outburst of contempt and wrath, as she reminded him that she was a woman not without experience of men—"Don Alfonso, mio quarto marito!" she looked like a beautiful goddess into whom had entered the soul of an infernal fury. There was a weight and a grandeur in her wrath, due in part to her personal magnificence, but no less to her union of a large and simple style with great impetuosity of passion, which gave her an air of irresistibility. It seemed as if the wave of that arm must sweep away all obstacles less grand and less beautiful.

Few men could afford to play *Alfonso* to such a *Lucrezia*. For *Alfonso* has to tame *Lucrezia*; and with most men it would be but too plain that this *Lucrezia* was "too many guns" for them. But Rossi, her *Alfonso*, was equal to the situation. Although his face had not the demi-god-like beauty of Fornasari's, it was handsome, strong, and manly, and his figure was like Jove's—towering, majestic, yet graceful. Such handsome legs as his are rarely seen even in Greek sculpture. He sang always well, always correctly, and always in good taste; but he was not admirable except upon the stage and in action; and although he remained in New York some years, always a favorite, his place was that of a fitting companion to Truffi; as in a pair of statuettes, one, of which the beauty may be undeniable, has yet its chief value as the fellow of the other.

Truffi was one of the few artists that I knew personally. With the enthusiasm of an unhackneyed critic, and the ardor of a very young man, I had glorified her to the public from the night of her first appearance, and, although not without some critical reserves, with a very warm-hued admiration. It was intimated to me that she would like to know the man who had done her such service. The very next day, as it was not an opera day, and she was likely to be at leisure, I

presented myself. I was shown into a room quite unlike any one into which I had ever before entered. It was not large, and much of it was occupied by a great, lumbering piano-forte, on which were piles and loose sheets of music, a bonnet and shawl, a pair of soiled white shoes, a half-empty bottle of wine, and a plate containing a cut loaf and a huge piece of bologna sausage. Dingy disorder pervaded the apartment, in which I detected faintly an odor novel and indescribable, which might have been that of the sausage, but which certainly was not that of a large faded bouquet which stood upon a table, on which the cover lay awry. The primadonna received me with gracious smiles; and if nothing else was fresh and sweet in the room, her lips and her complexion were. But her dress was a strange stuff gown; her hair was in disorder, and over her magnificent shoulders she had a queer little shawl, which she gathered closely around the ivory tower crowned by her beautiful head. She presented me to *mia madre*, one of the ugliest old she-Italians that I ever saw; in whose face, alas! there were some suggestions of her own. This ancient female, dressed in a dingy old loose gown, sat bent over in a rocking-chair, with a huge snuff-box in one hand, and in the other a silk handkerchief of varied colors. Notwithstanding the solid freshness of her beauty, which would bear the blaze of noonday, all my goddess's divinity was gone. Her figure was as grand as ever, her lips might have been stolen from Hebe, but she was utterly lacking in the charm of refined womanhood. On the stage, she had a graceful dignity which an empress might have envied; in her own parlor, no one could have mistaken her for a lady. My heart sank within me; but I kept my spirits up and entered into conversation, in which

I did not find the *signorina* very ready, although she radiated good-nature. Indeed, *mia madre* proved to be much the more conversible, and poured out upon me a flood of talk, of which I understood but little—partly because of her vile Milanese accent (which Truffi also had, of course), and partly because of my own want of practice in the language. But it was all about the brilliant talents of her daughter, and the lack of adequate recognition thereof, in money, by the *impresario*. All the while she regaled herself with snuff. At last, she paused; she raised one hand with the handkerchief spread out upon it, and lifted it slowly toward the organ which she had been titillating. I beheld the movement with some apprehension, but she staid her hand and her handkerchief in mid-air, and again she resumed her theme, and talked volubly, her nose poising and soaring above the outspread silk. She paused again, and then, after one or two more hesitating movements, the great beak swooped down in a blast that startled me from my propriety. But Teresa was as serene as a summer's morning. The handkerchief was folded, and alas!—*encore*. Then the flood of talk began again, punctuated by consolatory sweeps of the folded and refolded handkerchief across the irritated feature. And still Teresa, the magnificent, sat unmoved, smiling good-will upon me, and hugging her ivory throat with her dingy little shawl. "Great Phœbus," thought I, "and Truffi herself may come to this!" I soon gathered myself together and took my leave; and thereafter I was content to adore my goddess with the foot-lights between me and her divinity. Like many such "divinities," she was as much out of place in ordinary social life as a stage scene would be framed and hung on the walls of a drawing-room.

BUTTERFLIES IN MARCH.

DOUBTLESS it was good for ye,
To huddle here all shivering,
No blossom in the wood for ye;
From hungry pangs delivering.
No shelter for your quivering
Black and blue and liver wing.

'Twas best that so
Ye too should know
How frosty winds come slivering
More solid things
Than horns and wings,
With all their dainty quivering.

ON KINGSTON BRIDGE.

On All Souls' Night the dead walk on Kingston Bridge.—*Old Legend.*

ON Kingston Bridge the starlight shone
Through hurrying mists with shrouded glow :
The boding night-wind made its moan,
The mighty river crept below ;
'Twas All Souls' Night, and to and fro
The quick and dead together walked,
The quick and dead together talked,
On Kingston Bridge.

Two met who had not met for years—
Their hate was once too deep for fears ;
One drew his rapier as he came—
Up leapt his anger like a flame ;
With clash of mail he faced his foe,
And bade him stand and meet him so.
He felt a grave-yard wind go by—
Cold, cold as was his enemy ;
A stony horror held him fast.
The Dead looked with a ghastly stare,
And sighed, " I know thee not," and passed
Like to the mist and left him there
On Kingston Bridge.

'Twas All Souls' Night, and to and fro
The quick and dead together walked,
The quick and dead together talked,
On Kingston Bridge.

Two met who had not met for years ;
With grief that was too deep for tears
They parted last.
He clasped her hand, and in her eyes
He sought Love's rapturous surprise.
" O Sweet !" he cried, " hast thou come back
To say thou lov'st thy lover still ? "
Into the starlight pale and cold
She gazed afar—her hand was chill.
" Dost thou remember how we kept
Our ardent vigils ?—how we kissed ?
Take thou these kisses as of old ! "
An icy wind about him swept ;
" I know thee not," she sighed, and passed
Into the dim and shrouding mist
On Kingston Bridge.

'Twas All Souls' Night, and to and fro
The quick and dead together walked,
The quick and dead together talked,
On Kingston Bridge.

ODDITIES OF SOUTHERN LIFE.

EVERY people is known by its jokes. Men are least restrained in their mirth, and give therein the largest play to their likes and dislikes. The humor of Harry Fielding, Thackeray tells us, is wonderfully wise and detective; it flashes upon a rogue and lightens up a rascal like a policeman's lanthorn. The same may be said of the humor of Rabelais, though the objects of its ridicule are not always cheats and scamps. The difference between *opéra bouffe* and Anglo-Saxon farce represents the difference between the life of the French and the life of the English. With Americans it is not the snob and the husband who are satirized; our domestic jocosity embraces chiefly the small boy, the widow, and the mother-in-law, reserving for its most palpable hits the bully, the visionary speculator, the gamester, and the commercial agent. Thus American humor may be divided into two classes—that which relates to fighting and that which relates to money. In the South this general classification grows still narrower, gaining, however, in whimsicality and local color what it lacks in breadth.

There can be no mistaking the origin of the old story of the traveler who asked a Mississippian whether it was worth his while to carry a pistol, and was told: "Well, stranger, you mout move around here more'n a year an' never need a pistol, but ef you *should* happen to need one, you'd need it powerful." Equally characteristic is the record of a well-known Tennessee case. The principal witness for the commonwealth testified that he was sent to get a fresh pack of cards, that he got them, and, returning, sat down in the grass. Here he balked in his testimony, and would go no further. At last, after cross-questioning and coaxing had been exhausted, the judge threatened him with fine and imprisonment, whereupon he said: "Please, your honor, if I must tell why I drapped in the jimson weeds, I suppose I must. It was just, your honor, to *look over the kerds, and mark the bowers.*" The following incidents no less reflect the local color of the ante-bellum days: Two Kentuckians went to settle their bill at a hotel in Boston. There being a dispute about the amount, one of them grew angry and began to swear, when the other said: "Remember, John, who you are. Remember you are a Kentuckian. Pay the bill and *shoot the scoundrel.*" Parson Bullen, in his funeral oration over the dead body of Sut Lovingood, observed:

"We air met, my brethering, to bury this ornery cuss. He had hosses, an' he run 'em; he had chick-

ens, an' he fit 'em; he had kiards, an' he played 'em. Let us try an' ricollect his virtues—ef he had any—an' forgit his vices—ef we can. *For of sich air the kingdom of heaven!*"

Such incidents as these could not occur, and therefore could not be humorously narrated, in any part of the world except the South.

In the old steam-boating times the typical Southerner was pictured as a ranting, roving blade, who wore a broad-brimmed Panama hat and a great watch-fob, who was an expert in the decoction and disposition of mixed liquors, who ended all his sentences with "By gawd, sah," and thought no more of betting "a likely nigger-boy" on a "bobtail flush" than you or I, dear reader, would think of betting a button on the result of a presidential election. It was he who was to be encountered during the winter anywhere and all the way from Cairo to New Orleans; during the summer at any of the watering-places, from Saratoga to Newport. He traveled with a dusky valet, a silver-headed cane, two ruffled shirts, and a case of hair-triggers. His morning meal was a simple Kentucky breakfast—"three cocktails and a chaw of terbacker." His amusements were equally simple and few: he could clip the wing of a mosquito at ten or fifteen paces; could stop the launching of a lifeboat to tell his terrified fellow-passengers the last good story from "Georgy"; could draw to a shoe-string, as the saying went, and obtain a tan-yard! He affected blooded stock, particularly game-cocks. To him the pedigree of a race-horse, like a question in constitutional ethics, was a sacred subject, to be tampered with under penalty of death. He had the faculty of losing his money, and other people's money, with a charming indiscrimination, if not with a delightful indifference, at all games of chance, from chuck-a-luck to brag. That such an animal would fight was a matter of course; he would fight anything, preferring, indeed, the "tiger." The invention of the comparatively modern pastime called by the fastidious English "American whist," to escape its more vulgar appellation of "draw-poker," was to him the discovery of another world. He felt as the ancient monarch would have felt had the new amusement for which he offered a reward really come into being. It struck him, and it stuck to him. Its very nomenclature tickled his fancy, beginning with its descriptive soubriquet, "draw-poker." He was in the habit of drawing on his commission merchant, on his revolver, and on his imagination, and

here was a chance to draw on all three at one and the same time. He was himself a poker—a poker of fun at all men, a poker of nonsense in the face and under the nose of Providence. Then the titles of the hands were descriptive. There were “fulls” and “flushes,” and was not his own life a perpetual experience of one or the other?—for when he was not flush he was sure to be full, and *vice versa*.

In those days there were no bloated bondholders. We had not even risen to the dignity of the insurance agent. Capital was really timid, and, for the most part, was represented in the South, as far as the East was concerned, by the peddler, the colporteur, and the vender of lightning-rods. These, who made themselves familiar with Southern thoroughfares only, were impressed by the manners of our swaggering hero; they stood abashed before his bullying; they were amused by his vulgarity; being for the most part unversed in the ways of the world, except that of trade, they were bound to fall into mistakes. Not unnaturally, therefore, they mistook the Southern swashbuckler for the Southern gentleman, and carried home a daguerreotype of Southern life taken from their adventures, which, as we may conjecture, were rarely of the nicest. The South, on its part, got its view of the North from the wandering middlemen who were best known to it; and thus a mutual misconception sprang into existence—taking its ideas and examples, not from the better classes of society, but from the worst. The truth is, that behind these the people, the good people, of the North and South lived, moved, and had their being: in the one section, relying upon personal thrift and industry to build up fortunes; in the other section, victims to circumstance rather than design, accumulating debts as they accumulated slaves. I am sure that I am not mistaken in this; and, indeed, events are verifying it. After years of contention and war, the obstructive forces are passing away, and what do we see? Why, in the South, looking northward, we see a race, kindred to ourselves, a little less effusive, but hardly less genial, already disciplined and equipped to struggle against the winds and the waves. In the North, looking southward, the philosophic observer sees, not a huddle of lazy barbarians, composed in large part of murderers and gamblers, but a great body of Christian men and women, who have had a hard struggle with fate and fortune, but who have stood against the elements with a fortitude that contradicts the characteristics formerly imputed to them; he sees the master of yesterday the toiler of to-day; he sees the

mistress of the mansion, still a gentlewoman in the truest sense, striving and saving, patching, piecing, and pinching to make both ends meet; he sees, in short, a people, born to the luxury of a rich soil and a warm climate, and inured to nothing except the privations of disastrous war and unexpected poverty, throwing themselves bravely into the exigencies of real life; nowhere indolent and idle; nowhere demoralized; everywhere cheerful, active, and sober.

It is not of these, however, that I shall speak in these pages. The homely story of their ups and downs will pass into the humor of the future. I wish to introduce here a lower order—to talk of the comicalities and whimsicalities of Southern life, embodied in the exploits of the “howling raccoon of the mountains” and the musings of the epic hero who, describing himself, said: “I am a fighter from Bitter Creek; I’m a wolf, and this is my night to howl. I’ve three rows of front teeth, and nary tooth alike. The folks on Bitter Creek are bad; the higher up you go, the wuss they are; and *I’m from the head-waters*.” This type is the offspring of a class, and, as humor itself springs from the nether side of nature, he must needs play a considerable part in the veracious chronicle of Southern life.

Running over the pages of Professor Longstreet’s amusing volume of “Georgia Scenes,” certainly a most faithful, as well as a most graphic, series of pen-pictures of Southern life, one is agreeably impressed by the absence of venality and blood-thirstiness which marks the various narrations. The table of contents embraces all manner of inland adventure, from a gander-pulling to a shooting-match, including such suggestive chapters as “The Horse-swap,” “The Debating Society,” “The Militia Drill,” and “The Fox Hunt.” “The Life and Adventures of Bill Arp” is a continuation of the same class of incidents, narrated by the principal actor in backwoods English. Both volumes, however, are bounded by purely local confines. The yarns spun by Sut Lovingood, who describes himself as “a nateral born dern’d fool,” have been more fortunate; at least one of them has traveled across the Atlantic, where, translated into French, it enlivens a scene in one of the ingenious dramas of M. Victorien Sardou. Sut Lovingood is described as “a queer, long-legged, web-footed, short-bodied, hog-eyed, and white-haired” creature, mounted on “a nick-tailed, bow-necked, long, poor, pale, sorrel horse”—a compound of ignorance and cunning, half dandy and half devil, perpetually entangled in “a net-work of bridle-reins, crupper, martingales, straps, stirrups, surcin-

gles and red ferreting." He tells his own story in the wildest of East Tennessee jargon, being a native of that beatific region, and is, of course, the hero of his own recitals. These, be it said, are quite as often at his expense as in glorification of his exploits. There is an extravagant oddity in his experience which rarely fails to arrest attention. On one occasion he tells how, seeing for the first time "a biled shirt," he desires to emulate the wearer and imitate the fashion. He broods over the mystery of biled shirts. He roams in the mountains and dives into the philosophy of biled shirts. At length, he discovers in a female friend an original genius. She has no more practical knowledge of starch than himself; but she has heard that flour, boiled to a certain consistency and smeared over a given surface of textile fabric, will stiffen it. So she undertakes the job, makes the paste, douses Lovingood's homespun into it, and, being in a hurry, he puts it on before it is dry. He goes to the grocery to show himself, drinks deeply, and falls asleep; the shirt congeals upon him, and when he wakes—in a hay-loft—he is a sight to see. How to escape becomes at once a problem. At length, to make a long story short, he loosens the edges of the tails of the unmanageable garment, and tacks these to the four sides of the hole in the floor by which entrance is had to the hay-loft, and plunges through to the ground below—with what consequences one may imagine. On another occasion, the Lovingood family being about to starve, and there being no horse to plow with, Sut's father agrees to be horse and pull the plow, enacting the part perfectly until he gets into a nest of yellow-jackets, when—considering it his duty to act as a horse would act—he runs away, destroying plow, gear, and all, much to the consternation of his son, who plays the part of plowman. Again, being greatly enraged with a local preacher, Sut resolves upon revenge, and goes to camp-meeting to accomplish his purpose. The culmination of this exploit he tells thus:

"I tuck a seat on the steps of the pulpit an' kivered as much of my face with my han's es I could, to show I was in yearnest. Hit tuck powerful, for I hearn a sort o' thankful kin' of buzz all over the congregashun. Ther were a monstrous crowd in that grove, for the weather was fine and beleevers was plenty. The parson give out an' they sung that good ole hym:

" 'Thur will be mournin', mournin', mournin' here,
And mournin', mournin', mournin' there,
On that dread day to come."

"Thinks I, kin it be possible anybody has tole the ole varmint what's goin' to happen to him? An' then I 'low'd nobody know'd it but me, an' I was com-

forted. He nex' tuck his tex', which was powerfully mixed with brimstone an' trim'd with blue an' red flames. Then he opened. He commenced onto the sinners. He threatened 'em orful, tried to skeer 'em with the wust varmint he could think of, an' arter a while, he got onto the subject of hell-sarpints, an' he dwelt on it. He tole 'em how the ole hell-sarpints 'd sarve 'em ef they didn't repent; how both hot an' cold they'd crawl over their naked bodies; how they'd 'rap their tails roun' their necks, poke their tongues down their throats, an' hiss in their ears. I seed thet my time had come. I had cotched seven or eight pot-bellied lizzards, an' had 'em in a narrer bag thet I had made a purpose. So, when he war a rarin' an' a tearin' an' a ravin' onto his tip-toes, an' a-poundin' ov the pulpit, onbeknowns to nobody I ontied my bag ov reptiles, put the mouf ov hit onto the bottom ov his briches-leg, an' begun a pinchin' ov their tails. Quick as gunpowder they all took up his leg, makin' a noise like squirrels climbin' a shell-bark hickory, or a sycamin'. He stopt rite in the middle of the word 'damnation.' He looked for an instant like he were listenin' for somethin'. His terrific features stopped the shoutin'. You could 'a' hearn a cricket jump. Jess about this time one ov my lizzards pops his head out'n the parson's shirt-collar, waggin' his ole brown neck an' surveyin' of the congregashun. The parson seed it, an' it war too much for him. He got his tongue, the old varmint, an' he cries: 'Pray for me, brethren! pray for me, susteren! I is 'rastlin' with the arch enemy, rite now! Pray for me an' save yer-selves! For the hell-sarpints hav' got me!'"

I have abridged the details, which, though very comic, are, it must be owned, very coarse. The book abounds with similar burlesque. It is not real life, indeed, but an attempt, in a rough way, to travesty the shams of the crude life sought to be portrayed and satirized. The orthography is really original, if nothing else, not at all imitative either of Yellowplush or Artemus. The author of the book lived and died among the scenes he describes—a quiet, somber East-Tennessean, George Harris by name. His contributions were made in the first place to a journal in Nashville, and collected thence into a volume. The value of this may not be great, but its quaintness is undeniable.

About thirty years ago there appeared in the New Orleans "Picayune" a sermon which attracted immediate attention and secured wide currency. It was at once recognized as a genuine transcription. It purported to have been delivered by a volunteer preacher, who, making his livelihood as captain of a flat-boat, happened to "lay up" over Sunday by a Mississippi landing. An idle crowd being collected, he organized an impromptu congregation, and produced a discourse which has obtained a standard place in our comic literature. He began:

"I may say to you, my brethering, that I am not an educated man, an' I am not one o' them as believes an edication is necessary in a minister of the Gospel; for I believe the Lord edicates his preachers jest as he wants 'em to be edicated; and although I says it as

ought not to say it, in the State of Alabama, where I live, there's no man what gits bigger congregashuns nor what I gits.

"There may be some here to-day, my brethering, as don't know what persuasion I am uv. Well, I must say to you that I am a Hard-shell Baptist. Thar is some folks as don't like the Hard-shell Baptists, but, as fur as I see, it's better to have a hard shell than no shell at all. You see me here to-day, my brethering, dressed up in fine clothes; you mout think I was proud. But I am not proud, my brethering. For, although I've been a preacher of the gospel for nighly twenty year, an' am capting of that flat-boat at your landing, I am not proud, my brethering.

"I am not a-gwine to tell you adactly whar my tex is to be found; suffice it to say it's in the leds of the Bible, and you'll find it somewhere between the first chapter of the book of Generations and the last chapter of the book of Revolution; and ef you'll go an' sarch the scripters, you'll not only find my tex thar but a good many other texes as will do you good to read, and when you shall find my tex you shall find it to read thus:

"'An' he played upon a harp of a thousand strings—sperrits of just men made perfick.'

"My tex, my brethering, leads me, in the first place, to speak of sperrits. Thar is a great many kinds of sperrits in the world. In the first place, thar's sperrits as some folks calls ghosts and thar's sperrits of turpentine, and thar's sperrits as some folks calls liquor, an' I've got as good a article of them kind o' sperrits on my flat-boat as was ever fatched down the Mississippi River; but thar's a good many other kin' o' sperrits, for the tex says 'he played upon a harp of a thousand strings—sperrits of just men made perfick.'

"But, I'll you what kind of sperrits as are meant in the tex, my brethering. It's FIRE. That's the kind of sperrits as is meant in the tex, my brethering. Now, of course ther is a great many kinds of fire in the world. In the first place, there's the common sort of fire you light your pipe with, and there's fox-fire and camphire, fire afore you're ready and fire-an'-fall-back, and many other kinds of fire; for the tex says 'he played upon a harp of a thousand strings—sperrits of just men made perfick.'

"But I'll tell you the kind of fire as is meant in the tex, my brethering. It is Hell-fire! An' that's the kind of fire a good many of you are coming to ef you don't do better nor what you have been doin', for 'he played upon a harp of a thousand strings—sperrits of just men made perfick.'

"Now, the different sorts o' fire in the world may be likened to the different persuassions of Christians in the world. In the first place, we have the 'Piscopallians. And they are a high-sailin' an' a hifalutin set, and may be likened onto a turkey-buzzard a-flying up in the air, an' he goes up, an' up, an' up, ontill he looks no bigger'n your finger-nail, an' the fust thing you know he comes down and down, and is a-fillin' hisself on the carcass of a dead hoss by the side of the road, for the tex says 'he played upon a harp of a thousand strings—sperrits of just men made perfick.'

"Then thar is the Methodists, and they may be likened unto a squirrel a-climbin' up into a tree, for the Methodists believes in gwine on from grace to grace till they gits to perfection; an' so the squirrel goes up an' up, an' jumps from limb to limb and from branch to branch, and the fust thing you know he falls, an' down he comes, kerflumix, for they is always fallin' from grace; for the tex says 'he played upon a harp of a thousand strings—sperrits of just men made perfick.'

"An' then, my brethering, thar's the Baptists, ah. An' they have been likened to a 'possum on a 'simon-tree; and thunders may roll and the yearth may quake; but that 'possum clings thar still, ah; and

you may shake one foot loose, an' the other's thar, ah! and you may shake all feet loose, an' he wraps his tail around the limb, an' clings, an' clings forever, for 'he played upon a harp of a thousand strings—sperrits of just men made perfick.'

Irreligious as this may seem, grotesque and preposterous, it is not overstated. In the old time, and on the borders of civilization, such sermons were by no means uncommon. They are still to be heard in the "back settlements," as they are called; and, while those who make them pass for what they are worth as preachers, their sincerity goes unchallenged and unquestioned.

It was doubtless the publication of Professor Longstreet's "Georgia Scenes," in 1840, which suggested a continuous story upon the same stage of action, and in 1842 "Major Jones's Courtship" appeared. The author of this homely, natural, and amusing fiction, Mr. W. T. Thompson, an editor in Savannah, is still alive. In 1848, he followed his first production with "Major Jones's Sketches of Travel," which possess a value as contemporaneous pictures beyond and above their humor, abundant as that is. The "Courtship," however, is a novel, originally meant as a travesty, to which time has lent a sort of pathos. It is a graphic portraiture of the interior life of the South. Rough and ready as the farce is, it is never vulgar. Its characters are few, simple, and virtuous. It deals with clean homespun. It carries the mind back to the old brick church, the innocent picnic, the rural Fourth of July celebration, the Christmas frolic.

Joseph Jones, only son of the widow Jones, living near the village of Pineville, in Georgia, is a well-to-do young farmer. He is in love with Mary Stallins, daughter of the widow Stallins, a near neighbor. Joseph has grown up on the plantation, an honest, affectionate, moral young man; Mary has gone off to boarding-school, and comes home a belle. The adventures are bounded on the one side by the barn-yard, on the other side by the hearthstone. Over all a pair of rugged roof-trees cast their kindly shade. The story runs along like a brook, without effort or concealment. There is no villain in the piece—only a would-be wit, called Cousin Pete, who is introduced as a tease. The tribulations of the lovers are very slight; but there is throughout the narrative a naturalness which, being nowhere strained for its fun, is really captivating. As an example, I cannot forbear quoting the culmination of the courtship. You will understand that our hero has had many struggles and trials bringing himself to the point of popping the question; that, although he is almost sure of his sweetheart, he can-

not muster courage enough to make a direct proposal; that everybody is in the secret and approves the match. How the deed was finally done he shall tell himself:

"Crismus eve I put on my new suit, and shaved my face as slick as a smoothin iron, and after tea went over to old Miss Stallinses. As soon as I went into the parlor whar they was all settin round the fire, Miss Carline and Miss Kesiah both laughed rite out.

"There! there!" ses they, 'I told you so! I know'd it would be Joseph.'

"What's I done, Miss Carline?" ses I.

"You come under little sister's chicken bone, and I do believe she know'd you was comin when she put it over the dore."

"No, I didn't—I didn't no such thing, now," ses Miss Mary, and her face blushed red all over.

"Oh, you needn't deny it," ses Miss Kesiah, 'you belong to Joseph now, jest as sure as ther's any charm in chicken bones.'

"I know'd that was a first rate chance to say something, but the dear little creeper looked so sorry and keep blushin so, I couldn't say nothin zackly to the pint; so I tuck a chair and reched up and tuck down the bone and put it in my pocket.

"What are you gwine to do with that old chicken bone now, Majer?" ses Miss Mary.

"I'm gwine to keep it as long as I live," says I, 'as a Crismus present from the handsomest gall in Georgia.'

"When I sed that, she blushed worse and worse.

"Aint you shamed, Majer?" ses she.

"Now you ought to give *her* a Crismus gift, Joseph, to keep all *her* life," sed Miss Carline.

"Ah," ses old Miss Stallins, 'when I was a gall we used to hang up our stockins —'

"Why, mother!" ses all of 'em, 'to say stockins right before —'

"Then I felt a little streaked too, cause they was all blushin as hard as they could.

"'Highly-tity,' ses the old lady; 'what monstrous 'finement to be shore! I'd like to know what harm there is in stockins. People nowadays is gittin so mealy-mouthed they can't call nothin by its rite name, and I don't see as they's any better than the old time people was. When I was a gall like you, child, I use to hang up my stockins and git 'em full of presents.'

"The galls kep laughin and blushin.

"Never mind," ses Miss Mary, 'Majer's got to give me a Crismus gift—wont you, Majer?'

"Oh, yes," ses I, 'you know I promised you one.'

"But I didn't mean *that*," ses she.

"I've got one for you, what I want you to keep all your life; but it would take a two-bushel bag to hold it," ses I.

"Oh, that's the kind," ses she.

"But will you promise to keep it as long as you live?" ses I.

"Certainly, I will, Majer."

"Monstrous 'finement nowadays—old people don't know nothin about perliteness," said old Miss Stallins, jest gwine to sleep with her nittin in her lap.

"Now, you hear that, Miss Carline," ses I. 'She ses she'll keep it all her life.'

"Yes, I will," ses Miss Mary—"but what is it?"

"Never mind," ses I; 'you hang up a bag big enough to hold it, and you'll find out what it is, when you see it in the mornin.'

"Miss Carline winked at Miss Kesiah, and then whispered to her—then they both laughed and looked at me as mischievous as they could. They 'spicioned something.

"You'll be shore to give it to me, now, if I hang up a bag?" ses Miss Mary.

"And promise to keep it?" ses I.

"Well, I will, cause I know that you wouldn't give me nothin that wasn't worth keepin."

"They all agreed they would hang up a bag for me to put Miss Mary's Crismus present in, on the back porch, and about ten o'clock I told 'em good evenin and went home.

"I sot up till midnight, and when they was all gone to bed, I went softly into the back gate, and went up to the porch, and thar, shore enough, was a great big meal-bag hangin to the jice. It was monstrous unhandy to get to it, but I was terminated not to back out. So I sot some chairs on top of a bench, and got hold of the rope and let myself down into the bag; but, just as I was gettin in, it swung agin the chairs, and down they went with a terrible racket; but nobody didn't wake up but Miss Stallinses old cur dog, and here he come rippin and tearin through the yard like rath, and round and round he went tryin to find what was the matter. I scrooch'd down in the bag, and didn't breathe louder nor a kitten, for fear he'd find me out, and after a while he quit barkin. The wind begun to blow bominable cold, and the old bag kep turnin round and swingin so it made me sea-sick as the mischief. I was afraid to move for fear the rope would break and let me fall, and thar I sot with my teeth rattlin like I had a ager. It seemed like it would never come daylight, and I do believe if I didn't love Miss Mary so powerful I would froze to death; for my hart was the only spot that felt warm, and it didn't beat more'n two licks a minute; only when I thought how she would be suprised in the mornin, and then it went in a canter. Bimeby the cussed old dog come up on the porch, and began to smell about the bag, and then he barked like he thought he'd treed something. 'Bow! wow! wow!' ses he. 'Then he'd smell agin, and try to get up to the bag. 'Git out!' ses I, very low, for fear the galls mout hear me. 'Bow! wow!' ses he. 'Begone! you bominable fool,' ses I, and I felt all over in spots, for I spected every minit he'd nip me, and what made it worse, I didn't know whar abouts he'd take hold. 'Bow! wow! wow!' Then I tried coaxin—"Come here, good fellow," ses I, and whistled a little to him, but it wasn't no use. Thar he stood and kept up his everlasting whinin an barkin all night. I couldn't tell when daylight was breakin only by the chickens crowin, and I was monstrous glad to hear 'em, for if I'd had to stay thar one hour more, I don't beleieve I'd ever got out of that bag alive.

"Old Miss Stallins come out fust, and as soon as she seed the bag, ses she:

"What upon yearth has Joseph went and put in that bag for Mary? I'll lay it's a yearlin or some live animal, or Bruin wouldn't bark at it so."

"She went in to call the galls, and I sot thar, shiverin all over so I couldn't hardly speak if I tried to—but I didn't say nothin. Bimeby they all come runnin out on the porch.

"My goodness! what is it?" ses Miss Mary.

"Oh, it's alive," ses Miss Kesiah; 'I seed it move.'

"Call Cato, an' make him cut the rope," ses Miss Carline, 'and let's see what it is. Come here, Cato, and get this bag down.'

"Don't hurt it for the world," ses Miss Mary.

"Cato untied the rope that was round the jice and let the bag down easy on the floor, and I tumbled out, all covered with corn-meal from head to foot.

"Goodness gracious!" ses Miss Mary, 'if it aint the Majer himself.'

"Yes," ses I, 'and you know you promised to keep my Crismus present as long as you lived.'

"The galls laughed themselves almost to deth, and went to brushin off the meal as fast as they could, sayin they was gwine to hang that bag up every Crismus till they got husbands, too."

Of course, Major Jones marries his sweetheart, and, as we learn from his book of travels, published many years afterward, the union was in every respect a happy one.

I have hurried over these illustrations of Southern life in a desultory way, in order that I may reach, and give myself a little room to dwell upon, my old friend, Captain Simon Suggs, of the Tallapoosa Volunteers. He is to the humor of the South what Sam Weller is to the humor of England, and Sancho Panza to the humor of Spain. Of course, he is a sharper and a philosopher. But he stands out of the canvas whereon an obscure local Rubens has depicted him as life-like and vivid as Gil Blas of Santillane. His adventures as a patriot and a gambler, a moralizer and cheat, could not have progressed in New England, and would have come to a premature end anywhere on the continent of Europe. Although a military man of great pretension, Captain Suggs never threw out a skirmish line or dug a rifle-pit. He scorned to intrench himself. He played his hand, at no time of the best, "pat," as it were. He "spread it," as certain players do in the game called "Boaston," and, indeed, to speak truth, it was generally "a spread misery," for the career of this man, from the cradle to the grave, was one long, ambitious effort to acquire fortune by making the pleasures and recreations of life tributary to its material development, and so, abjuring scriptural injunctions touching the sweat of the brow, to compel fortune to "call" him, when he had provided himself a certainty. If he did not succeed, he at least made a struggle whose failure deserves, as it has received, historic record. No one can read the story of his life without rising from its perusal invigorated and refreshed.

Simon Suggs was the son of a Hard-shell Baptist preacher, Jeddiah Suggs by name. Tradition tells, according to the chronicle, "how Simon played the 'snatch' game on Bill" (a sable companion in the corn-field), "and found an exceeding soft thing in his aged parent." I must quote a bit of this*:

"The vicious habits of Simon were of course a sore trouble to his father, Elder Jedediah. He reasoned, he remonstrated, and he lashed [but all in vain]. One day the simple-minded old man returned rather unexpectedly to the field where he had left Simon and a black boy called Bill at work. The two were playing seven-up in a fence-corner; but, of course, the game was suspended as soon as they saw the old man's approach. Simon snatched up the money, answering Bill's demurrer with, 'Don't you see daddy's down upon us with a armful of hick'ries? Anyhow, I was bound to win the game, for I hilt nothin' but trumps.' Another thought

struck him. It might be that his father did not know they had been playing cards. He resolved to pretend that they had been playing mumble-the-peg. The old man came up.

"So, ho, youngsters; you in the fence-corner an' the crop in the grass. Simon, what in the round yearth have you an' that nigger been a-doin'?"

"Simon said, with the coolness of a veteran, that they had been playing mumble-the-peg, which he proceeded to explain.

"So, you git down on your knees," says old Jeddiah, "to pull up that nasty little stick with your mouth? Let's see one of you try it now."

"Bill, being the least witted, did so, and just as he was strained to his fullest tension, down came one of the preacher's switches. With a loud yell, Bill plunged forward, upsetting Simon, and both rolled over in the grass. A card lay upon the spot where Simon had sat.

"What's this, Simon?" said his father.

"The jack o' dimonts," said Simon, coolly, seeing that all was lost.

"What was it doing down thar, Simon?"

"I had it under my leg to make it on Bill the fust time it come trumps."

"What's trumps, Simon?" This with irony.

"Nothin's trumps," says Simon, doggedly, "sense you come an' busted up the game."

"To the mulberry, both on ye, in a hurry; I'm a-gwine to correck ye," said old Jeddiah. After Bill had received his quantum in Simon's presence, the father turned to his son and said: "Cross them hands, Simon."

"Daddy," says Simon, "taint no use."

"Why not, Simon?"

"Jess becase it aint. I'm a-gwine to play cards as long as I live. I'm a-gwine to make my livin' by 'em. So what's the use o' lickin' me about it?"

"Old Mr. Suggs groaned.

"Simon," says he, "you are a poor, ignor'nt creeter. You've never been nowhar. Ef I was to turn you off, you'd starve."

"I wish you'd try me," says Simon, "and jess see."

"Simon! Simon! You pore onlettered fool! Don't you know that all card-players and chicken-fighters an' horse-racers goes to hell?"

"I kin win more money in a week," says Simon, "than you kin make in a year."

"Why, you idiot, don't you know that them as plays cards allers loses their money?"

"Who wins it, then, daddy?" says Simon.

"This was a poser, and in the conversation which ensued Simon added to his advantage. At last, to satisfy his father that he really had a genius for his chosen profession, he offered to bet him what silver he had against the old blind mare and immunity from the impending chastisement, that he could turn up a jack from any part of the pack.

"Me to mix 'em?" said old Jeddiah.

"Yes."

"It can't be done, Simon! No man in Augusty, no man on the face of the yearth, can do it."

"I kin do it," says Simon.

"An' only see the back of the top card?"

"Yes, sir."

"An' all of 'em jost alike?"

"More alike'n cow-peas."

"It's ag'in' natur," Simon—but giv'm to me."

"The old man turned his back to Simon, sat down on the ground and deliberately abstracted the jacks from the pack, slipping them into his sleeve. 'As I am bettin' on a certainty,' he muttered, 'it stands to reason thar's no harm in it; I'll get all the money the boy has, and the lickin' will do him jest that much more good.' At length he was ready. So was Simon, who, all the while, had been surveying his father's operations over his shoulder.

* In this and the following quotations, Mr. Watterson does not follow exactly the text of the authorized edition, but has judiciously condensed it.—EDITOR.

"Now, daddy," says Simon, "nary one of us aint got to look at the cards whiles I am a-cuttin' 'em; it spiles the conjuration."

"Very well, Simon," said Jeddiah, with confidence.

"And another thing: you must look me right hard in the eye."

"To be sure—to be sure. Fire away."

"Simon walked up to his father. The two gazed upon each other. 'Wake, snakes! day's a-breakin',' says Simon, with a peculiar turn of his wrist. 'Rise, jack.' He lifted half a dozen cards gently from the top of the pack and presented the bottom one to his father."

"It was the jack of hearts."

"Old Jeddiah staggered back. 'Merciful master!' says he, 'ef the boy haint! Go, my son, go. A father's blessin' with ye!'"

"And yit," murmured Simon, as he moved away, "they say kerds is a waste of time."

With such a start in life, it cannot be expected that the career of the youthful Simon Suggs, whatever its triumphs may be, will add to the world's stock of harmless pleasure. He had at a very tender age evolved out of his consciousness the theory that mother-wit can beat book-learning at any game. "Human natur' an' the human family is *my* books," said Simon, "and I've seen few but what I could hold my own with. Just give me one o' these book-read fellers, a bottle o' liquor, an' a handful of the dockymints, and I'm mighty apt to git all he's got an' all he knows, an' teach him in a general way a wrinkle or two into the bargain. Books aint fit'n for nothing but to give little children goin' to school, to keep 'em out'n mischief. If a man's got mother-wit, he don't need 'em; ef he aint got it, they'll do him no good, no how." This was Simon's philosophy. His faith consisted in an ineradicable belief that he could whip the tiger in a fair fight. Many defeats had in no wise discouraged him; he had an explanation for each, which at least satisfied his own mind. He had girded up his loins, he had studied the cue-papers, and he was at length master of a system. Nothing was wanting but money enough to carry it out, and this he was assure of raising at short-cards as he was that the day or night would come when he would get the upper hand of the beast, and wear his hide the remainder of his life as a trophy. Half of his sublime aspiration was realized. One fair morning he found himself possessed of a hundred and fifty dollars, the accumulation of many smart local operations—for, after quitting the parental roof and wandering far and near for twelve or fifteen years, he had married and settled in Tallapoosa. It was the largest sum he had ever had at one time before. His dream was about to be realized. He would at once go to Tuscaloosa, then the capital of Alabama, beard the tiger in his lair, clean out the legislature, vindicate his genius and opinions, and live like a fighting-cock off

the proceeds. Considering the magnitude of the proposed expedition, Simon's means, it must be owned, were a little short. "But, what's the odds!" said he, when he started on his foray, "what's the odds—luck's a fortune." A hundred and fifty was as good as a thousand and fifty—perhaps better. He reached Tuscaloosa in safety, having picked up an extra twenty-dollar note by the way, and had hardly bolted down his supper before, like Orlando, he set out in quest of adventure—in point of fact, to seek the tiger. Presently he espied a narrow stair-way, with a red light gleaming above it. He waited for no further assurance. He boldly mounted the stairs and knocked at the door.

"Holloa!" said a voice within.

"Holloa yourself," says Simon.

"What do you want?" said the voice.

"A game," says Simon.

"What's the name?" said the voice.

"Cash," says Simon.

"Then another voice said: 'Let Cash in.' The door was opened and Simon entered, half-blinded by the sudden burst of light, which streamed from the chandeliers and lamps, and was reflected in every direction by the mirrors which walled the room. Within this magic inclosure were tables covered with piles of doubloons, silver pieces, and bank-notes, and surrounded by eager but silent gamesters. As Simon entered he made a rustic bow, and said in an easy, familiar way:

"Good-evenin', gentlemen."

"No one noticed him, and the Captain repeated:

"I say, good-evenin', gentlemen."

"Notwithstanding the emphasis with which the words were spoken, there was no response. The Captain was growing restive and felt awkward, when he overheard a conversation between two young men, who stood at the bar, which interested him. They had mistaken him for General Thomas Witherspoon, of Kentucky. Simon could, of course, have no reasonable objection to be taken for the rich hog-drover, and, having mentally resolved that, if he was not respected as such during the evening, it would be no fault of his, he sauntered up to the faro-table, determined to bet his money whilst it lasted with the spirit and liberality which he imagined General Witherspoon would have displayed had that distinguished citizen been personally present.

"Twenty-five-dollar checks," said he, "and that pretty tolerably d——d quick."

"The dealer handed him the desired symbol, and he continued with a careless air, 'Now grind on.' He put the whole amount on a single card, and it won; he repeated five times, and still won; he was master of nearly two thousand dollars. The rumor that he was a wealthy sportsman from Kentucky had spread through the room, which, joined to his turn of luck, drew a little group about the table. The Captain thought his time had come. He put up fifteen hundred dollars on the deuce. This was amazing, and a little bandy-legged dry-goods clerk, who looked on, observed:

"My Lord, General! I wouldn't put up that much on a single turn."

"Simon turned upon him, and glowered. 'You wouldn't, wouldn't you? Well, I would. And I tell you, young man, the reason you wouldn't bet fifteen hundred dollars on the deuce. It's because you aint got no fifteen hundred dollars to bet.'

"This sally was conclusive as to the wit of the supposititious General. The deuce won, and that settled any remaining doubt as to his identity. It made him a hero. Simon took his good fortune, however, with calm deliberation, responding with courtesy, but dignity, to the ovation which began to be extended. 'I do admit,' said he, 'that it is better—just the least grain in the world better—than drivin' hogs from Kentucky an' sellin' 'em at four cents a pound.' At this point one of the young men who had mistaken him for General Witherspoon approached, and, stretching out his hand, said:

"Don't you know me, uncle?"

"Captain Suggs drew himself up with as much dignity as he supposed General Witherspoon would have assumed, and said that he did *not* know the young man in his immediate presence.

"Don't know me, uncle!" said the young man, somewhat abashed. "Why, I'm little Jimmy Peyton, your sister's son. She's been expecting you for several days."

"All very well, Mr. James Peyton," said Simon, with some asperity, 'but this is a cur'us world, and tolerably full of rascally impostors; so it stands a man in hand that has got somethin', like me, to be pretty particular.'

"Oh," said several in the crowd, 'you needn't be afraid; everybody knows he's the widow Peyton's son.'

"Wait for the waggin, gentlemen," says Simon. 'I'm a leetle notoriety about these things, an' I don't want to take a nephew 'thout he's giniwine. This young man mout want to borry money o' me.'

"Mr. Peyton protested against such a suggestion.

"Very good," says the Captain, approvingly; 'I mout want to borry money of him.'

"Mr. Peyton expressed his willingness to share his last cent with his uncle.

"So far so good," says the Captain; 'but it aint every man I'd borry from. In the fust place, I must know ef he's a gentleman. In the second place, he must be my friend. In the third place, I must think he's both able an' willin' to afford the accommodation.'

"These sentiments were applauded, and the Captain continued: 'Now, young man, just answer me a few plain questions. What's your mother's first name?'

"Sarah," said Mr. Peyton, meekly.

"Right so far," says Simon. "Now, how many children has she?"

"Two—me and brother Tom."

"Right ag'in," says Simon, and, bowing to the company, "Tom, gentlemen, were named arter me—warn't he, sir!"—this last with great severity.

"He was, sir—his name is Thomas Witherspoon."

"Simon affected great satisfaction. 'Come here, Jeems. Gentlemen, I call you one and all to witness that I rekognize this here young man to be my proper, giniwine nephew—my sister Sally's son; an' I wish him respected as sich. Jeems, hug your old uncle.'

"After many embraces and much gratulation, during which Simon shed tears, he resumed his fight with the tiger. But the fickle goddess, jealous of his attentions to the nephew of General Witherspoon, turned darkly upon him. He lost all his gains as fast as he had won them, and with the same calm composure. Indeed, he made merry with his multiplying disasters, such as 'Thar goes a fine, fat porker,' and 'Thar makes the whole drove squeal.' At length he had not a dollar left. 'My friend,' said he to the dealer, 'could an old Kentuckian as is fur from home bet a few mighty slick fat bacon hogs ag'in' money at this here table?' Of course he could, and presently had bet off the biggest drove that had ever entered Alabama.

"Jeems," says he.

"Yes, uncle."

"Jeems, my son, I'm a leetle behind to this here gentleman here, an' I'm obliged to go to Greensboro by to-night's stage to collect some money as is owin' to me. Now, ef I should not be back home when my hogs come in—es likely I may not be—do you, Jeems, take this gentleman to whatever the boys put 'em up, and see to it that he picks out thirty of the very best of the drove. D'ye mind, my son?"

"This was entirely satisfactory to the dealer, and, having settled like a gentleman, Simon took his nephew into a corner of the room, and says he, thoughtfully: 'Jeems, has—your—mother bought her pork yit?'

"Mr. Peyton said she had not.

"Well, Jeems, you go down to the pen when the drove comes in, an' pick her out ten of the best. Tell the boys to show the new breed—them Berkshires."

Mr. Peyton made his grateful acknowledgments, and the two started back to rejoin the company. But Simon paused. "Stop," says he. "You moutn't have a couple o' hundred about you that I could use until I get back from Greensboro, mout you?"

Mr. Peyton had only about fifty, but he could raise the rest, which he did at once. Then there was a good deal of joking and drinking, and Simon, finding that General Witherspoon had unlimited credit at the bar, treated the whole company to a champagne supper. At last, at four o'clock in the morning, he and James Peyton repaired to the Greensboro coach. Just before entering this vehicle, Simon stopped to bid an affectionate adieu to his nephew. He was very full.

"Jeems," says he, 'I say, Jeems. I may forgit them fellers, but they'll never forgit me. I'm—if they do.' Being assured that they never would, he continued: 'Jeems, has yer mother bought her hogs yit?'

"No, sir," says Peyton. 'You know you told me to take ten of your hogs for her—don't you recollect?'

"Don't do that," says Simon.

"No, Uncle?"

"TAKE TWENTY!"

The military career of Captain Suggs sustained the character he had secured for himself in civil life. He commanded at Fort Suggs during the Creek war. His company of Tallapoosa Volunteers were sometimes dubbed by his political adversaries "The Forty Thieves," but this was afterward proved to be a slander. There were only thirty-nine of them. They and their gallant chief were never engaged in regular combat with the Indians, but their exploits upon water-melons and hen-roosts made them famous. Notwithstanding these, however, the close of the Creek war found Simon as poor as he had been when it began. The money which he had obtained by such devious, yet difficult,

operations had melted away. At length, Mrs. Suggs informed him that "the sugar and coffee were nigh about out," and that there were "not above a dozen j'int's an' middlin's, all put together, in the smoke-house." To a man of Suggs's domestic affection this state of destitution was most distressing. He pondered over it with bitter anguish. Then he rose and paced the floor. Presently his features were set, his mind was fixed. "Somebody must suffer," said he. He would go to a camp-meeting, he would get religion, he would enter the ministry and build a church. He did not doubt that his versatile talents would carry him through this new part, and he was more than justified by the result. He went up to be prayed for, he toiled three days with the evil spirits, and when he had made himself the object of universal sympathy and hope, he shouted "hallelujah," and from a miserable, impenitent sinner became at once an exhorter with surprising revivalistic talents.

"'Ante up, brethering,' he cried; 'ante up! I come in on nary pa'r, an' see what I drawed. This is a game whar everybody wins. You jest stick to the devil when he raises yer and raise him back, and he can't turn you off. In the service of the church you allers holds four aces.' This was a new style of religious illustration; but it took amazingly, and in a few days Simon developed his purpose to enter the ministry and build a church, 'ef he could git help.' It was agreed that a collection should be taken; that the proceeds should be placed in the hands of the Rev. Belah Bugg, in trust, and that Simon should be sent back to Tallapoosa, rejoicing in his new-found grace. In passing around through the congregation Simon's appeals were at once persuasive and peculiar. 'Stack 'em up, brethering,' says he, 'and don't be bashful or backward. They'll size themselves any way you pitch 'em in. Don't you see me? Aint you proud of me? I'm a hoary old sinner, but I 'kin draw to a meetin'-house, an' git a whole congregation.' Three hundred dollars were thrown into the hat. After the collection Brother Bugg said: 'Well, Brother Suggs, well done, thou good and faithful servant. Let's go and count it out. I've got to leave presently.'

"'No,' says Simon, solemnly, 'I can't do that.'

"'Why, Brother Suggs,' says Brother Bugg, 'what are the matter?'

"Simon looked at him for a moment sadly, and says he, 'Brother Bugg, it's got to be prayed over *first*.' His whole face was illuminated. It looked like a torch-light procession.

"'Well,' says Bugg, 'let's go to one side and do it.'

"'No,' says Simon, sweetly.

"Mr. Bugg was impressed, but uncertain. He gave a look of inquiry.

"Says Simon: 'You see that krick swamp? I'm gwine down in thar; I'm gwine into that lonely swamp, an' I'm gwine to lay this means down *so*, an' I'm gwine to git on these kn-e-e-s, an' I'm n-e-v-e-r gwine to git up until I feel its blessin'. An' nobody aint got to be thar but me—jess me an' the good spirits as goes with me.'

"The Rev. Bela Bugg was overcome. He could not say a word. He wrung the hand of the new convert, and wished him 'God-speed.' Simon struck for the swamp, where his horse was already hitched and waiting. He mounted and rode musingly away. 'Ef

I didn't do them fellers to a crackin', says he, 'I'll never bet on two pa'r ag'in. They are pretty peart at the game theyselves; but live and let live is my motto, an', arter all, gen'us and experience ought to count for somethin' in the long run.'

At various times in his life, Simon appeared before the courts to answer for his sins; but he never failed to come off with flying colors. His last appearance was as a witness before the grand jury. It was an especial panel, embracing the judge of the circuit and all the leading lawyers.

"'Captain Suggs,' said the foreman, 'did you play a game of cards last Saturday night in a room above Sterritt's grocery?'

"'Yes, sir,' says Simon, 'I did.'

"'What game of cards did you play, Captain Suggs?'

"'Well, sir,' says Simon, 'it was a little game they call draw-poker.'

"'You played for money, Captain Suggs?'

"'No, sir; we played for chips.'

"This stumped the foreman; but a talented Alexander, who happened to be on the jury, put in:

"'Of course, of course, you played for chips, Captain Suggs. But you got your chips *cached* at the close of the game, didn't you?'

"'I don't know how that was,' said Simon; 'es for me, I had no chips to cash.'"

It was ever thus with Simon, and it was this which saved him. He rarely had any "chips to cash." He was always in a good humor, he was always a willing soul, he was always ready, and he was always short. In his old age he repented of his sins; he had learned by a long life, full of rich experience, that his own motto, "honesty is the best policy," was true. He pinned his faith to that; and he stood to it. In consequence, he was elected sheriff of Tallapoosa County—a Whig county—he being the first Democrat who ever carried it. He died, and had a public funeral, and upon his tombstone may be seen inscribed to this day the following inscription:

"Sacred to the memory of

CAPTAIN SIMON SUGGS,

Of the Tallapoosa Volunteers.

He never hilt an opportune hand in his life; but when he drew upon eternity, it is believed he made an invincible in the world to come!"

I take it that there is no reader of this enlightened magazine who has not heard of the killing of McKissick. It created no little commotion throughout Coon Creek settlement, not only on account of the circumstances attending the homicide, but because McKissick was Jim Gardner's fourth man. According to Joe Furguson's testimony, "Mr. McKissick were sittin' in his back store a-playin' of his fid-dell—not thinkin' of bein' stobbed, nor nothin' of the kind—when the prisoner at the bar comes in an' stobs Mr. McKissick; where-

upon he seizes a i'on mallet, lights out o' the window, lips the fence, an' clars hisself." Circumstances so heinous the law could not brook. The judge sent for the prosecuting attorney, and observed that this time Jim Gardner must go up; but, when the case came to trial, the defense poured in unexpectedly strong. Six or seven witnesses testified that, though a dangerous man when roused, Gardner was peaceful and unaggressive; that his various killings had been in self-defense, and that, if people would let him alone, he'd let them alone. As a last resort, the prosecution, seeing Billy Driver in the court-house, and observing a dreadful scar upon his neck from a wound inflicted by the prisoner some years before, called him to the stand.

"Mr. Driver," said the State's attorney, "do you know the prisoner at the bar?"

"What, Gar'ner there?"

"Yes, sir, Gardner there."

"Oh, yes. I know Gar'ner."

"How long have you known him?"

"What, Jim Gar'ner?"

"Yes, sir, Jim Gardner."

"Well, Judge—you see I disremember figgers, but as man an' boy it's gwine on twenty years—mout be twenty-one or it mout be nineteen and a half—thar or tharabouts."

"Where did you get that scar across your neck, Mr. Driver?"

"This 'ere scar, sir?"

"Yes, sir, that scar. Didn't it result from a wound inflicted by the prisoner at the bar, sir?"

"What, Gar'ner?"

"Yes, sir, Gardner."

"Oh, yes, that was Gar'ner. No doubt about that."

"Now, sir, tell the jury how it happened."

"Well, you see, me an' a parcel o' the boys was pitching dollars down to the cross-roads, and Jim Gar'ner he was lyin' on the grass, a-keepin' the score. Arter we'd run the pot up to fifteen dollars—it mout ha' been sixteen, and then ag'in it moutn't ha' been more'n fourteen—one o' the boys says, 'Le's go up to the grocery an' git a drink.' We all 'lowed we'd go, and, jes' for devilmint—not thinkin' thar was any harm in it, you know—I ups an' knocks Jim Gar'ner's hat off, and says he, 'You cussed, bow-legged, bandy-shanked, knock-kneed, web-footed, tangle-haired vermint, if you do that ag'in I'll cut your ornery throat for you.' Well, we gits a drink and goes back to the cross-roads, an' in about a hour, or a hour an' a half—it mout ha' been two hours—one o' the boys says ag'in, 'Le's go up to the grocery an' git a drink.' So we was gwine along to the grocery to git a drink, and jes' for devilmint, you know—an' not thinkin' Gar'ner was in yearnest—I ups an' knocks his hat off, an' the fust thing I know'd he whips out a knife and ducks it into my throat. I didn't have no weapon nor nothin', so I 'lowed I'd better put a little daylight 'tween me an' Gar'ner, and I sorter sidled off, like, he follerin'; but, Lord! I know'd I had the bottom an' the hills, and that he couldn't ketch up with me. So every now an' then I'd stop an' let him closer, jes' to devil him. Arter a while, however, he picks up a hay-fork—"

"Stop, sir! Was that hay-fork of wood or iron?"

"It mout ha' been o' wood, or it mout ha' been o' iron, or it mout ha' been o' steel, or —"

"How many teeth did it have?"

"Well, you see, when I see Jim Gar'ner pick up the hay-fork, thinks I, I better put a little more day-

light between me an' him, an' I disremember the number o' teeth—it mout ha' been two, and then ag'in it mout ha' been four, may be five—I was in a bit of a hurry, an' I didn't exactly count em."

"Go on, sir!"

"I did go on, sir, an' presently we got in sight o' my house, an' my wife happened to be comin' out to cut some wood, and as I rin past her to get out o' Gar'ner's way, she fetched him with the ax."

"Exactly, but for which he would have killed you."

"What, Gar'ner?"

"Yes, sir, Gardner."

"Oh, in course—in course. It stands to reason. Thar warn't no other door for me to get out of, an' he would ha' been in that if my wife hadn't downed him with the ax."

"How far is it from the cross-roads to your house, Mr. Driver?"

"'Bout a mile, or a mile an' a half, Jedge—may be two mile. I never measured it axactly."

"Now, Mr. Driver, will you tell the court what sort of a man you consider the prisoner at the bar?"

"What, Gar'ner?"

"Yes, sir, Gardner."

"I do no nothin' ag'in' Gar'ner, sir."

"Don't you think him a desperate character, sir?"

"What, Gar'ner?"

"Yes, sir, Gardner."

"No, sir; I never hearn Gar'ner so called."

"Why, you say he cut your throat almost from ear to ear, followed you with an iron or steel hay-fork for two miles, and was only prevented from taking your life by the interposition of your wife."

"What, Gar'ner?"

"Yes, sir, Gardner."

"I can't swear he didn't, sir."

"Then, if you don't consider him a desperate character, what do you consider him?"

"What, Gar'ner, sir?"

"Yes, sir, Gardner."

"Well, your honor, of course Gar'ner is a clever man—I've know'd of him gwine on to twenty years—mout be twenty-one, an' ag'in it moutn't be but nineteen and a half—an' I should say that Gar'ner is a man that it wont do to go a-projeckin' with him."

There used to be, and I fear there still are, a good many men in the South with whom "it wont do to go a-projeckin'." It is true that we have reformed that indifferently, and we hope, in time, to reform it altogether; howbeit, there is a deal of misconception abroad touching the character of our murderers. They are not, as is stated so often, young gentlemen of the first families. On the contrary, they are with us, as elsewhere, low fellows—mere brutes and bullies. There is, perhaps, more stealing than killing in the North, and more killing than stealing in the South, because the criminal classes of each section go for that which is cheapest, safest, and most abundant—money or blood, as the case may be; but crime is crime the country over, and nothing could be more unjust than the assumption of superior morality by the inhabitants of any part of it. No people in the world are more homogeneous than the people of the United States. Where differences exist they are purely exterior. The self-governing

principle, the vestal fire of our Anglo-Saxon race, is strong enough and warm enough to maintain our system of Anglo-Saxon freedom and law to the farthest ends of the Republic. Like a touch of nature, making the whole Union kin, it joins the States, and should be left in each to do its work in its own way. The methods which suit one State may not suit another; but in all we may safely trust the result to the good sense and good feeling, shaped by the interest and guided by the intelligence, of the greater number, sure that in the South, no less than in the North, the conservative forces of society, left to themselves, will prevail over violence and wrong. Much, if not most, of the disorder of the last few years has been directly ascribable to a conflict of jurisdictions, State and Federal. Between the two stools justice fell to the ground, while malefactors made their escape. It is absurd to suppose that any civilized people, living within the sound of church-bells, can love lawlessness for its own sake.

If the manhood of the South were less true than it is, it would be held to its standards by the womanhood of the South. During our period of savage contention this shone with a sweet and gracious brightness which dazzled even those against whom it was directed, so that the worst which was said of the Southern woman by soldiers whom only the laws of war made her enemies, related to her fidelity in what they considered a bad cause. But if in time of war she was plucky, patient, and sincere, her triumphs have been ten-fold greater during a peace which has spread before her harder trials still; the transition from wealth to poverty, with its manifold heart-burnings and mischances, joining the sharp pangs of memory to the grievous burdens of every-day life; the unfamiliar broomstick and the unused darning-needle; the vacant clothes-chest and the empty cupboard—

"The desecrated shrine, the trampled ear,
The smold'ring homestead and the household flower,
Torn from the lintel."

I know nothing more admirable in all the world of history or romance than the blithe, brave woman of the South, grasping the realities of life in hands yet trembling with the interment of its ideals, and planting upon the grave of her first and only love signals of fortitude and honor, cheerfulness and gentleness, to be seen and followed by her children. These, she would have inherited with the misfortunes of the South, the pride of the South—not expressed in noisy vaunt and scorn of honest toil, in idleness and repining, but in a noble nature and a gift for work.

In the full meridian of their prosperity, the people of the South were an easy-going, pleasure-loving people. The reader will not have failed to observe, in the rude examples of Southern humor which I have cited, the conspicuous part played by the literature of the pictorial paste-boards, by cards and gaming. It could not be otherwise if they should be true to nature and reality. Men who dwell upon great estates, who are surrounded by slaves, who have few excitements or cares, are likely to grow indolent. The Southern gentleman had plenty of time, and he thought he had plenty of money to lose. A wide veranda, a party of agreeable neighbors, plenty of ice-water and Havana cigars, a brisk little black boy to keep off the flies, and a bright little yellow boy to pass about the nutmeg—that was the ideal state. Of course the lower orders imitated and vulgarized, as I have shown, the luxurious habits of the upper. The crash came; and, like the unsubstantial pageant of a dream, the pretty fabric fell. The great and the small, the good and ill, were buried under one common ruin. There is hardly anything left of the gilded structure. It is no longer fashionable or respectable to fribble the days away in idle, costly pleasure. Battle-scarred, time-worn, and care-worn, the South that is, is most unlike the South that was. There is something truly pathetic in the spectacles of altered fortune which everywhere meet the eye; for in the old life there were very few shadows. Such as there were gathered themselves about the negro cabins. I have purposely omitted the humors of the Southern black, because, amusing though they be, they are not essentially racy of the soil. The negro is an African in Congo or in Kentucky, in Jamaica or in Massachusetts. His humor is his own, a department to itself, embracing, amid much that is grotesque, more that is touching; for his lot has been as varied as his complexion, and ever and ever of a darksome hue. I know nothing that appeals so directly to the intellects and sensibilities of thoughtful men as the treatment he has received among us, North and South, in the present and in the past, and I declare that when I think of him, funny as he may seem to be, I am moved by any other than mirthful suggestions. I look back into that by-gone time, and I see him, not as a squalid serf, picturesque in his rags, or as we behold him on the minstrel stage,—the clown in the pageant making merry with cap and bell,—but as an image of impending sorrow crouched beneath the roof-tree, God's shadow upon the dial of American progress, whose cabalistic figures the wisest have not been able to read. I turn away dismayed. I dare not look upon the

scene and laugh, if he is to be a part of it. I only know, and to that degree am happy, that slavery is gone with other bag and baggage of an obsolete world; that it is all gone—the wide veranda filled with pleasure-loving folk; the vast estate, without a reason for its existence or a purpose in the future; the system which, because it was contented, refused to realize or be impressed by the movements of mankind. All, all has passed away. The very life which made it possible is gone. The man who, being able to pursue his bent, lives to amuse himself, is hardly more thought of now than the poor parasite who seeks to live and thrive off the weaknesses and vices of his

bettors. Never again shall the observation of the Governor of North Carolina to the Governor of South Carolina be quoted as a wise, witty, and relevant remark; never again shall the black boy's dream of happiness be realized in the polishing of an unexpected pair of boots. If proselytism be the supremest joy of mankind, New England ought to be supremely happy. It is at length the aim of the Southron to out-Yankee the Yankees, to cut all the edges, and repair his losses by the successful emulation of Yankee thrift. Taking a long view of it, I am not sure it is best for the country, although, as matters stand, I know it to be better for the South.

A SPRING MADRIGAL.

THE tree-tops are writing all over the sky,

An' a heigh ho!

There's a bird now and then flitting faster by,

An' a heigh ho!

The buds are rounder, and some are red

On the places where last year's leaves were dead;

An' a heigh ho, an' a heigh!

There's a change in every bush in the hedge;

An' a heigh ho!

The down has all gone from the last year's sedge;

An' a heigh ho!

The nests have blown out of the apple-trees;

The birds that are coming can build where they please;

An' a heigh ho, an' a heigh!

The aged man goes with a firmer gait;

An' a heigh ho!

The young man is counting his hours to wait;

An' a heigh ho!

Mothers are spinning and daughters are gay,

And the sun hurries up with his lengthened day;

An' a heigh ho, an' a heigh!

The signs may be counted till days are done;

An' a heigh ho!

And watchers can listen while waters run;

An' a heigh ho!

Old men in sunshine may skip or tarry,

Young men and maidens can joy and marry;

An' a heigh ho, an' a heigh!

But there's something uncounted, unseen, that comes;

An' a heigh ho!

If you leave it out you can't prove your sums;

An' a heigh ho!

And this is the way to say it, or sing:

"Oh, Spring is the loveliest thing in Spring!"

An' a heigh ho, an' a heigh!

IN APRIL.

How do I miss thee? 'As the violets miss
The sun, when clouds have hidden it. Dear one,
Wilt thou not tell me, whether in heaven the sun
Misses the violet it cannot kiss?

SOME AMERICAN TILES.

THE manufacture of artistic tiles in the United States dates from so recent a beginning that few persons who are not especially interested in ceramics are aware of the existence of tile-works on this side of the ocean. The tiles of English manufacture, representing many years of costly experiment and enormous expense of production, have hitherto filled the market of the world. The very perfection of these tiles has discouraged serious attempts at imitation, and they have covered the field of decoration so well that it has seemed hopeless to attempt to compete with them in design or invention. Nevertheless, several manufactories have been started in this country during the past few years, with the intention of making an article similar to the imported one. The chief of these is the one now in operation in Chelsea, Massachusetts.

The imported rage for household decoration, which the Philadelphia Exhibition developed and fixed, has given a great stimulus to industrial art in this country. Many artists of high rank in the profession have responded to the demand for good decoration, and for a time have left their canvas to work on ceilings and walls. The Low Art-Tile Works in Chelsea is the direct outgrowth of the influence on the artistic mind of the increasing public demand for decoration. The tiles which are there drawn from the kiln are not only excellent as specimens of mechanical workmanship, but they discover much originality of design in form, color, and construction. As they are made to-day, they form a new species of ceramic ware; and the inventor, Mr. J. G. Low (certain processes used by him are covered by patents), regards the manufacture at present as rudimentary in comparison with what he is confident of

accomplishing in the future. This opinion is fully warranted by the steady progress made from kiln to kiln, and in the means through which this advance is accomplished. Indeed, the best evidence of these statements may be found in the tiles themselves, which suggest great and enticing possibilities, and give promise of future elaboration and development.

Mr. Low put aside his palette only three years ago, and the tiles which bear his name to-day are the result of study, experiment, and practice since that time. A turn of mind which may best be described as peculiarly American, gave him the impulse to investigate and the persistence to pursue the study of the methods of tile-making. From 1858 until 1861 he had studied in the *ateliers* of Couture and Troyon in Paris, and since that time had been engaged in decorative and scenic painting. His education particularly fitted him to appreciate the artistic value of tiles in decorative work, and his experience as a decorator gave him exact knowledge of the limitations of interior ornamentation. Remembering what a great part of the success of an artist depends on the drudgery of elementary work, he began at the beginning, and spent a year in a pottery, designing shapes and reproducing some of the Etruscan pieces from the Englefield collection in England. Accustomed to work on his own responsibility, he could not long be content to imitate, and after his apprenticeship of a year he decided to make an attempt to produce tiles which should not simply be decorative, but should have a special artistic value, an individual character of their own. The Hon. John Low joined his son in partnership, and a manufactory with materials, machinery, and kiln was soon ready.

A GLAZED TILE.

The experiments began at once, and continued for months, interrupted only by the delays caused by constant failures. The history of these months of experiment counts few or no bright days. Different kinds of clay were tried, often with the loss of an entire firing. Most of the best clay-beds in the country were drawn upon before the proper material was found. Then followed countless trials of mixtures,—for the stock of which tiles are made, although called clay by everybody, even by the ceramist himself, is a mixture of various materials—flint, quartz, spar, clay, and ground tiles.

It is impossible to give a complete idea of the difficulties of experimenting with the manufacture of "biscuit," as the tiles are called before they are glazed, without going fully into the details of the accidents to which the

tile-maker is liable, and recounting the perplexing and annoying failures which stop his progress at every step. This is a subject requiring too voluminous treatment to be undertaken here. Enough to say that Mr. Low did at last succeed in producing flat, square, and true tiles, free from cracks or distortion, pure white in color, and in every way as perfect as those of foreign make.

After the perfection of the biscuit came the glazes, and these in their turn were quite as difficult to manage. Different compositions of biscuit take different glazes, and there is always open to the ceramist an enticing opportunity to discover new colors or refine those already in use. Here again Mr. Low's training as a painter proved of great value to him. He produced many original glazes, exceedingly strong in tone, rich and brilliant in

color. As a result of all this experimenting, he was able at last to put into permanent form some of the ideas which had given him the courage and patience to carry on his work from the beginning. One of the earliest forms of tile made was the so-called dust-tile. His first ambition was to make this with a pattern in relief, so that, when glazed, it would have both the charm of form and the beauty of color. He began by carving flat tiles before they were baked, and in this way succeeded in making some beautiful specimens with patterns of his own design. This process of hand-carving was so slow and tedious that he shortly began to study out a means to simplify and shorten it. He made his own designs from natural objects, vines, leaves, and flowers, conventionalizing them in the accepted manner. While at work with these objects, it occurred to him to try to use them as natural patterns, and to stamp them into the tile just as they were, thus doing away with the intermediary process of imitation by hand. The experiment proved to be a success, and he soon produced these natural tiles with great facility. The inventor's own words will give a good idea of the process:

"How did I think of that first? Why, I was bothering over a dust-tile,—and this process is a half-century old, and ought not to bother any one,—when suddenly it occurred to me that it might be possible to stamp a figure, or a letter, or, indeed, any form whatever, upon the face of a tile just as the manufacturer's name is stamped upon the back. Since this could easily be done, of course it would be possible to take the imprint of any natural object that had little enough relief to permit it to be readily lifted from the clay. I naturally thought of leaves as the material nearest at hand, and rushing out of the shop, down behind there, toward that brick-yard, I found a mullein-leaf. I hurried back, put the dust into the press, flattened it down by a light pressure of the screw, then laying on the leaf, gave the screw a hard turn. I pressed the juice all out of the leaf, but I got my imprint perfectly, ribs and all, even to the downy texture of the surface. This was not such a startling success, but I was in a fever of excitement and anxiety over my experiments, and at the sight of the imprint of the mullein-leaf, went fairly out of my head with delight. I kept at the work all night long, trying many sorts of leaves, grass, and various combinations. The next day I went on with the experiments, and the day after, and the day after that, and at last made perfect patterns of leaves and grass. Having made the matrix, it was now the problem to make

the die from it, for the tile ought to bear the pattern in relief. Fresh dust pressed upon the matrix adhered to it, and the two became one solid tile. I tried everything I could think of, and arrived at the best results by first drying the matrix, covering it with a thin coating of shellac, and pressing the dust upon that as a mold. This process was effective, but far too long to be practicable, and I tried again. First I spread a thin sheet of rubber over the damp matrix, and was successful with that. This method, however, would materially increase the expense of manufacture. Next I tried fine Japanese paper, and finally came to use thin tissue-paper, as you see."

While Mr. Low was speaking, he arranged a few bits of dry grass and ferns and a scrap or two of coarse-textured paper on the even surface of a tile just lightly formed in the press. He brought the screw vigorously down upon these objects, raised it again, and with the point of a penknife lifted them from the clay. A perfect impression of the objects, equal to the finest electrotypes, was found in the hard surface of the tile. He then placed a square of white tissue-paper upon the tile just made, shoveled a quantity of dust upon that, and brought the screw down with a forcible turn of the heavy balance-wheel. The lever below the bed was quickly worked after the screw had been raised, and a tile appeared, double the usual thickness, and with only a delicate line to show where the tissue-paper divided the two parts. A few gentle taps and judicious coaxing separated the two, the tissue-paper was easily removed, and there were the perfect copies, male and female, of the objects put into the press a moment before. The tissue-paper had dulled somewhat the sharpness of the details and had left its own texture, scarcely perceptible, over the whole surface, but there were the form and modeling of the leaves and the grain of the coarse paper, accurately enough reproduced to satisfy the most critical examination.

"I call these natural tiles," continued the inventor, "and the process is patented. The beauty of it is that we never make two originals exactly alike in composition, although we can glaze them with identical colors or reproduce them by mechanical means." And much quicker than the operation can be described, he made another pair of tiles from the same objects. They were as different from the first as two bunches of grass or two branches of trees are from each other.

"But you must understand," he said, "it is one thing to make tiles and quite another to sell them. During my season of experiment I had the encouragement and sympathy of the late Dr. Rimmer, the sculptor, who

watched with interest every step of the work. He was the first one who appreciated the results, and he confidently prophesied complete success for the tiles. I went about with my first pieces in much the same way that a young painter carries about his little first pictures, trying to find a purchaser. The things were evidently too much out of the common line to attract the commercial eye. However, Mr. Wellington, of the Household Art Company, had faith enough in his personal judgment of their merits to undertake to introduce them, and in a very short time he found a

homogeneous mass of the consistency of thick cream. This slip, as it is called, is then dried by artificial heat and afterward is ground into an impalpable powder. In this state it is, of course, only very slightly adhesive, and must be moistened to be worked. There is no way of mixing water with it without making it lumpy or sticky, and an ingenious process of dampening is made use of, which is not only effectual but extremely simple. A great bed of solid plaster, two or three yards square and nearly a yard deep, is sunk in the floor and surrounded by a board a foot or more in

CHARGING THE KILNS.

good market for them. From that moment all my doubts and anxieties were at rest. The real success was far more comprehensive than I had dared to hope, and as early as September, 1880, the tiles were awarded the gold medal at the exhibition held at Crewe, England, over all the famous pottery manufacturers of the United Kingdom."

The name "dust-tile" is somewhat of a misnomer, for the clay used, though not in the form of paste, is not by any means as dry as dust, but has the consistency of damp sugar. After preliminary grinding, the different materials used in its composition are mixed with water and stirred by machinery into a

height. Upon this bed are thrown barrels of water by the bucketful until it is thoroughly wetted. The dust from the mills is then spread upon this bed in a layer three or four inches deep, and absorbs the moisture with considerable rapidity. The exact degree of dampness required can be easily regulated by withdrawing the dust at the proper time. When moistened it is ready for the press.

The natural tiles just described form only an unimportant part of the manufacture at the Low Tile Works. Relief-tiles are the specialty there, and they are quite as unique in their way as the natural tiles are. They are made mechanically by the dust process, or by hand

A TILED FIRE-PLACE. (FROM A DESIGN IN USE.)

and then to a high heat in a closed room. The greatest care is required in handling them before they are fired, and it is an operation of considerable delicacy to place them in the fire-clay boxes in which they are packed in the kiln.

The first firing, which converts the fragile, dry clay into hard, imperishable biscuit, occupies about three days. The cooling takes from five days to a week. The proper management of the kiln is, like every other part of the manufacture, the result of much experiment, and it requires a workman of long experience and good judgment to superin-

tend the firing. The kiln itself is a conical structure, twenty feet or more in height and one-third this distance in diameter. The furnaces are built in the base of the kiln, and the flues are so arranged that, at a certain time during the firing, the smoke and gas may be turned out of the interior of the kiln, so that only the heat of the flame shall play among the "seggars," as the fire-clay boxes are called. The kiln is constructed of fire-brick laid up in concentric courses, forming a wall of sufficient thickness to confine the heat to the interior. It is entered by a small door, which is walled up after the kiln is packed.

ORNAMENTED JUG. (HAND-MODELED BY ARTHUR OSBORNE.)

are the varieties of the yellow and olive, and these are quite unlike any other tiles manufactured. The present fashion of interior decoration demands tiles which shall harmonize in color with the peculiar tones in hangings and paint now in vogue, and to satisfy this demand Mr. Low has composed a new scale of glaze colors.

It will be readily understood, from the description of the process of making dust-tiles, that the range of design is naturally somewhat limited. Only that kind of relief can be struck which will separate from the die; that is, any portion of the relief which overhangs or is under-cut must be carved by hand after the tile comes from the press. The great value of the mechanical process is the rapidity of manufacture and the consequent cheapness of production. The hand process of making relief-tiles is necessarily somewhat slow, but it is a quite simple one, and adapted to the artistic execution of almost any design, ornamental or sculpturesque. It is no new method, having been in use, with various modifications, from the earliest times. It consists in pressing stock or clay into molds previously prepared for that purpose, and then glazing and baking the forms in the usual way. In making relief-tiles by hand there is no limit to size, except that fixed by the difficulties of firing. By this process Mr. Low has made single tiles over two feet in length. The designs are first made in clay or wax, and a plaster cast is taken, which serves as a mold for the reproduction of any number desired. This mold is so formed that the design is depressed below the general surface of the cast just the required thickness of the tile. The sides are cut off even with the border of the design, leaving the ends by which to gauge the thickness of the tile, thus giving facilities for working the clay into the pattern and for lifting the tile from the plaster. The stock is mixed in the same way as for dust-tiles, only it is taken from the drying-pan while it is yet moist enough to be plastic. A quantity of this stock is taken by the molder, and beaten and kneaded on a block of plaster, which is kept damp enough to prevent it from drawing the moisture out of the clay. When it is of the proper consistency, the workman beats it out into a thin mass, smooths the surface, lifts it with both hands, and flaps it over upon the mold, much as a cook puts pie-crust upon a plate. He then works it with his thumb into the depressions of the plaster matrix, and completes the operation by pressing the clay into every part of the design by the vigorous use of a wet sponge. The dry plaster soon absorbs the superfluous moisture from the clay, and the tile

The seggars are stacked in the kiln in such a way that the fire plays among them freely, and heats every portion of their contents to the same degree.

After the biscuit has cooled, the glaze, which is a thick liquid, is applied with a brush, or the tiles are dipped into it. In firing the glaze, the heat is kept up only from twenty-four to thirty-six hours. The glaze is a mixture of various materials, so combined as to fuse together to form glass, and is colored by the addition of oxides of various metals. It must be so compounded that, when fused, it will contract and expand in the same degree as the biscuit, otherwise it would crack, or "craze," as the ceramist calls it. One of the peculiarities of the Low tiles is the strength and purity of the glazes. The colors range from pale yellows and delicate grays, through the entire scale to intense, lustrous browns and vigorous tones of green and even black. Perhaps the most successful colors

becomes sufficiently rigid to be lifted from the mold. It may now be readily worked over by cutting-tools. The pattern may be undercut or perforated, or, indeed, elaborated to any desired degree. The drying and firing then follow, and the tile may be glazed with one color or with a combination of tints, according to the taste of the designer.

This is the process by which the Low plastic sketches are made, and it is evident from these that there is no limit to the artistic quality of this branch of tile-making other than that found in the attainments of the designer. The sketches and tiles thus far produced have been mostly from the hand of Mr. Arthur Osborne, a sculptor trained in the English schools. His work is decidedly English in character, but remarkably varied in scope, and full of invention. Among scores of different designs in the plastic sketches, one of the best pieces is sheep in a pasture, with a delicately modeled landscape in the distance. An owl tearing a bat is the design of one of the largest pieces, made in high relief; it measures eight and a half by twenty-four and a half inches. A cock with two hens is a highly decorative panel, and the donkey panel, showing three donkeys trotting away to meet a braying companion, is one of the most popular designs by Mr. Osborne. It is a trifle longer than the owl panel. Mr. Theodore Baur has designed a boy on a dolphin, which is exceedingly rich in effect and bold in execution.

In the tiles, a pattern of hawthorn, one of quince-blossoms, and another of apple-blossoms, are favorite examples. These are made in sets to border fire-places of different sizes, and hearths with borders are made to accompany the sets. The designs do not stop with animals and foliage, for heads, groups of figures, and even architectural compositions are produced. A group of monks, a figure in sixteenth-century costume, and a number of ideal heads are among the latest designs successfully fired. In the plastic sketches, as well as in the tiles, the glazes are used to modify the effect of the design. They are applied so as to melt in the high heat of the kiln and flow freely over the surface of the tile, filling up the depressions, gathering in the places where shadows would naturally fall, and leaving the highest points of the relief with only a thin coating of the color. By this means the most charming effects are produced. In a landscape the foreground is strongly accented, and the sky made to appear soft and deep, as if modeled with a brush. A delicately executed head will receive through the glaze the additional charm of softness and mystery which the superimposed transparent color

OWL AND BAT. (DESIGNED AND MODELED BY ARTHUR OSBORNE.)

imparts, and the element of agreeable variety of tone will be added to the beauties of the design. All forms of pottery may be readily produced by exactly the method described above. Mr. Low has fired some beautiful examples of jugs and vases with ornaments in relief, which have all the artistic qualities of the tiles and sketches. The quantity of floor, wall, and ceiling tiles made at the Low Works testifies to the increasing demand

BOY ON DOLPHIN. (DESIGNED BY THEODORE BAUR.)

for this material, both for decoration and for practical service. Effective ceiling tiles are made by a new process of glazing. They have the glitter of burnished gold, or the delicate variety of color and sheen of mother-of-pearl.

The measurements of tiles above given are not to be considered the limit of the size to be produced in the Low Tile Works, although they are among the largest dimensions ever reached in tile manufacture. New kilns have been built at Chelsea, and a monster press has been set up. The discouraging conditions of experimental production are no longer in the path of progress, and the expense of the costly first steps has been met. The results are before the public, and form one of the most significant features of the present artistic movement in the United States.

RUSSIAN JEWS AND GENTILES.

FROM A RUSSIAN POINT OF VIEW.*

ANTI-SEMITIC feeling still runs high: to this the late most unjustifiable demonstrations against Sarah Bernhardt in Galicia and Odessa bear witness. That it is especially strong in the eastern part of Europe, where the Israelites are most numerous and most firmly seated, is another indubitable fact. It also may be safely asserted that never, even in the quietest times, is this feeling wholly extinct. Were it otherwise, the popular outbreaks could not be so violent, so frequent, nor—to use a homely but expressive word—so “catching,” nor so uniform in character, as they have been within not very many years in Roumania, Galicia, eastern Prussia, and, very lately, in the south of Russia. When the effects are identical, the causes must be at least similar, and where the former recur with persistent iteration, the latter may be supposed to be permanent and deeply rooted. Now, looking back along the line of ages, we find that no historical event recurs more surely, though at irregular intervals, than popular outbreaks against the Jews. Wherein lies the cause of this singularly tenacious phenomenon? Historians are quick and ready with their answer: “In religious intolerance, with its attendant spirits of fanaticism and persecution, and in the antagonism of race.” Such an explanation may pass muster for the ages of mediæval darkness—but sweeping assertions seldom exhaust a subject, and this can be proved to be no exception to the rule. When the same phenomenon is reproduced periodically in our own time, under our eyes, and we are still told that “its only cause lies in religious intolerance and the spirit of persecution—more shame to our enlightened nineteenth century,” and when this is made the burden of a general hue and cry from the so-called progressive and liberal press of most countries, we become slightly skeptical, and desirous of looking into the matter for ourselves and more closely. We hope better things of our own time; we are familiar with it, being a part of it, and we know that its ruling spirit is not that of religious intolerance. We also know, from the teachings of the modern philosophical school of history, that the popular mind and feeling, however abrupt and unreasonable their outward manifestations may be, are strictly logical in their development, and that the masses,

when they appear to be swayed by nothing but caprice, or a sudden gust of passion, or at best by a blind and defective instinct, are in reality ruled by irresistible hidden currents of historical life, not the less powerful because they act at great depths below the surface. To dive into those depths, to reach those currents, to ascertain their direction and force, is the task of the inquirer. Sometimes chance steps in, and by the discovery of some unexpected clew lightens the task. It so happens that such a clew, in this particular case, has been offered by a rather peculiar combination of circumstances in Russia several years ago, and as the interest in the subject has been strongly and somewhat painfully revived by the widespread tumultuous occurrences of the last twelvemonth or so, it is surely worthy of a few moments' serious attention, under the guidance of these revelations, which, though they concern specially the condition, power, and acts of the Russian Jews, will be found to possess more than strictly local importance. A convenient introduction is afforded us by the general rising against the Jews which took place last spring throughout the south-west of Russia, and of which scarcely more than a bare mention was transmitted at the time to this country.

I.

THE disturbances began at Ielizavetgrad, in the middle of the Easter week. How did they begin? On what provocation? The immediate occasion was too trifling to have been more than a pretense, a signal for something long impending. The first three holidays had passed over quietly, when, on the afternoon of Easter Wednesday, a quarrel took place at a much-frequented public-house on account of a broken drinking-glass, for which the offender refused to pay. The tavern-keeper, who was a Jew, from angry remonstrances passed to blows. A voice from the crowd around the bar was heard to shout: “They assault our people!” The uproar quickly spread along the street, and, in a few minutes, there was a mob of not less than a thousand men, which carried the news and the excitement from end to end of the city. The work of destruction began immediately, and raged all through the night and through the following day and evening,

* See “Topics of the Time” in this number of the magazine.

as late as midnight, when it stopped—not so much from fear of the troops who had been telegraphed for and only then had arrived, as because scarcely anything was left to destroy. To realize the extent of the ravages done, it must be kept in mind that Ieliza-
vetgrad, situated on the highway between Poltava and Odessa, is a great commercial thoroughfare and a very wealthy city, with a population of forty-five thousand, of which fully one-third are Jews. The authorities were wholly unprepared. The ordinary police force was far too small to be of any use, and of the military only four squadrons of cavalry were on hand—a force particularly ill-suited for action in narrow, crowded streets—not quite five hundred men in all against a mob of many thousands, half of them women and children. It was a good-natured mob, too, which did not provoke violence by resistance, but dispersed at the first collision; but the broken groups would join again some streets further off, and carry their devastations to other quarters where the field was still clear. As for the citizens of the better classes, they, of course, took no part in the proceedings,—but they did nothing to oppose them. Numbers followed the different mobs out of curiosity, as mere lookers-on. A certain secret sympathy with the rioters could even be detected, which the latter were not slow in perceiving, and acknowledged by sundry marks of friendly attention. Thus, on the “bazaar,” or market-place, the ground being very wet and muddy, they spread it with carpets and woolen materials dragged out of the shops, at the same time politely inviting the spectators “to approach, as they need not be afraid of soiling their nice shoes.” The citizens would probably not have preserved this passive attitude had the rioters shown themselves at all cruelly inclined, and threatened the persons of the Jews instead of venting their rage only on their property. But, as it was, the worst instincts of a mob were not called into play, in great part owing to the prudence of the Jews themselves, who mostly kept out of sight. Had they “shown fight” at all, matters might have taken a more tragical turn, for the rioters gave signs of manifest irritation in the rare instances when revolvers were fired, very harmlessly, from windows. Crowds of women and children, and townspeople of the poorer sort, followed in their wake, picking up and carrying away all they could of the valuable property which covered the ground, or lay piled in mud-bespattered heaps, and literally could be had, not for the asking, but for the taking. A noteworthy feature, and one that shows how entirely the actors were mastered by one feeling, that of animosity

toward the Jews, is that the rioters—mostly workmen, handicraftsmen, and peasants from the environs—did not take anything for themselves; they merely destroyed. Some shop-keepers and householders tried to ransom their goods with sums of money. One gave a thousand rubles, another two thousand; many gave a hundred and fifty or two hundred. The rioters took the money, but only to fling the coin away and tear the paper to shreds, and then went on with their work. The only temptation which they could not resist was whiskey (*vodka*). In the cellars of wholesale spirit-warehouses, every barrel was staved in or the faucets were taken out, till the whiskey stood several feet deep and the barrels actually swam. Three men were saved from drowning only by the timely assistance of the soldiers. Many lay senseless about the streets, and were picked up in that condition hours afterward.* Yet, on the whole, the mob behaved—for a mob—with remarkable coolness and discrimination. Not a single Russian house or shop was touched, even by mistake, although protected only by crosses in white chalk on the doors and shutters, and occasionally by some saints’ images (*ikonas*) and Easter loaves placed in the windows—a device which was found so efficient that the Jews did not fail to adopt it in other towns, where many saved their houses by it. Jews living in Christian houses were not molested; neither were Hebrew physicians and lawyers, they being considered useful members of society. Exceptions were made in favor of well-recommended individuals. Thus, at the door of one house belonging to a Jew, the mob is confronted by the porter: “Boys,” says he, “leave him alone! He is a good man, and often gives you work. I have been ten years in his service.” “All right!” say the rioters, and pass on.

When the outrages were stopped at last, and the excitement had worn itself out, the city presented the strangest, wildest aspect. The streets were as white as after a fall of snow, for one of the mob’s chief amusements had been to rip up every feather-bed and pillow they came across, and fling out the contents. The wooden houses were shattered, the furniture broken to pieces and left in heaps, mingled with kitchen utensils and household goods of every kind. Here might be seen the hulk of a grand piano, with lid and legs wrenched off and strings hanging out; further on, fine mahogany reduced almost to chips, with velvet rags still clinging to them, and close to that the *débris* of painted furniture of

* The account reads something like the famous episode of the Gordon riots in “Barnaby Rudge,” minus the horrible accessory of the fire.

the commonest description. Not a pane of glass, not a window-frame, not a door was left whole. Inside the houses the same ravages had been committed everywhere, with methodical regularity; every object, even the smallest, was broken or spoiled for use; the very stoves were demolished; nothing escaped destruction.

The pawnbrokers' offices were the first to suffer; then came the public-houses, the wholesale wine and spirit shops, then the other shops, and lastly whatever the mob set eyes on that belonged to Jews. The marketplace or bazaar was one motley chaos of dry-goods, broken crockery, ready-made clothes, iron-ware, leather goods, spilt flour and grain. Of course, a vast amount of property was secured and carried off by marauders of the poorer classes, especially women and children, who followed the rioters for the purpose; but when a bill was posted all over the city, explaining that such conduct would be considered as robbery or secretion of stolen goods, and requiring all such unlawful prizes to be delivered at the different police stations within three days, whole wagon-loads began to arrive, not only from different parts of the city, but even from the surrounding villages. These simpletons actually did not know that they were committing a blamable act and incurring a severe responsibility. When questioned or rebuked, they answered with the greatest candor: "Why, we did not steal these things; they were lying around, so we picked them up. We meant no harm." Of course there were exceptions, and in several instances, especially in other cities, great quantities of valuable goods, as jewelry, watches, silks, and the like, were found in the possession of people whose social position put the plea of ignorance out of the question. Nay, well-dressed women—ladies they could not be called—had been seen to drive to the scene of destruction, and to fill their carriages with plunder. Many a private grudge, too, may have been indulged under cover of the confusion, as in the case of a certain tradesman in Kief, who rushed into the house of a wealthy Hebrew merchant at the head of a band of rioters, gave the signal of destruction by shattering with his own hands the piano and largest mirror, and under whose bed many valuables belonging to the same merchant were afterward found.

In Kief and Odessa the riots broke out a few weeks later, in May and June, and took a rather more malignant character: more personal outrages were committed; the troops and police were resisted, so that several people were killed and about two hundred wounded; passers-by, who were accidentally met by infuriated bands, were in imminent

danger, and escaped it only by crossing themselves ostentatiously, after two men had already been struck down by mistake; two or three times the mob viciously had recourse to fire, poured kerosene on pieces of dry-goods, or set fire to barrels of oil, petroleum, tar, and pitch, and only the greatest vigilance prevented a general conflagration.

While all this was going on in the large cities, the small towns naturally followed suit. Great agitation prevailed in the villages also, but with comparatively trifling results,—on the one hand, because numbers of the peasantry had joined the rioters in the great centers; on the other because, immediately after the occurrences in Ielizavetgrad, Government officials had been dispatched all over the country, to talk to the people, exhort them to keep quiet, and explain to them to what consequences they would expose themselves unless they did. This was a most necessary measure, for the country people had somehow got possessed of an idea that a rising against the Jews would be connived at. There were even vague rumors abroad that it was desired, nay that a certain mysterious "paper" had come from head-quarters, formally authorizing it, which paper was withheld from the public only because the local officials had been bribed by the Jews to conceal it. Where and how such nonsense could have originated and been circulated has never been found out. The fact, at all events, points to some hidden machinations, some underhand leadership, and there can be little doubt that the Nihilists—or socialists—were concerned in the movement, and secretly fomented it. Proclamations were found in the streets of Poltava, and along the most frequented post-roads, exhorting the people to massacre the Jews *and the property-holding classes*. In another place a woman, disguised as a policeman, was caught distributing small printed sheets of the same description. Odessa being a university city, the workings of the socialistic propaganda were especially apparent there, and, strange to say, of the students arrested for openly inciting the mob to the plundering and destruction of Jewish property, and to riotous proceedings generally, one was himself an Israelite. Yet, in the great amount of lawlessness committed in those wild weeks, these are isolated cases which do not warrant the assumption generally set up in official circles, that the Jewish riots of last spring were entirely the work of "the party." It was not to be supposed that the revolutionary agents should miss so good a chance of working on inflammable material—offered them, so to speak, ready for use. But their efforts must be looked upon as one of many sparks falling on a train of gunpowder.

The above is a very condensed, but faithful and not incomplete, account. Anecdotes might be multiplied, but as it is, no characteristic feature has been omitted. And now, after attentively perusing it, who will venture to affirm that religious animosity or the spirit of intolerance had anything whatever to do with the deplorable outrages committed on one-third of the population by the other two-thirds? On the contrary, do we not see that every motive *except* that one was at work more or less openly? Popular revenge, political propaganda, common greed, commercial rivalry,—as in the case of the small Russian tradesmen, who would not be sorry to get rid of Hebrew competition, nor averse to getting the same exorbitant interest themselves,—in short, most human passions are in play except religious intolerance. If more is needed to complete the evidence, here are a few miscellaneous scraps to the point. "When I reached the corn-bazaar," writes a special correspondent of the "Golos," from Kief, "the Jewish shops were already demolished and plundered; the mob was just attacking the public-houses. Having broken in doors and windows, they rolled the barrels out on the street and broke them to pieces. Whiskey flowed in streams. The rioters waded—they bathed—in whiskey. The marauding women carried it away by pailfuls. Through the uproar I could clearly distinguish the shouts coming from all sides. 'The Jews have lorded it over us long enough!' 'It is our turn now!' 'They have got everything into their own hands!' 'Life is too dear!' 'They grind us to death!' etc. Some well-intentioned persons went about amongst groups of idlers, who were evidently anxious to begin operations, and were forming into a sufficiently numerous mob, and tried to dissuade them. 'How can you be so foolish?' they would say. 'Don't you know that you will be punished?' The reply in almost every case amounted to this: 'No matter; we will take our punishment—it will be only *once*. The Jews torture us all our lives.'"

It is a fact so well known in Russia as to need no repetition or argument, that it is in part the merciless and systematic "exploitation," or, as the people so graphically describe it, *the sucking out* of the country's blood by the Jews, which has brought the peasantry of the West to the depths of destitution. As a consequence, never, in the whole course of our history, has the rage for emigration been so much of an epidemic as it is growing to be since the Government has opened the wide fields of eastern Siberia and the Amoor country to settlers, offering them assistance, encouragement, and advantages. The Little-Russian peasant, like every tiller of the soil, is deeply

attached to the land that nourishes him and his family. Such a land, too!—one of the healthiest, wealthiest, most fertile regions in the world. Yet this fruitful land—the very "land of milk and honey"—they will abandon in gangs, half-villages at a time, their wives and children and some few wretched household goods piled on their wooden wagons, drawn by small, emaciated horses, sometimes a cow tied in the rear, but more frequently of late despoiled even of this last friend and chief support of the little ones, and start on their dreary tramp across half of one continent and the whole of another,—to them an incalculable number of miles,—for a distant, absolutely strange, nay, unimaginable goal, which half of them never reach,—all this with a recklessness which can come of nothing but despair.*

Russia has millions of Mohammedan subjects. I do not mean our new subjects of Central Asia, but the Tatars along the Volga and in the Crimea, and the inhabitants of the highlands of the Caucasus. They are received in the public schools and colleges, where they are taught the principles of their religious law by doctors (*mollahs*) of their own. They furnish good soldiers and distinguished officers to our army. They ply various crafts in the midst of our native population, especially those of peddlers, of cab-drivers, and hotel-waiters. They are thrifty and peaceable. Who ever heard of hostile outbreaks against them? A little good-humored railery is all they ever have to encounter at the hands of our people, who will call them "Pig-ear" in fun, or sometimes in derision, when angry or quarreling, in allusion to their horror of pork. "Shaved-pate" is also a current appellation, which they are so far from taking in bad part that a Tatar peddler, if so hailed by some housewife from the other side of the street, will immediately walk over, and, of course, drive the best bargain he can. But the people would no more think of attacking the Tatar quarter in St. Petersburg, or demolishing and plundering a Tatar village on the Volga, than of so dealing with a Russian bazaar or homestead. Where, then, is the difference? Why this imperturbable good understanding with fellow-subjects of one race and religion, and this ineradicable animosity against those of another?

II.

If we were told that a certain great state, embracing under its rule populations belong-

* There is another current of emigration from the government on the Volga; and that, of course, has nothing to do with the Jews.

ing to several distinct races, had in the number several millions of subjects who, outwardly peaceable and harmless, nay, timid to cowardice and submissive to servility, were yet unceasingly and systematically undermining the well-being of the country they inhabit; who, while enjoying the fullest religious toleration and liberty of public worship, scrupulously perform every year a public religious ceremony which offers a loop-hole of release from the obligation of keeping any oath or promise made to the Government or to individuals belonging to the state religion; who, while sheltered by the laws equally with all their fellow-subjects, and, like them, entitled to sit in local courts of justice, are bound, under the direst penalties of excommunication, to decide cases brought before them only according to instructions received from a secret tribunal of their own; who are authorized and taught by their law to consider the persons and property of their fellow-subjects, if belonging to a different race and religion from theirs, as their natural patrimony, lawful for them to secure by any means; lastly, who contrive to feed whole districts in part on the refuse of the meat slaughtered for themselves,—if such a state of things were described to us as existing actually, in a great country, under a strong and well-established government, would not such a statement awaken in us a feeling of incredulity amounting to total disbelief? Surely no government can for a single moment tolerate so monstrous an anomaly! Certainly not—*i. e.*, not with its eyes open. But there are many ways of blinding the most wakeful eyes. Argus had a hundred of them, yet Hermes could charm them all. That the above is no wild fiction, but a statement of facts, an account of the condition in which the entire west and south-west of Russia has been for centuries, and is now, is the startling discovery which we owe to the remarkable collection of authentic documents, edited in 1869 by Jacob Brafmann, under official patronage, and with means of a semi-official source. But before examining and quoting the work, something must be said of the man, whose marked individuality invites attention.

There have of old been Jews of two descriptions, so different as to be like two distinct races. There were the Jews who saw God and proclaimed His law, and those who worshiped the golden calf and yearned for the flesh-pots of Egypt; there were the Jews who followed Jesus, and those who crucified Him; there were the thinkers and the sticklers; the men of the spirit and the men of the letter; Spinoza and his persecutors. To borrow, for a moment, Renan's

noble and striking language, "in the course of its long history Israel has always had an admirable minority which protested against the errors of the majority of the nation. A vast dualism is the very essence of this singular people's life. It has been divided, so to speak, into two opposing families, of which the one represented the narrow, malevolent, hair-splitting, materialistic side of the genius of Israel, the other its liberal, benevolent, idealistic side. The contrast has always been striking."*

Jacob Brafmann is distinctively a Jew, but distinctively belongs to the "admirable minority." Of humble parentage, and in no way favored by fortune, he was raised out of his sordid surroundings and the narrow groove of his early training by nothing but the predominance of "the liberal, benevolent, idealistic" element in his nature. His boyhood was the same unenviable round of useless, unintelligent school learning, mischievous idleness, and precocious familiarity with sharp practice of every kind, which makes the Hebrew youth of the poorer class so unattractive a specimen. "Education" for the Hebrew boy of small means begins, indeed, at the age of five or six, but consists entirely in learning to read and memorizing the "Prayer-book"; then chapters from the Pentateuch, with scraps of Talmudistic commentary, and it may be, at the last stage, fragments from the Talmud itself. Then, at seventeen or eighteen, comes marriage with all its cares and burdens,—and Hebrew wedlock is proverbially prolific,—but too often without its solace and companionship, for the matter is usually arranged by the respective families, without reference to the young people's wishes or sympathies. Poor Brafmann fared but ill at this pass; the mate assigned him was exceptionally uncongenial to him. Doggedly he worked for his family, plying alternately sundry small trades and various crafts—that of cab-driver, of photographer, etc., with the versatility peculiar to his race, and to which they are partly driven by the necessities of an overcrowded, overstocked market in those centers of dense and abjectly poor Jewish population. But, unlike his brethren, he did not sink and harden in degradation. Through all those years of loveless, thankless toil, he never ceased to think, to observe, to learn—nay, to study, in the real and higher sense of the word, robbing many of his nights of their necessary rest, and bitterly upbraided by his young wife on account, not of his health, which suffered under the excessive strain, but of the candle which "he wasted." He became a Hebrew

* "Les Évangiles et la Seconde Génération Chrétienne," page 12.

scholar, he learned Russian and German—the literary German, not the mongrel jargon which Jews all talk in those parts—at the age of thirty-four; he even taught himself to read and understand French and Latin. He read the New Testament, and studied deeply in Christian theology. At length, and from sincere conviction, he became an open convert to Christianity, and received baptism. Life among his own people had now become impossible, but the education which he had given himself with almost superhuman persistence and intuition had fitted him for better things, and when he was appointed teacher of the Hebrew language at the seminary* of Minsk, in 1860, he found himself in an honorable and, comparatively speaking, comfortable position.

Even before that, Brafmann had attracted the Emperor's attention by addressing to him a memoir concerning the anomalous position and conditions of life of his Hebrew subjects. The consequence was that, together with his appointment, he received an imperial order to study and propose ways and means for removing the tremendous obstacles which Jewish converts encounter when they declare their intention of becoming Christians. To aid him in his researches, access was opened to the greatest variety of sources bearing on the question,—on the one hand by the support of the bishop, on the other by that—less official, but perhaps even more effective—of many a Hebrew well-wisher. "It was thus," says Brafmann, in his preface, "that a rich collection of materials accumulated in my portfolio, valuable not only for my special object, but as illustrating the condition of the Hebrew population generally. * * * The most prominent feature of my collection is a package of more than one thousand authentic documents, never published until this time—ordinances, resolutions, and acts of divers Jewish *kahals* [administrative councils] and *beth-dins* [courts of justice], which are of great importance as representing that practical side of modern Jewish life which can never be discerned by outsiders—by those who have not, so to speak, been reared within the synagogue walls. * * * "These documents," it is said, further on, "afford convincing evidence that the *kahal* and *beth-din* rule the private and social life of the Jewish population in a great measure independent of the Talmud, and that their own private

ordinances, supported by the penalty of the *kherem* [excommunication] are of far greater moment to the modern Jew than the Talmud. * * * They show as clearly as possible in what way and by what means the Jews, notwithstanding their limited rights, have always succeeded in driving alien elements from the towns and boroughs where they have settled, to get into their hands the capital and immovable property in those places, and to get rid of all competition in commerce and trades, as has been the case in the western provinces of Russia, in Poland, Galicia, Roumania; by what miracle it could come to pass that whole departments of France were found to be mortgaged to the Jews in 1806, as Napoleon tells Champagny in his letter of November 9th of that year, although they formed only an insignificant minority in the empire, in all sixty thousand. Finally, what is most important to us, these documents contain the plain answer to the question why the labor and money expended by our Government, in the course of the present century, on the reformation of the Jews have brought no result." Of these thousand documents, ranging from 1794 to 1833, Brafmann published in his book, "The *Kahal*," a selection of two hundred and eighty-five, mostly dated from Minsk, in the government of the same name. Their authenticity is proved (1) by their very ancient look; (2) by the uniform notarial handwriting; (3) by the signatures of many persons which can be identified from other existing sources; (4) by the water-mark in the paper on which they are written.

Before we examine their contents and the conditions of life which they illustrate, it may be well to define the exact meaning of some words which incessantly recur in them, and, first of all, that of the term *kahal* itself.

The *kahal*, abbreviated from *kheder-ha-kahal*, is the town-council or administrative council of a Jewish community. Officially it purports to discharge only a few modest duties, distributing the taxes among their people, for the punctual payment of which they assume the responsibility before the Government, taking care of the sick, superintending the synagogue and all that pertains to Hebrew worship, ceremonial, and religious observances. On these grounds the institution is not only tolerated, but sanctioned and actively supported by the Government. In reality, it wields supreme, absolute, and unquestioned power over every phase of Hebrew life, both private and social, and manages to use the local Christian authorities as its unwitting tools, not only against its Gentile fellow-subjects, but against any of its own

* The word "seminary" is always applied to ecclesiastical schools or colleges, placed under the jurisdiction of the local ecclesiastical authorities, and, as supreme resort, of the Holy Synod.

people who might feel inclined to demur at the heavy yoke imposed on them. To show that this is so, and what are the means employed, is the object of Brafmann's book, and will be that of our next chapter.

The *beth-din* is the Talmudic court of justice, which exists in every Jewish community without exception, under the high protection of the kahal, and under whose jurisdiction are placed all transgressions and litigations arising between private Jews, or between such and the kahal. It answers to all the needs of Jewish mercantile life, and takes the place of the ancient Sanhedrin. It is a sacred institution, and its attributes are, even now, very extensive. It pretends to be simply a court of amicable arbitration, and is tolerated, but not officially recognized, by the Government.

The *kherem*, or great excommunication, is the last resort and most terrible weapon which the kahal and beth-din always keep in reserve to quell incipient rebellion or punish actual disobedience. Brafmann gives the entire form, which, besides being very monotonous, is too long for reproduction here. There is something appalling in the virulence and malignancy of the curses launched upon the offender's head, and it is not astonishing that even liberal-minded Jews should often have faltered and been daunted before its tremendous vehemence. A general malediction is first pronounced in the name of God and all the celestial powers; then a special one for every month of the year, in this form: "If he is born in the month of Nisan, which is ruled by the Archangel Uriel, may he be accursed of that archangel and his angels," and so forth through the remaining eleven months; also the days of the week and the four seasons; then comes the final imprecation, to which great poetic force cannot be denied:

"May the Lord's calamity hasten to overtake him; God, the Creator! break him! bend him! May fiends encounter him! Be he accursed wherever he stands! May his spirit depart suddenly, may an unclean death seize him, and may he not end the month! May the Lord visit him with consumption, brain-fever, inflammation, insanity, ulcers, and jaundice! May he pierce his breast with his own sword, and may his arrows be broken! May he be as chaff which the wind drives before it, and may the Angel of God pursue him! * * * May his path be beset with dangers, covered with darkness! * * * May he encounter direst despair, and may he fall into the net spread for his feet by God! May he be driven out of the realm of light into the realm of darkness, and cast out of the world! Misfortunes and sorrows shall fright him. He shall behold with his eyes the blows that shall fall on him. He shall be sated with the wrath of the Almighty. He shall be clothed with curses as with a garment. And God shall give no forgiveness to this man, but pour His wrath and His vengeance upon him, and all the curses shall enter into him that are written in the Law. * * *"

And as though this were not yet explicit enough, the denunciation is further completed in the circular addressed to "the wise men and elders of the nation," to notify them that a son of Israel has been cast into the outer darkness. After the introductory greeting and the enumeration of the offenses of the accused person, the kahal continues:

"Therefore, we have laid the *kherem* on him. Do ye so likewise, daily. Proclaim publicly that his bread is the bread of a Gentile; that his wine is the wine of idolatry; that his vegetables are impure, and his books even as the books of magicians. * * * Ye shall not eat with him, nor drink with him; ye shall not perform the rite of circumcision on his son, and ye shall not teach his children the law, nor bury his dead, nor receive him into any corporations; the cup that he has drunk from ye shall wash, and in every respect ye shall treat him as a Gentile."

And now, after these necessary explanations, we can at last turn to that part of our subject to which the foregoing pages have been in reality only an introduction.

III.

"Die Juden bilden einen Staat im Staate."

These words of Schiller, Brafmann takes as his motto. Referring to them in the course of his book, he remarks that as a state without a territory is not admissible, so these words are usually taken by unsuspecting outsiders for a poetic figure rather than a historical truth. They little imagine that the fiction is turned into a momentous reality by a short item in the Talmud, which lays down as a fundamental axiom that "*the property of Gentiles is even as a waste, free unto all*"* (i. e., all Jews). Now, as the kahal has the supreme direction of the affairs of every community, it follows that the kahal of each district considers itself the only rightful owner and legal disposer of the territory within its jurisdiction, no matter who may hold it or any part of it in actual possession, Jew or Gentile, and that not arbitrarily, but on the ground of the *khezkat-ishoub*, a right well defined in the Talmudic code called *Khoshen-Hamishpat*, and the works of its learned expounders. One of the highest authorities among the latter, Rabbi Joseph Kouloun, in his highly respected work, "Questions and Answers," compares the property of Gentiles (section 132) to "a lake free to all," in which, however, no one may spread his nets but a Jew duly authorized by the kahal. We continue in Brafmann's own words:

"Considering, then, the Gentile population of its district as 'its lake' to fish in, the kahal proceeds to sell portions of this strange property to individuals on

* Talmud, Treatise "*Baba-Batra*," page 55.

principles as strange. To one uninitiated in kahal mysteries, such a sale must be unintelligible. Let us take an instance. The kahal, in accordance with its own rights, sells to the Jew N. a house, which, according to the state laws of the country, is the inalienable property of the Gentile M., without the latter's knowledge or consent. Of what use, it will be asked, is such a transaction to the purchaser? The deed of sale delivered to him by the kahal cannot invest him with the position which every owner assumes toward his property. M. will not give up his house on account of its having been sold by the kahal, and the latter has not the power to make him give it up. What, then, has the purchaser N. acquired for the money paid by him to the kahal? Simply this: he has acquired *khasaka*—i. e., right of ownership over the house of the Gentile M., in force whereof he is given the exclusive right, guaranteed from interference or competition from other Jews, to get possession of the said house, as expressly said in the deed of sale, 'by any means whatever.' Until he has finally succeeded in transferring it to his official possession, he alone is entitled to rent that house from its present owner, to trade in it, to lend money to the owner and other Gentiles who may dwell in it—to make profits out of them in any way his ingenuity may suggest. This is what is meant by *khasaka*. Sometimes the kahal sells to a Jew even the person of some particular Gentile, without any immovable property attached. This is how the law defines this extraordinary right, which is called *meropiz*: 'If a man [meaning a Jew] holds in his power a Gentile, it is in some places forbidden to other Jews to enter into relations with that person to the prejudice of the first; but in other places it is free to every Jew to have business relations with that person, to lend him money, give him bribes, and despoil him, for it is said that the property of a Gentile is *hefker* [free to all], and whoever first gets possession of it, to him it shall belong.' ”*

It will be noticed what stress is laid on money-lending as a means to effect the desired transfer of property. Indeed, it is the mainspring of the operation, and a case of failure is very rare. The proposed victim is tempted into borrowing, and enticed on and on by proffered facilities so long as it is supposed he still has a chance of rescue. When he has become entangled in the meshes of renewed bills and compound interest wholly beyond the range of his resources, the blow descends, and the fortunate purchaser enters into open possession of his secretly long-cherished property. Perhaps he sells it then to a Christian, so that it may revert back to the kahal as *hefker*, and the process begin over again, to the advantage of some new "fisher." And the beauty of the thing is, there is no risk attached to it. It is all done snugly within the law. If people will borrow, they have to pay, and there are courts of justice in the land to see that they do. No matter what artifices have been used to inveigle them, what amount of fine psychology has been put in play to find out their weak sides and attack them—the law has

nothing to do with that. In the rural districts, the process is still easier and the result still sadder. Jews do not live in villages; there is nothing for them to do there. They prefer more populous and, above all, wealthier centers, where the artificial demands of city life give scope to the display and bartering of tempting wares of all kinds.

Of these wares, there is one which the overworked, underfed, ever careworn peasant cannot resist—*vodka*. It is warmth in the inhuman winter cold; mirth in his rare hours of rest; strength—fictitious, it is true, yet upholding him for the time—when he sinks under the day's task; medicine in sickness; above all, it is forgetfulness. And if poets, with everything to make life a dream of beauty, have cried out in weariness of heart, "The best of life is but intoxication," surely the poor plodder may be excused for feeling the same in the only sense accessible to his limited experience. And truly, in moderation, whiskey is a necessity to our peasant, imposed by the climate and the conditions of his life. But how easy the slip into excess! and where the line? Well do the Jews know all this, and so the public-houses in the villages are all kept by Jews—a plenteous and never-failing source of replenishment to the exchequer of the kahal. In every village are one or two public-houses, or more, according to its size and the number of its inhabitants; for there must not be more fishers than the lake can support, nor must it be fished out all at once. How complete the success let any village of our western provinces witness, with its wretched, weather-beaten cabins, hingeless doors and shutters, crooked and thatchless roofs, and rotting door-steps; its tottering, yawning barns, scantily propped by poles; empty stables, solitary plows and wagons under ruinous sheds; finally, the long trains of Amoor emigrants mentioned in our first chapter. And if figures are wanted, let this suffice: in 1869, seventy-three per cent. of all the immovable property of the western provinces had passed into the hands of the Jews.

If we turn to the documents themselves, our amazement increases, for there, indeed, the assertion which we were half inclined to doubt assumes a body and becomes a living reality. Here are three,—Nos. 22, 23, and 26, dated Minsk, 1796,—which relate to a dispute between the kahal and a certain Eliazar, "about the possession of a house and lot of ground belonging to the uncircumcised hatter, Zvansky." Eliazar claims it on the ground that it was sold to his dead father, but there is a flaw in the title. In disputes of this kind the kahal generally wins

* "Khoshen-Hamishpat," section 156, paragraph 17, and Treatise "Baba-Batra," chapter 8.

the day. So this case ends by the beth-din adjudging the property to the kahal, "who may sell it to whomever it pleases." No. 77—dated 1799—records the sale to the "wealthy and illustrious Jochiel-Michael" of a stone building, containing two shops, with their cellars and upper stories, belonging to the Russian Baikoff; while No. 205—dated 1802—gives half of the same property to another person in payment of an old debt, "seeing that Jochiel-Michael has not yet paid in full the sum due for those shops." The house of the uncircumcised blacksmith, Zeleza, and that of the German carpenter, Johann, are disposed of in Nos. 115 and 195, and we may be sure these buildings did not in the end escape their destination, even though hatter, shop-keeper, blacksmith, and carpenter continued for a while to follow their several pursuits, each within his own premises, in the security of ignorance. Nor does the kahal limit its operations to private property. It is rather startling to find it disposing (No. 105) of "a convent, formerly possessed by Carmelite monks, but now occupied by Franciscans," with all its buildings and outbuildings, in wood or stone, the distillery belonging to it, as well as the convent meadows and vegetable gardens, with the usual remark that "the purchase money has been paid to a farthing"; of a hospital, with the piece of ground thereto pertaining, held in actual possession by a certain Catholic charitable brotherhood (No. 261); and, finally, appointing arbiters to decide a litigation between itself, the kahal, and a private individual, concerning the right of possession to several shops, stone buildings, owned by the Bishop of Minsk (No. 177). We pass over a long array of documents of exactly the same nature, only observing that in the statute of the kahal and beth-din of the city of Vilna, composed on the approved and general model, the obligation to see that Jews do not interfere with each other's *khazakas* and *meropiès* is especially mentioned as one of their functions and attributions. Moreover, the interesting "angling" process can be followed step by step in Gustav Freytag's powerful novel, *Soll und Haben* (Debit and Credit), in which we see the wealthy usurer Hirsch Ehrenthal systematically going to work on the property of the easy-going and imprudent Baron Rothsattel, until the wished-for consummation is happily achieved.

It is well known how punctilious orthodox Jews are about their food, and how particular about having their meat butchered and cooked according to certain very strict regulations laid down in the Talmud; also how great and enduring is their repugnance to share the food of Gentiles, even though they will occa-

sionally welcome a Christian guest to their own table. But what is less generally known is that this peculiarity of theirs, respected everywhere as a feature of their religious observances, very greatly affects, both directly and indirectly, the well-being of the populations among whom they are settled. So little is this suspected that no sort of objection is raised against their building slaughter-houses, and getting the entire butcher's trade into their own hands; indeed, the fact is mentioned with perfect innocence in the Russian Code of Laws: * "In most of the towns of the western provinces there are no butchers but Jews, and only that meat is sold to Christians which is not found *kòsher*." It is supposed that the whole difference between *kòsher* and *trèf* (lawful and forbidden, clean and unclean meat) lies in the observance of or departure from certain ridiculously trivial and minute Talmudic ordinances concerning the knife to be used for slaughtering, its shape, sharpness, smoothness, the exact spot on the animal's throat across which it is to be drawn, and the like. If this were all, there would be no harm in handing over to the Christians meat pronounced unfit for the use of their fastidious Jewish brethren. But this is not all. When the animal has been successfully dispatched, according to all the refinements of Talmudic law,† its internal parts—brain, heart, lungs, liver, bowels, &c.—are submitted to the closest examination from a hygienic point of view, and if a taint or symptom of disease is discovered in any of them, the whole carcass is pronounced *trèf*, and put into the market for sale to the Christian population. "We cannot wonder," remarks Brafmann, "at the profound loathing with which Jews regard the food of Christians, knowing as they do that much of the meat which is sold them is actually no better than carrion." Nor does their conscience sting them in the least for so unjustifiable a proceeding, since they have for it the authority of the Mosaic law, which expressly says (Deuteronomy xiv. 21): "Ye shall not eat of any thing that dieth of itself: thou shalt give it unto the stranger that is in thy gates, that he may eat it; or thou mayest sell it unto an alien; for thou art a holy people unto the Lord thy God."

Indirectly, the condition of the entire country (that part of it where the Jews are allowed to dwell) is influenced by this separatism, because it furnishes the kahal with its principal and most unfailing revenue,—universally

* Vol. V. Note to section 280, paragraph 42.

† The Talmudic law devotes eighty-six chapters, divided into six hundred and forty-two paragraphs, to the regulations concerning slaughtering, *kòsher* and *trèf*.

known under the curious name of "box-duty,"—and thus always keeps it provided with large sums of ready money, which it uses at its own discretion to further the interests of the community, or avert any obnoxious interference on the part of the Christian authorities—principally by means of bribes to police officials and employés. The regulations about this tax and its collection form quite a complicated organization, too important in its effects to be dismissed with only a passing notice. It necessitates a considerable staff of officials, who hold their functions on oath and under dread of the *kherem*. First there are the professional slaughterers, trained in the business of killing according to Talmudic rules, and appointed by the kahal. All cattle or fowls, without exception, that are to be consumed in the town—either for the market or for private use—must be slain by them, on pain of being considered "even as carrion"; the owner of a chicken may not kill it to make soup for his sick wife, but must take it to the sworn slaughterer. A certain duty has to be paid to the agents of the kahal, always present on the premises, on every head of cattle,—ox, calf, sheep, or goat,—and on every fowl, varying according to their kind. It is to be paid, not in paper or copper coin, but in silver, and the slaughterer is forbidden "to unsheath his knife before it has been so paid." This is only part of the box-duty. By far the greater part of it is levied on the retail sale of *kòsher* meat. This part falls on the purchasers, who pay three groats in silver (about one cent) on every pound they buy. Meat brought in from the surrounding country pays the same duty—*i. e.*, the owner can neither use it nor sell it unless he pays his three groats per pound to the collectors of the kahal. Even fat is not exempt from the duty, and any one who purchases either from a private person (*i. e.*, not from a butcher in the meat-market) must be shown the receipt of the collectors, or he may find himself devouring "carrion," "food unclean as pork," and come under the canonical *kherem* in consequence. There is in the market a special room, in which the collectors sit all day long to receive the money, while two superintendents continually "walk the floor" of the market, to see that every purchaser, after having received his piece of meat from the butcher, takes it straightway into the collectors' office, to be reweighed and to pay the duty. It is amusing to note the precautions that are taken to secure the money from fraud or foul play of any kind. "The collectors, to avoid abuses," it is stated in the regulation (Document No. 88), "are forbidden, under penalty of the most terrible *kherem*, to put it in their

pockets, but must slip it into a locked box, with a slit in the top." (Hence the name "box-duty.") Every evening they are to count the money, enter it into the book, then transfer it, at least twice a week, into a strong-box, deposited under the care of one of the rich men of the city, who, however, is not intrusted with the key—or rather keys, for the box has two locks. One of the keys remains with the collectors, while the other is in the charge of a third person, appointed every month by election. The contents of the strong-box are verified once a month, by persons specially appointed. When the kahal makes a demand for money from the box-sums, "it must be signed by five members at least" (there are nineteen in all), and the money is taken out and delivered by both collectors jointly, not otherwise. Butchers, in consideration of their having paid box-duty for the slaughtering of the animals, are allowed to sell *kòsher* meat two groats per pound higher than *trèf*, so that the Jewish purchaser really pays a double duty on his meat.

A number of documents show that a great part of this box-money is regularly expended in bribes, either on given occasions, for an object, or in a generally propitiating manner, as gratuitous gifts on the two great holidays of the year—New Year's Day and Easter. These latter offerings being a very ordinary occurrence, in accordance with an old custom of the country, are registered quite openly as "holiday presents to the authorities" (No. 4); or, "to be taken from the box-money a hundred *zlots* [a little over ten dollars] to buy coffee and sugar for presents to the authorities at Easter" (No. 114); or, "ordained by the 'chiefs of the city' to go the usual round at Easter, the necessary sums to be taken from the box-money" (No. 73); or, "bought four loaves of sugar, best quality, eighty-two pounds in all," for New Year's presents (No. 244). Actual bribes, given for a purpose, being of not so harmless a nature, are neither given nor expressed so openly. The documents which record the expense are worded covertly, as: "A hundred rubles to be employed in the purchase of rye and other grain for a certain purpose, and fifty rubles to be given to the secretary of the governor in acknowledgment of a certain service" (No. 33). The agents employed in such cases are instructed to do their best to secure proofs of the transaction, so that the kahal may always hereafter have it in its power to exercise control over the official who has yielded to temptation, by threatening to divulge his offense. When affairs in the issue of which the Jewish community is interested—or a

corporation, or even private individuals—are being transacted in one of the local courts, clever and trusty agents are directed to watch the case, and, if necessary, to give it a gentle push in the right direction by trying various blandishments on the members of the court,—such, for instance, as providing a luncheon, with choice wines, for the judges (No. 37). Now all this materially, if indirectly, affects the condition of the country at large, for every unlawful favor shown to the Jews is sure to react in a prejudicial manner on the Christian population. And were it not for the right to levy box-money on *kôsher* meat, the *kahal* would not have always ready to its hand extensive means to dispose of in this way. Therefore it has taken care to secure to itself this never-failing source of revenue, by enlisting the Government on its side. It was easy for it to do this by assuming the responsibility for the payment of the taxes by the Jewish communities, and by undertaking to supply the required number of recruits or the corresponding “exemption-money” (under the old military system), and by representing the box-duty as the easiest and surest means to this end, as a supplementary reserve income, from which the taxes should be paid for the poor or insolvent members of the community. The consequence is that this duty, together with all the regulations about *kôsher* meat, without which it could not be levied, are under the sanction and protection of the Russian law, and actively supported by the local authorities, whose aid and assistance the *kahal* may claim at any moment. The following are the express terms of the law :

“Subject to the box-duty are: (1) The slaughtering of cattle (per head of cattle); (2) of fowls (per each fowl); (3) the sale of *kôsher* meat (per pound); (4) another item of the box-money is the fines imposed for the non-observance of the regulations on this subject.” *

“The police, both urban and rural, and all other local authorities, are bound to render their aid and assistance, when such is required in legal form, to see that the box-duty be paid by the Jews without opposition or fraud.” †

How far the official object of the institution is achieved may be seen from the fact that, in 1867, there was a balance against the Jews in the government of Vilno of 293,868 rubles, 36½ copecks arrear on taxes, and 341,097 rubles, 15 copecks against those of Minsk. (A ruble is one hundred copecks, and worth about seventy-five cents United States money.)

* Statute on Taxes; supplement to section 281, paragraph 8.

† *Ibid.*, paragraph 57.

This exposition of the attitude which the Russian Jews* have invariably held and still hold toward their Gentile fellow-subjects would be incomplete without a brief statement of the line of conduct which they follow with regard to the jurisdiction of the Gentile courts of justice, and to their own obligations as represented by oaths and promises made to Gentiles.

The first of these points is settled most unequivocally by the following extract from the “*Khoshen-Hamishpat*” (chapter 26, paragraph 1):

“Jews are forbidden to go to law before a Gentile court of justice, or Gentile institution of any sort. This prohibition does not lose its force even in cases where the Gentile laws coincide with the Hebrew laws, nor even should both sides wish to submit their case to a Gentile court. He who violates this prohibition is a villain. Such an act is considered equal to blasphemy and rebellion against the entire Mosaic law.”

The offender of course incurs the *kherem* in all its rigor, and cannot be freed from it until he releases his antagonist from the power of the Gentiles. How consistently this principle is carried out is shown by two very remarkable documents, Nos. 165 and 166. Two Jewish members are to be elected to sit in one of the mixed minor local courts, called “oral courts,” because cases of a very trivial nature are examined and decided by them orally, according to “custom” more than written law. Thirty electors have been chosen by a general assembly, and the names of the candidates have been proclaimed. Thereupon, and before the official election by ballot takes place, the candidates are summoned before the beth-din, and there made to engage, under oath, “that, through all the time of their exercising the function of judges in the oral court, they will be guided by the directions and instructions of the beth-din and *kahal*; also that they will unconditionally obey all their commands with respect to the cases which will be submitted to the court.” After this a committee of four persons—two members of the *kahal* and two of the beth-din—is appointed to make out a code of rules for the guidance of the two judges.

“And all the resolutions signed by the committee shall be by said judges carried out punctually during a whole year. All this has been done with the common consent, in accordance with the laws and ordinances. At each sitting of the committee one of said two judges must of necessity be present, in order to consult to-

* To these may safely be added the Jews of the eastern provinces of Prussia and Austria, Galicia, Bukovina, etc., and also Roumania, for in all these countries the state of things is exactly similar.

gether concerning the cases to be decided in said court."

It naturally follows from these premises that all oaths whatever taken by Jews, or testimony given by them under oath before Gentile courts or magistrates, may or may not be valid. Further opportunities for evading obligations to Christians are offered by the annual religious solemnity called *kol-nidreh*, the opening act of the great festival of *Yom-Kipur*, the day of national purification, of absolution and reconciliation with heaven, when all private chapels as well as the synagogues of the various corporations are closed, by special order and under pain of the *kherem*, so that Israel may pray to the Lord of their fathers jointly in the great synagogue, as one united family. It is the tenth day after the Hebrew New Year's day, its great holiness marked by a severe fast—total abstinence from food during twenty-four hours for all adults, and even children over twelve years old; like the solemnity of New Year's day it closes with the significant patriotic signal, the blowing of the sacred horns, which is answered by the entire congregation with the traditional ejaculation: "Next year in Jerusalem!" The fast and common prayer begin the night before, two hours before sunset, and are ushered in by the ceremony of *kol-nidreh*, which we will describe in Brafmann's own words:

"When the men and the women, in holiday attire, have taken their separate stations in the synagogue, which is lighted by the wax tapers held by each person, and the leader of the choir (*cantor*) has taken his place, then the most notable members of the assistance open the ark, reverently take out the *thora*, while the choir thrice repeat the celebrated *kol-nidreh* to an ancient traditional chant; the congregation repeat it aloud with them. Judging from the pomp and reverence with which the Jews prepare for this act, an outsider would naturally conclude that it is the very center-piece of the whole yearly cycle of spiritual exercises. But, if he knew the language, he would find that the words pronounced with such awe-inspiring ceremonial, such religious concentration and profound reverence, are not words of prayer at all, but an act by which the entire nation renounces all promises, oaths, and obligations given by each of its members in the preceding, and all such as will be given in the coming, year. With this public renunciation of a nation's plighted word, the whole moral base of social life does indeed fall to pieces. It is a fact so utterly revolting, that the greatest authorities of the Talmudic world itself have risen in protest against it. But not even they could prevail against the force of custom, and the *kol-nidreh* renunciation maintains its place among the most honored Hebrew rites."

This chapter cannot be more aptly concluded than by another extract from Brafmann's remarks, so pithy and forcible in their simple earnestness:

"To students of law we venture to think that these documents will offer not a little interest; but we especially recommend them to the study of those who are curious to find out the real causes of the universal murmur of reprobation which has always been heard against the Jews from the surrounding world, and of the persecutions to which they have been subjected through eighteen centuries—*i. e.*, ever since the kahal has ruled this unhappy people."

IV.

WAS Brafmann right in making these revelations—or, at least, in giving them the publicity of the press? Should not a certain merciful feeling have restrained him from thus exposing the short-comings of those who still were his brethren in blood and race? Should he not have been content to cut himself adrift from the vessel which held them? Scarcely. You cannot let your neighbor's house be broken into because you have friends in the gang, even though you have withdrawn yourself from them when you discovered their evil ways. Yet, Brafmann is emphatically and enthusiastically a Jew. He is deeply, passionately devoted to his people, and he possibly—who knows?—might have hesitated and temporized with his duty to his new brethren from tenderness to the old, had it not been his entire conviction that the Jews suffer quite as much under the system whose secret workings he divulges as the Christians themselves. For each power, each right, of the kahal and beth-din is a stick with two ends, of which the one descends on the Christian population and the other impartially belabors the Jewish community,—of course falling heaviest on the poorer mass,*—with equal violence and equally fatal results. If the Gentile trader or artificer can never be sure that his house has not been sold over his head to a Hebrew fellow-citizen, on the other hand, the Jew who has bought a piece of ground or a house, from the Russian Government or a Christian owner, is made to pay an additional sum for the same property to the kahal. Thus No. 87 records the sale "to Rabbi Khaim, son of Rabbi Isaac, Levite," of the right of ownership to a stone building, constructed by him on the market-place of Minsk, and only from the day that this second deed of sale is

* So on one occasion, when the superintendents of the box-duty demanded an addition to their salary, the kahal, instead of granting it from its own exchequer, imposed an additional duty on the sale of meat, and when the collectors in their turn applied the very next day for the same favor, the duty was still further increased—by one groat per pound—to satisfy them. (Nos. 173 and 176.)

delivered to him is it said that the building belongs to him and his heirs forever, "from the center of the earth to the summit of the heavens." Further, as a rule, a Jew from one district is not permitted to trade or settle in another, and if he is, by special favor of the kahal, he is made to pay handsomely for the privilege. For it is said in the law:*

"At the present time, when we live under the rule of alien nations, and too great an accumulation of Hebrew population may lead to collision with them, every Jew who comes to a city and wishes to settle in it, is a foe to those who already dwell there. Therefore the local kahal is given the right to close the door before the new-comers, to attain which object it is lawful for it to employ any means whatsoever, even to the power of the *goim* [the local administration]."

"Even to the power of the *goim*." That means the local Christian police, which is to the kahal what the secular arm was to the Inquisition. It is literally at its beck and call, owing to the sanction awarded by our laws to the box-duty. This same active sanction also enables it to exercise a most irksome supervision and an intolerable coercion over the private life of every Jewish family. A few instances will best illustrate the practical working of this simple and ingenious machinery.

However miserable a Jewish family, there are two occasions—a wedding and the circumcision of a son—on which a certain amount of festive expenditure is inevitable. Guests are invited, a meal is served, musicians are hired. In none of these points, however, is the giver of the feast allowed to follow his own discretion or inclination, but must submit to a code of regulations, which would be amusing from their absurdity were they not so galling to all feeling of independence and human dignity. Here are a few items: "No one shall dare to serve at circumcision feasts refreshments consisting only of cakes and whiskey." There must be a meal of butcher's meat; if the feast-giver be a poor man, he must have meat for at least ten persons, and only in case of absolute destitution can an exemption be obtained from the kahal. Visitors who come to offer congratulations on the birth of a son or daughter are forbidden, as well as the parents themselves, to taste refreshments in the shape of cakes, preserved fruits, or sweets of any kind, on pain of the canonical *kherem*. At weddings it is forbidden to serve a large cake with filling made of preserved fruit. "Before and after a wedding each of the families is allowed to give only one feast." "There must not be more than three musicians at a wedding, and they are not allowed to

eat more than three times. To a circumcision may be invited "only relatives to the third degree, the two next-door neighbors on each side of the house and three from across the street, * * * the teacher of the host's children," and a few more persons strictly determined. The invitations are to be sent through the messengers of the beth-din—not otherwise. The feast-giver is entitled to a certain quantity of meat duty-free, which, however, the collectors deliver only on being presented with the list of guests, sanctioned by the kahal and signed by the city-notary. Now, if the kahal had not contrived to secure the active coöperation of the state laws in levying the box-duty, it would not have the means of reminding every Jew, even on such occasions as household festivals, of its dread and resistless power. As things stand, its vengeance can fall on the rebel at any moment. To punish disobedience to its slightest regulations or even a temporary ordinance, it has only to summon the police and denounce the culprit as having infringed the laws concerning *kosher* and box-duty. Who is to rescue the unhappy man from the hands of the authorities, who demand from him the legal fine for that offense? That he never committed it is no safeguard to him, for false accusation, even supported by perjury and recourse to the *goim*, are among the *authorized* means to break rebellion. Two documents—Nos. 148 and 149—contain the exposition of the measures to be taken "in order to preserve the Talmudic court [beth-din] from the disrespect which, in punishment for our sins, has of late made itself felt,—to prevent our foes from sitting as judges over us, which Heaven forbid!—and to bend audacious aspostates and rebels, so that every Jew may be submissive to the Talmudic law and court." The measures contained in No. 149 are much the most terrible, to be used only against hardened rebels, and when the case has been put in the hands of the "secret prosecutor"—a functionary who is elected every month by ballot from among the officers of the beth-din, and who swears the most solemn oath to spare no person in carrying out the instructions of the Talmudic court, and never to reveal that he ever has been invested with the function of "secret prosecutor."* Here are the nine paragraphs (some of them condensed) into which this remarkable document is divided:

"1. The rebel is deprived of the offices which he may have held in the kahal or corporations. 2. He is excluded from the community and any corporation

* "Khoshen-Hamishpat," section 156, paragraph 7.

* This strongly reminds us of the mediæval *vehmgericht*.

to which he may belong. 3. He is excluded from general assemblies and corporation meetings. 4. He is excluded from all functions or honors in the synagogue. * * * 5. He is not to be invited to any festival, public or private. He who invites him falls under the *kherem*. 6. No one is to rent from him his house or his shop, nor to let his own to him. * * * 7. If he is an artisan, it is forbidden to give him work, on pain of the heaviest *kherem*. 8. If a betrothal contract has been entered into with him, the other party is freed from it, without incurring the fine usually imposed in such cases, and reimbursement of expenses. 9. *It is lawful to proclaim in the synagogue that the rebel has eaten tréf food or infringed a fast, etc., to confirm the accusation by false testimony, and to have him punished as if he had done this thing.*"

This document is approved and signed by fourteen members of the kahal and beth-din, and by the chief rabbi of the city of Minsk.

Nor are the Christian courts of justice less efficient tools than the local police in the hands of the Jewish rulers. One of the most common proceedings to punish disobedience or disrespect is to sue the offender in a Christian court for debt, real or imaginary. Thus, when a litigation is to be decided by the beth-din, it is customary, in order to secure the submission of the parties to the suit, to make them both sign blank bills before the case is tried. Then, should the losing party be dissatisfied with the decision and refer the case to the Christian court, which is his right under the state laws, the beth-din fills the blank at its pleasure, and directs the nominal holder to present this perfectly legal document for payment through the local authorities. "This," says Brafmann, "accounts for the great number of litigations always on hand in Christian courts. They are generally nothing more than legal fictions used by the beth-din or kahal to compel the obedience of refractory members of their communities." If offenders return to the path of duty within a certain time, the claim is withdrawn. Sometimes the Russian courts receive genuine complaints, but they are usually powerless for redress, and bitterly are the plaintiffs made to rue their audacity. In 1866, a Hebrew widow complained to the mayor and town-council of Vilna that she had been charged fifteen hundred rubles for the burial of her husband, and compelled not only to pay this sum but to sign a declaration that she had done so voluntarily for charitable purposes, the corporation of undertakers having been directed to refuse burial to the body until she had submitted, which she had done at the expiration of five days. It is further seen, from the progress of the case, that the kahal fined her five hundred rubles more, and compelled the police to recover this sum from her by representing it as an arrear on her share of the contribution for ransoming

poor and insolvent Jews from military service. The impudence of the pretense was patent, yet the local authorities could do nothing, for the kahal, in all that regards the collection and payment of taxes for the Jewish population, is a state institution.

The meaning of the little phrase, so frequently repeated, that it is lawful to the kahal to compel obedience "by any means whatsoever, even through the power of the *goim*," will now be sufficiently clear not to need further illustration, though such might be produced to any extent from Brafmann's book, to which indeed full justice could be done only by translating it.

Brafmann is, we repeat, a Jewish patriot in the fullest and widest sense. He admires his race, he takes pride in belonging to it, and loves his people with a passionate pity and tenderness which makes his voice break and his eyes fill when he speaks of their sufferings and moral degradation under the oppressive system which holds them in iron bands. His dreams are of their regeneration, of their future power and greatness—not as a political nation, but as a highly gifted race, living on equal terms among other races, all artificial barriers being removed, and the field opened without let or hindrance of any kind to the free development of the many noble faculties of mind and soul so characteristic of what Renan calls "the admirable minority of Israel." If, therefore, he incurred by his revelations the utmost wrath of the rulers whom he exposed, and of the ignorantly fanatical mass, to such a degree that his life at one time was not considered safe even in St. Petersburg, where he dwelt after his book appeared; on the other hand, he is comforted and secretly supported by the sympathy of many of the more enlightened Jews who, like him, sigh for release from a bondage worse than foreign captivity. But for such support he could not have obtained possession of the precious pile of papers which were abstracted for him, not without danger, by a friend from the Jewish archive of Minsk.

THE above exposition of a state of things which might be pronounced wildly unreal but for the irrefragable documentary evidence adduced, though far from exhausting the material collected by Brafmann,* will, it is to

* Thus, no mention has been made of the so-called "candle-money," nor of the extraordinary contributions, mostly in the shape of a percentage on capital, personal property and wares, levied by the kahal arbitrarily on special occasions, to avert some danger threatening the entire community. Such an occasion occurred in 1802, when the poet Derjavin, a staunch Russian patriot, was in the ministry, and strove to

be hoped, have clearly established one fact: that, whatever historical causes may underlie the oft-recurring popular outbreaks against the Jews, race animosity, and religious intolerance have never been alone at work, and, in our days, are no longer so at all. The only case of systematic persecution of them from fanatical motives is that of the Spanish Inquisition, though the motives were far from unmixed, even there. At all events, if the fathers of St. Dominic and their secular supporters did not object to enriching themselves with the spoils of the wealthy Jews they burned, we must do them the justice to acknowledge that they burned the poor ones quite as piously and scrupulously. In all other instances "Jewish riots" begin spontaneously; something—sometimes a mere trifle—happens to infuriate the mob, and they begin to kill and plunder. The massacres spread, rage for a few days, then stop, and everything goes the old round again—for a while. Ignorant fanaticism is only an accessory—true, a terrible one—which comes into play with the greater violence the further the occurrence is removed from us, in the "dark ages." But a significant feature is that the notorious usurers are always the first to suffer, and the bills and securities which hold whole provinces in bondage are the first property sought after and destroyed. This was the case even in the more than usually severe outbreak at the beginning of Richard I.'s reign, which ended in the horrible catastrophe of York, and the monkish chronicler who records it in terms of unseemly exultation, amid much revolting fanatical twaddle drops a word which strangely reminds us of the burden of popular complaint which recurred all through the riots of last spring. He calls the Jews "blood-suckers."† Another curious coincidence is that then, in England, as nine hundred years later in Russia, "the rumor was spread that the King had issued orders to massacre the Jews."‡ The facility with which the ignorant masses lend their ears to such absurdities betrays, at all events, a latent though monstrously distorted consciousness of having received at the hands of the race such wrongs and injuries as

claim redress from their natural protector, the governing power. The difference between then and now, apart from the comparatively mild form of the recent paroxysms consequent on the general softening of men's natures, is chiefly this: then, religious feeling was actively mixed up with economical grievances and hideous reprisals, while now it is totally absent. And never could this mediæval specter be dragged forth to the light of our sober, unfanatical age, to account for phenomena of which the real causes must be obvious to every unbiased observer, were it not that by far the greater part of the so-called "liberal press" in Europe is in the hands of Hebrew editors and Hebrew writers—many of them men of great culture and talent, of great and well-merited authority in the world of letters and science, but whom it suits, from mistaken national zeal, to shed a false light on certain events and sides of modern life, to blind the eyes of superficial and docile readers with the dust of those cheap and plausible phrases of which the shallow orators of 1789-93 have left us so ample a store, and which can be as easily shuffled to prove anything or nothing as the cards whose combinations furnished forth the effective and patriotic speeches of Pieborgne, the lawyer-minister in Laboulaye's "Prince Caniche." It is time to drop the sentimental liberal slang, through whose loose, wide meshes the biggest humbug can slip unchallenged. When a question of vital import is presented to us, the thing to do is to drive it into a corner and grapple with it, not muffle it up in commonplaces long ago worn threadbare. The Jewish question, in Eastern Europe and Western Russia, is such a question: let us then, for once, look it square in the face. The Jews are disliked, nay, hated in those parts, not because they believe and pray differently, but because they are a parasitical race who, producing nothing, fasten on the produce of land and labor, and live on it, choking the breath of life out of commerce and industry as sure as the creeper throttles the tree that upholds it. They are despised, not because they are of different blood, because they dress differently, eat peculiar food; not even because, herding together in unutterable filth and squalor, they are a loathsome and really dangerous element—a standing institution for the propagation of all kinds of horrible diseases and contagions; but because their ways are crooked, their manner abject,—because they will not stand up for themselves and manfully resent an insult or oppose vexation, but will take any amount of it if they can thereby turn a penny, will smirk and cringe, and go off with a deadly grudge at heart, which they will vent cruelly, ruthlessly,

carry through a law forbidding the Jews to keep taverns and public-houses in the villages. There was a great panic among them; the kahals raised one million rubles for bribes and presents at head-quarters, ordered public prayers and days of fasting. Derjavin was offered one, even two hundred thousand rubles, to withdraw the project. He told the Emperor (Alexander I.), and did not take the money; but others did, and the Jews won the day. Russian writers have celebrated the event as a triumph of humane and liberal policy, and it has been rather the fashion to abuse Derjavin as a narrow-minded *rétrograde*.

but in an underhand manner, and not always on the offender, but on any or all belonging to the offender's race. It is an essentially oriental feature, this making light of servile forms, so the feeling of pride be secretly treasured and revenge taken at some time and in some way—a feature which our Jews could not have retained so unimpaired had they not always been forcibly kept aloof, by their own rulers, from the ennobling influence of that compound of Grecian refinement and Teutonic manliness which we call modern culture, and which instills more than it teaches that the forms of servitude are as degrading as the fact. The readiness with which they appeal to foreign sympathy and interference, and which in any set of people holding the position of citizens would be looked upon and punished as state treason of the worst kind, is but another phase of their oriental nature—the inability to grasp the first principles of state-life, or perhaps rather their determination not to acknowledge themselves as belonging to any Gentile state. They are not “persecuted.” Only, from time to time, the popular patience—that dike built up of ignorance, apathy, and habitual endurance—breaks; then there is an outpouring of angry waters. True, some things have become impossible. No invading conqueror, for instance, would dream nowadays of farming to the Jews *the churches* of a conquered people, as did the Poles when they held Galicia in the sixteenth century and later, thus authorizing them to tax the people arbitrarily for having divine service performed in their own temples. No government would now lend itself to such iniquity. Still we have just seen that, even without such open support, enough can be achieved to exasperate the most long-suffering people and goad them into momentary frenzy.

THE question naturally arises, What is to be done? It is a momentous one, and might partly be answered by showing what ought *not* to be done—*i. e.*, by a review of the legislative measures, hostile or propitiating, which have been tried in different countries and at various times, and have utterly failed, as well as of the causes why they failed. Brafmann's “Kahal” and his other book, “Hebrew Corporations, Local and Universal,” contain valuable material toward working out the problem; but it is not at the end of an already long paper that this feature of the subject can be considered—a paper, too, of which the special object is only to vindicate the age in which we live from the odious imputation of “intolerance and religious per-

secution,” unthinkingly and indiscriminately brought against it. Yet the impression conveyed would be incomplete, nay, the entire tenor and drift of the paper might be misconstrued, without at least a hint at the solution which is desired and openly advocated by all enlightened Russians as represented by our liberal press. Briefly stated, it reads as follows: The legal emancipation of the Jews, begun years ago by granting them the right of buying and holding land, of entering the universities, and various smaller concessions, must be completed. They must share both the rights and the duties of their Christian and Mohammedan fellow-subjects, without restraints or privileges. As the first step toward such a consummation, the kahal must necessarily be abolished, or at all events shorn of its power—a thing very easily achieved by simply depriving it of the right of levying box-duty on the slaughtering and sale of *kôsher* meat, and forbidding the sale of *trêf* to Christians. This would at once release the Jewish population from an intolerable pressure by delivering them from an irksome duty, and by depriving the town-councils of the means of enforcing their arbitrary separatistical ordinances by recourse to “the power of the *gôim*.” The taxes would then be collected from the Jews directly by Government officials, in the same manner as they are from all other subjects; they would be brought under the census, which they have always been able to elude until now,—and all this would place them in a direct and normal relation to the rulers of the land, without in the least interfering with the full exercise of their religious worship and national customs. Left to themselves and freed from all restraint with regard to their place of residence, the process of assimilation would soon begin, and the number of Jews who discard the Talmud and keep to the simple Mosaic law in its wider and more liberal application would annually increase. But if the Government, at this critical moment, recoils from this radical change, and contents itself with half-measures, denying its Hebrew subjects their full share of civil rights and at the same time upholding the artificial separatism so baleful in its effects, the same state of things will be still further perpetuated,—consequently, the causes being unchanged, the effects will be identical, and the same deplorable scenes will be enacted from time to time,—scenes which every other European country has witnessed, and would see now, had not a wiser legislation made their recurrence impossible.

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

XIII.

THE whole thing was so crazy, as Bartley said, that it made no difference if they kept up the expense a few days longer. He took a hack from the depot, when they arrived in Boston, and drove to the Revere House, instead of going up in the horse-car. He entered his name on the register with a flourish, "Bartley J. Hubbard and Wife, *Boston*," and asked for a room and fire, with laconic gruffness; but the clerk knew him at once for a country person, and when the call-boy followed him into the parlor where Marcia sat in the tremor into which she now fell whenever Bartley was out of her sight, the boy discerned her provinciality at a glance, and made free to say that he guessed they had better let him take their things up to their room, and come up themselves after the porter had got their fire going.

"All right," said Bartley, with hauteur; and he added, for no reason, "Be quick about it."

"Yes, sir," said the boy.

"What time is supper—dinner, I mean?"

"It's ready now, sir."

"Good. Take up the things. Come just as you are, Marcia. Let him take your cap—no, keep it on; a good many of them come down in their bonnets."

Marcia put off her sack and gloves, and hastily repaired the ravages of travel as best she could. She would have liked to go to her room just long enough to brush her hair a little, and the fur cap made her head hot; but she was suddenly afraid of doing something that would seem countrified in Bartley's eyes, and she promptly obeyed: they had come from Portland in a parlor-car and she had been able to make a traveler's toilet before they reached Boston.

She had been at Portland several times with her father; but he stopped at a second-class hotel where he had always "put up" when alone, and she was new to the vastness of hotel mirrors and chandeliers, the glossy paint, the frescoing, the fluted pillars, the tessellated marble pavements upon which she stepped when she left the Brussels carpeting of the

parlors. She clung to Bartley's arm, silently praying that she might not do anything to mortify him, and admiring everything he did without question. He made a halt as they entered the glittering dining-room, and stood frowning till the head-waiter ran respectfully up to them, and ushered them with sweeping bows to a table, which they had to themselves. Bartley ordered their dinner with nonchalant ease, beginning with soup and going to black coffee with dazzling intelligence. While their waiter was gone with their order, he beckoned with one finger to another, and sent him out for a paper, which he unfolded and spread on the table, taking a tooth-pick into his mouth, and running the sheet over with his eyes.

"I just want to see what's going on to-night," he said, without looking at Marcia.

She made a little murmur of acquiescence in her throat, but she could not speak for strangeness. She began to steal little timid glances about, and to notice the people at the other tables. In her heart she did not find the ladies so very well dressed as she had expected the Boston ladies to be; and there was no gentleman there to compare with Bartley, either in style or looks. She let her eyes finally dwell on him, wishing that he would put his paper away and say something, but afraid to ask, lest it should not be quite right: all the other gentlemen were reading papers. She was feeling lonesome and homesick, when he suddenly looked up at her and said,

"How pretty you look, Marsh!"

"Do I?" she asked, with a little grateful throb, while her eyes joyfully suffused themselves.

"Pretty as a pink," he returned. "Gay—isn't it?" he continued, with a wink that took her again into his confidence, from which his study of the newspaper had seemed to exclude her. "I'll tell you what I'm going to do: I'm going to take you to the Museum after dinner, and let you see Boucicault in the 'Colleen Bawn.'"

He swept his paper off the table and unfolded his napkin in his lap, and, leaning back in his chair, began to tell her about the play.

"We can walk: it's only just 'round the corner," he said at the end.

Marcia crept into the shelter of his talk—he sometimes spoke rather loud—and was submissively silent. When they got into their own room,—which had gilt lambrequin tops, and a chandelier of three burners, and a marble mantel, and marble-topped table and wash-stand,—and Bartley turned up the flaring gas, she quite broke down, and cried on his breast, to make sure that she had got him all back again.

"Why, Marcia!" he said. "I know just how you feel. Don't you suppose I understand as well as you do that we're a country couple? But I'm not going to give myself away; and you mustn't, either. There wasn't a woman in that room that could compare with you—*dress* or looks!"

"You were splendid!" she whispered, "and just like the rest; and that made me feel somehow as if I had lost you."

"I know—I saw just how you felt; but I wasn't going to say anything for fear you'd give way right there. Come, there's plenty of time before the play begins. I call this *nice*! Old-fashioned, rather, in the decorations," he said, "but pretty good for its time."

He had pulled up two arm-chairs in front of the glowing grate of anthracite; as he spoke, he cast his eyes about the room, and she followed his glance obediently. He had kept her hand in his, and now he held her slim finger-tips in the fist which he rested on his knee.

"No; I'll tell you what, Marcia, if you want to get on in a city, there's no use being afraid of people. No use being afraid of *anything*, so long as we're good to each other. And you've got to believe in me, right along. Don't you let anything get you on the wrong track. I believe that as long as you have faith in me, I shall deserve it; and when you don't——"

"Oh, Bartley, you know I didn't doubt you! I just got to thinking, and I was a little worked up! I suppose I'm excited."

"I knew it! I knew it!" cried her husband. "Don't you suppose I understand you?"

They talked a long time together, and made each other loving promises of patience. They confessed their faults, and pledged each other that they would try hard to overcome them. They wished to be good; they both felt they had much to retrieve; but they had no concealments, and they knew that was the best way to begin the future, of which they did their best to conceive seriously. Bartley told her his plans about getting some

newspaper work till he could complete his law-studies. He meant to settle down to practice in Boston.

"You have to wait longer for it than you would in a country place; but when you get it, it's worth while." He asked Marcia whether she would look up his friend Halleck if she were in his place; but he did not give her time to decide.

"I guess I won't do it. Not just yet, at any rate. He might suppose that I wanted something of him. I'll call on him when I don't need his help."

Perhaps, if they had not planned to go to the theater they would have staid where they were, for they were tired, and it was very cozy. But when they were once in the street, they were glad they had come out. Bowdoin Square and Court street and Tremont Row were a glitter of gas-lights, and the shops with their placarded bargains dazzled Marcia.

"Is it one of the principal streets?" she asked Bartley.

He gave the laugh of a veteran *habitué* of Boston.

"Tremont Row? No. Wait till I show you Washington street to-morrow. There's the Museum," he said, pointing to the long row of globed lights on the façade of the building. "Here we are in Scollay's Square. There's Hanover street; there's Cornhill; Court crooks down that way; there's Pemberton Square."

His familiarity with these names estranged him to her again; she clung the closer to his arm, and caught her breath nervously as they turned in with the crowd that was climbing the stairs to the box-office of the theater. Bartley left her a moment, while he pushed his way up to the little window and bought the tickets.

"First-rate seats," he said, coming back to her, and taking her hand under his arm again, "and a great piece of luck. They were just returned for sale by the man in front of me, or I should have had to take something 'way up in the gallery. There's a regular jam. These are right in the center of the parquet."

Marcia did not know what the parquet was; she heard its name with the certainty that but for Bartley she should not be equal to it. All her village pride was quelled; she had only enough self-control to act upon Bartley's instructions not to give herself away by any conviction of rusticity. They passed in through the long, colonnaded vestibule, with its paintings, and plaster casts, and rows of birds and animals in glass cases on either side, and she gave scarcely a glance at any of those objects, endeared by association, if not by in-

trinsic beauty, to the Boston play-goer. Gulliver, with the Lilliputians swarming upon him; the painty-necked ostriches and pelicans; the mummied mermaid under a glass bell; the governors' portraits; the stuffed elephant; Washington crossing the Delaware; Cleopatra applying the asp; Sir William Pepperell, at full length, on canvas, and the pagan months and seasons in plaster,—if all these are, indeed, the subjects,—were dim phantasmagoria amid which she and Bartley moved scarcely more real. The usher, in his dress-coat, ran up the aisle to take their checks, and led them down to their seats; half a dozen elegant people stood to let them into their places; the theater was filled with faces. At Portland, where she saw the "Lady of Lyons," with her father, three-quarters of the house was empty.

Bartley only had time to lean over and whisper: "The place is packed with Beacon street swells. It's a regular field night," when the bell tinkled and the curtain rose.

As the play went on, the rich jacqueminot red flamed into her cheeks, and burnt there a steady blaze to the end. The people about her laughed and clapped, and at times they seemed to be crying. But Marcia sat through every part as stoical as a savage, and, except for the flaming color in her cheeks, making no sign of interest or intelligence. Bartley talked of the play all the way home, but she said nothing, and in their own room he asked:

"Didn't you really like it? Were you disappointed? I haven't been able to get a word out of you about it. Didn't you like Boucicault?"

"I didn't know which he was," she answered, with impassioned exaltation. "I didn't care for him. I only thought of that poor girl, and her husband who despised her——"

She stopped. Bartley looked at her a moment, and then caught her to him and fell a-laughing over her, till it seemed as if he never would end.

"And you thought—you thought," he cried, trying to get his breath, "you thought you were Eily, and I was Hardress Cregan! Oh, I see, I see!"

He went on making a mock and a burlesque of her tragical hallucination till she laughed with him at last.

When he put his hand up to turn out the gas, he began his joking afresh:

"The real thing for Hardress to do," he said at last, fumbling for the key, "is to *blow* it out. That's what Hardress usually does when he comes up from the rural districts with Eily on their bridal tour. That finishes off Eily, without troubling Danny Mann. The

only drawback is that it finishes off Hardress, too: they're both found suffocated in the morning."

XIV.

THE next day, after breakfast, while they stood together before the parlor fire, Bartley proposed one plan after another for spending the day. Marcia rejected them all, with perfectly recovered self-composure.

"Then what *shall* we do?" he asked, at last.

"Oh, I don't know," she answered, rather absently. She added, after an interval, smoothing the warm front of her dress, and putting her foot on the fender. "What did those theater-tickets cost?"

"Two dollars," he replied, carelessly. "Why?"

Marcia gasped.

"Two dollars! Oh, Bartley, we couldn't afford it!"

"It seems we did."

"And here—how much are we paying here?"

"That room, with fire," said Bartley, stretching himself, "is seven dollars a day——"

"We mustn't stay another instant!" said Marcia, all a woman's terror of spending money on anything but dress, all a wife's conservative instinct, rising within her. "How much have you got left?"

Bartley took out his pocket-book and counted over the bills in it.

"A hundred and twenty dollars."

"Why, what has become of it all? We had a hundred and sixty!"

"Well, our railroad tickets were nineteen, the sleeping-car was three, the parlor-car was three, the theater was two, the hack was fifty cents, and we'll have to put down the other two and a half to refreshments."

Marcia listened in dismay. At the end, she drew a long breath.

"Well, we must go away from here as soon as possible—that I know. We'll go out and find some boarding-place. That's the first thing."

"Oh, now, Marcia, you're not going to be so severe as that, are you?" pleaded Bartley. "A few dollars, more or less, are not going to keep us out of the poor-house. I just want to stay here three days: that will leave us a clean hundred, and we can start fair."

He was half joking, but she was wholly serious.

"No, Bartley! Not another hour—not another minute! Come!"

She took his arm and bent it up into a

crook, in which she put her hand, and pulled him toward the door.

"Well, after all," he said, "it will be some fun looking up a room."

There was no one else in the parlor; in going to the door they took some waltzing steps together.

While she dressed to go out, he looked up places where rooms were let with or without board, in the newspaper.

"There don't seem to be a great many," he said meditatively, bending over the open sheet. But he cut out half a dozen advertisements with his editorial scissors, and they started upon their search.

They climbed those pleasant old uphill streets that converge to the State-house, and looked into the houses on the quiet Places that stretch from one thoroughfare to another. They had decided that they would be content with two small rooms, one for a chamber and the other for a parlor where they could have a fire. They found exactly what they wanted in the first house at which they applied, one flight up, with sunny windows, looking down the street; but it made Marcia's blood run cold when the landlady said that the price was thirty dollars a week. At another place the rooms were only twenty; the position was quite as good, and the carpet and furniture prettier.

This was still too dear, but it seemed comparatively reasonable till it appeared that this was the price without board.

"I think we should prefer rooms with board, shouldn't we?" asked Bartley, with a sly look at Marcia.

The prices were of all degrees of exorbitance, and they varied for no reason from house to house; one landlady had been accustomed to take more and another less, but never little enough for Marcia, who overruled Bartley again and again when he wished to close with some small abatement of terms. She declared now that they must put up with one room, and they must not care what floor it was on. But the cheapest room with board was fourteen dollars a week, and Marcia had fixed her ideal at ten: even that was too high for them.

"The best way will be to go back to the Revere House, at seven dollars a day," said Bartley. He had lately been leaving the transaction of the business entirely to Marcia, who had rapidly acquired alertness and decision in it.

She could not respond to his joke.

"What is there left?" she asked.

"There isn't anything left," he said.

"We've got to the end."

They stood on the edge of the pavement

and looked up and down the street, and then, by a common impulse, they looked at the house opposite, where a placard in the window advertised "Apartments to Let—to Gentlemen Only."

"It would be of no use asking there," murmured Marcia, with sad abstraction.

"Well, let's go over and try," said her husband. "They can't do more than turn us out-of-doors."

"I know it won't be of any use," Marcia sighed, as people do when they hope to gain something by forbidding themselves hope. But she helplessly followed, and stood at the foot of the door-steps while he ran up and rang.

It was apparently the woman of the house who came to the door and shrewdly scanned them.

"I see you have apartments to let," said Bartley.

"Well, yes," admitted the woman, as if she considered it useless to deny it, "I have."

"I should like to look at them," returned Bartley, with promptness. "Come, Marcia." And, reinforced by her, he invaded the premises before the landlady had time to repel him. "I'll tell you what we want," he continued, turning into the little reception-room at the side of the door, "and if you haven't got it, there's no need to trouble you. We want a fair-sized room, anywhere between the cellar-floor and the roof, with a bed, and a stove, and a table in it, that sha'n't cost us more than ten dollars a week, with board."

"Set down," said the landlady, herself setting the example by sinking into the rocking-chair behind her and beginning to rock while she made a brief study of the intruders. "Want it for yourselves?"

"Yes," said Bartley.

"Well," returned the landlady, "I always have preferred single gentlemen."

"I inferred as much from a remark which you made in your front-window," said Bartley, indicating the placard.

The landlady smiled. They were certainly a very pretty-appearing young couple, and the gentleman was evidently up-and-coming. Mrs. Nash liked Bartley, as most people of her grade did, at once.

"It's always be'n my exper'ence," she explained, with the lazily rhythmical drawl in which most half-bred New-Englanders speak, "that I seemed to get along rather better with gentlemen. They give less trouble—as a general rule," she added, with a glance at Marcia, as if she did not deny that there were exceptions, and Marcia might be a striking one.

Bartley seized his advantage.

"Well, my wife hasn't been married long enough to be unreasonable. I guess you'd get along."

They both laughed, and Marcia, blushing, joined them.

"Well, I thought when you first come up the steps you hadn't been married—well, not a great while," said the landlady.

"No," said Bartley. "It seems a good while to my wife; but we were only married day before yesterday."

"The land!" cried Mrs. Nash.

"Bartley!" whispered Marcia, in soft upbraiding.

"What? Well, say last week, then. We were married last week, and we've come to Boston to seek our fortune."

His wit overjoyed Mrs. Nash.

"You'll find Boston an awful hard place to get along," she said.

"I shouldn't think so, by the price Boston people ask for their rooms," returned Bartley. "If I had rooms to let, I should get along pretty easily."

This again delighted the landlady.

"I guess you aint goin' to get out of spirits, anyway," she said. "Well," she continued, "I have got a room 't I guess would suit you. Unexpectedly vacated." She seemed to recur to the language of an advertisement in these words, which she pronounced as if reading them. "It's pretty high up," she said, with a warning shake of the head.

"Stairs to get to it?" asked Bartley.

"Plenty of stairs."

"Well, when a place is pretty high up, I like to have plenty of stairs to get to it. I guess we'll see it, Marcia." He rose.

"Well, I'll just go up and see if it's *fit* to be seen, first," said the landlady.

"Oh, Bartley!" said Marcia, when she had left them alone, "how *could* you joke so about our just being married!"

"Well, I saw she wanted awfully to ask. And anybody can tell by looking at us, anyway. We can't keep that to ourselves, any more than we can our greenness. Besides, it's money in our pockets; she'll take something off our board for it, you'll see. Now, will you manage the bargaining from this on? I stepped forward because the rooms were for gentlemen only."

"I guess I'd better," said Marcia.

"All right; then I'll take a back seat from this out."

"Oh, I do *hope* it wont be too much!" sighed the young wife. "I'm so *tired*, looking."

"You can come right along up," the landlady called down through the oval spire formed by the ascending hand-rail of the stairs. They found her in a broad, low room,

whose ceiling sloped with the roof, and had the pleasant irregularity of the angles and recessions of two dormer windows. The room was clean and cozy; there was a table, and a stove that could be used open or shut; Marcia squeezed Bartley's arm to signify that it would do perfectly—if only the price would suit.

The landlady stood in the middle of the floor and lectured:

"Now, there! I get five dollars a week for this room; and I gen'ly let it to two gentlemen. It's just been vacated by two gentlemen unexpectedly; and it's hard to get gentlemen at this time the year; and that's the reason I thought of takin' you. As I *say*, I don't much like ladies for inmates, and so I put in the window 'for gentlemen only.' But it's no use bein' too particular; I can't have the room layin' empty on my hands. If it suits you, you can have it for four dollars. It's high up, and there's no use tryin' to deny it. But there aint such another view as them winders commands anywheres. You can see the harbor, and pretty much the whole coast."

"Anything extra for the view?" said Bartley, glancing out.

"No, I throw that in."

"Does the price include gas and fire?" asked Marcia, sharpened as to all details by previous interviews.

"It includes the gas, but it don't include the fire," said the landlady, firmly. "And it's pretty low at that, as you've found out, I guess."

"Yes, it *is* low," said Marcia. "Bartley, I think we'd better take it."

She looked at him timidly, as if she were afraid he might not think it good enough; she did not think it good enough for him, but she felt that they must make their money go as far as possible.

"All *right*!" he said. "Then it's a bargain."

"And how much more will the board be?"

"Well, there," the landlady said, with candor, "I don't know as I can meet your views. I don't ever give board. But there's plenty of houses right on the street here where you can get day-board from four dollars a week up."

"Oh, dear!" sighed Marcia; and that would make it twelve dollars!"

"Why the dear suz, child!" exclaimed the landlady, "you didn't expect to get it for less?"

"We must," said Marcia.

"Then you'll have to go to a mechanics' boardin'-house."

"I suppose we shall," she returned, dejectedly. Bartley whistled.

"Look here," said the landlady, "aint you from Down East, some'eres?"

Marcia started, as if the woman had recognized them.

"Yes," she said.

"Well, now," said Mrs. Nash, "I'm from down Maine way, myself, and I'll tell you what I should do, if I was in your *place*. You don't want much of anything for breakfast or tea; you can boil you an egg on the stove here, and you can make your own tea or coffee; and if I was you, I'd go out for my dinners to an eatin'-house. I heard some my lodgers tellin' how they done. Well, I heard the very gentlemen that occupied this room sayin' how they used to go to an eatin'-house, and one'd order one thing, and another, another, and then they'd halve it between 'em, and make out a first-rate meal for about a quarter apiece. Plenty of places now where they give you a cut o' lamb or rib-beef for a shillin', and they bring you bread and butter and potato with it; an' it's always enough for two. That's what they *said*. I haint never tried it myself; but as long as you haint got anybody but yourselves to care for, there aint any reason why *you* shouldn't."

They looked at each other.

"Well," added the landlady for a final touch, "*say* fire. That stove wont burn a great deal, anyway."

"All right," said Bartley, "we'll take the room—for a month, at least."

Mrs. Nash looked a little embarrassed. If she had made some concession to the liking she had conceived for this pretty young couple, she could not risk everything.

"I always have to get the first week in advance,—where there aint no reference," she suggested.

"Of course," said Bartley, and he took out his pocket-book, which he had a boyish satisfaction in letting her see was well filled. "Now, Marcia," he continued, looking at his watch, "I'll just run over to the hotel, and give up our room before they get us in for dinner."

Marcia accepted Mrs. Nash's invitation to come and sit with her till the chill was off the room; and she borrowed a pen and paper of her to write home. The note she sent was brief: she was not going to seem to ask anything of her father. But she was going to do what was right; she told him where she was, and she sent her love to her mother. She would not speak of her things; he might send them or not, as he chose; but she knew he would. This was the spirit of her letter, and her training had not taught her to soften and sweeten her phrase; but no doubt the old man, who was like her, would understand that she felt no compunction for what she had done, and that she loved him though she still defied him.

Bartley did not ask her what her letter was when she demanded a stamp of him on his return; but he knew. He inquired of Mrs. Nash where these cheap eating-houses were to be found, and he posted it in the first letter-box they came to, merely saying:

"I hope you haven't been asking any favors, Marsh?"

"No, indeed."

"Because I couldn't stand that."

Marcia had never dined in a restaurant, and she was somewhat bewildered by the one into which they turned. There was a great show of roast, and steak, and fish, and game, and squash, and cranberry pie in the window, and at the door a tack was driven through a mass of bills of fare, two of which Bartley plucked off as they entered, with a knowing air, and then threw on the floor when he found the same thing on the table. The table had a marble top, and a silver-plated castor in the center. The plates were laid with a coarse red doily in a cocked-hat on each, and a thinly plated knife and fork crossed beneath it; the plates were thick and heavy; the handle as well as the blade of the knife was metal and silvered. Besides the castor, there was a bottle of Leicestershire sauce on the table, and salt in what Marcia thought a pepper-box; the marble was of an unctuous translucence in places, and showed the course of the cleansing napkin on its smeared surface. The place was hot, and full of confused smells of cooking; all the tables were crowded, so that they found places with difficulty, and pale, plain girls, of the provincial and Irish-American type, in fashionable bangs and pull-backs, went about taking the orders, which they wailed out toward a semicircular hole opening upon a counter at the farther end of the room; there they received the dishes ordered, and hurried with them to the customers, before whom they laid them with a noisy clacking of the heavy crockery. A great many of the people seemed to be taking hulled-corn and milk; baked beans formed another favorite dish, and squash-pie was in large request. Marcia was not critical; roast turkey for Bartley and stewed chicken for herself, with cranberry-pie for both, seemed to her a very good and sufficient dinner, and better than they ought to have had. She asked Bartley if this were anything like Parker's; he had always talked to her about Parker's.

"Well, Marcia," he said, folding up his doily, which does not betray use like the indiscreet white napkin, "I'll just take you round and show you the *outside* of Parker's, and some day we'll go there and get dinner."

He not only showed her Parker's, but the City Hall; they walked down School street,

and through Washington as far as Boylston: and Bartley pointed out the Old South, and brought Marcia home by the Common, where they stopped to see the boys coasting under the care of the police, between two long lines of spectators.

"The State House," said Bartley, with easy command of the facts, and pointing in the several directions; "Beacon street; Public Garden; Back Bay."

She came home to Mrs. Nash joyfully admiring the city, but admiring still more her husband's masterly knowledge of it.

Mrs. Nash was one of those people who partake intimately of the importance of the place in which they live; to whom it is sufficient splendor and prosperity to be a Bostonian, or New-Yorker, or Chicagoan, and who experience a delicious self-flattery in the celebration of the municipal grandeur. In his degree, Bartley was of this sort, and he exchanged compliments of Boston with Mrs. Nash, till they grew into warm favor with each other.

After a while, he said he must go upstairs and do some writing; and then he casually dropped the fact that he was an editor, and that he had come to Boston to get an engagement on a newspaper; he implied that he had come to take one.

"Well," said Mrs. Nash, smoothing the back of the cat, which she had in her lap. "I guess there aint anything like our Boston papers. And they say this new one—the 'Daily Events'—is goin' to take the lead. You acquainted any with our Boston editors?"

Bartley hemmed.

"Well—I know the proprietor of the 'Events.'"

"Ah, yes: Mr. Witherby. Well, they say he's got the money. I hear my lodgers talkin' about that paper consid'able. I haven't ever seen it."

Bartley now went upstairs; he had an idea in his head. Marcia remained with Mrs. Nash a few moments.

"He's been in Boston before," she said, with proud satisfaction; "he visited here when he was in college."

"Law, is he college-bred?" cried Mrs. Nash. "Well, I thought he looked 'most too wide-awake for that. He aint a bit offish. He seems *reel* practical. What you hurryin' off so for?" she asked, as Marcia rose, and stood poised on the threshold, in act to follow her husband. "Why don't you set here with me, while he's at his writin'? You'll just keep talkin' to him and takin' his mind off, the whole while. You stay here!" she commanded hospitably. "You'll just be in the way, up there."

This was a novel conception to Marcia, but its good sense struck her.

"Well, I will," she said. "I'll run up a minute to leave my things and then I'll come back."

She found Bartley dragging the table, on which he had already laid out his writing-materials, into a good light, and she threw her arms round his neck, as if they had been a great while parted.

"Come up to kiss me good luck?" he asked, finding her lips.

"Yes, and to tell you how splendid you are, going right to work this way," she answered fondly.

"Oh, I don't believe in losing time; and I've got to strike while the iron's hot, if I'm going to write out that logging-camp business. I'll take it over to that 'Events' man, and hit him with it, while it's fresh in his mind."

"Yes," said Marcia, "are you going to write that out?"

"Why, I told you I was. Any objections?"

He did not pay much attention to her, and he asked his question jokingly, as he went on making his preparations.

"It's hard for me to realize that people can care for such things. I thought perhaps you'd begin with something else," she suggested, hanging up her sack and hat in the closet.

"No, that's the very thing to begin with," he answered, carelessly. "What are you going to do? Want that book to read that I bought on the cars?"

"No, I'm going down to sit with Mrs. Nash, while you're writing."

"Well, that's a good idea."

"You can call me when you've done."

"Done!" cried Bartley. "I sha'n't be done till this time to-morrow. I'm going to make a lot about it."

"Oh!" said his wife. "Well, I suppose the more there is the more you will get for it. Shall you put in about those people coming to see the camp?"

"Yes, I think I can work that in so that old Witherby will like it. Something about a distinguished Boston newspaper proprietor and his refined and elegant ladies, as a sort of contrast to the rude life of the loggers."

"I thought you didn't admire them a great deal."

"Well, I didn't much. But I can work them up."

Marcia was quite ready to go; Bartley had seated himself at his table, but she still hovered about.

"And are you—shail you put that Montreal woman in?"

"Yes, get it all in. She'll work up first rate."

Marcia was silent. Then she said :

"I shouldn't think you'd put her in if she was so silly and disagreeable."

Bartley turned around, and saw the look on her face that he could not mistake. He rose and took her by the chin.

"Look here, Marsh!" he said, "didn't you promise me you'd stop that?"

"Yes," she murmured, while the color flamed into her cheeks.

"And will you?"

"I *did* try —"

He looked sharply into her eyes.

"Confound the Montreal woman! I wont put in a word about her. There!"

He kissed Marcia, and held her in his arms and soothed her as if she had been a jealous child.

"Oh, Bartley! Oh, Bartley!" she cried. "I love you so!"

"I think it's a remark you made before," he said, and with a final kiss and laugh, he pushed her out of the door; and she ran down stairs to Mrs. Nash again.

"Your husband ever write poetry, any?" inquired the landlady.

"No," returned Marcia; "he used to, in college. But he says it don't pay."

"One my lodgers—well, she was a lady; you can't seem to get gentlemen oftentimes in the summer season, for love or money, and I was puttin' up with her,—breakin' joints,—as you may say, for the time bein'—*she* wrote poetry; 'n' I guess she found it pretty poor pickin'. Used to write for the weekly papers, she said, 'n' the child'n's magazines. Well, she couldn't get more'n a doll' or two, 'n' I do know but what less, for a piece as long as that." Mrs. Nash held her hands about a foot apart. "Used to show 'em to me, and tell me about 'em. I declare I used to pity her. I used tell her I ruther break stone for my livin'."

Marcia sat talking more than an hour to Mrs. Nash, informing herself upon the history of Mrs. Nash's past and present lodgers, and about the ways of the city, and the prices of provisions and dress-goods. The dearth of everything alarmed and even shocked her; but she came back to her faith in Bartley's ability to meet and overcome all difficulties. She grew drowsy in the close air which Mrs. Nash loved, after all her fatigues and excitements, and she said she guessed she would go up and see how Bartley was getting on. But when she stole into the room and saw him busily writing, she said, "Now, I wont speak a word, Bartley," and coiled herself down under a shawl on the bed, near enough to put her hand on his shoulder if she wished, and fell asleep.

xv.

It took Bartley two days to write out his account of the logging-camp. He worked it up to the best of his ability, giving all the facts that he had got out of Kinney, and relieving these with what he considered picturesque touches. He had the newspaper instinct, and he divined that his readers would not care for his picturesqueness without his facts. He therefore subordinated this, and he tried to give his description of the loggers a politico-economical interest, dwelling upon the variety of nationalities engaged in the industry, the changes it had undergone in what he called its *personnel*, its present character and its future development in relation to what he styled, in a line of alliterative small capitals :

COLUMBIA'S MORIBUND SHIP-BUILDING.

He interspersed his text plentifully with those exclamatory headings intended to catch the eye with startling fragments of narration and statement, such as—

THE PINE-TREE STATE'S STORIED STAPLE
MORE THAN A MILLION OF MONEY
UNBROKEN WILDERNESS
WILD CATS, LYNXES, AND BEARS
BITTEN OFF
BOTH LEGS FROZEN TO THE KNEES
CANADIAN SONGS
JOY UNCONFINED

THE LAMP-LIGHT ON THEIR SWARTHY FACES

Then he spent a final forenoon in polishing his article up. But after dinner he took leave of Marcia with more trepidation than he was willing to show, or knew how to conceal. Her devout faith in his success seemed to unnerve him, and he begged her at last not to believe in it so much.

He seized in both hands what courage he had left, and found himself, after the usual reluctance of the people in the business-office, face to face with Mr. Witherby in his private room. Mr. Witherby had lately dismissed his managing editor for his defiance of the true interests of the paper as represented by the counting-room, and was managing the "Events" himself. He sat before a table strewn with manuscripts and newspapers, and as he looked up, Bartley saw that he did not recognize him.

"How do you do, Mr. Witherby? I had the pleasure of meeting you the other day, in Maine—at Mr. Willett's logging-camp. Hubbard is my name; remember me as editor of the Equity 'Free Press.'"

"Oh, yes," said Mr. Witherby, rising and

standing at his desk, as a sort of compromise between asking his visitor to sit down and telling him to go away. He shook hands in a loose way, and added: "I presume you would like to exchange. But the fact is, our list is so large already, that we can't extend it, just now; we can't—"

Bartley smiled.

"I don't want any exchange, Mr. Witherby. I'm out of the 'Free Press.'"

"Oh!" said the city journalist, with relief. He added, in a leading tone: "Then——"

"I've come to offer you an article—an account of lumbering in our State. It's a little sketch that I've prepared from what I saw in Mr. Willett's camp, and some facts and statistics I've picked up. I thought it might make an attractive feature of your Sunday edition."

"'The Events,'" said Mr. Witherby, solemnly, "does not publish a Sunday edition!"

"Of course not," answered Bartley, inwardly cursing his blunder, "I mean your Saturday evening supplement." He handed him his manuscript.

Mr. Witherby looked at it, with the worry of a dull man who has assumed unintelligible duties. He had let the other papers "get ahead of him" on several important enterprises lately, and he would have been glad to retrieve himself; but he could not be sure that this was an enterprise. He began by saying that their last Saturday supplement was just out, and the next was full; and he ended by declaring, with stupid pomp, that the 'Events' preferred to send its own reporters to write up those matters. Then he hemmed, and looked at Bartley, and he would really be glad to have him argue him out of this position; but Bartley could not divine what was in his mind. The cold fit which sooner or later comes to every form of authorship, seized him. He said awkwardly he was very sorry, and putting his manuscript back in his pocket, he went out, feeling curiously light-headed as if his rebuff had been a stunning blow. The affair was so quickly over that he might well have believed it had not happened. But he was sickeningly disappointed; more than he had allowed himself to realize he had counted upon the sale of his article to the "Events"; his hope had been founded upon actual knowledge of the proprietor's intention, and although he had rebuked Marcia's overweening confidence, he had expected that Witherby would jump at it. But Witherby had not even looked at it.

Bartley walked a long time in the cold winter sunshine. He would have liked to go back to his lodging, and hide his face in Marcia's hands, and let her pity him, but he

could not bear the thought of her disappointment, and he kept walking. At last he regained courage enough to go to the editor of the paper for which he used to correspond in the summer, and which had always printed his letters. This editor was busy, too, but he apparently felt some obligations to civility with Bartley, and though he kept glancing over his exchanges as they talked, he now and then glanced at Bartley also. He said that he should be glad to print the sketch, but that they never paid for outside material, and he advised Bartley to go with it to the "Events" or to the "Daily Chronicle-Abstract"; the "Abstract" and the "Brief Chronicle" had lately consolidated, and they were showing a good deal of enterprise. Bartley said nothing to betray that he had already been at the "Events" office, and upon this friendly editor's invitation to drop in again, sometime, he went away considerably re-inspired.

"If you should happen to go to the 'Chronicle-Abstract' folks," the editor called after him, "you can tell them I suggested your coming."

The managing editor of the "Chronicle-Abstract" was reading a manuscript, and he did not desist from his work on Bartley's appearance, which he gave no sign of secretly welcoming. But he had a whimsical, shrewd, kind face, and Bartley felt that he should get on with him, though he did not rise, and though he let Bartley stand.

"Yes," he said. "Lumbering, hey? Well, there's some interest in that, just now, on account of this talk about the decay of our ship-building interests. Anything on that point?"

"That's the very point I touch on first," said Bartley.

The editor stopped turning over his manuscript.

"Let's see," he said, holding out his hand for Bartley's article. He looked at the first head-line, "What I Know about Logging," and smiled. "Old, but good." Then he glanced at the other headings, and ran his eye down the long strips on which Bartley had written; nibbled at the text here and there a little; returned to the first paragraph, and read that through; looked back at something else, and then read the close.

"I guess you can leave it," he said, laying the manuscript on the table.

"No, I guess not," said Bartley, with equal coolness, gathering it up.

The editor looked fairly at him for the first time, and smiled. Evidently he liked this.

"What's the reason? Any particular hurry?"

"I happen to know that the 'Events' is going to send a man down east to write up

this very subject. And I don't propose to leave this article here till they steal my thunder, and then have it thrown back on my hands not worth the paper it's written on."

The editor tilted himself back in his chair and braced his knees against his table.

"Well, I guess you're right," he said. "What do you want for it?"

This was a terrible question. Bartley knew nothing about the prices that city papers paid; he feared to ask too much, but he also feared to cheapen his wares by asking too little.

"Twenty-five dollars," he said, huskily.

"Let's look at it," said the editor, reaching out his hand for the manuscript again. "Sit down."

He pushed a chair toward Bartley with his foot, having first swept a pile of newspapers from it to the floor. He now read the article more fully, and then looked up at Bartley, who sat still, trying to hide his anxiety.

"You're not quite a new hand at the bel-lows, are you?"

"I've edited a country paper."

"Yes? Where?"

"Down in Maine."

The editor bent forward and took out a long, narrow blank-book. "I guess we shall want your article. What name?"

"Bartley J. Hubbard." It sounded in his ears like some other name.

"Going to be in Boston some time?"

"All the time," said Bartley, struggling to appear nonchalant. The revulsion from the despair into which he had fallen after his interview with Witherby was still very great. The order on the counting-room which the editor had given him, shook in his hand. He saw his way before him clearly now; he wished to propose some other things that he would like to write; but he was saved from this folly for the time by the editor's saying, in a tone of dismissal:

"Better come in to-morrow and see a proof. We shall put you into the Wednesday supplement."

"Thanks," said Bartley. "Good-day."

The editor did not hear him, or did not think it necessary to respond from behind the newspaper which he had lifted up between them, and Bartley went out. He did not stop to cash his order; he made boyish haste to show it to Marcia as something more authentic than the money itself, and more sacred. As he hurried homeward, he figured Marcia's ecstasy in his thought. He saw himself flying up the stairs to their attic three steps at a bound, and bursting into the room, where she sat, eager and anxious, and flinging the order into her lap; and then, when she had read it with rapture at the sum, and

pride in the smartness with which he had managed the whole affair, he saw himself catching her up and dancing about the floor with her. He thought how fond of her he was, and he wondered that he could ever have been cold or lukewarm.

She was standing at the window of Mrs. Nash's little reception-room when he reached the house. It was not to be as he had planned, but he flung her a kiss, glad of the impatience which would not let her wait till he could find her in their own room, and he had the precious order in his hand to dazzle her eyes as soon as he should enter. But, as he sprang into the hall, his foot struck against a trunk, and some boxes.

"Hello!" he cried. "Your things have come!"

Marcia lingered within the door of the room; she seemed afraid to come out.

"Yes," she said, faintly; "father brought them. He has just been here."

He seemed there still, and the vision unnerved her as if Bartley and he had been confronted there in reality. Her husband had left her hardly a quarter of an hour, when a hack drove up to the door and her father dismounted. She let him in herself, before he could ring, and waited tremulously for what he should do or say. But he merely took her hand, and stooping over, gave her the chary kiss with which he used to greet her at home when he returned from an absence.

She flung her arms around his neck.

"Oh, father!"

"Well, well! There, there!" he said, and then he went into the reception-room with her; and there was nothing in his manner to betray that anything unusual had happened since they last met. He kept his hat on, as his fashion was, and he kept on his overcoat below which the skirts of his dress-coat hung an inch or two; he looked old, and weary, and shabby.

"I can't leave Bartley, father," she began, hysterically.

"I haven't come to separate you from your husband, Marcia. What made you think so? It's your place to stay with him."

"He's out, now," she answered, in an incoherent hopefulness. "He's just gone. Will you wait and see him, father?"

"No, I guess I can't wait," said the old man. "It wouldn't do any good for us to meet now."

"Do you think he coaxed me away? He didn't. He took pity on me—he forgave me. And I didn't mean to deceive you when I left home, father. But I couldn't help trying to see Bartley again."

"I believe you, Marcia. I understand. The thing had to be. Let me see your marriage certificate."

She ran up to her room and fetched it. Her father read it carefully.

"Yes, that is all right," he said, and returned it to her. He added, after an absent pause: "I have brought your things, Marcia. Your mother packed all she could think of."

"How is mother?" asked Marcia, as if this had first reminded her of her mother.

"She is usually well," replied her father.

"Wont you—wont you come up and see our room, father?" Marcia asked, after the interval following this feint of interest in her mother.

"No," said the old man, rising restlessly from his chair, and buttoning at his coat, which was already buttoned. "I guess I sha'n't have time. I guess I must be going."

Marcia put herself between him and the door.

"Wont you let me tell you about it, father?"

"About what?"

"How—I came to go off with Bartley. I want you should know!"

"I guess I know all I want to know about it, Marcia. I accept the facts. I told you how I felt. What you've done hasn't changed me toward you. I understand you better than you understand yourself; and I can't say that I'm surprised. Now I want you should make the best of it."

"You don't forgive Bartley!" she cried passionately. "Then I don't want you should forgive me!"

"Where did you pick up this nonsense about forgiving?" said her father, knitting his shaggy brows. "A man does this thing or that, and the consequence follows. I couldn't forgive Bartley so that he could escape any consequence of what he's done; and you're not afraid I shall hurt him?"

"Stay and see him!" she pleaded. "He is so kind to me! He works night and day, and he has just gone out to sell something he has written for the papers."

"I never said he was lazy," returned her father. "Do you want any money, Marcia?"

"No, we have plenty. And Bartley is earning it all the time. I *wish* you would stay and see him!"

"No, I'm glad he didn't happen to be in," said the Squire. "I sha'n't wait for him to come back. It wouldn't do any good, just yet, Marcia; it would only do harm. Bartley and I haven't had time to change our minds about each other yet. But I'll say a good word for him to you. You're his wife, and it's your part to help him, not to hinder him. You can make him worse by being a fool; but you needn't be a fool. Don't worry him

about other women; don't be jealous. He's your husband, now: and the worst thing you can do is to doubt him."

"I wont, father, I wont, indeed! I will be good, and I will try to be sensible. Oh, I *wish* Bartley could know how you feel!"

"Don't tell him from *me*," said her father. "And don't keep making promises and breaking them. I'll help the man in with your things."

He went out, and came in again with one end of a trunk, as if he had been giving the man a hand with it into the house at home, and she suffered him as passively as she had suffered him to do her such services all her life. Then he took her hand laxly in his, and stooped down for another chary kiss.

"Good-bye, Marcia."

"Why, father! Are you going to *leave* me?" she faltered.

He smiled in melancholy irony at the bewilderment, the childish forgetfulness of the circumstances, which her words expressed.

"Oh, no! I'm going to take you with me."

His sarcasm restored her to a sense of what she had said, and she ruefully laughed at herself through her tears.

"What am I talking about? Give my love to mother! When will you come again?" she asked, clinging about him almost in the old playful way.

"When you want me," said the Squire, freeing himself.

"I'll write!" she cried after him, as he went down the steps; and if there had been, at any moment, a consciousness of her cruelty to him in her heart, she lost it when he drove away in her anxious waiting for Bartley's return. It seemed to her that, though her father had refused to see him, his visit was of happy augury for future kindness between them, and she was proudly eager to tell Bartley what good advice her father had given her. But the sight of her husband suddenly turned these thoughts to fear. She trembled, and all that she could say was:

"I know father will be all right, Bartley."

"How?" he retorted, savagely. "By the way he abused me to you? Where is he?"

"He's gone—gone back."

"I don't care where he's gone, so he's gone. Did he come to take you home with him? Why didn't you go?—Oh, Marcia!"

The brutal words had hardly escaped him when he ran to her as if he would arrest them before their sense should pierce her heart.

She thrust him back with a stiffly extended arm. "Keep away! Don't touch me!" She walked by him up the stairs without looking around at him, and he heard her close their door and lock it.

NIÑITA.

NIÑITA had lived her whole life long—that is to say, a trifle less than seventeen years—in the little town of Santa Cruz. Not the old Santa Cruz, the one back on the coast, but the new one—the Villa Nueva de Santa Cruz de la Cañada, as they called it, those lank Spaniards who built it in compliance with the orders of the pious King Philip, up on the head-waters of the Rio Grande del Norte, a trifle less than three hundred years ago. And the town to-day is very much what it was when its founders, having, as they believed, sufficiently fulfilled the king's command, stopped building. Twenty or thirty adobe houses, low, and mellow-brown as the sun strikes down upon them, cluster around three sides of the *plaza*. On the fourth side stands the old adobe church of Our Lady of Carmen, grown to stately proportions in modern times—that is to say, within the past two hundred years—but most revered because of its old chapel, that was builded first of all, when the good Franciscans came out into the wilderness to save heathen souls. And in this chapel is the gracious image of Our Lady that the great Queen Isabel, almost a century before the new Santa Cruz was thought of, had caused to be made and sent over seas for the edification of those converted to the true faith in her realm of New Spain. Niñita greatly loved that sweet image, and, on occasion, she made to it her most especial prayers.

But Niñita, while a good girl who went to the sacrament regularly, and who regularly first cleared her little conscience of the various small sins which accumulated upon it from month to month, had not often been moved to address to Our Lady any very earnest prayers. Her life was still too young, too fresh, too joyous in its sweet innocence to make any very earnest praying on her part necessary. Three times, in all, she had come to Our Lady with petitions which came strongly and warmly from her heart: once when little Carlos was born and her mother lay very, very ill—so ill that the *padre* came with the holy oil, and the nurse opened the window in the thick adobe wall, that the freed spirit might find its way out easily and so swiftly get to heaven; once when the *burro* fell down and crushed her poor father with the load of wood; and once when the small-pox was destroying right and left over in the near-by *pueblo* of San Juan. This

last prayer was that Santa Cruz might be spared—and she was quite conscious, down in the very depths of her heart, that the real burden of her prayer was that her own pretty face might escape the pestilence. It horrified her to think that she might have to go through life seamed and scarred like old Dolores. And all her prayers had been granted. By a miracle, as the *padre* said, her mother did not die, but got well. The American doctor said that her life was saved because the window was opened and some fresh air got into the room—the first that had been there for years. Niñita, who shared the contempt of her race for fresh air, believed the *padre*. Her father, who was a wiry little man, got well, too, though the poor *burro* died, having broken his back. And, as a dead *burro* is a thing almost unknown, the people came from miles around to look at his little fuzzy corpse, and stroked, almost tenderly, his long ears, out of which the wag had gone forever. Nor did the small-pox come to Santa Cruz. Now who can wonder, her prayers having been so fully answered, that Niñita loved the gentle face and figure of Our Lady of Carmén, and knelt before her reverently?

There was, indeed, about Santa Cruz a perfect placidity very well calculated to produce a quiet, loving faith such as dwelt serenely in Niñita's little breast. Since that dreadful day in January, three and thirty years before, when the battle was fought out on the *mesa*, and the victorious *Americanos* came into the town and wrecked the *padre's* house, and despoiled the church of its treasures,—a sad day's work still silently testified to by the broken walls and bare sacristy,—since that dreadful day there had not been a single event of any sort to stir the town from its perfect quietude. Niñita's father had been in that fight, and still bore upon his right arm the brave scar where the American saber had cut in to the bone. In his shoulder he still carried the American bullet that abruptly ended his fighting. But all this happened long before Niñita's day. She knew of it only as a dreadful story that was told to her when she was a little child—when she really was the baby-girl of the household, "*la niñita*"—sitting close by her father's side out on the stone pavement before the *puerta* in the cool evenings, while the wind blew fresh through the broad valley and the sun went

down beyond the mountains in a golden blaze.

During all her life there had been in Santa Cruz only peace and happiness. Her father, somewhat fitfully, to be sure, had tilled his little plot of ground, lying close upon the margin of the Rio Grande, with his two little steers and his little wooden plow; and Niñita herself had helped in this work, padding about barefooted in the mud, and with a clumsy hoe turning the water from the *acequia* from channel to channel, until the whole field was freshened and gladdened by its grateful presence. Then, when her day's work in the fields was ended, she would wash her feet in the stream and trot home to help in making supper ready—not a very serious performance, for the supper was *atole* and goat's-milk almost the year round. After supper she would bring the water from the spring, placing the great *tinaja* close by the open chimney, where, through the chill night, the water would grow deliciously cool in the draft. As she grew older it was noticed that of all the village maidens Niñita bore her water-jar upon her head most gracefully, and was the lightest, lithest, liveliest, and prettiest. And she was such a sweet, helpful little body, so ready with a kind word and a kind act, that even her girl friends forgave her her good-looks and loved her. Surely there was every reason why she should be happy; and she was happy—as happy as the day was long: and, somehow, the days are very long down in that pleasant old New Spain.

But now, at last, a trouble had overtaken Niñita, and for the fourth time in her life she had stolen into the chapel of Our Lady of Carmen to pray. Vespers were over, and through all the great church there was a duskiess. Into the little chapel a gleam of light came through the western window, and played upon Our Lady's golden crown—not the crown of real gold that was sent by Queen Isabel (that had gone northward long ago in the saddle-bag of an *Americano*), but the gilded crown that had been made of late in Paris, and that Our Lady—failing to get anything better—wore with gracious serenity. The light played, too, upon Our Lady's face—a gentle, loving face, that Niñita felt was looking down upon her, full of sympathy. And so, coming as near as her respect for the holy image would permit her, though not so near as her heart prompted, she dropped down upon her knees in the dusk and prayed. She knelt there upon the clay floor for a long while,—so long that the dusk passed into gloom, and the gloom into dark,—but, still a faint ray of light stole in from the

west, and through the darkness the saintly face looked kindly down upon her, and a dim glory seemed to shine from the golden crown. At last she rose. There were tears in her eyes, but her heart was lighter. She stole out softly from the chapel, through the dark church, and into the starlight. She did not see the *padre*, nor did he speak to her as she passed him in the cool darkness. He was a wise and good man, and he knew that sometimes hearts grow too tender to be touched by any hand but God's own.

But this time Niñita's prayers were not for her people. At her home, in the adobe house, over on the other side of the *plaza*, all was well. As she came from the church she found her father smoking his *cigarrito* with unruffled happiness—sitting the while, like a patriarch of old, before his gate in the evening. Within the house her mother was going through the mysterious process that Mexican women probably believe to be dish-washing. On the clay floor her little brother was contending amicably with the big dog for a bone. There was nothing wrong here; it was a household permeated by contentment and possessed by peace. No, Niñita's sorrow was not for her people. For the first time in her life, she was sorrowful for herself. Her prayer was for her own right guidance—the prayer that the saints have had put up to them so many times in the long ages since the world began: that a maiden's love may be led and guided in the right way.

A year before, Niñita would have laughed had any one told her that this world-old prayer would so soon be hers. She would have laughed, and would have shyly pointed to tall Manuel, who never was far from her side in those happy days. That she should marry Manuel had been decided upon by old José and old Manuel while yet the two were children, making little adobes and building toy-houses together out under the big cotton-wood tree, by the *acequia*. It was a marriage that in every way would be desirable. Old Manuel and old José were the fastest of friends. They had fought together, and had been wounded together, and had suffered loss of property together when the hated *Americanos* invaded the land: and what binds men more strongly together than brotherhood in arms and community in wrongs? And then for years they had been wrangling good-naturedly over the right to the water that flowed across a field of José's before it reached Manuel's land. For their old friendship's sake they were eager to have the marriage take place; and for the sake of settling the one dispute that ever had come to jar upon their friendship, it was agreed that

this field over which the water came should be Niñita's portion. There was great satisfaction between the two old fellows when this excellent plan was thought of and decided upon. In their joy they drank more of the Albuquerque wine than was good for them; and so were roundly rated by their wives.

Nor was their manifest destiny at all objected to by Niñita and Manuel, as they grew up out of childhood and came to know about it. Manuel would have been hard to please indeed had he not been pleased with Niñita, the roundest, daintiest little body in all the valley between Antonito and Santa Fe. And Niñita had equal reason to be satisfied with Manuel. He was a gallant young fellow, with crisp black hair, black eyes that were bold yet tender, a brave figure, and the natural grace that is the heritage of the children of the South. He was, too, as good-hearted as he was handsome. Everybody spoke well of him; and what is more surprising, the praise that he got was deserved. It seemed a match made in Heaven; Niñita thought so, certainly, sometimes, when her brown eyes were turned up to his, and each saw plainly the other's love.

And yet now Niñita had prayed from the depths of her soul that the sweet Lady of Carmen would guide aright the love that was in her heart. And in thus praying she had admitted to Our Lady, while yet denying it to herself, that the love which for so long had flowed on smoothly in the same pleasant channel had begun to stray from its right course,—that within her heart was going on a fight between an old love and a new.

This fight was something more than an ordinary heart-battle: it was a veritable war of races. Manuel's rival—of whose existence, as yet, Manuel had but a faint, dreamy suspicion—was not of his hybrid race, that strange mixture of Spanish and Indian blood that has come to be known as Mexican. John Grant was pure Saxon: tall, large-limbed, with merry blue eyes that yet had a world of tenderness in them, and with blonde hair and beard; and for a man who had run a level for a thousand miles or so across the plains, and who had been making surveys for a year or more under the blazing sun of New Mexico, he was wonderfully fair. To Niñita, when he first cantered across the *plaza*, in the early morning sunlight, and pulled up short at her father's gate, this blonde young fellow, in blue flannel shirt and corduroy trowsers tucked into his boots, appeared as a god. Down in the depths of her heart, among the drops of her Indian blood,

she had, if not exactly a belief, at least a touch of superstitious faith, in the coming again of the fair Montezuma; and she knew that when the god returned it would be with the first rays of the rising sun. But this faint remnant of a nearly shattered creed had no real hold upon her, and in a moment she laughed a little to herself, and then, more seriously, exorcised the evil spirit that had put such thoughts into her mind by making upon her breast the sign of the cross.

Very charming she looked, to be sure, standing there in the shadow of the gate-way, with the court-yard behind her all lit up by the light of the rising sun. Grant, looking at her from under the broad brim of his felt hat, thought that she was the most beautiful creature he had ever seen; and this somewhat hastily formed opinion was not far from the truth.

In shaky but intelligible Spanish he asked for permission to see her father, and when old José came out from the court-yard he set about explaining his business. The railroad, coming down from the North, was to traverse that very field over which José and Manuel had quarreled so pleasantly in the years gone by,—the field that was to be Niñita's marriage portion,—and Grant had come, he said, to pay for the right of way. A great time he had making clear to José the meaning of that same phrase, "right of way," for it involved the meaning also of railroads—monstrosities of which only a hazy conception resided in José's mind. But when, at last, the old man fairly got the bearings of the case, his anger got the better of his Mexican politeness. A railroad cross his land! Never! He had fought the invaders once, and he was not too old to fight them again. He would die before he would see the fields laid waste which he had tilled his life long, and which his father and grandfather and all his line before him had tilled for two centuries. He did not care for money; God had given him all that was needful to make life happy, and money was of no use. He had had enough of *Americanos* in the past,—his hand touched the place where the Texan ball still lay in his shoulder,—and this particular *Americano*, he said abruptly in conclusion, was at liberty to go at once to the devil. And saying this, old José pulled Niñita within the gate, and then slammed it in John Grant's face.

Grant, who was not at all prepared for such an outburst, but was in the habit of taking things coolly, slowly gathered up the reins from his horse's neck and went away, whistling meditatively. But he was thinking less of what José had said than of what he had seen. For many a long day he car-

ried in his mind the picture that he had come upon so suddenly as he cantered across the plaza—Niñita standing in the shadow, with the old court-yard bright in the morning sunlight beyond.

Now, of course, a railroad that is to unite two nations cannot be stopped by a single cranky old Mexican—especially when the railroad builders are more than ready to pay their way. And back of this truism, in this particular instance, was the fact that John Grant was not the sort of man to drop a piece of work when he had once fairly begun it. He did not go to the devil, as José had impolitely suggested; on the contrary, he went to the company's solicitor, and explained to that functionary the necessity of using means more powerful than persuasion to bring José to terms. Evidently this was not a case in which mild measures would prove useful: and yet, for some reason which he did not satisfactorily account for to himself, Grant made a number of visits to the adobe house in Santa Cruz before he finally invoked the power of the law. Upon old José all his blandishments were thrown away. The old fellow did not suffer his anger to overcome him again; but with Spanish dignity and Mexican stubbornness he held his ground. Between him and the *Americanos* there was a gulf of hatred that nothing could bridge—least of all, a railroad that was to destroy his lands. This was his position, and he held it as resolutely as he had held the redoubt out on the *mesa* three and thirty years before.

It was during these days, while Grant came and went, that the first doubts as to the happiness and fitness of her future found their way into Niñita's heart, and bred trouble here. They were only little doubts, at first; but they grew, and grew, until at last they wrenched and tortured her whole being. She still loved Manuel, but she felt that a stronger love was taking hold upon her; and she even hoped that an answering love came out to meet her own.

All this was not a matter of a day or a week. It came gradually. The summer was slipping by, and as the hot days one by one went past, each marked a little change in Niñita's heart. Old José, finding that the law of the commonwealth is greater than the will of the individual citizen, had surrendered sullenly, and sullenly had pocketed the comfortable sum allowed him for his wasted land; but he persisted in believing that Grant was the cause of all his troubles, and upon that particular *Americano* he had concentrated the hate which previously had been bestowed upon the American nation at large. Old Manuel and young Manuel shared this feel-

ing, for they also felt that they had suffered wrong. Indeed, through all the valley, there was an undercurrent of anger and discontent as the country-side folk saw the current setting down upon them from the North, and felt themselves powerless to stay it. They cared nothing for progress, for improvement, these simple souls; and they cared very little for the unheard-of quantities of money which were paid for the damage done their lands in comparison with what they cared for the loss of the lands themselves. But what worried them most keenly, though not one of them could understand, much less explain, this feeling, was the sudden inroad of a civilization utterly unlike, utterly inharmonious with, their own. Instinctively they recognized the advent of a race stronger than theirs, which must of necessity first subjugate and then exterminate them—not by force of arms, but by force of brain. These white men from the North were invaders, surely destined to be conquerors; nor were they the less to be dreaded because they came as friends and were free-handed with their gold. In body and brain they were the superiors of the people among whom they came; by the inevitable law of nature theirs must be the dominant race. Not a single Mexican ever went through this analysis of his hatred of the incoming *Americanos*; but, all the same, the hatred was there, and this was its cause. It did not show on the surface, but it smoldered hot beneath the crust of good manners with which all Mexicans are venerated.

And Niñita had so far forgotten the sentiment of her people, the will of her father, and her faith to her lover, that she had suffered her love to go out toward one of these hated strangers; and, even more than this, she had so far forgotten her maidenly dignity that she had given her love unasked. In his curt fashion, so unlike the gracious forms of speech to which she had been through all her life accustomed, John Grant had said many civil things to the Mexican beauty; and he certainly did very unnecessarily prolong his dealings with her father, for no other reason than that he might increase his opportunities for seeing her pretty face. During all the summer, while the embankment was creeping down the valley,—coming to and crossing José's field and passing on to the southward,—he made many excuses for holding interviews with the master of the old adobe house in Santa Cruz. Being courteously received on these occasions,—given to eat if his visit happened upon a meal-time, and to drink if it did not,—Grant promptly arrived at the conclusion that the old Mexican had been humbugging him all along, and was

only too glad to get his land off his hands at so good a price: a conclusion as near the truth as the guesses of a man of one race usually are about the feelings of a man of another.

As to making love seriously to Niñita, Grant never once thought of it. Marrying a Mexican and marrying a mulatto were much the same thing to his Saxon mind; and he was a good fellow in the main, and was altogether above the love-making that could end only in her wrong. But it was only natural, he thought, to amuse himself a little with this pretty girl whom fate had brought across his path. His work was hard enough, and his life was lonely enough down in that semi-barbarous region, he felt, to entitle him to play a little when he had a chance. Nor did he for a moment think, to do him justice, that his play could be mistaken by Niñita for earnest. In the civilization that he understood, men might make pretty speeches to pretty girls without a serious meaning attaching to their light words; he did not realize that in this other civilization which he had come upon, things were not the same. Indeed, he did not realize that this new phase of life that he had encountered was a civilization at all. When he wrote to his friends in the East, he described himself as living among half-reclaimed savages, and he believed this description to be the truth. So, when he had the chance, he said nice things in his jerky Spanish to Niñita, and was not a little pleased to see the color come into her pretty brown face and the long lashes droop over her beautiful brown eyes.

He did not have such chances often, for Mexican girls are sharply looked after, especially when an *Americano* is near. But now and then he would come upon her standing in the gate-way,—as on the day when he saw her for the first time,—and once or twice he was so fortunate as to meet her at the spring. And so, little by little, without knowing it and without meaning to do it, he stole Niñita's heart away.

The summer was now nearly ended. The embankment had gone on down the valley, past the village, and the trains had begun to run—constant sources of wonder and alarm to the simple folk who up to this time had held that, besides their own legs, *burros* and rattling ox-carts were the only known means of transportation. Grant's work near Santa Cruz was ended, and he was going back to the East; he had had enough of the barbarism of the South-west, he said.

Perhaps, had Niñita known that he was so soon to leave her, she would not have gone that evening to the chapel of Our Lady of Carmen to pray. But she did not know it, and

her troubled heart sorely needed comfort and rest. That day, as she was coming from the spring in the sunset light, Manuel had met her, and had asked her, very gently and tenderly, why she had so changed. Had he been harsh, had he insisted upon his right to her love, she might not have felt very deeply his reproaches. But it was not in Manuel's nature to be harsh with Niñita, and the love that he asked for was asked for humbly. In the evening light, he looked down upon her with the love in his eyes that once had seemed to her so perfect and so satisfying; and she had almost cursed herself because, as she turned toward him, his dark face and eyes and hair disappeared for a moment, and in their stead came a vision of blue eyes set in a fair face, framed in yellow hair and beard. She could not answer him, and for the first time in their lives he had gone from her sorrowing.

THIS was the trouble that Niñita had taken to Our Lady over in the chapel, and with all the strength of her heart she had prayed that the love which was in her might be guided in the right way. As she came out through the dusky church into the white starlight, it seemed to her that her prayer had been answered. The gentle Lady seemed to have told her that her love belonged to her own people, not to strangers; and presently she found herself softly saying over and over, under her breath, Manuel's name—just as she used to do before the *Americanos* came down into the land. For the first time in a long while she was possessed by a spirit of love and peace. Our Lady of Carmen had heard and answered her prayer.

She went out and seated herself upon the stones in front of the gate-way—looking in across the court-yard, and over the adobe wall beyond, at the young moon just rising above the mountains. As she sat there, still and happy, she heard the beat of a horse's hoofs out upon the road that led across the *mesa* to Española. The regular cadence made a little tune in her mind, to which she said "Man-u-el, Man-u-el," half-unconsciously. The hoof-beats came nearer, softly over the bit of sandy road beyond the *padre's* garden, and then with a clatter up the stony hill behind the church. Then, before she realized it, the horse had crossed the *plaza*, and John Grant had dismounted and was standing by her side. How beautiful he looked standing there, uncovered, in the moonlight! Niñita's heart beat hard, and all the peace that her prayer had given her was gone!

He had come to bid good-bye, Grant said. He was going away—going to his home far off across the plains and mountains; he feared

that he never would see the *señorita* again; he was glad that he had met her thus alone; would she be sorry when he was gone?

He spoke lightly, but there was a touch of real feeling in his tone,—for no one, not even a cool-headed *Americano*, could know Niñita without loving her at least a little,—and the tone meant more for her than the words. All that she felt was that he did love her, and that he was going away. In spite of herself, she gave a little sob.

"Poor little girl; then you are sorry?" said Grant, gently. He felt very kindly toward the little brown-eyed angel, who grieved because he was going away.

"And will the *señorita* give a little kiss—*un besito*—in parting?" he added.

He had laid his hand upon her shoulder as he spoke, and as he touched her he felt her tremble. For an instant she did not answer. Then, with a sudden, passionate movement, she turned toward him, flung her arms about his neck, and pressed her lips to his. It was *un beso*—not *un besito*—and the memory of it staid by him to his last day.

There was a sound of footsteps. Grant gently unclasped the arms from about his neck, and said, in English,—for Niñita's kiss had startled him so much that his small stock of Spanish was all gone from him,—
"Good-bye, dear child! God bless you!"
Then he jumped on his horse and galloped away.

Niñita stood dizzily for a moment. Then she heard her father's voice, but sharp and cruel: "Thou hast disgraced thy name!" And another voice, broken and piteous, said: "Thou hast betrayed thy love!"

This, then, was the answer that Our Lady of Carmen had given to her prayer! She sank down slowly, in a miserable little heap, upon the stones.

After what seemed to her a long while, she heard her father's voice again: "There is work for us to do to-night, Manuel. Get thy knife and thy horse!" In a dreamy way she heard departing footsteps, and then, after a while,—she could not tell how long,—the tramp of horses. Her father rode out through the gate-way, close by her side, and she heard him call Manuel's name; she heard Manuel answer, and she heard the sound of the horses' feet on the stony hill behind the church, as the two rode away together through the faint moonlight. And as she lay there in dumb agony, she knew that her father and her lover had ridden out into the night to murder John Grant.

GRANT had ten miles before him to the camp at Chamita, but he knew the road, and he had

the light of the young moon. It was a still, delicious night,—the sort of night that comes often in New Mexico,—and he rode slowly, that he might enjoy it to the full. This was his last ride along the lovely Rio Grande valley,—he was to start for the States the next evening,—and he wanted to make the most of it. And even had he not been disposed to ride slowly for the ride's sake, his queer adventure with the pretty Mexican would have made him forget to press his horse to speed. He was a good deal astonished by Niñita's demonstration, and a good deal flattered, as any man would have been.

"Poor little body! I really do believe that she loves me," he said to himself, with a good deal of quiet complacency.

And then he fell to wondering how much of his adventure it would be advisable to tell to Miss Eleanor Whittredge, of Chicago—for whose use and benefit he had spent a month's pay in the purchase of an engagement-ring, the last time he had been in the States. And so his thoughts wandered back and forth from the East to the West; from Miss Whittredge in Chicago, whom he loved sincerely, and whose dignified person and character he as sincerely respected, to this wild little Mexican girl in Santa Cruz, who had startled him with a kiss such as all the Miss Whittredges in the world together could not give. He went slowly over the *mesa*, slowly across the bridge to Española, and slowly along by the river-side toward Chamita. The night was perfect, and his thoughts moved about pleasantly in his mind. Once, when he roused himself, he heard horses galloping on the other side of the river—along the shorter road from Santa Cruz to Chamita, that crossed the river at the ford. Had he been in a hurry he would have taken that road himself; but he was not in a hurry. People down in New Mexico have a habit of galloping about the country at night, and unless they happen to be galloping up behind you, you do not pay much attention to them. So Grant relapsed into his musing.

He was aroused very completely, just as he had passed a clump of *pinons*, by a rush of horses toward him, and by a thrill of pain as a knife sliced its way into his left arm. Had not his own horse swerved just as the thrust was made at him, that ride in the moonlight would have been his last. Grant had not lived for five years on the plains, and for a year more in New Mexico, without picking up enough of the customs of the country to know what to do in such an emergency. He struck his long Mexican spurs into his horse, and felt for his revolver. There was not much satisfaction in finding that his pistol-pocket was empty: he had left his revolver in camp!

If the other people had pistols, it was all up with him; if they had only knives, he had a chance of getting off. His horse was a good one and fresh, and the bound that he had given when he felt the spurs had left the others behind. So he rode onward through the moonlight, crouching down over the high pommel of his saddle, and expecting every moment to feel a pistol-ball cracking in through his ribs.

But the ball did not come.

"They must be Mexicans," he thought, "and that accounts for their being without pistols and operating with knives."

This reflection comforted him a little; but he knew that a single unarmed man against two men armed—even though the two be Mexicans, and armed only with knives—has only a trifling chance of coming out victor. He gave his horse the spurs again, and set his teeth hard; and so he went along the river-road, not ten yards ahead of the Mexicans, for a couple of miles. Then the luck turned in his favor.

As he rounded a bend in the road he came upon three of his own men, who had halted and faced about when they heard horses galloping up behind them. They sat quite still: two of them holding cocked revolvers, the third with a Winchester all ready to bring up to his shoulder.

"It is I—Grant; these brutes have cut me. Shoot!" he shouted, as he recognized the party. In the East, an order of this sort might be questioned. In the South-west, we shoot first and question afterward. The two revolvers and the rifle cracked together, and the foremost of the two Mexicans fell with three balls through him—all three had shot at the same man. The other Mexican went straight through Grant's party, and on like a flash up the road. But he did not go far. The Winchester cracked again, and his horse galloped on with an empty saddle.

"That was a close call, old fellow. I didn't think these Mexican hounds had pluck enough to turn highway robbers. But we've settled 'em this time. Winchester and revolvers are ahead of Mexican knives every time—eh, old man?"

But Grant did not answer. He was dizzy and faint.

"Take him into camp, Jim; Ned and I'll look after these beggars. We've got to hunt up the *alcalde* at Española, I suppose, and make depositions and give ourselves up for trial, and that sort of thing. An awful waste of time over two blackguard dead Mexicans; but it can't be helped, you know. By Jove! there's blood running out of your sleeve, Grant. You must have an ugly hole in you.

Here, get your coat off and let's tie you up, and keep you from leaking."

So Grant was tied up, and then taken into camp, where he fainted dead away.

It was the evening of the next day, and again Ninita went into the chapel of Our Lady of Carmen, and knelt upon the clay floor—not near the sweet image, but far away from it in the dusky darkness.

Ninita's heart was broken—was dead. She could not pray. She scarcely knew why she had come to the chapel; there only stirred in her a vague feeling that here, though the gracious Lady no longer could be her friend, no longer could listen to her prayers, at least she would not be crushed to the earth by cruel, bitter words. No one could be her friend any more. Her mother had cursed her when her father was brought home dead, had told her, "This is thy work. Go thou also, with thy sins upon thee, and die;" and old Manuel, looking upon his dead son, had echoed her mother's curse. Even the *padre*, the good *padre*, had turned from her when she looked toward him with her eyes imploring pity. As she stood in the gate-way the people of the village had crowded about her, and their words of cruel abuse were yet ringing in her ears.

Yet had she really sinned? She could not think so. In her own heart she knew that that kiss was a kiss of renunciation and farewell. Much of her life went with it, but all of her life that was left would have been Manuel's. She was sure of this, and she was sure that the good Lady would have given her strength to forget, after a while, the love that had so mastered her, and would have made her love for Manuel once more strong and true. If! Oh God, if—and Ninita bowed her head, and a great agony filled her soul.

No, there was no use praying. Our Lady looked down upon her no longer gently, but with a grave severity that turned her broken heart to stone. Not even here could there be comfort for her. She must indeed have sinned if the gracious image turned against her; and then in her ears sounded again her mother's words: "Go thou also, with thy sins upon thee, and die." Yes, that was all that there was left for her to do. It would be very easy to die; and, perhaps, in death there would be peace.

She knelt there for a long time, while the darkness gathered around her. How very, very long ago it seemed to her was that evening when she had knelt and asked Our Lady to guide aright her love; and yet she knew that it had been but the evening of the day before. But time had ceased to have any meaning for

Niñita; she was already reaching out into the dim vastness of eternity.

Through the still night, as she knelt there silently, prayerless, there came the sound of a locomotive whistle—it was the night express for the North. The train was still miles away down the line, for sound travels very far in that still, pure air, and more than a quarter of an hour would pass before it would go thundering by the village and up the valley beyond.

Suddenly, Niñita gave a little shudder. Then she rose steadily and walked out through the darkness of the church into the faint moonlight—walked on down the hill behind the church, past the *padre's* garden, out into the fields beyond, and so at last to where the railroad swept around a curve through a grove of cotton-woods. This was the field that was to have been her marriage portion. It was under those cotton-woods, by the *acequia*, that she and Manuel had made little adobes in the years so long gone by. She noticed how greatly the trees had grown, and wondered to herself that she had never noticed it before. Through their branches she could see the head-light of the engine, a great ball of

fire, coming up the line. She did not know that Grant was sitting in the lobby of the sleeping-car—looking a little pale, but not much the worse for the wound he was telling the conductor about as he smoked his cigar. It was better that Niñita did not know how close Grant was to her. At least one added pang of grief was spared her at the last.

"MUST have been one of them Mexican goats, I guess, Bill," said the engineer of the express to his fireman, as they felt a little jar, just as the engine rounded the curve, and they saw something black glance down the embankment and fall among the trees.

"Guess so. Serve him right for bein' fool enough to go to sleep on the track. Just like a Mexican goat to do that. Goats and Mexicans, they're all much of a muchness, and all d— fools together. What's the use of any of 'em I don't know, and I haven't found the fellow that does." And the engine and train, the advance guard of the coming race, swept on up the line.

Down under the cotton-wood, by the *acequia*, Niñita—one poor little soul of the race that must go—lay dead.

WAS THE EARL OF BEACONSFIELD A REPRESENTATIVE JEW?

HERR GEORG BRANDES concludes his acute and brilliant study of the late Earl of Beaconsfield with the question: "Is he (Disraeli), as he considers himself, a representative man? Can he be truly said to be a representative of the Semitic race? If the question be put in this direct form, it must decidedly be answered in the negative. For the Jewish mind has revealed itself in far more affluent and nobler forms than in Disraeli's comparatively limited mental range." To our thinking, Herr Brandes' own book affords grounds for the contrary reply to his leading question. Despite his eminent gift of critical discernment, he seems to have fallen into error, rather owing to a misconception of that which constitutes the true Judaic type, than of the special character of the great statesman and novelist whom he portrays with masterly skill. In order that a single man shall represent a people, it is certainly unnecessary that he shall embrace, in the most perfect degree, the whole gamut of qualities ever possessed by the united members of his race. In other words, taking Spinoza and Shylock as the opposite poles of the Hebraic

character, it is not requisite that the representative Jew shall be, at the same time, Spinoza and Shylock. All that is required is that he shall furnish us with an epitome of the race-features common to both, and give us an example, on however limited a scale, of the master quality of each. Now, this is precisely what we think Benjamin Disraeli has done. If he was a stranger to the serene disinterestedness, the philosophic repose, the simplicity and magnanimity of Spinoza (all of which traits were purely individual), yet he shared with the inspired Hollander the distinctively national combination of mysticism and cool-headed shrewdness, of powerful imagination and mathematical precision in argument, together with indomitable energy, unhesitating self-confidence, and indefatigable perseverance. On the other hand, we have not far to look for his affinity with the Jew of Venice. Again, we find the poetic, oriental imagination dealing in tropes and symbols, the energy, or rather now the obstinacy, of will, the intellectual superiority, the peculiarly Jewish strength of the national and domestic sentiments; and, added thereto, the rebellion

of a proud heart imbittered and perverted by brutal humiliations, and the consequent thirst for revenge, the astuteness, the sarcasm, the pathos, the egotism, and the cunning of the Hebrew usurer. Disraeli possessed in an eminent degree the capacity which seems to us the most characteristic feature of the Jew, whether considered as a race or an individual, and one which has been developed to perfection by ages of persecution. We refer to the faculty which enables this people, not only to perceive and make the most of every advantage of their situation and temperament, but also, with marvelous adroitness, to transform their very disabilities into new instruments of power. To-day, in Europe, their commercial prosperity is such as to arouse the jealousy and enmity of nations supposed to be the most enlightened, and yet this excessive accumulation of wealth is only the natural result of the stupid, not to say cruel, policy of those very nations in confining them for years to the practice of usury. Ostracized from the society of Christians, even when not made the victims of actual barbarity, refused a voice in the administration of public affairs, denied the honor of military service, excommunicated at the same time from legal protection and from Christian charity, it behooved them to organize all the more stringently their own little communities, to perfect their system of private beneficence, to administer their own affairs with scrupulous exactness, to practice the arts of peace, and to keep their eyes and wits ever open to the chance of gaining an inch of ground from the common enemy. Thus has a virtue, or at least a new element of force, been instilled into them by every provision for their extermination. Only an outward "sufferance is the badge of their tribe." The patient humility which accepted blows and contumely in silence was not the inertia of a broken will, but the calculating self-control of a nature imbued with persistent and unconquerable energy. In the long run, it was sure to endow them with the immense superiority that the self-contained man has over the man of unbridled temper. No other Jewish trait is more conspicuously exemplified than this in the career of Benjamin Disraeli. It was this which supported him through his repeated defeats before securing a seat in Parliament, and again through the disgraceful exhibition of Parliamentary brutality which attended his maiden-speech. No tempest of ridicule could shake his imperturbable calm. Not that he was lacking in sensitiveness, in pride, in the justifiable indignation of an insulted gentleman, but simply that he was used to it—that he had inherited and

cultivated the simulated patience to submit to it without flinching, while straining every nerve and directing every energy to the aim of retaliation and revenge. Upon that memorable day, the chief objects of derision, Herr Brandes tells us, were the speaker's peculiar manner and outlandish costume; there was nothing in his speech either absurd or dull. We fancy we can discern something deeper than the so-called oriental love of show in Disraeli's fantastic attire on this occasion; it is probable that the wily diplomatist adopted it deliberately as a conspicuous mark for the shafts of scorn—a sort of "Alcibiades' dog" to divert attention from the natural race-peculiarities of his appearance. The ridicule he foresaw as inevitable; rather let it be poured upon the masquerade-dress, which could be doffed at will, than upon the inalienable characteristics of his personality, still less upon any vulnerable points in his oratory. Moreover, he was doubtless anxious to let it exhaust itself at once—to provoke the full measure of scorn, and prove once and forever that he was to be dealt with by other opponents than bullies or buffoons.

A man of less audacity and tact would have endeavored to suppress, or at least to keep in the background, those facts relating to his origin and creed which were most at variance with the prejudices of his fellow countrymen. Not so Disraeli. His object was not to conciliate, but to dazzle; no difficulties could daunt him, but he was lynx-eyed to discern the line that separates the arduous from the impossible. No Englishman would ever forget he was a Jew; therefore, he himself would be the first and the loudest to proclaim it, and instead of apologizing for it, he exerted all his powers of rhetoric and persuasion to make it appear a natural prerogative of rank and honor. He did not knock servilely at the doors of the English aristocracy; he conquered them with their own weapons; he met arrogance with arrogance, the pride of descent based upon a few centuries of distinction, with the pride of descent supported by hundreds of centuries of intellectual supremacy and even of divine anointment. As a communicant of the Anglican Church he did not deny Christianity's claim to all the glory of civilization, but he went a step farther back and declared this very Christianity to be the outcome, the apotheosis, of Judaism. In the attitude which he assumed, politically, socially, and æsthetically, toward his race, we do not know which to admire more—the daring originality of his position, or the pluck and consistency with which he maintained it.

It would be an injustice, however, to attribute solely to a calculated audacity Disraeli's

haughty position in regard to his race. He belonged, by birth, to the branch of modern Jews known as the Sephardim, concerning whom an English writer has remarked: "Of the two large bodies of European Jews, the Ashkenazim, from Germany and Poland, and the Sephardim, of Spanish and Portuguese descent, it is well known that during the Middle Ages the latter were the more eminent in wealth, literature, and importance. The general histories of modern Jews have treated of them as one people *per se*, without adequate consideration of how differently must have been modified the Judaism of Granada in the twelfth century, or of Castile in the fourteenth century, from that of the same period amid the ferocity and unlettered ignorance of Muscovy and Poland." There can be no doubt that a spark of fiery Castilian pride was transmitted, unstifled by intervening ages of oppression, to the spirit of Benjamin Disraeli. He knew himself to be the descendant, not of pariahs and pawnbrokers, but of princes, prophets, statesmen, poets, and philosophers, and in his veins was kindled that enthusiasm of faith in the genius and high vocation of his own people which strikes outsiders as an anomaly in a member of an habitually despised race. Indeed, in reading the annals of the mediæval Jews of Granada, we meet with more than one instance of a career ascending from the humble station of the Hebrew scribe or shop-keeper to the premiership of the kingdom, which seems almost the counterpart of that of Lord Beaconsfield, and which he, doubtless, treasured in his mind as an earnest of future possibilities, no less than a proof of historic superiority. Herr Brandes says: "Disraeli certainly cannot be looked upon as the personification of the many-sidedness of the Jewish race. He is wanting in its idealistic tendencies." But our author seems to forget that the idealism of politics is not the idealism of philosophy. Disraeli's faith in the sovereign power of imagination seems to us a proof of his "idealistic tendency." Ideal is a vague word, of many meanings. Ideal aims, in the sense opposed to egotism or personal ambition,—the idealism of Washington as contrasted with the selfishness of Bonaparte,—held no place in Disraeli's career or policy. But idealism as opposed to utilitarianism, faith in the romantic, the poetic idea, rather than in the dead, prosaic fact, characterized every act and statement that emanated from this brilliant Semite. Says Herr Brandes:

"It is in this high value placed on the use of imagination, conditioned by the lack of scientific training, that the originality of the man consists. There is some truth, something even profound, in this view of

imagination as a political motive power. It springs from his own peculiarly imaginative temperament, and this mode of looking at things is to such an extent the central point with him that he who rightly apprehends Disraeli's opinion of the part played by imagination in politics, and his adroitness in turning it to account, possesses the key to his mental powers as a novelist and statesman." (Pp. 59 and 60.)

Again we must differ from Herr Brandes in the assertion that Disraeli was lacking in the "many-sidedness" of the Jew. Prime-Minister of England, poet, novelist, orator, satirist, wit, and dandy, the leader of the Tories and the writer of a novel ("Sybil") which Herr Brandes says is "a confession of sympathy with the Chartists," and contains "passages that remind one of Lasalle," the author of "a little masterpiece of composition ('Ixion in Heaven')—a classic model which Heine might have envied," and of poems (in "Venetia") "not unworthy of Shelley," the chief of the Conservatives and the enthusiastic champion of Byron and Shelley as opposed to the cant and stupidity of British society,—in the name of Proteus, have we not here enough, on Herr Brandes' own showing, to establish Disraeli's claim to many-sidedness of sympathy and mind?

And yet the fact remains that Disraeli was not a first-class man; his qualities were not those of the world's heroes; he possessed talent, rather than genius; he was a sagacious politician aiming at self-aggrandizement, not a wise statesman building his monument in enduring acts of public service; and the study of his career is calculated to dazzle, to entertain, even to amuse, rather than to elevate, to stimulate, or to ennoble. But do all these derogatory facts preclude him from being considered a representative Jew? On the contrary, we think they tend to confirm his title. First-class men in all races are sufficiently rare, and they have not been absent from the annals of Judaism: Moses, Jesus, St. Paul, the prophets, Spinoza, bear glorious testimony to their existence. But centuries of persecution and the enforced narrowness of their sphere of action have, nevertheless, developed among the Jews a typical national character other than that of the above-named scions of the race. Adroitness, dexterity, tact, industry, perseverance, ambition, brilliancy, and imagination—these may be enumerated as their distinguishing qualities. Where shall we look for the great modern Jews? At the head of the revolutions, the politics, the finance, the journalism of Europe, or among actors, musical *virtuosi* and composers, wherever they can find a field for their practical ability, their long-starved appetite for power, their love of liberty, and

their manifold talents. They are on the surface in every city of Europe and America where they have gathered in any considerable numbers. But in proportion as we seek among the less brilliant avenues to renown, among the slowly rewarded workers and students, we shall find fewer and fewer representatives of the race.

The distinguished Belgian publicist, M. de Laveleye, says :

"The rapid rise of the Jewish element is a fact which may be observed all over Europe. If this upward movement continues, the Israelites, a century hence, will be the masters of Europe. * * * This fact is popularly attributed to usury, rapacity, hard-heartedness, and what not of the sort. This is a complete error, a baseless prejudice. When all transactions are free, no one is forced to submit to more onerous conditions than those of the general market. Christians do not neglect to profit, like every one else, by whatever favorable opportunities are accidentally presented to them. In the great financial scandals of our day, especially in Belgium, only Christians have figured. * * * The Jews have a very keen and very just sense of reality, which they seize and render with extreme precision; and at the same time a strong ideality, a powerful imagination. Heine seems to me the type of this rare combination of apparently antagonistic qualities. Apply this genius to business, and their success is explained. Imagination and invention discover advantageous operations, solid good sense enables them to see the good and bad sides, and protects them against illusions. Among us, business-men with imagination ruin themselves through optimism, and those without it crawl in routine."

We hear much of their achievements in art, but among no modern people has the loftiest embodiment of any single branch of creative art been a Jew. In music, for which they are peculiarly gifted, the high-water mark of the art was reached by the three Christians, Bach, Beethoven, and Handel. In poetry, their most brilliant exponent, Heine, must take his seat at the feet of Goethe, and even of Byron, to whom he is more nearly related. Neither in painting nor in sculpture can they bring forward any supreme name. The great modern revolution in science has been carried on without their participation or aid. Thus far, their religion, whose mere preservation under such adverse conditions seems little short of a miracle, has been deprived of the natural means of development and progress, and has remained a stationary force. The next hundred years will, in our opinion, be the test of their vitality as a people; the phase of toleration upon which they are only now entering will prove whether or not they are capable of growth. In the meantime, the narrowness, the arrogance, the aristocratic pride, the passion for revenge, the restless ambition, the vanity and the love of pomp of Benjamin Disraeli, no less than his suppleness of intellect, his moral courage, his dazzling talents, and his triumphant energy, proclaim him, to our thinking, a representative Jew.

THE BLESSINGS OF PIRACY.

In the good old romantic days, when pirates wore top-boots and cutlasses, and bore down upon their victims with ships instead of printing presses, the trading-place of the buccaneers was Jamaica, where they spent in riotous living and the outfitting of their vessels the greater part of the wealth taken from merchant ships and wrung from the inhabitants of captured towns by torturing men and frightening women. There was naturally a party in the island opposed to the suppression of freebooting. That did not seem to Jamaicans so very bad a business which brought gold and silver plate and other precious stuffs, rifled from Panama or the coasts of South America, to be sold at low rates to Jamaican traders, and which afforded a liberal market for the rum and other commodities of that favored island. Those planters in Jamaica, if any there were, who opposed this sort of unlawful privateering, were, no doubt, deemed unpatriotic. Great fortunes were amassed indirectly from the trade, and to abolish it was

to blight forever the golden prosperity of the country. The people who were plundered and tortured were, after all, only foreigners, Spaniards, and, above all, Papists. Piracy was not so very bad; it served to depress the Spanish power and to exalt that of Protestant England, and so promoted the glory of God, even though the means were most devilish.

One is forcibly reminded of this state of moral and intellectual fuddle into which the church-going English colonists of Jamaica fell through the seductions of trade, by the attitude of some of our publishing-houses on the copyright question. There are prominent publishers who are at length, after so many years of delay, in favor of granting to the foreign author some more definite interest in his book than the courtesy-money paid voluntarily of late years, but even these publishers continue to higgler for certain restrictions. They are not yet willing that literary theft shall be wholly suppressed, though they would like to see it reformed, now that a

race of bolder and more predatory publishers are sailing the literary ocean, and disregarding all the traditional rules of genteel buccaneering. But simply to give an author control of the book he has made, as a wheelwright controls the wagon he has built, as a farmer controls the potatoes he has grown, or, to borrow from Mark Twain, as a distiller controls the whisky he has distilled, this our reformed publishers regard as quite out of the question. An unrighteous trade always warps the conscience and the judgment at last. What the old sermonizers used to call "a judicial blindness" has smitten some of the book-sellers.

The English and American publishers are now wrangling over the question of how authors can be in part protected, without giving them a simple property-interest in, and entire control of, the product of their work, such as all other workmen have. This only will satisfy justice, and justice is a horse pretty sure to lead by a length or two in a very long race. In this whole discussion, the intrusion of the book-seller's claims into the question is a curious illustration of the way in which a wrong, when long tolerated, puts on the airs of an abstract right.

The most amusing thing that has been said or done in this discussion is not Mark Twain's funny speech. For once, the Hartford humorist has been fairly outdone by a piece of American humor from a publisher. A book-house of Philadelphia, a few months ago, sent to a number of authors a circular, in which it was proposed that they should give countenance to a proposition to forestall the pending book-sellers' treaty on the copy-right question by a general law that should be more restrictive (and, consequently, less honest) than the treaty. One of the arguments in favor of this barefaced suggestion was that Belgium had lost her "flourishing reprint business" by making a copyright treaty, and it was urged that the same might happen to America. Authors were, therefore, solicited to petition against the moiety of justice that this treaty would afford them, with as much suavity as a man in Japan is asked to commit *hari-kari*. No doubt, the South Carolina Legislature, in colonial times, felt about piracy just as this patriotic Philadelphia book-firm feels about reprints. The Carolina proprietors wanted the colonists to chase away the pirates who flocked into Charleston to buy sea-stores and sell booty, but the Colonial Assembly refused. The Carolinians, no doubt, said as the Philadelphians do now: "See what will come of driving away a lucrative trade." The proposed treaty will not seriously restrain the reprinting of foreign books,—in fact, it leaves open a wide door for

plunder, but even if it were calculated to break up the business of reprint, it would be no worse than some of our existing laws. Some people on Long Island a while ago carried on a most "valuable reprint trade," which would have made money more plentiful, and enriched some of the islanders, if the Treasury detectives had not rudely seized the plant and sent the printers to prison, from a prejudice against counterfeiting. It seems hard to deal thus with men who were only trying to get other people's property without paying for it,—a thing perfectly legal in another branch of the reprint business.

It is worth while to repeat and emphasize the fact that the greatest damage from any system of pillage, or complicity in pillage, is that it confuses the moral judgment and tends to retard the general enlightenment of a people. No amount of "cheap literature" can atone for the disturbing effect on the public conscience of a dishonest system. I have heard a gentleman of culture and usually clear ideas talk about "the great heritage of cheap literature," which the pirated "libraries" had brought to the American people. Which reminds me of the saying of a West Virginia chaplain, when recounting his capture by bushwhackers: "They cast lots, to decide who should inherit my horse."

Entering a shop in London, in 1880, I found the book-seller in a rage against America and Americans. He was resolved on vengeance and was swearing, in round old-fashioned Saxon oaths, that he would reprint some valuable American illustrated work—no matter whose—to revenge himself on America in general for the piratical act of one of the American book-houses,—perhaps the one in Philadelphia which esteems so highly "our valuable reprint trade,"—or, possibly, some other firm, composed of church-going and entirely respectable buccaneers,—deacons, as likely as not, and pillars in the church. The American book-lifter had robbed the English publisher of the money he had invested in works of art for his book, and had used the result of the toil and talent of the author and the artist without any compensation whatever. I might have blushed for my country's shame, but I knew that all true Americans ought to sustain the valuable reprint trade, and the benefits of cheap literature, which does as much for Philadelphia as the worship of Diana did for Ephesus. I therefore retorted upon the angry Briton, that he had not suffered so much from Americans as I had from English publishers. Indeed, our publishers have practiced privateering for so long a period that a sort of "honor among" themselves prevails with the more prosperous ones,

which is unknown to English book-sellers, who do not even rifle your pockets politely, as bandits always do, in romances.

The chief sufferers by the reprint trade are not British publishers, for whom I have no great sympathy, nor even British authors, whom I should like dearly to see righted. The American author suffers more than either. While other forms of industry are protected in this country by an almost prohibitory tariff, it marks the lowness and materialistic character of our civilization that the highest kind of production is discouraged by being subjected to direct competition with stolen wares. The wonder is that we have any literature. A reader must pay a dollar and a half for a novel by an American, while he can buy "Middlemarch" or "Daniel Deronda"—incomparable offsprings of genius—for twenty cents.

"But the public gets the benefit," says some hasty philosopher. Public-spirited people are always willing to have the public benefited at the expense of others. But does the public get benefit from this literary loot? For what is the office of literature? To refine our daily life—to show us the ideal aspects of the world in which we live. Foreign literature, drawing its materials from foreign life, cannot do the work of American letters. It is important that we see our own life idealized and analyzed in literature. Our aspiring people seek in Europe relief from the rawness of our new country, and feel when they land in England that they are walking in a country whose highways or hedge-rows are consecrated in works of genius. We ought by this time to have had a literature ennobling our thoughts of home and field and shop; and indeed, if we had had an honest and equitable copyright law, we might have had more than reaping and sewing machines with which to mark the advance of our civilization. Literature is like other industries; it is affected by the law of demand and supply—the law of relative recompense. Authors are not, usually, men who write for the fun of it, or because they cannot help it, or because they are incapable of other pursuits. Literary ability is not inconsistent with business sense. Shakspeare and Voltaire were so far from being incapacitated for affairs by genius that they both grew rich by shrewd investments. Nearly all American men of letters have earned money with other implements than their pens. Irving was a merchant, Bryant and Willis were newspaper proprietors, Longfellow and Lowell, professors, Holmes is a physician and professor of anatomy, Stedman a broker, and so on. Ability of a large kind is not shut

up to one pursuit, and, other things being equal, talent will seek the best market as certainly as wheat or salt pork. Men of first-rate power go to commerce, to the professions, even to politics, rather than court comparative poverty by writing books in competition with the pirated productions of transatlantic genius. Our life is thus left in a measure without the refining influence that can come only from a home-grown literature of advanced development. Notwithstanding the success we have made in some lighter forms, our literature cannot, in the more thoughtful departments, hold up its head alongside the current literature of England, France, or Germany; and our life is by consequence yet somewhat more crude and material in its aims and methods than that of older nations. This is apparent in the way in which we regard literature and art, either as useless luxuries, or as vehicles conveying morals or sugar-coating information. Since I began to write this little paper I have received a letter asking me to contribute to a livestock paper a serial story that shall, "in an attractive form, treat of the breeding of meat on the plains," the slaughtering, cutting, and family marketing, with a lot of other kitchen ideas. This is the way literature looks to some people. I once heard an English woman say, with malice in her tone, that America was a great country *for machines*. We are not, of course, wholly destitute of the higher forms of intellectual life, but it is true that lower kinds of activity offer great temptations in America, and that in the present state of the book-trade the higher sort of literature is not an inviting profession to a man of gifts who has a decent regard to the provision he is to make for his family.

The chief sufferers from this state of things are the people at large, who lose the inestimable benefits which any nation derives from a body of men in its midst following thoughtful and studious pursuits, and thus helping the people to see their own business, society, and politics by the lamps of history, poetry, and philosophy. For our partial loss of these benefits we have no compensation, unless we can find it in the large wealth accumulated by a few men in a reprint trade like that once carried on by the publishers of Brussels, who managed by this means to plunder the intellectual men of Paris, and to make their own people, like ours, consumers of second-hand wares.

It might be well to recall the fact that the "literary fellows," so much despised by the lower grade of politicians, are the final recorders, and in some sense the ultimate arbiters, of the reputations of men of action

and affairs. The function is not second to any other in an enlightened country. Men of letters are the intellectual judiciary, and the whole tone of public and private life is lifted up when the character of the literary guild is improved. The statesmen who now find their account in yielding to the vulgar desire to get pillaged literature at a low rate, must themselves go down to history by means of the recording pens of men of letters. It is not in the training of the true literary man to seek mean revenges—half the merit of literature lies in sincerity and impartiality. But there were English statesmen of great figure in the last century, who repelled colonial overtures for the abolition of the slave-trade, without argument, simply and selfishly saying: "You must not meddle with a trade that brings so much money to England." These men do not appear well in the light which our later culture holds up to them. The historian in the twentieth century, who shall set himself to the task of analyzing the degree of enlightenment attained by us, will not admire those public men of our time who obstruct so great a reform, in the interest of a dishonorable trade,

any more than we applaud the mercenary decisions once made in favor of piracy and the slave-trade.

If the present movement should fail, the next will probably be a far more comprehensive one, made by men of letters themselves, who are the real principals in the case. It is hard to organize authors as such—there are too many questions of literary position involved. But we can readily organize, on a business basis, an association of producers of literary property, which shall include writers of every rank and grade, who have a property-interest in copyrights. Such an association would seek to reform the whole theory of literary property. For it is a disgrace which the law-makers of America will have to bear, that men of letters in this late age should have to persuade reluctant legislators to give, through an intricate diplomacy, a partial protection from pillage to the productions of brain labor, that ought to stand on the common footing of all other property. The nineteenth century is drawing toward its close while yet Jews in Russia and writers in America are alike excluded from the equality before the law accorded to other classes.

TOPICS OF THE TIME.

A New Kind of "Boss."

SINCE the close of the war, various attempts have been made in Southern States to set on foot independent political movements through a division of the negro vote. None of these has met with much success except the Mahone movement in Virginia, and that has had a complete triumph. By the aid of the local Republican "machine" and the support of the negroes, Senator Mahone has created a new party, beaten the Democrats at the polls, and secured possession of the State Government. The movement of the Virginia Re-adjusters has been watched at the North with much distrust, owing to the fact that re-adjustment appeared, at first, to be merely a new name for repudiation. Had the Democrats ever shown a serious intention to provide for the payment of the debt of the State—had they appealed to their followers, not merely in the name of honesty, but with a practical declaration of an honest political programme, the Re-adjusters would have been placed in a very awkward position. As it was, the professions of the Bourbons amounted to little more than solemn asseverations that they were more honest than their opponents; but as they did not promise distinctly what they would do with the obligations of the State, if successful, their declaration was easily met by the Re-adjusters' denial that, so far as integrity went, there was anything to choose between the two parties. This made it easy for many organs of opinion at the North to urge that on

other grounds there might be reasons for wishing the new party success, and these grounds were found in the possibility that the defeat of the Democrats would make a break in the "Solid South," teach the negroes the value of their power as voters, help to accustom them to combinations for political objects of their own, and thus pave the way for what the South so much needs for its prosperity and security, the destruction of the old party lines.

It seems now to be doubtful whether the chief practical result achieved by Senator Mahone and his followers is not simply and solely a new demonstration of the fact that the negro vote can be used by unscrupulous leaders who know how to influence it, no matter what their objects may be. It hardly needed a re-adjuster party or the repudiation of Southern debts to teach us this; for the carpet-bag governments set up throughout the South at the close of the war had proved it already. The demagogues of the reconstruction period cast the negro vote as they pleased, and they cast it, too, for purposes as directly antagonistic to the true interests of the blacks as any for which the Bourbons since their disappearance have used it. It has now been "voted" by Mahone in Virginia in precisely the same way. The fact is, and the sooner the fact is recognized the sooner we shall be rid of many dangerous illusions with regard to the future of the country, that the negroes constitute a peasantry wholly untrained in, and ignorant of, those ideas of

constitutional liberty and progress which are the birthright of every white voter; that they are gregarious and emotional rather than intelligent, and are easily led in any direction by white men of energy and determination. Such white men may be demagogues, as in the case of Mahone, or they may be filled with a sincere desire to effect desirable political objects; but their relation to the negro vote, until the character of that vote is materially changed through education and material improvement, will be substantially what it is now.

The importance of the Mahone movement lies in the fact that it will probably be followed by other movements of a similar kind in other parts of the South. Mahone's imitators will not necessarily make use of his cry, for in most of the Southern States repudiation is a dead question. But almost any cry will, for the reasons we have mentioned, do equally well. In any movement, an Independent now starts with the advantage that he is necessarily an enemy of the Bourbons, and can therefore advertise himself as a friend of liberal ideas, and count upon a certain amount of sympathy as a friend of the negro. Such movements, if they are allowed to remain local, can do little harm, and may do much good if they fall, as here and there they must fall, into the hands of men with something more than mere selfish interests at stake. But it is evidently the intention in certain quarters at the North to utilize them for a purpose which Republicans have the right to consider good in itself, but which can only be advanced, in this case, by means full of danger to the country. The purpose is to strengthen the Republican party at the South; the means, the use of Federal patronage in aid of any independent movement that may be started. How far the Administration of President Garfield actually went in placing the Federal "machine" in Virginia at the disposal of General Mahone and his friends, it is difficult to say; but that it was extensively used, and became a potent factor in the campaign, there can be no doubt. It is now proposed that in Georgia, or South Carolina, or wherever an Independent leader shows any "strength" among the negroes, this scandalous abuse of power shall be repeated, and that the custom-houses and post-offices of the general Government shall be converted into local political machines to stimulate the movement.

It is hard to believe that any Administration which avows itself in favor of civil-service reform can lend itself to a scheme so inconsistent with all professions of reform as this. If it is wrong to use the custom-house in New York for the control of the primaries, and if we make a boast of the successful working of competitive examinations in New York, how is it possible, without the most unblushing effrontery, to insist that in Charleston or Savannah the Government officials should take an active part in politics, and use their positions to advance the interests of this or that politician? There are many reasons why such a course would be more immoral and likely to produce worse results in the South even than in the North. Here civil-service abuses are at least understood as such. The voting population is active and intelligent, and accustomed to take care of itself, no matter how the leaders may crack their whips, and there is a constant discussion of men and measures going on in the

press. But at the South, the Government is looked upon by the negro even now as a second Providence. What it approves is right; what it opposes is wrong, and its appearance in local politics is an indication of a moral preference which the negro, in his present stage of development, can but yield to. He reads no newspapers, and thinks but little for himself. He regards the Administration at Washington, the moment that it intervenes actively in his affairs, with the eye, not of reason, but of faith. For this very reason, absolute non-intervention by the authorities at Washington is necessary in order that he should gain the idea that thinking and acting for himself, deciding upon what he wants and what he dislikes, and combining with other voters to secure the one and prevent the other, constitute the true road to safety and progress. As we have said, the principal difficulty with this negro vote as it exists to-day is its emotional and gregarious character. To change and improve it we must rely upon time. The way to perpetuate and aggravate its present evils is for the Administration at Washington to interfere with it. The use of the negro vote by white politicians has, since the war, made the history of the South a history of rotten boroughs: first, carpet-bag rotten boroughs, then Bourbon rotten boroughs, and now we are threatened with a sort of Independent rotten-borough system, based on the old negro vote, an Independent "boss" to bring it out and direct it, and the Administration machine to make bargains with the boss with a view to the control of the next presidential convention. Public opinion in the North is hardly likely, when the plan is understood, to lend itself to so criminal and corrupting a political programme, even though its promoters masquerade as Independents, Reformers, or friends of the negro.

Science in American Colleges.

WHEN Luther, in a letter to a friend, classed college faculties *a priori* with the Pope, as his most determined prospective enemies, he drew a legitimate inference, justified by the history of learned corporations in past times. The great battles of thought by which civilization has been advanced have rarely been fought within the universities, but chiefly outside of them, although frequently by men who have received their training within them. Very slowly and reluctantly yielding to the pressure of public opinion, the universities have first tolerated, then countenanced, and in the course of generations at last openly approved new systems of thought which revolutionized the hoary but comfortable routine inherited from past ages. That this conservatism has its uses, we do not in the least question; and, on the whole, it is within certain limits much safer and more dignified than a hot-headed zeal for progressive innovations. Nevertheless, when carried beyond these limits it is suicidal, and interferes seriously with the usefulness of academic teaching.

The fact may not be generally conceded, but the old mediæval *trivium* and *quadrivium*, comprising the seven liberal arts (grammar, logic, rhetoric, music, astronomy, geometry, and arithmetic), remain to this day, in most of our colleges, the pattern after which the curriculum is modeled. Some few amplifications, such as physics, zoölogy, and a very rudimentary teaching of the modern languages, have been introduced almost

everywhere, but scientific study, such as is cultivated at the German universities, has as yet gained a secure foot-hold only at about three of our colleges; even at these institutions Germanic and comparative philology are in their infancy. When the importance of these studies is urged upon members of the faculties or the boards of trustees, the same reply is always received, viz., that the classics absorb so much time, that within the short course of four years, no room can be found for serious scientific study. If a man wishes to become a scientific specialist, it is said, let him enter one of the scientific schools, and if he wishes to study modern philology, let him go to Germany.

Now all this has a certain show of reason. Yet it is not an answer to the question, but an evasion of it. It is the business of our great educational institutions to supply just the kind of knowledge which will equip a man most completely, if not for his special profession, then in a more general way, for the struggle for existence. His education should enable him to utilize to the very best advantage the conditions which surround him. That this should be the aim of all training, collegiate and elementary, few, outside of college faculties, will dispute. But how do our colleges meet this universal demand? By requiring of every applicant for admission that he shall have spent from three to five years in familiarizing himself with the grammar and literature of two exceedingly difficult ancient languages, which he never will either speak or write correctly, and which, in nine cases out of ten, will be of no practical value to him whatever. Thereupon follow four additional years of training in these same defunct languages, minute study of prosodic rules, accents, and other scholarly niceties, while the modern languages and the useful sciences hold an inferior and half-recognized position as matters of secondary importance.

Now, what is really the cause of this anomalous arrangement? Simply the fact that since the study of Latin grammar was first introduced, into Europe, in the sixth century (although as a literary study Latin could hardly be said to have had any existence until the day of Poggio, in the fifteenth), humanity has accepted the stale truisms regarding its use mechanically, as it does any inherited belief, and has shrunk from examining the validity of these claims by the light of modern knowledge. There is no question that in the Middle Ages, when every science except mathematics was in its infancy, the introduction of the classics was a movement of enormous importance. It was so much better than any means of intellectual training which had previously existed that very likely the old *trivium* and *quadrivium* did represent the best college course which could be devised with the literary and scientific resources of that time. But is that any reason why, with the unparalleled progress of the arts and sciences which the last century has witnessed, we should still continue to look with this exclusive reverence upon the Greek and Roman writers? We will yield to no one in appreciation of their beauties, but, even granting all that their advocates claim, can they by any possibility be entitled to usurp so large a share of the time and energy of our youth, to the exclusion of knowledge which has so much more direct bearing upon the affairs of life?

There is hardly a man of keen sense and insight who, after having left college, does not have daily occasion to regret his inability to account rationally for the phenomena which everywhere thrust themselves upon his attention. If he is a merchant, there are a hundred facts which he must take into consideration in determining his daily sales and purchases, and the more accurately he can estimate the effects of present and prospective events upon the market, the surer he is of success and the swifter his road to fortune. But how much time is given to the study of sociology and political economy in the academic curriculum, as compared to Latin and Greek? It is only within the last two or three years that these studies have received any attention whatever, for few would seriously contend that the so-called political economy which is cultivated in many of our old-fashioned colleges is in any sense a science, or has any tendency to sharpen one's powers of rational observation in after life. But a most important step has now been taken in the recognition of these studies, in their modern acceptation, as legitimately belonging to an academic course.

What we have said in regard to sociology applies, *mutatis mutandis*, with equal force to other sciences. Physics, zoölogy, geology, etc., interpret the deep and essential rationality of nature's methods, and in connection with biology enable man to form an approximate estimate of his own place in the physical universe. There is beauty as well as strength in all true knowledge, and as means of mental training alone, even a rudimentary acquaintance with these sciences is, in its way, quite as valuable as the epistolary and rhetorical elegance and the refinement supposed to be derived from the study of the classics. So long as we are all born into this world and are to live by our faculty to utilize its resources, it is our first business to explore its properties, its history, and the mode of its development. There is, however, no reason why we should not devote part of our time to the study, also, of those two remarkable eras of civilization represented by the Greeks and the Romans; and if a man looks forward to a profession in which acquaintance with the ancient classics is of practical value, by all means let him adhere to the present college course. But these professions are very few. We are of opinion that, as refining influences and agencies of culture, the sciences, if taught with the same thoroughness and care as the classics have hitherto been taught, will yield results not to be despised. Indeed, the gradual remodeling of our college course in the spirit here indicated is merely a question of time, and all that the ultra conservatives can accomplish is merely to delay the reform.

Christianity and Commerce.

SINCE the days when the Greeks had but one word with which to describe the retailer and the rascal, much improvement has taken place in the morals of trade. Fraud and knavery still exist, but the great volume of business in Europe and America is done by men who do not misrepresent their wares, and who do not intend to cheat their customers. Many cheap and worthless fabrics are manufactured, but most of those who deal in them reveal their true character to those who purchase them. In the majority of our larger business-

houses you can take the salesman's word; he will not tell you that the cloth is "all wool" when it is half cotton; he will not represent the plated ware as solid silver. There are knaves in all branches of business, but they do not ordinarily thrive in trade; the commercial value of common honesty has become tolerably evident to sagacious business men. In this respect there has been a great change for the better within a quarter of a century.

The principal evils connected with commercial life at the present day do not arise out of what is commonly called dishonesty. The worst malefactors in the business world to-day are men who do not lie nor cheat; whose word is good on the Exchange; who fulfill their contracts when they can, and who always intend to keep strictly within the letter of the law. Fraud is not their weapon; they have ample justification for all they do in the statutes of the State and the maxims of political economy. An aggressive selfishness that knows no pity and feels no shame can manage to perpetrate untold injuries without incurring the penalty of any human law.

This type of selfishness finds an ample opportunity in the present organization of industry and trade. The tendencies are all toward consolidation and monopoly. Great capitalists or great companies are steadily replacing the multitude of smaller makers and dealers. The industrial conditions are such that this process is likely to go on. Whatever may be true of biology, the law of natural selection seems to rule in commerce. "To him that hath shall be given, while from him that hath not shall be taken away," no longer seems a paradox.

These great accumulations of capital are, of course, mainly impersonal and immoral. The soullessness of corporations is a proverb. The people who draw the dividends come into no personal relations with the people who do the work; their traffic is with shares and per cents, not with spinners or brakemen. The great proprietors are not much better than the great companies. As wealth enlarges, the distance widens between employer and employed. It is impossible, of course, for one of our railroad magnates, or one of our great merchants or mill-owners, to know all the persons who gain their livelihood in his service, and the impossibility is one over which selfishness rejoices. The less of acquaintance there is between master and man, the less room there is for considerations of justice and humanity. Scrooge would much rather discuss labor as an abstract element in the cost of production than consider the wage of Bob Cratchit or the stipend paid to the widow Jones's daughter. So it comes about that the business carried on by merchant-princes or railroad-kings shows few signs of personal ownership or management. Machinery increases and humanity decreases. It sometimes happens that a man becomes, to all intents and purposes, a corporation. What becomes of his soul in the transmigration nobody knows, but it disappears. Can this be the process referred to in the pungent question, "What shall it profit a man if he gain the whole world and lose his own soul?"

Not only do great accumulations of capital possess a natural advantage over small ones, but this advantage is pushed with the intent to destroy the small concerns. We have learned to talk very coolly of the big fish eating the little ones; that predatory habit seems

quite a matter of course. The great merchant or manufacturer deliberately sets to work to kill off his small competitors; by canceling his own profits and reducing his pay-rolls for a season, he drives them from the field. All this is done in the way of legal and "legitimate" traffic; whose business is it if the great dealer chooses to sell his wares for less than cost? Doubtless the public will pay, by and by, for the crushing out of competition; but the public is near-sighted in such matters, and readily unites with the strong in trampling down the weak. This work of extermination is often accompanied with the proffer of courtesy and even friendliness; it is not uncommon for the great railroads or the great mills to extend their protection to the little ones—"such protection as vultures give to lambs, covering them [with mortgages] and devouring them."

If the small capitalists are thus driven to the wall in their conflict with the great proprietors and the great companies, much less can laborers hold their own in the struggle for their share of the profits of production. The power of aggregated and organized capital to dictate terms to labor has been amply demonstrated. It is simply true to say that this power is exerted, not uniformly, but for the most part, in a perfectly selfish manner. The welfare of the work-people does not enter into the problem; the question is simply one of the percentage of profit. A great railroad company forces the wages of its brakemen from a dollar and a half down to a dollar and a quarter a day, in order that it may keep the dividends on its stock up to eight per cent. This is not illegal; it is not dishonest, according to the usual acceptance of that word; the company is free to fix its own tariff of wages; if the brakemen do not wish to work for a dollar and a quarter a day, they can take themselves off. The managers who make the reduction, and the directors who approve it, expect, however, that the workmen will submit. They do not, first of all, ask themselves how a man with a wife and five young children can live on a dollar and a quarter a day; they chiefly wish to know how the regular semi-annual dividend of four or five per cent. can be secured. Are not all these matters determined by the equivalence of supply and demand? Is not this economic law the guide of conscience and the end of controversy for every business man?

The last question brings us to the heart of the matter. For a pagan the answer is easy: need the Christian vex himself with scruples? How about the Golden Rule? Has that anything to do with business? "We that are strong," says an apostle, "ought to bear the burdens of the weak." Is there room to apply such a maxim as this in the relations of capitalists and laborers? "Look not every man on his own things, but every man also on the things of others"—is that a maxim that should ever come into the mind when wages are lowered that dividends may be raised? What has the Christian rule to do with the transactions of commercial life?

A large share of all the business men of this country profess and call themselves Christians, yet the thought of practicing in their business these plain rules of Christianity enters the minds of but few of them. The love that worketh no ill to his neighbor is not yet the law of commercial life. Not fraud or trickery, but

selfishness, undisguised and absolute, governs the realm of exchanges. Political economy assumes this as the normal principle; and not many are found who, in behalf of Christianity, venture to question the assumption. It seems to be taken for granted that Christian ethics has no place in the commercial realm: that this is one of the kingdoms of this world that never was given to Christ. Clearly the millennium is yet a great way off.

Nevertheless, it is coming. The signs of its coming are seen here and there upon the earth. It has been demonstrated that the affairs of great corporations may be successfully managed, even when much thought is given to the welfare of the people employed. The factory village that was once a wilderness has been seen to blossom like the rose, in bright fulfillment of the old prophet's vision. There are business houses in all our cities in which the interests of employer and employed appear to each to be mutual. There are business men who think habitually of the welfare of their neighbors; who forbear to push the advantage that wealth gives them to the destruction of their rivals; who lighten by their good-will the pressure of the economic laws. It is possible, even in these fierce times, for a business man to mix Christian kindness with thrift and enterprise. The day will come when the phenomenon will be less rare.

The Outrages in Russia.

EVERY day it is becoming more evident that no part of humanity can be hurt without pain to the whole body. The inhuman and almost incredible outrages upon the Jews in Russia have drawn forth a world-wide sympathy, and a protest almost unprecedented in its swiftness. The quick and burning indignation expressed so universally and so conspicuously in America is all the more significant owing to the unusual feeling of friendship existing between this country and Russia. But all Christendom has, with one voice, proclaimed its detestation of the crimes committed by the populace—nor is the Government acquitted of its supposed share in the guilt of the people.

"Men have been murdered, women outraged, children dashed to pieces or burned alive; whole streets occupied by Hebrews razed to the ground and desolated by fire; thousands of families reduced to beggary, and many banished from their homes. One hundred and sixty towns and villages feel this scourge of persecution. Three hundred houses and six hundred shops were plundered at Warsaw while a garrison of twenty thousand soldiers was kept within barracks and made no sign, and that, too, on the morning when in the name of Christ peace and good-will were proclaimed over all the earth." These are the words in which Mr. Evarts, in his speech at Chickering Hall, summarized the situation in Russia, as described by the latest dispatches. It may be that there was exaggeration in these earlier reports, but there has been enough

cruelty and horror to warrant the general outburst of sympathy and anger. With such desolation either in progress or in danger of recurring, the first duty of the Russian Government is repression. It is claimed that the authorities have already done all in their power; but wherever there is non-interference, such as Mr. Evarts has charged, other countries will hold the authorities responsible. The world will not be satisfied with excuses so long as there is one man in uniform who will obey the order of an officer. But after repression will come other and no less urgent duties—first and foremost must come whatever reparation may be possible, —and next, the persecuted race must be given (as even in Russia is now acknowledged) equal rights before the law. Even then the duty of the governing classes will not be completed. Without forgetting the glass-house in which we ourselves live,—we, who have seen the anti-negro riots of New York and the anti-Chinese riots of San Francisco,—it must still be said that Russia's most apparent duty is to civilize herself.

For it must be remembered that the Jews, everywhere, notwithstanding their inflexible exclusiveness, are, in a great measure, what they are made by the people among whom their lot is cast.* The amelioration of the condition of the masses in Russia will react upon the Israelites. Even if the latter are, as it is charged, bad citizens—it is not merely the fault of the laws which discriminate against them, but it is because they live in a community not wholly enlightened. Certainly, the race through which the Christian world has received its Bible and its religion, and that has shown an unequalled vitality during eighteen centuries of oppression,—surely such a people does not need to prove its power of development under fair and equal conditions.

It is, of course, not with a view of palliating infamies or excusing the guilty, either in high places or low, that we open our pages this month to a remarkable statement by a Russian writer of the views of her people on the subject of the Russian Jews. It is important to be informed of the alleged local occasions for dislike, and the special suspicions, even if groundless, which attach to the Jews of Russia. Besides, a nation which has been arraigned as Russia is at this moment arraigned before the civilized world, has the right to be heard in its own defense. The paper here printed is but the opening of a discussion in the pages of this magazine, which will not only have to do with the situation in Russia, but will deal fundamentally with the question of the relations between Israelites and Christians in America. We expect to lay before our readers, in the next number of *THE CENTURY*, a reply to the charges contained in Madame Ragozin's paper. Considering the extraordinary character of these charges, and the extremely mediæval aspect of some of them, it is no more than just that meantime there should be a "suspension of opinion."

* See "Was Lord Beaconsfield a Representative Jew?" in this number of *THE CENTURY MAGAZINE*.

LITERATURE.

Bartlett's "Shakespeare Phrase-book."

MR. JOHN BARTLETT'S "Shakespeare Phrase-book" is the best existing compilation of its kind—albeit we must say that the kind is not one to which we can give unqualified approval. Books of "beauties," concordances, anthologies, selections of the "wit and wisdom" of this and that eminent writer, and so forth, are commonly the "cram" of literary sciolists, the dust-heaps of literary potterers, or the labor-saving machines of literary hacks. Lovers of literature, genuine readers, rarely use them, and are never content with them. Their acquaintance with books is not made thus piecemeal and at second-hand.

It seems strange that the book which Mr. Bartlett has given us should have been so long in coming. Among Shaksperiana, "beauties," and such like, in various shapes, have held a conspicuous place ever since William Dodd published, in 1752, his "Beauties of Shakespeare, regularly selected from each play," the third edition of which, that of 1790, the last one revised by the compiler, is much sought after by Shaksperian collectors. This book, however, and all of its kind, were put out of use as manuals by Thomas Dolby's "Shakspearian Dictionary," London, 1832, an octavo volume which, by its copiousness and convenient arrangement, left little to be desired by those who like books of this kind. Passing by all other Shaksperiana of this sort, we come to Mrs. Cowden-Clarke's well-known concordance, constructed upon the plan of Cruden's "Concordance to the Bible," and in which every word in Shakspeare's plays (articles, prepositions, pronouns, and the like, excepted) is given, with a reference to the act and scene of the play in which it occurs. This stupendous result of sixteen years' plodding toil was supplemented by Mrs. H. H. Furness's concordance to Shakspeare's poems, in which every word, not excluding articles, prepositions, and the like, is given. After this came Dr. Schmidt's "Shakespeare Lexicon," in which all the words which Shakspeare uses (the particles excepted, as mentioned above) are given, with definitions—not always correct—of the various senses they bear in the several passages in which they occur. This work, it will be seen, is, so far as it goes, a grand combination-concordance-and-glossary to Shakspeare. It is thoroughly German in its kind, and, like all copious and systematic collections, it has a certain value, and has produced a certain impression.

But to Mr. Bartlett's phrase-book, which is like and unlike the compilations of Mrs. Cowden-Clarke, and Dr. Schmidt, and all others. Its purpose is to index, not exactly the words, but the phraseology of Shakspeare. Its plan is to take every sentence from his dramatic works which contains an important thought, with so much of the context as preserves the sense of the passage, and to put each sentence under its principal words, alphabetically arranged. To a certain extent,—indeed, to a very great extent,—an index of phrases must be a concordance of words,

and Mr. Bartlett's book has this among its values; but its peculiar value is that it gives, not the disjointed and meaningless parts of lines or sentences which contain a certain word, as is the way with concordances, but enough of the passage in question to set forth its sense very plainly, and to bring the whole context, in a general way, to the mind of a Shakspeare reader. It thus fulfills, in a great measure, the functions of a book of "beauties," of a concordance, and of a glossary. For the bringing of words and phrases thus together is a means of comparison that will be of great value to every student of Shakspeare. Let us illustrate this by a few examples taken almost at random from Mr. Bartlett's pages. The Shakspeare reader who remembers vaguely the beautiful passage in which perpetual maidenhood is compared to an ungathered rose, will find, on looking under the word *rose*, a reference to "A Midsummer Night's Dream," Act I., Scene 1, with the whole line:

"But earthlier happy is the rose distilled."

And in this place, at a glance, may be seen all the notable instances of Shakspeare's use of the word *rose*, set forth so fully that the sense of the several passages may be intelligently apprehended. But, besides this, the same line in full will be found under the words *happy*, *distilled*, and *earthlier*. So that this whole line may be found at once by any one who remembers any word in it more than *but, is*, and *the*, which belong to all lines and all authors. And not only so: the intelligent user of Mr. Bartlett's labors will be glad to compare, with a sufficiently full context, all the notable instances of Shakspeare's uses of the important words in this beautiful line, and he will remark, as to *distilled*, three varying shades of meaning, in the line from "A Midsummer Night's Dream," and in the following, which are given in full:

"A man distilled out of our virtues."
—*Troilus and Cressida*, Act I., Sc. 3.

"—whilst they, distilled
Almost to jelly in the act of fear,
Stand dumb and speak not."
—*Hamlet*, Act I., Sc. 2.

That Shakspeare uses *earthlier* but once may, indeed, be noted also by the concordance or the lexicon. Again, a remembrance of *rubbed*, or *quat*, or *sense* will lead to a discovery of this speech of *Iago*'s:

"I have rubbed this young quat almost to the sense,
And he grows angry."

A comparison of this passage with some seventy or eighty others in which *sense* appears, shows that this is the only one in which Shakspeare uses the word as equivalent to *quick*, "almost to the sense" meaning almost to the quick; and it will also be seen that the grotesque word "*quat*," meaning little fool, does not appear elsewhere in Shakspeare's plays. The value of this book—and it is great—consists in this presentation of Shakspeare's phraseology with sufficient of the context for a clear apprehension of its meaning, and the repetition of each passage under the head of all the

more important words in each phrase. This makes the work one not merely for reference or for labor-saving and memory-weakening, but for study. A thoughtful man interested in literature, if he were about to suffer a short seclusion from books and men, might do much worse than take Mr. Bartlett's "Shakespeare Phrase-book" with him. For the very reason of its value in this respect, we regret that Mr. Bartlett sometimes, as it seems to us, fails to present passages under all their most characteristic aspects. He cannot give them under all their words. Room would fail him. Therefore the selection of the words is the more important. For example, that noble advocacy of the necessity of reform, in "Coriolanus":

"Custom calls me?
What custom bids, in all things should we do't,
The dust on antique time would lie unwept,
And mountainous error be too highly piled
For truth to overpeer."

Mr. Bartlett makes this passage attainable through the words *custom* and *time*. This is well; but surely it fails to present the passage under some of its most important and significant aspects. *Coriolanus* is revolting against the authority of antiquity; *antique* is, therefore, a key-word. He is protesting that a reverence for old custom perpetuates error; *error* is, therefore, another key-word, and one of the most important. He invokes the eye of truth; and *truth* is, therefore, a word of much importance. For a passage of four verses six key-words would not have been too much, according to Mr. Bartlett's scale of work. But according to our observation his short-comings in this respect are very few indeed; and we have to thank him for the admirable and very useful results of a protracted labor, which has been performed with notable intelligence, patience, and judgment. Thoughtful readers of Shakspeare will thank him now and long hereafter. Of the fullness and comprehensiveness of his work some adequate notion may be gathered from the fact that under the word *speech* there are no less than one hundred and forty passages cited; under *grief*, about the same number; under *thought* we find two hundred and fifty; under *time*, four hundred; under *thing*, four hundred and fifty; while *man* furnishes more than five hundred.

Not the least interesting and useful part of Mr. Bartlett's book is comprised in the last eighty-two of its ten hundred and thirty-four pages, in which are given comparative tables of the most important various readings of the passages cited. These various readings are from the texts of Knight, Singer, Staunton, Dyce, and Grant White. This part of Mr. Bartlett's work is very full; and upon a close examination we find it faithfully performed. Some notion of its extent, of the labor which it involved, and of its value, may be gathered from the fact that the various readings in "Hamlet" fill nine pages, each page of which contains fifty-seven lines. Now as the work contains, of course, every passage in Shakspeare's plays which is of any interest, even the smallest, it will be seen that this book fulfills for all ordinary purposes the function of a variorum edition of the text of Shakspeare. The introduction of this appendix was a most happy thought. In fact, the book as a whole is one of the most valuable ever published for the use of intelligent students of Shakspeare. The general reader needs no

ampler concordance, no better guide to Shakspeare's beauties of phrase or even of thought, no completer record of the variations of his text.

Lang's "The Library."

THE two main conditions of a good book on book-collecting—viz., that it should be written lovingly, and that the author should not take his hobby too seriously—are thoroughly fulfilled in this charming little volume. Even the most unbookish reader will kindle into a momentary sympathy with Mr. Lang's fine poetic enthusiasm over those "little tributary streets, with humbler stalls, shy pools, as it were, where the humbler fisher of books may hope to raise an Elzevir, or an old French play, a first edition of Shelley, or a Restoration comedy"; or over that mediæval picture of "the *Scriptorium*, where the illuminator sits and refreshes his eyes with the sight of the slender trees and blue distant hills"; or, again, over M. Octave Uzanne's rhapsodical description of an August book-hunt along the quays of Paris:

"The brown old calf-skin wrinkles in the sun, the leaves crackle. You could poach an egg on the cover of a quarto. The dome of the Institute glitters, the sickly trees seem to wither, their leaves wax red and gray, a faint warm wind is walking the streets; under his vast umbrella the book-hunter is secure and content; he enjoys the pleasures of the sport unvexed by poachers, and thinks less of the heat than does the deer-stalker on the bare hill-side."

Such passages are almost enough to convert the most hardened "grobian," or even the robustious Philistine himself, whose doings are thus set forth:

"This man will cut the leaves of his own or his friends' volumes with the butter-knife at breakfast. * * * He also loves dogs' ears, and marks his place with his pipe when he shuts a book in a hurry; or he will set the leg of a chair on a page to keep it open. He praises those who tear off margins for pipe-lights, and he makes cigarettes with the tissue-paper that covers engravings."

We confess to a sneaking tenderness for the robustious Philistine. At least we are willing to grant him, as a *concessum propter duritiem cordis*, that for one who buys books to read them, the latest and handiest reprint of an old author is better than any black-letter copy or *editio princeps* whatsoever. Yet we will not carry our Philistinism so far as to steel our heart against Mr. Lang's half-humorous apology for the amiable weakness which he defends. In that delightful work, "The Book-Hunter," by John Hill Burton, it is related that a mighty collector said scornfully of a pretender to the same title: "He a collector! Why, he knows nothing of books beyond their *insides*." This marks very well the distinction between the book-hunter and the mere literary man.

There are, of course, degrees of the vice, and it is hard to draw the line where a taste passes into a hobby and a hobby into a mania. It is even conceivable that an early edition, an autograph copy, or a volume stamped

* The Library. By Andrew Lang; with a chapter on Modern English Illustrated Books, by Austin Dobson. London: Macmillan & Co. 1882. ("Art at Home" series.)

with the arms of some famous collector, may be precious for its associations. One prize of this kind was the "relic" picked up by the French bibliophile, M. Tenant de Latour, the story of which, as told by Mr. Lang, is enough to thrill the most sluggish imagination. M. de Latour bought, on the quay of the Louvre, a shabby little copy of the "Imitatio Christi," which bore on the fly-leaf the autograph of J. J. Rousseau, and had between the leaves faded petals of the great sentimentalist's favorite flower, the periwinkle. Furthermore, a letter of the date 1763, in which Rousseau asks his correspondent to send him the "Imitatio Christi," in conjunction with a gushing passage about a periwinkle in the "Confessions," under the date 1764, made it probable, as Mr. Lang ecstatically explains, that M. de Latour "had recovered the very identical periwinkle which caused the tear of sensibility to moisten the fine eyes of Jean Jacques Rousseau." But all collectors are given to be imaginative. We once asked a friend, whom we may designate, on the authority of the Bath "Stamp Collectors' Magazine," as "the first pen in philately on the American continent," what possible interest he could take in an assortment of postage-stamps. "You ask what I see in these stamps," he replied. "I see history, art, biography, poetry in them." And so it is with other collectors, whether the objects of their pursuit be coins, autographs, orchids, butterflies, or pottery.

Yet there are limits. We will allow a degree of sanity to the man who pays an extravagant price for Bankes's "Bay Horse in a Trance" simply because it is rare; but why should man, that is born of woman, set his inordinate desires upon an Elzevir "Cæsar" of 1635? One may tolerate the foibles of all grades of bibliomaniacs, from the "indiscriminate accumulator" through that long list of specialists enumerated by Burton—a black-letter man, or a tall copyist, or an uncut man, or a rough-edge man, or an early-English dramatist, or an Elzevirian, or a broadsider, or a pasquinador, or an old brown calf man, or a grangerite, or a tawny-moroccoite, or a gilt-topper, or a marbled insider, or an *editio princeps* man." But we must stop short with the idiot who practices "duplicating," which Burton calls the extreme form of the mania. "I always thought that M—— was not quite sane," said an acquaintance of a famous memorabilia-hunter, "but the other day I found him making a complete collection of all the kinds of steel-pens ever manufactured, and now I know that he is stark mad."

Besides being pleasant reading, "The Library" contains excellent practical hints about bindings, bookshelves, publishers' catalogues, bibliography, the cleaning of soiled copies, the location of the book-room, and other matters pertaining to the purchase and care of a library. The Rev. W. J. Loftie contributes a serviceable article on MSS. and early printed books. Austin Dobson's chapter on illustrated books is written with that nicety of taste and full knowledge of the subject familiar to readers of his little work on Hogarth. Noticeable among the illustrations are the exquisitely colored plate of a richly bound Lucan of 1551; the frontispiece, engraved on wood by Swain from a drawing by Walter Crane, and a reproduction of Blake's well-known sepulchral group from Blair's "Grave."

We will close this notice with an extract touching

the book-worm, which well illustrates the delicate playfulness of Mr. Lang's manner:

"The learned Mentzelius, says he hath heard the book-worm crow like a cock unto his mate. * * * But in our time the learned Mr. Blades, having a desire to exhibit book-worms in the body to the Caxtonians at the Caxton celebration, could find few men that had so much as seen a book-worm, much less heard him utter his native wood-notes wild. Yet, in his 'Enemies of Books,' he describes some rare encounters with the worm."

Altogether, it would be hard to find a daintier offering for the dilettant than Messrs. Lang and Dobson have here prepared, or one breathing a more pleasantly antique flavor—like the suggestive musty smell that one snuffs from the paper of an old book itself.

"Memoirs of Prince Metternich," Volume V.*

METTERNICH was a historical figure not cast in a very heroic mold: but during the aggressions of Napoleon the Great against the peace of Europe, one would need to be unusually unsympathetic not to recognize the admirable struggle made by the Austrian chancellor in chief against his powerful and unscrupulous adversary. As the volumes come out, and the periods covered are removed more and more from the stormy seas in which Napoleon acted the part of Neptune, sympathy for Metternich as a champion of Austria entirely fades away. The devotion to his Emperor, which had its fine side once, becomes the most barren contest over a fixed idea. Injustice to the people can be fairly alleged against a man in whose mouth the most pious terms became so many forceless counters of epistolary change. It is hard to repress contempt for a man who harangues his subordinates at the various courts of Europe in the phraseology of the old time, while all around him Europe is awakening from the effects of revolution, counter-revolution, and bureaucracy. A bureaucrat of bureaucrats in his youth, Metternich's pedantry becomes insupportable in later years when, like the English, he arrogated to himself the major part of the overthrow of the captive of St. Helena. Fussy, pompous, full of hollow phrases, alternately whining or threatening at the foreign policy of France, the spectacle of Metternich is not edifying to witness, and accounts for much of the legacy of hatred and contempt which his name left behind him in Europe. He outlived his time. The moment for his disappearance should have been that of Napoleon's death; then a grateful people would have remembered his faithful services before he had a chance to alienate them by reactionary and petty measures. There is no doubt that Metternich was a power, but it was a power that merely repressed and irritated while it supposed itself leading and managing. To him more than to any other Austrian diplomat is owing the opinion among the nations that Austrian rule means everything that is the opposite of generous, broad, progressive—an opinion founded as much on little silly rules of red tape, enforced with all the magnifi-

* Memoirs of Prince Metternich. 1830-1835. Edited by Prince Richard Metternich. Translated by Gerard W. Smith. Vol. V. London: Richard Bentley & Son. New York: Charles Scribner's Sons.

cence of state measures, as on the treatment of Hungarians and other non-German nations under the rule of the Hapsburgs.

The first report of Metternich at Königswart to his imperial master, regarding the Paris Revolution of 1830, betrays his character in every sentence: "I have just received the inclosed newspaper from Frankfort. Its contents show that the Revolution, and one, too, of the extremist type, has won the day in Paris. This fact proves two things: First, that the ministry erred in the choice of means; second, that I was right when, more than two years back, I called the attention of the cabinets to the threatening condition of things. Unhappily my words were thrown away." The elaborate truism "that the ministry erred in the choice of means," can only be equalled by some of the utterances of Shakspeare's *Dogberries* and *Shal-lows*. It is capped at once by an "I told you so," which doubtless served its purpose in impressing the Emperor with the profound political sagacity of his correspondent. At the same time, Metternich was no charlatan. He believed that the political world was tottering to its fall, and that it was only his Atlantean shoulders which still supported it. The editor prints, from a note to Count Nesselrode, the Russian minister, the following interesting view of the situation as it was seen through Metternich's eyes at the beginning of September, 1830: "But, after all, the thought I secretly cherish is that ancient Europe is at the beginning of the end. My determination being to perish with it, I shall know how to do my duty; nor is this my motto only. It is that of the Emperor, too. New Europe, on the other hand, has not, as yet, even begun its existence, and between the end and the beginning there will be a chaos." From which it appears that, if nobody else was willing to regard good Count Metternich in a heroic light, he himself was quite capable of the task.

Materials for the series of volumes issued from time to time by Prince Metternich are so abundant as to embarrass him. Six books in four volumes have already appeared, selected almost entirely from the family and private correspondence of Metternich. This source closes with the year 1829. But from 1831 to 1848 there were confidential letters between him and Count Apponyi in Paris, which are still extant. Moreover, the Princess Mélanie Zichy-Ferraris, whom he made his third wife in 1831, has left thirty stout, closely written volumes of a diary beginning at the year 1820, and reaching to 1853. Probably no more tedious diary was ever written by an infatuated woman. No public man was, in consequence, more thoroughly handed down to posterity than Metternich, whether from the formal, political side of his character, in historical letters, dispatches, and state papers, or from the domestic side, as the husband of a great lady who held one of the chief salons of Vienna. Much of this volume is not of deep interest to readers who think little and know less of celebrated people of the Austrian capital, notwithstanding that the translator has omitted much matter of purely local importance. The translation is fair, although sometimes awkward. Such an expression as "Three interviews of Metternich's with General Belliard" is sanctioned by common use, although two genitives might seem wasting one's energy without need.

"St. Nicholas," Volume VIII.*

CHILDREN'S literature has suffered so many and such violent fluctuations during the last century that it is somewhat difficult to predict anything for its future. A hundred years ago, its history might have been written as briefly as the famous chapter upon the herpetology of Ireland, for there was no literature for children then. The forms which it has assumed during that time are legion. The goody-goody books, conducted upon the principles of the most inexorable justice, have had their day. The profoundly instructive books, where dutiful little boys and girls asked questions innumerable for the purpose of drawing out their parents and guardians, pastors and masters, into dull disquisitions on the universe in general, have come and gone. The reaction from all this priggishness—in the sensational blood-and-thunder stories of the lower class of weeklies, the dime novels, and so forth—has come, too, and, it is to be hoped, is nearly gone. A purer literature is making its way rapidly with the children, not because it is pure so much as because it is bright, and lively, and true to nature.

The recognition of what will please children, and, at the same time, help them in forming high ideals of life, of literature, and art, is probably due as much to the editor of "St. Nicholas" as to any one person living. There is such a charming mixture of sense and nonsense in this children's magazine, such a happy union of amusement and instruction, so much really good and useful reading, and yet it is so sound, and pure, and healthful, that many a mother will be ready to echo the verdict pronounced only a few days ago upon the volume for 1881, by a man of superior mind and large attainments. "In my opinion," he said, "the 'St. Nicholas' is the very best magazine in the world."

It is, perhaps, invidious to select a few stories, poems, or more serious articles when so many others have an equal claim; but it is not possible, in a short book-notice, to do justice to a periodical of such infinite variety. And, where justice cannot be done, one must be satisfied to do the next best thing.

Among the serials of this volume there are two interesting stories of American boy-life—"Phaeton Rogers" and "Saltito Boys"—and a narrative of adventure in the tropics, somewhat in the style of Mayne Reid, and entitled "In Nature's Wonderland." Still another continued story, which hides its authorship under an "Anonymous," is particularly good.

The value of "St. Nicholas" as an educator is shown in Mrs. Oliphant's admirable historical papers, in the "Agassiz Association," continued from month to month, and in the series called "Stories of Art and Artists," illustrated with reproductions from the famous painters of the world. A happy idea, too, is the "Treasure-box of Literature," presenting short extracts from standard English and American authors.

But the quality which is preëminent in "St. Nicholas," which is even more noticeable than its admirable illustrations, its solid information, its charming nonsense, its ærial fancy, is the purity and wholesomeness of the tone.

* St. Nicholas. An illustrated magazine for boys and girls, conducted by Mary Mapes Dodge. Volume VIII. Part I.: From November, 1880, to May, 1881. New York: Scribner & Co. Part II.: From May, 1881, to November, 1881. New York: The Century Co.

The Yachtsman's Manual.*

THE great interest now taken in steam and pleasure boats, and in all subjects connected with navigation, makes this book both timely and valuable to a large class of readers. It is a fully illustrated compilation of the laws, customs, and usages of the navy, the commercial marine, and the yacht club. Chapters are devoted to pilots and pilotage laws and customs, to the use of the compass, barometer, thermometer, and

*The Sailor's Handy-book and Yachtsman's Manual. By E. F. Qualtrough, Master, U. S. N. New York: Charles Scribner's Sons.

charts. Also to the use and construction of rigging, and to hulls and their classification. Ample space is devoted to steam engineering, the care and use of engines for boats and yachts, steam steering-apparatus, pumps, etc. The United States Life-Saving Service, and the laws of shipwreck and directions for help in all kinds of disasters, are fully treated. The subject is a very large one, and the six hundred pages of closely printed matter contain more information useful to the sailor and yachtsman than in any book yet prepared on this subject. The matter seems to be fully and clearly stated, and the book is provided with a complete index.

HOME AND SOCIETY.

Women and Business.

Two things should be included in the education of every girl: she should be taught practically the value and use of money, and she should be trained to do some sort of work by which she can earn a livelihood, if need be. Children of eight or ten years of age should have an allowance. They are too young, of course, to be trusted with a large amount of money, but they should be given a fixed sum, and out of that should be expected to get certain articles of dress, say ribbons and gloves. As they grow older, and are learning by experience how to use money, the allowance must, of course, be increased, and the range of articles left to their judgment extended; till at ages varying from fourteen to seventeen, according to the development of the child, a sum sufficient for all personal expenses may be given monthly. Let them use the surplus as they please, let them never in a year overrun the allowance, let them feel the consequences of their folly, mistakes, or self-will. Do not come in and make up deficiencies, unless in very exceptional cases. In this way they will learn wisdom in the use of money; the reasoning faculties, the power of estimating the relative value of things, will be gained while the child is still under the protection of parents, and experience will be bought at its cheapest rate. An account-book, with the left-hand pages devoted to receipts (or all that comes in), the right to payments (or all that goes out), balanced weekly or monthly, should be kept conscientiously and submitted for inspection occasionally.

Any girl with a proper personal pride and individuality will learn to like the independence which this system gives. To have to ask for every article of dress or luxury is somewhat galling to young people, and when it is in a home where strict economy must be practiced, it is sometimes a source of great pain. On the other hand, this plan simplifies matters greatly to the parents, especially in a home of narrow means, by introducing a known quantity into the problem of domestic economy, instead of an unknown one. Some parents object that giving an allowance makes their children too independent, but I do not think this is the case. Children, it seems to me, are practically more grateful for money given freely for their own use, as a regular allowance, than they are for the separate articles purchased for them. They themselves have a chance to learn the luxury of giving,

and they enjoy the presents made to them outside the stipulated sum far more than when bestowed under other circumstances. The independence nurtured by this system is of the right sort.

The second thing which should be thought of in every woman's education is that she should learn some one thing thoroughly, by which she may support herself, if necessary. Just because marriage is a woman's noblest life, it should never be entered into but from the purest motives. No woman should look to marriage for a home—for a maintenance, but always and only for her highest life. Women were not intended to be thrown out into the world to be jostled and wounded in the struggle for a livelihood. It is the veriest perversion of a true social life which makes it otherwise, but it is the part of wisdom to look at things as they are, and to meet the existing conditions. As a matter of fact, women are thrown out upon the world to earn their own livings, to rear and educate their children; sometimes even more than this rests upon them to do. When a woman knows she is competent to earn a living, it will not hurt her if she does not need to use her ability. If misfortune threatens, the knowledge that she is not helpless saves many an hour of heart-sickening despondency, and, if misfortune does come, she is equipped to meet it.

The low prices which women get for their work are due to two causes: its poor quality from want of special training, and the enormous competition in a few fields. When women are well-trained and thoroughly competent, and when they learn (as they are learning) to do something besides sewing and teaching, they will command higher remuneration. There is little to fear from the fact that women will be more independent of marriage than they now are. No really womanly woman ever takes the helm and sails out into strange waters with all the responsibilities of life resting on her without great suffering. It may be that the pain seems light when compared with the torture from which she has escaped; but it is always hard to do a man's work with only a woman's heart to back it. That is no reason, however, why, by our absurd systems of education (or want of education, rather) we should add the element of despondency and inefficiency to the other necessary evils of such a life. We do not make our girls more womanly, but only more helpless.

S. B. H.

THE WORLD'S WORK.

Improved Method of Seed-Planting.

THE tendency of modern agriculture is steadily toward a lessening of the distance between horticulture and agriculture. Many food-plants that were formerly considered field crops have become garden crops, so that now only the grains and grasses may be said to be raised on farms. All the roots, the tubers and fruits, the beets, potatoes, tomatoes, etc., are now raised in market-gardens, and in a large, though purely horticultural, way. This extension of high culture to field crops has made glass more and more important in the market-garden. The shortness of the season, and the steadily advancing value of land, make it now essential that crops should be raised with as much precision as possible. If the gardener has just land enough for ten thousand cabbages, there must be some way of producing exactly ten thousand plants, no more and no less, and all the plants ought to reach a given stage of growth at precisely the same time. If there are more plants than space, there is a waste of plants, if less, a waste of land, time, labor, and interest on capital. If the crop matures irregularly, or even grows irregularly, there will also be waste of labor in cultivating it or in gathering the harvest. Raising seeds in hot-beds and cold frames has been common in all good gardens, for some time. The raising of seedling plants in hot-houses on a large commercial scale is a comparatively new industry in this country. Even in the best market-gardens, where plant-houses, artificially warmed, are used, there is still a very large percentage of waste, and very few gardeners can be found who could fill an order for ten thousand plants without a large percentage of loss in seeds, time, or labor. By the new plan it would seem that this loss can be obviated.

In the work examined, the seedling plants were in every stage of growth from germination up to the condition when they are ready for a second transplanting. The plant-house was of the common span-roof type, about $30\frac{1}{2}$ meters (100 feet) long, and 4.80 meters (16 feet) wide. It was heated by hot-water pipes in the usual way, and there were three tables—two narrow tables next the side, and a broad table in the center. In point of aspect, ventilation, etc., the house was much like those used by commercial gardeners in this country. The tables on which the seeds are germinated were next the side, over the water pipes, and consisted of a flat table or shelf of slate, with wooden edges to keep the soil in place. On these, fine, soft loam was laid about five centimeters (two inches) deep. The object seems to be merely to give the plants a warm, moist support, and to prevent the young roots from being burned by touching the hot slates below. This loam is carefully pressed down smooth, so as to have a perfectly level surface. Over this is carefully spread five millimeters (one-fourth inch) of finely powdered moss. This is the ordinary sphagnum moss used by gardeners, which is found growing wild in low, wet fields. It is dried and then run through a sieve made of wire mosquito-netting. This reduces the moss to the condition of a dry, coarse dust like powdered

sponge. When this is done, finely sifted dry loam is spread (or sifted) over the moss to the depth of two centimeters (three-fourths of an inch), and carefully pressed down with a smooth flat board held in the hand. The seeds, whatever their size, are then spread evenly over the surface of the loam, close or wide apart, according to the character of the expected plant. Over the seeds is then sifted a second layer of dry powdered moss. This finishes the planting, and the seeds rest on the surface of a thin sheet of loam, with a layer of moss below and a blanket of moss above. The moss is then gently and evenly pressed down, to press the seeds into the loam without actually covering them. A supply of water from a watering-pot or hose having a fine rose finishes the work. In the ordinary methods of planting seeds, either in the field or plant-house, the seeds are covered more or less deep by the soil. The seed must be in the dark or it will not germinate, or, at least, will germinate badly. As the seeds are not all buried to the same depth, those nearest to the surface will start first. This irregularity of growth will make it difficult to select a day for transplanting when all the young plants will be equally ready for the change of soil. When a seedling plant begins to grow in ordinary soil, it sends down its single rootlets for some distance before it begins to branch out. By placing the seeds in loam over a layer of sponge-like moss, the root at once finds water held in the moss which is a partial obstruction to its progress. The result is that the root at once divides into a number of short branches, forming a thick mass or bunch of roots, instead of one long root with few branches, and thus, when the time comes for transplanting, the young plant is in the most favorable condition. The plants examined were remarkably healthy and in precisely the same stage of growth, the proportion of feeble or late plants being apparently only a fraction of one per cent. The system appeared to be entirely successful, both in a horticultural and commercial sense. No patent will be placed on the system, as the inventor has given it to the public.

New Lime-light.

THE oxyhydrogen light, sometimes known as the lime-light or the Drummond light, is one of the most useful forms of lamp that can be employed wherever a powerful and concentrated light is required, as in lantern projections, lighting large spaces, and in illuminating signs. In a new lamp, recently introduced, the two gases are mixed in the burner by placing one pipe within the other, one jet of gas thus being surrounded by the other, and the two gases burning together at the top of the burner. The lime is cut in the form of a sharp-pointed cone, and is held, point downward, in the gas-flame. By this arrangement the flame heats all sides of the pencil of lime at the same time, and the light is equal on every side. As the lime burns away, it is gradually lowered into the flame till it is all consumed. A curved arm of

metal is bent over the lamp to support the cone of lime, and the jets, bracket, and cone are inclosed in a glass globe. By this simple arrangement of the parts this lamp is greatly improved, and its field of usefulness is widely extended. The older form of lamp gives a light in only one direction. In the new lamp the lime is equally exposed to the flame, and the light is as bright on one side as another. This makes it possible to use the light in many places where it has not before been available.

Protecting Iron Surfaces.

A GREAT number of experiments have been made to find a substitute for paints in protecting iron from rust. The most successful process introduced within the last few years employs a skin or film of magnetic oxide, that is formed directly on the surface of the iron. This process is described on page 799, Volume XXII., of this magazine. By a new process, just announced, the surface of the iron is treated with acids, and, after the resulting salts have been removed, the surface of the metal is coated with resin, gutta-percha, pitch, or rubber. The theory of the work is very simple. Cast-iron being composed of iron and graphite, the acid attacks and destroys the iron, leaving the graphite in the form of a honey-combed or sponge-like film on the surface. The pores of this film, after the salts of iron have been removed, may then be filled with resin, pitch, coloring matter, enamels, or other materials. As the graphite is a part of the cast-iron and closely attached to it, it holds the materials injected into the pores firmly, and assists to form a skin or surface over the iron that will resist the action of water and preserve it from rusting. The graphite, when filled with insulating materials, will make cast-iron available as battery-troughs, etc. Treated with enamels, it extends the use of iron in many directions, and makes it a substitute for glass. The process does not appear to be very complicated nor expensive, and will, no doubt, become commercially available very soon.

Improved Forge Furnace.

AMONG the new apparatus having for its aim the convenience and comfort of men working at forges is a new form of circular furnace. This furnace is designed for heating small articles, like bolts or rivets. In place of having a square fire-pot into which the bolts may be thrust for heating, the furnace has a circular fire-box or pot, so arranged that the bolts may be placed in the fire from any or all sides. To accomplish this, the furnace is placed in a room having a low ceiling or beams, or a structure of some kind from which the upper part of the furnace may be supported. The fire-box rests upon an iron ash-pit on the floor. The dome or cover over the fire-box is suspended by chains passed over pulleys, so that, by the aid of counter-weights on the chains, the dome can be raised and lifted off the fire-box. Just above the grate are two rings, placed one over the other, making the circular sides of the furnace. Between these rings are small, semicircular notches, so that, when one ring is placed over the other, there is a series of holes (between the rings) all around

the furnace. These rings rest on a revolving table, that can be made to turn around by means of steam-power. The sides of the furnace may thus be turned around at will, the motion being controlled by the workman in charge. There is a door in the dome for getting at the fire, and, when the fire is started, a blast is applied through three openings in the furnace, so as to secure an even fire in all parts of the grate. Surrounding the furnace is a copper water-jacket, suspended by chains from above. Water is caused to flow through this jacket at all times, and when it is lowered over the furnace the workmen are protected from the heat. To get at the fire, it is only necessary to pull the jacket up out of the way. In operating the furnace, the workman stands at one side, and, raising the water-jacket so as to expose the holes in the sides of the furnace, he inserts the bolts to be heated in the holes nearest to him, where they rest on a shelf exposed to the fire. A touch of the foot on a pedal causes the rings to revolve, carrying away the bolts and exposing more holes, ready to receive their charge. In this way, the furnace is filled from one side only, or from any desired position. All the bolts are equally exposed to the heat, and the fire is kept bright and clear around the edges by the motion of the apparatus. By the time the rings have made one revolution the first bolts are ready to come out, and they are withdrawn and a fresh supply put in their place.

Silk Culture.

AN effort was made in the United States some years ago to introduce the culture of silk, but, owing to the unbusiness-like way in which the matter was brought forward, it was a failure. The subject has lately received renewed attention, and from an examination of some of the results already obtained, it appears to be evident that silk can be raised to advantage throughout the greater part of the country. The chief difficulty that has hitherto stood in the way of this industry in this country has been the cost and labor of unwinding the silk filament from the cocoons. Hand reeling machines have long been in use, but they are all too slow and too imperfect to be of any value. A reeling machine, intended to be used by either hand or steam power, has been recently introduced that appears to do the work quickly and thoroughly. It consists of an iron table, supporting a shallow iron boiler open at the top. This boiler is to be filled with water, and kept at a low boiling point by a gas-stove under the table. On the top of the table, which forms a zinc-lined tray or shelf around the boiler, is placed a wooden frame or bridge. This supports four glass rings or guides, directly over the water. Back of the table, and joined to it by an iron frame-work, is a simple form of reeling apparatus. This consists essentially of a horizontal reel and four sliding guides for guiding the filaments upon the reel. At the machine examined, a young girl was employed to turn the reel, but attachments are provided for employing electricity as a motive power if wanted. In using the machine, the reeler sits before the table with a basket of cocoons at her side, and a dish of cold water on the table. A quantity of the cocoons are then placed in the boiling water, and beaten up with a small stiff broom, till the gum on the cocoons is melted, and the ends of the

filaments are loosened. These filaments are gathered as fast as they appear, and are held in the left hand, with the cocoons floating on the water. With the right hand one of the threads is passed through the glass guides, or eyes, over the water, and then a second thread is passed through the next eye. The two threads are then twisted loosely together, and each is carried through one of the sliding guides to the reel. When four threads from four cocoons are thus arranged in pairs, twisted together, and caught over the reel, the machine is set in motion. The revolution of the reel draws the threads from the cocoons, and they roll over and over in the water, unwinding by their own gravity. As fast as the silk is removed from one cocoon, a thread from another is joined to it by merely pressing one filament against the other. They quickly stick together, and thus one filament is joined to another to make a continuous thread. The length of this thread is regulated by the number of cocoons on hand, or the amount of silk required in a skein. The machine examined appeared to be well designed, and admirably adapted to the work. With hand-power it could be made to move at the rate of two or three hundred revolutions a minute while winding four skeins. The labor of attending the apparatus is light, and not particularly taxing to the attention. New cocoons must be added to the reel at the rate of about one in three or four minutes, and many hundred can be unreeled without stopping the machine. The cold water is used to cool the right hand, that must be often thrust into the

hot water to remove the empty cocoons as fast as they are unwound. It would seem desirable to use some kind of glove that would resist the heat when the hand is thrust into the hot water. The apparatus is regarded by competent authorities as well adapted to the work, and larger machines, to be used with steam-power, will, no doubt, prove of value.

The culture of the silk-worm appears, from the experience of those who have practically tried it on a commercial scale, to be very simple. All the work can be performed by women and children, and it can be safely recommended as a new employment for persons living in the country who are able to control about six weeks of their time during the early summer. The capital required is quite small, and the plant needed for a moderate number of workers can be established in any dwelling-house or temporary wooden building. The culture consists essentially in the rearing of a number of silk-worm eggs from birth to full maturity—a period of about thirty-five days—and the subsequent care and sale of the cocoons. Unless fresh eggs are bought, there will also be the labor of caring for and rearing the moths for the purpose of securing a fresh supply of eggs for another season. The food of the worms must also be bought or raised, and this is simply a matter of so much farm-work spent on an orchard of mulberry-trees. An agency has already been established in this country for the sale of eggs and the purchase of cocoons and reeled silk. There is also a literature of the subject that can be readily consulted.

BRIC-À-BRAC.

The Yearn of the Romantic.

EDITOR OF THE CENTURY.

SIR: Finding a lamentable tendency, of late, toward the modern inanities of *Æsthetics*, I have prepared the following, in the endeavor to restore a healthy taste for the Mediæval and the Strong; to induce others to return, with me, to the chivalric pages of Scott, of Bulwer, and of G. P. R. James; and to lead them to sigh, as I do, for a revival of feeling for the stalwart old days of Knighthood and of the Troubadour.

I am, my dear sir, with sentiments of the highest consideration,

ONE OF THE OLD ROMANTIC SCHOOL.

WHEN aweary of this living, with its gaining and its giving,
And its toiling, and its traffic, and its tame pursuit of gold;
I recall at what a high rate lived the Poet, Knight, and Pirate,
As they fought and sung and swaggered, in the bloody days of old!

I.

THE KNIGHT ERRANT.

WITH a chivalry romantic, and with love and honor frantic,
With a cross upon his armor, and a spur upon his heel,
He would bind him in indentures to impossible adventures,
And to rid the world of evil—or to never take a meal!

Then, to slay the dark deceiver, or the wicked unbeliever,
He would swim the foaming river, and would sleep upon the sword;
To subdue a horrid schism, he would risk the rheumatism—
All to prove his high devotion to his Lady and his Lord.

Then, it was not looked absurd on, if he wore a lady's guerdon,
Whom he loved with desperation—but he didn't know by sight—
When he rode a distant journey to indulge in joust or tourney,
To maintain her matchless beauty over any caitiff Knight.

Then, the statutory vapor, on impenetrable paper,
 Couldn't dwarf his noble nature with debilitating "Laws";
 For he stopped not to construe 'em, with their horrid "*meum, tuum*,"
 But survival of the fittest proved the justice of his cause!

He would glare and shake his lance, as the war-horse foams and prances—
 While his armor clanked and rattled from his head unto his toe.
 From his helmet of pot-metal, like the steam from out a kettle,
 He would blow his fierce defiance at his mediæval foe!

Then, confiding in his science and the saint of his reliance,
 With his battle-ax and bludgeon, he would cut, and thrust, and guard,
 While the shields would clash together, as the bells in foggy weather,
 And the blows upon their armor clattered like a boiler-yard!

Then to slay a brazen Dragon wasn't thought a thing to brag on;
 And to massacre a Giant was an every-day affair;
 And 'twas nothing but a wassail to assail an Ogre's castle
 And deliver noble damsels who were hanging by the hair.

He would swear on sword and altar, that he'd never fail or falter,
 But would help the True Religion sack the Saracenic hive;
 Then the unbelieving village was the prey of holy pillage,—
 That the Turk could be converted,—if he happened to survive.

That his valor, so transcendent, might be wholly independent,
 He was bothered not with baggage, and the other minor ills;
 From Jerusalem to Gaza, there was not a comb or razor,
 And an almost utter absence of all washerwoman's bills.

When the long Crusade was over, then he rioted in clover,
 And around the kingly table he would roister and regale;
 Jolly monks would utter benison o'er the haunch of royal venison,
 And the beards would wag with wisdom as they quaffed the yellow ale.

Thus a-battling, and a-bouting, and a-rioting and routing,
 From Palestine to Paris, on the land and on the sea;
 Though perhaps a little gory—yet he led the life of glory;—
 Ah! how brave, and true, and noble was the Knight of Chivalry!

II.

THE TROUBADOUR.

WITH a jaunty cloak and swagger, and a jewel-handled dagger,
 And a lute across his shoulder, by a ribbon—blue at that!
 And his breeches, never bigger than would show his shapely figure,
 And a fascinating feather in his funny little hat;

Not fat and roly-poly, like that parody Brignoli—
 Singing sentiment affected to a mercenary tune—
 But a Poet, young and slender, he would charm the tender gender,
 As he sighed his soul, in music, at the maiden or the moon.

He would rove the land and ocean, on a fancy, whim, or notion;
 He would sing the tender rondeau, he would tell the merry tale;
 He would thrill the fierce Crusader, he would turn a serenader;
 He would banquet in the castle, he would billet in the jail.

And the Queens and noble maidens doted on his serenadings,
 And they dropped the smile, or ribbon, and the glove, or lock of hair,
 Or, in lieu of rope or stringlets, loosed their long and silken ringlets,
 And the Minstrel, bold and loving, climbed them as you might a stair!

Thus, he poached on others' manors, and he fought for others' banners,
 And he dined at others' tables, and he droned in others' hives,
 And he livened others' journeys, and he rhymed of others' tourneys,
 And he emptied others' flagons, and he flirted others' wives.

So, he wandered forth, a-warring, and a-rhyming and guitaring,
 And, in attitudes artistic, tinkled lum-te-tum-ty airs,
 And the ladies all adored him, and the gallants aped and bored him,
 And his tunes were legal-tender for his lodging, everywhere.

Thus, a-humming, and a-strumming, and a-wooing, and a-cooing,
 Dealing ditties by the dozen, making sonnets by the score,
 While the glamour of the amour hid the stammer of his grammar;—
 Ah! so gay, and free, and happy was the merry Troubadour!

III.

THE PIRATE OF CHIVALRY.

With raven beard, and visage that would terrify in this age,
 And with eye as fierce as eagles' as they swoop from mountain crag,
 With jack-boots of raw leather, and a Spanish cloak and feather,
 And a fragment torn from Midnight for his horrifying flag—

With the winds and waves he'd wrestle, in a somber sort of vessel,
 And, in search of strange adventures, he would ravage every shore;
 Now, to rob the Lapland lubbers of their walrus-teeth and blubbers,
 Now, to depredate the natives on the coast of Labrador!

On the track of Turkish zaccas, or of Portuguese polaccas,
 Or of argosies of Venice, laden low with golden gain,
 Or of Amsterdam's fat traders, or of homeward-bound armadas,
 He would scour the Northern ocean, or would sweep the Spanish main.

He would strike for fame and plunder midst the hurricane and thunder,
 While the jagged flash of lightning hissed behind him from the clouds,
 And, with curses of bravado, dare the tempest and tornado,
 While the winds, as ghosts of victims, were a-shrieking through the shrouds!

When the foe would strike their colors, with their doubloons and their dollars,
 He would give the night to revel, and to jolly jest and cheer;
 And, free from weak emotion, walk the captives in the ocean—
 Ah! so bold, and free, and bloody was the roving Buccaneer!

IV.

THIS DEGENERATE AGE.

AH! those days have gone forever, with their splendid fire and fever,
 And their lofty scorn of living, and their quenchless thirst of fame!
 When faith and beauty filled them, and when love and glory thrilled them,
 And the sacred light of Honor led them like a flitting flame!

And the Minstrels, tender-hearted! they are silent and departed,
 With their amatory music, once so delicate and sweet;
 Now we never sigh to hear them, but we fly them and we fear them—
 Grinding melancholy organs on the corners of the street.

Gone the Pirate and the Sea-King, and the Buccaneer and Viking;
 Furl'd the banner of the Rover, hushed his cannon's heavy roar;
 And the only reminiscence of his nautical existence
 Is the banging of the big drum in the play of "Pinafore."

Gone's the glamour and the glory of the Knights of song and story,
 With their love and high endeavor, and their noble deeds and aims;
 Of heroic days behind us, now there's nothing to remind us
 But the Solitary Horseman in the narrative of James!

Yes! the Knights so celebrated, in these days degenerated
 Would be madmen or marauders—we would ridicule their cause—
 And the Pirate of the shipping would be hanged, or get a whipping,
 And the Troubadours be prisoned, under local vagrant laws!

Now, the soul that scorns to grovel, can but revel in the novel
 Of Sir Walter Scott, or Bulwer, on the days of long ago;
 And of Brian de Bourbeon, and of mighty Cœur de Léon,
 And of Lancelot and Arthur, and immortal Ivanhoe.

For the prosy and pedantic have extinguished the romantic,
 And the pomp and pride of chivalry are driven from the stage;
 All is now so faint and tender that the world has lost its gender,
 And the enervate Æsthetic is the model of the Age!

April.

Aloft where bends the tall elm's topmost crest,
Watching the sun, the robin sits and swings;
The amber light shines on his ruddy breast,
And loud his carol rings.

The crocus-buds break into starry bloom,
And in the wind the golden tulip rocks,
And garrulous sparrows chatter in the gloom
Of prim and rounded box.

The meadows stretching from the river show
The fresh, cool green of early springing grass,
And bending willows droop their branches low
As winds above them pass.

A shimmering haze lies on the dreamy slopes
Of hills that rise against the lustrous west,
The waveless sea seems bright with dawning hopes
Of summer's peace and rest.

The south wind, singing through the pasture, bends
The fern's low frond, crowning a mossy plinth;
And violet perfume in the garden blends
With sweets of hyacinth.

The mellow sunlight, breaking through the rifts,
Burns like a flame along the widening plain,
And down the sloping valley slowly drifts
The murmur of the rain.

The yellow cowslips toss their cups of gold,
Where brooks go whispering through the reedy
marsh;
And crows, among the blooming maples, hold
A council loud and harsh.

The plowman, whistling down the furrow, sees,
Above the thin and opal-tinted mist,
The rounded cones of budding orchard-trees,
Where bluebirds make their tryst.

The massive monarchs of the forest now
Are giant harps, melodious with song
That vibrates through each quaintly twisted bough,
Swaying the hills along.

The fragrant morn, clad in soft robes of white,
Flings wide day's portal for the sunlit noon;
And deep the purple stillness of the night
Clings round the narrow moon.

And fair with blooms, and buds that tell of these,
Through merry songs across the valleys blown,
Fresh from the sweetness of south-lying seas,
Comes April to her own.

One Rainy Day.

At Chamouni I woke one morn,
Hearing afar an Alpine horn
Upon some glacier to the North,
And thought, although it rained forlorn,
To saunter forth.

There, in the hall, outside a door,
Waiting their owners, on the floor,
I saw two shining pairs of shoes;
One pair was eights—or, may be, more—
The other, twos.

I wondered who those gaiters wore
That such a look of courage bore;
They seemed alert and battle-scarred,
And all their heels were wounded sore
On mountain shard.

The lofty insteps spurned the ground
As if up high Olympus bound;
The tireless soles were worn away;
The smooth and taper toes were round
And *retroussé*.

Sudden my envious thought essayed
To count the conquests they had made,
And all their pilgrimages view;
O'er glen and glacier, gorge and glade,
My fancy flew.

I saw them thread the Brunig Pass;
I saw them scale the Mer de Glace,
And Riffelberg, beyond Zermatt;
I saw them mount the mighty mass
Of Gornergrat.

I saw them climb Bernina's height;
I saw them bathe in Rigi's light,
And linger by the Giessbach fall;
I saw them grope in Gondo's night,
And Münster Thal.

I saw them find the Jungfrau's head,
And leap the Grimsel gorges dread,
And bound o'er Col de Collon's ice,
And on Belle Tola's summit tread
The edelweiss.

The vision shamed my listless mood,
Banished my inert lassitude,
And fired me with intent sublime;
I vowed when sunshine came I would
Go forth and climb!

With new ambition I arose,
The foot-gear scanned from heels to toes
(One pair was eights—the other, twos),
And blessed the owners brave of those
Heroic shoes.

"Maskwell's Compendium."

THE golden rule of humorists—"Never explain a joke"—must for once be broken, for the benefit of the hasty reader of the "Bric-à-Brac" department in our February number. It would perhaps be more exact to say the hasty glancer, for it is difficult to believe that any attentive reader of the above-named parody of the penmanship systems could regard it as an advertisement. We hardly know whether to esteem it as complimentary to the piece in question that in some instances the direction, at least, of its all too blunt and feeble shafts should not have been evident. Among the aggrieved are a number of our kind constituency in England, where, we are told, there is no similar system to share in "Punch's" current satire of "How we advertise now." Let us explain, then, that from a long and intimate personal acquaintance with Professor Maskwell, we can truly say that there has not been, is not, and will not be any such person, that the P. O. address which we did not give is false, and that "the middle-aged and distinguished" are to be left to their characteristic illegibility without further attempt by the professor to impair the individuality of their styles.
